9592. You spoke of a university man being among these men on the colony; are you able to say at all how these men come to be on the colony?—The majority of them come from drunkenness; I should imagine that about 85 per cent. of the men at the colony come there through drunkenness, and have lost their position through that cause; almost all the men seem to have come through that cause.

9593. Will you continue what you wish to say about Hadleigh Colony?—Of course the experience of Hadleigh Colony is principally useful in consequence of the detailed evidence that it affords as to the ability of these unskilled men when directed at the early stages of this work. There was a special inquiry, presided over by Lord Onslow, as to the useful or otherwise expenditure of these funds; and before that inquiry Mr. Bird, one of the advisers to the Board of Agriculture, was called as an expert witness, and he agreed that there had been no expenditure upon the colony during the first year of which he would not have sanctioned the full cost to be advanced by the Land Improvement Commissioners. He stated that the whole expenditure upon the land improvement work seemed to have been of a profitable character, and seemed to have been carried out at a cheaper cost than if it had been done by ordinary labour.

Mr. *John Burns.*

9594. Are you referring only to the land improvement work?—I am referring only to land improvement work. I am not referring to cultivation at all.

Chairman.

9595. When it was acquired and started, was it cultivated or uncultivated land?—When it was acquired there were about 300 acres of cultivated land, and about 700 acres that had gone out of cultivation, in addition to some reclaimable saltings.

Mr. *Heywood Johnstone.*

9596. Do you mean that the 300 acres which you spoke of as cultivated land was under crop?—It varied, of course. It had been worked up to that time. Much of the heavy land on the marsh had gone out of cultivation; while the upper portions on the hill had been cultivated on the ordinary system of husbandry, with ordinary crops.

Chairman.

9597. Had the part that you say had gone out of cultivation been long out of cultivation?—It had varied a good deal. The marsh land had not been cultivated for about 12 years, while some land on the slope of the hill had been cultivated in the last four years.

9598. Will you continue with any observations you have to volunteer upon the subject of the Hadleigh Colony?—Another point which was of some interest, and from which perhaps one might gain some experience was, that some men who have come down on the colony without any training in land work, seem to have a great desire to work land for their own use. Under the regulations of the colony a certain amount of labour is required for the benefit of the colony; but an experiment was tried two years ago of letting men have some allotments, in addition, for their own benefit. A certain area of land was laid off for those allotments, and when I saw them last year, at all events, they seemed all of them in remarkably good condition. I spoke to some of the men who were tenanting those allotments, and they all seemed satisfied with the results of this work. They were growng produce, and the Salvation Army realised on their account the produce of those allotments. They were certainly exceedingly well cultivated, and some of the men at all events had been able to get some experience in this actual cultivation work which they had never done till they came to the colony.

9599. That exemplifies the transition which Mr. Mather described in his scheme, from the farm training colony to the farm settlement?—That is so. It would have been desirable that the Salvation Army should have tried the experiment on a larger scale, and had set apart a certain area of larger extent. These allotments are very small; the total area being only about seven acres. There was great competition upon the part of the men to get the small pieces when offered.

9600. What I understand from you is that a man arriving without any knowledge or experience of cultivation of the soil at all, after a certain time spent in the colony in reclaiming and so forth, becomes able to cultivate an allotment or piece of ground for himself?—That certainly seems to be the case in some instances at any rate. Then another matter of interest in relation to the colony is the manner of cultivating, and the crops which have been yielded by the land that was out of cultivation at the time it was acquired. The first work that should have been undertaken in the first year was reclaiming the marsh land, ploughing it up by steam, and then employing some of this labour upon it. That work does not seem to have been done at first, but it was done later, and some land, to the extent of 80 or 90 acres, this year is bearing crops, which, at the time when the Army came into possession, was a type of the heavy derelict Essex land which has been described to the Committee. I was there in July last year, and I noticed particularly good crops growing upon certain areas of this land. One was a crop of rivet wheat which was an exceptional yield. I

Chairman—continued.

have been told since that this crop yielded 60 bushels to the acre. Of course it is only rivet wheat and not the ordinary wheat, but I should think it was possible that the yield was what I was told. That is land that was uncultivated two years before, and it had been allowed to go to waste on the ground that it did not pay for cultivation.

Mr. *John Burns.*

9601. What proportion of the men who cultivate the land consist of outside professional labourers that are attracted to the farm by the slightly higher wages, on purpose to teach the submerged tenth; what proportion of those skilled men had allotments?—I cannot tell, but I do not think the allotments are let to anybody except a colonist.

9602. You have not absolute information upon that point?—No.

9603. It is the fact that there is a very large nucleus of skilled Essex labourers there who get higher wages than they find outside, is it not?—From the Blue Book on "Agencies and Methods of Dealing with the Unemployed," it appears that there were 55 skilled men employed in industries.

9604. I am not speaking about carpenters and plumbers and bricklayers; I am talking about the men who do the skilled agricultural labourers' work; is it not the fact that if there are 200 men at General Booth's colony at Hadleigh employed in agricultural work, something like between 40 to 60 at different times of the year are skilled labourers paid above the normal wages?—The last time I asked that question, I was told that the maximum number of agricultural labourers had been 15. It is necessary to have skilled agricultural labourers for the horseman, but except for the horseman and certain other work with live stock, the whole of the labour was claimed to be done by the men from London.

9605–6. What about the men in the piggeries and cowsheds and in the glasshouses, or in the shrubberies?—I cannot say. I should, perhaps, state that at the end of 1891 I resigned my position and reponsibility in relation to the colony, in consequence of the protest I made against what I thought to be the totally unnecessary and uncalled for capital expenditure that was then contemplated, being intended. I have not been connected with the colony since that time.

Mr. *Bartley.*

9607. You objected to the large increase of capital expenditure?—Undoubtedly. In my opinion, the expenditure in developing certain works that they did there was an uncalled for expenditure, and I could not sanction that money being expended out of the Darkest England Fund. I considered it was for the purpose of a farming colony, and not to be an industrial concern.

Mr. *John Burns.*

9608. You mean the expenditure, I suppose for the bridge and the piggeries?—My protest was against a capital expenditure which I thought was unnecessary upon buildings, and 17,000*l.* upon brickworks and railway, and some very elaborate expenditure in other directions, and, in fact, on organising industries which showed last year, as Mr. Mather has said, a loss of 1,700*l.*, and have now been given up. That expenditure was contemplated at the time of my resignation; I did not wish to injure the movement at all, more especially as I had gained my knowledge of it professionally; and, consequently I have never made the causes of my resignation public, and, indeed, I promised General Booth not to do so.

Chairman.

9609. The cessation of your connection with the colony was not on account of any fault you found with the management of the colony except in so far as you thought they were going into branches of industry that were unnecessary in a purely farm colony?—It was also partly on account of their agricultural management. I considered they ought to have done what was subsequently recommended by Lord Onslow's Committee on the evidence, I suppose, of Mr. Bird and myself, viz., that there should be some competent agricultural expert in control of the agricultural work of the colony. There was no such expert, and I thought the colony could not be successful without it. Before my resignation, at the end of 1891, in a letter I wrote to Mr. Booth, I stated that "without a competent official responsible for the executive direction of the land improvement work for at least four months to come I do not think I could, in the position of a consultant, prevent the colony from being a failure so far as the landed work and the training of the men in that department is concerned." That expert that I wished to be appointed was not appointed, and my resignation was the result.

9610. Is it managed by the Salvation Army alone?—Entirely now.

Mr. *Heywood Johnstone.*

9611. Would the expert whom you recommended have been a consulting or an executive expert?—I advised certain work and said, I would not take the responsibility of that work being carried out unless there was a man appointed whom I considered competent to supervise the execution of the work.

Chairman.

9612. Have you told us all you think essential on the subject of the Hadleigh Colony?—I think those are the principal points to be learned from it. I may say that as the result of the farming work last year a profit of 532*l.* was made. Of course, as I explained, the farming department is quite different from the industrial department. I have no doubt the profit is correctly shown at 532*l.*, for the balance sheets are very properly made up; the valuations are made by proper experts, and no doubt that surplus on the farming work is a genuine one in that way. As against the 532*l.* there is an admitted loss on the industrial department of something like 1,700*l.* in addition to the cost of administration.

Mr. *Mather.*

9613. Have they given up the industrial department now?—So far as I could judge from my visit a few weeks ago, they do not seem to be working the brickworks. Two years ago I thought the industrial work must stop when the finding of the additional funds necessary to carry it on came to an end.

Mr. *John Burns.*

9614. If the brickmaking has diminished, is it not a fact the outside building operations have proportionately increased?—I cannot say. Whatever outside operations they have got, it is perfectly evident from the last balance sheet that they have been a loss.

9615. Do you know that the Salvation Army has been building dwelling houses and farm buildings and other buildings outside their colony?—I have heard they have taken contracts for that, and I need hardly say I strongly object to any such thing. There is one point concerning outside competition upon which I formed strong opinions; that is, with regard to market gardening. It is unquestionable from investigations I have made in the district, that market gardeners have been thrown out of work by the competition of this colony in the Southend market. Of course the competition was not a competition in price; indeed, I think the Salvation Army produce got rather higher prices than the produce of the outside market gardeners; but it was the question of a limited market like Southend. Southend was already supplied by the market gardeners in the district, and I believe that some 30 or 40 outside market gardeners have been thrown out of work, undoubtedly owing to competition in the limited market of Southend without reduction in price.

Mr. *Jackson.*

9616. How could the competition be successful if there was no reduction in price?—Because it is a limited market; there is a demand to a certain extent, and if some new producer comes and produces a very large quantity of market garden produce, of course, there is not a market for the extra produce.

9617. Does not a man buy in the cheapest market?—To a certain extent he would, but if the produce is superior for the same price, people will naturally take that superior produce. In a great many instances the Salvation Army produce is superior to that grown outside the colony.

9618. That is the same thing as competition in price, is it not? If you get a better article for the same price it is practically the same as competition in price?—What I meant was that the Salvation Army claim that they have not done anything to reduce the price, and I think their claim is correct; it is not a competition of price in that sense.

Mr. *John Burns.*

9619. It is a competition in quality?—Yes.

9620. Have you seen any of the houses that have been built by these men on the colony?—I do not know which the houses are that have been built by the colony.

Chairman.

9621. I do not think that we are concerned with the operations of the Salvation Army beyond the question whether the farm colony promoted by them has been successful to some degree or not. That is the point to which you have directed your attention?—Yes.

Mr. *Mather.*

9622. The workshops are closed now, are they not?—I cannot speak definitely as to that; I have only given my attention to the question of how far the experience of the colony showed that the men could be profitably used in the hand labour on agricultural land.

Mr. *John Burns.*

9623. If there has been outside building competition with external industries in other directions than agriculture that has been contrary to your view and wish?—Undoubtedly; I do not think a farm colony ought to go into anything except agricultural work.

9624. Does your general experience in connection with all the colony schemes in England and abroad lead you to believe that a sober and steady unemployed man would resort to the colony when he could not get ordinary employment?—I should have said the experience both of the Wanstead Flats and the Abbey Mills experiments showed that he would do so at all events as a temporary means of maintenance.

9625. As regards the work at Abbey Mills and Wanstead, was it not carried out under practically normal wages in the one case and trade union wages in the other, and consequently it only ordinary employment?—In the case of Wanstead Flats, I thought it was not so.

9626. They had piece-work which in many cases exceeded the normal wages?—I think, undoubtedly, any colony must be based on piece-work.

9627. As apart from Wanstead Flats and Abbey Mills, do you consider in the light of your experience that a sober, steady, married and unemployed man is willing to break up his home and his local associations to go to a colony such as Hadleigh or the Belgium or German Colonies, necessarily of a penal or disciplinary character?—I do not think any man would break up his home to go to such a colony, but I do not think the colony need be of a penal character.

9628. Do you know any colonies which are not of a penal or disciplinary character?—Take the French Colony; that is open to any man who volunteers for a place there, and occasionally for a single vacancy they have as many as 40 and 50 of the Paris unemployed applying for that vacancy.

9629. Have you seen the French Colony?—Yes.

9630. What type of men mostly go there?—They seemed to be very willing workers.

9631. Are they not mostly men from the night shelters in Paris?—They are mostly from the night shelters in Paris.

9632. Do you compare them with an average bricklayer and painter, who loves his home and does not care for a degrading association of such

Mr *John Burns*—continued.

a colony?—I should look at it from this point of view, that I think the respectable men would be much better workers on the colony than the men from the shelters.

9633. At all events, these sort of men are not the men to drift there?—Not to the same extent, because skilled men seem better able to get employment.

9634. You tell us that at Hadleigh 85 per cent., judging from your experience, are there through drink, or the results of drink?—Yes.

9635. Do you think that a sober and steady workman out of work would select that type of man as his associate, generally speaking?—I do not think they would; and that is the reason why I emphasise so strongly, in my notes upon the German colonies, that it would be impossible to expect those two classes of men to go to the same colony.

9636. I gather from you that for the unemployed who are averse to penal and disciplinary conditions, a labour colony of the Hadleigh and German and Belgium type is not an attractive place?—No, the German experience shows that the respectable class of men will not go to an open colony.

9637. May I take it that these sober, steady, respectable men will not go to a colony like Hadleigh, where 85 per cent. are there through drink, and which might be regarded as, shall I say, a country home for inebriates, or an institution for the treatment of inebriety, tempered with the work on the soul?—They claim, of course, not to be inebriates.

9638. You do not need more than one look to see what they are?—Evidently the majority of them have been.

9639. Do you consider that even given better economic and social results from a labour colony, such as Hadleigh, it is a wise, a reasonable, and humane thing to have 300 men penned up in a labour colony there, without their wives or their sweethearts; do you consider that a colony, even if it were economically successful, would be justified if concurrently with its economical success you had moral degradation, such as a single man's colony must necessarily involve?—I do not think that a single man's colony need involve moral degradation.

9640. Have you ever lived in a garrison town?—I have.

9641. Do you say that seriously, after having lived in one?—I do not think it applies to this case. It is pointed out in this draft scheme that there will be married men on this colony.

9642. Are there any there yet?—I am referring to Mr. Mather's scheme.

9643. Have you had any experience of any colony where married men and women colonists have been placed?—None, except at Frederiksoord in Holland, as to which evidence has been given already.

9644. That is rather different, I think. You said that 94,000*l.* had been put into the Hadleigh Colony, and that 300 men were in training, if you like, or doing work there. Can you tell me the proportion out of the 300 men who are officials?—I cannot say.

9645. You cannot tell of that number the proportion of skilled labourers?—No, a description of the condition of the colony will be found in the Blue Book on the unemployed, and I presume if it is wanted an officer from the Salvation Army will give evidence upon that.

9646. Have you seen the complaints of the Camberwell men who were sent down to Hadleigh?—I have heard some of them; but I have also got here a report of the Camberwell guardians as to the result of the experiment, in which they suggest it might be continued.

9647. Have you considered whether it would not be better to give an average of 40,000*l.* a year to the Essex farmers to take on a certain proportion of these men in connection with the ordinary labour they employ. Have you considered whether that would not be, to the community and to Essex, more profitable than having a separate colony of the submerged tenth alone?—I have heard of that suggestion, but it seems to me there would be some difficulty in it.

9648. Would not the proportion of reclamations be greater if the 300 men were distributed over 50 farms in the neighbourhood in Essex than herding the 300 men together?—The difficulty would be as to the management and the ownership of the land. A colony cannot be successfully carried out unless those working it are the owners of the land.

9649. Do you not think that a trained farmer would be better qualified to superintend 10 to 15 of General Booth's labourers (provided that the conditions were in other respects the same) than men who, however full of spiritual enthusiasm, did not possess the technical knowledge necessary for agricultural success?—Yes.

9650. Would not that provide the men means of getting back to decent and steady employment?—It depends so entirely upon the class of men who have the direction of the labour; but in certain cases it might be.

9651. What restraint is put upon these men leaving the colony to seek for employment?—I cannot say at all. I am of course not here to give evidence upon the Hadleigh Colony.

9652. Should not a colony as a means of providing work for the unemployed, offer a man a very easy medium of getting back to his regular employment?—I think it has been proved that a colony when it is on the voluntary system is useful in that way, from the earliest result of the German colonies. The German colonies when first established were for the respectable members of the unemployed working classes, and as a result out of the 1,200 men coming upon the first colony in a period of 14 months 830 had situations found through the colony, and 130 others went to situations found independently of the officers of the colony.

9653. But as years went on that did not take place, did it?—It did not take place because of the deterioration in the quality of the men coming to the colony in consequence of its being an open colony.

9654. Because of the repugnance on the part of the steady, sober, unemployed to associate with the nucleus at the colony of the criminals or men of criminal taint?—Yes, but that can be avoided

Mr. *John Burns*—continued.

avoided in the organisation of the colony, such as that described in the draft scheme.

9655. In what way?—By the principle of a selection of the men on the part of those governing the colony. The colony is kept for the respectable members of the working class, each man to be approved before admission.

9656. I gather from you that it would help to make the labour colony a success from the point of view of the sober and steady unemployed, provided greater discretion were shown, and the men were put through a sifting process?—That is a point that would have to be carried out.

9657. What would you do with the men who refused to go through that sifting process?—They would have to be dealt with on a colony formed for the vagrant class, if a colony is wanted for that class, as in Belgium and Holland. That opens quite a fresh question, as Mr. Willink suggested, namely, whether it is worth dealing with that class in that way; but a free colony started for the working classes can only be successfully maintained for the *bonâ fide* working classes by the most careful selection, as is done in France.

9658. Assuming one labour colony was made a success would not an indefinite extension of these labour colonies in close proximity to large towns set up competition with the ordinary products produced by free labourers under normal conditions, and consequently defeat the object which the first labour colony had in view?—I see no reason why they should do so under careful management.

9659. You have heard the complaints, I suppose, about the Salvation Army matches and Salvation Army bundles of wood. You yourself have volunteered the statement that market gardeners in the neigbourhood have been injured by the competition from Hadleigh?—Simply because there are complaints arising from what one may presume to be mismanagement in one colony, it does not follow that there will be complaints in regard to all colonies.

9660. Would not an indefinite extension of labour colonies, either well or badly managed, mean that just in proportion as they were well managed so the products would enter into competition with the free labour outside?—I think under good management the labour colony ought to be so directed that the products do not enter into competition with the labour outside.

9661. How can that be effected?—That is covered in the draft scheme which Mr. Mather has placed before the Committee by various suggestions.

9662. I want to know how the non-competition of labour colony industry would arise?—By the production of products which are required for consumption or use upon the colony itself, and putting into the market for outside sale only such products as are not now produced in this country.

9663. Let us take your ideal labour colony with no industry employed at all but exclusively agriculture and market gardening; you cannot draw a line between market gardening and agriculture; supposing you have 1,000 men on General Booth's colony, at Hadleigh, growing cabbages,

Mr. *John Burns*—continued.

turnips, cucumbers, and tomatoes for the London market; those men could not live on those products; they would have to sell the surplus which they did not require to buy boots and other things; how would you dispose of that surplus?—I should only grow such crops for sale for which a demand could be obtained without competing with products now grown in this country; that could be done in more ways than one. First of all, the principal employment on such a colony should be arable dairying, and the principal products would be milk and butter, which would not compete because there is an underproduction of those products in England at the present time.

9664. Will you stick to my illustration of cabbages and potatoes; supposing you have a thousand men on the Hadleigh Colony engaged in some agricultural operation, the growth of cabbages or potatoes, either for the Southend or London market. The more successful the colony was, the greater would be the product. Where would their surplus commodities go?—They ought not to grow any such thing as cabbages or those vegetables beyond the extent required for their own consumption.

9665. What would they grow other than what was necessary for their own consumption?—They would grow, in the first place, crops for the maintenance of cows, and turn that product into butter, because butter is a product that does not compete with home products.

Mr. *Jackson.*

9666. How do you make out that butter does not compete with home products; is there no home product butter made?—There is home product butter made, of course, but it is insufficient for the supply of the needs of this country, as is shown by the fact that butter is annually imported into this country from abroad to the extent of about 15,000,000*l.* sterling.

9667. Would you not make the competition greater with the existing grower in this country if you enlarge that 15,000,000*l.* to 16,000,000*l.*?—Certainly not, because the existing grower would get his market just as he does now.

Chairman.

9668. You seem to assume that the additional production of butter in this colony would exclude the foreign butter, but not interfere with the home butter?—Certainly; because if we produce sufficient in this country for the consumption of the people here the whole of it will be sold here. We have such superior facilities in competition with any foreign product that, no matter what quantity we produce within the limits of our demand, we can successfully compete with the foreigner.

Mr. *Heywood Johnstone.*

9669. Irrespective of the cost of production?—The cost of production of such a thing as butter is decidedly less here than abroad.

Mr. *John Burns.*

9670. Supposing the local farmers were selling milk at Southend at 4*d.* a quart, and supposing the Salvation Army were producing milk and

Mr. *John Burns*—continued.

butter at Hadleigh, and by virtue of the subsidy which the Hadleigh colony get from philanthropy and charity, and practically paying no wages, were able to sell the same quality of milk at 3*d.*, what would become of the agricultural labourer tending the cows producing this milk at 4*d.* a quart?—I should say it was improper management on the part of the colony to allow that.

9671. You have to have your colony paying the same wages as outside farmers to put them on an equal footing?—The allowance paid in the colony would be based on the ordinary piecework rate current in the district.

9672. To compete fairly and equally the labour colony would have to pay the same wages for the production of milk as the outside farmers; would that be good management?—Certainly. I do not think that, using the unskilled labour, it would be really cheaper than what the ordinary farmer is paying.

9673. Even given your conditions, would not the same thing result with milk as resulted with the market gardening, viz., that even if you did not undersell in price there would be competition in quality, and consequently the professional agricultural labourer would be thrown out of employment?—If the product is butter, that could not occur; if it is milk, it is just possible it would, because it would be improper management to send milk into the market from Essex, on the ground that the market for milk is already sufficiently supplied.

9674. If that is so, would you still suggest a dairy in the colony?—I suggest a dairy, but I am putting the product not in the form of milk but of butter.

9675. Would it not then become an industrial colony, and as such come within the lines of your condemnation?—Certainly not, because butter is a product that would not injure the outside products; if we produce another million pounds of butter that would not affect the value of the outside product of butter. We should get the same price for it as proper factory-made butter now realises.

9676. You admit that the competition with the market gardeners has done the local market gardeners harm?—Certainly, I think it has.

9677. Do you know that General Booth's bricklayers and carpenters and labourers receiving from 4*s.* to 8*s.* per week and their allowances on the colony in the building trade, are bringing down the local wages of the carpenters, bricklayers, and joiners to the extent of throwing them out of work?—I have seen that alleged.

9678. If it is true with market gardening, painting, plumbing, and bricklaying, would not the same thing apply to buttermaking or any other agricultural products?—No, because the things are on a different basis. In the case of butter we are dealing with a product of which an insufficient quantity is produced in this country; it is not a competing industry at all.

9679. Would you not prefer that the total cost of the labour colony should be added to the general cost of the products by reducing the hours of the men generally?—I suggest that any profits on a colony of this kind would go directly to the men engaged upon it.

Mr. *John Burns*—continued.

9680. You misunderstood my question; would it not be better instead of spending 34,000*l.* a year on a labour colony, the surplus products of which would compete with outside labour, to add that 34,000*l.* to the enhanced price of ordinary products by giving more men employment so as to prevent them from going to the colony at all?—I do not see how it could be done.

9681. It is done by, at present, charity; it would be done in the price of the products; do you not see that?—I do not quite follow you.

Chairman.

9682. I do not think we need press you any further upon that point. We have sufficiently before us, I think, that your view is this: that there would be no unfair or reprehensible competition with agricultural industry if a colony such as you advocated devoted itself merely to growing sufficient to maintain the men on it, and, as regarded other industries, grew or produced not butter only but beetroot and flax and new developments of that sort, which would not interfere with the ordinary commodities produced outside; that is your view as I understand?—Yes, that is as pointed out in Clauses 20 and 22 of the scheme submitted by Mr. Mather.

Mr. *John Burns.*

9683. The Royal Commission on depression of trade, which means un-employment, stated that England's means of production were in excess of its demands both for home and abroad. It also affirmed that the tendency was for England's power of producing wealth to outstrip consumption. It also stated that the ratio of increased power to produce grew faster every year, and that is how the unemployed were created. Do you think you will remove the unemployed, which is the result of over production, by those labour colonies, the products of which would accentuate that very difficulty?—I should say that the question as to production, looking at it from the agricultural point of view, is that we are now producing about half the quantity that we were 30 years ago on the soil of this country, so that I do not see that the question of over production will come in, even if we go to the extent of extending these colonies to such an extent that we produce now the same as we did from the land 30 years ago.

9684. Do I gather from you that with the unskilled labour you hope to compete with the professional labour, without protection?—I think it is possible to do so, bearing in mind the possibility it affords of the employment of the most improved system, and other machinery in conjunction with it.

9685. How do you reconcile that answer with other parts of your scheme which go in exclusively for hand labour as against steam, because it employs more?—I think it is; I think it is uneconomical for such an operation as digging, for instance. I think it would be quite uneconomical to put a man at such labour as digging

Mr. *John Burns*—continued.

digging up the land. I think land ought to be all steam-digged, and then hand labour employed on it after treatment when it has been steam-dug, because by the hand labour after treatment you get superior results from the hand labour to what you would get by any other means.

9686. My last question to you is, that you would prefer that unemployed men should be employed on labour colonies at work which they have hitherto not been used to, rather than reducing the hours of all to prevent them going to the labour colonies altogether?

Chairman.

9687. Have you entered upon that point?—I have not considered that point much, but I think any man ought to have a right to work as long as he wishes to.

Mr. *John Burns.*

9688. Even on the labour colony?—Certainly, if he gets a reward from it.

Mr. *Lawrence.*

9689. In the paper you have given us, you have said that the German Colony at Wilhelmsdorf was founded for well-conducted men out of employment. Is it not the case that the Dutch colonies in 1818 were practically founded for the same class, which I understand is the same class which Mr. Mather desires to help?—Yes, I should presume that was so at that time.

9690. Is it not historically correct that both these Dutch and German colonies have ceased to benefit that class, and that they have become more or less used for a lower class, and are now disciplinary, if not absolutely penal?—That does not apply to the Dutch Colony at Frederiksoord, but the one at Veenhuisan, in a similar manner to the German colonies, have practically become penal. The only difference between them is that the German Colony is controlled by a private society under Christian influence, while the Dutch Colony is controlled directly by the Government.

9691. Practically, my facts are correct, that with the good intentions in one case, 60 years ago, and in the other case 13 years ago, the good intentions have not been succeeded by the results that were expected of them?—It was owing to the fact which was not recognised at that time (as Professor Mavor points out in his report on these colonies) that a voluntary colonist would not go at the same time to a penal colony. Now it is recognised.

9692. And your suggestion is that you can really select the *crème de la crème* of the people who happen to be out of employment, and you will get them to go out in the country to live on these farms?—Certainly. I think I may say to a sufficient extent, at all events, to occupy the colonies that are suggested to be first started, and then before any large sum would be invested in these particular colonies, the experience of those colonies themselves will show whether they should be extended or not.

9693. You say, among the experiences you gained from the German colonies, the men unskilled in agricultural work can immediately undertake the reclamation of agricultural land;

Mr. *Lawrence*—continued.

that is a correct quotation from your words, I think. How can you deduce that from the experience at Wilhelmsdorf, where you inform us that eight horses are made use of to cultivate something like 1,000 acres?—The eight horses are used after the reclamation, and all the hand work carried out at Wilhelmsdorf is in reclaiming this land. Taking into consideration the improved value of the land at Wilhelmsdorf and other colonies where the valuation has been more precise, the improved valuation of the land shows that the increased value equals, or nearly equals, the cost of the labour.

9694. And you have seen from the Dutch colonies that land which is thought to be so-called improved, has not really been of the value which has been placed upon it, so that this enhanced value of this land created by pauper labour is a very uncertain and speculative quantity?—The increased labour of the German colonies is indicated by the valuation for assessment purposes, which annual value is carried out for the purposes of rating, and other assessments.

9695. You told us that in Germany the whole system is extravagant. Is it likely that, that being the case with the Germans, who are so methodical and careful, and having occasion to be so owing to their (on the whole) national poverty, that English people are likely to succeed where the Germans have failed?—So far from the German colonies being considered extravagant, they are considered an exceedingly economical method of dealing with the class which is received there, otherwise they would not have extended so much.

9696. I am taking your statement that you think the German management is bad?—The cost of administration is very high, but the fact that the paupers maintained in the Berlin workhouse only cost 3*l.* a year, as compared with about 16*l.* in England, shows they are economical.

9697. You inform us that the management is bad, and with all their attempts to be careful they have failed financially altogether, and I suggest that the Germans, being so much more methodical than we are, the chance is that any public body in England would fail still more than the Germans have failed?—I should rather gather from the financial results of these German colonies that they are extremely economical if we compare them with the cost of the maintenance of in-door paupers in our English workhouses, the only class with which they can fairly be compared.

9698. The German and Dutch colonies have practically now become nothing more than tramp farms excepting the one at Frederiksoord?—That is the case.

9699. The Swiss colonies were founded in 1889, and the French in 1892. I presume you will allow they have hardly been long enough founded to form any reliable opinion on their merits?—I should have thought they had been founded quite sufficiently long. The reason I should suggest why both the Swiss and the French Colony give satisfactory results is because they have had the benefit, just the same as we

Mr. *Lawrence*—continued.

have now, of the experience derived from these older colonies, and consequently they would be able to go on what would be recognised as correct economical lines, and avoiding the errors and mistakes that have been made in the earlier colonies that have been founded elsewhere.

9700. But if the German colonies founded in 1882 have failed within the last few years to attain their main object, is it not more prudent to hesitate to form an opinion from a colony founded in Switzerland in 1889, which is only 16 years old, and one founded in France, which is only three years old?—The German Colony that was founded in 1882 never has had any idea of being self-supporting. It was a means of giving work to those applying for charitable relief more in the nature of test-work than any other work, and the whole theory underlying the German colonies have been on that basis. The establishment of the French colony was quite different. A committee was appointed by the parish municipal council to investigate as to the results of colonies, and that committee reported accordingly, and reported as to the basis on which it has been founded.

9701. Apparently, the report you handed in for the French Colony was for the first year of the foundation of that establishment?—It was partly from the first report.

9702. Therefore it cannot be of any real value. Are you at all inclined to believe these statements as to the cost of the agricultural operations done by pauper labour as compared with ordinary labour, or would you not think them to be in no sense reliable?—I think as to the expense of harvesting no doubt it is correct, and I think that is where labour colonies in England would have a special advantage. It must be remembered in harvest time the ordinary labour is so very much more expensive than at ordinary agricultural times.

9703. But he does not require anything like the supervision that a pauper does?—No; if we take the words "pauper labour" as meaning unskilled labour, it depends on whether the men are working by piece-work or not. If a gang of men who previously had not any experience in the work are told off to load a cart of corn, for instance, it is rather remarkable to see that they are able to do it almost as rapidly as an ordinary agricultural labourer.

9704. I am surprised to hear that statement, because I have taken tramps fresh from the road and given them very elementary jobs, and they have been disastrous failures; are you prepared to say that a tramp without any previous experience can pitch hay or crops?—I do not think they can do it so well the first day or so, but I think the fact of their being on piece-work will sufficiently stimulate their powers to make it certainly a cheap kind of labour as compared with the agricultural labourer, who at that time gets, at all events, 5*s.* a day.

9705. I see in Mr. Mather's statement he presumes that a cottage and the out-buildings suitable for eight acres can be erected for 140*l.* Are you prepared to endorse that statement?—That is only given as an example in order to prove whether or not it would be possible to

Mr. *Lawrence*—continued.

minimise the cost, which is a detail which has to be considered. It is perfectly possible that a cottage could be erected for that money.

9706. Of what material and where?—It depends on the material of the district. If bricks are made in the locality, a pair of semi-detached brick cottages, with three bed-rooms, can be erected for 250*l.*

9707. With a kitchen and a scullery?—Yes, a kitchen and a scullery, and three bed-rooms over.

Mr. *Heywood Johnstone.*

9708. And a water supply?—Water supply from a well.

9709. Is the well included in the 140*l.*?—It would be included in the 250*l.* I have had cottages built in Essex of that class and at that cost.

Mr. *Lawrence.*

9710. What thickness of brick?—Nine-inch brickwork. I have had cheaper cottages built in Wiltshire of the local chalk, and occasionally in Sussex, where we can get very cheap stone. It is difficult to get a detached cottage for anything less than 125*l.*, but where one is building a pair it is possible to get them for less than that.

9711. In what part of Wiltshire have you heard of these cottages being erected?—I have seen some cottages erected of chalk with cement outside, a detached plain cottage, built at a cost of 120*l.*

9712. In what part of Wiltshire?—Winterslow.

9713. Then you put 20*l.* for the cost of the additional out-buildings?—The out buildings would cost about 30*l.*, as a rule. Of course they are built of timber, being sufficient to provide accommodation for the cow and the stores, for the pigs, and so forth, and with iron roofing.

9714. Do you know of any of these farm colonies, other than Frederiksoord, where men and their wives have been treated together?—There are numerous cases of small holdings, and many instances are given in the Reports in the Blue Books and in the Reports of the Agricultural Commissioners, but not with the advantages that are available on such settlements as are suggested.

9715. Are there numerous instances where men with their wives can be treated?—Not connected with the colonies, but independently. The cases are very numerous where a man and his wife have got a small living on the basis that is put down in this scheme, but there is no place of which I am aware where they are concentrated on a colony with special advantages which they get by being there, and as a sole means of livelihood.

9716. Have you heard that the result of Frederiksoord is, that practically there is a state of stagnation in the social advancement of the families, and that they cannot benefit their position, and that they are as much dependent on outside charity as when they first joined the place?—They are dependent on outside charity to the extent I have stated in the statement I have made, but there are schools of forestry, and schools of agriculture, and the children are assisted in technical training to a far larger extent than is found in our rural districts of England.

9717. But

Mr. Lawrence—continued.

9717. But the people are not made more independent; that is the point of my question?—They are independent, living on their holdings to that extent, except that the rents that they pay are not sufficient to pay the cost of the administration of the colony.

9718. You criticise the success of the Dutch colony by saying it is founded on very bad land, but we have had information from Mr. Willink that the adjoining land in the hands of freemen has been successful in supporting the people on it?—I think that is very possible, because at the time the Dutch colony was acquired, in 1818, the whole of the waste tract was obtained at the time it was acquired, and it is not at all impossible that the adjoining lands were in a better condition. Personally, I should think, in any case they are so far from a market that good results cannot be expected even from the adjoining land.

Mr. *Pickersgill.*

9719. I understand that you regard it as of the essence of your scheme that the colonists should be picked men?—Yes, certainly that is necessary.

9720. Would not there be a considerable danger of the respectable classes being crowded out by the same classes which fill the Belgian and the German colonies?—I do not see how that could occur if the principle of selection were strictly maintained in the same manner, for instance, as it is in the French colony at the present time.

9721. Do you think there is an opening for the establishment of colonies for what I call the master class in England?—Tramps, you mean.

9722. Loafers and tramps?—I think it would be very possible to establish such a colony, but I think it would have to be under quite a different system to that contemplated in the scheme. It would have to be a different scheme of control.

9723. I entirely agree; but my point is rather this: do not you think that it would be a security for the success of this class of colony if, alongside, or simultaneously with it, or before the establishment of your class of colony, there was established a colony somewhat on the Belgian or the Dutch plan for the loafer, the vagrant, and, perhaps, the ex-criminal?—I think it would be decidedly useful to have such a colony established, but I do not think it would be a necessity, nor would it affect the successful working of the volunteer colony, provided the principle of selection were always carefully adhered to.

9724. You do not agree with me that it would be a help to the successful realisation of your plan?—I think it would be a help.

Mr. *Heneage.*

9725. What do you mean by picked men?—That the colonists should be men who volunteer for work on the colony, and it should then be considered by the director as to whether or not they are suitable colonists, and who then pass a successful trial as to their capability for land work.

9726. Then you mean with regard to picked men, men picked with regard to their capabilities and not on account of their being out of employment, and not tramps?—They would not volunteer to come on the colony, unless they were unemployed. They would not be likely to have work on the colony if they were able to get better occupation elsewhere, and it is simply the selection of those among the unemployed. Certainly these colonies cannot take every man who is unemployed, so that we suggest that the right of selection amongst those men who are unemployed should be with those who are directing the colony.

Mr. *Heneage*—continued.

9727. I ask the question for this reason, that Mr. Mather in his evidence said that his idea of picked men was simply men who were out of employment from no fault of their own, and were not tramps or men of that class. You put it that you want to pick your men out of the men who are unemployed?—If a colony was sufficiently large to take every man with the qualification, then I should say we would have them, but as long as the colonies only have room for a comparatively small number, I should maintain the right of selection on the part of those directing the colonies.

9728. In the interest of making the colonies pay?—Not necessarily on that ground, but no doubt depending to a great extent on the men to be moved.

Mr. *Mather.*

9729. The selection that I defined for the colony was the unemployed working classes, the well conducted and of earnest desire who presented themselves before the Poor Law authority having the right to admit to such farm training colonies, and having desired on their part to receive relief only through work that they could do on the usual terms of working, whether they were unemployed in domestic service or other industrial occupation, that no examination as to character, no selection in any shape or form of one man over another was to be exercised, excepting that they qualified by being out of work and belong to the respectable working classes, but I gave a preference to married men who had a number of people depending on them.

Mr. *Heywood Johnstone.*

9730. You told the Committee on the last occasion that you knew thoroughly the working of the Hadleigh Colony?—I know the lines on which it was laid down.

9731. The words you used were: "I know thoroughly the working of the Hadleigh Colony." You have given us to-day two balance sheets, one of 1891, showing a profit of 43*l.*, and one of last year, showing a profit of 532*l.* on a total receipt of 17,782*l.* That is so, is it not?—That is so.

9732. Then the last balance sheet shows a profit of something like 2¾ per cent. on the turnover?—Yes, it would be so.

9733. You have not either of those balance sheets with you?—No. In referring to the work of the colony, I meant more particularly to describe the work as to the employment of these men upon the land, and not so much as to the financial results of the colony as a whole.

9734. I quite understand, but you have given us certain figures, and you must allow me to test them

Mr. *Heywood Johnstone*—continued.

them to a small extent. I think you told us that the capital expenditure up to the close of last year on that farm amounted to no less than 94,700*l.* odd?—Yes.

9735. That works out at about 820*l.* an acre, and you consider that capital expenditure is vastly in excess of what it need be?—Certainly.

9736. Can you tell us at all what part of that capital expenditure was properly attributable to Hadleigh as a farm colony?—I can, to some extent.

9737. Is it one-half or one-third?—I have the balance sheet of 1893 here, and I find that the cost of the land was 27,000*l.*, but I think the questions as to the balance sheets would be better answered by someone on behalf of the Army, and I have no means of access to them otherwise than is possessed by every member of the Committee.

9738. I propose to take you very shortly through it for that reason. Can you tell me if in the balance-sheet anything is allowed for interest upon capital?—I think not.

9739. Is anything allowed in the nature of rent?—No, nothing is allowed in the nature of rent.

9740. Supposing the land cost 27,000*l.*, there is no allowance for any interest upon that at all?—No, there is no such allowance.

9741. And there is no allowance for any interest on working capital?—I do not think so.

Mr. *Heywood Johnstone*—continued.

9742. So that the profit of 532*l.* last year is arrived at by excluding two items which you yourself would admit to be rather important ones?—Certainly.

9743. That is so, as a matter of fact. I am not asking your opinion about it?—That is so.

9744. I think you said that a farm colony of this sort could not be satisfactorily carried out unless the land belonged to the persons who were working it?—That is so.

9745. Do you mean by that that no interest upon the purchase-money of the land should be charged against the colony?—No, I simply meant by that that it would not do for an ordinary tenant, who would not have the benefit of the improved value resulting from the working of the men, so that an ordinary tenant could not take it.

9746. I wish to make that point clear to the Committee that your reason for saying that the land should be owned and not hired was that the benefit, if any, of the reclamation should go to the capital account of the owner, in a sense, that one owner was occupier as well; that it should not go into the pocket of the landowner?—That is so.

9747. But supposing compensation was given at the close of the tenancy for any improvements of that character, your objection would disappear?—It would; but it would probably be very difficult to get any place for tenancy on those principles.

9748. But as far as the principle is concerned, that is the only difficulty that you see in the way?—Quite so.

Mr. HENEAGE took the Chair.

9749. And you quite admit that some charge should be made among the working expenses for any interest upon the capital required to purchase the original land?—Certainly; but in cases where that interest is chargeable, certainly on the other side, ought to be added as income, the actual improved value shown as the result of this cultivation. Even on the cultivated land the result of land tillage would give a considerable improved value.

9750. Improved value in the way of cropping?—Improved value to the freehold.

9751. How do you bring into your balance-sheet the improved value to the freehold; that would come in your capital account?—That would come in the capital account.

9752. You cannot bring it into your yearly profit and loss account?—It depends on how it was worked. If it was a tenancy, then it would be brought into the profit and loss account, because it would be in the nature of improved tenant-right, for which a payment can be claimed at the end of the tenancy, and consequently in that way it would come into the annual profit and loss account.

9753. That would appear in the same column as other valuations?—Yes, that is so.

9754. Coming for a moment to the Hadleigh Farm, you told us that when the Salvation Army purchased it, it consisted of some 1,160 acres?—Yes, that was the area, I think.

9755. Of which 300 were in actual cultivation, and the balance, some 700 acres odd, had gone out of cultivation?—Yes.

9756. Was it a purely arable farm?—Some part of the land was old grass, which would be uneconomical if ploughed up, but not a large portion of it; I should think not more than 200 acres.

9757. That is to say, there were 300 acres under crop or in fallow?—Yes.

9758. And 200 of grass. Would that be seed or pasture?—Pasture.

9759. Actual old pasture?—Yes.

9760. And that would not be ploughed up?—No; of course it is more valuable as it is as old pasture, and consequently it would remain.

9761. Then we must strike that out of the uncultivated 700 acres, because it is more profitable in the state in which they found it?—Yes.

9762. That reduces the 700 to 500?—Yes.

9763. That 500, I suppose, included a few seeds?—No, the 500 is all land with grass growing on it, with more or less growth but no bottom growth, but some, of course, better than the other. Some land had been sown down and the other part had not been sown.

9764. Can you tell me, how much of the land had been laid down, and whether it was a temporary layer or permanent grass?—Two hundred and twenty acres, not 300, were arable at the time

Mr. *Heywood Johnstone*—continued.

time possession was taken. I have the figures here now. There was less than 150 acres of old grass, so that the balance must have been arable that had gone out of cultivation.

9765. There were 800 acres of arable which had gone out of cultivation, and some seeded itself and some had been laid down?—Yes.

9766. And you do not know the proportion of what was seeded and what had been laid down?—No, I have not got the proportion here.

9767. You told us that the marsh land was ploughed up?—A portion is. I should think about 150 acres more are now under cultivation than was under cultivation at the time the property was acquired.

9768. All marsh land?—Partly of land on the hill and partly of land on the marsh. There is a large area on the marsh. There is then a steep hill, the property rising 200 feet above sea level, and then about 150 acres of flat land on the top of the hill. The land which has been brought under tillage is partly on the marsh and partly on the hill slope.

9769. You did not get your hand labour to work until it had been ploughed?—These hill slopes were too steep to profitably cultivate by either steam or horse labour in any way, and they being sheltered and facing the south with a suitable sub-soil, were adaptable for fruit. The whole of that land has been dug and double trenched by hand, amounting to 25 acres, and fruit has been planted on it.

9770. Hard fruit or soft?—Strawberries and raspberries, and fruit trees on certain portions.

9771. Can you tell at all how that part of the farm has paid?—Last year it was supposed——

9772. Please do not tell me about "supposed," tell me whether you know or not?—I cannot say definitely.

9773. You cannot say whether that has paid or not?—It is claimed by the Salvation Army that it has paid.

9774. Do they represent the fruit cultivation has paid?—Certainly.

9775. But you do not know?—No.

9776. And you do not know what they have charged on the credit side?—At the time that work was beginning I had a sample dug in order to see how much it cost, and I found that the cost of digging in the form that we had it done, by a gang of 30 men that we put on this particular work, was from 8*l.* to 10*l.* per acre. The land at the price it was purchased was 12*l.* per acre, so that after having this expense upon it it would cost 22*l.* per acre, when planted with the fruit, in addition to the cost of planting. That is the work which is referred to before Lord Onslow's Committee by Mr. Bird as being undoubtedly a profitable experiment, and there is no doubt that the land was worth the capital expenditure that had been made upon it.

9777. You say that any figure on that point must come from the Salvation Army officials and not from yourself?—They would be able to give the actual annual returns.

9778. I do not want to ask you about things that we shall get better from others. Now, come back to the land that was ploughed, with the exception of this land, which, being on a slope, was too steep for profitable employment

Mr. *Heywood Johnstone*—continued.

(as you had not got Cornish men about) under the plough; you ploughed the flat land?—Yes, the flat land on the marsh has been ploughed.

9779. Before you steam-ploughed?—Some part was steam-ploughed, and the remainder horse-ploughed; I am not certain that it was not all horse-ploughed.

9780. Then that I suppose was all done by skilled men?—Yes.

9781. Not by any of the men for whose benefit the colony was instituted?—No.

9782. When did their work come in, was it harrowed?—Their work would come on the hand harrowing, and also in one of the cases that was quite at the earlier stages in the first year in taking off the turf and burning the surface of the soil.

9783. First of all, this land had to be ploughed and harrowed, and the seed bed made and sowed down, and the seed rolled in, and I suppose that was done by skilled agricultural labour?—Some part of it.

9784. And, until you wanted the land hand-hoed, you had no employment at all for the casual men?—I am not quite certain how it was done, but undoubtedly the method by which it ought to have been done was that the hand labour ought to have been put on immediately after the ploughing, and the preparation of the seed beds should be done entirely by hand-labour. Part of it was so done; whether the whole of it was done I cannot say, but the profitable employment of the hand labour would have been in substitution of the harrow and after the steam-ploughing. After the steam digger has gone over the land it is left in hard clods, and the next labour is by putting on the hand labour with a fork in order to break those clods and form the seed-bed.

9785. Can you tell me the comparative cost of doing that compared with harrowing and rolling?—Yes, I tried the cost of piecework of the same nature that has been put in evidence by Mr. Hill in the case of the Wanstead experiment, and agree with what he said, viz., that the digging would be one rod per day. I found, with the cultivation after the steam-plough, one man could do four rods per day, as compared with one rod per day if he dug.

9786. Four rods after the steam-plough, as compared with one rod with the spade?—Yes; my experiments quite agreed with Mr. Hill in that way; that one rod was as much as a man could do if he dug. The four rods a day cost 2*l.* an acre, so that the cost of treatment by hand labour was 2*l.* per acre as compared with about 30*s.* for harrowing and preparing the seed-bed by horse labour.

9787. That is so, a cost of 10*s.* an acre more?—Certainly with probably far better crops.

9788. You have spoken of a very large crop of rivet wheat. Do you know what that cost to produce per acre?—I do not know what it cost at all.

9789. Or what it fetched; you have not gone into the question of whether that was a profitable crop or not?—Mr. Hawthorn, who was responsible for growing it on his method, considered that the crop was worth 15*l.* per acre, and has made

Mr. *Heywood Johnstone*—continued.

a statement to that effect. I probably should not have supported that opinion.

9790. What rate of wage have you calculated on Mr. Mather's system?—Simply on piecework arrangements throughout.

9791. You pay these colonists at the same rate that an ordinary labourer alongside would be paid?—That would be the only correct method, it seems to me, of assessing the value of labour. We give a certain proportion for the cost of his maintenance, and anything in excess of that he gets as a grant to himself, or it is sent to his family.

9792. Do not you think it would be putting the ordinary labourer at a disadvantage that any man who had passed your test of selection should be able to come to one farm in the parish, and get employment any time, whereas the ordinary labourer might be thrown out of employment at any time, and could not command the same wages as a matter of right?—I do not think there is any difficulty in that way.

9793. It does not occur to you as a hardship that there might be two farms side by side, on one of which a man not belonging to the parish would have a modified right of employment at a standard wage at all times, and next to it there should be a farm at which the well-conducted labourer who lived in the parish all his life should not have a right of employment?—No, I do not think so.

9794. You do not see any difficulty or any hardship in that?—No; more particularly as the work of these men on the land to be cultivated would probably mean increased employment of some skilled agricultural labourers.

9795. Then all your calculations are based on the ground of paying the full agricultural wage?—Certainly they would be. I may take as an instance of this what has been already given as an example: suppose the produce of this farm to be converted into milk by keeping 100 cows. That would mean keeping eight skilled labourers for milking and the care of that live stock, as well as the unskilled men, and this farm being worked in that particular manner would not only employ the unskilled man from London, but would give increased employment to the skilled men in that particular neighbourhood, at all events, in this particular part of the work.

9796. If this is to be a commercial success on the basis of the ordinary wage, what is to prevent ordinary private employers doing it?—There would be no reason why a private employer should not do it, except the difficulty as to the improvement of the land, and also the difficulty in the abuse which might be made of the system of supplying labour on these terms to a private individual.

9797. What do you mean by "supplying labour on these terms"?—On the terms of allowing any individual farmer to have men subsidised or nominated by boards of guardians, and who are prepared to give their labour on that particular basis, getting nothing beyond their maintenance, unless their piecework justified it. That would be supplying labour on cheaper terms than the ordinary employer would be able to get.

Mr. *Heywood Johnstone*—continued.

9798. Then the root and basis of it all is that labour is to be employed on cheaper terms?—It is simply the case of men who volunteer and are prepared to give the work.

9799. If men volunteer and are prepared to work for less than the current rate of wage, is it necessary to set up all this machinery to enable them to get work on those terms?—They do not work for less than the current wage; they take the current wage, but they get less for it. They simply get their maintenance and do not get the full agricultural labourer's wages, because they are less competent.

9800. It is a kind of truck system; they have got to take payment in kind?—To a certain extent it is, except that they gain by being maintained cheaper than they could maintain themselves. A man being sent to the colony would have probably better food and less responsible work than an agricultural labourer getting his 14*s.* a week and an independent cottage.

9801. That is the net result, that a man would have better food and a happier life than the agricultural labourer, and he would be entirely quit and free from the care and responsibilities of his wife, a responsibility which would be looked after by the guardians. That is what it comes to, is it not?—I do not think it would be sufficiently attractive for him to wish to continue it as a permanent livelihood.

Mr. *Round.*

9802. You were referring to the balance sheets of the Salvation Army; have you seen them?—I have simply had the ordinary public access to them; nothing beyond that.

9803. Are they made out by competent agricultural valuers, or by an accountant?—I think the value is made each year by a competent agricultural valuer, so I think to that extent the balance sheets are perfectly correct as to the agricultural results.

9804. There is still a large portion of the Hadleigh land that is not reclaimed and brought into cultivation yet?—Yes, there is a large area yet.

9805. Do you know what they did with the labourers during the severe and prolonged frost?—I do not know at all.

9806. How could you deal with a quantity of men in the country during a prolonged frost?—I think there would be some difficulty, but we partly cover it by the suggestions made in this scheme in Clauses 22 to 26, with reference to the different industries; that would be mainly utilised during the winter weather. Such a thing, for instance, as the industries named in Clause 22 particularly would be kept all through the winter, and then we should have the ordinary work which an ordinary farmer would have to do, such a thing as threshing wheat, which ordinarily would be done by machinery. In the case of a hard winter we should have it done by hand labour in the same way that the ordinary farmer would, but we should be able to use that hand labour to a far larger extent.

9807. With regard to this scheme Mr. Mather has put before us, take Clause 32, "Estimate for current expenses of the cultivated land, 4,900*l.*" Does that include the cost of fodder for horses, or

Mr. *Round*—continued.

is it assumed that the farm would produce that?—That amount is made up of detailed items.

9808. You do not put down that one of fodder?—Yes, I include the cost of horses.

9809. It is a most important item?—I include in that estimate 12 skilled labourers and the feed for eight horses, and a sufficient allowance for steam digging, which I estimate would be hired.

9810. That I suppose would be the current expenses of a farm in the ordinary way for ordinary crops. It would not be for special crops?—I have estimated the crop of 600 acres. I have gone on that basis. I estimate that this 600 acres would be 60 acres of garden produce; 60 acres for seed growing, 120 acres wheat, 120 acres barley, and 240 acres green crops for the maintenance of the cows. The ordinary four-course rotation, with the addition of garden produce for home consumption and seed growing, which I think is a most important department of farming to employ these people.

9811. Would that estimate also include the harvest labour or not?—Yes; I have taken into account the harvest labour. The harvest labour would be cheaper in consequence of having this large number of men, instead of having to pay the extra current wages, but I have allowed, I see, in my estimate of expenses 400*l.* for the ordinary skilled labourer in harvesting.

9812. As to Clause 33, where, you see, the annual value of the crops might be expected to be 9*l.* an acre, is that the annual value of the ordinary crops?—That would be rather a high value for ordinary crops, but I have worked it out in detail on the same area of farming that I have just named, and I find that that detail comes out at 5,700*l.* The returns vary from 5*l.* per acre for the lowest value of green crop fed to as much as 20*l.* per acre for the comparatively small area which would be used for the garden produce consumed on the colony. I think 20*l.* an acre would be a moderate value to put upon that area.

9813. Would the 9*l.* an acre include the straw?—Certainly; that would include the value of the straw.

9814. With regard to a statement made by Mr. Mather in his evidence. At Question 9296 he is asked, "What price does he get for his

Mr. *Round*—continued.

milk? (*A.*) I think 5*d.* a gallon." Then the next question is, "Is it 5*d.* per barn gallon on the farm? (*A.*) Yes, I think that is about the price"?—I think that should be 5*d.* per Imperial gallon.

Mr. *Mather*.

9815. Have you thoroughly investigated the bearing of this scheme, either in part or as a whole, on the question we have to deal with before this Committee, viz., in the employment of the unemployed well-conducted working classes?—Certainly.

9816. Taking that fact as a point of view, do you think, with the experience you have gained of the Hadleigh Colony, a colony which has formed to-day among my honourable friends the chief feature of your evidence, although you have no intimate knowledge of it at all, that any part of this scheme as submitted to the Committee is based upon either the principles or the practice of the Hadleigh Farm Colony?—Certainly not. I only referred to the Hadleigh Colony as simply an instance of experience gained upon details, as to the actual value of work applied in certain particular directions which I knew of in that colony.

9817. Do you think the provision of this scheme, for its practical working, for its financial success, and for the value of it in relation to the employment of such labour as it provides for, in any sense compares with either the labour employed at Hadleigh, the financial condition of Hadleigh, or the principles on which Hadleigh has been found, and is carried on?—No, I do not think it is on the same principle in any way, or that the results gained at Hadleigh will be of very great value in considering that question otherwise than from the one point I have just mentioned.

9818. It is only in so far as the Hadleigh Colony has proved that all sorts and conditions of men sent to the Salvation Army Colony, composed chiefly of the submerged tenth, that their labour can be usefully employed on land in this condition; it is only so far that you bring the Hadleigh Colony forward as bearing on the success of this scheme at all?—That is all.

Tuesday, 28th May 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Thomas Henry Bolton.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Round.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).

THE RIGHT HONOURABLE A. H. DYKE ACLAND, IN THE CHAIR.

Mr. BRAMWELL BOOTH, called in; and Examined.

Chairman.

9819. YOU attend here on behalf of the Salvation Army, do you not?—Yes.

9820. Will you tell us what the proper definition of your position is in the Salvation Army?—I am chief of the staff.

9821. Would you in the first place tell us something about the origin of the work which led to your dealing with the unemployed?—Up to 1890 or thereabouts the army had been conducting principally a strictly religious work, amongst the poorer classes chiefly, both of this country and some other countries. In carrying out that work, I may say, without going into details, we have been from time to time very strongly impressed with the fact that some special means should be adopted for helping the unfortunate and overcrowded parts of the working population to a better condition of life; and General Booth made a number of careful inquiries which were extended over a period of about 18 months or two years specially with a view of discovering what could be done to aid the more destitute and more unfortunate of the people. As the result of those inquiries he published a book, of which you no doubt have heard: and he explained there somewhat in detail what his views were, what the considerations were which had led him to adopt those views, and what his hope was with regard to a special plan which he thought might be carried into effect for remedying the state of things, at any rate, as regards certain classes of workless people.

9822. When did the definite plan for doing something for the unemployed begin?—At the end of 1890.

9823. Will you tell us in what way you have worked out your classification with these unemployed people?—We found there might be roughly taken to be three general divisions of the unemployed. The first comprised those who were efficient workers of good standing in their respective trades, and of good character, but who were from various causes occasionally thrown out

Chairman—continued.

of employment; for instance, sometimes from ill-health, sometimes from special causes, such as extensive labour disputes, and sometimes from the fluctuations of trade generally. Then we found another class who were a little lower than the last, comprising those who might be said to be sinking down, who had generally lost their footing with their unions, if they had belonged to trade unions, and who were scarcely so proficient in their various trades, and were getting into a state bordering on destitution.

9824. The work of this second class, I presume, was still more irregular than that of the first class?—Quite so. There was a third class, made up chiefly of the homeless, the idle, the vicious, and, I suppose I must add, the criminal. Now, in considering the evil in that form, it appeared to General Booth that there could be only three methods of meeting and remedying it.

9825. Will you tell us what those three methods of meeting and remedying this state of affairs were?—Only three methods seemed to him to be practicable. The first was to make more work; and that seemed hardly likely to be realised in view of the fact of the increase in machinery and the increasing competition of foreign labour in Germany and in India, and so on. There was an alternative to that in a more equal distribution of existing work; but the experiments which had been made, and which have since been made, with regard to the eight hours' day, and so on, have confirmed his view, hardly justified him, as he thought, in hoping that that could be, at any rate, upon any very large scale, a remedy for the difficulty. The further alternative seemed to him to be some plan by which the number of workers could be reduced. If the work could not be increased, the workers surely should be reduced by being taken away from the overcrowed market and put to some part of the world where they could live without trampling upon somebody else.

9826. When

Chairman—continued.

9826. When you say they should be reduced, do you mean reduced in some given place?—Yes, reduced in number in some given place.

9827. By removal, or otherwise?—By removal. General Booth felt that was the most likely plan; and the question then naturally arose, could they be removed, and, if so, where to?

9828. What was the plan you arrived at after you had come to that conclusion?—We found that there were very large tracts of beautiful fertile land in the colonies which could easily be made to support all our surplus population; and from the reports of our own men and others whose business it was to make such enquiries, the General concluded that it would be quite possible, under certain conditions, to establish upon suitable land in the colonies large numbers of the unemployed workers here in a manner which would secure their being happy and thriving colonists.

9829. Have you carried out that principle to any extent?—No. I ought to have said, perhaps, at the beginning of my remarks that the social scheme of the Salvation Army has been as yet, and must be treated as being, only a partially completed effort. We have from various causes, which it is not necessary to go into here, the principal one among them being want of money, been prevented from carrying it out to a complete issue. We have a very strong hope that we shall now be able to do something in the direction of the over-sea colony, which is the third stage of the undertaking; but at present we have done nothing in the way of transferring people from this country to others, for our over-the-sea colony, which is the ultimate material aim of the whole enterprise, but we have trained a number of men for emigration, and sent them abroad to our friends, and through existing agencies.

9830. Then emigration forms a definite part of your scheme, but as yet you have not been able to carry it out?—The transfer of the workless people to the colonies has not been carried out.

9831. Will you go to the part of the scheme which has been carried out?—Before I go to that, perhaps you would allow me to remark further, that the General arrived at the conclusion that it was possible for these workless people to live and thrive in the Colonies from the experiences of some of the people whom we have known and whose cases have, in sufficient numbers to enable us to form a judgment, been put before us. People leaving this country, with comparatively little capital but with the determination to work hard, have been able to secure for themselves, comparatively speaking, positions of comfort and plenty, working upon the land in the colonies.

9832. Do you propose to apply this over-sea colony plan to all the three classes that you mentioned?—Yes and no; yes in this sense, that we should apply it to a suitable selection from all

Chairman—continued.

the three classes. Then the General having determined upon the desirability of taking the people away, and the possibility of arranging for them to live when they got away, he was confronted with the question of what was necessary to carry the enterprise out. Now, in the first place it was necessary that some method of immediate help to the individual himself should be forthcoming. The workless man, no matter which of the three sections he is found in, wants immediate help and advice. The distant prospects may appear interesting; but he must have a hand stretched out to him there and then, and that help must be, we felt, based upon certain sound principles. In the first place, it must be economical; that is to say, it must not be too costly; secondly, it must not be of the nature of mere charity; it must not be of a character which would damage the person whom we seek to help, or in any way disturb or weaken his self-reliance, independence, and freedom. Further, we felt it must be on such a scale and on such conditions as would enable us to classify carefully the persons whom we take in hand. We felt, further, that it must be of a nature which might enable us to train the men, and, if you like, educate them to some extent. We felt also that it was necessary to give them some opportunities of receiving advice and counsel which might help them in attaining improved moral conditions. It is at that point, perhaps, I ought to say, that while we have laid it down strictly, and have, I think I may say (and I think I know what I am saying), adhered strictly to the rule we have laid down for ourselves, that in no shape or form would the benefits or opportunities of our social work be administered with any regard to religious or irreligious feelings or prejudices, yet we do rely very strongly indeed upon the benefits of religious and spiritual advice with a view to improving the moral condition of the people we want to benefit. That necessity for immediate help, in order to carry out our plan, originated in the formation of what we call our City Colony operations. I cannot possibly stay to describe in detail all those various agencies, and it is not necessary for your purpose that I should; but I may say there is a network of agencies carried on by us in connection with what we call the city colony to meet the wants of the different classes of persons who require this immediate help. We began with an effort to provide food on the lowest possible scale of charges in the simplest possible form for those who are left with barely a copper. We are now supplying about 25,000 meals a day. Then we have a system of shelters for the homeless, which is devised upon a graduating plan; there is first the cheapest and roughest accommodation provided for the poorest and lowest, or perhaps I ought not to say the lowest, because often the poorest men are not the lowest. We give them a night's shelter in a warm room, a seat to sit upon, and a slice of bread, plenty of hot and cold water, and clean towels, and we charge them a penny for that night's accommodation.

THE RIGHT HONOURABLE H. CAMPBELL-BANNERMAN, TOOK THE CHAIR.

Chairman.

9833. A SLICE of bread is the only food, is it, included in that penny?—Yes, that is included in the penny. Then for the slightly better class of man, who has not gone quite so low, or who is coming up again, provision is made whereby for 2*d.* he can get a bunk to lie down in with a mattress and a pillow, and a covering, and also towels and hot and cold water. Then there are places for 3*d.* a little better still, and again for 4*d.* a little better still, and again for 6*d.* a little better still; the total accommodation in the shelters being for 5,420 persons.

9834. Are these shelters scattered through the east-end of London?—They are scattered throughout London. There is also one in Bristol, one in Leeds, and one in Bradford, and for women one in Edinburgh and Cardiff. I have here a schedule of the various shelters for homeless men and women.

9835. Will you hand it in?—Yes. (*The same was handed in.*)

9836. Will you continue what you were saying?—We find in the shelter work for the unemployed one very great advantage, or rather, I might say, two almost equal advantages. One is that you have got an opportunity of coming into immediate contact with the individual sufferer; he is there; you can speak to him and inquire into his condition and the circumstances which have brought him to his present condition of want, and can find out what his position has been, and advise him what he should do to get on to the level of decent society again. In the second place, it enables us to classify the men. One of the most horrible misfortunes of misfortune is that it makes such strange bedfellows; the deserving man who wants to work, has, merely because he is without a penny, to come down to the level of the biggest scoundrel who is equally without a penny. The shelters enable us to divide, separate, and take out the man who appears to be more deserving, and who has not gone down so low, and is willing to work; in fact, to classify the men, in short. Then, there is the further step of finding employment. That is one of the most difficult parts of the whole enterprise; but we are able now, and have been for some time, to employ in our city colony between 1,300 and 1,400 men and women. Those men are employed in various occupations; the principal one of which is the collection of what we call salvage waste material, waste paper, cast-off clothing, and leather, which material is manipulated, classified and treated, some of it cleansed and sold to manufacturers, who work it up again in their manufactures.

9837. How is it collected?—Some of it is collected by horses and carts, but the majority of it is collected by men with hand barrows; they go out each man, having a certain round to visit, which round has been worked up for him by another man who acts as a sort of traveller, and he collects the waste material from house to house. When he has got as much as he can comfortably trundle, he brings it in.

Chairman—continued.

9838. People are glad, I presume, to get rid of the waste?—Some of them are; some we pay a certain sum to for allowing us to come at regular intervals and take the waste; but the majority of it is got from people who are glad to dispose of it. Then there are also some other employments; they are not very extensive, I am afraid. I wish they were a little more so. There is some upholstering, for instance. We try, of course, to give a man who knows a trade work to do at the trade he is accustomed to; for the reason that he thinks better of himself for one thing if he is working at something approaching his own trade, and also because he is likely to earn more in that way than in any other; but the majority of these people are employed in dealing with these waste materials. Now, it may interest the Committee with regard to that labour, which we call our labour factory work, if I just give some particulars as to the time the men remain with us.

9839. Will you please do so?—20 per cent. of the men received in the labour factories are men who stay with us for less than one month. Many of those are men who are only in temporary difficulty: they come just to get lifted over a hiatus, so to speak. Of that 20 per cent. I am afraid I must say about half are thoroughly idle, worthless, fellows, who will not work, and never have worked, and never mean to work, and who ought to be locked up. Then 34 per cent. stay more than a month, but less than three months; 33 per cent. for more than three, but less than six months; 22 per cent. stay over six months, but less than a year; 8 per cent. stay over 12 months, but less than two years; and the remaining 3 per cent. stay over two years. The last two, the 8 per cent. and the 3 per cent., that is to say, 11 per cent. of the whole, are men who work their way up and become, generally, a sort of overlookers, gangers, over the other men.

9840. Will you tell us as to the paying of those men; would that point come next?—I will take that point now, if you like. Those men are not paid any wages; they come on the understanding that they will be fed and clothed and housed, and that the quantity and character of the food they get will be determined, in a certain degree, by their willingness and industry at their work; and in order to make that work out, we have adopted a system of rewarding the men by tickets, each of which has upon it a face value, which ticket they take and exchange again for its equivalent in food at the place where they are fed and lodged. So that an idle man, or an unwilling man is found out immediately, because he does not get tickets on such a liberal scale as the industrious man; the man who has idled away his morning, when he comes to dinner, perhaps will get a 3*d.* or 4*d.* ticket, whereas, the man who has been industrious and worked well may get a 6*d.* ticket. The 3*d.* man sits side by side with the 6*d.* man at table, but he has finished his dinner before

Chairman—continued.

before the 6*d.* man, and has the satisfaction of seeing his friend continue. That stirs him up.

9841. That has a stimulating effect?—Yes; I am afraid I have not here a copy of the regulations which the men actually sign on going into the labour colony; but they are similar to those which they sign on going on to the farm; in substance they are the same, although not exactly the same in detail. This is the Agreement that is signed by the colonist on coming to the farm colony: "The Salvation Army Farm Colony, Hadleigh, Essex. Agreement by colonist. I, being by trade a but, being unable to find work, now wish to go upon the farm colony. I agree to obey all the rules and regulations made for the good conduct and management of the colony, and to carry out all the instructions which may be given me by my officers there. I promise to abstain from all intoxicating drink while resident in the colony, and I pledge myself not to enter any premises where drink is sold, and to discourage others doing so. I understand that any departure from these rules may be followed by my instant dismissal from the colony. I understand the regulations as to grants as printed on the other side, and am willing to work for my food and shelter only for one month upon the colony, and after that time shall be satisfied with the grant allowed me (if any) by the superintendent under whom I may be placed." Then in connection with the City Colony, we have also methods for dealing with special classes. Perhaps I need hardly go into it at any length; but, for instance, we have a number of homes for fallen women, which are very successful. We receive about 1,500 women annually, and of that number there are permanently satisfactorily reclaimed and restored to virtue and honesty about 75 per cent. A number of those women are women who have been industrious workers in the past, but who have fallen and lost all. Then we have also special methods for dealing with the purely criminal men. We have accommodation for over 100 criminals. They are dealt with separately. We do not mix them with the men of better character, but they are otherwise treated on very much the same principles as the ordinary workless men. The work amongst them has been fairly successful also.

9842. In this city colony you deal solely with units, do you not. I mean, supposing a man has a family dependent on him, and comes into your colony, have you any relation with the family?—We deal with some married men; not a very large proportion, I am afraid, but still we deal with some. In that case we make the man a money grant in lieu of his food, and we pay him every day according to what he earns by his labour, from 2*s.* 6*d.* to 3*s.* 6*d.* a day, just to carry him over. Those married men are generally good intelligent decent workmen, who are most anxious to be temporarily helped in a time of stress, and what we give them in that way is sufficient just to keep them from the workhouse and despair.

9843. That money goes to the family?—That money goes to the family. Then as to the

Chairman—continued.

Home for Criminals, which I have just mentioned; the criminal work is difficult, but we have had some very encouraging results. We find that after a lapse of two years from the men leaving our hands 86 per cent. of them are earning an honest living; 10 per cent. were doubtful, though not lost sight of by us, walking in dangerous ways, but still somehow in touch; the remaining 4 per cent. were known to have returned to bad courses. We hope to be able to extend that work; because we think it is work which perhaps is more needed than any other of its kind. The criminal, when he comes out of prison, is probably the most abjectly hopeless and helpless creature on God's earth; his old friends do not want him, his new friends will only lead him further in bad courses; society is against him, and he is against society. There is nothing for him but to steal or to starve; and as a rule he prefers to steal, and then we have to support him again. We have to keep him in either case, because he puts his hand into our pockets if he is out of prison, and we have to put our own hands into our pockets if he is in prison; so that in either case he has the advantage of us. We hope to extend the criminal work.

9844. What sort of work do you give these men to do?—Similar work to the others. Some of them are very much less amenable at first to discipline. Many of these men have been in better classes of society than one would expect; for instance, of the men received into our criminal home last year, 8 per cent. belonged to the professional classes; lawyers, the clergy, and medical men; of the commercial classes, there were 30 per cent.; of skilled mechanics, 30 per cent.; and of unskilled workers, only 32 per cent. Many of the criminals are very slow to go to hard work, and they have to be put to very simple work; some are engaged at mat-making and boot-making, which they have been accustomed to do in prison, but which at first is very unremunerative.

9845. Can you tell us how long they stay in the homes, as a rule?—I think the average stay of the criminals is about six months, or perhaps a little more, in the home. Then, of course, we are very careful to keep touch with the men who go from our criminal home; we go to some considerable expense in order to do so (and that is one thing that makes that work more costly), because we feel a serious sense of responsibility in sending a man who has been in prison for stealing to a situation. We usually tell his employer his history; and, as a rule, the majority of employers are willing to help to keep us in touch with the men.

9846. You usually do find them situations?—Yes, we find them situations. I have some figures here which may interest the Committee in that connection. The majority we find situations for; a few enlist in the Army, and a few go abroad, but no very appreciable number. With regard to the criminals, if I might go back for a minute, a number of the women who come to the working homes for women are also criminals; they have been in prison, and we adopt the same plan with them.

9847. Will you proceed with what you were

Chairman—continued.

saying about your colonies?—The City Colony, having given immediate help to a man, having enabled us to classify him, and having enabled us to some extent, at all events, to train him and discipline him, and accustom him to orders, the next step is to place the man somewhere where he can receive some training which will fit him for the conditions into which we propose to transplant him across the sea. Hence, the Farm Colony. Now, with regard to our farm colony. I may say, in the first place, the word "farm colony" is something of a misnomer. The farm colony is really intended to be a farm colony first, but second an industrial colony: a colony in which men can be trained in such work as will be required of them when they come to seek a living across the sea. I do not know how far the Committee will be interested in hearing from me about our farm colony.

9848. I think we should like to hear what you have to say about it. We have heard a good deal of it from indirect sources?—The farm colony is situated in Essex. The total acreage is about 1,800 acres of land, and there are about 1,000 acres of water around it, which is part of the property, in addition to the 1,800 acres.

Mr. *Mather.*

9849. The water is down on the marsh, is it not?—The marsh is separate from the water. I am including the marsh in the land. There are about 1,000 acres of the Ray, which is a creek or inlet of the Thames. We are on the mouth of the Thames.

Mr. *Round.*

9850. There are some saltings which are covered by water when the tide comes in, are there not?—Yes. Out of that total acreage we are actually in working occupation of about 1,270 acres. I have a plan of the property here. I do not know whether the Committee care to see it.

Chairman.

9851. Will you please put it before the Committee and explain to us what the property consists of?—Of the total acreage about 1,270 acres of land are, as I said, in our occupation. The remaining 600 acres, or thereabouts, of the land which belongs to us is at present let off to tenants, some of whom were in occupation of it before we purchased it. You will observe that the main line of the London, Tilbury and Southend Railway to Leigh runs through the middle of the property. We are in occupation of all that you see on the map here, except certain properties held on unexpired leases which will fall in presently. Castle Farm is the centre of the estate. The principal buildings are situated on this part of the property. There are a few agricultural buildings, stores, a library, a bakery, a Salvation Army Hall, the cottages of employées and labourers, and some houses for offices. There are also other houses, and two cottages *here* (*pointing to the plan*). This house is used as the residence of the governor of the colony. *Here* (*pointing*) is a very good house in which we receive visitors who come to see the place. We fitted up this house for visitors, and

Chairman—continued.

we make them pay for what they get. The land slopes from this point on the north to the railway (*pointing to the plan*), and we have two brickfields *here*, with smaller ones up above. Then down on the Ray we have built a wharf at which we are loading and unloading continually, barges bringing manure and materials from London, and sending materials away. From the wharf we have built an ordinary narrow gauge railway; and from where the railway stops to the top of the hill we have a rope elevator which pulls small waggons up and down; so that we can convey, at a very small cost, our manure and refuse stuff from the waterside up on to the high land beyond Castle farm, which is the best land we have at present. The pieces coloured yellow on the map are what are called "Saltings." They are all reclaimable, and will be no doubt taken in and become a valuable addition to the property.

Mr. *Bousfield.*

9852. Reclaimable by building a sea wall, do you mean?—Yes; we have a sea wall now inside the Saltings.

9853. What is it that you have been reclaiming?—We have not reclaimed, strictly speaking, very much; but a lot of this marsh land below the railway, almost on a level with the river, was, when we came on to the estate, in an exceedingly bad and an almost useless condition. We have worked that land. It may virtually be said to be reclamation, although in the technical sense of the word it is not. We have brought it into cultivation. We grew last year about 16 acres of wheat in a field near the brickfield; it is true it was rivet wheat, but we got about 60 bushels to the acre, and nearly two loads of straw. Of course, it was rather high cultivation, and that means expensive cultivation: but I think it more than paid its expenses, and it will do if wheat goes on improving as it is at this moment. Now, we are carrying on on this land in the way of agriculture the ordinary farming operations, and dairying and market gardening. We have about 365 acres of land under what may be considered really vigorous cultivation in connection with the farm, and we have 200 acres further not quite so good. Then there is some grass land. There are 104 acres of fruit which we have planted, which promises to be a good investment; and we have, besides, about 103 acres devoted to ordinary market gardening. Then, with regard to industries, we did some building, though not very much.

Chairman.

9854. Did you do any building beyond what you require for yourselves?—Yes, we have done some outside. We have built, for instance, perhaps about half-a-dozen cottages in the neighbourhood; certainly they have been built chiefly for friends of the Salvation Army who asked us to build them; but still we have built them. Then we have a small carpentering shed where we do some carpentering; that is chiefly for ourselves. We make boots and shoes for the colony, training men in making them, so that they can make them for themselves by-and-bye when they go across

Chairman—continued.

across the sea. We also make bricks; we have not made any this year, but we made some last year. We have lost some money upon bricks. I shall come to that matter again presently. We have also a bakery. Then there are some small industries. We make, for instance, some of our own household furniture, chiefly with the idea of training the men who are doing that work, so that after their transfer they would be able, out of the rough material such as they would get, to construct the necessary articles for their own use. Now, leaving the actual *matériel*, so to speak, of the colony, and coming to the men, we have now upon the colony 298 men, of whom 242 are colonists. We have accommodation for more, and the number fluctuates. We have been up to 400, but I thought you would prefer to have the exact figure at the moment.

9855. What do you mean exactly by the word "colonists"?—I mean a man who being out of employment has put himself into our hands for labour and training, and whom we have transferred from the city; from the street corner, so to speak, to the colony, and who works there under the conditions mentioned in the agreement to which I have already referred.

Mr. *John Wilson* (Govan).

9856. The colony is the farm, I understand?—The colony is the farm, and the farm is the colony.

Mr. *Mather.*

9857. The colonist will ultimately go over the sea, I presume?—Yes, that is our intention.

9858. After you have trained them?—After we have trained them for that purpose. Of the 298 men upon the colony, 242 are colonists in that sense, 40 are paid employees, many of them local men who are engaged, some of them as carters, as horsekeepers, and for the market-garden packing, and in going to and fro on the local roads to the railways, and so on. That number, perhaps, is as high as it ought to be; but we have not been at all anxious to get rid of men or to dispense with the services of men belonging to the locality who might reasonably expect to be employed upon a thriving settlement; and, therefore, we have not at all excluded the local people from some share in the labour. They are paid the ordinary local rates. There are eight men engaged as paid superintendents over the various departments, and besides that there are on the staff eight officers. It may interest the Committee also to know that of those persons only 14 of the total are persons who were Salvationists before they went on to the colony. Now as to those men's previous trades, they are roughly in about the following proportions: about 60 per cent. were unskilled workers; about 30 per cent. were what you would call mechanics, and the remaining 10 per cent. were from the educated commercial and professional classes, lawyers, and so on. Their present distribution on the colony, taking the total 298, is as follows: On the land engaged in agriculture there are 235; engaged in industries, including building and bricks, 52; management, 11; making the total of 298. Those are nearly all single men. A few of the officers are married, and a few of the colonists are married. We have some cottages on the estate, and we have fitted them up; and the same principle is followed there as I have mentioned in the case of the city colony, viz., an allowance is made for the wife and children. It would, perhaps, interest you if I made a short digression to mention the experiment we made with regard to the London paupers who were sent to the colony. Of course the pauper is a very important section of the unemployed worker, and he is a very difficult section too.

Mr. *Mather*—continued.

Chairman.

9859. I asked you to define the colonists; will you now define the paupers. What do you mean by a pauper: do you mean a man who is habitually in receipt of relief?—I should say that a pauper, generally speaking, was a man that received assistance from the rates. He is divided again into the out-door and in-door pauper. The paupers we have received have been in-door paupers.

9860. You would not class a man as a pauper, I presume, who for a short time, and from accidental circumstances, was driven to the rates?—No, certainly not.

9861. You mean a man who habitually lives by the rates?—Yes.

9862. Are these in-door paupers that you speak of?—Yes, all the paupers I spoke of on our colony have been in-door paupers. What happened was this: the chairman of one of the London Boards of Guardians came to us and said: "Our workhouse is crowded to overflowing, we do not know what to do; we are in despair. Will you take some men if we make you some small money grant for the men you receive." We said, "Yes, we are quite ready to try the experiment. We are not over hopeful about it, but we will try it." Permission was obtained from the Local Government Board to our receiving 50 men, with a grant from the parish of 5*s.* per week per man towards his support. We had also men from one other Board of Guardians, I think. We have had altogether 110 men. We considered that 22 per cent. of them were totally incapable for work from physical causes; one or two were not quite what they should have been, poor fellows, in their heads; and some were very ill and had to go straight into hospital, and so on. Deducting that 22 per cent, leaving them out as of no account, 74 per cent. of the remainder are reported by our superintendent to have worked fairly satisfactorily at the work that was given them to do. Of course, in the first place there was some shuffling, and a desire to put off on to others what they should have done themselves, but nothing out of the ordinary. There are very few people who love hard work, and I should be very sorry to think that the paupers are to be specially condemned because they do not happen to show altogether an affection to it. Of the 110 men, 41 per cent. are still at work with us, and in the majority of cases give reasonable promise that they will again be made into decent working fellows. The majority of that 41 per cent. are anxious to forget the stigma

Chairman—continued.

stigma of their workhouse associations; 16 per cent. have left us and have obtained situations, and, so far as we know (but I will not say that our knowledge goes very far) that 16 per cent. are earning their livelihood in situations outside. Of the remainder, 21 per cent. will not work; they never did work. Some of them say straight out, "I never did work, and I never mean to while I can live without it." One man complained very much on his arrival on the colony with regard to the accommodation that was afforded him; he said: "I ought to have had a feather bed; if I cannot have a feather bed here I shall not stop"; and he went back to the workhouse. Some of them, about a fifth, have turned out incorrigible idlers and loafers, and will never work while a foolishly benevolent community will provide them with bread and cheese without working for it. I would lock them up; I would put them into a settlement in which they had to work on the land, or work at something, or go without their food. If you say to a man who will not work, "Very well; you must dig that rod of earth, and you shall have your dinner; or if you will not, you will have to go without your dinner," in 95 per cent. of such cases they will dig it and earn their dinner; whereas, now it is a standing menace to your decent working man, who is tempted to be idle, because he sees these fellows living and getting on, and being fed and clothed without work. The younger men especially, and those who have been brought up under vicious surroundings, are tempted to say, "Well, I shall get through whether I work or not." These incorrigible idlers ought to be legislated for immediately, and separated from the decent workless man, who is continually scandalised by their conduct. A large portion of the community feel very wrongly towards a man who happens to be out of employment, simply from the fact that a small section of the unemployed are such incorrigible scamps. Then, leaving the pauper experiment and coming back to the main subject, I should like to mention this, because I think it would be interesting to the Committee as regard the general conduct of the men. In respect of, at least, 80 per cent., or perhaps rather more, of the men we have received on the colony, we can say confidently they are willing to work. Many of them undoubtedly have been loafers in the past, but they have never had a chance; they have never had a chance under kindly supervision, and especially they have never had a chance with a prospect of future permanent deliverance. With that we say 80 per cent. of them are willing to work.

Mr. *Mather.*

9863. Is the whole colony for what is known as the Submerged Tenth?—No, not exactly. It is intended for what we should call the Submerged Tenth (which I should say was the third or lowest class which I mentioned just now amongst the unemployed), but it is not exclusively intended for them.

9864. You begin at the third class, which you described?—Yes, but we have received men from both of the other classes. The colony is intended primarily to be a training ground for any workless man who wishes to be trained for service across the sea, irrespective of what class

Mr. *Mather*—continued.

of the unemployed he belongs to. He may be a deserving man, or he may be a very undeserving man, who now wishes to do well. The colony, subject to certain conditions, is open to all three classes; we have all three classes upon it. Then we say also, with regard to the men, that their behaviour is fairly good; we have only had to send away 10 per cent. of the whole for persistent idleness or drunkenness. We have had no disorder upon the colony during the whole time it has been in existence; we have never had occasion to call in a policeman to settle any disturbances or disputes or fights, or anything of the kind. All the men behave well, and the majority of them are fairly thankful; there is no lick-spittle about it, but they are fairly thankful for the efforts that are made on their behalf. And I think I may also say they are all improving. They improve in their physique, their health gets better, we make them better to look at, and they improve morally. Those who do not accept at all the religious influences and who pay very little attention to the religious work carried on on the colony, the attendance at which is entirely voluntary, even those who keep themselves out of its direct influences improve; their language improves, their manners are nicer, they are kinder to each other, and more considerate of the success of the whole enterprise, and those who do accept the religious training are remarkably and wonderfully changed and improved.

Chairman.

9865. Have you had any threatening of those species of immorality that sometimes are attributed to colonies of men?—Very little; I do not think, if I may say so, that the great mass of the ordinary working people of the country are so seriously open to reflection on that side as some people think they are.

9866. I asked the question because it is sometimes asserted as a danger?—Quite so. Drunkenness is a great evil amongst those men; but even in that direction our investigations have led us to conclude there is a good deal of exaggeration. As to the causes that bring men to that condition we have formed, after very extensive opportunities of examination, and careful investigation, the opinion that only about 34 per cent. of the whole would fairly be said to have come into their present condition through over drinking. Of course they are not all teetotallers; only about 25 per cent. would be considered to be abstainers; but only about 30 per cent., roughly speaking, are really brought to poverty through drink. It is often misfortune, bad health, accidents, commercial accidents, bankruptcies, fires, and that sort of thing, that throw men out; and then, after a certain number of weeks or months (it varies in different cases) they lose their standing with their unions because they are unable to keep up their payments, and they get out of the swim of employment, and become a drag on others. Now, passing away from the farm colony, that brings me to the next step in our proposals, namely, the Over-Sea Colony. Now, I am not in a position to say definitely that we have finally settled the site of our over-sea colony, but I can say that we have virtually made up our own minds as to what

is

Chairman—continued.

is going to happen. The matter is now a matter of negotiation between ourselves and one of the colonial Governments, and I am not in a position to speak of the matter, which is still a matter of treaty, so to speak; but I think it is probable that we shall be able, before the end of the year, to commence operations over the sea; and, although I claim that our scheme has done a great deal of good, quite apart from that, it will be then that there will come into operation the ultimate, the supreme object, of the whole enterprise, namely, after classifying, helping, and training them to take away your workless man from where there is not enough work to keep him, to where he can by his own labour get out of the land what will support him. Now, of course, I know the objections (or, at any rate, I know something of them), which are urged against ordinary emigration, and I should be the very last person to suggest that we should go down that street any more. But our plan for the over-sea colony is quite different from anything that, so far as I know, has been attempted before. We should take a man already fitted for the work he has to do, and accustomed to the circumstances in which he would be placed; we should take him from our colony here, put him on the ship, receive him at the port on the other side, put him in the railway train, take him straight to the spot at which he is going to work, and the next morning have something ready for him to do which he can do. For a time we should employ him at what will enable us just to support him until he gets a little accustomed to the climate and conditions, and then we should fix him on his own bit of land, with his own cottage, and start him off on his own account, keeping watch over him, buying his produce from him, and taking back from him in the shape of a graduating rent what his house and land have cost. Thus we should be obtaining three or four leading advantages. In the first place, he escapes all the wretched uncertainty and misery which an emigrant feels on landing in a strange country; he does not fall into wrong hands; nobody wants him to buy unnecessary implements or unsuitable land; he is landed among friends, who tell him what he ought to do. In the second place, it saves him from that awful isolation which has largely contributed to the failure of ordinary emigration, especially in Canada, and also in some parts of Australia. A man is planted down six, seven, eight, and 10 miles away from anybody else; the silence, the monotony and the separation are depressing in the extreme, and if they do not kill him they make his life miserable. His children cannot get to school, and he gives it up. In the third place, we should save him from the bane of emigrants, and, indeed, of all other persons, the money-lender; we will not let anybody lend him money.

9867. You mentioned the wife and children; do you propose to deal with individuals or with families?—With families in some cases. We think that no solution of the unemployed question is worth considering unless it ultimately proposes to take away the man who has got a wife and children. He is the most difficult part of the problem. Our operations have been, as you no doubt are thinking, limited in this direction to a large extent: we have only done a certain amount of work with married men; but that has been because we have not had this way of escape for them. But we can see our way to transferring them at a very small cost, and we think they can be fitted up, and after a few months a man can, with his wife's assistance, or such assistance as she and the children can give, get all he wants to live upon; and he will be in a country where every child he gets is an accession, whereas now he feels that every baby that is born is an encumbrance.

Chairman—continued.

9868. Do you see your way to carrying out a scheme of this sort with something like a reasonable chance of recouping your money?—We think we have a reasonable chance of recouping what we spend upon the man on the other side, and we think we shall get a large part of what is spent upon him on this side, as I think I shall satisfy you in a few minutes when I come to the question of finance. We think there will, however, still require to be provided from somewhere the cost of his transfer; we do not quite see how that is to be got over. But then I suggest that that is a very small matter if it can be shown that there is a reasonable expectation that his removal will result in his being permanently taken away from becoming chargeable to the rates here; and one thing I should like to ask this Committee (perhaps I might refer to it now, although it is not quite in its right place) to consider when you come to prepare your Report for the House of Commons, is whether you could not suggest that powers should be granted to municipal authorities, boards of guardians, or local authorities generally, to pay the cost of what we will call, for the want of a better word, the "emigration" of the men and their wives who seem likely to be able to get on in the Colonies, and who, if they remain in this country, are likely to become chargeable in any way to the rates. Boards of Guardians, I believe, now have powers, under the approval of the Local Government Board, from time to time to expend a certain sum (I think it is not exceeding 10*l.*) upon the emigration of paupers, that is, persons who have already become chargeable to the rates. But what I want is that that advantage should be extended to men who are not paupers in the ordinary sense of the word, who have not yet become chargeable to the rates, who have held off by their own industry and their determination to suffer anything rather than become paupers. I would suggest that Boards of Guardians should have power to pay the cost of sending such men across the sea. You can safeguard it by any provisions that are necessary: you can say, for instance, that the man must be a certain age, or must be of a certain condition of health, or that he must belong to a certain trade, or must not belong to a certain trade, or that his application must be made with certain recommendations; you can safeguard it in any way you like, so long as a Board of Guardians have power to say, "Now, here is a man of 30 years of age with a wife and children; he is a decent, honest, and industrious person, but he is starving. If he once comes on to the rates it is quite possible he will become chargeable to us altogether; and therefore, before we get to that stage with him, here

Chairman—continued.

here is a society or an agency which will send him abroad and undertake that he does not come back within a certain period," (if you like to put in such a provision as that) "we will pay his expenses." That would apply not only to us, but to other societies which would provide for emigrants.

9869. In such cases, do you draw a distinction between the case of what I may call ordinary emigration, that is to say, the mere departure from this country and arrival in another country of an isolated individual with no particular preparation for him on the other side, and the case of what is better known as colonization, where either the man or the family are taken over and settled on the soil in some place, preparations being made beforehand for him?—Quite so; it is for the latter that I contend; it is with regard to the latter that I should like boards of guardians to have power to pay the costs of shipping the men out.

Mr. *Mather.*

9870. Do you mean the cost of simply passing from shore to shore?—I think they should be landed on to the ground to which they are going. Paying the cost from shore to shore would be better than nothing, but why not fix a limit, why not say that it shall not exceed so much, for instance, that it shall not exceed, say, 10*l.* a head.

9871. For the whole journey?—Yes. There are many boards of guardians who would be very happy to get rid of some of their decent men who are prospective paupers for 10*l.* a head for the journey.

Chairman.

9872. Would that be 10*l.* per member of the family?—No; I would say 10*l.* per head, and 30*l.* for a family; because you would get sometimes men without children, and sometimes with one child, and sometimes with four or five children. But if the guardians were allowed to go to 30*l.* for a man and his family, I think that would meet it.

Mr. *John Wilson* (Govan).

9873. What would keep those individuals for the first year till the crop came?—When I make the suggestion, I would like the Committee to understand that I make it for general application; because I think there are others besides ourselves who would take advantage of it; but, so far as we are concerned, we should make arrangements that would secure the men being employed on their arrival. We would put them into the community, and for the first few months we would find them work to do; for instance, in building their own house, or preparing their own furniture, or their own land, and we would pay them perhaps what you would hardly call wages, but something sufficient to support them. When they were on their land and got going we should get it back from them spread over a period of years, in the form of a graduated rent.

Mr. *Wootton Isaacson.*

9874. Are you carrying out a similar system now?—No; as I said, we have not reached that stage in our present scheme. That is what we are coming to.

Chairman.

9875. May I ask have you ever read or looked at the Report of the Select Committee of this House which sat on Colonisation four or five years ago?—I have seen it.

9876. It went very elaborately into the question?—Yes. I know the substance of it; I went over it. I am aware that some cases where something of this kind has been attempted have turned out failures.

9877. Was it not the case that there were other cases, and very conspicuous cases, of great success where it was done on a comprehensive scale, as you indicate?—Quite so. Now, perhaps I should pass on to mention two or three items with regard to the finance of the undertaking. I have some more details with regard to the farm colony here; but I do not think I need go into them now. With regard to finance, there are one or two items which I might mention as to the City Colony, as to the cost of carrying on these operations in the City Colony. We laid it down for our own guidance, that for any scheme to be successful, to be comprehensive, or to be on any adequate scale, it must be based on certain leading conditions. In the first place, the persons benefited must provide the larger amount, the main amount, of the cost of doing it. Perhaps they could not find it all; but after, at any rate, the first outlay, they must provide the working cost by their own labour. We laid it down further, that if there was any margin to be supplied by the public or the charitable, that margin must not be more than could be looked upon as a reasonably economical investment. It must not be mere charity. The public must get something by way of relief from its burden for anything it paid, which you will observe is the very opposite of the Poor Law system. With the Poor Law, the more paupers you support the more paupers you manufacture. The more you pay for the Poor Law the more you will have to pay. Now, with regard to the city colony, our last year's results show that the cost of carrying on these various operations which I mentioned to you, namely, feeding and housing the poorest, the labour factories, the criminal work, labour exchange, &c., was 73,000*l.* for the year. We received back again from the people, either in labour or in payments out of the 73,000*l.*, 70,000*l.*; so that the deficiency required from the charitable benevolent public to make up the cost of carrying on these operations in the city colony was rather more than 3,000*l.* I should like to point out here that when we originally foreshadowed this scheme, it was laid down most distinctly by the General that he ought to be provided with the buildings, the machinery of the effort, so to speak, free of rental; whereas we now pay 6,000*l.* or 7,000*l.* a year in London alone for rents, rates, and taxes; and notwithstanding that we carried on all these operations last year, benefited thousands of persons, sheltering 5,000 or 6,000 every night, and received into the labour factories 2,000 or 3,000 persons, about 1,000 being there every day, the total loss was only 3,000*l.*; we think we can claim that that shows we are working on a pretty sound financial basis.

9878. Can you tell us something as to how that 70,000*l.* is made up?—The principal items are, in the first place, food and shelter. The outgo

Chairman—continued.

outgo for the food and shelter section was 22,400*l.*, and the income was 22,900*l.* and odd, say 23,000*l.* So that on that section there was a working profit of nearly 600*l.*

9879. The income consisting of the payments made by the recipients?—Yes, the payments made by the men and women in the form of pennies and twopences for their lodging, and halfpennies and pence for their food, and in some cases the labour which is calculated at a certain value, and in exchange for which they get shelter. During the severe weather we set apart one of the buildings for those who had no money at all, of whom I am sorry to say there were always some, and we said to the totally destitute man: "You have nowhere to go for the night; come here and chop our wood," or do something else which we happened to require to be done that was worth something. Some could do the work in half-an-hour, and some took an hour to do it, and when they had done it they had their penny ticket, their night's warmth, and their slice of bread; we always keeping definitely before our minds, "Do not demoralise a man by giving him anything he can work for, nothing without labour." Then the next largest item is the industrial section, in which there is an outgo of 22,100*l.* and an income of 20,400*l.* in respect of industries; showing a loss of 1,500*l.* or 1,600*l.*

Mr. *Wootton Isaacson.*

9880. Does that include the bakery?—The bakery is part of our food depôt; it is included in the previous figures. Then on the women's work, which is a separate item, there is an outgo of about 10,000*l.* and an income of about 8,000*l.* Those are the principal items. Then there are some sundries, viz., slum work and the starving children's breakfast fund, and some other items, which make up the total. If the Committee prefer to have the figures more in detail upon the notes, I could send in more exact information.

9881. I think it would be very instructive if you would send us the information?—I will do so. Now with regard to the individual, and as to how this is distributed, we say that the feeding and the sheltering of the unemployed pays for itself virtually. Then with regard to his temporary employment in the workshops, it costs us 1*s.* 10*d.* per week per man; that is our loss; and as the average stay of a man in the labour factories is four months, or 16 weeks, that works out at about 30*s.* a man. Then with regard to the women, it is a little more; the average stay is 17 weeks. It is not so easy to find a woman labour which is convertible into money, and most of the labour done by the women is of the special class which the Salvation Army Organisation proper chiefly helps to dispose of. She sews and makes texts for the walls of our buildings, and ornamental Scripture work, and that sort of thing. She costs about 2*s.* 7*d.* per week; that is to say, the loss to the fund upon her is about 2*s.* 7*d.* per week. But then, of course, you have to bear in mind the remedial character of the work: that in respect of 70 per cent., or thereabouts, you get rid of the necessity, because you restore them to work and livelihood. Then, coming to the Farm Colony, perhaps I ought to refer first to the total capital expenditure upon the Farm. The total expenditure upon the whole farm colony stands in our last balance-sheet at about 94,000*l.*, of which 39,700*l.* was for the land. I have got a schedule here showing the principal items: the farm buildings, 3,900*l.*; dwellings, dormitory, room for men, and so on, 7,380*l.* That gives accommodation for about 500 people. The colonial buildings, bakery, library, stores, hospital, and barracks (which cost 600*l.*) together cost 3,700*l.* Implements, waggons, tools, &c., stand at 5,500*l.* Wharf, railway, tramways (there is a tramway three miles long), roads and sewers, 13,690*l.* It must be borne in mind, of course, that we really have to provide all that would be ordinarily called municipal expenses; we have to drain and make roads, and light, and so on. Then with regard to the brick-works, the two brick-works have cost 3,500*l.* with their machinery and plant. The stock, dead and alive, stood, at the date of the balance-sheet, which is just after harvest, at 15,730*l.* Then furniture and fittings stood at 1,430*l.* That makes up the total of 94,000*l.* Now, about 13,000*l.* of that represents property which was purchased, as I explained a while ago, being let to tenants whose terms have not expired and who pay a rental which pays a fair interest upon the capital outlay. That property will ultimately come into our use. The estate is generally considered to be a very good one for the work in hand, and nearly all this, if not quite all this, capital expenditure has been sanctioned before it has been undertaken by Mr. John Bird, who is one of the official advisers of the Board of Agriculture and who was sent to help us in the matter by Sir James Caird.

Mr. *Wootton Isaacson*—continued.

Mr. *Logan.*

9882. Would you explain what you meant when you spoke of certain property let to tenants which would come into the use of the association?—Perhaps I had better explain how it came about. When you are buying property there is often property immediately adjoining you which has a great deal to do with the comfortable possession of what you want, and if it is to be got at a reasonable figure it is generally considered that it is good policy to get it. There are two small farms at one point, and a third at another point, which command some of our roads and rights of way, and so on; and they were in the market, but they were at the time in the possession of tenants. We bought the property, and those tenants' leases will in lapse of time expire, and then we shall take it entirely. Now the men on the colony are remunerated; that is to say, they get what we undertake to give them in return for their labour, in the same way as those in the City colony, viz., by tickets, and they spend on food on an average 5*s.* 10*d.* a week. Their food is supplied to them at what it costs plus the working expenses of preparing it; so that they spend about 5*s.* 10*d.* a week in those tickets. The further cost to us of management, and so on, brings up the total cost of a man to very nearly 10*s.* a week, exclusive of any money grant which he gets. Most of the men, after they have been on the colony two or three months, get a small money grant, part of which they bank with us with a view to have something to fall back upon when

Mr. Logan—continued.

when they leave, or with which to buy tools for themselves, or an outfit. The remainder, 1*s.* or 1*s.* 3*d.*, they keep as pocket-money, and spend it to buy newspapers, or to buy some tobacco, and so on. So that we reckon that the average cost of a colonist all round is about 11*s.* a week, and the average length of stay upon the colony of the men at present there has been one year and two weeks.

Mr. *Mather.*

9883. What determines the length of their stay at the colony?—We have been so handicapped for the want of this over-sea colony that really that has been left very much more to a man's own taste and fancies than we should have liked to have left it, and a great many men have no doubt gone away from the colony after they have been there six or seven months, and have got into a better condition of health, and so on, with the prospect of work whom we should like to have kept and sent across the sea if we had been ready with the over-sea colony. When they go it is generally their own choice.

9884. Do you ever turn a man away?—We never turn a man away, except for serious misconduct. For instance, if a man gets drunk, we caution him the first time; if he gets drunk the second time, if he is accustomed to receive a money grant, we stop it, or change his work and put him on to work that is less popular; and if he gets drunk again we dismiss him, not because we think he should be dismissed for getting drunk three times, although it is a very naughty thing to do to get drunk, especially if you are found out, but because it has such a bad effect upon the rest of the colony. It is in the interests of the general *morale* of the colony.

Chairman.

9885. You must maintain discipline?—We must preserve discipline.

Mr. *Wootton Isaacson.*

9886. Is your colony isolated?—No, it is not.

9887. Is it near to a big town?—We are within half a mile of a village which has two public houses, and we are within four and a-half miles of the town of Southend. We have a system of permits; we do not allow a man to go off outside of bounds, except by permission, and we have not found very great difficulty in enforcing that. A man must get a permit to go; it is generally the man who has a permit who succumbs to the temptation when he is outside.

Mr. Logan.

9888. Have you to discharge many in the course of the year for drunkenness?—We discharge just about 10 per cent. of those whom we receive for incorrigible idleness and drunkenness. The two things generally go together; the incorrigibly idle man is frequently a drinking man.

9889. Do you take any pains to follow those men afterwards at all?—Yes, we make a considerable effort to keep trace of them, and we do keep trace of about a third of those we send out. We reckon that two-thirds of those who pass through the colony go out to start again satisfactorily, and of that two-thirds rather more than one-third we find are permanently employed.

Mr. *Logan*—continued.

9890. Those you discharge for drunkenness you say are about 10 per cent. of the total number you receive; do you say you are able to follow about a third of them?—No; I say a third of the remainder. We do not follow those we discharge. Many of them, no doubt, gravitate back to the large cities whence they came; some get into prison, and some get to the workhouse again. Some of them come back again to us.

Mr. *Wootton Isaacson.*

9891. Do you sell stimulants upon the colony?—No; the agreement which every man signs on entering the colony contains a clause in which he undertakes not to drink intoxicating liquor while he is on the colony.

Chairman.

9892. Going back to the financial aspect of it, what can you tell us of the result of the Hadleigh Colony financially; we have had it stated before us that your colony was a financial success as long as you confined yourself to what was considered to be the legitimate purpose of land reclamation and land cultivation, but that when you launched into fantastic occupations, like brickmaking and house building, and all sorts of nice things, since then you have been losing money; I just bring that before you as a general statement that has been made?—I will preface my reply by saying, first, that of course we did not set out merely to cultivate the land. The colony was not intended to be exclusively a land or a farm colony; it was intended, as I said just now, to be a colony for training persons for the conditions to which they would be transferred, and must, therefore, be in part industrial. But its main purpose was the land. Further, let me say, that I think I can easily explain to you how the impression has been created, that when we adhered exclusively to agriculture we were more successful. On the publication of the first yearly balance-sheet for the first year's working we were able to show a small profit (I forget how much, but less than 100*l.*) upon the working during the period the colony had been in our hands. But that was only a period of six months. We took it in May, and our accounts were made up in September or October, after six months. That figure was really no criterion of our working at all, because we took over the existing tillages, to a certain extent, and we worked the colony partly with the men we found upon it, and had very few men there. It was all preparatory work, and, so far as I am concerned, I attach very little importance to the result of the first few months' working in a scheme of such magnitude, and containing so many branches. In our second year we had a considerable loss (I am sorry I have not got the exact figures with me) on agriculture, and a small loss on the industrial work. In the third year we made a smaller loss on agriculture, though we were extending it each year; more agricultural work was done, more land was broken up, more land was brought under vigorous cultivation, and more fruit planted; and it was necessary in making extensions and improvements, especially in planting fruit

Chairman—continued.

fruit and breaking up new land, to wait before we could get the advantage of our expenditure. Our third year showed also a loss, though not so heavy, on agriculture, and still a loss on the industrial section; but the loss on the industrial section was almost entirely limited to the brickyard.

Mr. *Mather.*

9893. How much did you lose on the brickyard?—We lost on the brickyard through the absence of proper kilns.

9894. What did you lose in the year?—That year, speaking without book, I should say a couple of thousand pounds. I will come back to that in a moment, and explain how it came about; but I will proceed at the moment with my statement as to the finances of the farm colony. I may say we divide the work on the land into two departments; what may be called farming and what may be called market-gardening. In farming this year our accounts showed a profit on the year's working of 200*l.*, and on the market gardening a profit of 400*l.*; so that on agriculture last year we showed a profit of 600*l.* As regards the industries, there is a loss of 1,300*l.* or 1,400*l.*, chiefly, if not exclusively, on the bricks again. It is open to those who like to say so, to say that we ought not to have embarked on brickmaking; that we should have been able to foretell that we should lose money upon it. Perhaps we ought to have been, but we did not foresee it, and we think the loss on the bricks is accounted for by extraordinary circumstances. We had a very serious breakdown at the beginning of the year with our managing man, and we were left in a very awkward position with a great deal of the stuff mixed, and this raw labour to handle it, and no regular staff to deal with it. We are not making bricks this year, but when we begin again we shall have some better kilns, and we have no doubt we can make it pay. We have splendid clay; we have taken the very best expert advice we could get; and we are advised that the brickmaking will answer when we take it up under proper conditions. We have had to pay for our experience.

Chairman.

9895. I presume you look upon brickmaking as an art that it would be very useful for the men to know when they went to another country?—Exactly; we have been influenced chiefly by that consideration, although we have been so pressed by want of money that it certainly has been one element in our programme that we should make something out of the brickmaking, and I still think we shall recoup what we have lost. We are close to London, we are on the river, and have special facilities for getting our bricks to the market, and we have had no difficulty whatever in disposing of those which we have made at current market rates. The whole neighbourhood is developing very rapidly, and for the next 10 years there will be an enormous amount of building going on all round about. We think we have opened up a new era of prosperity to a large number of people in the neighbourhood.

Mr. *Wootton Isaacson.*

9896. What has been the total loss up to now since you started the colony?—I am speaking from memory, and I should like to be allowed to correct the figure afterwards, if I am wrong, but I should think it would be about 10,000*l.* in the four years, perhaps a little more. Then, of course, a large part of that loss has really gone into the improving of the estate. We have not taken credit for any of our accruing improvements. Over against that it is fair to say, against myself, that we did not charge ourselves with rent. We were advised on good authority that for the first four or five years, if we did not take credit for improvements such as we might take credit for, we might fairly remit any charge against ourselves for rent.

Chairman.

9897. You set the one against the other?—Yes. The estate has really very wonderfully improved in every way.

Mr. *Mather.*

9898. Have you any idea of how much per acre the estate is worth now compared with what it was when you bought it?—My ideas, of course, would be very favourable.

9899. I mean an estimate based upon the usual knowledge?—I think the value of all we have put into it, and more, is there. Our valuer, the man who makes our valuations for our stock for our balance sheet, is the same Mr. Bird whom I mentioned, who is connected with the Board of Agriculture, a very able man, and a man of very wide experience; and he told me, for instance, the other day, that he considered that the land upon which we had planted fruit is, most of it, fully worth 100*l.* an acre as it stands. The outside cost of it to us has been 60*l.*, including the original cost and the cost of cultivation.

9900. You paid about 15*l.* an acre, I believe, for the whole estate?—Yes, thereabouts.

9901. You think it is worth much more than 15*l.* all round to-day?—Yes.

9902. Probably 10,000*l.*?—It would be worth considerably more than what we have spent upon it.

Mr. *Bartley.*

9903. Could you sell it for more?—I do not know. As between a willing buyer and a willing seller you might, I think; but under the present conditions of agriculture, I am not sure from the point of view merely of agriculture. From the point of view of future development for building, I feel quite sure it could be sold for more. We have been offered, for instance, within the last month for some land there 500*l.* an acre.

9904. That has nothing to do with your agricultural improvements?—No; I say that from the point of view of agriculture, I really could not say how far we could sell it for what we spent upon it.

Mr. *Wootton Isaacson.*

9905. Is the 15*l.* an acre based on the valuation of the 1,000 acres of water; does it include the water?—The average would be about 15*l.*

9906. For the whole 2,800 acres, do you mean?—I can tell you exactly. I have here

Mr. *Wootton Isaacson*—continued.

the total amount of the Ray purchase, that is, the water purchase; but that includes some land that is in cultivation, and some saltings. It was 1,500 acres, land and water, and it cost 4,800*l.* I find that the average for the whole estate, including the water, is about 13*l.* an acre.

Mr. *Mather.*

9907. The fruit acreage which you have planted, I think you said, was 100 acres?—About 100 acres.

9908. That you think is worth about 100*l.* an acre?—Yes, the bulk of it.

9909. That could be valued any day from the crop it was producing in the year?—Yes.

9910. It would not undergo the same valuation as other land growing turnips or cabbages?—No.

Chairman.

9911. Can you say anything to us as to the conclusions at which you have arrived as to the plan on your present experience?—So far as our experience has gone we have come to the conclusion that, first of all, the persons we seek to benefit are willing to submit themselves to the conditions that we think are necessary in order to make them successful when they come to cross the sea. We have not found any fulfilment of the fears expressed when we began, that men would not submit to the necessary discipline, and that men would not be taken from the warmth and activity, and brightness of the towns, and would not be willing to stay long enough on the land settlement to be taught what was necessary for them to learn; we find they are. Further, we have come to the conclusion also that the men will work, and that even the most unfortunate class are willing to work. Further, we think the plan is the right plan, because it is economical; it is no longer up in the air that the men can earn sufficient to support themselves; they can, after the first few weeks in our hands, given ordinary conditions and average health, the men will earn sufficient for their own maintenance while they are in course of training, and some will earn a little more, though some will earn a fraction less; but on the average they will earn sufficient. Further, we think that the scheme shows itself to be based upon sound principles, because it looks to a permanent benefit of the people whom we take hold of; we take them away. Further, we think it is sound because it benefits those who are left behind; it is not a scheme by which any danger arises to the working people who do not need it; it relieves the overcrowded market, and therefore benefits the working people who are left behind. Now, there have been two or three objections urged against our working. I do not know how far it is necessary for me to touch them, but there is one I should like to refer to, because I noticed in the reports of the evidence given before this Committee which have appeared in the papers that references have been made to it. I refer to the question of undue competition and under-selling. Now, there are two branches of this objection; there is the alleged under-selling

Chairman—continued.

in the city colony in town, and the alleged under-selling in the farm colony. With regard to the town, the only cases that we have ever heard of, and the only definite branches of trade in which we have ever been accused of under-selling, have been the wood-chopping and the match-making. It has been stated that we have under-sold other traders, and thereby displaced labour engaged in the fire-wood chopping and selling business. Now, we have always denied this accusation, which is a very old one, and we regard it as being positively malicious and slanderous, because it has been so often contradicted that persons ought to be cautious about repeating it. We have never under-sold, and we have never entered into improper unfair competition in the wood-chopping business. We had, at a time when we were doing very much more business in that direction than we are now, because we have reduced that branch of work, having found other work which is more remunerative and easier to learn, to make a very careful investigation into the charges. We received several deputations from firewood makers' unions. I received a deputation myself from one union, and one of our leading officers received another deputation. We showed them our books, we gave them an opportunity of examining our workpeople, we sent them with an open permit to visit our factories whenever they liked, and as a result they expressed themselves as entirely satisfied both that we were not selling the same article at a less price than the market price and that we were not selling a better article at the same price. One of the deputations finished up, after expressing their great satisfaction, by giving a subscription of one guinea towards our funds, and leaving it on the table as a mark of goodwill. I do not know that I need pursue the matter further. If any gentleman has any question to ask me I shall be glad to answer it. With regard to matches, the matchmaking business is not, strictly speaking, a part of the scheme; it is no part of the organisation in the strict sense of the word. It is a sort of accessory, and it is not necessarily connected with the scheme itself, but it grew out of a great desire on our part to benefit a particular section of workers, namely, the match-box makers, who are generally women and children. It is work that they do at home chiefly. The piece of limp wood which forms the match-box is folded up, and a label fastened on it, and the person who does that is called a match-box maker. It is really folding a piece of wood up which is called the skillet, and putting a label upon it; for that work we found that women and children were paid 2*d.* and 2¾*d.* per gross, that is to say, they bend up a gross of those boxes, and fasten a label on, finding their own paste, for 2¼*d.* We made some inquiries, and we found it was a very shameful thing, and we thought that perhaps there would be sufficient sympathy with these people as a class to justify us in trying to sell matches for which we paid a little higher price to these workers. We accordingly took some premises, and got in some necessary machinery, and commenced to make matches

Chairman—continued.

matches in order that we might employ the match-box makers. We make only safety matches, thereby excluding our people from the danger of contact with phosphorus which produces the most horrible diseases, disfigurement and suffering, and instead of paying 2*d.* we paid 3*d.*, and instead of paying 2¾*d.* we paid 3¾*d.*, and so on, the 3*d.* and 3¾*d.* representing the small and the large-sized boxes. Our matches are good matches; they are made of the best materials; there is no phosphorus in them, and we have always sold them at the full price of the match market, which is really Bryant and May's, and we sell at their prices. So that we have no underselling. I am sorry to say that as a commercial venture it has not been very successful. We have lost 300*l.* or 400*l.* each year upon it because we cannot sell sufficient matches. Matches are inflammable, and are classed as inflammable goods, and the railway companies will only take them in parcels of a certain size, and under certain conditions, and that prevents their easy distribution. But we feel somewhat aggrieved, I might almost say that I feel some manner of resentment about this perpetual repetition of this story, that we undersell in the match business. Five years ago before we commenced making matches these stories were first published. The story was first published by a witness before a House of Lords Committee on Alien Labour in London, which was presided over by Lord Dunraven. I went there and denied it as a witness before the Commission on oath, and the man who first made the statement, who was an East-end minister, wrote to the "Times," and apologised for it, and said he deeply regretted he had made it, and wished to withdraw it. In spite of that again and again it comes up, and I believe it has been mentioned in this room. I hope I am not going to hear of it again.

9912. I think we have heard of it with regard to wood-chopping, but I do not remember hearing of it with regard to matches?—Yes, I think matches were referred to.

Mr. *Mather.*

9913. One of the Members put some questions about it at the last meeting?—Perhaps that was it. Then with regard to underselling on the farm colony, to that we make in substance the same reply. We deny it. We say that neither have we sold an article of equal value lower than the market price, nor have we sold a better article at the same price. I met myself a local deputation about 18 months ago, which came to me on the subject, a deputation of residents and growers who had believed themselves to be aggrieved. I assured them that it was no part of our desire or purpose or intention, but was absolutely contrary to the regulations we had laid down that there should be underselling in any department, and I asked them if they would furnish me with one or two cases concerning what they complained of, and I would investigate it. I have never heard any more from them, although I have written to them several times after my interview, and I contend they were never able to find a case. I do not believe there is one.

Mr. *Mather*—continued.

Chairman.

9914. Of course you compete?—We compete in the same way as an ordinary trader competes. Nobody would object to my setting up to grow strawberries and sending them to the London market in my own interest and for my own profit. Why should they object to my doing it for the benefit of these poor and unfortunate creatures so long as I do not unfairly compete.

9915. They may make this objection, that you did it (if it was the case that you did it) by the advantages that you would have from the charitable funds at your disposal?—Subscribed capital.

9916. Yes?—The answer I make to that is, Yes, and the profits I make by it, if there are any, go to the objects for which the capital is subscribed. The capital earns something, and that something goes for the public benefit. I should quite understand the force of the objection if it was that the public capital enabled me to make a personal gain; but seeing that the public capital is only used for the public good, I cannot see where the objection comes in.

9917. But what people would say is this: Suppose Mr. Mather and I are market gardeners at Southend, and we are struggling on and keeping ourselves in employment, and our families in decent life. You come down there, and gathering together certain persons called unemployed men maintained by charity or by benevolent funds of some sort, swamp us in the Southend market, so that Mr. Mather and I are turned out of employment by your process, and lose our business. That is the sort of feeling that may exist?—In answer to that, I should say that I cannot find the persons we so swamp. I invited them to come forth from their caves, but they do not appear, and I do not therefore believe in their existence.

9918. You think there is room for you all?—I think there is room for us all. Secondly, I should say that the same argument in principle would apply to all trading, would it not?

9919. Except that one trade may be artificially fostered by the favour of the community and by the assistance it receives from the community, and that is hard upon the decent man who works away on his own account. That is the idea; I do not say it is my view, but that is the view that is put forward?—I contend that when we come to the facts it really is not so; that we have not displaced any growers, that I am unable to find any, and incidentally that part of our produce which we sell in Southend is purchased by people who are visitors who come from London, from whom chiefly the persons are drawn who produce the stuff we put upon the market, but also, I should say, our competition is for the public benefit at large. Even supposing we did, I would not say it would be impossible that we should have injured here and there an individual trader in some part of the world, but even supposing that there is some addition to the produce put upon the market for a moment, if in the end

Chairman—continued.

t results in taking away from the overcrowded markets some of the workers for whose benefit you enter into the business, the community is the gainer.

9920. The objection has more force in it where some such organisation as yours is maintained or assisted by a direct grant from the State in any way. In that case the State, which means the organised taxpayer, comes in and meddles with the arrangements of a trade by what they would consider underselling or over competing with the regular trader, getting the capital to carry it on for nothing; that is the feeling?—I should say that the same principle would apply to the case of the State. I should say that if the State, for instance, entered into the business, we will say, of boot-making, I give that as an illustration, because it happens to be a business we are not engaged in; if the State entered into that business for the purpose of employing superfluous workers upon that business, with a view as speedily as possible of ultimately removing those superfluous workers to a position and condition of things in which they would cease to compete with the remainder, in the end the State would be acting beneficially to the community. I do not say that I am going to recommend the State to do it, but I think the principle would apply. It must be borne in mind, of course, that all these people, I will not say all, but a great many of these people, who benefit become much larger consumers than they were before we took hold of them; they take the produce of other men's labour in exchange for their own. It is not all loss to the community.

9921. But if you benefit a man by giving him any employment, he himself becomes a consumer, and therefore adds to the consuming power of the country?—Yes, of the community.

9922. In fact, there is more trade in the country with a prosperous and thriving population than with a distressed and unemployed population. The thing is very obvious?—Passing away from this subject, I should like again to refer to what I said this morning. I am afraid I did not make myself quite clear as to my suggestion that I would very much like the Committee, if possible, to make a recommendation as to giving by legislation powers to local authorities to pay the necessary capital to transfer say, from shore to shore if you like, persons, not being paupers, who are in distress, and out of employment, and yet would be likely to make decent citizens on the other side. I do think it is a practicable suggestion, which, although it does not look very much at the moment, might work out to be a very great benefit to thousands of men.

9923. There are two things I would say about that, having been myself a member of the Committee on Colonisation. In the first place there are some colonies who will not take men, or who are very particular as to the kind of men they receive, and the conditions on which they receive them. You get over that you think, and probably with success, by sending out nobody for whom you have not made an arrangement, so that they may start fair with every prospect of being good and useful citizens in their new country. The other difficulty which I think

Chairman—continued.

you would ultimately encounter is that which was very strikingly brought before the Committee, namely, that in a very few years there would be no corner in the world available for the purpose: it would be filling up at such a pace that you could not regard that as any permanent solution of the difficulty?—I think there is something in that; but if you got rid of some considerable number in the meantime it would be a very great thing. There is, as you know, in Canada and Australia alone, to say nothing of the Cape, which has certain climatic difficulties, millions and millions of acres of land which could be occupied, rivers full of fish, woods full of game, and fertile soil which is only waiting for population. I remember the late Sir William Fox, who was Prime Minister of New Zealand for some time, saying to me that he regarded as the very best investment New Zealand had ever made, the borrowing and expending 600,000*l.* on the transference from Europe of 10,000 families into New Zealand. He said that it paid the colony over and over again, and I am quite sure it paid Europe.

9924. Of course the cost of transfer to New Zealand means so large a sum that it would be hardly within contemplation at first?—But it paid them.

9925. I do not know that they are so anxious to get them now as they were?—No, they are not.

9926. Your suggestion on this occasion is a very valuable one, and the Committee will no doubt give it every consideration?—It would be entirely in the nature of a permissive arrangement. There would be no compulsion; unless the board of guardians or the local authority see its way they need not do it.

9927. Is there anything else you wish to say on your own account?—I think there is nothing that I need refer to further, except it is to repeat my suggestion that if possible (although I do not know that this comes within the scope of this Committee's inquiry) some recommendation should be made for legislation for people who will not work.

9928. Some sort of penal colony?—Yes; where a man must dig or else he cannot eat. I feel sure a very simple arrangement could be made empowering municipal authorities; again, what they want is power to say to a man who is obviously and notoriously an idle fellow, that he must work or his rations will be cut down to a very small minimum; to, say, oatmeal.

Mr. *Mather.*

9929. May the Committee understand that your movements both in London and also at Hadleigh are of a reformatory character as well as of a training character for the purpose of emigrants?—Yes, for those who need it specially, a reformatory; for those who are not needing special reformatory influence, but only employment, employment.

9930. But you find amongst the people with whom you have to deal generally a large amount of depravity as well as poverty, I presume?—Yes.

9931. And,

Mr. *Mather*—continued.

9931. And, unhappily, as you say, they go together very much?—Yes.

9932. And you rather seek to raise the very fallen, those who are in the third state, as you describe; and in all your efforts, and therefore in all your expenditure, you are looking for two objects: the one is to reform the character, and the other is to enable that character, when reformed, to obtain a decent livelihood?—Yes.

9933. And these objects are never separated; you always regard them as one?—We regard them as two objects, but indissolubly joined.

9934. Leading up to one end?—The man being able to live under decent conditions. Of course, if you have a drunkard, you must deal with his drunkenness; if you have got a very idle man, you must deal with his idleness; and if you have a sick man, you must deal with his particular sickness.

9935. Of the class you deal with, supposing you did not hold out the hand of fellowship and help, would they necessarily come into the hands of the guardians of the poor, or are they such persons as those who have been in the hands of the guardians and dislike it, and then come to you in preference?—No; I should say that about one-third of those we receive have been at some time or other in the hands of the guardians, or in the hands of authorities in some form, either out-door or in-door.

9936. One-third only?—Yes; of the remaining two-thirds, I should say fully half, that is 33 per cent. of the whole, were decent hard-working industrious men; mechanics, artisans, whose condition of want is produced largely by misfortune or by circumstances that they are not to blame for.

9937. And would this class of persons, this one-third of respectable men, appeal to the guardians under any circumstances, or do they come to you in preference to going to the guardians?—I do not think they would appeal to the guardians unless they came to the last resort of starvation.

9938. They have not fallen low enough to come within the net of the guardians?—No, not yet.

9939. You spoke very strongly, and in a disparaging sense, of the whole system of relief given by the Poor Law to the poor of the country; you said it was a wasteful system, and that it multiplied the cases with which they had to deal. May I ask whether the scheme of the Salvation Army, both as to your refuges and shelters, and industrial occupation in the town, and your training colonies for immigration purposes in the country, if these means were substituted under some control for the present Poor Law system under the guardians, do you think a great benefit would accrue to the country?—I think so, and I think it would accrue, not merely because I happen to be associated with the Salvation Army, but I think it would accrue because those principles which we are working for are sound ones, and they can be applied by others. There is nothing in the Poor Law system, or very little (I am speaking comparatively now), that is remedial. A man goes into the workhouse with his wife and three or four children, or he goes into

Mr. *Mather*—continued.

the workhouse with three or four children without his wife. He cannot get out of the workhouse again. There is no way out except he takes his wife and children, whom he cannot take. If he does take them, they go on to the streets to tramp together, and there they multiply, and the community has to support them. I live at Barnet, in the county of Hertfordshire, and I am interested in tramps and people, naturally, coming through my own county. We have got a great influx of tramps during the last five or six years, at least we think so. I understand all the adjoining counties think that they get an influx of tramps from Hertfordshire, and we think we have a large influx of tramps from other places. Our chief constable was giving me an example of the kind of thing which goes on. He has known a man for the last 14 years as a tramp. The man was out of work, being a labourer and agriculturist, and he started tramping, and came into the house, out again, in again, and out again. He gets married. His wife comes into the house; a baby is born; they go out again; another baby is born, a third, a fourth, a fifth, and sixth, and now there are eight of them. They are all tramps. They are all in and out of the house, and it is only a matter of time when there will be 16, and they will all be tramps.

9940. And they are doing no useful work?—Nothing. That system, I think, is wrong. I would take them and make them work.

9941. As a matter of fact, to put it in a very rough-and-ready manner, if the country were to make a contract with you, the Salvation Army, to take the entire control of all the paupers, and all the poor and the tramps, and the indifferent and the idle, you would make a good return for the money paid to you, and make a very handsome profit out of the amount now spent by the Poor Law unions of the country?—That is a very liberal way of putting it, and it would be a very large order for the Salvation Army; but what we do now aim at is to carry out experiments so that we may show the country that these principles are applicable to all conditions of the unemployed and the unfortunate classes.

Mr. *Round.*

9942. I want to clear up this point about the cost of the land?—We put it at about 13*l.* an acre.

9943. You bought 1,800 acres of land which you paid 15*l.* an acre for, and 1,500 acres of saltings for which you paid 4,500*l.*, and that together makes 31,500*l.*, and not 39,000*l.*?—I am afraid I have not given you quite the right figures. The actual extent of the whole property is 2,900 acres, of which 1,500 acres are either water or saltings. They are not all water. The total cost of the whole estate is 39,738*l.* I make that roughly about 13*l.* 6*s.* or 13*l.* 5*s.* an acre all round, land, water, and saltings. If you would like to have a more particular statement as to the exact amount paid for the various parts of the estate I could easily supply it, because, of course, our valuations give the exact value of each part.

 9944. When

Mr. *Round*—continued.

9944. When you speak of reclamation, you merely mean that you brought back into cultivation land that had previously been cultivated and allowed to go out of cultivation?—Yes. I explained when the word "reclamation" was used that in the strict sense of the word we had not reclaimed any land to speak of. I believe we have an acre or two of saltings, but nothing to speak of. We brought back again into good cultivation land which had been remaining neglected and allowed to get into a very bad and rough and wild state.

9945. Can you tell me what proportion of the acreage was in that state which had been arable land, and that you brought back into cultivation?—I am afraid I cannot without referring to documents. I could tell you what the proportion of the part we are in occupation of is, but part of this is let. I can get it for you if it will interest you.

9946. Your point of view is the reclamation of men?—Yes; but still, in reclaiming men, we want to teach them how to deal with rough land.

9947. I am speaking from an agriculturist's point of view; you do not look upon it in any way as a solution of the land difficulty in the eastern counties?—No; but I do think that soon we shall be able to show some very remarkable results in the way of vigorous cultivation. I think our crops last year were very satisfactory from that point of view.

9948. You merely utilised the land as a means of reclaiming the men you put upon it, and doing useful work in that way?—Yes; but at the same time we want to do the best agriculture we can, and I think with regard to our wheat last year, and also some other crops, roots, and with regard also to some of the fruit crops (which is another branch altogether), we get very remarkable results. It is full soon to speak, however.

9949. I quite agree with that; but take the rivet wheat that you grew, could you tell us the expense of the cultivation of that?—I am afraid I cannot off-hand; I know that, worked out at the price of wheat a month or six weeks ago (it is better just now), there was a profit of some 30*s.* or 2*l.* an acre.

9950. That, of course, was a very remarkable crop?—That, of course, was a very remarkable crop. We have adopted a special system of sowing.

9951. Then as regards the fruit cultivation; do you know what your expenditure has been upon that, in bringing the land to a proper state?—The capital expenditure you mean.

9952. We know what it cost to buy, 13*l.* an acre; do you know what the total amount is that it has cost you to bring it into a proper state of fruit cultivation?—It varies; but it has cost about 55*l.* or 56*l.* an acre, including the cost of the land.

9953. What state is that land in now at this moment; the trees that you put upon it?—They are very good.

9954. What was the result?—Part of last year's crop was very good, but then part of it was slack, owing to the fact that it was only the second year.

9955. You could not expect it to do much at present?—No. Last year was, however, the third year, and was a very great improvement on the second; but this year will be the first year in which we can give actual returns of fruit crops, to compare with the best known authorities on the subject.

9956. What kind of fruit have you been growing?—Low bush fruit, gooseberries and currants, raspberries, and some apples and plums, including some damsons. The currants and raspberries, so far, have done the best. We have also some 25 acres of strawberries.

9957. Do you define a colonist as a person who requires to be trained?—In many cases, of course.

9958. Is that what you mean when you speak of a colonist?—Yes; a man who has to be trained for the conditions into which we hope hereafter to transplant him. Of course, amongst these colonists, there are men who were brought up on the land, but they need to be taught other things, and *vice versâ*.

9959. With regard to your experiments with paupers, they were confined to indoor paupers?—Yes, entirely with indoor paupers.

9960. What do you mean by an indoor pauper?—I stated that a pauper was a man who received any assistance from the rates, but these paupers with whom we dealt were exclusively indoor paupers, and were the most difficult to deal with.

9961. A pauper, in the ordinary acceptation of the term in England, is anybody who receives any assistance from the rates?—Yes.

Mr. *Wilson* (Durham).

9962. In gathering up the men for your home colony, do you make any discrimination between those who come to you?—The plan adopted is this: When there is a vacancy for men upon the farm colony, one of the officials connected with the farm colony meets one of the officials of the city colony, and together they examine the men who have been previously reported by their foreman as suitable to go to the colony, and they would be required to pass a doctor's examination as to their being fairly well, and not suffering from any disease which could injure the others; and they are to express their willingness to abide by the regulations and sign that small contract which I have put in, and then they are taken on. We reject men who are unfit physically, and we reject men who are, in our opinion, too old, although we have men down in the colony as old as 55 or 56, and they have done fairly well; but as a rule the age is about 35.

9963. You would not consider your colony a very large element in the solution of the question we have in hand, the employment of the unemployed?—As I stated at the beginning, the effort we are making is really in the nature of an experiment in certain principles which, if it can be carried out successfully, we think could be extended to an unlimited degree. What we are trying to show is that they are sound.

9964. Provided you can find room?—Yes, we think that room could be found for a very great many, at any rate for some years to come.

9965. Then I may take it the test for a man being transferred from your city colony to the colony

Mr. *Wilson* (Durham)—continued.

colony in the country is physical ability?—And willingness to work and obey orders.

9966. Have you any regard to trade?—No, we take any trade; we take men, of course, who have no previous trade.

9967. I think I gathered that the idea was that your system was not complete except you had a colony abroad?—Yes.

9968. Would this colony abroad be what I may call a self-containing colony, embracing all trades?—Yes, largely so.

9969. That is to say you would have within it certain aspects of agriculture and various industries?—Yes.

9970. Have you any principle of selection in your mind as to the men who should go from this country to your foreign colony?—We have not got quite up to the time of making the selection; but our idea is to select men who will fit into the first primarily immediate wants of the colony which is being established. We should have to send tailors, for instance, and we should have to send builders, and some bootmakers.

9971. I will take an old one and a young one, or one weak and one strong, presenting themselves to you, would you take the old and the young, the weak and the strong, alike to this foreign colony across the sea?—I do not think we ought to take more than a certain proportion of old, at any rate at first. Our idea would be to try and make the over-sea colony, by a fair sampling, fairly represent the men here. We should not exclude entirely old men, and we would not altogether take young men, but we should take both in fair proportions.

9972. I understood you to say it would be economical if the guardians who administer the Poor Law were to pay the passage out of the men who were either on the rates, or might probably be on the rates?—Especially the latter.

9973. In that case would not they send out the old and the young indiscriminately?—There would have to be some provision made to guard against that. For instance, if it was done in the case where we were suggesting it should be done through us, we should stipulate that we had some voice in the selection of the men.

9974. But if you stipulate the guardians should pay for the strong and healthy to go to your foreign colony, would that not be leaving the weak?—We would take a proper proportion. We would do as we have done in this experiment with indoor paupers in this colony. We took a fair proportion of men over 50, and a fair proportion of men under 30. We tried to make

Mr. *Wilson* (Durham)—continued.

it as fair as we could. My point with regard to the guardians paying is this, I say it is well known from my own personal knowledge in dealing with Poor Law guardians and dealing with the poor, that the relieving officers are very well aware when a man is likely to come on to the rates. They know it months before he comes, in many cases; I want to prevent his coming on to the rates in the strict sense of the word, and beginning that demoralising business of living without work; and I say, to give the guardians power to say, "Well, now, here is a decent fellow, if he gets once on our hands we shall never get rid of him; let us pay up and send him and his wife away."

9975. At the present time, and during the past few months, have not a number of men come on the rates that last year at this time there was no probability of coming on?—I think in the last winter, yes; but I think that was an exceptional and an abnormal season.

9976. And owing to the depressed state of trade?—Yes; I hope we may not have to face quite so serious a time again.

9977. I hope that myself. I want to get the fact whether you would take out those who were not only willing to work but were able to work when they got there. A man might be willing to work whose strength was gone, but would you say you would take out to your foreign colony a fair proportion of the weak, and what I may call the used-up men?—Yes, in the hope that we should be able to give them such aids as they could manage to subsist upon.

9978. But there are people who are used-up?—People who cannot work at all?

9979. Yes?—I do not think it would be fair to ask us to take them; the proper place for them is the hospital.

9980. I do not mean who are ill and want a doctor, but who are getting down to the verge of life, and who are not able to work at hard muscular labour. Would you have the guardians pay for the transition of men who could work when they get there, and leave the men in this country who would labour, but really could not work if you took them out; willing to work but whose strength was about gone?—No; I do not think it would be practicable. I do not think that the country to which it was hoped to send such people would receive them. I do not think, therefore, the question arises as to whether we would be expected to do it or not. I do not think that would be received, and I do not think it would be quite fair to the new country.

Mr. T. H. BOLTON took the Chair.

Mr. *Pickersgill.*

9981. You have told us you have at Hadleigh 298 men, but that you have accommodation for a very large number, namely, 500?—Yes.

9982. From that it appears that only about three-fifths of your accommodation is utilised at the present time?—Yes; perhaps next month it may be restored to the full extent of the accommodation; we fluctuate very much.

Mr. *Pickersgill*—continued.

9983. Although you have given us certain percentages of success and failure, so far as I gather, you have not given the total number of men who have passed through Hadleigh since its establishment. Can you give us that figure?—I am afraid I cannot now.

9984. Would you obtain that for the Committee?—Doubtless I can get it.

Mr. *Pickersgill*—continued.

9985. You have told us that 30 per cent. of your colonists are skilled mechanics. That strikes me as a large percentage?—Thirty per cent. of the men coming into our hands. I think I said that with regard to the city colony. As a fact, it is about one-third.

9986. I took it as a general statement with regard to Hadleigh. What evidence have you that these men are skilled mechanics. Have you anything beyond their own statement?—We have their own statement, and then we have their ability to do the work.

9987. You do test them?—Yes.

9988. Supposing a man told you he was a bricklayer, would you test his skill as a bricklayer?—Yes, we would, because we have bricklaying to do. In the same way if a man told us he was a painter he would get painting to do; and equally, if a man told us he was an upholsterer he would get upholstering to do.

9989. Do you think this 30 per cent. is reliable, and that there is 30 per cent. of your colonists who have a knowledge of the skilled trades?—I think so.

9990. Could you analyse this 30 per cent., either now or at some future time, to show the trades of which the 30 per cent. is made up?—I can send you the exact figures from which they are made up.

9991. With regard to the pauper experiment, I think you have had paupers from only one London union?—The figures I gave you relate to one.

9992. But have you had paupers from other unions?—Yes, we have.

9993. With regard to the other unions, did you have them from two other unions?—One.

9994. Two altogether?—Yes, from two unions; but we also had, to be quite accurate, a dozen men sent down from West Ham; they were not exactly sent down by the union, but they were helped by the Unemployed Committee there.

9995. You have given us in detail an account of the paupers who were sent from one union, namely, Camberwell?—Yes.

9996. You had some stipulation with the Camberwell guardians as to the ages of these men?—We said we would take them at about the ordinary ages; I have the list of the ages here.

9997. That was not my point; was that the only stipulation you made with regard to the age?—We made two or three stipulations, one, that the men must be willing to undertake to conform to our regulations; then they were to pay us 5*s.* per week per man, and then we were to have the men addressed before they were selected, so that our officers should have an opportunity of laying before them some of the conditions under which they were to be taken.

9998. Did you understand they were picked out by the Camberwell guardians as specially suitable men?—Yes, I think they were.

9999. They were picked men?—Yes.

10000. And yet of these picked men you found 22 per cent. were totally incapable of work?—Yes, they ought never to have been sent, and that is admitted now, I think, by the guardians themselves; they simply say, Well, we did not know.

10001. Then you told us 41 per cent. are still with you; are you still receiving payment for them?—Yes.

10002. Five shillings a week?—Yes.

10003. They have been some months with you?—Yes, some of them; some of them have been six or seven months.

10004. During the whole of that time you have been receiving from the rates 5*s.* a week for each one?—Yes.

10005. A question was put to you on rather a delicate point, and I hope you will excuse me reverting to it, because it seems an important point; that is, with regard to the dangers which are likely to arise in a celibate establishment, such as yours is. Is your management alert and conscious of the possibility of danger, and alert to any indication of unnatural crime in your establishment?—Yes, I think so; I think our men who are in close contact with the colonists, certainly are thoroughly wideawake with regard to that and similar difficulties. I repeat what I stated to the Chairman, that I think many people are greatly in danger of exaggerating the extent to which the purely working classes are affected by those evils; I do not think there is anything like the amount of immorality and unnatural wickedness amongst them that is often thought; I believe they are far better in those respects, far cleaner than is very often stated.

10006. Since the colony was established has any man been dismissed on suspicion or proof of anything of the kind?—In the farm colony no, but in the city colony one or two have.

10007. Just one word with regard to your scheme about the guardians having power to contribute; your idea is, that the guardians should have the power to pay these sums in regard to persons whom you describe as prospective paupers; it is rather a point you make, that they should not be actual paupers?—Yes; I do not want men ever to have the stigma.

10008. I quite understand and fully appreciate and sympathise with your feelings, but my question is this: what knowledge have guardians, as such, of the existence of prospective paupers?—From my own knowledge I am able to say that I believe relieving officers (those are the officers through whom the guardians come actually into contact with the poor) have in multitudes of cases prior knowledge as to the probability of a man's asking for relief. In many cases, I believe, men go to the relieving officer, in fact, I know they do, and ask him whether there is any way of getting help without being classed as paupers, and relieving officers often know men, honest, straightforward fellows, who are bound to come in the course of a few months or weeks on the rates.

10009. We have had a good many witnesses from boards of guardians, and I think they have generally stated they have no knowledge of distress until application is made to them; of course, the application makes the man a pauper?—I do not think that the guardians, as a board, have the knowledge; I think that would be quite accurate; I think, as a board of guardians sitting round the table, they know nothing about the

Mr. *Pickersgill*—continued.

the men except they are men on the street, and may be very excellent men, but I think there are officials, especially those officials (and I am glad to think there are many who are so) who are personally interested in helping the people who do know very often when men are likely to be pushed into a corner, and they should have power to say, "This fellow is a decent fellow, and he ought never to be allowed to become a pauper; put him in a schedule, and have certain recommendations with regard to him, and say, 'Now, look here, we will help you to get away.'"

10010. I think your original suggestion was, that these powers should be given to local authorities, which would, of course, extend beyond guardians?—I think it should extend to all local authorities who have the control and management of the poor.

10011. With regard to your building operations; apart from building in connection with your own colony, what has been the extent of your building operations in the neighbourhood of Hadleigh?—We have built about half-a-dozen cottages, and I daresay, on the average, they have cost 200*l.* or 300*l.* each. If it would be of any interest to the Committee I could easily give you a list.

Mr. *Round.*

10012. Are they single cottages or in rows?—They are single.

Mr. *Pickersgill.*

10013. Do I understand you to say that your people at Hadleigh have not built more than six single cottages or double cottages?—I am speaking off my book, but I should say in that neighbourhood it is half-a-dozen small houses, the rents of which will vary from three or four shillings to five or six shillings a week, and they have been built, as I have said, chiefly for friends of the Army who have desired to help these poor fellows, and have said, "Can you build me a cottage?"

10014. Are these six cottages the full extent of the building which has been done by your staff or colonists at Hadleigh?—Outside our own building, I think so.

Mr. *John Burns.*

10015. I venture to suggest if you were to refer to your builder's book you would find more?—I do not recollect anything further. If I find I am wrong I shall be very anxious to correct myself, but I think you may take it that is about it.

Mr. *Bousfield.*

10016. These six are what you have built on contract; you have not built them for yourselves, but built them at a price for other people?—Yes, we built them for outside persons in the neighbourhood who had property there, and who have paid us for building.

Mr. *Pickersgill.*

10017. Really as a means of providing employment?—Yes, and also contributing to the funds of the establishment.

Chairman.

10018. Are they separate or in a block?—They are single.

10019. Detached cottages?—They are not built in a row.

Mr. *Logan.*

10020. Is it, in your opinion, through their own fault that the bulk of the people you get come to you, or why is it they come to you?—In a way, yes, it is through their own fault in a large number of cases; but then the measure of responsibility must be determined so much by factors which are out of sight. It is very difficult to say exactly. Here is a return with regard to a particular 698 men, or say 700 men, who at a particular time, a few weeks ago were in certain of our labour shops. With regard to their downfall, these are the reasons they give in respect of 700: 237, or 34 per cent., attributed their downfall to drink; 165, or 24 per cent., attributed their downfall in a general sort of way to bad trade, they could not get work; 296–300, or 42 per cent., are classed here as "other cases;" three principal causes, pure misfortune, ill-health, and old age would account for that 42 per cent.

10021. So that the people who come to you, are to a very great extent failures; the temporary unemployed, who are mainly the cause of this Committee being appointed, do not come to you?—About one-third of those we deal with, I stated in the early part of my evidence, are persons who are out of employment through no fault of their own. The other two-thirds I should say, more or less, have themselves to blame, drink, vice, and so on.

10022. Having given so much time to curing this social disease which exists in England, have you ever thought of any way of preventing it?—I am a religious man, and I think that the true and ultimate remedy for all these evils is to be found in the service of God, and the moral and spiritual renovations which follow that service; but speaking from, if I may say so, the lower level of ordinary social thought and everyday thought of the present time, I should say that the Government or some authority ought to insist on the better distribution of the workers in order to deal with poverty. I come back to where I started, that if you have got more workers than work you must either find more work or do something with the overplus workers.

Mr. *John Burns.*

10023. What about reducing the overwork?—I dealt in your absence with that alternative as being one which I know to be held by some persons, that a better and more equal distribution of work would meet the difficulty, but I give it as my own opinion that the experiments which have been tried with the eight hours' day, and some other matters of a kindred nature, do not seem to indicate that that is going to meet the difficulty.

Mr. *Logan.*

10024. You were saying just now that you hoped the Committee would make a suggestion, that the guardians should contribute to send men out of England; I understand that to mean

Mr. *Logan*—continued.

mean that men to go out of England must consist, if not actually of the very best of the men, still the men you would desire to send away must be useful men; has it never occurred to you, Mr. Booth, that this Committee might suggest, that as there is a vast amount of work to be done in England, possibly some means might be found of setting the men to work in this country instead of sending them abroad?—Of course, I was asked to come here to-day to give evidence as to what the Salvation Army is doing in respect of its social operations. I was not expecting to be asked whether I could make any recommendations to the Committee outside our own work; but I daresay the Committee may be able to light upon work which can be usefully done. I saw a suggestion the other day by some good gentleman that you should pull down all the slums of London and rebuild half London, and that you would find occupation for the unemployed, at any rate, a large part of them, for some years to come in doing that, and have a good investment when you finished. I daresay there are other things which might be done of a temporary nature.

10025. I know that you are here to help the Committee, if you can; but it struck me as somewhat strange to hear you, and I have heard others, suggest that some of our best men should be sent out of this country to do work elsewhere, while at the same time there is any amount of work to be done in this country?—That brings us back to another question. I think, purely from the human side, the happiest conditions in which a man can live are those connected with, and associated with, the tillage of the land; and I think, if you want to make, humanly speaking, a man happy and prosperous, and make him glad that God has given him a large family of children, and put him in a condition where he is likely to do something with regard to the future, you should place him where he can get a living out of the soil. Such are the conditions of things here, that it is very problematical whether a man can get a living out of the soil in this country. I am not here to say that he can, and I do not wish it to be understood that he cannot, but it is difficult under existing conditions, and unless you are prepared to go in for a wholesale system of protection, and to put back the timepiece, and do some things you cannot do; but there are countries where he can live, and where we know that men brought up very much as multitudes of men are here have lived; they prosper and they thrive; we know they do, and therefore I say it seems a rational thing that you should send them where they can do so.

10026. Is not the only reason why they can thrive on land elsewhere, as in Australia, for instance, or in New Zealand, that they can get that land for a very small price, whereas here, in this country, they have to pay a big price for it?—That is one reason, but another reason is more forcible, climatic conditions; another reason would be, that the produce of the land is easier to get than it is here.

10027. In what way is it easier to get; supposing you go abroad and compete with us, they grow less per acre than our men grow, infinitely less, taking Canada, Australia, and New Zealand; and in addition, not only do they grow less, but they have got carriage, in some cases, of 6,000 miles to pay, and yet they can undersell our men at their own doors; it is not protection that gives them that power?—Does not that rather support the view I am suggesting, that they do thrive, and that they can thrive. The conditions, say in Australia, or in New Zealand, or in Canada, and the conditions under which they live are better, because they can compete with us here.

10028. Is it not that land is cheaper?—It may be that may have something to do with it. But my opinion of land in the colonies is, that land costs you, when you have worked it, and done what you have to do, nearly as much as if you got it at a good price.

10029. You say that the man in New Zealand has to pay as much per acre for his land as the man in England?—I think he has got the climate in his favour.

10030. He does not grow as much?—He grows and eats it, and he does not of necessity send it to market. We have a considerable interest in Canada, quite apart from what we are now looking at; our ordinary religious operations in Canada and Australia, and we have many thousands of working people who are connected with our religious propaganda. We have a personal knowledge of thousands of these men who have to make themselves happy, comfortable homes upon the land, and who never want anything to eat. It is quite true they may not have much money, but there is food in the cupboard, there is a pig in the sty, or hanging up in the winter, and they can have a joint off to roast when they want it. There is beef every day for breakfast, and the children run about, and grow up; and if they do not know quite as much arithmetic and algebra as they do here in the board schools, they grow up strong, and accept their conditions of life, and are bright and happy.

10031. They live better than our people?—Better.

10032. They eat more?—They eat more.

10033. Their clothing costs them 25 per cent. more?—A good deal is made of the cost of their clothing. Nominally their clothing is at a high price, but a great number of them wear homespun stuff, that will wear out what we have to pay for three times. It is quite true the life is rougher, and I know there are some disadvantages in it, but from what we know, confirmed by the personal observations of General Booth, who has now been practically twice round the world, and has had good opportunities of observing, and is surrounded by men who are disinterested, we are convinced that there are multitudes of men here who are working for a mere pittance, a hand-to-mouth existence, who might be in comparative comfort if they were transferred under favourable conditions to the colonies.

Mr. *John Burns.*

10034. State colonisation, in a word?—I would say, Salvation Army colonies. I am afraid that State colonisation would be found to have more difficulties in it than the Salvation Army colonies.

10035. You

Mr. *Logan.*

10035. You say you would recommend the State or the authorities in England to send men to our colonies, under certain conditions?—I would.

10036. Rather than keep them at home, although the great bulk of our people in this country are neither housed properly, clothed properly, nor fed properly, and there is unlimited work in this country for our own people to feed and to clothe and to house if it was only set about and done in a proper way. Do you still recommend they should be sent out to these colonies?—You are rather leading me beyond my intention by your question. I would say that, having regard to existing conditions in this country, and the great difficulties which are in the way of making any substantial changes in those conditions, and the long time it will take to make any serious changes, yes.

10037. I do not want to press you unduly for one moment, but I am one of those who hold that we could find work enough in this country if we altered the social conditions, and I want to see men like you recommending alterations of those social conditions?—I think very likely you could, but I am afraid it would take me all the afternoon to express what I think are my views on that question. I do say, however, that having regard to the present great need, the evident growth in the number of unemployed persons, being unemployed through no fault of their own, it does seem to me that the best plan is to transfer them to some other country under some such conditions as those described, for I fully believe they would be thoroughly happy.

10038. That will be in the direction of cure, not prevention?—By doing so I think you would cure in those cases you remove, and prevent a multiplication in the future, because by every man you take away you relieve the over-crowded market here.

10039. We have seen in Ireland that system carried on, not by State aid, but we have seen natural circumstances driving all the best young men and young women out of Ireland to work elsewhere, and leaving the old, and the crippled, and the maimed behind, until we see Ireland in its present wretched condition?—Another set of questions come in there again. You have certain congested districts in Ireland, and you have certain political conditions which are rather different to the conditions here. I do not think you could argue from the state of things you have had in Ireland on the state of things you have here. People have gone away from Ireland, not merely because they sought to get a living, but there have been other considerations.

10040. Still the inability to get a living here has been the chief cause?—Yes, a leading cause.

Mr. *Bousfield.*

10041. Moreover, your scheme deals with those who have already failed in this country, and therefore are presumably not in the first flight, and not among the best to start with?—That is so.

10042. You are helping, therefore, to send abroad, not the best class, but the best of the class of failures?—The best of the second-best. Then I think that a great many of the best class of workers would go if they saw a fair prospect of getting into a settlement of their own, because if you take the condition of a great many of those who are classed in the first ranks of artizans and tradesmen here, when you come to add up what they really earn and the crowded conditions under which they live, there is a great deal wanting in their lives to give them a chance of happiness.

Mr. *Bousfield*—continued.

10043. But my friend Mr. Logan's point was that you were robbing the country of some of its best blood. Your answer to that is, I take it, that your scheme really does not deal with the best of the working classes, but you are taking out the best of those that have failed, and, therefore, are only second-best?—Our scheme is primarily to take away the best amongst the surplus. We should like to take away a proportion of the best, and a proportion of the second-best, and a proportion of the worst. Mr. Logan's anxiety is that I should leave them all here, and seek some method of employment in this country. I say there may be some methods for doing that; I do not say there are not; but I have an impression that it will take a long time to get to them, and that in the meantime you ought to do something to relieve the present pressure.

10044. Now the person who enters the class of the worst. You had among your indoor paupers that you set to work 21 persons who told you they never did work and did not intend to work, and who would not work?—Yes.

10045. And you had also at your city colony a considerable proportion (it does not matter what for the moment) of idle worthless fellows, who could not be got to do any work. You take a strong view, that there ought to be legislative power to deal with that class of idlers, who simply live to prey upon society?—Yes.

10046. You know we have had some evidence about what is done in Belgium with that class?—I have not read the evidence, but I know a little about the Belgian efforts, and also in Holland.

10047. They have not only voluntary settlements, such as yours would be, but they have also penal settlements, to which people can be sentenced for one, or two, or three years or more, three years' hard labour, as it were, upon the settlement. Do you think that settlement could be introduced with advantage into this country?—I am sure the same principle could be applied with advantage; I am not sufficiently familiar with the exact working of the Belgian and Dutch beggars' colonies, and so on, to say that that exact thing would answer, but I think, with regard to the men who won't work, that principle should be applied here. There should be some compulsion.

10048. You have found yourselves powerless to deal with that class?—Quite, or very nearly so.

10049. And after bearing with them for a while, you have got no remedy but to send them adrift?—Ask them to go.

10050. I suppose, as a matter of machinery, the way you would suggest would be that you should be able to charge such a person before a magistrate?—Yes, requiring him to show he was either in employment or had some reasonable prospect of getting it, and, in default of that, give

Mr. *Bousfield*—continued.

give him certain notice, at the expiration of which he would be committed to a colony of some kind.

10051. I want to direct your mind to the point of distinguishing between people who are merely unfortunate and out of work and have no prospect, and people whom when you offered them work declined to do it; you would have to charge them before a magistrate with being loafers and vagabonds, as you can do now, and upon conviction they would be sentenced to a term of work in a settlement?—Yes.

10052. It was suggested here that, as a practical question, you could not discriminate really and could not decide whether a man was idle and a loafer or not; what do you say to that?—You would have to provide (that is what I meant just now) some intermediary condition; the municipality would have to be empowered to test a man's willingness to work before he was actually committed for any long term of labour. I would say, to take an illustration, here is a man who is out of employment, and has been on the poor-rate and in a workhouse, or been applying for relief for, say, six months. At the expiration of that time, it is believed by the officials appointed by the board that he will not work; he does not want to work if he can get it; he is brought before a magistrate, who investigates his case, and he says, "Now, then, you must go down for three months to so-and-so, and we will see whether you will work or not, and on the report I get about you at the end of three months I will determine what I have to do with you afterwards." He is sent down on a preliminary test for two or three months, and at the end of that time he is brought up, and if the evidence shows he will not work, he is sent for two months or two years to some colony, where he has to work or he cannot eat. During those three months many of them will set to work.

10053. The men at your colony are practically under such a test; you have got them there, and you can see whether they work or not?—Yes.

10054. And you practically have no difficulty in deciding who are the worthless loafers and who are the men who are willing to do what work they can get?—Quite so.

10055. As a practical point, do you think there would be any great difficulty in deciding on the question as to whether a man was a worthless loafer after you had some experience of his working in the fields?—No, I do not think there would be any serious difficulty.

10056. Do you think the public opinion, and particularly the public opinion among the working classes, and, let us say, even among the workless classes also, excepting, of course, the worthless ones, would support the Legislature in passing, and support magistrates and others in working, a law of that kind?—I think so. I really think the working man is the most bitter enemy of the idle man. I think his eyes are open. As I said just now, the idle loafing fellow brings discredit upon the whole community of workmen, and therefore he would support it. There would be a great howl, perhaps, on the part of a few people who go in for abstract theories of freedom; but as regards the general public they would support it, and think it a very good thing.

10057. Your view is that that class discredits the unemployed as a whole?—Altogether.

10058. And diverts public sympathy from those who are really deserving of sympathy?—Very much so indeed.

10059. With regard to any relief works, of course, that class always makes it more difficult to deal with the unemployed as a whole?—Yes.

10060. Therefore, with regard to the problem of the unemployed, if you could remove that class, as it were, to penal settlements, you would have made a considerable step in dealing with the whole problem?—I think so; simplifying the whole question.

10061. With regard to your labour colony, you pointed out that at present you had only 298 there, although you had places for 400 to 500?—Yes.

10062. Do you find that the demands upon your colony, as a rule, overrun your accommodation or are less than your accommodation?—I will say they are about equal; sometimes they are under and sometimes they even get a little over.

10063. How do the demands come?—They are made weekly by requisition from the governor, the man in charge.

10064. Where do you get your cases from; do you collect them in London and send them down there?—Yes, they are taken from the city colony.

10065. Supposing you doubled the accommodation and your labour colony was twice as big, and you had twice as many places, do you think you could keep it filled?—I think so. Of course there would be times when we should be a little below, but we could easily deal with 500 men there if we had the money and the trade.

10066. Supposing you were in a position to deal with 5,000 men, do you think you would get 5,000 men to deal with?—We should not get 5,000 in a week or two, but we should get them. I should have no fear of not getting 5,000 men and keeping them all well employed and happy.

10067. Your total cost per man per week comes to 11*s.*?—Between 10*s.* and 11*s.* it costs us.

10068. That is, of course, the money out of pocket?—No, that is his total cost; that is not the loss on him.

10069. You did not give us that figure; I think you omitted that?—No, I do not think I did give it. I must send it to you because I have not got it here.

10070. You gave it us for the city, and it came to 1*s.* 10*d.* per man per week?—Yes. It will have to be an approximate figure.

10071. You have said the food cost about 5*s.* 10*d.* a week?—Yes, 5*s.* 10*d.* is what they spend upon food, and then there is the management to go on, and then there is the money grant.

10072. That works out at a cost of about 11*s.* in all, good, bad, and indifferent, and the cost to you would be perhaps 3*s.* or 4*s.*, or something of that sort?—The loss depends upon the year's working. For instance, last year in agriculture there

Mr. *Bousfield*—continued.

there was no loss, because we made a slight profit, but I can let you have the exact figure.

Chairman.

10073. That is, I suppose, the difference between what you received for the produce and what you spent?—Yes, the difference would be the loss if it was on the wrong side or the profit as the case may be, and that divided among the number of men would be the net cost of the men.

10074. You do not take anything into account for rent?—No.

10075. Or rates and taxes?—Yes, rates and taxes and tithe.

10076. Or capital?—No, I have already explained that in my evidence.

Mr. *Bousfield.*

10077. You set off the improvements against that for the first few years?—Yes.

10078. You will endeavour to let us have a statement that is in an intelligible form?—Yes, in the form of a schedule.

10079. Practically it will set out your total loss on the colony, and then you will give us the average of men there throughout the year, and then we will divide by that and that will give us the loss that you make per man. Do you think it is covered, to make a rough guess, by that 5*s.* which was paid in respect of these paupers?—Yes, I think so, more. I shall analyse it to show you the departments where the loss was, because that will help you in arriving at an opinion.

10080. That will come in your statement?—Yes.

10081. The reason I ask you is this: It seems if you had accommodation there it might be a valuable experiment to make to extend this system, if you were willing to take them, of sending people to you and paying so much a week for them. Would you be inclined to adopt that?—Yes, I should be inclined to go in for an extension of that if I got the opportunity, but I am afraid we should have to have some different conditions as to the working, and I should like to think it out very carefully, because it is not so easy to make men do their duty who know there is some money payment made on their behalf. Of course there are exceptions among them, because you get men who make it a matter of conscience as to what they do, and are anxious that they should help other men as well as themselves, but with the majority it would make a difference to them.

10082. They consider they are paid men?—Yes, that there is something paid on their account.

10083. Now with regard to the food and shelter part of your city colony. You make that department pay, I understand?—Yes, there is a slight profit shown last year.

10084. You deal to some extent with rather a better class of people than would go to the casual ward of the workhouse?—Yes; I think we deal with all classes of the unemployed. I think there can be found at our places every class of man from the respectable decent honest fellow who is temporarily out of employment and down on his luck, down to the merest wreck of a man.

Mr. *Bousfield*—continued.

10085. Now I am very curious to know exactly how you make that pay?—In what form would you like it?

10086. If you can show us the elements of cost as regards the individuals and the way in which you make the labour they give you pay for their board and lodging for the day, I should like to have it?—I will make the statement.

10087. That system of food and shelter which you have worked out in this way is a system which any board of guardians or any municipality might adopt, is it not?—Yes, if they had persons to work it with kindness and sympathy and personal dealing.

10088. If you had that personal element there is no reason why that system of yours should not be entirely substituted for the present casual ward system?—None whatever.

10089. Moreover, it goes beyond that. Mr. John Burns says that pre-supposes a millennial condition that is not likely to come. Is there very great difficulty, do you think, in showing boards of guardians how to work a system of that sort?—No. We offered to take over the casual wards if they were handed over to us with the buildings; we should require the buildings, without any serious charge upon them.

10090. The casual wards throughout London?—We have offered to do that, and we are at the present moment in treaty with one of the boards of guardians for taking over their casual wards on those conditions, and I have no doubt we should be able to make the men a great deal happier and more decent than they are in many cases now. I think in some cases the casual wards are very well and fairly managed considering the class of men, but in others I think the management is execrable.

Mr. *John Burns.*

10091. And demoralising?—Cruel.

Mr. *Bousfield.*

10092. Your system of food and shelter deals with the same thing as the casual ward deals with to some extent, but it also deals to some considerable extent, does it not, with the question of unemployment. You may have people come to you day after day, and in return for the work they do for you, you can let them in from day to day over the bad times?—That is so.

10093. How many people did you deal with in that way last winter?—Here is a list, which has already been put upon the Notes, of the places, the charges, and the accommodation. I am afraid I cannot give you now the number of individual cases that have been dealt with in the shelters by the officials, but I think I could supply it.

10094. It would be useful if you would do so?—There is a great deal done in that way. I may mention, for instance, one item with regard to one of our shelters last year, the largest place mentioned there; we slept there every night nearly 1,000 men in different stages. There are 300 or 400 of them pay one penny for their night's accommodation, just a seat in a warm room,

Mr. *Bousfield*—continued.

room, and hot and cold water, and towels, and a slice of bread. There are 200 or 300 of them who pay 2*d.* and lie down, and there are others who pay 4*d.*, and so on, a better class of men. Last year we returned to the provinces (this is one item which may be a matter of sentiment, but it goes to my heart), we sent home to their parents nearly 200 runaway youths varying from 17 to 20 who had come to London, got into trouble, spent all they had, landed in this place homeless, and just at the right moment found somebody's hands upon them. "Where did you come from? What business have you here?" "Oh, my home is in Edinburgh" or "in Manchester." "Who is your mother? What is her address?" "Here it is." And so you get it all out of them, and send them home. Of course the strength of that work is in the dealing with the individual, and we get all classes, as I said just now, of poor men.

Mr. *Logan.*

10095. Do you pay their carriage back?—In many cases we do, because we think it is a wise investment. In some cases their parents paid it.

Mr. *John Burns.*

10096. That is one of your regular losses?—Yes.

10097. And you consider it a good expenditure?—Yes; we send the youth to his own home, and his mother looks after him.

Mr. *Bousfield.*

10098. We are chiefly interested in this from the point of view of the reference to us as regards dealing with the unemployed, and I was anxious, if I could, to extract your secret as to how you make these places pay, because you appear to deal with a certain class of unemployed both from the point of view of food and shelter, and to pay your way as regards that; do you include in your accounts, with regard to this food and shelter, rent, because I understand you have to pay a rent for most of these places?—Oh, yes.

10099. Have you any rent-free buildings?—I do not think we have any rent-free buildings, because they make us pay rent for every building.

10100. I think you have said that with regard to the different industries that you carry on, and the employments, you are going to furnish us with the figures of the results?—I am going to furnish you with an analysis of the trades and the proportion of men who are mechanics.

10101. I am rather anxious to see how you make both ends meet?—I will show you a return which will show you what we spend in rent, rates, and taxes, food, fuel, and labour; and, on the other hand, what the people pay and how it comes in. This for food, and that for the 1*d.* shelter, and that for the 4*d.* shelter.

10102. And as regards the number of hours, supposing a person came to you for one night's lodging and some sort of supper at night, and breakfast in the morning, what work would you set him to do?—Only in the case of the 1*d.* men. If a man has got 4*d.*, he is an aristocrat compared with some men. If he has got 3*d.* he can get a lie down, and for 2*d.*, too. It is the man who is quite penniless to whom we say, "Come in here and work."

Mr. *Bousfield*—continued.

10103. Then practically the 6*d.* man and the 4*d.* man pay for the 1*d.* man?—No, they pay for their own bed.

10104. Supposing you take the 1*d.* place; you have got one place where you have got accommodation for 500; do you think that place pays for itself?—I think it just about makes both ends meet.

10105. Could you give us that separately from the others?—Yes.

10106. Can you give us any idea how many hours' work a man would have to do to earn that 1*d.*?—The expert man would earn it in half an hour, and the helpless man would perhaps take three-quarters of an hour.

10107. If he brings his 1*d.*, that would cover the whole cost of the shelter?—Yes, that gives him what is described here; the use of the lavatory, a slice of bread, and a warm room for the night.

10108. That is only one place; if you give him another place, that might bring it up to 2*d.*?—A little more.

10109. There is a certain class of the lowest unemployed; you can rent a building and pay rent for it, providing accommodation and lodging and a certain amount of food sufficient for existence, and you can do all that at a cost of 2*d.* per head per day?—Yes.

10110. With regard to the match-making industry, how many men do you employ in that?—Men and women, 110.

10111. Is that an industry of an elastic character; do you think it is an industry in which you can keep your plant and everything going so as only to employ a few people at one time of the year and then expand it?—Yes, we have to do that. As I pointed out a little while ago, that is not an integral part of the scheme. It was started simply to benefit the match-box makers; from a desire to pay the match-box maker a little more money than she is ordinarily paid.

10112. Do you deal with any of the unemployed in that matter?—Not strictly. It is only the match-box makers we deal with. We employ 110 people, but it is in the ordinary way of a commercial undertaking.

10113. Have you got a factory?—Yes.

10114. And have you got the 110 all there?—No, they are not all in the factory. They come and take the work out. There are about 60 inside.

Mr. *John Burns.*

10115. They are employed under a condition that prevails in the trade having regard to a factory and external work?—Yes.

10116. There are none of the 110 who work at match-making, either in your factory or otherwise, who live either in the city colony or the shelter, or elevator?—No; they all live in their own homes.

10117. With

Mr. *Bousfield.*

10117. With regard to this question of competition, you have told us you have not undersold people in any trade?—No.

10118. There are, of course, a number of people besides Bryant and May's, and they are all competing?—Yes.

10119. And you are competing on the same terms with them?—Yes.

10120. You have already given some answer to the suggestion, but it is suggested that that competition acts unfairly, in that while you are providing work for some people you are throwing other people out of work; you have endeavoured to meet that suggestion?—Yes.

10121. Your point was this; I want to see if I have got it rightly: that these people whom you employ want bread?—Yes.

10122. And want certain things: clothes and shelter?—Yes.

10123. Instead of providing those things for themselves they make matches and sell the matches, and other people provide the food and the shelter?—Yes.

10124. Therefore, it is a mere question of exchange?—Yes; they have become, by our assistance, consumers of as much as they produce. They take off the market as much as they put on it.

10125. You are familiar with the ordinary free trade argument in this country, that we, instead of making those things we get from abroad ourselves had better make other things that we can make to better advantage, and exchange for those things we want?—Yes.

10126. You apply the same argument to this question of competition?—I think so.

10127. You say they are making things which it is convenient for them to make, and they are exchanging them in the same way with other people, instead of making the identical articles which they consume?—Quite so.

Mr. *John Burns.*

10128. I am sorry that time will only allow me to put a few questions to you. I will deal only with the farm colony. Primarily, Hadleigh colony is a moral and spiritual regenerative agency, is it not?—I must say yes to that; but I must qualify my statement in this way: I will go back to what I said at the beginning, when you were not here, which will enable you to see what we do regard the Hadleigh colony as being. The Hadleigh colony is part of a scheme. It is one limb, so to speak, of the organisation of which it is impossible to judge without referring to the other parts of the work. The city colony was constituted in order to give immediate help to certain classes of suffering persons, unemployed persons, and to do that by giving what they wanted at the moment, food and work, shelter and food, work; then to classify, and take out of them persons whom it might be possible to send abroad; send them to Hadleigh, and train them at Hadleigh, for the purpose of transferring them to the colony over the sea. We use moral and spiritual agencies for the purpose of the mending of broken people. The primary idea of the colony is to prepare men by training them in habits of discipline in agriculture and industry to get their living over the sea.

Mr. *John Burns*—continued.

10129. I will put an inclusive question to you that you can answer briefly: primarily the Hadleigh colony is a moral, spiritual, and physical regenerative agency to fit men for over-sea colonies?—I think so.

10130. Incidentally in effecting its objects, work of some kind is essential to keep the men in proper order?—No; work is an essential in order to train them, not incidental; work is primarily and essentially necessary for training them for the work they will have to do across the sea.

10131. That work is absolutely essential to qualify the men for their subsequent industrial occupation across the sea?—Yes.

10132. What have been the percentages of men who have passed through Hadleigh who have gone to your over-sea colonies?—As I explained early in my evidence, I am sorry to say that the over-sea colony has not yet been established, and that, therefore, no men have been sent from the Hadleigh colony to the over-sea colony.

10133. Consequently, I may infer that the objects of the Hadleigh colony have not yet had an opportunity of being fulfilled and tested?—Quite so.

10134. Let us assume that your over-sea colony was established; what would the colonists say to it; they are not in love with the idea, are they?—I explained also in my evidence that I was unable to discuss very freely the attitude of the colonists to the over-sea colony, because we are at this moment in negotiation for land which we think will probably become the site of our settlement.

10135. I will not entangle you in official embarrassment, but, generally speaking, the average man in the street in Australia and America, even if the officials are willing that your over-sea colony should be established, do not view with any satisfaction the emigration of the physically unfit and the moral wrecks from our big cities to compete with them, even under the guidance of the Salvation Army?—The average man in the colonies has a pretty good measure of confidence in the Salvation Army.

10136. The same measure as we have here?—Yes, and he is not averse to our bringing into the colonies men whom we will undertake to supervise and fix up. What he is averse to is the helter-skelter emigration of people with no money in their pockets, and no friends behind them, who are shot down on the sea-board, and who do not know where to go and what to do, and who finish up by being left upon his hands.

10137. Supposing either the Salvation Army or the State (you of course said you preferred the Salvation Army) could plant a thousand men and their wives and families in close proximity to a big town either in America or the colonies; do you think that form of colonisation would be acceptable to the workman?—I do not, and I should not propose it. What I should propose would be to take the men and their wives and families to the colony as far as I conveniently could from a large town, settle them on land

Mr. *John Burns*—continued.

which had been prepared for them roughly. We would not take the whole 1,000 at once.

10138. And then employ them entirely in agricultural operations?—I would make them as far as possible a self-contained colony, and let them get their subsistence out of the land.

10139. But you find from your limited experience at Hadleigh colony that if you once start the colonies with 40 men, it means the employment of trades and industries to keep the whole colony self-supporting. The agricultural labourer requires clothes, and a blacksmith, and a carpenter?—Oh, yes; and we would send among these unemployed men tailors and bricklayers, who would come into that colony, and whose

Mr. *John Burns*—continued.

labour would supply what is wanted by the agricultural labourer.

10140. Even in colonies, man, being a gregarious animal, likes to live in larger numbers than 10 or a dozen?—Yes.

10141. And when that colony is fully equipped, it must necessarily produce more than it can consume, because that is the curse of modern labour, that it produces too much?—I do not know that it must necessarily do it, but supposing it does?

10142. If it does, it stands to reason that the surplus commodities must enter into competition with commodities made by free labour elsewhere; is not that so?——

Tuesday, 11*th June* 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Benn.
Mr. Campbell-Bannerman.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. Renshaw.
Mr. Round.
Mr. John Wilson (*Durham*).
Mr. John Wilson (*Govan*).

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

The Rev. W. H. HUNT, called in; and Examined.

Chairman.

10143. ARE you Chief of the Social Department of the Church Army?—I am Secretary of the Social Department of the Church Army, which is the branch which deals with such matters as finding work for the unemployed, and so forth.

10144. That has brought you into contact with the problem of dealing with the unemployed and with distress arising from want of employment?—Quite so.

10145. In what light do you regard the problem; you regard it as being partly industrial?—Yes, as being a social as well as an industrial one.

10146. What view do you take of the methods that have been attempted in order to deal with that problem?—In this country method after method has been tried. The gaol, the workhouse, and casual ward have supplied and enforced work of a kind on the idle and erring: temperance reformers have urged total abstinence; kindly disposed men have spoken words of counsel and sought to awaken new life; reformatories and industrial schools have tried separation from previous surroundings; and night shelters and free meals have offered their quota to relieve misery. Some agencies have failed because they did not set men to work; others because they did not offer sufficient remuneration for work; others, possibly, because men had not sufficient food to enable them to do that work; some, again, because the men were allowed to tamper with intoxicating liquor; and others, doubtless, because they were without the helpful influence of comradeship, and the civilising and christianising environment of home life. These, we think, are all necessary in order to secure that self-respect and self-help which every man must have before he can make his own way again as an honest, straightforward working man.

10147. Will you tell us something of the nature of the Church Army and what it has attempted to do?—The Church Army, as no doubt some of you know, is a working men's mission to working men, and to those who are not, but desire to become working men and women. In our social operations we have accepted as one of our first laws that no ultimate good can result to the nation from any work based upon a false economic principle; and after working upon it for some years we are now able to say that the social side, at least, of the unemployed problem, once apparently so difficult, is assuredly nearer solution than it was at that time. We aim at giving men the chance to earn and eat their own bread under healthy conditions and this Christian environment. The chief unit in our work is a small labour home, comprising workshops, separate beds and bedding, with usual homely outfit, chapel, dining, smoke, and reading rooms, kitchen, stores, fumigator, and lavatories, with officers' quarters; the whole comprising sufficient accommodation for a family of twenty-five persons. It is, we think, your workhouse in miniature, humanised and christianised, which men do not regard with such abhorrence as the workhouse, but enjoy as a home, and sometimes grieve to leave when they have secured more permanent work. These small homes are placed in all quarters of the Metropolis, north, east, west, and south of England, and, though slowly, are yet continually increasing in number. Regarding London as our centre, and going westwards, we have planted them at Oxford, Bristol, Exeter, Plymouth; going southward, we have them at East Grinstead, Eastbourne, and Brighton; eastwards, at Cambridge, and a test and training farm near Thetford in Suffolk; going north, we have them at Birmingham, Derby, Stockport, Manchester, Liverpool, Leeds, Sheffield, and Edinburgh shortly. Our object is to place them in the most necessitous parishes of the country, where people are least able to help themselves. Germany has so many of these labour home colonies (theirs are larger in size than ours), as to be able to announce to their country: "If a man will walk or work nine hours per day he can get food and shelter at the end of it"; and we ask ourselves why should it not be so in England? We begin by breaking up the congealment

Chairman—continued

Chairman—continued.

congealment, and detaching men from previous surroundings and companionships, allowing only very small numbers together, so that any who are suffering from the inevitable results of vicious and low surroundings by birth and dissipated habits can have the chance of honest work under better conditions. These labour homes were comparatively unknown in England until the Church Army began her social operations. The place is not a shelter where men get a night's lodging at the price of less and less labour, nor a lodging-house with a separate yard at a distance for working in during the day, but a labour home where every endeavour is made to restore or to create the idea of home life and domestic happiness. The manager and his wife act as "father" and "mother." Each worker has four substantial meals per day.

10148. You make a point of keeping the labour homes small?—Decidedly. We would infinitely prefer to multiply the number of homes than to multiply the size of any one home. That is a very marked feature in our work, and we think a very necessary one, as corroborated by all kinds of people.

10149. Will you tell us how you act in receiving those who apply for relief?—We immediately offer to every person received a real work test, and whilst this puts on the man himself more or less the measure of his relief, the system discovers to us the ability, inclination and *bona fides* of each separate individual.

11050. Will you tell us what sort of test work is applied?—Various kinds of work are given. Sometimes, and in fact chiefly in the small homes, we have the making and bundling of firewood, because it is a commodity that lends itself rather to unskilled labour of the class that we get, and it is one, moreover, that does not interfere with existing trades so much, because grocers and other people who sell it are not sorry to be rid of such a bulky commodity, and one upon which there is so little profit. But we do not by any means confine our labour to firewood making. It is governed to some extent by the smallness of the home; you may have, for instance, only to find work for one carpenter or one painter, or whatever the employment of the man may be.

10151. Do you find that the class you receive in your labour homes are mostly unskilled labourers, or do you have many tradespeople?—They are mostly unskilled labourers.

10152. For whom you find firewood-cutting suitable work?—Yes; chiefly because of the considerations I have just enumerated. One has to watch, of course, so as not to disturb other industries, and so on.

10153. You wish to put a stop to begging or indiscriminate appeals to charity?—Yes. I think if you wish to deal effectually with the whole problem, you must remember the type of the "unemployed" man who says: "It's a poor street that won't yield a penny, and it's a poor man that can't do sixty streets a day; that brings me 5*s.* a day without work." We have constantly to deal with that class of man. Those men overshadow the real unemployed, and therefore it is necessary to deal with them as delinquent folk.

10154. But supposing in this country we made more stringent laws against begging, do you think that would be a desirable thing?—I do. I think it would avoid much demoralisation of the people by indiscriminate charity, and at the same time enable you to ascertain much more exactly the number of the real unemployed. Anything which would help to arrive at the facts in this respect, whether it is a national labour bureau, or anything else, is much to be desired. I should like to mention to the Committee that about the time they sent out circulars to the mayors of towns, and chairmen of district councils, respecting the exceptional distress and the nature of relief, which, I think, was about February 16th, I questioned various of our people in the different towns already enumerated, and especially at Leeds, to ascertain if their labour home was full, and found they were half-a-dozen men short of their small complement of 25, and, although they stopped likely-looking men in the streets and offered them work, they would not hear of it, for they could, as they said, "get enough per day from the Mayor's Fund to get along with." The same may be said practically of such towns as Manchester, Stockport, Derby, Brighton, and elsewhere. That does not, of course, go to show that there was no real distress at the time; but it rather shows that if any fund of a pauperising nature is being dispensed in the indiscriminate way that many thousands of pounds were spent during last winter, it is almost unreasonable to expect men to work for what they can get without it. In our labour homes nothing is given except at the price of labour, and a daily test of willingness to work is obtained. We try to make every man feel his responsibility to earn his own living, and conform his habits to his economic surroundings. With us idlers are dismissed, and each man has to work as hard, or harder, than he would have to do out-side; and because we want to employ men we use but a minimum of machinery, and conserve hand-labour as much as possible.

10155. You do not think that these small homes will disturb trade, or interfere with it at all?—I have never known an instance of that as yet in our experience. Our labour homes, being small, are far less likely to disturb any kind of industry than if they were large; and being less expensive they can be proportionately increased in number. We set them down in the provinces so as to deter men from tramping the country or coming up to London. By the smallness of the homes institutionalism, which we believe is the bane of our workhouse system, is reduced to a minimum; individual waste is avoided, the strictest economy secured, most thorough cleanliness observed, and we can readily detect or prevent disease. A sufficiency of trade can easily be secured to keep a small home going, and by gathering up the fragments which remain, the odd jobbing work which is to be picked up round the parish, the place is not calculated to disturb existing trade, as a larger establishment might do. Moreover, the small home enables us to give individual attention, and the chance of obtaining a stronger personal influence for good over these delinquent ones. We try to combine local influence and interests with what we call our strong central government, so as to see that all

Chairman—continued.

all the institutions are working on the same lines and observing the same rules and regulations.

10156. You have, I believe, a regular organisation in your army which lays down rules and regulations?—Yes; we work through working men; every man at the head of an institution is a working man; he may not understand the economics of the thing, but if you lay down a law for its government, he will soon learn the wisdom of observing rules and discipline.

10157. Can you state some particulars of the rules under which the men work in the labour homes?—Men are engaged between eight and nine hours per day. Bank holidays and the greater Church holidays are allowed; and overtime is discouraged, so as to find work for a larger number. The men can smoke, but bad language is not allowed. Every man is expected to take a bath, and continue them regularly; to keep himself thoroughly clean and neat in his person; to become and remain a total abstainer, and make an honest endeavour to lead a good life. Of course, we feel those things important in connection with what I call the delinquent men; such things need not be observed in dealing with the better type of the unemployed. Newspapers with advertisements are provided, and leave can be obtained for the purpose of seeking a situation. Anyone leaving the home dishonourably to his companions, without an approved situation or the officers' permission, or being dismissed for breaking his total abstinence pledge, for idleness, disobedience, insubordination, or any other breach of the rules, forfeits all benefits, nor can he be again received for at least twelve months in any of the labour homes. Full pay is given for the first two months; a trifle less the third month, and less again the fourth month; that is in excess of his board and lodging. Each man is expected to do his best to obtain a more permanent situation for himself. Those rules are cast into a simple form of agreement, everything being carefully read and explained to each newcomer, who then adds his signature. Eighty per cent., at least, keep this agreement, and among other things you will see the following are secured: work is regarded as a test of character; individual responsibility and treatment; discipline inculcating habits of cleanliness, inducements to self-help, self-respect, and independence; adoption of workman's usual hours of labour (they work slightly under the 54 hours a week); innocent pleasures and amusements allowed; abstinence from intoxicating liquor; moral stimulus to live honourably towards God and man; teaching how to break bad habits and to form better, both at work and in leisure.

10158. Do you do anything to classify the men, or to make a distinction between the honest working man who is the victim of circumstances and the idle, the helpless, or the vicious?—We have, I am sorry to say, very few of those who form the better type of working man, and consequently we have felt less need for classification. Moreover, in our small homes we do not have many work together at any one time, and we have found that if there is a man of better or healthier spirit amongst them it may be a trifle worse for him, but it is much more healthy for the others to have a good influence amongst them, so that we have not classified them further than the smallness of the home would do. Of course, it would be a very easy thing to classify on the small-home principle; that is to say, classify the homes for the men.

Chairman—continued.

10159. You think it better not to do so?—We have not found the need of it hitherto. We have never had any kind of complaint from anyone that he was demoralised by what he saw and heard or had to experience.

10160. You pay, I believe, the trade rates of wages for the work that is done?—We do.

Mr. *Wootton Isaacson.*

10161. You pay the unionist rate of wages?—Yes, so far as the quality of the work will allow of it. Sometimes it is inferior work, and people would not give it us if we charged them more than its value.

Chairman.

10162. What sort of condition do you attach to the earning of wages; I mean, how much is each person expected to earn with reference to the charge fixed for board and lodging?—Every person is expected to earn six shillings per week, the charge fixed for his board and lodging; anything above this sum is set aside for the man's own use, spent in the purchase of clothes, tools, fares to next situation, emigration; or, if married, sent to help his wife and family. One shilling per week, or twopence per day, of his surplus earnings is allowed for pocket money, an arrangement of very great importance. German labour home colonies allow wages, but do not allow intercourse with the outside (without supervision), nor handling of money from the day a man goes in to the time he leaves. The Salvation Army allow men to go out, but we are given to understand that as the "truck system" is in vogue, and wages in the ordinary sense paid to comparatively few people, the advantage we secure is quite missed by them. Inebriate homes allow persons to spend money, but not to mix with the world. English poor law guardians have power to impose work, but do not pay for it in wages, and only allow their people occasional leave from the "house." In contrast to all that, the Church Army both pays wages and allows free intercourse with the outside; and by the pocket-money arrangement not only secure the test of work but also a test of a moral kind. If, for example, the worker has been a drunkard, he now knows that his present home and future prospects depend entirely upon keeping his total abstinence pledge. Every day he passes a public-house or beer-shop with money in hand he has a daily temptation, a daily fight, and a daily victory over the besetment of his life. In this way, as they are allowed to remain in the home for a period of four months, each one has a fair moral training against his former bad habits of idleness and drink. Then, again, just as a rotation of gangs, one having the first position for a fortnight, then stepping down to the second place the next fortnight, then the third place, and so forth, among waterside or other labourers, is sometimes

Chairman—continued.

sometimes adopted, so that all may share in the work obtainable at the time, and as a graduated scale of benefit is in all cases adopted by trades unions and friendly societies, so the Church Army has a rule by which the same thing is secured. Full pay is allowed for two months; then, as a little stimulus to encourage each person to seek some independent sphere of work for himself, during the third month half-pay only is allowed, in addition to board and lodging. If this does not suffice, a further stimulus is administered by allowing no pay during the fourth month to cover such luxuries as tobacco, &c., and the effect of this rule, whilst regularly discovering shiftless "loafers," has been wonderfully helpful to others. Another rule, like many trade societies, provides help for 16 weeks, after which period 12 months must elapse before another application from the same person can be entertained; that is rather with the view of throwing him on his own resources and independence. Should a situation be obtained in less than four months, and lost again through no fault of his own, he can, as in those trade societies, make a fresh application, usually receiving further help, if necessary, until the full period allowed during the 12 months has expired. Labour homes are testing, training, and standardising institutions. We have counted the cost of bad citizens, and, appreciating the economy which obtains by pure and honest principles, we urge that the stamping out of one delinquent, and making him a respectable self-sustaining member of society, does more for the nation than rendering aid of a temporary sort to 20 other persons; because probably each of those persons would find themselves in the same condition at the return of that season of the year. We make a point of improving the man's condition; by arranging everything in the way I have described, and systematising the man, so to speak; by habituating him to certain rules, and regular discipline, we help to make him better able to cope with the difficulty when it comes next time.

10163. Do you take any steps to assist the men in getting employment?—Yes; we have many agents scattered throughout the country. Of course we are an evangelistic organisation as well as a social organisation, and we have by reason of this many agents scattered throughout the country who can ascertain for us any specially busy time or place. Sometimes we try to do it by interesting afresh parents, friends, guardians, and old employers; by newspaper advertisements, and other means, to bring situations under the notice of the unemployed; and in contrast to the casual ward system, and in full persuasion that the early bird more frequently gets the worm, we send them to offer for vacancies the first thing in the morning. It is rather a point to be observed that in some kindred institutions, when men ask leave for the morning to look for regular work they lose their mid-day meal, because by going out they have not that day earned it; but to us this practice seems calculated to deter men from pushing out into independent spheres of labour. With us a man has what he earns according to the piece-work rate; and it is his own look-out if he loses a few hours in seeking permanent work

Chairman—continued.

elsewhere, but he does not lose his midday meal thereby.

10164. How do you overcome the difficulty?—With us it is the aggregate earnings of the week that pay for the food. In other kindred institutions where the truck system is in vogue each day is dealt with by itself, and the men are paid, not in cash, but by relief tickets for that day.

10165. Do you think this arrangement of yours has been successful?—Most successful, we think; and testimony seems to come from all kinds of quarters to the same effect. We think our system has demonstrated again and again, and our statistics clearly show, that there is real hope for many of the feeblest and worst; and when this is assured we think the problem connected with the more efficient and higher-typed unemployed ought to be by no means regarded as beyond solution.

10166. You mentioned just now, what we all know, that yours is an evangelistic as well as a social institution; do you mix the two branches together?—Not at all, except that the working men handed over to me by the secretary of the evangelistic department to manage the homes of the labour department are all trained evangelists who have been accustomed to labour work, and earned their own living at different kinds of work before they came. Those men are handed over to me as so many strong, useful, sensible, and godly fellows, each of whom manage one of these labour homes. There is no other connection between the two branches except so far as the other branch can voluntarily help us.

10167. I mean, do you use the homes as a means of evangelisation?—Yes, sometimes that is the case.

10168. Or do you use them merely as a means for the relief of distress?—No; we have what we call morning and evening family prayer; that is a short informal service, the same as any of us would have in our own homes. Besides that, there are two or three meetings which the men can attend if they like. It is very seldom there is anything compulsory in that way; although sometimes it is so, as, for instance, in respect of the parish church, where they are supposed to go once a week on the Sunday morning. I might also add at this point that the question of the particular form of a man's religion is not, as has been thought by many, a serious matter with us. We believe that religion helps men to lead good lives, especially the kind of men we get, and on that account we say that they should come under the influence of religion somewhere or other. If we are satisfied that a man wishes to go to mass, or to worship in another way, and we know that he does go, we allow him to do so; if not, we expect him to meet with us, at all events not to absent himself from these informal services. But no question arises, when we are employing people from the outside, as to what religion or persuasion they are of, or anything of that kind.

10169. You have not yet given us any statistics as to the numbers you deal with?—About 2,000 per annum pass through our labour homes.

10170. How is the cost of those homes borne; does

Chairman—continued.

does it involve a large drain on your funds?—Yes. I took the trouble to get out the result of our co-operation with the Poor Law guardians in this respect, and I find that for the first 1,250 people that we had from them, representing 64,406 days' support by us, we received about 113*l.* 5*s.*, which does not work out at more than six-sevenths of a penny on the average per day. So that, of course, it does involve a great drain upon our funds. Sometimes these places are partially financed by the vicar of the parish, who invites us to plant a home. We ask him to pay the officer's salary and the rent, rates, and taxes of the place, that is to say, the place in which to do the work and a man to superintend it; and we undertake to find the remainder of the working expenses from our central fund. Those working expenses we find come out on the average at about 200*l.* to 250*l.* per annum.

10171. In addition to the City Labour Homes you have other methods for dealing with the unemployed, have you not?—Yes, we have training farms, emigration work, work among women, and lodging homes.

10172. Are those in any way connected with the City Labour Homes?—Yes; sometimes, when one of these poor fellows has fallen again or broken down in some way, we do not give him up absolutely; we say that he must not come into the labour home again for 12 months, but if there is a chance of restoring him we try to get him into one of our small lodging homes, where, at the price of work, he can obtain home-like comforts and surroundings. He is obliged to work outside and do his best to obtain the necessary pence to pay for his night's lodging, and we can thus still keep touch with him. We make a point in our lodging homes of keeping the price up, so as to induce labour if we can. I am sure very much in London has been done to solidify and settle the army of loafers by the system which has obtained for the last four or five years. Until a few years ago people had to pay sixpence for a night's lodging; and then some proprietors undertook, under the name of charity, to reduce that to fivepence, then to fourpence, and then to threepence and twopence, and they diminished thereby the impetus to labour. A free shelter always seems to us to have the effect of diminishing the impetus to labour, and creating what Professor Huxley characterised as "a mighty army of shiftless loafers." He foretold that some years ago, and we took the hint at the time and have never had anything of that sort, I am happy to say, under our notice. These people, it must be remembered, are reckoned among the "unemployed." People from whom the impetus to labour has been taken away, and who say, "I can get as much food as I want for the time being for a couple of pence, and I can get a shake down for a penny; why need I work?" Very cheap lodgings, we think, have helped to settle that condition of things.

10173. Benevolence employed in that way, you think, really increases the evil?—It increases rather than diminishes the evil.

10174. You, on the other hand, try to make

Chairman—continued.

everything pay?—Yes, we do. We begin with the individual, everyone of whom must pay for what he receives. The value of that is obvious. We say at once to a man, "You are not an object of charity after you come here; you are a working man. You are going to have firewood to work at, which we would not give if we could give something else; but you are not an object of charity, but a working man from this day forth." We try to make everything pay, and do not consciously pauperise any man. By paying an equivalent each one gets something which he has earned, and, feeling that he is somebody, values it the more. We make our own homes pay, for the wood they receive from the wharf, the market rate obtaining elsewhere, and we falsify nothing. We are called a charity, though I can assure you charity is reduced to a minimum. There is a point here, perhaps, I ought to notice. There are other professed charities which have been entrusted with large sums of money on behalf of the unemployed and suffering poor; but it is clear if these lower market rates break down the means of livelihood for struggling poor, their mistaken zeal will increase the number of unemployed, and leave some people worse than before.

10175. You do not approve of taking advantage of men who are "down," and making them work for mere food and shelter?—By no means. We think it is little less than iniquitous to take advantage of men who are "down," and make them work for mere food and shelter, when, if they were fairly dealt with, and received trade rates for their work, they would, at least, also be able to purchase necessary clothing. As I have already shown you, the wages are but very small; because unskilled men are not so well able, even in cutting a bundle of firewood, to make such wages as a professional firewood-cutter; but by the trade rate even a man who has not done any firewood-cutting before can obtain what we consider necessary clothing, and a little besides for the time being.

10176. Will you say what your arrangements are for co-operation with the guardians of the poor?—We were the first to organise an extensive system of co-operation with guardians of the poor; and nowhere throughout England is there anything like as active and comprehensive co-operation with the Poor Law, for the purpose of transferring cases of able-bodied paupers from the ranks of the unemployed chargeable to the rates, than there is between the Church Army and the guardians of the poor all over the metropolis, not to mention the provinces. We have for some years been regularly and systematically visiting every casual ward and workhouse in London, and are now the only people doing so. During the last few years we have received from the London guardians one by one (I emphasise that fact) between 2,000 and 3,000 of their destitute unemployed into our small labour homes, and with good success. The direct results of this co-operation between the Poor Law and the Church Army have abundantly justified the Local Government Board in endorsing many annual subscriptions of ratepayers' money to our

Chairman—continued.

funds. There are many advantages in such co-operation.

10177. Will you name some of them?—It prevents men, women, and children who have drifted into the unions, but not yet sunken into the ranks of hopeless casuals and chronic unemployed, from doing so. Again, the workhouse is often demoralising; the labour homes always self-helping. The guardians can offer men the workhouse, but nothing more, and can do nothing to develop or encourage in them the hope of rising again in the world; whilst our voluntary system provides a sympathetic heart and hand (in contrast to those employed merely to fulfil the law, such as workhouse masters, who have chiefly to provide for paupers inside the house), and shows how, at the price of honest labour, each person, on equitable terms with others, may obtain an independent and satisfactory form of self-maintenance. Moreover, this co-operation is manifestly a clear saving to the rates (you will think so from the figures I have read out, I daresay), affording more humane treatment to the pauper class, whilst giving every able-bodied unemployed person the opportunity to leave the workhouse, and discloses whether he will do so or no when such a chance is brought within his reach. Though we are conscious that in very many cases we have prevented the public rates being exploited, we do not pose as a society for punishing offenders; but the St. Pancras board of guardians were glad to be able to use one of our homes in this way not long ago. A poor fellow in their union had two or three opportunities of maintaining himself outside the "house" under proper conditions, but, throwing himself repeatedly on the rates, was taken before the magistrates, who sentenced him to one month's imprisonment with hard labour. Some boards of guardians have emphasised this as an important precedent and most valuable to guardians, and ratepayers throughout the country, and urged us to make it known; though, as a matter of fact, we have not mentioned it from that time to this. Again, the law regarding married people usually claims that if a wife and children are wanting workhouse relief, the husband must come into the "house" with them; and though this law making an unemployed able-bodied man into a pauper chargeable to the parish and stripped of the power to vote in time of elections, seems somewhat absurd on the first blush to an economic mind, it may be more or less necessary that some such power by law should be vested in the guardians, lest the man abscond, leaving the union to provide for the wife and family. By our carefully-arranged co-operation with the guardians, this difficulty has been solved again and again, until there appears to be now no difficulty in the matter. If you contemplate a recommendation that guardians of the poor be empowered in special instances to grant relief to the able-bodied, or that relief to the able-bodied should become legal, I specially commend to you this example; for some guardians, usually inclined to discourage "out-relief" have adopted this plan. The man in question is handed over to us on the understanding that the guardians shall be made acquainted from time to time of his self-helping endeavours,

Chairman—continued.

and know in an hour or two if he should abscond. At once he ceases to be a pauper, gets a fresh inspiration of hope, and is given work by which he can pay for his own board, washing, and lodging. As we have already shown, he can easily earn a few shillings per week in addition, which may go to the purchase of clothes, tools, &c., or to the support of his family. He obtains influence in getting a situation with increased wages, where he may withdraw from parish relief, and the whole family be restored to each other and to independence.

Mr. *Heywood Johnstone.*

10178. You go on to say, in the statement which you have supplied to the Committee, "It is quite true that both our workhouse and casual ward systems are not deterrent to any person who values liberty"; ought that "not" to be there?—No; it is a misprint; the "not" ought to be erased. Then there is an interesting letter from the chairman for many years of the Paddington board of guardians, dated the 28th of January 1892 (which shows we have been doing this work for some time), in which he says, "I am instructed by my colleagues to express to you their sense of the value of the co-operation that has existed for the last few months between them and your society, and to send you the record of their experience, in the hope that it may prove of service to you in approaching other boards of guardians. For long the Paddington guardians have desired to find some means by which hope might be raised again in men who were slowly drifting towards, but not yet sunk into, the ranks of hopeless casuals. The guardians could offer them the workhouse, but nothing more; they could do nothing to develope or encourage in the men the hope of rising again in the world. Upon hearing of your labour homes, the guardians spoke about them to two male inmates who had entered the workhouse some months before, broken down through drunken, dissolute lives. Both expressed their thankfulness at the prospect of another chance of recovering themselves, and, as an experiment (and a most successful one), they were transferred, with your consent, to your home. The guardians were then able to point out to the Local Government Board the saving effected to the ratepayers by the inmates being taken off their hands, and both on the score of economy and of the wisdom of co-operating with a society that could offer to a man that which the guardians could not, viz., another chance of recovering himself, they asked for and obtained their approval of a subscription being given, under Section 10 of the Poor Law Act, 1879, to the funds of that branch of your society which dealt with Tramps' and Inebriates' Labour Homes. In Paddington the guardians have few applications for relief from able-bodied men as distinct from casuals, and so the cases sent to you have been few; but, with the results in those few cases sent, they are so fully satisfied that they hope to further co-operate with you as regards able-bodied females." They have since done so to a small extent.

Chairman.

10179. What are the results of the experience of

Chairman—continued.

of the Church Army as to the present workhouse system?—Our experience of the workhouse teaches us, in the first place, that when men are willing to work and cannot, if they have no other means of support, the poor law administration and working homes should be so arranged and classified, as to help them. I do not mean the people should be classified in the same house, which would probably increase the expense for officials, and be the source of constant irritation and soreness amongst the inmates themselves; but rather the classification of houses, say, *e.g.*, if here and there, according to the necessities of the case, one house were set apart for the poor, who being not too advanced in years wished to regain their independence; another for those physically unfit for work; and another type received such poor as have, through no fault of their own, fallen from better positions in life, and though dependent upon the rates, justly wish to end their days without being obliged constantly to witness the disgusting habits and hear the filthy talk so common in some workhouses. Such an arrangement, we think, could easily and inexpensively be effected on the principle that I mentioned about our homes. That is to say, we could as easily set apart one home for this type of person, as let a number of them mix together. That is the idea. Then, in the next place, those of the fallen and delinquent poor, who can work and will, should be handed over to voluntary agencies, such as our own; for surely no man capable and willing to do a fair and honest day's work should be left in our workhouses, as at present arranged, without the chance to obtain a livelihood outside. This kind of co-operation between the Poor Law and voluntary effort can be increased and developed to almost any extent. Then, in the next place, those who can work (that is, are physically fit and have it to do) but won't, could then, in England, as in Germany, be dealt with by the law as administered by the police. Where such homes as I have described are well-placed, no tramp nor homeless person need lack honest labour and a roof, no criminal a home and work on leaving gaol, and no inebriate a refuge from the besetting sin of his life. We have had much testimony all round from casual ward masters, and workhouse masters as well as the guardians themselves, on the subject.

10180. Those persons have discovered the advantage of your system?—Very much so indeed. One of the London casual ward masters said of it some time ago: "This is the best bit of religion there has been for many years;" and another says: "Your work sets us on a different footing with regard to the unemployed men with whom we have to deal. When a decent fellow now appears and I find it is his first time in a casual ward, I promise him one of your tickets, which puts new life into him. He does his task and sets off early in the morning to your office, when otherwise he would stay over his work until six o'clock in the evening; and I warrant that if one half of the old casuals who commenced a vagrant's life 10 or 15 years ago had had the same chance afforded them they would not be troubling me now. Such being the case, the guardians commend what it is hoped may be a vastly increased power for good all over the country."

Chairman—continued.

10181. Now will you say what remedies, broadly, you would suggest for the cure of these evils?—In the behalf of our superior and skilled unemployed, it will not be an easy matter to interfere with individual members of the community, or to oblige them to reduce their working hours; and the difficulty of making work, so as not to increase shiftlessness amongst the unemployed, is not small. But we think something may be expected of our Government departments, county, town, district, and parish councils, school boards, vestries, and indeed all public bodies, who ought always to use their best endeavours:—(1) To prevent their employés working overtime, so that a greater number of persons may thereby obtain work. (2) To make a point of reserving what work they can for the unemployed season of the year. (3) To avoid under-cutting or unfair competition with others in the market. If I may give an example, I should like to say that a London Board of Guardians are asking tenders for "the very best yellow deal and batten ends for cutting up into firewood," which but comparatively few firewood bundlers on the market can afford to pay for in the ordinary way of trade. It is a mere item, I know; but one is inclined to think the usual class of firewood might answer quite as well for use in the "house;" it would possibly require a little more manipulation (there would be less stone-breaking if there was more time spent in this way), and be quite as useful work for those who have it to do, and at the same time save the ratepayers' money. But some unions, in addition to buying the very best wood, also use public money to sell it lower than other people in the local trade can possibly do, and the mischievous consequence is manifest to all. Only the other day did I hear the master of a certain workhouse say he could invariably make his firewood business pay, as he always considered he got his labour without any cost, except a trifle for tobacco or snuff. That is just an instance in point.

10182. That spirit you entirely disapprove of?—Yes. That is what I was pointing out just now. The master of the workhouse is a working-man, and no doubt does not see the force of all this; he supposes he gets his labour without cost, except a trifle for tobacco or snuff. In the next place, I should like to see an experiment made on the land in the way of small labour colonies, chiefly for unmarried people, and small holdings for married people, with or without families. Everybody knows that the influx of agricultural hands from the country has considerably increased the number of unemployed in our towns; and it is obvious, we think, that if, from any means, the settlement of individuals and families on the land can be facilitated and encouraged, the settlers would probably not only be consumers of their own labour but the plan might also, in the first place, deter agricultural folk from leaving the country for the towns. In the second place, it might enable many of those who, having previously

Chairman—continued.

viously left the country, and spent their "life" of five years as "dockers," or in similar work in towns, and have now to give place to fresh blood, to get back to the land. In the third place, it might afford the chance to many other labourers, and less skilled artisans, now in want, to obtain necessary food, with some prospect at least of increasing the value of their labour each succeeding year. In the fourth place, it might prepare some people for emigration; and, lastly, it might accentuate the value of all kinds of skilled labour. Agriculture is said to be at the root of all our industries. I think, on this account, it is desirable to try what it can do for us, and make a real endeavour to get back therein as many people as we can, "where each one's labour," as Sir John Gorst said the other day, "enriches the nation, does not lessen the earnings of his fellow-workman, and engages him in an industry in which there cannot be over production."

10183. Have you had any actual experience of a farm colony?—We have had some experience, but very slight, and we are not yet able to tabulate results. We have been about it for some years, but there has been a good deal of delay; the chief person interested in the land we acquired has been abroad a good deal, in and out, and there has been no chance of getting the business permanently through. We are therefore not able to tabulate results at this moment.

10184. Does that complete the suggestions you have to make?—No, there is another which I scarcely like to name to you; but I may say I think it would be a very useful thing indeed in connection with the unemployed problem, especially in connection with the superior type of the unemployed, if a Minister of Labour were appointed, and a national labour bureau arranged; the latter for the collection from thoroughly efficient and reliable sources, and the dissemination of facts and statistics; and the former who might, amongst his other duties (and especially amongst his colleagues, who stand at the head of our various Government Departments) always bear in mind the question of the "unemployed."

10185. You are aware, are you not, of the organisation that exists at the Board of Trade in the Labour Department?—Yes.

10186. Perhaps you have a larger belief than some of us may have in the efficacy of the establishment of a Minister at the head of a department. It is a natural feeling, but I do not know that with some of us who have sat a long time in the House of Commons that superstition is entertained so strongly as it is entertained outside?—Yes.

10187. You wish, in fact, to have a properly organised department of some sort dealing with the subject?—Quite so; that is really the point.

Mr. *Logan.*

10188. Do you think if we took as much trouble in training men to work as we take in training men to fight, possibly our work might be done rather better?—Quite so. I think another great advantage would be that that Minister would be able to influence his colleagues at the head of various Government Departments

Mr. *Logan*—continued.

(as we have to do so in a small way ourselves) so as to secure a certain proportion of work, in the different departments, being kept for the winter time. It is as one comes into living touch with the people that one is able to help them; that is what we find; and a Minister of Labour at the head of affairs might be able to claim more consideration for such a subject as that which this Committee is considering, than one who merely represents the getting together of statistics would be likely to do. I think, too, perhaps, if the Government policy were known on certain subjects it would help very often to settle labour disputes.

Chairman.

10189. I understand you to think that what you call the "delinquent unemployed" are those who should be dealt with first?—Yes; economists tell us that "unemployment means under-consumption," and I think myself that absence of work is not only the object which has brought your Committee together, but your whole difficulty. It is natural for an economist to ask us, must not any real remedy for the present distress show how it will operate in raising the standard of consumption before it can establish any claim to have materially affected the problem. I represent to you the social side of this great subject, and before now I have been asked, "Why do you try to put these fellows back into the market to displace those who have never fallen?" which I submit is a very pertinent question, indeed, if the assumption on which it is based, that there is only a certain amount of work in the world, be true. But it should be remembered that every good man in the market creates work, and makes possible work somewhere else, and so increases the market. The greater the number of good men there are in the nation the richer the nation must be. When, therefore, we raise a man socially and religiously we create new desires and necessities, and make of him a fresh consumer, requiring better food, clothes, housing, &c., &c., than he used to do. I think that if for the present you were only to deal with the delinquent unemployed it would be a sound policy in the same way as in our own system, and you would act advisedly in the matter of economics, minimise your charges upon the public purse, and again accentuate the value of all kinds of skilled labour, and have gone a long way towards the solution of the problem by clearing out those men who live on the fringe so to speak of the labour market, ready to accept work almost at any price.

10190. Would you go on stating your general conclusion?—Our present Poor Law administration, I understand, is not for finding work for the unemployed, but for the avoidance of distress generally, arranging that the condition of the pauper while in the "house" shall be made less eligible than that of the independent labourer, and sometimes taxing the energies of the recipients in the cause of his relief; and I take it the object of this Committee is chiefly the avoidance of distress from want of employment, and not the finding of work in the winter for those who have enough or more than enough,

and

Chairman—continued.

and work many hours overtime at other seasons of the year. In either case, I am sure you will find that on arriving at a solution of this great subject, there is no road along which you can travel with your multitude at express speed. If, therefore, before recommending that Imperial funds be expended to any large extent on an agricultural experiment in the country, or small labour homes for the towns, you prefer to try on a small scale what can be done with good or bad men, or both, from amongst the unemployed, we can help you, and herewith offer you two or more of our labour homes according to the classification you desire, operating on the principles which I have already described, and by which you would be able to offer relief on the spot, discriminate idlers from workers at a minimum cost, and before incurring the expense of sending them on to the land. I can also offer one of our farms, 190 acres in extent, about 160 acres of which are arable, part of which can be worked by your superior and the other by your inferior men. We might increase the acreage, and even more definitely separate the men for you, if necessary. I should suggest that the existing machinery, say, some guardians of the poor, select them, and that, as their stay will, I suppose, be voluntary and not compulsory, the people sending them (for the reason I have already given by the few figures I have quoted) should be asked to pay during the experiment a sum not exceeding the rate of 8½*d.* per day for each man whilst he continues in the home or on the farm; and the experiments on the land, if you wish, may, in view of next winter, be begun at once. The necessity of such experiments on the land is recognised in the Report on the Unemployed of 1893; in the Reports of the Mansion House Conferences 1887–88, and 1893; and the Minority Report of the Royal Commission on Labour, where it is stated: "Sufficient trial has, we believe, not yet been made to warrant any conclusive judgment as to the extent to which this method of relieving exceptional distress can safely be carried, and the manner in which it may be best applied. Any reasonable experiments by local authorities should therefore be encouraged and welcomed by the Local Government Board. They should, however, be regarded frankly as experiments, and we attach the greatest possible importance to their working and results being exhaustively investigated and recorded, not by any of the persons concerned, but by impartial experts of the Labour Department. Only in this way can we hope to make the experiments useful in the solution of a problem, which, in our opinion, ranks amongst the most difficult of those presented to us." Then, again, such an experiment would be in character with the final Report of the Royal Commission on Labour, which states that "the employment by public authorities of surplus labour for the produce of services of which there is no existing demand, is so closely connected with the subject of Poor Law and its administration that it seems to be excluded from the scope of the inquiry with which we have been entrusted. We think that if an investigation of the practicability of municipal workshops or agricultural home colonies

Chairman—continued.

with this end in view should be considered desirable, it should be undertaken separately in general connection with the subject of the reform of the Poor Law." Moreover, the experiment would further enable you to adopt in substance a series of resolutions passed not long ago by the London and District Poor Law Officers' Association; to give practical effect to the recommendation of several witnesses before this Committee who have already made the suggestion, and provide—(1) That the unemployed shall be dealt with by your present Poor Law administration. (2) For the development of the workhouse system (though I still urge classification upon you) without any weakening of its safeguards. (3) The means for boards of guardians co-operating with organised voluntary effort in cases of exceptional desert. (4) An economical experiment on a small scale already well tried for years in some respects, by many Poor Law guardians, for dealing with out of-work cases of the better sort who now suffer privation rather than resort to the Poor Law. (5) An agricultural home for the country and labour homes for the towns established by a voluntary organisation commanding public confidence with a view to determining whether such institutions can be made the means of effectually testing, training, and improving the condition of any number of the unemployed. (6) Against boards of guardians entering into relation with voluntary bodies for the mere provision by the latter of a maintenance possibly more eligible than in the workhouse, to able-bodied destitute persons. (7) That such co-operation be strictly confined to selected cases of desert by the guardians with the definite object and intention of redeeming them from a condition of dependence. (8) That the experiments so made should in their working and results be exhaustively investigated and recorded by the impartial experts of the Labour Department.

Mr. *Acland.*

10191. In speaking of your homes, as not being in the nature of charities, do you mean to indicate that they are self-supporting?—No, I say the charitable element is reduced to a minimum in them. Of course, we cannot make them absolutely self-supporting, for reasons which to us are very well known. A man comes to us who does not understand wood-cutting, and although he can earn just enough to keep himself and regard himself as a working man he cannot earn very much more than will clothe him, and for a little while when he first comes he can scarcely earn his own board and lodging. That period passes away, but soon after we have to face the difficulty of not allowing him to rest upon us indefinitely, so that we have the rule which I described in operation for just putting the screw on at the end of three or four months to help him out to an independent sphere; that again means that when he becomes more or less skilled and able to do his work, he has to be moving on elsewhere.

10192. Then there is and of course must be an element of charitable contribution for the maintenance of your system?—Yes; I think there would have to be in any system of the kind some-

Mr. *Acland*—continued.

thing to provide for those who on first coming to you are unable to do the work you can give them unless, indeed, you raise the price of their work.

10193. What is the actual number the homes will accommodate?—Each home accommodates from 20 to 25; they vary slightly.

10194. I mean the total number adding all the homes together?—About 2,000 per annum pass through the homes.

10195. What would be the total on any given day?—There are not 2,000 of them at any given time, because they leave us about every three months.

10196. I understood you to say that 2,000 had passed through your homes in the year?—Yes; but they are not all there at one time.

10197. I want to get at the number which the homes taken altogether accommodate?—If you divide the 2,000 by four, you would get the number we have at any given time.

10198. That would be about 500?—Yes, they stay about three months each on the average.

10199. Are you able to trace them after they leave?—Many of them; some we are not, they will not let us know when they get a situation, because they think there is a certain stigma on the place that might attach to them.

10200. At the end of three or four months you part with them?—Yes.

10201. Under all circumstances?—Yes; at the end of four months, because almost invariably they can get a situation if they have any push in them; they can get some sort of temporary or more or less permanent work.

10202. If they fail to get work, you still adhere to your rule?—We are obliged to have a law, for many reasons; it must be an inflexible law, otherwise they would take advantage of it.

10203. Do you find, to your knowledge or to the knowledge of your officers, that the bulk of them do get employment?—At least 50 per cent. of the men we deal with get employment.

10204. Do you think that a good deal of that employment becomes of a permanent character?—Much of it does, I am sure.

10205. Does the strictness of your rules as to their conduct when they are in your homes lead men to leave; I mean the fact that they must conform to certain rules?—No, I do not think so; 80 per cent. of them keep the agreement they make with us.

10206. A certain number drift away, I suppose?—A certain number do drift and others make trouble for us.

10207. Are you going to develop your farm colony?—Yes, we certainly mean to develop it.

10208. Will you fill it up from your homes?—Yes, or from the ranks of the unemployed most assuredly. Of course, we can use these homes, and we do so for the purpose of testing first of all whether the men mean to work at all; then when we are sure they will work, we pass them on to the farm colony; that is the theory.

10209. Do you think you have men in the towns who will be willing to remain on the land in the colony?—If it is made possible for them to do as well as they can in the labour homes in the towns, and as they are now doing in the labour homes in the towns, which is not a very difficult matter.

Mr. *Acland*—continued.

10210. Would your idea be to keep them on the land for a time, and then bring them back to the town?—No, to try to keep them on the land permanently, and some of them would continue there, with a view to emigration. We test in that way whether they would do well if they went abroad.

10211. Do you assist them to emigrate?—Yes. That is another branch of our work.

10212. When you have your agricultural colony developed, do you think a certain number would take to an agricultural life?—Yes.

10213. How do you find that out?—We have some now who seem right glad to get back to the land; they are upon it at this moment.

10214. Even already?—Yes. This is not the place, of course, for sentiment, but we have some men who are really rejoiced to get back to the land.

10215. You have already some work going on in the rural districts, have you?—Yes; but as I say, it is not in such a condition as that we could tabulate the results.

10216. So that you do not give us full particulars as yet as to that work?—No. I only mention the fact, and say that our success so far warrants our going further.

Mr. *John Wilson* (Durham).

10217. In relation to the question which this Committee is sitting to inquire into, would you give us information as to how your homes would affect the employment of the unemployed?—Our homes are only designed for helping the delinquents, if I may repeat the word, amongst the unemployed, but by removing them from the ranks of what I may call the real unemployed, we accentuate the value of their labour at the same time.

10218. But, during this last winter, I do not refer to the frost, but speaking of trade generally, you are aware that there have been thousands of men out of work in nearly every trade in the country?—Yes.

10219. How would your homes affect the employment of those men?—I do not think the homes would affect them, because the homes are not so extensively developed; we have 25 men in a home, and if we are only supported at the rate of six-sevenths of a penny by the Poor Law funds for maintaining each of these men per day and setting them to work to help themselves, we clearly could not very largely develop any such system at such a rate.

10220. Then may I take it that your system is simply to gather up what I may call, without disparagement, the wastrels of life and make men of them?—Yes.

10221. And that really it would have no effect in times of extra depression such as those through which we have passed this last winter?—It would have no very great effect unless the number of homes were so great as to receive the unemployed of all classes.

10222. Still, if there was not work in the country for the whole of the men who were in the trade willing to work, how would you find places

Mr. *John Wilson* (Durham)—*continued.*

places for them?—That is a point I made myself in my previous evidence.

10223. Could you explain it to us a little further; take a trade in which I know to-day there are 4,000 men out of work; how would your homes affect the employment of those men?—I do not see how they would meet that problem.

10224. Then may I put it that your homes are simply to act on the normal condition of things to gather up those who have gone down to the lowest fringe of society?—Yes, as well as in the abnormal times.

10225. That is what I want to get at. We are in abnormally depressed times at present?—Yes; but still the point, if I understand you rightly, is what is the type of person our homes are designed to help.

10226. I will put it this way: we have had evidence given before this Committee as to the large number of tin-plate workers thrown out through the depressed state of that trade; there are, we know, a large number of miners and generally tradesmen of all kinds out of work; how would the augmenting of your homes affect the employment of those men when there is not work for them at the present time in their trades?—We could not find tin work for them to do.

10227. Take miners?—We could find no mining work for them to do.

10228. Take engineers?—We could not find any engineering work.

10229. I might go through a catalogue of trades whom you could not supply with work?—Quite so.

10230. You would only affect the lowest class of unskilled labour and agricultural labour?—Yes; the real advantage to those out of work in those trades would be that the loafing class would be removed, and the nation would see how many there were unemployed in the tin work trade or the engineering trade.

10231. Still here is the fact staring us in the face, that there are thousands of tin workers in South Wales and Monmouthshire out of work; and here is another fact, that thousands of miners are out of work to-day and the same applies to the engineers; how would your labour homes affect the employment of those men?—They would not find them employment.

10232. They would still have to be out of employment as far as your homes were concerned?—Yes.

10233. Therefore am I correct in saying your homes would not affect the special question which this Committee is considering?—Only so far as it would affect the social side of the question, the loafing classes.

10234. I quite agree that every man who consumes affords employment; and if you make a man a buyer you make him an employer of labour in a small way; but I want to see how your homes would affect the employment of these men?—Of course looking at it from my point of view whether the times are good or bad you have the loafing classes with you.

10235. Let me draw your attention to a statement you make on page 7, of the Paper with

Mr. *John Wilson* (Durham)—*continued.*

which you have furnished us. You say: "Those who can work (are physically fit and have it to do) but won't, could then in England as in Germany, be dealt with by the law as administered by the police." Would you make it criminal to be lazy?—No, that is not the idea at all.

10236. Would you explain what the idea is?—I have given you an illustration of the idea on page 6. The St. Pancras Board of Guardians had a poor fellow in their Union who through one of our homes had two or three opportunities of maintaining himself outside the "house" under proper conditions, but throwing himself as repeatedly on the rates was taken before the magistrate, who sentenced him to one month's imprisonment with hard labour. It was wilfulness on the part of that man; it was not idleness merely, but it was wilful idleness, therefore he brought himself under that ban.

10237. Has it not come within your experience that there are a number of men, fathers of families, even in flourishing times who will not work, and their families are in destitution?—Yes, quite so.

10238. How would it be with that class of man?—I do not know.

10239. They do not go to the rates, but they live on the vagrancy of their children, do they not?—Yes.

10240. How would you deal with that class?—I daresay you would have to make some special law dealing with special classes.

10241. I see you refer to the Government Department on page 8 of your proof, where you speak of Government Departments, county, town, districts, and parish councils; can you give us any idea how you would apply the Government Departments to the employment of the unemployed?—Some of the ways I have indicated; they might watch the work they have for disposal, and as they represent the public, consider public need and welfare in the very best way they possibly can. For example, if they know there is plenty of work in the summer-time for a certain class of workmen, from whom they require work during the year, they might easily keep their work, or defer some of it, at least, until the winter.

10242. Would not that then increase the volume of the unemployed in the summer time in the Government Departments?—I do not think so, because many people are so often working overtime in the summer.

10243. Then would you enact that no man should work overtime?—I think that would not be an unwise thing in the Government Departments.

10244. That is to say, suppose men are working two days a week overtime, you would arrange that they should work six ordinary full days?—Yes, if possible.

10245. And that would spread the work over a greater number of persons, would it?—Yes.

10246. Is that what you mean by the application of Government Departments?—Yes.

10247. With regard to the Minister of Labour, about which you speak on page 9, and the raising of a national bureau, how do you think that would affect the unemployed question?—I think facts would be obtained, in the first place, very

Mr. *John Wilson* (Durham)—*continued.*

likely by a national labour bureau, and there would be some pains taken to obtain them and to disseminate them, and there would be, I think, much more real inquiry if there were a Minister of Labour appointed than if the Board of Trade merely get together a certain number of facts.

10248. He would then be different from the Secretary of State for the Home Department or the President of the Board of Trade, would he, according to the way you sketch it?—Yes.

10249. Would he have the manipulation and the employment of men; is that what you mean?—I should like to see that. I think that anything which would lay hands on as much labour as possible in the Government Departments and equalise them for certain seasons would be a good thing.

10250. Taking the War Department at the present time, would the Minister of Labour be any better qualified to arrange the employment of men than that department?—That of course would be a matter of arrangement between the two heads of departments as to which I could not speak. I have no knowledge of the internal arrangements.

10251. I thought as you had indicated one remedy, namely, appointing a Minister of Labour, you would want him to have the manipulation and arranging and allocating of the labour in the Government Departments?—I do not see how he could go into every other Government Department and say "you must do this and do that," but he could arrange with his colleagues, no doubt, and there would be proper attention given to the subject if there were a Minister for the purpose.

10252. Would he be above them?—No, of equal rank, I should say.

10253. I may as well leave that to the departments to work out. On page 10, I see you speak of 8½*d.* per day for each man whilst he continues in the home. Is that 8½*d.* per day for each man to be exclusive of his board?—No; it is to be a sum "at the rate of and not exceeding." Our plan is not to ask (and we have never had) a grant from the boards of guardians at the rate of 5*s.* a week, which you will see this works out at, nor would we wish it, but if a man by doing his best could not earn 6*s.* a week for a week or more, we should say that it ought to be supplemented, so that we were no losers.

10254. Taking the typical case of a man in the workhouse, would you take him and put him on to your farm, providing the guardians gave you 5*s.* as an auxiliary?—Yes, or, providing the guardians saw we were no losers. I do not think we ought to go to the public and ask for voluntary subscriptions to save the guardians paying what is fair and just.

10255. So that they should guarantee 5*s.*?—Guarantee anything not exceeding that; but they would be shown what the man's labour was worth, and so on.

Mr. *Round.*

10256. You mention the test and training farm at Thetford, do you not?—Yes.

10257. Have you any particulars to give about

Mr. *Round*—continued.

that?—No. As I have said, we have only just taken it up within the last few months, and are not able to tabulate results.

10258. How large is it?—We have two farms there of about 550 acres altogether. The one to which I have been referring is 190 acres.

10259. Are they separate farms?—Yes, quite separate.

10260. Are they in cultivation?—Yes, they are in cultivation.

10261. Are they cultivated in the ordinary way?—Yes.

10262. Did you purchase them, or how did you obtain them?—We have had one handed over to us by Bishop Wilkinson, who has undertaken to raise some of the purchase money.

10263. What about the necessary stock?—We have found that ourselves from voluntary subscriptions.

10264. And you have no particular results arrived at?—No; certain facts are already making themselves apparent, and for that reason we would recommend the experiment being tried.

Mr. *Lawrence.*

10265. How many months exactly have you been carrying the farms on?—I think we commenced about the spring of last year; but it is more or less in a tentative condition.

Mr. *Heywood Johnstone.*

10266. Have you no facts which you can give the Committee as to these training farms?—None which we can tabulate, but we have some facts which we have learnt as to the healthfulness of such as cheme; for example, we have men who used to earn, say 9*s.* or 10*s.* per week, in our labour homes, some of whom we have sent down, and we allow them that rate of pay; they are delighted with their life and are satisfied and contented.

10267. And they are earning 9*s.* or 10*s.* a week as agricultural labourers, are they?—Yes.

10268. I suppose you have had to train them to some extent?—That is part of the business. Of course, some of them have been already on the land.

10269. At all events you can give the Committee no actual experience of the working of your training farms?—No.

10270. Would you kindly turn to page 7 of your printed proof; you will see about two-thirds down the page the words "our experience at the workhouse teaches us"?—Yes.

10271. Are those your own words or the words of the chairman of the Paddington Board of Guardians; I am not quite clear?—They are my own words.

10272. Then it is the experience of the Church Army of the workhouse which teaches you A, B, and C; is that it?—Yes.

10273. I do not quite follow what you mean by A., that when men are willing to work, and can't?—I mean when they are physically infirm; unable to work in that way.

10274. Are those men whose lack of employment is due to physical causes?—Yes.

10275. The second clause, Clause (*b*) are those of

Mr. *Heywood Johnstone*—continued.

of the fallen and delinquent poor whom the Church Army specially deals with?—Yes.

10276. And is class (*c*) the idlers whom you would have dealt with by police regulations?—Yes. Of course the very point of our existence means that we would give them every chance.

10277. If they have done their four months with you, and gone out and made no attempt to get work, then you would hand them over to be dealt with by the police, would you?—I do not think those sort of men would stay with us four months; they would not be able to stay with us. They would be men who absolutely refused to work, and that would be discovered before the four months had expired.

10278. Are they the people who have had so much mischief done to them by the reduction in the price of lodgings?—Some of the people undoubtedly.

10279. And are they the people who do not meet with employment, but who personally suffer very little distress because their standard is very low?—Quite so.

10280. And, therefore, in dealing with any question of distress from want of employment, we need not take them so much into consideration, you think?—Not so seriously as compared with other classes, I should think.

10281. I do not think you gave the Committee any idea of the cost of your homes, did you?—Yes, I tried to state it to the Chairman. We reckon that the initial expenses are covered by about 100*l.*

10282. Is that the cost of starting each home?—Yes.

10283. What are the working expenses?—The working expenses are between 200*l.* and 250*l.* per annum.

10284. That is a home for 25 men, is it?—Yes, through which about 120 to 150, on the average, pass in the course of the year.

10285. Can you let the Committee have a balance sheet or anything showing how those figures are arrived at?—Yes, with pleasure; I will hand it in afterwards.

10286. I think you make it a condition, do you not, that those in the homes should be paid a standard rate of wage?—Yes. I must qualify that answer. That is as far as the quality of their work will allow. I mean to say that I could not possibly say that every carpenter or every man that could do a little carpentry gets the full price a man outside in regular work would get.

10287. Can you tell me what would be the average weekly earnings of a man in your homes?—Chiefly at fire wood cutting, 9*s.* or 10*s.* is the average.

10288. Is the work done chiefly firewood cutting?—It is chiefly firewood cutting.

10289. If a tradesman comes in can you find work for him at his own trade?—Very often we can, or at least for some part of the week, and his wages will increase accordingly.

10290. But you cannot at all guarantee him it, can you?—No.

10291. He must take what he can find, must he?—Yes.

Mr. *Heywood Johnstone*—continued.

10292. Which may be the lowest type of rough work?—It may be.

10293. You do not guarantee him any more than that, do you?—No.

10294. And working eight or nine hours a day at that he is able to earn, at the most, 9*s.* or 10*s.* a week?—Yes, unless he gets work for some part of the week at his own trade, or some superior work.

10295. Do you give him the advantage of that?—Yes.

10296. I did not understand from your answers whether the man will be employed at what I will call a union rate of wage at his own trade for eight hours a day all the week long?—No, we cannot undertake to do that; if we could, we should be in this dilemma. Great numbers of men would be coming to us instead of trying to push about outside.

10297. You speak, on page 3, of a simple form of agreement which each man is expected to sign?—Yes.

10298. Have you a copy of that with you?—No.

10299. Will you let the Committee have a copy of it subsequently?—Yes.

Mr. *Pickersgill.*

10300. How many homes have you in London?—Eight, I think, of this sort.

10301. How many London boards of guardians have co-operated with you. There are 30 boards of guardians altogether. I should like to know what proportion have co-operated with you?—Twenty-six of them.

10302. Have they all co-operated?—Yes; not to the extent of paying money to us in any way, but we visit them. Our arrangement consists in sending representatives every day to visit the various workhouses and casual wards all round London, and this we do whether they pay anything or not.

10303. Is that done with the sanction and approval of the 26 boards of guardians?—Yes.

10304. Will you tell me how many boards of guardians have sent men to you for whom they have paid?—They never pay per head for individual cases. They give us an annual subscription in some cases, such as Paddington and Lambeth, 10 guineas; Marylebone, St. George's, Islington, St. Pancras, Holborn, and Wandsworth, give us five guineas each. The total sum comes to 113*l.* 5*s.*, as I have said.

10305. Are you aware that in some cases some London guardians have sent men to the colonies at Hadleigh, and paid 5*s.* a week with them?—I have seen it in the newspapers. I know nothing beyond that.

10306. Have you ever suggested to a London board of guardians they should ever make a similar arrangement with you?—No, we have not, because our idea is rather to tax the man's own energy as much as possible. You will notice in this statement I say, "up to and not exceeding a rate of 8½*d.* per day." I would far rather have what the man can himself earn supplemented, if he is doing his best, by a trifling sum. I think it is a better arrangement, and one with which ratepayers could not quarrel.

Mr. *Pickersgill*—continued.

10307. But at present you have not any such arrangement, have you?—No.

10308. You have not a payment of so much per man per day, have you?—No; the getting out of these figures has made a revelation to me which will lead to further action in that respect, I daresay.

10309. I understand that four months is the maximum time any one may stay with you, is it not?—Yes.

10310. Do the bulk of the men who come stay the full time of four months?—No; the average is three months.

10311. The average is three months and the maximum is four months, is it?—Yes.

10312. With regard to the results, you have not told the Committee anything definite about the permanent results, have you?—About 50 per cent. of the men we take get a fresh start in life, and about 80 per cent. keep their agreement.

10313. You say about 50 per cent. get a fresh start in life, do you?—Yes; that is to say, they get a situation of some kind.

10314. What becomes of the other 50 per cent.?—I am afraid we do not know what becomes of them.

10315. Do they leave either through mis conduct or by expiration of time?—Quite so; very few from expiration of time.

10316. Do you follow up the 50 per cent. who get a fresh start in life?—We follow them up as far as possible, but, as I have already said, some of them do not care to let us know too much about them afterwards, lest there should attach to them a sort of stigma.

10317. How many are you able to follow up?—I could not tell you exactly at this moment.

10318. How many come back to you?—Very, very few indeed.

10319. How many again become chargeable to the Poor Law?—Very few. We do hear occasionally of men who have thrown themselves out going back to the workhouse, and this case I have instanced is one such. They made careful inquiry to see really whether he had been trying to work; we had given him already two chances, and it was proved beyond dispute that it was a case of wilful idleness, consequently he was taken before the magistrates. There are extremely few we hear of. I should think 5 per cent. would be quite as much as we know of who come back. Of course we may not always be apprised of them.

10320. As I understand, referring to your concluding suggestions, you contemplate that the initial machinery to bring men to you shall be the Poor Law?—Yes.

10321. So that, so to speak, the man must pass under the yoke of the Poor Law, become a pauper, in fact, before coming to you?—He begins as a pauper, I take it, when he applies for relief, or would you not say, when he goes into one of their institutions?

10322. At all events he becomes a pauper when he receives relief in any form?—Yes.

10323. And, as I understand, up to the present moment, you have been taking paupers in the full sense of the term, that is to say, out of casual wards and so on?—Quite so.

Mr. *Pickersgill*—continued.

10324. Is that the initial machinery which you contemplate in the future?—No; I was supposing that some arrangement could be made for dealing with this sort of people before they go into the house at all, after the guardians were satisfied that such men ought to be dealt with.

10325. But the point is this, the guardians would only become aware of the existence of these people, in the ordinary course, by an application for relief, would they not?—Yes.

10326. So that practically they have become paupers, have they not, or are about to become paupers, at any rate before you intervene?—But I gave you the case of a married man. He applied for help at Paddington, and the guardians took the wife and children and handed over to us the man. He is not a pauper. For the time unfortunately his wife and children were obliged to be.

10327. He is a pauper in the eye of the law, is he not?—Yes, but we saved him from the workhouse.

10328. You saved him from the workhouse, but you did not save his wife and children from the workhouse unfortunately; is not that the weak point?—Of course that is the weak point; but I should imagine it would not be a very difficult thing for guardians to make some arrangement for allowing such a family supplementary help, meanwhile not requiring the man to pass through the union.

10329. With regard to the use of the criminal law in the case which you cited, the typical case, the man had brought himself within the reach of the criminal law by becoming chargeable to the rates, had he not?—By wilfully repeating the act of throwing himself on the Poor Law.

10330. But the essence of the case is that he had become chargeable to the rates, is it not?—Yes.

10331. Do you propose to limit the use of the criminal law to cases where the person charged has become a burden on the rates. A person may be an idler, a wastrel, a burden to society, and a trouble generally, without being actually chargeable on the rates, and my point is this: do you contemplate that a man should make himself chargeable to the rates before he comes within the reach of the criminal law, as you desire to have it?—If he violates in some way or other an existing law, I do not see how you can help it.

10332. But, as I understand, you want to punish the man who is idle?—The man who wilfully throws himself on the rates when he can avoid it.

10333. Then the essence of the case is, he becomes chargeable to the rates?—Yes.

10334. Unless he becomes chargeable to the rates in some form or other, you do not think idleness should be a criminal offence, do you?—Unless he does a wrong to society, or violates some law. If a man thieves, for example, he gets himself into trouble.

10335. Take the case which is attracting a great deal of attention at the present time, of tramps, who go wandering about the country; take the case of a man who never goes into a casual

Mr. *Pickersgill*—continued.

casual ward as many do, but who passes the night in the open air or in a lodging house; would such a man, according to your view, be a proper subject for the criminal law to interfere with or not?—The criminal law does interfere with him as a vagrant, doesit not?

10336. But he will have either to beg, or to sleep out?—Yes.

10337. Unless he does one of those two things, I do not think the law could very well get at him; do you wish to extend the law beyond the point to which it reaches at present?—No, I should not say so.

10338. Then all you want is a more stringent exaction of the existing law against vagrancy and mendicancy?—Yes.

10339. Do you think the law at present strong enough, but that it is not properly put into execution?—Yes.

Mr. *Logan.*

10340. Do I understand that at no time you have more than 500 men in your homes?—Yes.

10341. Could you increase those homes indefinitely?—Yes.

10342. If you do so, would you suggest to the Committee that that would in any way assist the solution of the unemployed question in this country?—No; as I have already said, I should say that it would deal much more effectively with the socially delinquent classes of the unemployed, and that it would reveal the real state in respect of the others.

10343. I understand your answer to Mr. Wilson to be in that direction, but I was not quite sure whether I gathered it you increased your homes, you might not possibly deal with the unemployed; do I understand as your homes are now constituted you simply deal with the loafer?—Yes.

10344. And not with the honest working man, who is anxious to work and cannot get it?—That is so, except in comparatively few instances.

10345. So that really the suggestion which you have to make to this Committee to assist them in framing a report is to be found, is it not, on page 8 of your proof of evidence, where you say that you think something might be expected from Government Departments, county, town, district, and parish councils?—Yes.

10346. And you suggest lower down that these various Government Departments and various councils should provide small holdings for married people and families?—Yes.

10347. Do you make that suggestion because you believe that the influx of agricultural labourers into our already over-crowded towns tends to congest further the labour market?—Yes, undoubtedly.

10348. Do you think that if some steps could be taken to keep the agricultural labourer at home on the land that that would go a considerable distance towards relieving the unemployed in towns?—Yes.

10349. How do you suggest that these district or parish councils should provide the land for small holdings?—I am afraid I have not given very much attention to that side of the subject, but I suppose it is quite possible under existing laws to acquire land for the purpose.

Mr. *Logan*—continued.

10350. Do you think that local authorities should be given power to enable them easily to acquire land for the purpose of providing small holdings for those who are fit to work them?—Yes, for those who are fit and wish to work them.

10351. I quite agree with you that it is very desirable, but I am afraid I do not see quite how it is to be done; how are these people to be started on these small holdings; how are they to get the money to stock them?—They would have to be financed, of course, on some system.

10352. You do not suppose that our agricultural labourer of to-day, on his miserable wage of 9*s.* up to 14*s.* or 15*s.* a week, is ever going to start himself, do you?—No.

10353. Then you think that the parish council districts and county councils should assist the man to make a start, do you?—Yes, with proper precautions and safeguards, of course.

10354. That, I take it, is your main suggestion?—Yes, for what you would call the respectable unemployed. I hope sincerely this Committee will not fail to deal with the delinquent unemployed. I understood that that also came within the scope of the inquiry of this Committee. I mean the loafer, and the man who is always on the fringe of the labour market, lessening wages by being content to take any kind of odd job at any price.

10355. You have told us that the men you deal with are principally of the delinquent class, as you call them?—Yes.

10356. I was very much struck just now by your observation that 50 per cent. or one-half of these loafers get permanent situations?—More or less permanent; I cannot say permanent. As I have not the record of every man, I cannot say that.

10357. From your great experience would you lead the Committee to understand that 50 per cent. of the men who have been loafers for a considerable number of years of their life are likely to make good servants?—Yes; they are reclaimable.

10358. Do you think one-half is not too high?—Facts have proved it; that is taking the entire total of our analysis; but if you come to particular classes I should have to give different figures.

Chairman.

10359. Do you mean 50 per cent. of those of that class who have passed through your homes?—Yes.

10360. And possibly it is the best of them who come to the homes?—Very likely; they must be men who want to work.

Mr. *Logan.*

10361. The best of them come to the homes, do they?—Yes, the man who is ready to work will come, but he knows he must work if he comes.

10362. And the good influence of your homes, you think, turns 50 per cent. of them into fairly good members of society again?—Yes.

10363. You say you pay trades union rates of wages, and yet I understood you to say the men

Mr. *Logan*—continued.

can only earn about 6*s.* a week?—No; I said about 9*s.* or 10*s.* That means that the work those men do chiefly is firewood cutting.

10364. What can a firewood cutter earn?—A professional firewood cutter at trades union rate of wages can earn (for I have set him to work to try it myself) from 20*s.* to 24*s.* per week, and he can cut up the wood very economically; if he has got to husband every stick of it himself it is marvellous what he can do. But if you put the ordinary man from the street to it our experience is that he cannot earn more than 10*s.* or 11*s.* at the outside, and very often it is betwen 9*s.* and 10*s.*

Mr. *Lawrence.*

10365. How long have you been engaged in this particular work of dealing with the delinquent unemployed?—Since the end of 1889.

10366. Yourself personally?—Yes.

10367. Have you had any experience of agricultural life?—No, I have not.

10368. So that all your remarks as to putting people back on the land are not the result of any practical experience, are they?—Not of my own experience, but of the experience of deputies. Of course we have men who thoroughly understand the land, and have been on it all their lives.

10369. You said, did you not, in reply to Mr. Acland, that you found there were a considerable number who desired to get back to the land?—Yes.

10370. Does not your statement seem to conflict with all the evidence the Committee have, that as regards the London unemployed they are not people who have come from the land, but that they are rather urban breakdowns?—Yes; it may be that by dealing with them individually, so to speak, and in getting at the individual, we take more pains to ascertain the capacity of each man. Then, again, we remove them one at a time, so that we are pretty well sure what line a man will take before we put him on, and our smaller experience might prove this rule, whereas a larger experience, taking one of our homes and emptying it, on to a farm, for example, might prove the very opposite.

10371. The statement which I make, drawn really from the Board of Trade Labour Department Blue Book, that people who are unemployed in London are not people who come from the land is generally true, is it not, that in your particular case, having selected cases, you may find a larger average of people who do come from the land?—Yes, I think that is so. As I have said, it is a small experiment which we have tried, and I dare not use what experience we have to prove anything as to the land, and I should certainly not desire to do so.

10372. You say you advocate labour bureaus; have you not seen how very unsuccessful they have been at first starting?—I think in some cases they have been very successful.

10373. Can you mention one successful one?—I think the Chelsea one was very successful.

10374. Was not that chiefly for the municipal body getting sweepers in winter?—I am not quite sure; I understood that great numbers of men got situations through that place.

10375. Is it not the case that labour bureaus to be successful must make a thorough inquiry into the cases?—Quite so.

Mr. *Lawrence*—continued.

10376. And that as a rule the people who go under the name of "unemployed" are quite unwilling to have those inquiries made?—I should certainly not regard them as the real unemployed at all. If you discover by inquiries that the character of a man will not bear the light of day, I think in the same way as the Charity Organization Society investigate their cases, that man is a case for such an institution as our own, and not for a labour bureau.

10377. Do you make any inquiry at all equal to that of the Charity Organization Society?—We do not inquire in the same way as the Charity Organization Society, because they exist as a society, as doubtless you know, largely for the repressing of mendicity; nor in the way of the relieving officer, who has to protect the rates of his parish. In both these cases, if they find a man has been a scoundrel, they look on him with more or less suspicion. On the other hand we do not mind how bad the man may have been, it does not disqualify him from coming to us; accordingly we have a more or less unique niche to which these people, the Charity Organization Society and relieving officers, refer cases which they themselves cannot deal with.

10378. The Charity Organization Society's inquiries are made not with the view to repress mendicity, but to learn the character of the case, is it not?—But is not the title under which they exist, The Charity Organization Society, for the repressing of mendicity. We have very amicable arrangements with the Charity Organization Society, and help them very much indeed in many cases.

10379. My reason in asking the question was to test some of the statements you have made to the Committee, and to see whether you have got real information upon which you can issue real returns; for instance, do you make inquiries as to where the people come from?—Yes.

10380. Do you make any inquiry at all as to their antecedents, and correct their statements?—Yes. We are very careful. We have what the man says of himself; we have what two independent working men say of him; we have what his old employers and parents and friends say of him.

10381. Do you check their statements at all?—Yes, undoubtedly. Then we have sometimes to send a man to the doctor, and we then have what an expert thinks of the whole evidence in the case of every man.

10382. In my experience of similar work in analysing the characters of persons in connection with soup kitchens, I have noticed something like 80 per cent. of them practically had no address beyond a common lodging house; is that your experience?—We sometimes find that, and we sometimes find many inconsistencies and falsifications, but they do not deter us from helping the man; they rather put us on our guard, but they do not deter us from helping him.

10383. I understood you to say that very few of the people whom you once take in come back to you; is that so?—Very few.

10384. Is not that a very singular fact when we

Mr. *Lawrence*—continued.

we see that in the German and Dutch colonies there is always a return of a very large number of the people who once go there?—Yes.

10385. How do you account for that?—I do not know; it has always been a mystery to me, but it may be that some of those who fall again know that they will have to work if they come back to us. That may account for it more or less. That is the principle upon which they have received our help previously.

10386. But is not that the principle in Germany and Holland, and yet they come back to the extent of 25 and 28 per cent.?—Yes. We have very few cases, indeed.

10387. Is it your experience that a very large number of people do not acknowledge that they are married?—Yes.

10388. Does not that seem to indicate to you that they are not an improvable class?—No, because we very often restore a man to his wife after his stay in our homes.

10389. After he had deserted her?—Very often. Sometimes we have had an inspector come to arrest him, which comes to the same thing, of course; but, oftentimes we have restored men to their wives, and people to their relations; it is quite an item in our tabulation.

10390. Do you see any way in which you can deal with respectable people who are married, and who are out of employment, by your methods?—No, I am afraid not; we do not take married people, you see. But there are some advantages even to married people from our system; a wife can get along on less rent if her husband can support himself. He can earn a few shillings a week which can go to his wife; he can earn a reputation if he has got none, or he can increase it if he has, and he can get the chance of some substantial help in obtaining a more permanent situation afterwards. There are many advantages to married folk; but we do not take them as families.

Chairman.

10391. You put in accounts do you not, showing the financial results of your scheme?—Yes, with the Poor Law Guardians.

10392. And tables showing the financial aspect of your system of homes?—I referred to one of these statements which shows how far the Poor Law Guardians of London co-operated with us in respect of finance. Then I made a statement or rather promised one of the Members of the Committee to send a statement of what the initial outlay and working expenses consisted.

10393. Perhaps you will kindly put in any information which you can on the financial results of the working of the homes?—I will.

Chairman—continued.

10394. Is the result that they are a considerable charge on your charitable funds?—Very considerable; I estimate if they had paid us at the rate of 8½*d.* per day for the support of these paupers who have been sent us, for the 64,406, it would have amounted to 2,280*l.* whereas they have given us 113*l.*

10395. There are somewhat similar organisations to yours, are there not, which are almost self-supporting?—I do not know of those.

10396. The Committee had it in evidence from Mr. Booth that the Salvation Army pay for the whole of their operations including labour, factories, shelters, homes for women, and so on, 73,000*l.* a year, and receive back from the people either in labour or in payments of that 73,000*l.* 70,000*l.*, so that the deficiency required from the charitable benevolent public to make up the cost of carrying on operations in the city colony was rather more than 3,000*l.*; that is on a very large scale, of course?—Quite so.

10397. He has sent the Committee accounts showing how these figures are made up; that is a very different financial result from what you show, is it not?—Quite right; but you will quite understand that the question of wage-paying makes a very considerable difference. We say we pay wages; we say also we pay trade wages. They adopt the "truck" system, and give the great majority of their men so many tin tickets, which include one for so much food, and another for a bed, and so forth. By obliging a man to go there they make a profit on all they give him, so that they get his labour for a mere trifle.

10398. But that is a very striking fact, is it not?—Yes, but that explains it. We pay hundreds and hundreds of pounds away for wages to get hold of the best thing that remains in the loafer, namely, his own self-interest; it is better for him if he works better. We do not simply manage to get him off the streets, but we try to develop in him independence of spirit and self-help.

10399. And you have told us, I think, that when he goes out you allow him to have pocket money, so as to strengthen him by resisting the temptation of falling into his old ways?—Quite so. There is nothing of that kind in the Salvation Army homes, I understand.

10400. Do you think that accounts for the great discrepancy in the results of the two systems?—Very largely; you cannot have the payment of wages and trade rate of wages without having a very decided difference.

Mr. George Lansbury, called in; and Examined.

Chairman.

10401. Will you tell the Committee what experience you have had in the matter of the relief of distress from want of employment; you have been, I think, connected with one of the boards of guardians, have you not?—Yes. I am a member of the Poplar Board of Guardians, and have been a member of that board for two years. During that time we have had a considerable number of people out of work in the district. We find that it is not merely a seasonal question, but that it only becomes acute in bad weather, and as a matter of fact, that men can starve easier, or put up with distress arising from want of employment better, in the summer than in the winter, and that their clamour becomes the strongest when the weather is very bad.

Chairman—continued.

Chairman—continued.

10402. The word "easier" has two senses. It is not easier for a man to starve I suppose at one time than at another, but that he does it with more satisfaction and comfort to himself?—That is so; if he has to die of starvation he can do it easier in the summer than in the bitter cold weather, when he has frost, &c. to add to the pangs of hunger. We find too that it is not so much a question of the men being unable to find work in the winter, but that it really applies the whole year through. As a matter of fact at the present time we have large numbers of men applying for work or relief through lack of employment. Of course things came to a head so far as the present year is concerned, last February, I ought to say though that from last October until February, we were having big meetings of the unemployed, and large numbers of them coming to the board for relief. On 17th February things got very bad and stoneyards were opened. Three labour yards were opened by the board of guardians. They were opened for six weeks. Each man who applied had to show a clear six months continuous residence, that was to prevent people coming from other districts. The hours of labour were from 9 to 4. We made it 9 so that the men could go about and look for work elsewhere before they came to us. Then they had an interval of one hour for dinner. We paid single men at the rate of 2*s.* 6*d.* per day, married men with three children 3*s.* 6*d.* per day. For each child above the three we allowed an extra 2 lbs. of bread. I have said that we paid them those amounts, but half of it was given in money and half in tickets, which could be changed for food at any shop in the Union. Of course, at our end of the town, we hear a lot of the struggling ratepayer, and it rather quieted him by giving him back in the shape of custom the money he was paying these men for work in the labour yard. At first the guardians gave the food, but we found it better to give the tickets. As I say, these yards were open from 17th February till 30th March, and during that time there went through them 1,939 men. These men's ages were as follows, and I rather want to make a point of the ages of these men. Under 20 years of age there were 71; from 20 to 30 there were 591; from 30 to 40 there were 564; from 40 to 50 there were 402; and over 50 years of age there were 311. These men had dependent upon them, or some of them, rather, 1,518 women and 3,468 children, making a total of persons relieved in this way, 6,925.

10403. How do you make that computation; the same man being relieved every day of the week, would count seven men, would he not?—These are separate individuals. I will put in a return which we have had made out, if you will allow me.

10404. Please do so, because that confession is often made?—In this case it is not. Here we give you the actual individuals (*the return was handed in.*) We paid to the men in money and gave them tickets to the value of 2,252*l.*; for extra officers, 359*l.*; for men to prepare the yards, we did not employ them as paupers, but paid them the ordinary current rate of wages, 134*l.*; for the purchase of stone, 475*l.*; for tools, 353*l.*; rental of grounds, 34*l.*; cartage, 114*l.*; surveyor, 2*l.* 5*s.*; making a total of 3,726*l.* which the guardians expended on these labour yards. As against that we shall receive 730*l.* for the broken granite, and I suppose we have 300*l.* worth of tools, so that roughly speaking the union has spent 2,720*l.* on relief for which they will get positively no return whatsoever. That is what we spent outside the workhouse. Now I want to point out during the whole of that time, I have not had time to get out the actual figures, our workhouse, which will accommodate something over 1,300 people, had over its number from 200 to 250 persons. Of course that added to the outlay of the guardians, because each one of those persons had to be maintained out of the local funds, as we get nothing for them out of the Metropolitan Common Poor Fund. Then I want to point out that an increase in the workhouse has been going on during the past seven or eight years. In the year 1888 the guardians thought that they would provide once and for all sufficient accommodation, but since that time we have been spending on extending the workhouse and adding to it in various ways, 95,000*l.*; that is during the past seven years. Of course we have not paid the money, but we have borrowed it, and we are paying it back in the ordinary way.

10405. Was that spent on the top of a provision which was considered adequate at the time?—Yes. The point, of course, is that at the present moment, after that expenditure of money, the workhouse last Saturday had 75 inmates over the statutory number. Mind you, that is in the middle of summer.

10406. What are the circumstances of Poplar?—Do you mean as to the people?

10407. Yes. What causes this great increase in paupers?—It is a big waterside district for one thing. Then we have gas works and jam factories.

10408. But those are all flourishing, are they not?—I think I shall be able to show you in a minute or two why it is we get this class of people. The board of guardians tried to co-operate with the Local Board of Works, but we found that it was practically impossible to co-operate with them through the bad time, except for snow-sweeping and stone-breaking; I mean as to the stones which were required for the roads in the district. I will put in three returns, which give the actual expenditure of the Board of Works at the same time. They spent 1,600*l.* on the unemployed in stone-breaking and snow-sweeping. I wish to point out that there again they had a staff quite sufficient to do the work, but they put on the men merely to keep them from starving (*the returns were handed in.*) I went down several times to the depôts where the men were taken on. We hear a good deal about people not being willing to work, but I have seen men positively fighting for the purpose of getting a ticket to be able to go to work, and it has taken half-a-dozen policemen to protect the foreman and keep the men really from bearing him down. As to the kind of men we had out of work, you will find from the returns that we had all sorts, from costermongers to commercial travellers. Of course some were not of

Chairman—continued.

of the best character, but out of 1,939 we had two cases of men who refused to do their work. Those two were prosecuted and, I think, punished. That rather proves that the men merely wanted the chance of going to work. The majority of them were unskilled labourers. There were about 1,350 who could be classed as unskilled labourers, and about 600 as mechanics. As I say, I can state from my own practical knowledge of these men that each one of them, with the exception of two, were only too anxious to go to work and earn some money. Then, as to the youths from 18 to 21, it is a striking thing that at Bow and Bromley we have a large number of youths from 18 to 21 who are out of work. I account for that in this way. As I have said, we have rope works, jam works, chemical works, paper works, and gunmaking works. At each one of these industries there is a lot of machinery employed, and the people who are required to look after the machinery are not grown men or grown women, but boys of from 14 to 18 who are quite able and, of course, quite willing to do it. The consequence is, that up to the age of 18 they can earn from 8*s.* to 12*s.* a week; but whenever they begin to feel they are men and want more money they are discharged. What I am saying is not hearsay. We took the trouble, on the relief committee, to investigate some of the cases of these lads who asked for work, and in each case it appeared that they had left either one of those industries because the employers could not pay them more; I say could not, it was not a question of would not, for competition would not allow them; it would not allow them to pay more than 12*s.* or, at the outside, 14*s.* a week. Then, on the top of that, a gun factory there had just finished a contract which they had from the Government, and their works had thrown a number of these boys on to the road. I have lived there about 10 years, and, from my own knowledge, I have seen these boys growing up into real corner lads. You meet them at each corner at this time of the year; they get through life by carrying betting news, and in various other ways; in the winter they have to get help either by going into the workhouse or into stone-yards, if such are open. What I want to point out is that it is not these boys' faults, but it is really the condition under which they come into the world and grow up, and the industrial life by which they are surrounded. As I say, I do not blame the employers in these particular cases; they produce under competition, and they cannot under competition pay any more than the wages they do pay for this class of work. Another thing with regard to the ages is, and it is an astonishing thing, the enormous number of men from 30 to 60 out of employment, which gives you the other side of the picture. You find that when a man gets from 36 to 40, and is out of work from any cause, it is very difficult for him to get employment elsewhere. Our relief committees have experience week by week of men who come up to tell us that the reason they are out of work is because they are considered too old by the people who need men. Then, again, with regard to these particular cases of ages from 30 to 60, we find in Bromley a large number of men have

Chairman—continued.

been displaced in the gasworks by the introduction of a machine called a "Sloper," which is really a slope down which the coals travel to the retorts, instead of the men having to throw them in. The stone-yards had to accommodate some scores of men who had been displaced from the Bow Common Gasworks because of the introduction of this machine. These men we have there now, and the Board of Works puts out just as much work as it can to keep them going, just to keep them alive. Practically, nothing permanent is done for them at all, it is impossible because of their age. They have been gas stokers ever since they went to work, and it seems utterly impossible for them to expect to get employment anywhere else. As I say, we have those two classes of people in the Poplar district, and, added to that, we have a large number of dock labourers. The dock company has reorganised the whole of their labour at the docks, thoroughly reorganised it; they have introduced electric cranes; they have brought up permanent hands from the country, and the old docker is thrown out. We have a very large percentage of these men. Nobody wants them; nobody wants to take them on; they have been casual dock labourers all their lives, and we have to deal with them as guardians either in the workhouse or in the way I have just been stating. That is as far as men are concerned. I want to point out that all that has nothing to do with bad weather; we have that class of thing now, and we have it all the year round. As to women, we have not any very reliable returns made out, but of course every one who has had anything to do with Poor Law in London knows that we have a large number of widows to deal with. We find that females from 14 to 18 can earn fairly good money in match factories, ropewalks, at shirtmaking and bootmaking, but after they get to marriageable age and their husbands die, they are not able to earn any more than they earned when they were single. The consequence is that very often our out-door relief to widows and that class of women has to be really an aid to the wages. Of course it is not acknowledged as an aid to the wages, but that is really what it amounts to. They earn at these sort of industries from 5*s.* to 8*s.* a week; I should say 6*s.* was the average. We have large numbers of women who earn that sum and who cannot possibly earn anything more. There is a striking thing here, exactly the same as with the young lads. You see large posters stuck up all over the place asking for learners to various trades; when one set of learners have learned they are cleared out, and another set of learners brought in, simply because employers have to produce things cheaply in some way or other, and the way they do it, especially in the waterproof working, is to get rid of one set of learners and bring in another. We have no end of women who have been treated in that sort of way. With all our expenditure of 2,000*l.* and the Board of Works 2,000*l.*, and the 90,000*l.* odd in addition to all the other money which has been spent, we have not touched the root of the matter at all. We could go on spending in the same direction, and still you would have the unemployed; still you would

Chairman—continued.

would have people in the same position they are in now, for this reason: these people are out of work because competition says there is not any room for them, that they are not needed. I contend that you cannot solve, I know this will seem a big order here, you cannot hope in any way to touch the unemployed question without a complete reorganisation of our industial system. I say distinctly that those young men from 18 to 25 and those men from 35 to 45 are quite able to earn their livings; they have physical strength enough; they have intelligence enough, if properly directed, to earn their own livings, but under present circumstances they are not allowed to do so because they cannot make a profit on the top of it for either a firm of capitalists or an individual capitalist; therefore they are left to come either on the rates or to live by the charity of someone else. Therefore, I consider, the only solution of the unemployed question is for the community to take over and control the industries of the country, and produce for use instead of profit. I want, however, to say that I think, especially in London, the President of the Local Government Board should use the power he has under the Metropolis Poor Act of 1867 to group the unions of London into one district; he should alter the terms of the out-door relief order, so as to enable the managers of such a district to buy and hire land; I say hire land, because I am doubtful if enough can be legally purchased; and that on this land men who are unemployed should be set to work, not to produce a profit, but simply to grow food for their own sustenance, and the sustenance of those dependent upon them, and that side by side with them there should be workshops erected for the manufacture of boots, clothes, and other things necessary to human life. I want to point out that the Poor Law says all those who are relieved, whether inside or outside the workhouse, must be set to work. At the present time you stick to the letter of that law by setting them to stone-breaking, oakum-picking, wire-pulling, and that sort of thing; but when you attempt to open workshops you are met with the cry of competition with out-door industries. For instance, we have opened a tailor's shop, and bootshops, and we are having deputations from trades unions, pointing out that we are producing the goods under the current rate of wages. Of course we are, because the inmates have only provided for them the ordinary food and the ordinary clothing, and the ordinary conditions of a workhouse. Now, if you put men on to land, I suppose it does not need arguing, at any rate here, that one man on the land will always earn more under proper supervision than he actually consumed; I mean he could grow more potatoes than he could actually eat himself; consequently you could have others in the workhouse making the clothes, and other things necessary for the men who were engaged in work on the land. That is all, I think, which can be done at the present moment. I think it is too much to ask the House of Commons, which is too busy, so we are told, with other matters to pass any new law except one, and that is one to renounce the present disfranchisement attaching to relief by guardians. I want to say to this Committee as an ordinary individual that it will be

Chairman—continued.

nothing less than a scandal to London, and to the people of this country, if these 1,939 people I have mentioned, and others, who have been relieved in similar ways throughout London, are to be taken off the register from no fault of their own. I think the least we can ask this Session is that the disqualification from going on the register should be removed, and that these men's rights as citizens should be recognised. As I say, we have found nothing against their characters, we have found them willing and anxious to work, only society had not any room for them. I think, considering it is asserted there is no time to pass Acts of Parliament, the proper thing to be done is for the President of the Local Government Board to use his powers, and to group the unions of London in the way I suggest. I think that should only be the commencement. I quite recognise that such things as the coal industry and the making of cotton goods are not carried on in London, but if the idea were extended it does not seem to me there is any reasonable objection to organising the surplus labour of the country in this sort of way. I do not put this forward as any authority on the matter at all, but as a reasonable person, I think it is a useless kind of thing to put able-bodied men to crack stones, or strip wire, or pick oakum, when you have miles of land quite close to London crying out for this same sort of labour, which would give men the opportunity of getting their own living in a rational sort of way.

10409. You touched on the question of disenfranchising anyone who has received Poor Law relief; are you aware of the argument on the other side, that it is very difficult to discriminate between the class that you speak of and that class which may be called the loafer class?—Yes, that only applies at one end of the social scale. I want to put the other side. Take your Benson, and Baird (who has just died), the loafers at this end of London who canter round Rotten Row, they have their legal rights to vote, and my contention is that if a man has had an education and becomes a loafer like that, he is worse than the loafer at my end of the town, and should be disqualified in preference to the men who are made loafers in the way I have described. My answer is, if we are to have a sorting-out of loafers, let us sort out from the top the men who are cultured rather than begin with those at the bottom to whom those at the top should set an example.

10410. I agree with you in sentiment and theory, but the man who is cultured and who has the means of supporting himself, does not become a burden on other people?—But he must; the man who does not work must be kept by someone. You know that Carlyle says there are only three ways of getting a living, either by begging, stealing, or working; the Almighty does not rain manna nowadays, someone has to earn all the wealth, or whatever you call it, that these cultured men spend and live on; that is my answer. You cannot live without somebody supporting you. I mean, if I do not work for my own living someone else has to do it for me.

Mr. *Heywood Johnstone.*

10411. Or has done it?—No; we can only live on present labour. We all know that money left brings interest, but interest is only made by labour

Mr. *Heywood Johnstone*—continued.

labour at some time or other. My contention is that if you are going to sort out loafers, clear out those at the West End first, and set those at the East End an example.

Chairman.

10412. However, to come down to more practical or immediate purposes, is there not a danger (not expressing an opinion of my own, but merely opinions which have been expressed otherwise) that if we were to entirely do away with this disfranchisement provision, there would be an extension of leaning upon the Poor Law?—I do not think so. My experience teaches me that men hate the stoneyards and hate the idea of being pauperised, and it is only extremity which brings them to us.

10413. Are you an out-door relief man or an in-door relief man?—I am an out-door relief man. But let me qualify that. I do not believe in out-door relief at all; I mean for any class of society able to do useful work. There is one class class of society that does well on out-door relief, looks well, lives well, and dies well. There is another class at the East End, who starve on it, on a miserable half-crown or 3*s.* a week. I am not in favour of that, but I am in favour of the Poor Law being used as the spirit of it dictates, namely, that each man who is relieved is relieved by finding him useful work, whereby he may obtain his own living. For old people, I believe in adequate maintenance, not starving them, as most people do.

10414. Do you think that this last year the amount of want of employment in your quarter was greater than it has been in previous years?—Yes. It has been growing worse and worse during the last seven years, but this last winter it certainly was as bad as ever I have known it, especially during those weeks of frost; but I am bound to say, if we had a bureau there, and it were open now we should find literally hundreds of men out of work. I meet them every day. But as I say, it comes much harder in the winter time.

10415. You would hire land, and employ the men on it, would you?—Yes.

10416. In spade industry?—I am not an agricultural expert. I have had no experience, only what one has read, though I was born in the country; but I think we have enough agricultural knowledge in the country to employ these men profitably.

10417. Within a reasonable distance of their homes, do you mean?—No; I think there would have to be residences built for them away.

10418. Farm colonies, in fact?—Yes.

10419. Would they be taken away from their wives and children?—Oh, no; their wives and children would go with them.

10420. And you would provide houses for them also, then, would you?—Yes, or accommodation; I am not sure about houses for each family.

10421. Would you do that with a view to relieving their immediate wants, or would you do it with a view to their staying there and settling there?—I should do it with a view to their staying there and settling there, and starting co-operative colonies, if you might call them so, or

Chairman—continued.

co-operative settlements, rather. Certainly, I should start them with the idea of their staying.

10422. Are you aware that that involves a large amount of ground if it is to touch on any considerable scale, the numbers of unemployed we have to deal with?—Yes; but I have ridden through Essex; I have read the Report of another Commission, or portions of it; I find that they cannot get rent for the land, that farms are unlet and are lying idle; and I also read that some of it has been good wheat-bearing land, and that it could be brought back into cultivation by labour.

10423. But it is probably lying idle because it does not pay to cultivate it?—That is so; but my answer is, though it does not pay to cultivate it under competition, it would pay if you took into consideration the question of providing the people with the means of living.

10424. Do you know whether it would pay to cultivate it, even putting the question of rent aside; supposing land were got for no rent at all, do you think it would pay to cultivate it?—I take the evidence given by Mr. Booth, where they have taken land at Hadleigh, in Essex, and with the men taken clean off the streets they had very good returns for the labour.

10425. I do not know that they have very good returns. Are you aware that Mr. Booth did not define the condition of things at Hadleigh on the principle of its being a mere farm colony, but merely on the principle of its being a training colony to prepare men for going over the sea?—But surely if you can prepare them to go over the sea to get their living, it seems to me that it should be possible under proper organisation to do it here at home. I do not see why a man should go right away to America to earn his own living if the element of profit is taken out.

Mr. *Heywood Johnstone.*

10426. Do you mean that it is to be evenly balanced. You say if the element of profit is taken out?—Yes.

10427. Is there to be any loss?—My contention is that there would not be a loss; a man could earn his own living.

10428. That a man could produce exactly the amount required to support him?—He would probably produce more, and, as a matter of fact, all men and women employed now have to do so.

10429. And his wife and family?—Yes.

10430. Irrespective of the size of the family there would be an exact even balancing?—No; I think probably there would be more, and that the balance would be on the right side.

10431. And that by labour on the land he would probably produce more than required for the consumption of himself and his family, however large the family might be?—Not by working singly.

10432. I want to get your exact proposition?—I do not mean that I am to be planted down on an acre or an acre and a-half or three acres, but that with 20 other men on a farm worked on the latest principles it would probably produce, according to Prince Krapotkine, more than the 20 should need for our sustenance and the sustenance of our wives and children, that is, taking the average man.

Mr. *Logan.*

10433. The proof of it is, is it not, that other people do it and send us the surplus?—Yes; but I did not put that because I thought perhaps I might be met by the question of rent.

Chairman.

10434. There is more than one proposal of this kind put forward. There is the idea of a public authority taking land either by renting it or purchasing it for the purpose of employing temporarily and giving work more or less as a test to men who are to receive relief. Your proposal goes far beyond that, does it not?—Yes.

10435. In fact, you see, I have no doubt, objections to that being done except as a makeshift, do you not?—That is so. You see the root of the business is in this, that practically the whole of those men are displaced because under our present undesirable system there is no room for them. Nobody can employ them for profit, therefore they are not employed at all. It seems to me that to deal with this class of people satisfactorily you must employ them where the element of profit does not come in, because I never will believe that if a private firm cannot employ them for profit the State can, but I do think the State or the community could so organise their labour that they would be able to maintain themselves rather than be a burden upon those who are at work; that is the idea.

Mr. *Lawrence.*

10436. Why do you assume that a business in the country will pay when you confess that a business in a town will not pay if you employ this kind of labour?—Simply because in a business in town you produce your boots or clothes, or chemicals of some sort, and you have to sell them for the purpose of getting food. The market for the particular commodities is glutted, and you cannot get rid of that; but we are not glutted in England with agricultural produce grown on our own soil, and therefore I contend that the land is simply crying out for labour and wants work put into it to get the food needed.

10437. Is not your premise really wrong, and that we are glutted with agricultural produce?—No, not at Bow, at any rate; we have plenty of boots and shoes and plenty of coats.

10438. And plenty of food surely?—No, there is not.

10439. You confess, do you not, that your expenditure of money by public authorities, especially the Poor Law, has failed to meet the wants of the unemployed; does that raise in your mind any distrust of the principle on which you administer your relief?—No; because the principle upon which it has been administered has been to make people hate to rely on the community for work. It has been made as distasteful as possible to go to the Poor Law at all, and the work given has been made as distasteful as it could be.

10440. Is it not the case that your Poor Law Union is really supporting a higher average of paupers than other adjoining unions?—No; I do not think so.

10441. Are you quite certain it is not the case?—I am certain it is not the case.

Mr. *Lawrence*—continued.

10442. That the Poplar Union is not assisting a greater number of paupers in proportion to the population than, say, the Tower Hamlets and Whitechapel?—Whitechapel is a portion of the Tower Hamlets.

10443. Take St. George's-in-the-East?—You can never take St. George's-in-the-East and Whitechapel, and compare them with Bow, Bromley, and Poplar, because, in the first place, you have an enormous Jewish population in both unions, and these never come to the ordinary Poor Law authorities for relief at all.

10444. Then you will allow, will you, that as compared with Whitechapel and St. George's-in-the-East, your rate of pauperism is much higher?—No; I will not allow it, because you have, first of all, to take out of the population of Whitechapel the whole of the Jewish population.

10445. Why so?—Because their poor are relieved by another board of guardians than that constituted under the law, and it is not fair, surely, to leave out of account the people who are relieved by the Jewish Board of Guardians. In judging how much pauperism there is in Whitechapel, you only take those relieved by the Whitechapel Board of Guardians; but to be fair to Poplar you must take those relieved under the Jewish Board of Guardians also, or else take out the Jewish population.

10446. I have not the figures as to the Jewish Board of Guardians. And if they do relieve a large number, I quite allow that would nullify the returns of the Poor Law authorities; but it is the case, is it not, that that district of Whitechapel is as poor as you are?—But it is not so, sir. You see, Whitechapel has Toynbee Hall, which has cleared out the rookeries of Whitechapel. It is all very well to say it is as poor as Poplar, but the facts are other way. You may go through a whole square of Whitechapel, where dwellings have been demolished, and new places being put up.

10447. You have referred to the youth of the unemployed; is it not a fact, known to those who know London generally, that people of those ages are to be found equally throughout the metropolis; and that it is not peculiar to Poplar?—Probably so; and the reason is because of the kind of industries that are carried on throughout London.

10448. Therefore, there is nothing really special to regard, is there, in the fact that the unemployed in your district are of those ages you give?—I think we have more factories that employ lads than some other parts of London have; I should say, certainly, more than Whitechapel or St. George's.

10449. Would you not think, if your expenditure had done nothing to meet the case of the unemployed, the conclusion is that it had actually induced men to stay in the district who ought to have gone away?—The difficulty is, we may tell them to go away; but none of us know where exactly to tell them to go to. It is all very well to say, "Go away," but we have to tell them where to go to.

10450. I do not recommend any authority to tell a man where to go to, but if, when the pinch comes, a Poor Law authority by its action shows men that they will get relief on more easy terms, they

Mr. *Lawrence*—continued.

they will stay, will they not, and will not have the self-respect, and exercise the self-exertion, to go and find work for themselves?—Self-respect is all very well; but take a man with his wife and family in the depth of winter, where is he to start tramping to? One does not see. Self-respect surely would teach him that his first duty was to get food for his wife and family.

10451. But if you were more strict in your relief in the winter, in weather like this, they would go afield, would they not?—Last night we had some men before us. The vicar gave them good characters, the Charity Organisation Society had nothing to say against them; the relieving officer gave them good characters. Where could we tell them to go? I have no knowledge where there is any work. You have been sitting here some weeks, and you might publish it to the world if you have.

10452. I am not suggesting any public authority would be so rash as to tell such people to go?—That only shows no one knows where to send them to.

10453. I should be anxious to contend that no public authority can do for a man what he can better do for himself?—But do not you see that society protects the capitalists and the landlord. I have my labour power, society only allows me to exercise it under given terms. If I go into a factory, or on to a piece of land to start tilling it, the landlord either orders me off, or sends for a policeman, if he does not want me there, and society protects him in doing it against my right as an individual to exercise my labour power, therefore society should provide me with the means of living when I cannot get it otherwise.

Mr. *Logan.*

10454. I understand you to advocate that it is the duty of sosiety to find people who are willing to work, and who are able to work, with the means of providing their own livelihood?—Yes; I do not understand why we need a State at all, why we need any form of government, except that it is not to find people the means of living.

10455. Do you think, in fact, that a large community, such as exists in England to day, should treat the individual members of that community the same as a small community would do, that is to say, if we were living on a very small island instead of a large one, and there were 30 of us instead of 30,000,000, we should not attempt to provide food and raiment for a man, unless he were willing to work, and we should give him that opportunity?—Yes.

10456. And you think the same theory should be applied to the larger community?—Certainly.

10457. Do you hold, as the community has to keep these men, whether they are working or not, that it would be more economical to set them to work?—That is so. I contend that my proposal is a most economic one.

10458. Considering there are large numbers of people in this country, at the present moment, who are neither decently used, housed, clothed, or fed, do you think, it would be infinitely better to set those who want to work to work

Mr. *Logan*—continued.

to help to house, to clothe, and to feed, those who are in want of those various things?—That is so.

10459. You said just now that you thought many of the unemployed could be set to work on the land?—Yes.

10460. Have you ever thought why it is that we in England cannot grow food at a profit?—That opens up a very big question. I think that as a nation we have found it paid better to go in for manufacturing, and when we had command of the markets of the world, everyone rushed for the manufacture of commodities which they could get rid of abroad, and for a time that policy paid. I mean we were as a nation piling up a large amount of wealth, if you count wealth by money, but now that markets have become contracted and other nations are entering into competition with us, it seems to me we are feeling the pinch of allowing the natural source of all wealth to go out of cultivation. I think we have to go back, and we will have to till the land of England, or I do not see how we are to live at all.

10461. Have you formed any opinion as to the reason why we import so much food?—I think it is because we export so much of other commodities. If the labour of the community is being expended on the production of commodities for foreign markets, naturally you are bound to bring your food in; the one follows the other.

10462. I gathered from the question of an honourable Member there was an idea that we could not produce in this country what other countries produce in the way of food?—I have already said I am not an agricultural expert, but I have read others. I believe Prince Krapotkine is one of the highest authorities on this point, and he has stated over and over again that the land of England will sustain a much larger population than it does to-day. A reverend gentleman in Lincolnshire has also stated (for the moment I cannot think of his name), and Bolton King, in Warwickshire, has also proved that land can be tilled and be made to pay when men are allowed to work it under rational conditions. As I say, I do not think youcan do it if you have to pay profit and have to pay rent, and to keep a lot of well-to-do loafers, as I should call them, on the top of keeping yourself; I think that is the bottom of the whole thing.

10463. But you are aware, I suppose, that our foreign competitors work much inferior land to ours?—Yes; I am aware that our land, so far as one has read, is the best wheat-producing land per acre of any in the world.

10464. Do you know that in 1893 we produced 26 bushels per acre, whereas the United States and Russia, the two nations which send us an enormous quantity, could only produce 11 bushels to the acre?—I have not seen those actual figures, but I have seen very much the same figures.

10465. Have you ever thought of the reason, and there must be a reason, why these men with much inferior land to ours can grow the stuff which you say our people ought to grow, and undersell us at our doors?—I should think, for instance,

Mr *Logan*—continued.

instance, they do not have to pay anything like the amount of rent which has to be paid in England, and I should say their standard of living is very much lower than ours.

10466. Do you think their standard of living is lower than our agricultural labourers' standard of living?—I should think it was in Russia. If you take America, of course they do it on an enormously large scale, I mean compared to how we grow wheat; the way in which it is grown in America is vastly different.

10467. But according to your great authority, Krapotkine, the more labour you put on the land the more you produce?—Yes; but in England, you see, our farmers have gone on the assumption that they ought to put less and less labour on to the land instead of more, and consequently they do not seem to me to have been able to use it to the best advantage.

10468. Do you think, supposing our people could get land on the same terms as, for instance, they get it in Argentina, where they get two-and-a-half acres for about 4*s*., they would be able to hold their own and would not have to import quite so much?—I think, seeing that we produce so much more per acre, if the men who actually work the land owned the produce after it was produced, that is proof enough that they could maintain themselves and live. You know we have to keep so many people in England, those of us who work, and have to keep them in a luxurious manner too.

Mr. *Pickersgill.*

10469. You suggest that the President of the Local Government Board should exercise his power to group the London unions under the Metropolis Poor Act of 1867. Will you kindly develop that a little; I do not quite understand what you mean?—I sent down this morning for this Act. The President of the Local Government Board, perhaps you may remember, replied to a conference that was held at the East-end.

10470. I am familiar with his reply?—I believe the reason he replied as he did was because West Ham was included, and, as you know, West Ham is out of the metropolis.

10471. Was not his reply that he had not the power that you desired him to exercise?—Yes. The conference proposed that West Ham should be grouped with the unions of London, and I believe that that was the point where the proposal broke down. West Ham is outside the metropolis, and therefore would not come under that.

10472. Will you refer me to the part of the Act which you think applies to this case?—"Asylums to be supported and managed according to the provisions of this Act may be provided under this Act for the reception and relief of the sick insane or infirm or other class or classes of the poor chargeable in unions and parishes in the metropolis."

10473. I am not unfamiliar with that section?—Surely if it means anything it means this: It does not say you shall only group them for the sick; it does not say you shall only group them for the children, but for all classes of the poor. Surely if that is so the President of the Local Government Board could group the whole of London

Mr. *Pickersgill*—continued.

for the whole purposes of the Poor Law if he liked, and make it one union.

10474. Do you mean also equalising the rate?—That is not provided here at all. I think the rate should be equalised, certainly.

10475. That is the point. You do not say it is in the power of the Local Government Board to provide by an equal rate for the necessary expense, do you?—I am not quite certain about the exact proportion, though I expect it is in the Act. At any rate, we in Whitechapel pay for our schools on the rateable value of each union, and these would have to be managed, too. Then the higher-rated parishes would bear, of course, a bigger share than the lower-rated parishes.

10476. Not a bigger share in the £1.?—No, certainly not, but according to their rateable value.

10477. It would not relieve the ratepayer in a poor district, would it?—No, it would not; except that there are more poor in the poorer districts, and we should be making the rich parishes help to float the proposal; for instance, St. George's, Hanover-square, would not start it at all, but they would have to pay for it.

10478. But you do not maintain that, under that Act, they would have to pay for it, do you?—Certainly they would, if you group the whole of London. If the President of the Local Government Board formed London into one unemployed district in the same way as he has done Whitechapel and Poplar as a school district, we each should bear our share in proportion to the rateable value.

10479. Is that so? Under the Metropolitan Asylums Board Act, your labour colony would be analogous to the hospitals of the Metropolitan Asylums Board, which was established under that section. Each London union pays in proportion to the number of its poor, who are maintained in the central institutions?—The children are not paid for in that sort of way.

10480. The children are specially provided for, but I am speaking about the insane in the Metropolitan Asylums hospitals. You may take it from me (probably you may know better even than I, that each union pays in proportion to the number of its own poor, who are maintained in the central institution. Now follow that out with regard to your grouped colony. Poplar has an an enormous number of poor; Saint George's, Hanover-square, has a very small number of poor; then if this power was exercised by the President of the Local Government Board, you would not get financial relief, because Poplar would have to pay in proportion to the number of poor whom it would send to be maintained; is not that so?—Personally, I am not sure; I thought it was the other way; but I am not competent to argue it, so I will not do so. I only want to point out that, as far as I am concerned, there are a lot of things which ought to be done; but what I am most concerned about is, that probably next winter we shall have the same thing all over again, have the same expenditure of money, and be as far off as ever. I see that the House of Commons is not going to pass any Act of Parliament this Session, at any rate on the matter, therefore let us use the power that we have.

10481. But

Mr. *Pickersgill*—continued.

10481. But it is useless to ask the President of the Local Government Board to exercise a power which apparently he does not possess, is it not?—But he certainly has power to group the unions.

10482. He has the power to group, but no power to distribute the cost; and as you know, the curse of the whole question is the cost as between the rich and the poor district, is not that so?—But surely that is only a secondary matter. Surely the crux of the thing is when you have to spend money you spend it in a useful manner; and if the Poplar Board of Works, and the Poplar Board of Guardians, have to spend 3,000*l.* or 4,000*l.*, they should spend it in the best manner. We have either to build another workhouse at 20,000*l.* or 30,000*l.* outlay, or do something in this direction; surely we had better by all means spend our money upon something which is likely to give us a return, or, at any rate, be something towards permanent solution, rather than have to spend it on a workhouse. We have got to spend the money, whether we like it or not; and I am only pleading that it should be spent in a rational way, and that the Local Government Board should enable us to do so.

10483. If my reading of that Act is right, what advantage would you gain by joining with any other union of London?—The advantage we should gain would be because it could be done on a bigger scale, and I think the larger it is the more likely it is to be successful, and also that in any case the initial cost would be borne by the whole of London.

Mr. *Benn.*

10484. With regard to cases of men who would not probably be inclined to consent to be sent to a co-operative colony, we will say men who have no fancy for the land or the conditions of rural life, but who requires some assistance in order to tide them over a difficult time; for instance, a painter, who is frozen out; supposing such a man came to you and said, "I do not care about your farm colony, I want a little help in the meantime to keep me out of the workhouse;" have you any suggestion to make as to men of that kind?—We should require painters; we should require all kinds of men. I am not proposing you should squat on the land; naturally, you would have to employ all kinds of men.

10485. Do I understand you to say that with regard to some 4,000 people you relieve in Poplar, your plan would be to send these people straight away to your farm colony in Essex, with their wives and children, to till, or build, or paint, or do anything necessary for their existence?—No. I have never suggested you could do that right straight off; I have only suggested you should commence to do it. I am not at all saying that you could pick up 4,000 people and drop them down in Essex. It is a very big thing to do, I quite realise; I am only asking that it should be commenced.

10486. I do not care in what proportion; I only want you to put before the Committee the nature of the commencement you suggest. For instance, I will go back to the painter. We will suppose a district is rather rich in painters,

Mr. *Benn*—continued.

as some districts are, and he came to you and said, "I want to go to your farm colony; I do not care about the land; I am a painter." Supposing you have enough painters already for the buildings you propose to erect, what would you do then?—I take it the mass of men are reasonable beings, and if such men wanted work really, and we could offer them work which they were physically capable of doing, either at tilling, or some other work than painting, they would be reasonable. The first consideration is to supply their stomachs, and they would take whatever work was given them. I have not found men so unreasonable as to say, "I will work at my trade;" not starving men, at any rate.

10487. Do I understand that your remedy for the 4,000 you have mentioned, together with those dependent on them, would be to send them straight away to the farm colony in Essex?—No.

10488. But you would pick out those who would be suitable, would you?—Yes.

10489. Supposing the Committee were to recommend the giving of power to local authorities to enter into such an experiment as you suggest, of course it would involve the raising of a considerable sum to start at any rate, would it not, even if it became self-supporting?—Yes.

10490. Have you any proposal to make to the Committee as to how that money could be raised, or what suggestion we should make to Parliament for the raising of the money?—I think that the money should be a grant from the Imperial taxation of the kingdom, either by a graduated income tax or a tax on the landlords of the country.

10491. You are looking at it now from the national point of view rather than the local point of view, are you not?—Yes.

10492. You in Poplar might say, We are inclined to start a co-operative colony; the other parts of the country might say: We do not want any such thing; it would not be suited to our population; would you make the district which did not agree with your scheme contribute equally with such districts as did?—No. Personally, I think the President of the Local Government Board should issue an Order strictly prohibiting stone-breaking, oakum-picking, and all those tasks; he has the power to do it; and he should also order that agricultural and useful work should be undertaken; then it would be done all over the country, you see.

10493. That is a question?—It is being done. I have been in Burnley and Rochdale, where they make all their clothes, and so on.

10494. We have had evidence before the Committee where they have no such desire?—But have they unemployed?

10495. That, at all events, is the evidence given before us. They say that such a plan would not help them. Take the case of London as a case which is peculiar in many respects, have you any plan which would apply to London without creating a grievance in any other part of the country?—No; personally I think the question of the unemployed can never be really touched unless it is done nationally. I think it is a national question, and the nation, as a whole, should deal with it.

10496. Then, does your proposal amount to this:

Mr. *Benn*—continued.

this: that certain districts or unions anywhere all over the country should have power, either by themselves or grouped, to carry out some such scheme as you suggest, and that the fund should be found in the shape of an Imperial grant?—Yes, the initial funds to start, just the same as you grant money to the Irish boards of guardians; you do that. This proposal is not peculiar; you have done it for Ireland a lot of times.

10497. Certain local authorities are able, are they not, to some extent, by offering certain classes of work, to prevent working men who desire to avoid pauperism going into the workhouse; do you think any increased facilities in that direction would be desirable in London. For instance, supposing any of our riverside parishes said, we have the money, we can do certain things for the improvement of our district, such as the improvement of our foreshore, or a work of that kind, which would be useful in helping the men over a difficult period, do you think that any proposal of that kind would be judicious?—Of course I think that that work should be undertaken without any reference to the unemployed, and what I rather want to emphasise is the point that men are out of work not because a local authority does not employ sufficient men to beautify its district, but because of an economic law which says they shall only work when it is profitable for some one else to allow them to work. I understand that you are here to try and find a solution of the unemployed difficulty, and I point out that the solution is the reorganisation of our industrial life on a co-operative basis instead of a competitive one.

10498. Supposing we were not able to induce Parliament to enter at once into that larger scheme which you advocate, and which one quite understands, do you see any way of so re-organising things in London as to enable the poorer parishes to cope with the unemployed question?—No; looking at it all round I do not think the districts can cope with the unemployed question themselves; I think it is altogether too big for either a board of guardians, a parish council, or a board of works to deal with it at all; you might palliate it.

10499. But you have told the Committee that you recommend a grouping of unions, so that they might be enabled to carry out some such co-operative scheme as you have sketched out?—Yes, and that it should be done nationally. If it were done in one district it is quite obvious that the unemployed of other districts would be crowding there.

10500. Unless, of course, you had a residential qualification?—That could be got over. If you made it a year they would come and live there on purpose to qualify.

10501. No doubt that is a difficulty?—There is an economic difficulty, too, which is greater than all.

10502. Then your idea of the grouping of London in one parish breaks down in that case, does it not?—Certainly; if you only do it for London, one admits that it would fail absolutely.

10503. Then, as far as London is concerned, you have no suggestions to make, have you?—No; except that to deal with the unemployed I think that the Local Government Board should group the unions of London and form an unemployed district.

10504. Then, unless we can bring the representatives of Liverpool, Manchester, and other parts to your view of dealing with the question nationally, London is to wait until that question is complete, is it?—Certainly, because London is merely one portion of the country; London cannot exist without Liverpool any more than Liverpool without London; their interests are all interwoven.

10505. Supposing we are more enlightened in London than those of the rest of the country?—I have not any of that nonsensical feeling; you will excuse me saying it is nonsense to talk about us being more enlightened here than they are in Liverpool and the north. They want this done just as badly as we do here, at any rate the growing body of them do. I do not say that public opinion is ripe even in London for it.

10506. Supposing we were ready in London for some such scheme as you have sketched out, and we find representatives from other parts of the country saying: "we do not want it, we are built differently;" are we to put off our millennium until they are educated up to our standard?—I am afraid you would have to; they will not let you do it, that is all. You are to be ruled by the majority. I understand the object of this Committee is to try and get evidence to convert them. If anybody knew what to do, it would have been done without this Committee.

10507. But you know the force of good example; and suppose you could solve it for London?—I do not think you can solve it for London.

10508. But you said something about making a commencement?—Yes, that is so; we probably shall try to make a commencement at Poplar, but we do not flatter ourselves we are going to solve the unemployed problem. We recognise it is too big for us to settle, and that is why I do not want to adopt your assumption that we can do it for London first.

10509. Then do I understand you to say, having secured your plans for Poplar and obtained the approval of the President of the Local Government Board, unless the unions of the kingdom are prepared to take your view, Poplar must wait?—I say that the Poplar scheme will not succeed.

10510. That is an important admission, is it not?—That is so. I am not here to state anything that I do not believe; and I believe that the whole point of the talk round this table this afternoon has not touched the crux of this business at all. I set out by saying that the unemployed difficulty is a part of the industrial system, and you can only alter it by a re-organisation of the industrial system. Instead of that being argued, I am trotted round various proposals, and the main point is not argued at all. If you admit that, then you must admit the further assumption that I make, namely, that the reorganisation of industry is the basis of any solution of the unemployed question.

10511. Suppose

Mr. *Benn*—continued.

10511. Suppose I admit that and look forward to such a millennium, are we to do nothing until everybody is educated up to that point?—Nobody has asked you to do nothing. I have asked you to start farm colonies.

10512. And you have told us that unless every part of the kingdom is prepared to start with us, that in London we must do nothing?—I have not said start with you; unless they follow, and very quickly, economically, they cannot succeed. I want to start, but am also anxious that we should understand what it is we are trying to do.

Mr. *Heywood Johnstone.*

10513. Practically, you have told us people

Mr. *Heywood Johnstone*—continued.

are not employed because they cannot be employed at a profit?—That is so.

10514. And your solution of the question, to take it very shortly, is that if the element of profit is once eliminated, there would be employment for all?—That is if the community organises the labour.

10515. Given a properly-organised system under which there should be no profit, every person would be employed?—I did not say would be, but could be, employed.

10516. And if there was any lack of employment it would be the fault of the person, and not of the community?—Yes.

10517. And that is practically what you have come here to tell us, is it not?—Yes.

Friday, 14*th June* 1895.

MEMBERS PRESENT :

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Bousfield.
Mr. Campbell-Bannerman.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. David Randell.
Mr. Renshaw.
Mr. John Wilson (Govan).
Mr. Stuart Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN IN THE CHAIR.

Mr. CHARLES BOOTH, called in ; and Examined.

Chairman.

10518. As we know, you have devoted much time and attention to the question of labour and the condition of the labouring classes of the community ; and we shall be glad to have your assistance in this investigation. You are, I believe, the author of a work called " Life and Labour of the People ? " —I am the editor of that book. I have written a good deal of it myself.

10519. I think you wish to begin your evidence by making a preliminary statement ; will you please do so ?—An unemployed person may, in the first place, be defined as one who at any particular time desires to find remunerative work and fails to do so. The numbers of such unemployed must, however, be considered in connection with the cause of their lack of employment, or the explanation of the breach in its continuity. These causes may be classified as follows : (1) *According to " the job."* Such as to the dock labourer, who is wanted one day and not wanted the next ; or, in the building trade, where a man is engaged by the hour, and as each job ends must look out for another, and so almost necessarily lose some time ; (2) *According to the weather.* Such as external painting stopped by rain, and many kinds of work by frost ; (3) *According to the season.* Such as the discharging of timber coming from the Baltic, or other places which are inaccessible in winter. (4) *According to changes of fashion, or of tariffs ; or according to periods of peace or war.* For these no examples are needed. (5) *According to condition of trade, i.e.*, sluggishness following activity. Such as in shipbuilding, or the construction of railways, or the manufacture of telegraph cables, when expansion and contraction succeed each other by a natural law and tend to produce cycles of good and bad trade. (6) *According to the capacity or character of the worker.* This must be regarded as an independent cause, but is also interwoven with all the others ; for in each case it is the less valuable servant who first loses his employment and finds most difficulty in regaining it.

The number whose employment from one or other of these causes is not strictly *continuous*, and who are consequently sometimes " unemployed " is a large proportion of the working classes. In some important trades it may include nine-tenths of the workers, and taking all trades together the numbers of unemployed on any particular day would under this definition be always considerable and at times very large indeed. But in considering these numbers the following points must be borne in mind regarding the six classes of unemployed persons enumerated above :—

Chairman—continued.

(1) *Concerning breaches in continuity of employment due to engagement by " the job."*—This cause is partly connected with trade union policy. Other things being equal, the rate of pay rises in proportion to the shortness of the engagement. A man engaged by the hour or by the day is paid at a higher rate than if engaged by the week or given what is called " permanent " employment. It has been the usual policy of trades unions to raise the rate of pay and shorten the tenure of employment. Occasional lack of work is anticipated, and if the policy is successful the effect on earnings of lack of work may be supposed to be balanced on the whole by the higher rate of pay secured. The individual inequality of lot, which results under this system, is met in the best organizations by out-of-work benefit. All the members contribute, and may claim the allowance if they need it ; but practically one set of men continually pay more than they receive, and another (smaller) number of men as continually receive more than they pay. The latter are those who mainly make up the percentage of members returned as " out-of-work," and are so on the definition given ; but more correctly must be said to share the employment of their companions, being supported out of the aggregate wages maintained in this way at a certain standard. This policy of short tenure and high wages tends to increase the number of those required to do a certain amount of work, while, at the same time, it tends also to decrease the total amount of work available ; and it undoubtedly has the effect of dividing the employed and unemployed more rigorously. The employers keep no idle men on their books, even for a day, and

Chairman—continued.

and get rid as soon as possible of the inefficient, who are unprofitable at high rates of pay. It, however, does not follow that all those employed would find constant work at lower rates of wages.

(2) and (3). *According to the weather or the season.*—The periods when there will be little or no employment are foreseen, and undoubtedly affect the number of hours worked; at other times it may be as overtime, as well as the rates of remuneration. If men do not equalise their income by laying something by when earning most, it is mainly because they find it easy to obtain credit at the time when they earn least. The money is saved for them by those who find in the custom thus secured a source of profit. Men who live habitually on this assistance when out of work cannot be included as suffering from want of employment unless the period of lack of work is longer than usual.

(4) *According to change of fashion, &c.*—The uncertainty of demand, and still more the uncertainty of its exact direction, is met by preparations for rapid action. Those manufacturers will be most successful who can wait till the market declares its wants before attempting to supply them. This creates irregularity of employment. On the other hand, the great cost of the plant demanded by this policy causes the owners to seek to occupy it fully, and the usual result is a glut of production. Thus irregularity of employment, if not chronic, comes eventually in an aggravated form. When the irregularity is chronic it has a considerable effect on rates of pay and on hours of work, but much less so when lack of employment follows a glut.

(5) *According to the conditions of trade.*—Some trades are more liable than others to inflation and contraction, and in such trades wages usually rule high; but the periods are long, and neither savings nor credit can be safely relied on to equalise good and bad times. Not only are large numbers out of work at one time, but wages usually fall, and the funds of trades unions become exhausted. The mischief becomes still more serious when depression of trade is general. Such depression may be inevitable, and may come in approximately regular cycles; but nothing short of great prudence on the part of the workers can meet the difficulty. Moreover, those who are most prudent in saving are probably least likely to be thrown out of work.

(6) *According to the capacity or character of the worker.*—This cause of lack of employment (like sluggishness of trade, and unlike irregularity according to the job, or the weather, or the season) depresses wages and lowers the standard of life. The men themselves, when they work at all, usually give comparatively little value in return for their wages, and are therefore the first to be discharged. As unemployed men, they hang on to the labour market, and while doing little good to themselves, injure the prospects of others. They are a great difficulty in the way of effective organisation as well as a great strain on union funds, and are also a constant burden on the purses of their kind-hearted companions.

It is evident from these considerations that the definition first given includes many who can-

Chairman—continued.

not be rightly taken as the subjects of this inquiry. A second definition thus becomes necessary, and might run, "those whose periods of lack of employment are excessive, with the result that their earnings fall below the needs of life." The numbers of the unemployed when thus defined, though falling far below those that might be counted under the first definition, are still very great.

10520. Although the necessitous unemployed, as you define them, may not be capable of being enumerated, may it not be possible to find out whether they are more numerous than usual at any given time?—Yes, I think it may; especially or mainly by a very careful use of statistics. I should wish, with regard to that, to refer to the work of the Labour Department, which, I think, has been excellent in that direction. I know you have had before you Mr. Llewellyn Smith of the Labour Department. I think the work undertaken by the Labour Department is excellent; but it is rather too recent for us to build upon so much as one would wish. It is capable, moreover, of extension laterally as well as in time; that is to say, not only will it be more valuable when it has been in operation several years, but its work may be extended considerably. There seems a necessity of combining many sources of information to obtain a complete picture of the condition of things. You have, for instance, to combine statistics of Revenue and of Traffic (traffic is very important), and of Banking and Pauperism, and in fact there may be many others; it would be necessary to combine statistics of various sorts to get a complete picture. I know they are doing that to some extent in the Labour Department. The best single test is the total volume of trade; the volume to be tested by quantity, not by the amount of money. I think that, if we are to look at a single test, that is the best. When the whole volume of trade (the population remaining the same) is very much reduced, it is evident that there is a strain put upon the resources of the industrial classes. I do not think we need very seriously consider the question of unprofitableness; at any rate, so long as the trade still continues to be done. It does not seem to me to be so much a question of the profit as of the bulk of the trade that is handled. Still, unprofitableness must not be altogether disregarded, because it may be a warning of coming contraction. In the meantime the public undoubtedly benefits by the consequent cheap prices. Unprofitableness may be a warning of coming contraction, though it has no immediate effect upon the employment of the people. Studies in economics of this character should, I think, be facilitated in every possible way. It is very important that these questions should be studied by those who are interested in and who undertake industry, and also by the working classes themselves. The more they are popularised the better. It would be an immense advantage if each trade were conscious of its own development, and conscious of the dangers it runs. I think, in a great measure, by foreseeing those things they could mitigate the evil.

10521. The Labour Department of the Board of Trade might, therefore, you think, be a means

Chairman—continued.

of communicating that information to the different trades in order to guide their action?—Of assisting them, at all events. The use of statistics would be partly of that character. Better trade organisation among masters and men works in the same direction. We find that if the various employers in a trade are united together they begin to regard the trade as a whole in a way that perhaps they do not do if they are not united, and I am sure it is very greatly so amongst the men. Among the large industries that are very well organised, where the working classes have their unions and are strongly federated together, I know they boast that they understand the general position of the business quite as well as the masters, and I think it is a very excellent thing that both should understand it, and that both should follow out these studies, with a view, if possible, of avoiding the dangers that may overtake them, the danger of over-production or of whatever character it may be.

10522. Do you think that improved organisation in the management of industry causes greater regularity of employment?—Organisation in the management of industry is rather different from what I was talking of, which was the organisation of men and masters amongst themselves with regard to the general trade interests. But the improved organisation of the management of industry certainly tends, and will always tend, to a greater regularity of employment. At all events, if it does so, if they try to get rid of the hangers on, and try to consolidate the industry in that way, I think it will tend immediately against the unemployed; it will create a large number of unemployed; it tends in favour of the best men. Supposing a manufacturer has at some times been in the habit of employing 2,000 men and at other times 1,000 men and he finds that by better organisation he can employ 1,500 men regularly, there are 500 men thrown out. The immediate effect, probably, is not so drastic as that, but the tendency would be that a larger proportion of those employed will get regular work, and either there will be a smaller number of men employed irregularly, or, if the same number is still employed, their work will be still more irregular. The larger the proportion of work done under regular conditions the smaller will be the proportion to be shared amongst those who work irregularly. It therefore does tend to aggravate the condition of the mere casual hands. It is easy to give instances of that, if it is necessary. The building trade is one instance that may be taken. It is sometimes said that public bodies should put out their contracts at a time when other work fails, that is to say, when people are not naturally undertaking building operations. It is said, for instance, there is nothing to make it impossible for building to be continued through the winter; that it only needs better arrangement. I believe in some countries, where the winter is very long, the difficulties have been conquered, and it is suggested that public works should be done in the winter, when work is scarce. But the effect of that would be to benefit, not the unemployed, but to benefit the employed. The people who would get the work could hardly be selected because they were unemployed, but they would be the people who

Chairman—continued.

could with least difficulty find employment. That is to say, the best hands would inevitably get the work; they would have the preference; and the result, I think, would be, that the men who are thoroughly well employed most of the year, and irregularly employed in the winter, would get regular employment all the year round; whereas those who are now irregularly employed in the summer would have even less work then, and when the winter came they would still have none. We have seen, and are seeing that now, in regard to the dock employment in London. Before the dock strike the management of the docks considered it very advantageous that there should be a large number of men competing for their work. Since the dock strike that has been changed, and the chairman of the joint committee, Mr. Hubbard, is doing his utmost to reduce the number of casual people, and he is constantly attempting to increase the proportion of work done by men who are practically regularly employed. The result of that evidently is, that the proportion of the work that remains to be divided amongst the irregular hands becomes smaller and smaller, and I believe that is one reason for the distress that exists in East London.

10523. In the riverside locality, you mean?—Yes; it is a large volume of employment, and I think it has had a distinct effect.

10524. You consider that that evil is an unfortunate circumstance, but that it really ought not to be set against the advantages of the improved system?—I think the fact that those irregularly employed have a harder time is a step towards the cure of the evil in the end. Those for whom there is no longer a living must, I think, be gradually absorbed into other industries, or, if the worst comes to the worst, they pass through the workhouse and finally die. It is, no doubt, a very hard saying, but it is, I believe, the only way in which improvement can be reached; that the regularising of work, the making of work more regular, will gradually crowd out those who now depend upon this irregular and extremely unsatisfactory source of work. The more regular work becomes the better it will be in the end; but it may cause, and is now causing, I believe, considerable pressure in the present. It has also another influence, and that is of an educational character; it tends to subdue the repugnance to regular work which is felt, and which I think goes hand in hand with the facilities for its indulgence. Men who have never done regular work in their lives can hardly stand it; but upon those who are young, pressure being brought to bear upon them in that way by its being made very difficult for them to get their living in any way but by regular work, it will have a good educational influence. I cannot think that irregularity of work, combined with irregularity of life, is anything but an evil, and therefore I am willing to face a good deal of present difficulty in order to make it less easy.

Mr. *Logan.*

10525. Will not the giving of greater regularity of employment have the effect of stopping the influx of men into the towns?—It has not that

Mr. *Logan*—continued.

that effect at first; the effect is just the opposite. It may ultimately have that effect; but the immediate effect is that you can afford to import superior labour; you offer something that is worth a man's while to come for, and you can get men of more trustworthy character and of, perhaps, stronger physique to take it. The charge that the Dockers' Union make against the management with regard to this point is, that the management have deliberately introduced country labour to supplant the London Dockers. I do not myself suppose that to be true at all, but I have no doubt that there is a tendency in that direction, and I should think it has probably come to pass with regard to the wharves to a certain extent. At all events, that is the tendency; if, instead of chance work day by day, you are able to offer a regular income, a regular weekly wage for the work, you do offer a thing which is very attractive, and you will get the pick of the men from everywhere to come to it.

Chairman.

10526. The men you would attract would be the better class of men, and not the more casual class of men whose employment is unsteady?—Yes, the attraction is to a very good class of labour; but it does bring this good class of men to London, and the others, those who are not wanted, do not leave London, so that the evil is aggravated by that. Again I believe that to be a step in the right direction, but it is a painful step.

10527. But you do not throw much light upon what becomes of those who are thrown out by this process?—It is very difficult to throw any actual light upon that. One's imagination can deal with it, and I suppose everybody who works among the poor (I do not myself, but I come in contact with those who do) knows plenty of cases of that sort where the work is dwindling and the men are left stranded, and they are in London practically kept by their wives.

10528. The wives finding some small industry are enabled to keep their husbands?—Yes, the wives help things generally. London offers many chances still, chances of charity, and chances of one kind and another, so that they scramble along somehow, but no doubt in distress.

10529. Do you regard it as a transition period which we are passing through?—I hope so; but the transition lasts so long, one does not know what limit to put to the transition. We are always being told we are in the transition stage. I suppose we always are.

Mr. *Mather.*

10530. Transition from what?—From what was to what will be; but I am afraid it is eternal rather.

Chairman.

10531. Have you anything more to say upon that part of the subject before I pass to the next point?—No. I think I have dealt with that part of the case as fully as I wish to; but I shall be very glad to answer any questions.

10532. Now, which of the causes of lack of employment which you have enumerated do you

Chairman—continued.

consider the most serious?—Undoubtedly, the last three; that is, those which are connected with the condition of trade and the character of labour, those which in my preliminary statement I numbered 4, 5, and 6: "According to changes of fashion," "According to condition of trade," and "According to the capacity or character of the worker." I should wish, however, to say that I do not at all pretend that this statement of the causes of the breaches of continuity of employment is complete or exhaustive. A great many causes may be found, and they act and re-act upon each other, and to a certain extent new causes come from the combinations. One, for instance, which occurs to me is connected with the trades union policy, and that is the effect of strikes. A strike may cause a lack of continuity of employment, and is evidently aimed at, and if successful results in, improved rates of wages; so that you must put that down as a peculiar cause. Then, of course, strikes are by no means limited in their effect to those who make them. The stoppage of one trade caused by a strike affects adversely the work in many other branches, so that there is a great deal of irregularity that may come from that. Again, there are sudden changes in industrial processes which throw out one set of men, and which perhaps employ another set of men, and create friction. That cause lies somewhere in between Nos. 5 and 6; that is, between the condition of trade and the capacity or character of the worker. A man has perhaps the capacity if the trade had not changed its character, and ceases to have that capacity when it has changed its character. Then, again, there are other changes which come from variations in the comparative strength of competition. It may be that the north succeeds in competition as against London, or Scotland, as against Yorkshire, or whatever it may be, or we may have changes in the comparative strength of Continental competition. Belgium may for some reason have an exceptional advantage. As to a matter of that sort, the workers in England have really no control, and cannot affect it, unless it is connected with the trades union policy. It may be that the trades union policy will drive wages too high, and cause it. Thus the subject becomes more complicated than can be dealt with in a simple statement of this sort. I only wish to guard against its being supposed that this is anything like a complete statement. I have done my best to put down the more important headings. In the main, one may say that the troubles I am going to consider now come from bad trade or from bad labour.

10533. What do you consider, in a general way, to be the causes of contraction in trade?—The immediate cause of contraction in trade, I think, is usually a previous inflation. But that is saying very little. Contraction and the inflation act and re-act, but continuance of a depressed condition (which is the most serious symptom of bad trade) is undoubtedly due to lack of enterprise; the good heart and hopefulness which set enterprise in motion fail; people get out of heart. Enterprise springs from the hope of profit, and if people cease to see their way to make a

profit,

Chairman—continued.

profit, if they cease to hope for profit, and if they cease to know how to serve people so that they will be willing to pay for those services, there is a lack of enterprise. Enterprise forecasts what will be wanted, and it is only justified in that forecast by success; that is to say, by the services which it supplies being welcomed and paid for. It necessarily speculates to that extent. It offers something to the public, hoping the public will appreciate that offer by paying for it, and if it does not do so, if the public does not appreciate it and does not pay for it, the enterprise is a failure, and if enterprise has met with failure after failure, it loses heart.

10534. If private enterprise is lacking, can anything be done to stimulate it?—That is a very difficult point. I think it is conceivable that a large public undertaking at exactly the right moment might start the ball rolling; that is to say, it might start things so that private enterprise continued them. But it would be rather a dangerous attempt to make. The general flow of enterprise depends immensely on good government; that is a commonplace; on security of life and property, just laws, evenly distributed taxation, and freedom of trade; and is just as true that bad or rash government acts against it. In that general way enterprise does depend immensely upon governmental action; but the attempt to stimulate enterprise in that way by a large expenditure of public capital, although I think conceivably it might answer, would be a very serious and somewhat dangerous attempt to make.

10535. What sort of public enterprise have you in your mind?—I think such an enterprise as has been recently considered, namely, that of light railways, would be of that character if it were deliberately undertaken. If it was thought that the internal trade of the country would be immensely facilitated by light railways, and it was not easy to get shareholders to subscribe the money for this, or get it undertaken in a private way, that would be the sort of undertaking that might be considered. A large scheme of that sort, which public money could be invested in with a fair chance of ultimate return on it, and on which the money would not be wasted, would start industry which would afterwards flow in the natural channels of trade. But I do not like to suggest the thing definitely, because it is a difficult matter. I only put it forward tentatively. I think it is conceivable that action might be taken in that way with advantage at times.

Mr. *Billson.*

10536. Would you say the same of a wide extension of the postal facilities?—They are fairly widely extended now.

10537. I mean for the carriage of small parcels, and things of that sort?—Yes.

Chairman.

10538. Would the public enterprise, such as you would contemplate, or have in your mind, be in addition to private enterprise, or would it replace it. I presume it would be additional, and a stimulus to private enterprise?—I should think it ought to be an addition, and I think it would be to a great extent; but I do not think it would ever be a pure addition. The extent to which public enterprise steps in, as an addition to private enterprise, seems to me to depend upon the wisdom with which it is undertaken. If wisely undertaken, I think it is to a great extent additional. I think it may take up ideas that private enterprise cannot very readily touch. I see no reason why it should not be almost entirely additional, because I do not think it depends upon the amount of capital available. I think the extent of human mental effort that is brought to bear is the main thing. I think it is possible to bring public enterprise forward to fill a place that private enterprise does not take at all, if it is done wisely. But, if it is done unwisely, I think it may interfere with far more industrial action than it causes.

10539. Can you suggest any cures for the lack of employment due to the ebb and flow of trade?—I think I should like to speak first of the effect of replacing private by public enterprise. I think for a time that could be done, and that public enterprise would be more constant and less liable to ebb and flow. However, with regard to the cures, I should divide the subject into two parts: first, concerning the future, into which broad questions of public policy enter, but as to which it would be fatal to be guided by the present distress; and, next, concerning the present, as to which relief of distress is the first consideration, but in which so far as possible no step should be taken that is not conformable to the general principles of policy requisite under the first part, that is to say, with regard to the future. Then the suggestions, if I may put them quite shortly, which I should make as to the first part (that is, concerning the future) are these: I should favour a tentative extension of municipal enterprise generally, for the reason I have just given, that I think that public enterprise of a steady character is less liable to ebb and flow, and that enough can be done, if done gradually and tentatively, to be of some use without being of much danger; and I should not be afraid of some extension of taxation for this purpose.

10540. Will you explain what you point to in speaking of municipal enterprise?—I think, for instance, locomotion is certainly a fair public enterprise; but the general extension of municipal enterprise appears to me to be of that character.

10541. To put it plainly, you mean that municipalities should undertake certain public services on their own account?—They should increasingly undertake them, not with a view of conquering the present difficulty of the unemployed, but as being the better policy.

10542. When you said you would not be afraid of some increase of taxation for that purpose, do you mean by Imperial taxation, or by rates?—I was using taxation to mean both rates and any form of taxes. Then I should certainly favour an extension of technical and scientific education, for which I am willing to pay to a certain extent. I should also favour the public organisation of incompetent labour in a manner which, if desired, I will detail. And, finally, I should wish, as everybody knows, to lighten the burthen of old age for the poor by collective action.

Chairman—continued.

action. Then, with regard to the second part of the subject, concerning the present, I am strongly against all attempts to manufacture work for the temporarily unemployed. If work is provided, it should be only as a test, and be as educational as possible, and the results should be carefully watched. The only sure cure, as I think, for the evils of irregularity of work is personal prudence. I see no other sure cure. When prudence fails, and distress ensues, we must look to organised charity (it is no use calling it anything else, it is charity), or public assistance must be given with very careful administration.

10543. You used the phrase just now, "public organisation of incompetent labour;" would you develop what you mean by that a little?—I shall be very happy to deal with that more fully. The idea is the establishment of industrial homes of a certain character. I have a memorandum here on industrial homes, which I can read if you please.

10544. Will you please do so?—Among those who are frequently out of employment there are many who are so because they are incapable of managing their own lives, and are thus the prey of every kind of misfortune and a great burden on the community. It would be desirable that the State should, on certain conditions, offer to organise industry for these or some of these persons, individually or by families. What I suggest is that industrial homes should be established in which suitable persons would be cared for, provided that they come voluntarily and are accompanied by a guarantee from some local authority (or organised charity, or private person), which would limit the possible cost to the State to a small fixed sum per annum for every person maintained. The organisation of these industrial homes would be directed towards making them as nearly self-supporting as possible, and the accounts would be so kept as to indicate the actual loss (if any) resulting from the keep of each family or each individual separately. The work undertaken would be as varied as is compatible with its being done entirely on Government account. The basis of profit or loss would be the prices charged by ordinary contractors to the Government for similar articles, clothing, accoutrements, furniture, etc. Articles required for the inmates' own wants would be amongst those prepared. The loss (that is the excess of cost of these establishments and of the keep of the inmates) over the earnings would be shared in certain proportions between the Government and the local bodies on whose recommendation the inmates were received. Any profit would belong to the inmate by whose labour it was made. An experiment could be tried with one such establishment, and would show: (1.) What demand there was for this form of assistance; (2.) What class of persons applied; (3.) What average loss resulted; (4.) What rules must be observed. It is only by the Government that the experiment could be made, without direct competitive interference in industry. The rules I suggest are: (i.) The local sender to be responsible for suitability of applicants; (ii.) Applicants may be either individuals or whole families; (iii.) The contribution of the

Chairman—continued.

central government to be fixed. Any further loss, whether much or little, to be chargeable to the local guarantor. The amount of such loss to be estimated each week; (iv.) Inmates to be comfortably lodged and fed and supplied with clothing (at their own choice) up to a certain value; (v.) No one to be received for whom employment cannot be found, except children, who, if too young to work, shall be taught ordinary lessons, or receive industrial training; (vi.) Any inmate may leave by giving one month's notice; or may be dismissed for idleness, or disorderly conduct; or will be discharged if the local guarantee is withdrawn. In any case the inmates on leaving will be returned to the place from which they came. The numbers who could be assisted in this way would be limited by the amount of accommodation provided, and by the willingness of local authorities to guarantee the cost. If this plan of relief proved successful, and economical, it is capable of considerable extension. Ultimately it might include agriculture, and possibly even building, in its industrial operations.

10545. Would you have each home with an area of its own; that is to say, supposing the home was erected in a particular town, would it take its inmates only from that town and district, or would it take them from any part of the country?—I should think either plan might work; it would depend upon the character of the home. Naturally it would be desirable that people should not be sent too far from their own home.

10546. You say there would be no direct competitive interference with industry; but surely whatever the inmates worked at, the results of their industry would displace some outside industries, would they not?—Yes. I regard that as indirect.

10547. Supposing the men were put to make clothing, accoutrements, and furniture, as you say, that would mean that there would be less employment of that sort outside?—Yes; but on the other hand that number of people would be withdrawn from competition; so that it is as broad as it is long; or rather broader. But there is no competition in price. That is, perhaps, what I should have said in saying that there was no direct competition. You withdraw on one hand a certain amount of labour from the market, and on the other hand a certain amount of labourers from the market, and there is a balance there that I think would be rather favourable than unfavourable. Those people are being supported one way or another; they are hanging on the labour market, and also hanging on the public, or the private purses of those who support them; they are working now to very little purpose, and if they could be made to work to greater purpose there would be an industrial advantage, I believe, to the community.

10548. You would prevent any feeling that they were underselling outside labour by your arrangement as to the prices to be charged for the articles?—As I propose it, it is entirely a Government affair, and it is for them to decide the price; it is a mere matter of book-keeping. The articles made by these people would only be

Chairman—continued.

part of the whole number of similar articles which the Government would use, and the Government would have no right to charge itself any more for the products they get from these people than if they bought outside. The Army Department, for instance, would have no right to pay more for a uniform made by them than if they got it from a contractor; but neither has it the right to pay less. The amount of work done would be charged at exactly the same price as the contractor would get outside; so that there would be no competition in price, although there would be a reduction in the total quantity available for the outside world.

10549. You are aware, no doubt, of the jealousy with which certain trades in the country have regarded the employment of prisoners in gaols on certain industries?—Yes.

10550. You think that would be neutralised here by the fact that the persons employed in these homes would not be prisoners but would be labourers subtracted from competition outside?—I think there is no reason at all why prisoners should not do work if they do the work for the Government use only. I think if the prisoners made mats solely for the Houses of Parliament and for their own and other prisons, and so on, there would be no real cause for complaint. The cause for complaint is that they make mats cheaper and sell them cheaper than they can be made outside, and anybody can buy their mats. We are now importing mats and things of that sort from Belgium that are made by prisoners there.

10551. That is rather objected to in some quarters, is it not?—I do not think that is parallel to this proposal. I do not mean to say that this proposal could not be objected to; but it could not be objected to on the same ground.

10552. Might it not be objected to on the ground that if they made mats or any other articles within these homes there would befewer mats required to be purchased by the Government from outside makers?—That is so, undoubtedly.

10553. But you think that is balanced by the fact that there would be fewer people to make those mats, and, therefore, less competition in the labour outside?—Yes.

10554. Is that all that you wish to say in your general evidence?—Yes, that completes my statement.

Mr. *Acland.*

10555. In speaking of the tests by which we should learn more as to the condition of those out of employment, you spoke of the volume of trade as the best test?—Yes.

10556. Do you think we have now sufficient information as to the volume of trade inside the country to enable us to judge?—No, you have not.

10557. Is there any means by which we can get more statistics?—I think we could make greater use of the means we have by putting things together, by combination, and I should not despair also of getting more information.

10558. At present I suppose the statistics of exports and imports have to do a great deal of duty as a sign of the condition of the trade of the country?—Yes, and the railway returns are used; but more use might be made of them, I think.

Mr. *Acland*—continued.

10559. You think whatever would enable us to know more about our internal trade would be very desirable?—Very.

10560. But I suppose it is very difficult?—No doubt it is difficult; it would have to be slowly built up.

10561. The more these figures can be improved the better test we shall have as to the present conditions, and a better opportunity of having some warnings as to the future?—Yes; they need to be arranged so as to show comparable results from year to year.

10562. In speaking about the large body of unemployed who are in existence at the present time, and who will be in existence in the future, partly as the result of more organised employment and employment given more continuously, do you think that most of those who remain unemployed will be unemployed chiefly through some weakness of their own?—If you include weakness of character, I think so.

10563. I ask the question because I observe in your book, which you refer to, you speak about the sad results of what you call the impoverishment of respectability. I suppose even there the respectability is suffering to some extent from causes of internal weakness, including character?—It is a comparative matter. If the best man wins, the second man, who is not best, does not win. There is no positive test of what his character or quality is.

10564. Yet the second man may be a very respectable man?—He would have been first if the first man had been away.

10565. Of course in your classification of the whole of London you include in the classes which have very uncertain employment a great many very respectable citizens, do you not?—Yes.

10566. And they will be, and are now, among those who suffer from real distress?—Undoubtedly there are specimens of all kinds.

10567. Would you say the proportion of those whose character is good, and who are respectable persons, is large among the ranks of those whose employment is very irregular?—I think not; but it is very difficult to speak as to that.

10568. You have made this subject a study of your own, and therefore I wanted your opinion; I will not press you upon it?—I should think it is not large. One has to take some kind of absolute test, and I think it will be found that most of them have themselves to thank in some way for their irregular work. It may be that irregular work of that sort suits them better, or that they have missed their chances.

10569. If I understand what you have written on this matter, you think that the weakness of our present social arrangements is that there is a large number of people of this unemployed and unsatisfactory class at the bottom who affect those who are above them in a very serious way?—Yes, they drag down the general industrial position.

10570. Those who are fairly well employed are partly affected by the fact that they are often very friendly and generous to those immediately below them?—They are affected in that way.

10571. And their sources of income are so impaired?

Mr. *Acland*—continued.

paired?—Yes, there is a heavy burden upon them; but the great effect is upon those who are immediately above them, and who are themselves more or less irregularly employed, although not so very irregularly employed. Their chances of work are very much injured by the hanging on of these more irregular men. The descent is so gradual throughout, from the perfectly regularly employed to the entirely irregularly employed, that it is not possible to draw an exact line anywhere. But the whole position is undoubtedly aggravated from below.

10572. They are constantly in a state of uncertain competition with one another?—Yes; security is very much shaken.

10573. There is a general feeling of insecurity?—Yes. They are used to that; they do not feel it much.

10574. In relation to failure through health or deficient capacity, have you noticed at what stage of life that begins with a good worker?—It depends upon the trade. In some trades it is early, between 40 and 45; in other trades, between 45 and 50. In some trades it is not felt until quite late in life.

10575. Then sometimes a really good worker becomes old in a particular trade almost by the time he is 50?—Yes.

10576. I mean old from the point of view of being a good worker?—Yes; generally too old to get new employment, although he may retain his old place. There are trades in which the extra experience and character which age brings with it so tell that the old men are paid higher wages than the young men; but in many trades a man is at his highest value quite early in life, and in most trades he ceases to be at his highest value between 45 and 50.

10577. At that age he will be very likely going downwards, and may very soon reach the ranks of the very irregularly employed?—Yes, if he loses his place and has to seek another chance. The loss of his place may be due to some fault of his own, and very likely is, or, on the other hand, it may not. It may be due to the failure of his employer. There may be a change of business. One business failing, or stopping from one reason or another, and a new business taking up the field, causes a great deal of irregularity and disorganisation, and old hands who would have been kept on by the old employer are no longer considered.

10578. I am speaking specially of men whose nerves or capacity for work have failed?—Yes, but that has to be taken in connection with the effect upon the employer's mind; because employers do not take the simple line: this man is not worth so much, and therefore I will discharge him. It would be a very hard employer that would take that line. Moreover, a man who is known to his employer has a value to the employer who knows him which he has not to an employer who does not know him.

10579. And it may happen, I presume, that he may pass under the same employment to work not so highly paid?—Yes, it may be so; or suitable work may be often found for him.

10580. Are you able to say, watching the development of modern industry and changes,

Mr. *Acland*—continued.

whether the effect of those changes is to make men become less efficient at an earlier age?—I think it has that effect.

10581. My point is that the tendency therefore may be to bring men into the ranks of those who may become unemployed possibly at an earlier age than used to be the case?—I think that is so. I think there is both more friction, and, also, the work on the whole becomes more straining; the work is taken at a greater pace.

10582. When you spoke of public enterprise, or municipal enterprise, I assume that the men who are to be taken into this work are to be men who are not regularly employed elsewhere?—I think that if the workman are selected for the work because they are unemployed, it would be fatal. I think, if it provides work which otherwise would not be done, it will draw from the unemployed; but I think that drawing must be perfectly natural. That is to say, in doing the work you must take the best men you can get; and the best men you can get would not necessarily be the men who were out of work, or quite out of work, at all events.

10583. Then the object of it would not be in any way to make special provision for those not in employment at the particular moment, but simply to increase the general volume of employment in the country?—Yes.

10584. The result of that would be to take up a certain number of the good workers who happened to be out of employment for the time being, but were quite efficient workers?—Yes; it would increase the field for employment.

10585. Yes, but it would take up men who were perfectly fit to do the work in hand?—Yes, it would take the best men that could be got.

10586. That assumes that at any given moment there are a certain number of men not fully employed and willing to go elsewhere?—Yes.

10587. It was for that purpose that you would advocate municipal or public enterprises?—Yes. One would wish to see people as fully and usefully employed as possible, and it is in case public enterprise fills the place which private enterprise has not succeeded in filling that it would be useful, and would act as an additional means of employment.

10588. But that, I take it, is quite apart from the question of giving employment to persons who are not fit to do that work well?—Entirely.

10589. That is to say, that part of the unemployed who are out of work because they are inefficient workers?—Yes, who are either altogether out of work or have not so much work as they could do.

10590. I understand that for these persons who are out of work because they are not fit for skilled work, or because other persons at all events get work before them, you suggest as one of your recommendations the organisation of these industrial homes?—Yes, I think that would reach a particular section of them.

10591. Then the workers in those homes would be some of the less efficient workers?—Some of them would be efficient workers, but unable to manage their own lives. It is a little

Mr. *Acland*—continued.

difficult to say what is meant by "efficient." A man may be a perfectly good servant if he is properly looked after, and yet may be unable to manage his own affairs.

10592. But I take it your proposal of industrial homes had direct reference to those whom we may call, speaking broadly, the unemployed?—Yes, the inefficient unemployed.

10593. They would be under some kind of special control rather different from that which applies to ordinary labour outside?—Yes.

10594. They would want special guidance?—The object would be to make them as efficient as possible.

10595. But not to expect them to be as efficient as those outside?—It would, no doubt, be necessary to have paid superintendents.

10596. You would expect, I suppose, to have a certain amount of loss on such a scheme?—Yes.

10597. Your homes, you think, would restore some of these men to a certain amount of efficiency?—Yes; the main object is not for their sake but for the sake of those who are left. I should also think it very important for the sake of the children. The individuals may be past cure; I cannot tell. Some of them could be cured at all events; and they would be comfortable; and those who are left in the world from which they were withdrawn would be better off. With regard to the children, I think the taint might be entirely eradicated, because these people are not paupers. They are incompetent; but it does not in the least follow that the children will be incompetent if properly educated.

10598. I believe you have always held very strongly the view that if the State could in any wise take charge of some of those in the lowest ranks of labour, it might be of the greatest possible assistance to those above them?—I have, for many years.

10599. This proposition, I take it, of an industrial home is part of that proposition?—It is.

10600. You think that it would be very useful even to make a single experiment with a view to seeing how it worked out?—I should not venture myself to recommend more than an experiment; it may fail.

10601. You think that one experiment under good auspices would be worth trying?—I think it is well worth trying.

10602. As to the employment of those who are not employed by municipalities, I understand you say you do not think offering work to them is at all a desirable thing?—I do not think the manufacture of work for them is good.

10603. Do you think any extension of the principle of applying work as a test, such as we have now under the guardians, is desirable?—It may be; I have not sufficient knowledge to be able to say. It appears to me very possibly it might be desirable under careful guidance. I should not at all like to say it should not be done; but I think it should be done carefully, and mainly as a test.

10604. And for the rest, so far as anything can be done, it must be done by carefully organised charity, as you say?—Yes.

Mr. *Acland*—continued.

10605. There is hardly anything else to be suggested for that large body that cannot be brought into industrial homes or be helped in any other way?—I think not.

Mr. *John Wilson* (Govan).

10606. You spoke of the building trades at the beginning of your examination; I suppose at the present time, both in London and everywhere else, the building trade is very good?—I believe it is.

10607. My reason for saying so is that I find, from provincial papers as well as from city papers, contractors advertising for workmen who are skilled in the building trade?—Yes.

10608. And, at the present time, those engaged in the trade have good wages?—I believe so. I believe they suffered considerably in the protracted frost of the early part of this year when their work no doubt was postponed, and they are now benefiting by the work which was put off.

10609. Of course it is well known when it comes to winter time, and the frost is very severe, those men cannot get employment at their regular employment?—When you spoke of the present state of things I was not quite sure whether you meant this particular month, or this year, or last year.

10610. I mean the season in which building can be carried on?—When you asked me what the condition of the building trade was now, I did not know whether you referred to the month of June or May, or the whole of 1895.

10611. I referred generally to the present summer?—With regard to the present summer, I think they are benefiting by the exceptionally long frost which postponed action. But the building trade has been good, looking at it over a larger period than that; it was good in 1894, and it is good in 1895.

10612. You referred to the policy of trades unions to shorten the tenure of labour: do you not think that the strikes of workmen have a tendency to widen the breach between employers and employés; so that, when a time comes, either through slackness in trade, or from any other cause, when employers might widen their sympathies towards their workmen by finding out means of employment for them, they really do not study to find such opportunities on account of the way the men have used them before when they have had the opportunity?—It has had that effect.

10613. And, as a general rule, strikes are very injurious to the workpeople, are they not?—I do not want to make a general statement as to that. They have a policy to pursue, for which they must be willing to sacrifice certain things to attain their end; and I do not mean to say that their policy is wrong, or that strikes are always a mistake. That they are very costly I should readily admit.

10614. As a general rule in the end the working classes do not make much by them; do you admit that?—I think they make very little by individual strikes generally; but the consequences of the strike go far beyond the particular trade or the particular year in which it is fought.

10615. You referred to certain changes in industries

Mr. *John Wilson* (Govan)—continued.

industries as causing a great deal of want of employment to persons employed in those industries; but you will grant, I suppose, that there are a great many new industries which spring up to absorb the labour that antiquated industries have thrown off?—Yes; but they do not directly absorb it; they cause a great deal of friction. It is not the same men, or the same class of men, who are thrown out of one trade that are picked up by the others. In the long run, the nation finds new work to do; but a large number of those thrown out are not absorbed. There is, to use the word commonly used, increased friction. The particular individuals may never be absorbed.

10616. They may not be able to take up anything else?—They may not; it depends upon their age.

10617. You referred to "bad labour;" what did you mean by "bad" labour; did you mean that the persons have become dissipated and were not able to work, or were not qualified for the work they attempted to do?—I mean not qualified through incompetency.

10618. Arising from what?—It may arise from various causes. It may arise from their own habit or from their lack of education, or from the fact that something different is demanded in their trade from that to which they have been accustomed for many years.

10619. I think you stated that for the present distress the cure was "personal prudence;" what do you mean by personal prudence?—I said that was the remedy, not with regard to the present distress, but with regard to lack of employment from fluctuations in trade or seasons. I was referring to those large causes of fluctuation of employment which result in there being one year plenty of work, and in another year very little, or one trade dying out while another springs up. To get over those dangers that come in working men's lives; I see no cure except personal prudence, that is to say, they should save money when they make it.

10620. By thrift?—Yes.

10621. I think Mr. Acland referred to a class of men who are not disposed to work at any time, loafers?—I referred to them.

10622. There are always in large cities a large class of those men; I suppose those individuals would go into these industrial institutions you have spoken of?—I do not think they would get sponsors or guarantors.

10623. What would you do with the loafers?—I would leave them to the Poor Law.

Mr. *Mather.*

10624. Your experience in connection with the "Life and Labour of the People," I presume, has been chiefly in the East-end of London?—Not particularly. I began at the East-end, but my work now takes the whole field of London.

10625. The facts in connection with your well-known work on the "Life and Labour of the People" were chiefly gathered, I presume, from the East-end of London?—No. I began with the East-end of London. The first thing I published regarded the East-end, but the rest has covered the whole of London.

Mr. *Mather*—continued.

10626. Did you not take a very careful analysis over four years of the occupations of the people in the East-end of London, the analysis, I think, covering over 900,000 people?—That was the first thing I did, but the work now covers the whole of London.

10627. Would that experience among that 900,000 you first dealt with form the basis of your general views on this question of the unemployed?—It formed the beginning. I have been working 10 years at the subject. The first three years was with regard to the East of London; the rest has been over the whole of London.

10628. You described a certain class amongst the 900,000 as being those who were always on the verge of actual poverty?—Yes.

10629. You found, I believe, a considerable number, some hundreds of thousands of people, who were living upon that verge continually?—Yes.

10630. You describe in your book the habits of such people, and, I think, proved that even amongst the well-conducted of such class the wages received, owing to the fluctuation of their employment, would not permit them to save anything at all; and, therefore, the principle of thrift for such a class could not come in. You drew the line of poverty, I think, at 20*s.* a week for a man with four or five children with fluctuating employment?—Many of them do save, but I admit it is more than one can fairly expect from them. Those whose management is so good and who are so careful that they do succeed in saving on such an income deserve the greatest possible credit, and it is perhaps not fair to try everybody by so high a test.

10631. When you say that prudence and thrift is the only radical cure amongst the working classes by which distress can be obviated in future, would you apply that test to the class I have named, those struggling on the verge of poverty?—Not to all of them.

10632. Then you admit there must be some remedy applied in addition to the ordinary virtues which might be exercised by individual men in order to meet the circumstances of all our social industrial life?—The condition of many of those individuals is the result of lack of prudence in the past.

10633. Would you assume in the unskilled labour market that a man who married at 23 or 24 years of age, and received 18*s.* or 20*s* a week, and had a family of four or five children, in course of time would be necessarily responsible for his own life throughout a long period, taking into consideration the fluctuation of such employment as he might follow; would you think he ought to be left to himself?—I think his wages should be higher than the sum you mention.

10634. I am taking the amount of wages paid for such work as he can render; of course he has not the power of raising the wages himself?—They have done it themselves.

10635. Did the labourers succeed in raising their wages?—They did, all round. Such wages as 18*s.* to 20*s.* a week for a married man of the age you mention are not common. If a man

Mr. *Mather*—continued.

only earns that it is only probably because his work is irregular.

10636. I am referring to a common labouring man?—He earns more than that.

10637. He receives 20*s.* for constant employment, does he not?—He earns more than that.

10638. In the East-end of London?—Everywhere in London. There are some trades where quite young men or boys can easily compete, such as carmen, for instance; there are some who are very low paid in that way. You may find a carman driving a single horse on 18*s.* a week, but it is work which a lad can do; and, therefore, if a man does it, he is doing the work and receiving the pay which a lad of 18 or 19 or 20 can earn. There are such cases, no doubt, but such a man is badly paid.

10639. Is your experience chiefly amongst the unskilled labour in London, or taking all trades into consideration?—I have no special experience. I am now studying all the trades in London.

10640. Are you at all acquainted with the customs in the manufacturing districts in the north; say, in Lancashire, Yorkshire, Northumberland, Durham, and the Midland Counties?—I know something of them.

10641. From investigation?—No; from keeping my eyes open and from what I have seen.

10642. Have you employed any very large number of men yourself in a large manufacturing industry?—Not quite directly. I am interested in manufacture, but I am not managing a manufactory here.

10643. When you spoke of the volume of trade in this country as distinct from the money value of trade, I suppose you have considered as bearing upon this question the fact that the volume of trade is continually increasing; through every decade there is a distinct increase?—Yes.

10644. Therefore in the aggregate there is, at all events, more work done either by mechanical means or by hand labour?—Yes.

10645. But you would not, I presume, from what you have stated, attach any direct importance to the number of persons employed from year to year, except you take it in connection with the total volume of the trade of the country at that period?—Yes; the two must be taken together.

10646. You are aware, I presume, of the fact that the constant effort of every manufacturer, every employer of labour in manufacturing industries is to restrict the amount of labour he employs, and at the same time to increase the production of the article he manufactures?—To restrict the amount of labour in proportion to the production.

10647. To increase the turnover, as we call it, and at the same time to reduce the number of persons employed?—To reduce the number in proportion to the production. The manufacturer's object is to employ more men, but to get more work in proportion to the men.

10648. Quite so; the extent of his business may in the long run increase the number of persons employed, but in proportion to the value produced he may make the labour cost less?—That is his object.

10649. That is an operation, is it not, which

Mr. *Mather*—continued.

would affect very much this matter of employment?—I think it does.

10650. The change from one trade to another of a large number of men in consequence of improvements, the invention of machinery and new methods of manufacture, is a constant source of displacement of labour, is it not?—Constant.

10651. Of course, they cannot be absorbed, as you have already admitted, without an amount of friction and long suffering on the part of the labouring classes?—That is so.

10652. Among the many points you have indicated as a source of want of employment, you have not mentioned (I do not know whether purposely or not) the fact that one of the greatest industries of this country, the agricultural industry, is employing constantly less and less men, and that constantly less and less land is under tillage year by year?—No, I suppose my mind has been very much occupied with London. I have not gone very much into the question of agricultural labour.

10653. Do you think your views of the situation in towns would not be to some extent modified if you were to discover that hundreds of thousands of men in the course of the last 10 years have been streaming towards the manufacturing centres, and leaving the land, which is our greatest natural resource for work?—So far as I can make out, those coming from the country come because they are attracted to the town, not because they are driven from the country. Although the two motives are no doubt mixed, the fact that they are needed in the town has been the active cause of their coming to the town.

10654. Have they not been attracted by the hope of getting work in the town?—By the certainty of getting it. Generally the place is actually offered. In very many cases they come to London for employment that is offered them.

10655. Are you not aware that a very large amount of land in this country is going out of cultivation, and that those labourers are coming to all the towns to seek employment?—I do not know it.

10656. That has transpired in the evidence during this investigation?—They come, undoubtedly; but the question is, what is their motive? My experience of village life, and some direct inquiries that were made on my account, show that they come in connection with direct invitations; they come to be policemen, they come to be carmen, and a variety of things, and they displace the Londoner. I do not think they usually come up to London looking out for a job. The people who want men of that sort bring them from the country, or if men want a job, they come up after corresponding with somebody who has already preceded them. The young man in the country who finds there is no room for him there, perhaps has an uncle, or a cousin, or whatever it may be, in some town who has already established himself there. He says: "There is no place and no chance for me here; is there anything I can get your way," and he gets an invitation

Mr. *Mather*—continued.

invitation. This relative says: "Yes, I can put you in for so-and-so."

10657. That is, being dissatisfied with his life in the country, or having no occupation there, he naturally comes to the town to seek occupation?—I think the town occupation is more attractive; but I admit the two things are very much mixed together. I do not venture to deny your proposition, but the other is the one that I have been more familiar with.

10658. You recommended to the Committee the establishment of industrial homes, which would undertake the manufacture of all sorts of articles consumed by the State and public departments generally?—Yes.

10659. Those industrial homes would work on the ordinary raw products which are to be obtained in the market, and out of them you would produce, by the labour of these men, articles that could be sold in the market, or absorbed by public bodies, which otherwise they would have to get from the market to meet their requirements?—Yes.

10660. If an industrial home, working up such raw products as you have in view, were established in the country, and worked up the raw product of the land, do you not think such a community would be of infinitely greater value to the country as a whole by taking uncultivated land and putting this labour on the uncultivated land, well organised and directed, than if you established this small community in towns for the purpose of manufacturing articles that are already made on a wholesale scale?—I do not think many of the men I am thinking of would be of any use on the land; but still I did say at the end of the memorandum which I read that it might be ultimately extended to agriculture. I look upon that as about the last thing that would come. I should begin with the most towny manufactures, and if it answered and developed, I think it would in the end be extended to building and finally to agricultural operations.

10661. But we find, in examining into the condition of agriculture in this country, that hundreds of thousands of acres of land are going out of cultivation, and therefore giving no employment to a single individual; would it not be the readiest way to bring upon the land requiring cultivation, by any means such as I have described, all these unemployed persons to cultivate it, and so get from the natural riches of the country the means to support that population?—I think it would be a more costly way of doing it. That it would be done at a greater loss than the proposal I have made. Both proposals would lose money, but I think the agricultural scheme would lose the most.

10662. Do you mean that nature would not yield enough to the man to keep him; could they not support themselves?—I do not think the men I have in my mind would so easily support themselves, or nearly support themselves in the way you suggest. It is however, a very interesting experiment, and an experiment that is being tried.

10663. I understand you to go so far as this: that in your industrial scheme, whether it partook of the character of agriculture or of a

Mr. *Mather*—continued.

manufacturing industry, you hold it might be to the advantage of the State to make an experiment to absorb a certain number of the unemployed population under good management in an occupation that might enable them to keep themselves at least, and probably do something more; that is your general view, is it not?—Yes, and some kind of small cultivation, garden cultivation, and things of that sort. I can imagine it might be useful to try.

10664. Let us leave out of consideration for the moment, for the purpose of my question, the character of the work, whether it be manufacturing or agricultural work; you do from your experience regard it as a practical and feasible scheme for the benefit of the country, that an experiment should be tried to have organised colonies and industries of one sort or another directed and controlled by the State, started by the State, and continued for such a time as will enable the State to discover whether by those means an outlet could be found for the constantly increasing unemployed population. Does that fairly state your general principle?—I do not know whether I should venture to include the words "constantly increasing unemployed population."

10665. I will say then, to meet the case of those at present unemployed, with any new additions which might accrue from time to time?—Yes, that is quite fair.

10666. That would be your view?—Yes.

Mr. *Stuart-Wortley.*

10667. How would you provide for selecting the persons to be admitted to the industrial homes?—I leave the selection to those who are willing to guarantee the extra cost, who may be presumed to know something of the people for whom they are willing to make the offer.

10668. They are all to be comfortably lodged and fed and clothed; how would you help those who are capable of managing their own lives, but who might wish to be comfortably fed and lodged and clothed?—I do not see how they would find anybody who would be willing to pay for them. If they can I am content to take them. There would be a point at which the home would be declared full perhaps, or something of that sort. It may be necessary for there also to be a possible veto. That would be seen in practice. My impression is that there would be no rush. In the first instance the man or the family must be considered a suitable case. You would have a Charity Organisation Society or a private friend, or the guardians, or some local body who would represent the case as a suitable one for treatment in this way, and would say, "We hold ourselves responsible for the excess of loss on keeping these people over and above that which the Government has undertaken to meet." The number of persons who first of all would be willing to be treated in that way, and, secondly, could get persons who were prepared to stand as guarantors, would, I think, be limited; and I think there is sufficient machinery for the selection being carefully made, especially as the Government would have the right of sending back any who were either not capable of doing work or disorderly. The really

Mr. *Stuart-Wortley*—continued.

capable workmen who could manage his own life would not go into such a place.

10669. What is your answer to the suggestion that these homes, giving employment to those incapable of managing their own lives, would take away employment from those capable of managing their own lives, and transferring employment from one class to the other?—I think these people by being themselves removed would benefit those who are left outside more than those outside would lose by the work that would be taken out of the open market.

10670. Those taken into the homes would no doubt be benefited, but those not requiring to go into the homes would surely lose employment, would they not?—Those who would go into the homes are now being more or less employed outside. On the one hand you withdraw a certain amount of work, and on the other hand you withdraw a certain amount of labourers.

10671. My point is that you are really transferring the employment now enjoyed by the more capable and efficient, and therefore presumably more deserving class, to the less capable and efficient, and therefore presumably less deserving class?—I do not see that. I do not think that there is a transfer of that kind. It seems to me you would take away those who are doing the most irregular form of work now. You would remove those whose competition is most dangerous in the labour market. I cannot see that the people who are regularly employed lose if they part at the same time with those who are competing with them, who are doing a certain amount of work, the lower part of their work. Above all, they at present have to support these people outside. They are all either being supported by work, in which case, on going into the home they, so to say, bring their work with them, or they are not being supported by work, in which case they are being supported somehow or other out of the public or private purses of those who are doing better; and my impression is, that they would be more cheaply kept in the home than they are now kept, and that everybody would benefit. Those in the home would benefit by being better fed and clothed, and everybody else would benefit, because they would not have to feed and clothe them.

10672. You have already described these people as a class whose competition is dangerous; you are proposing to take them into a home and place them under paid superintendence; would you not thereby make their competition, which was already dangerous, absolutely destructive, and sweep the field and leave nothing to those who have not occasion to go into the homes?—The work does not come into competition as to price at all.

10673. You do not say you are going to increase the volume of employment but only to give it to different people?—My suggestion is, that the work done should be done solely on the Government account; therefore it will not compete in price with the work outside.

10674. But those now working on the Government account, manufacturing similar articles to these homes, are free labourers and not in this

Mr. *Stuart-Wortley*—continued.

tutelary condition; my point is, that their employment will be practically swept away in favour of this less deserving and less independent class?—A portion of their work would undoubtedly be taken away.

Mr. *Wootton Isaacson.*

10675. Will you tell me whether things are different now from what they were ten years ago when you wrote the part of your book on the East-end of London?—I hardly know; that has not been part of my work. I think there has been a gradual dragging down, especially in the last five years.

10676. Can you tell the Committee any cause for that gradual dragging down in the matter of labour in the East-end of London?—I was not for the moment referring only to the East-end, but to trade in general.

10677. I am speaking now solely of the East-end of London?—The East-end of London benefited for a time considerably by the strike of 1889; but since then I think there has been an increase in the lack of employment, largely due in the East-end of London to the action of the Joint Committee of the Docks.

10678. Take the matter of strikes; are you aware that when the strike took place in the match trade, which is a very considerable industry in the East-end of London, a considerable quantity of Swedish matches were imported into this country to the great detriment of the match makers of the East-end of London?—I do not know it, but I think it is very likely.

10679. Are you also aware that ships, I might say, almost daily arrive in the Port of the Thames containing cabinet work of every kind, window frames, sashes, coffins which are purchased by the workhouse authorities, and that ships filled with toys and all sorts of things are coming to the Port of London free of duty to compete against East London workers whose industries have been completely annihilated owing to this unfair competition which is daily taking place in the East-end of London?—I do not know that it is unfair competition.

10680. Are you aware from your great experience in the East-end that the cabinet trade has almost died out, for instance?—I am not aware of it.

10681. Then, would you be surprised to know (as I know, because I have been so long located in the East-end of London) that out of a population of nearly 12,000 cabinet makers there are not more than 2,000 at the present time?—I am not aware of that. Do you mean it is reduced to one-sixth of what it used to be ten years ago?

10682. Yes?—I was not aware of that.

10683. You are perfectly aware, I suppose, that the sugar industry has entirely gone from the East-end?—I believe there is a large lack of work in that industry.

10684. In the East-end, you know that there is a considerable body known as the Independent Labour League?—Yes; I do not know much about them, but I know there is such a league.

10685. You know that in this Independent Labour

Mr. *Wootton Isaacson*—continued.

Labour League there are men who have hitherto worked at these industries in the East-end of London, including shipbuilding, and that owing to the course which has been taken by the trades unions those men have been thrown upon the parish for want of employment. The trades unions have taken up all the work in the place of those men, and now the trades unions, owing to their excessive rates of wages, have driven trade from the East-end, notably the shipbuilding work, and that work has gone away to the North and elsewhere?—That happened a good deal before, and I do not think was due to that. There has been no change during the last 10 years with regard to shipbuilding.

10686. You are aware, I presume, that in Commercial-road and Mile End-road and other large industrial centres, house property has depreciated very seriously during the last 10 years owing to that?—I did not know that.

10687. With regard to light railways, you suggested to the Committee just now that you thought one means of improving the unemployed would be a system of light railways?—No, pardon me, I said I thought it conceivable that a fitting opportunity might be found for a large expenditure of public money to start the ball of trade rolling, and the Chairman asked me what sort of public undertaking I had in my mind, and I instanced a light railway, because it is a thing that is now talked of as the kind of undertaking I had in my mind. I did not suggest it as a means, but I gave it simply as an instance of the sort of thing in my mind.

10688. Of course, you are aware of the present state of agricultural depression in the eastern counties, taking Suffolk, for instance?—I know something of it.

10689. Are you aware that in Suffolk, taking that county by itself, the farmers, in addition to the hardships that they have to face, owing to the depression in prices, have the greatest difficulty possible in conveying their produce from one place to another owing to the want of communication?—That is very likely, I should think.

10690. Do you think that a system of light railways for the whole of the County of Suffolk would be a very useful thing as a means of meeting the depression, and affording employment for these unemployed people?—It is quite conceivable, but I have no special information upon the subject; I merely instanced it as an illustration.

10691. You do not know anything on that subject from actual information?—No.

10692. One other point with regard to the East-end of London. No doubt you are aware that the system of early marriages in the East-end of London has been a means of bringing about a vast amount of poverty?—I could not say; I do not know that it is so.

10693. Do you know that boys of 14 and 15, and girls of 14 and 15, marry in the East-end, and ultimately become chargeable on the parish, owing to indiscreet early marriages?—I do not think they marry so early as that, but they do marry very early.

10694. I have taken a great deal of trouble to go into the facts, and I have been absolutely appalled by the amount of destitution in the East-end owing to these early marriages. Those early marriages do take place, and are the cause of great poverty and great destitution, are they not?—I do not think to any great extent. I do not look upon that as the cause of the destitution and poverty.

Mr. *Logan.*

10695. You were questioned with regard to the effect that strikes had upon the unemployed. I am not to gather, am I, from your answer that you are of opinion that the policy of trades unionism has not been beneficial to the working classes?—No, I think it has been beneficial.

10696. You said that the result of giving or finding constant employment at the docks in the place of the mere casual labour of former years, in your opinion, had brought men to London; have you any figures or data upon which you base that opinion?—No; it is asserted by the Dock and Labour Union, and I think it is exceedingly likely; it is almost certain to be the case with regard to the wharves.

10697. It is an opinion; you have no figures to support it?—No, I have not.

10698. You are aware, are you not, that there is a constant decrease in the rural population of England, owing to men leaving the rural districts and going into our towns?—Yes, or into urban districts. I should say it is so particularly with regard to certain counties. The word "rural" is not quite accurate perhaps; it is certain agricultural conditions that have caused it. There are large parts of England that might be called country where it has not happened at all.

10699. Taking my county, Leicestershire, which is a grazing county, there has been a large decrease of the purely agricultural population?—I should think there has been, but not a large decrease of those living in the villages with green fields very near them.

10700. In Leicestershire the villages have decreased very considerably?—I live in Leicestershire also; it is not so at all with us; they have enormously increased. We are in the colliery district, and the villages have rapidly increased; therefore, I say it is rather a question of the quantity of the employment in the locality; there are numbers of men attracted by the coal fields who are living under fresh-air conditions, though they are not employed in tilling the fields.

10701. I will put my question this way: are you aware that the agricultural labourer leaves the purely agricultural country to go away to a district where there is employment in collieries, or else he goes into the big towns?—Less agricultural work is done in England with an increased population.

10702. Your idea with these industrial homes is to deal with a man after he has, so to speak, come down in the world; do you not think it would be far better to stop him from going down, to deal with him, so to speak, in his native village, and keep him there, if possible?—He does not begin to fall from his native village; he begins to rise.

Mr. *Logan*—continued.

10703. The result of his coming to the town is that he falls, is it not?—No; somebody else falls, he does not fall. If you keep him in his native village you do not prevent him from falling, you prevent him from rising.

10704. I understand your view is that the agricultural labourer betters himself when he comes to the town, but he displaces somebody else?—He depresses life for somebody else.

10705. It has the same effect upon the community; it matters not to the community whether the agricultural labourer comes down himself, or sends down somebody else, the result is the same to the community?—It is not quite the same thing.

10706. The effect is the same, is it not?—Hardly.

10707. Accepting your proposition that the agricultural labourer pushes down somebody else and does not come down himself, my contention is that if you kept the agricultural labourer in his own village he would not push down this other man?—Yes, but he does work that the other man is perhaps not capable of doing; he raises the character of the town population, so that it is not absolutely equal.

10708. He keeps the town population going at present?—I would say, at once, I think it most desirable he should have a chance of rising in the country.

10709. Do you agree with me that, if we could keep the villager at home, it would in a very great degree tend to improve the condition of labour in our larger centres?—If you could open a career in the country for those active young countrymen, you would do an excellent thing.

10710. You said that one of the causes of want of employment, or collapse of trade at a given period, was previous inflation; do you mean previous inflation caused by over production?—It is a wave up and down again; it is over production in a sense.

10711. Many people hold the view that previous inflation causes over production, do you hold it?—That is one of the things it has done.

10712. Do you believe, as a practical man, in over production and want at the same time?—No, of course, it is absurd.

10713. You said just now that enterprise, I suppose you mean commercial enterprise, depends largely upon good government; I suppose you do not hold, as some people do, that the political opinions of the Government can have anything to do with the trade of the country?—I think it is a fair electioneering statement; I do not think it is so wrong that you may not say it upon a platform. But if you ask me whether I think it matters very much as to the future of the trade of England whether the present Government remain in power for the next year or not, I must frankly say I do not think it would make any difference. If a new Government comes in they will have the advantage of being able to pose as having brought about the improvement, if an improvement comes.

10714. You do not represent that the political opinions of the Government have any effect upon the trade of the country?—Good government has; and I support a certain party because I think they will secure good government.

Mr. *Logan*—continued.

Mr. *Acland.*

10715. I suppose you would say that good government might exist as regards points of administration alike under different political parties?—If the suggestion is that particular departments might be well managed in spite of the folly of a particular Government, I hope that is possible.

10716. What you mean in speaking of good government is that good government may really exist whatever particular political party may be in power?—Certainly.

Mr. *Logan.*

10717. I was very glad to hear you say it is the volume of trade that should be taken into consideration, and not the money value. We have had a paper handed in by Mr. Llewellyn Smith, giving the money value of the imports of both foreign and colonial merchandise into the Port of London; you think that it would have been better to have given the amount of tonnage as an indication of the effects upon employment?—I think that is the better test.

10718. Are you aware that last year, 1894, although the money value of our imports and exports was much below the money value of our imports and exports in 1890, yet the volume of those imports and exports was very much in excess of what we imported and exported in 1890?—I have seen that stated, and I confess the figures surprised me.

10719. For instance, we imported 18,000,000 bushels of wheat more in 1894 than in 1890, and yet we paid nearly 5,000,000*l.* less for it; you have seen those figures, have you not?—I think the figures are exceedingly interesting and satisfactory.

10720. You say that one cure, in your opinion, for the trouble of want of employment, would be an increase in personal prudence. Mr. Mather dealt with that question. I should like to ask whether, in your opinion, it is not the fact that the chief incentive to personal prudence is, generally speaking, to save on good wages?—Yes.

10721. People, as a rule, who are in receipt of good wages or good salaries are much more prudent than people in receipt of wages upon which they can hardly exist?—I do not know that that is so; I doubt it.

10722. You think that the rich are quite as improvident as the poor?—Yes, I do.

10723. And quite as thriftless?—I am inclined to think so; but the consequences are not the same.

10724. My last point is with regard to your second suggested cure, viz., that municipalities should exercise a little more enterprise, and I understood you to say that you would not object to an increase of taxation for that purpose?—I should not.

10725. Has this ever struck you: that the result of an expenditure of taxation by municipalities will go largely to increase land values within their area?—Yes, if it is wisely spent, it will do so.

10726. You are aware, are you not, that at present

Mr. *Logan*—continued.

present the land is held by a very few people?—I do not know that that is so.

10727. Are you not aware that one-third of the land in the British Isles is held by 642 people?—Do you speak of the towns?

10728. I say in any area you like to take you will find that the land in that area is held by comparatively few people?—I do not think that is so, it depends upon how you use the word "comparatively." There are in England always certain large owners in most places, but on the whole I think town properties are very much cut up. We rather lack exact statistics upon that point. I imagine the owners of land in London are a very numerous body.

10729. They are rather careful not to give us any returns. You say you would be surprised to hear there are very few landowners in England?—What I answered was, that I thought your previous questions were referring to the towns.

10730. I am dealing with the land as a whole, and wherever you set a municipality to work to spend money collected by taxation, or by the rates to improve the general condition of the locality, the inevitable result will be to improve the value of the land. That is so, but it is equally true of whatever improves the condition of the people. It is an objection which holds good against every improvement in life.

10731. Has it ever struck you that the very fact which you now emphasise, that whenever anything is done to improve the condition of the people it has a tendency to improve the condition of the land and the value of the land, and that it is that constant added value to the land which drags the people down?—I do not think it is; it adds value to everything else too.

10732. You do not agree with me, then, that if you add to the value of an area, and so add to the power which the owners of that area possess to tax other people for the right of using the area, that if that power is exerted it has a tendency to keep people down; you have never thought about it perhaps?—Yes, I have thought a great deal about it, and I do not think it has a tendency to keep people down. I will tell you why, if I may; because it is the fact that they are not kept down, that they are rising, that has given value to the land. If it did keep them down the land would not rise, I think.

10733. Do you agree with me that one cause of the recurring periods of depression is this added value which the work of the community gives to the land?—I do not think it is so.

10734. The way it struck me first was in Australia. Will you agree with me that if you take any given area, say 10 square miles of land, while the industry of the people increases, say in a given time, five years if you like, 50*l.* an acre, that means that in that 10 square miles in the five years the increased value of the land will be 320,000*l.*, giving to those who own it the power of extracting from those who use it 16,000*l.* a year more; what I want to know is whether you have ever thought this out; supposing that the people on that 10 square miles are doing a prosperous business, can you not see that when the land is put up in value as it is the people have got to pay at once an increased rental of,

Mr. *Logan*—continued.

in this case, 16,000*l.* a year, and that takes from their profits, and it is that which causes the depression of trade against which people have got to fight?—I do not think it is so. I do not think it does cause the depression of trade against which people have got to fight.

10735. But surely if people have got to pay 16,000*l.* more a year for existing upon 10 square miles to-day than they did last year, that must have an effect upon their trade?—It is the improvement of their trade that has caused the prosperity.

10736. But then the improvement of their trade and their labour enables the landowner to extract 16,000*l.* a year?—I am not denying that, and that he has done very little for it.

10737. Then surely if he exercises that power of extraction, which he does, it must to a corresponding extent depress trade. If you can barely make a living when you are rented at 20*l.*, then it must follow that you have a greater difficulty in making a living if your rent is put up to 36*l.*?—I do not think it follows.

10738. Then my last question will be this: I am afraid you do not agree with me that the real remedy for want of employment is that the community should intercept by taxation or otherwise the added values which the community gave to the land and apply those added values for the benefit of the people?—I do not think that would have any effect whatever in the relief of distress; it would merely be a re-adjustment of taxation.

10739. It would be a great relief of taxation surely?—I do not think it has any effect at all on the question of lack of employment.

10740. But the total value of the land of England to-day is 2,000,000,000*l.* more than it was at the commencement of the century?—I am very glad to hear that.

10741. Do you tell the Committee that, in your opinion, it is a good thing for the community to have to pay the interest upon that 2,000,000,000*l.* of increased selling value of the land?—I think it is immaterial to the point in question.

Mr. *Bousfield.*

10742. Your general view, I think, is that, in these social and economical matters which we are considering, the policy of cautious experiment is the right course?—Yes.

10743. And you have indicated one or two experiments which you suggest?—Yes.

10744. You know, of course, what is being done by the Salvation Army?—Only by repute. I have not studied it personally.

10745. Have you read the evidence of Mr. Bramwell Booth before this Committee?—I read the short account of it which was given in the papers.

10746. Do you know that they are carrying out an experiment, somewhat on the lines of your memorandum, in industrial homes?—Yes.

10747. Perhaps you did not hear Mr. Bramwell Booth state that they had a great number of people there; I think they were paupers that they were dealing with, at so much a week, who were simply incorrigible and idle, who said that they never had worked for their living and never

Mr. *Bousfield*—continued.

intended to work for their living?—Yes, I saw that sentence.

10748. There is a certain number of such people existing?—No doubt.

10749. What do you think we ought to do with regard to such people; what do you think it is possible to do with them?—I think the Poor Law is the only way of dealing with them.

10750. You would simply support these people at the expense of the State?—You cannot kill them.

10751. You would not make them work, then?—No, I do not think I should make them work; I have not thought it necessary, and I do not think so; making them work, you mean, by beating them, whipping them?

10752. Oh, no?—How do you mean, then?

10753. You know what is done in Belgium; that such people are sent for two or three years on an industrial colony where they have to work, enforced labour?—How do you mean they have to work; they can leave those colonies; they are not prisoners, I presume?

10754. No, they cannot leave?—Have they to work in the same enforced way that men in prison have to work?

10755. I take it much in the same way that men have to work on Dartmoor?—That is to say, they get no food unless they do work? I mean, what is the method of compulsion?

10756. I do not know; I only put it to you that there is a method in force there by which incorrigibly idle people are sentenced to two or three years' work?—I do not say that such a course may not be right, but it is not a very important point.

10757. Is it not the fact that when the pressure of the unemployed question comes, in winter time there are always a large number of habitually idle and lazy people who are mixed up with the genuine unemployed workmen, who clamour for some kind of help at such times?—There is every shade, from the one to the other; you cannot divide them rigidly.

10758. And at the bottom there is this class I have mentioned, the habitually idle?—Yes; but I think they are not so much affected because they have their sources of supply, charity for one thing.

10759. They prey on the community in some way or other?—Yes, at all times. I do not think they are so much affected by the exceptional distress.

10760. You have said that a class of that sort drags down the general industrial condition of those above; that is your view, is it not?—Yes; but I was not speaking of the bottom class of all. Each class drags down that immediately next it; but I was thinking of something much larger than the comparatively small number of absolute good-for-nothings that you are speaking of. I say there is every shade, every gradation from that, all the way up to the highest degree of honourable labour, and I cannot draw the line at any particular point. From the bottom to the top there is a constant dragging downwards.

10761. I suppose you have no idea what the total number might be of those who might be classed as habitually idle and unwilling to do any work?—I should hope it is very small. I have no means of telling.

Mr. *Bousfield*—continued.

10762. You have gone into a good many statistics, but you have never endeavoured to obtain that information?—You cannot tell that; they keep coming up over and over again; they are a stage army.

10763. Have you any idea how many tramps there are at any given time?—I have seen figures, 7,000 or 8,000 I think; I do not know anything about it, I should have thought there were more.

10764. Do you think with regard to this class that our present system of receiving such able-bodied people in the workhouse and feeding them at the public expense is the best thing that we can do with them?—Yes. If charity was shut to them, it would be better still.

Mr. *Logan.*

10765. Indiscriminate charity?—Yes.

Mr. *Bousfield.*

10766. It would be public charity then instead?—Yes; the more organised the charity is to deal with cases of that kind I should think the better. But I do not think it is a large class. I should think that the number of those who are more sinned against than sinning is probably infinitely greater.

10767. Have you ever tried to ascertain their number?—No.

10768. You know, for instance, that in Hackney we have opened a labour bureau for some winters and some sort of inquiry on that point is made; if you have so many thousand people applying, and inquiries are making, it would be possible, would it not, to get an idea as to how many were in the lowest class?—Yes, some idea has been got that way; but it is difficult to apply it. You get a certain percentage of those that apply, but there are difficulties of all sorts, because men do not apply at all if they know that there is going to be a test which they would not stand; and, on the other hand, they are dubbed as being unwilling to work, in some cases, possibly, when they are not altogether unwilling to work. Statistics have been got out, but they are not such as to enable one to state the total number.

10769. It is not an inquiry that you have yourself personally pushed?—No.

10770. You said that fluctuations of employment are at the root of a good deal of the difficulty that we have with the unemployed; is it not the fact that employments which directly satisfy home wants are more valuable from the point of view of steady employments than employments in goods for export which may at one time become enormously inflated, and subsequently depressed?—Yes.

10771. For instance, we have had a notable instance given in evidence here of the tin-plate industry, which expanded to very large proportions, and was then suddenly contracted, owing to action abroad?—That is so.

10772. Let me put that to you as a simple illustration: supposing, that instead of sending our tin plates to America, and receiving in return American clocks and watches, and other small nick-knacks which they make, we had had a similar number of people at home supplying the home-market

Mr. *Bousfield*—continued.

home-market demand for clocks and watches, we should have had a more stable condition of employment, should we not, less liable to fluctuation, owing to the action, for instance, of foreign tariffs?—I am not perfectly certain; that is a difficult question with regard to the whole industry. But no doubt, with regard to the tin-plate trade, it was in a precarious and uncertain condition, depending so largely as it did on the American market, and being at the mercy of tariffs.

10773. I do not want to say anything with regard to food products and other necessaries of life which come into this country from abroad, but with regard to other products (luxuries, in many cases) that are required for home consumption. I have instanced clocks and watches; but take silks and ribands and other luxuries which we import from abroad, does it not strike you that the conditions of employment in this country would be far more stable if we were making these things ourselves for home consumption instead of inflating industries, such as the tin-plate industry, or the iron industry, or any other, in order to produce something to barter in exchange for those luxuries which we get from abroad?—I think that the home trade is infinitely the most important trade, and it has advantages of that sort that it is less fluctuating.

10774. You have suggested, for instance, that public enterprise, as being more constant and less liable to ebb and flow, is a thing that might be encouraged by an extension of municipal enterprise?—I think it could.

10775. Because it would be more stable?—Yes.

10776. Following upon that, what I want to put to you is, that another thing which would tend in the same direction would be, if we at home were to manufacture all those various articles of luxury which we import from abroad, articles for which there is a steady demand at home and which would create a steady trade if we made them here, that would tend in the same direction, would it not, of diminishing the unemployment?—I think it would.

10777. You have said that while you would have public organisation of incompetent labour, which, to a certain extent, touches the unemployed problem directly —— ?—To a certain extent.

10778. You are against attempts to manufacture work for the temporarily unemployed?—Yes.

10779. I suppose you do not wish to discourage the attempts of municipal bodies to find work

Mr. *Bousfield*—continued.

that can be done in the winter time, in order to do such work at a time when most people are out of employment, and so to equalise to some extent the labour market?—I am not afraid of that, but I pointed out that the first effect would be rather against the class whose wants we are considering.

Mr. *Lawrence.*

10780. I thought, in reply to Mr. Acland, that you contradicted your original statement; but I ask you this: Do you or do you not recommend the execution of works by the State or municipality with a view to employ people as workmen, or is it with a view to open up a line of action that may lead to individual enterprise?—The latter would be my view; that if any large expenditure of public money is justifiable at all it should be justified by its opening up, as you say, a line of action to be followed by private enterprise.

10781. And the object is not to use public incomes merely to find work?—I think that the finding of work *ad hoc*, especially to meet a lack of employment at the moment in a particular class, and the giving of work to the unemployed, would be a mistake. I do think it is desirable to equalise the work by doing public work in the winter which could be done at any time of the year; but I do not think that that would benefit the class whom we call the unemployed.

Mr. *Billson.*

10782. I suppose your system of old age pensions you think would relieve the distress from want of employment by eliminating competition?—No; more by removing the very heavy burthen upon the young.

10783. Supposing that you could not get your old age pensions universal, would not a general system of out-door relief at the age of 65, say, relieve the situation?—Yes, but that would offer a premium to lack of thrift.

10784. If it was made at the age of 65?—At any time. If it is not out-door relief given generally but given only under the terms that the man has to be destitute, surely it offers a premium on destitution, because the man who does not save has an advantage given him which the man who does save lacks.

10785. But I am proposing that you should give to everybody at 65 whether destitute or not?—That would be a pension, not out-door relief then.

Mr. WILLIAM THORNE, called in; and Examined.

Chairman.

10786. YOU are the General Secretary of the National Union of Gas Workers and General Labourers of Great Britain and Ireland?—Yes.

10787. And in that capacity you have a considerable acquaintance with the subject with which we are dealing?—Exactly.

10788. What is the particular locality that you have most knowledge of; West Ham, is it not?—West Ham. I reside in West Ham.

Chairman—continued.

10789. And you were mentioned, I think, in the early part of our investigation as having taken some part in the question of the unemployed there last winter?—Yes.

10790. Have you anything to tell us about the number of the unemployed in West Ham and in other places?—Yes. In January 1895, I believe it was in the early portion of January, when Lord Rosebery came down there to deliver an

Chairman—continued.

address, there was a deputation waited upon Lord Rosebery with the view of putting this unemployed question very forcibly to the front; and the statement given at that time was that there were something like between 4,000 and 5,000 men out of employment in the two parts of the borough, the north and the south. Lord Rosebery did not think in his own mind that there were that number of men and women out of work in the Borough of West Ham; and in consequence of that the West Ham Trade and Labour Council undertook to get some men from amongst their own ranks to take a census of the whole of the unemployed in the borough. The result of that investigation was that in the north they found there were 17,147 workers, and in the south 27,543; that in work in the north there were 13,880, and in the south 14,503; that the number of casual men that were out of work in the north was 1,105, and the number out in the south was 5,071; that the number of men out of work in the north was 2,162, the number out in the south was 7,969, making a total of 10,133, out of which total there were about 700 women, which really leaves 9,431 men.

10791. Those figures are the actual workers?—The actual workers.

10792. Not the people dependent upon them?—Not the people dependent upon them; the actual number of people, casual and out of employment.

10793. Is this the result of the same census that I think we had from Mr. Percy Alden?—Yes; he was the clerk who tabulated the whole of these statements.

10794. He would put himself a little higher than a clerk; he was secretary to the Unemployed Committee?—He was secretary to the Unemployed Committee, but he was not secretary of this particular census committee, he merely acted as clerk in tabulating the statements that were brought forward. Then in regard to the great number of people out of work in different parts of the country; I have had a great deal of experience in travelling about through the different parts on account of my work, as we have a very large number of branches all over the country, and I find that in all the industrial towns wherever I go there is an enormous number of men out of work, and it does not matter what town or country you go to it seems to me that this thing is very prevalent all over the country. The statement has been put forward by several people, it was put forward in the House of Commons (and I have never seen it contradicted) by Mr. Keir-Hardie, and not only by him but I believe some three or four years ago by Mr. Abraham, one of the Welsh members, when they were discussing the Miners' Eight Hour Bill, that there were about a million men out of work. I am not in a position to say whether there is or not, but according to the returns issued month by month in the Labour Gazette of the great number out of employment in skilled industries, such as boiler makers, engineers, and others, I do not think we are exaggerating at all when we say that there are quite a million men out of employment. If there are from 3 to 6 per cent. out of work in the engineers or boiler makers or

Chairman—continued.

those other skilled industries, it must naturally follow that there is a great number more out of employment of what are commonly called the unskilled workers, because they are more numerous, and so I do not think we are exaggerating at all when we say that there are quite a million men out of employment.

10795. Is it your impression that there were more this last winter, I mean before the frost began, independently of the frost, than there had been in previous winters?—Yes, I should say so; so far as I am able to judge, this last two years, I should say there have been more unemployed than at any previous time, so far as my recollection goes.

10796. It seems to be increasing, in fact?—It seems to be increasing week by week. And even at the present time I have been travelling about of late, and I find an enormous number of men out of work even in our own borough at the present time, men who cannot get work at all. Men come crying to me that they have been out of work six or seven weeks, and sometimes two or three months, strong able-bodied men willing to work with any one, and denied the right of going to work.

10797. That is to say, they cannot find the opportunity of going to work at all events, which comes to the same thing?—They are denied the right of going to work; it does not matter whether they go to the docks or other employers, the employer says he is full handed and cannot find them work.

10798. What sort of men are those; are they of the general labour class as a rule, or the skilled labourer class?—I am speaking greatly now for what is called the general labourers. I am not in a position to speak on behalf of the skilled men at all.

10799. Has the organising of the dock labour had the effect in reducing the number employed, of giving more continuous employment to those that are employed?—I believe it has in some connections, because unions have been started and have endeavoured, so far as they can possibly, to regulate the work between man and man, so that one man shall not be in a position to work a large number of hours and other men walking about. It has had some effect in the direction of finding work, no doubt. We were formerly engaged upon the 12 hours in various gas works in London and provincial towns, and since our own union has started, through the introduction of the eight hours, that has been the means, so far as we have been able to judge, of employing at least 10,000 more men in the various gas works now under the eight hours than were formerly employed under the old 12 hours system.

10800. Was the eight hours introduced without any change of wages?—Yes, there was no reduction in wages, but in some instances the men got an increase in wages, in some instances they are getting more for the eight hours than they were formerly getting for 12.

10801. Perhaps they do a little more work in the eight hours?—Per hour of course; they do carbonise more coal now under the eight hours than they were formerly carbonising under the 12. They are not carbonising so much coal in the eight hours as in the 12, but still they are

doing

Chairman—continued.

doing more per hour than formerly under the 12 hours system.

10802. What can you tell us about relief works in West Ham in the last three winters?—It seems to me, so far as West Ham is concerned, that we have a greater share of unemployed there than they have in any other district. Perhaps it is because the great bulk of the work is river-side work, dock work, and work of that character, and a great number of people flock to where that kind of work is carried on.

10803. That is South West Ham, of course?—Yes, there are not so many out in the north as in the south. I am a member of the West Ham Town Council; in the last three winters we have endeavoured each winter to cope with this difficulty. Two winters ago we started some kind of relief works in finding men work, on whatever we could seek about, and put them to do; as you know, there was a circular sent out from the Local Government Board, asking the local authorities to do all they could to find work in paving and channelling the roads, and the like of that; but it seems to me that those circulars are useless, because we were seeking about to find work for the men on the lines laid down by the Local Government Board circular, and we found, in many instances, that if we carried out the suggestions put forward by the Local Government Board, we were relieving the responsibilities of the property owners, because the property owners are supposed to pave and channel and make up roads before they are dedicated; and if we had undertaken those duties we should have been relieving the property owners of their responsibilities. On the north side there is a large space of ground which is part and parcel of Epping Forest, called the Wanstead Flats, and the Town Council decided to get permission from the Epping Forest Commissioners to lay out a portion of that land to make two cricket pitches and football grounds, which of course was very successful in that direction. And the following winter Mr. Hill came forward; he is the man I believe at the head of the Thames Limited Ironworks, and he said he would willingly contribute 1,000*l.* to a fund if the corporation would grant a similar amount. That was accepted, and it was agreed that not less than 6*d.* per hour should be paid to the men that would be engaged.

10804. Was that what is called the Trades Union rate of wages?—The Trades Union rate in the building trade was 6½*d.*; but the general recognised rate, so far as dock work and the like of that is concerned, is 6*d.*, which is pretty well recognised as the Trades Union rate of wages. A man was only to be allowed to work six hours a day and three days a week; that was a hard-and-fast rule which was made by Mr. Hill, which worked very satisfactorily that winter; that was 1894, or rather it would be like 1893 and 1894; December 1893 and January 1894. Then he came forward again in the latter portion of 1894 and offered another 1,000*l* if the corporation would grant a similar sum; but he made a very hard-and-fast condition, and that condition was that the men were not to be paid at more than 4*d.* per hour, and they were to be engaged on similar lines as

Chairman—continued.

previously, six hours a day, and three days per week. What is called the Unemployed Committee accepted the conditions laid down by Mr. Hill; but I attended the meetings, and I spoke very strongly against it; I said that the working men, so far as the borough of West Ham were concerned, would absolutely refuse to go to work for 4*d.* an hour, as it had a tendency to drag down the wages of men engaged in other industries. Anyhow, the committee decided to accept the conditions laid down by Mr. Hill; he appeared before the council of the corporation of West Ham, and that council accepted the conditions laid down by him. Not being altogether satisfied I gave notice of motion to rescind the resolution a fortnight afterwards. During the meantime I had some meetings; I went to the street corners and exposed the whole business because I did not believe in it, as I thought it was economically unsound; and there was a deputation appointed from a public meeting to wait upon the town council. There was P. Curran, one of the organisers of the gas workers, and Mr. Vincent, of the compositors, and Mr. Harris, district secretary of the dockers. There was a very large deputation, and there was a great number of workmen from the various parts of the borough attended at the town hall.

10805. That was the occasion, I think, when Mr. Hilleary told us that the town council was practically invaded?—Yes.

10806. That is the historical occasion?—It was pretty well invaded; anyhow, the town hall was pretty well lined with workmen. The deputation was introduced; the arguments which they put forward were very sensible arguments, and the council in their wisdom rescinded the previous resolution and refused to accept the 1,000*l.* from Mr. Hill on the conditions laid down. They were quite willing to accept his 1,000*l.*, and contribute another 1,000*l.* if he would agree to pay the workmen the 6*d.* per hour they had been formerly paid on similar occasions. On account of the town council refusing that, they had of course to seek about elsewhere to find work in other directions; so we started, and the corporation agreed to spend something like the 1,000*l.* that they were willing to contribute towards Mr. Hill's scheme, which was spent in the following manner: In clearing snow, &c., from highways and main roads they spent 493*l.* 9*s.*; the total number of days worked was 3,289. They then set men to work excavating round a street called Bidder-street, and the work undoubtedly was very hard, as you know, on account of the severe frost; the frost had got into the ground I dare say six or seven inches; these men were set to work with hammers, sledges and wedges to break up the road; the council spent upon that 443*l.* 10*s.*, and the number of days worked was 2,957; what I mean by that is, say if 100 men were at work to-day, that would be counted as 100 days. Then they started some men to work laying out some ground round the band-stand of the recreation grounds, and they spent 70*l.* 19*s.* in that direction, and the number of days worked was 473. Then in excavating sewers they spent 80*l.* 6*s.* 10*d.*; the number of days worked was 539. Then in supplying the

Chairman—continued.

residents with water, there were various men engaged going round with water-carts as there was a scarcity of water.

10807. The mains were all frozen, I suppose?—Yes; they spent 174*l.* 2*s.* 6*d.*, and the number of days worked was 870. On the sewer embankment there were casual men put to work, and they spent 19*l.* 10*s.* on that work, and the number of days worked was 95, which makes a total of 1,281*l.* 16*s.* 10*d.* they spent during the winter, and there were 8,223 days worked.

10808. What sort of men were employed in that way?—There were all kinds of men engaged; they had a book opened, and every man was in duty bound to go and register his name on the book, and their names were called out day after day; the men who were at work to-day would not be called out on the morrow, and every man was engaged as he signed the book. In some instances the men during the winter worked three or four days probably, and some may have worked a week during the whole of the winter, because when they called the names on one day probably the men really in turn for the work were not present, but seeking work elsewhere, and their names would be passed over, and other men would of course get the work.

10809. Did you get any sort of guarantee that they were genuine West Ham men?—Yes, every man had to declare that he had been a resident in the borough for six months, and if we had any idea that they were violating the conditions, we used to send someone round to the house to see if such was the case. That was the only way, of course, that we could really find out.

10810. From your experience, what have been the main causes leading to the scarcity of employment?—I think one of the great causes is on account of the rapid introduction of machinery, and, undoubtedly, the main cause to my way of thinking is the whole of the land and the machinery, and the whole of the capital, of course, being held as private property. That is my impression of the real main cause of why men are out of work; and I do not think, personally speaking, there is any solution at all of this problem as long as the present state of society exists. As long as goods are made for private gain, as it were, so long, I think, you will have your unemployed; and it seems to me it does not matter what kind of scheme you put forward, whether you start farm colonies or any other kind of employment, I think it is only just tiding over the difficulty temporarily just for a few days, and after you have given this relief work, it may be for a day or two or a week, after the work is completed you will find the men in exactly the same condition as before.

10811. Those are proposals, for the most part, of schemes for the relief of distress arising from non-employment, but you think that by some complete alteration in the social system you could prevent non-employment altogether?—I do, and I think that is the only solution of the whole problem. I will give you a few facts and figures which I think may impress your minds, as to why you have got so many men out of employment. I am only going to speak now in regard

Chairman—continued.

to what I pretty well know in connection with our own industry, the gas industry. Of late there has been a great development of machinery, that is to say, in the system of carbonising coal. At the Bow Common station, which is one of the stations under the Gas Light and Coke Company, some 12 months ago they introduced what is called the new inclined retorts.

10812. By which the coal is shot down an incline?—Yes, the retorts are set at a great slope, and the coal is put in at the top end and runs right down, and it takes very little labour. Under the old system there were 57 men employed, that was 19 men in each shift, and three shifts of eight hours per day. The 19 men would carbonise something like 100 tons of coal. When they started the new system, that is the inclined retorts, there were nine men engaged in a shift.

Mr. *Logan.*

10813. Twenty-seven altogether?—Yes; that really displaced something like 25 men on that one particular station.

Chairman.

10814. But you do not find any fault with that, you would not revert to the old system?—I do not find any fault with that, I am only just giving you the fact that this is one of the causes why you have got so many men walking about the streets at the present time.

Mr. *Logan.*

10815. What quantity would the 27 men produce?—The same quantity of coal; they carbonise exactly the same amount. At the Beckton station, which is one of the largest gas works I think in the whole world, on 20 sets of retorts, under the old fashion of carbonizing, there were about 28 men engaged, that is including what is called the coal trimmer. They have now introduced what is called the iron-man. These iron-men are worked, in some instances, by compressed air, in others by wire rope. On these machines, that is on 20 sets, there are 11 men, that is 11 men engaged, including the coal trimmer. If you take the three shifts, that has been the means of displacing something like 51 men in the 24 hours. That is in only one retort house. It is true that they have not got the whole of the retort houses filled with machinery, but I am only speaking of one particular house. In years to come undoubtedly they will probably get these machines in all the houses. At the Brentford Gas Works they have introduced these incline retorts; and there is an article in the "Gas Journal" of London, of the 4th June 1895, where the manager has been giving a very elaborate account of the working of this new incline retort system, and he asserts there that the coal can be carbonized for 1*s.* per ton. I have a book here which is called "An Analysis of the Principal Undertakings of Gas Works," and so on, by Mr. Field, who, I think, is a very eminent authority; and on the old system I find that at the Brentford Station it cost something like 3*s.* 2*d.* to carbonize; so, you see, there is a saving

Mr. *Logan*—continued.

saving there of something like 2*s.* 2*d.* per ton, which is all to the benefit of the shareholder.

10816. And the consumer?—No, not to the consumer; because the price of gas is exactly the same to-day as it was some few years ago.

10817. The consumer does not get it because of the monopoly, I suppose?—Exactly. If the gas works were municipalized as they are in Birmingham and many other places, undoubtedly there would be a slight relief to the ratepayers; but then I do not think that that would affect the workmen in the slightest degree.

10818. But you do not find fault; you are too sensible a man, I should think, to find fault with the fact of these labour-saving improvements being introduced?—I do not find fault at all, not in the slightest. I should like to see the time arrive when pretty well the whole of our work was done by machinery, but not under the present system; because instead of the machinery being a blessing to the workmen it is a curse, because it throws the men on the labour market to compete one against another, which makes their conditions more insecure than they are under the present system. I am going to give you now another instance of machinery in the coal part, that is, in unloading coal. They have introduced in unloading coal what is called a grab; it is worked similar to one of those machines which I dare say you have seen work on the railway, what is called an iron devil or steam navvy. It works with a crane, goes into the ships' holds, and grabs the coal up. They have introduced that down at Beckton. On the old system the men get paid at the rate of 4*d.* per ton for unloading, and in a ship there are 32 men engaged; on the new system (that is, the grab system) they are paid at the rate of $1\frac{1}{4}d.$ per ton, and 16 men are engaged in a ship; so that is displacing 16 men in every ship that comes up, and also a saving of $2\frac{3}{4}d.$ per ton. At the Bromley station, where a similar system has been introduced, where they get 4*d.* per ton, there was 10 men engaged in a barge. Of course the different gas factories have different systems of unloading coal. In this Bromley station the trucks used to be lowered down by a crane into the barge, the men used to fill the truck, and it was then swung up again, and there were 10 men engaged in a barge. Under the new system they get paid at the rate of $1\frac{1}{4}d.$ and half a farthing per ton, and there are two men engaged in the barge; that is displacing eight men.

10819. Out of 10?—Yes, besides the saving, of course, in the unloading itself. At Pimlico and Nine Elms, of course, there are similar machines introduced, and, in fact, in very nearly every one of the gas works. Then as we have so many different sections of men in our union, I have got a communication from one of our branch secretaries in the stone quarries who tells me that there is a kind of machine introduced which has really displaced nine men out of every 10. Then we have a very large number of men, members of our union, engaged in chemical manure works. I have the whole details here, but I do not think it necessary to worry you by going through them all. On the whole in the loading of phosphates, and unloading and mixing in the different departments on the old system, there were engaged between 300 and 350 men; since then they have introduced all kinds of new improved machinery, and new methods of conveying and unloading these phosphates; there is one machine in particular, namely, the endless chain, which has brought about much the same result. The factory, I dare say, is something like 100 yards long, and there is a man at the bottom end with an endless chain as long as that table (*describing the same*). Under the old system they used to have to carry the bags about 100 yards distance, those bags averaging from 2 cwt. to $2\frac{1}{2}$ cwt. per bag. Now this endless chain is introduced, and there are two men at the end, and all they have to do is to turn the bags over on to the endless chain; the conveyer keeps working right up and carries the bags into the ship, which has displaced a large number of men. Taking one factory alone, Odams' Silvertown Chemical Works, that has been the means of displacing at least 100 men in that particular factory; that is within our own borough of course. Then again there is the sugar refinery; there is a very large one in our borough, Tate's; I think it is one of the largest in England, perhaps. Some six months ago there was a German patent introduced, the German sugar refining machine I think it is called. We had a very large number of men and boys, members of our union, working there, and on account of this machine being introduced they discharged one-half of their hands; and it was put forward at the time by the heads of the firm that this machinery would be able to do as much work, say by about 50 men, as was formerly done by 100; but when the machine got into operation I do not think it came up altogether to their expectations; anyhow it has been the means of displacing about 40 men out of every 100. Then in the brick-making industry we have a very large number of men, members of our union, who are brickmakers, and there have been all kinds of brick-making machines introduced; they have not been introduced anywhere in and around London for many miles. I think the nearest place where machinery works is Peterborough, where I think nearly all the bricks are made by machinery. In the Midland counties a brick maker would make, with the aid of a man and a boy, about 4,000 bricks per day. I was down at Gainsborough the other week, and I saw one of these brick machines at work; in fact I have worked them myself when I was at work in Birmingham. I went up to a boy (they were really boys engaged in manipulating the machine), there were two of them, and I asked them how many bricks they turned out per day, and they told me 12,000. That shows of course what a large amount of labour force has been saved.

10820. The boys do not feed the machine?—The machine is fed by steam power. The clay is drawn up with a little wagon and chain from the clay pit, put into rollers which grind it smooth, and then sent into the pug-mill where knives are going round to chop the hard pieces very

Mr. *Logan*—continued.

very small, and then it goes through a kind of press, and it comes out probably about that length (*describing the same*), and then there is a wire about *that* width, and then they got six bricks off at a time. By the aid of these two boys they can really turn out about 12,000 bricks; but even under the old hand system you must bear in mind that the machinery is to be used exactly the same as where they cut them off by the wires; the only difference is cutting them by the wires, and there are these two boys. All the other machines are just the same by the old hand system.

10821. Under the old hand system one man moulded them, and two boys carried them?—Yes.

10822. Now the two boys carry off what the machine moulds?—Yes.

10823. Then the machine now does the work of the one man that used to turn out the 4,000?—Yes, but this machine will turn out 12,000.

10824. But the machine has to have some man attending to it?—Yes, but only the same as under the old system. There are exactly the same number of men attending to filling the clay in the clay pit before it comes to the boys, but where the difference comes in is that these boys are in a position to make 12,000 bricks, and under the old hand system there would be three clay wheelers and three moulders; that is six, and three boys, that is nine. These two boys are really performing the same amount of work that used to be done formerly with six men and three boys. Then there is the road scarifier again; it is a kind of machine.

Chairman.

10825. To tease the road?—Exactly; it is similar to a scarifier used on the land. Last winter we had to dispense with that because it would have been the means of throwing a great number of men out of work, and as there was such a large number of men out of work at that time we did not think it wise to engage this scarifier; but if we had been working under a properly organised system there would have been no fear about this scarifier at all, we should have introduced it without doing anybody any injury. I think it is a great mistake, of course, to have to simply use your influence against machinery for the purpose of finding more work; but still there the fact remains that that is what we had to do to find more work. Then, again, there is the street sweeper, the street brooms that you have seen going about. I have a communication from one of our men engaged in the sanitary department at Bristol, and he tells me that on account of the street sweeper being introduced it has been the means of displacing 60 men that were engaged in sweeping the roads. There are many other kinds of machinery. If you take the building trades there is the Scotch derrick, used in hoisting bricks and mortar and every material, which has been the means of doing away with an enormous number of men. Or, again, take steamships. So far back as 1872, in a steamship of, perhaps, about 1,000 tons register, there would be a crew of about 18 men. If we come down to late years they are constructed now to carry something like 9,000 tons, and only about

Chairman—continued.

30 to 35 men engaged on one of those 9,000 ton registered steamboats. I should like just also to back up what I have been saying by a few words from the chairman of one of the trades union congresses as far back as 1888, Mr. Shaftoe, the President of the Bradford Trades Union Congress. In his address he was going on to elaborate upon labour-saving machinery and so on, and he says this: "There is scarcely any branch of industry to which these mechanical inventions have not been applied, and the effects have been intensified by the sub-division of labour. We find, for instance, in the use of steam hammers that nine men have been displaced out of every ten formerly required. Machinery has displaced five men out of every six in the glass bottle trade; in the manufacture of agricultural implements 600 men now do the work which 15 or 20 years ago required 2,145, thus dispensing with 1,545. In the production of machinery itself there is a saving of 25 per cent. of human labour; and this even reaches 33 per cent. in the production of metals. In the boot and shoe trade one man, aided by mechanical appliances, now does the same amount of work which some years ago required five. We find a single lace-making machine displacing upwards of 2,000 women; in paper making, 10 persons can do as much as years ago required 100; in shipbuilding the displacement is four or five men out of every six; in woodwork one man now replaces four. In the manufacture of clothing there is a great displacement, one man now being estimated to do the work hitherto requiring from six to nine. Innumerable instances might be cited, but the general effect during the last 40 years is a saving of labour to the extent of 40 per cent. in producing any given article." That is on the authority of Mr. Shaftoe, a man I think you could take it from with some amount of authority, as being President of the Bradford Trades Union Congress. And since then the development of machinery has been more rapid than before.

10826. But your position, to make it clear, is not that you object to the introduction of machinery and the saving of labour, which is all right, but that you say that the benefits caused by that ought not to be absorbed by the capitalist?—Exactly.

10827. And that that course of invention and ingenuity has the effect of throwing a large number of men out of employment under our present social system?—Yes.

10828. It is the social system that you object to, not the machinery?—Exactly.

Mr. *Mather.*

10829. Do you consider that the benefit of this labour-saving machinery goes wholly to the capitalist, or that the consumer gets any part of it?—I do not think that the consumer receives but very little benefit of it; my opinion is that the greatest benefit has been received by the capitalist, because you read of men dying and leaving enormous piles of wealth, which was never known before, I think. If we refer back to history, we find men now dying leaving very large sums of money, that they could not possibly accumulate in years gone by; in fact, it would

Mr. *Mather* – continued.

would have been impossible for them to do so in a small number of years.

Chairman.

10830. You regard that progress of things as being a very large cause, at any rate, of the number of the unemployed?—Exactly.

10831. Let me now ask you, what suggestions have you to make; first of all, as to the best method of giving relief to the unemployed, because that, after all, is the main point that this Committee has to consider?—Personally, I do not think I should be called upon to offer any suggestions as to finding work for the unemployed. I think that the men who are in the capacity as Government officials, and men who occupy positions on town councils and vestries, are the people who certainly ought to try and formulate some scheme whereby the workmen who are out of work could be found work; but one of the suggestions that I would like to throw out, if I am called upon to do so (which I expect I am), would be for the Government to call an International Conference of all nationalities to agree upon reducing the hours of labour all the way round in every country. I attended the last International Conference held in Zurich, I think in 1893, and there was a resolution passed there by the whole of the delegates from all parts of the world, that they should urge upon all the respective Governments to call an International Conference with the view of reducing the hours of labour in all countries on similar lines to those on which a conference was called, I believe, some years ago, about the age of children being allowed to go to work in factories. I believe if that was done, undoubtedly some good would result from it. Then, if it could be agreed between the whole of the nations that no man should work more than eight hours a day, that would undoubtedly be the means of giving relief to the large number of men who are walking about the streets at the present time, and the employers would be exactly in the same position as they are to-day in regard to the competitive system; that is to say, if the hours were reduced all the way round. It seems to me that that would be a step in the right direction, because I think the hours of labour will have to be reduced if you are going to give any permanent relief to workmen.

10832. You think a reduction in the hours of labour would have the effect of giving employment to a larger number of men?—I do, in many industries; I do not say in every industry.

10833. In many industries the same amount of work is done in eight hours, is it not, as has been done in nine or 10, because the man is more fit all through the time?—Yes, but there are some industries undoubtedly to which the same thing would not apply. Take the trams and 'buses, and probably the railways, and many other industries; of course, there it would not apply; but it is undoubtedly quite true in many industries, where the eight hours has been adopted, that the men are really performing as much work in the eight hours as they formerly did in nine and nine and a-half hours. Therefore, you see, even the reduction of hours is no solution for the reduction of the unemployed. I do not think it is; it would be a temporary relief. And since the eight hours has been introduced into the gasworks the great development of machinery has taken place, of course; because, as the employers tell us, the cost of production has increased, and therefore they had to seek about for appliances; and probably, even if a general eight hours day were agreed to here in England, in various parts of the country, in the course of years to come the workman would, I think, be in exactly the same position as he is at the present time. Therefore, as I said, and I shall have to keep repeating it, I do not think there is any solution at all; and even if you endeavour, as it were, to find men some kind of temporary employment, it is temporary, certainly; it is giving the man a little bread to-day and to-morrow he is in exactly the same position again. I think what will have to be done sooner or later is that the Governments of the various countries will have to face this difficulty and endeavour to seek about and see if there is not a possibility of bringing about some kind of system where every man would be in a position to share the wealth that is produced where the hours of labour could be regulated, and there would be no necessity for any man, woman, or child to be starving, the same as they are at the present time.

Chairman—continued.

10834. You suggest the advantage of an international agreement about the hours of labour. Is there anything else you can say on the point of relieving the unemployed?—No.

10835. That would also be preventing the existence of the unemployed. What I wanted rather to know was, when we have unemployed men, what should we do with them; that is the point?—As long as we have them with us of course we have to find some kind of relief, and what seems to me will have to be done, if you are going to give any temporary relief, will be to get the men back upon the land again. I do not believe in these farm colonies at all; I do not think they will be of the slightest benefit to anyone. I certainly do believe in having the whole land cultivated, and I believe every inch of land should be cultivated, and the men who are out of employment should be engaged upon the land. I do not believe in the allotment system at all; I believe if land is to be cultivated, it should be cultivated by men who would follow up that work as their regular employment. I do not believe in men working in factories 10, 12, or perhaps 14 hours a day, and after they have performed their daily labour in the factories to go and turn to and cultivate land, perhaps, three or four hours per night. I was given to understand that down in Gainsborough. A lady down there told me that on moonlight nights several men, after they have been at work in Marshall's factory (and that factory works overtime every night, and has done for the last 16 years, from one hour to three per night), on moonlight nights were working really up to four in the morning. I believe that if the land has to be cultivated it should be cultivated by men, and they should be paid a decent wage under our present system, and the men should make it their regular avocation; they should not be allowed, I think, after they had been at work in the factories for 10 or 12 hours a day to go upon the land.

Chairman—continued.

10836. At any rate you do not regard allotments as a cure for the present condition of things?—No.

10837. You say that the unemployed should be put upon the land; but do you believe now, taking the Wanstead Flats' experiment, or any of those enterprises, that they have been successful?—I do not think they have; but there is a very large number of men who are out of employment in towns who would not possibly go back to the land at any price. I have never lived and worked in the country a day in my life. I belong to Birmingham, and have always resided in a town; it would be no good sending me on the land at all, and should be useless as going to work upon the land; and I believe there are a large number of such men. Even in the borough of West Ham and every town you would not get a great percentage of men to go back to the land at all; but, undoubtedly, there is a number of men who would be quite willing to go back to work upon the land that have been on it previously to coming to London or to different industrial centres. And if the land were cultivated there would be a great demand for machinery in other directions, agricultural implements, which would give more work to the engineers, and the various mechanics engaged in manufacturing agricultural implements; and that would be a kind of relief.

10838. But you do not believe in taking persons unaccustomed to agricultural work, and finding it profitable or advantageous to put them to that work?—No. I think it is useless, and I do not think it is a sound policy at all

Mr. *Mather.*

10839. You do not think that a man can be trained to do anything but what he has done for the last five years?—A man could certainly be trained to it; but there are any number of men out of work to-day in every industrial centre who are used to the land, and you would get sufficient, I think, to cultivate all the land in England.

10840. You would necessarily take those first?—Exactly.

Chairman.

10841. When we have, either in consequence of our social system, or from any mishap in trade, or from any other cause, a number of unemployed men who cannot find work, as in West Ham, have you any idea of the mode of dealing with them; that is to say, should they be dealt with by the Poor Law authority or by the municipal authority?—No; I believe, as it is a national question, the question should be dealt with and grappled with by the Government; because if one municipality attempts to grapple with the unemployed problem then you have a very great difficulty in keeping men from outside coming into the borough where you may be starting some kind of relief works. And I do not think it is altogether the duty of a municipality to grapple with the question at all.

10842. Still there must be some authority on the spot to manage it and deal with it?—Exactly. I believe that they should administer the law, or whatever it is, if there was a law established or

Chairman—continued.

passed by the Government, or if there was any money to be paid over, though that is a thing I do not altogether agree with; I believe in every man working for his living and not being subsidised, as it were, by payments from Government even. But, still, as we are working under an awful system, we have to do the best we can. And I do not believe in the guardians handling the unemployed; I do not think that is the proper authority.

10843. Do you think there is a strong feeling among well-doing men out of employment against coming in contact with the Poor Law authorities?—Yes, I know no end of people who would bear almost anything before they would go and apply for relief; any amount of men and women dying in secret poverty, as it were, and living in secret poverty, who will never make their wants known to anyone.

10844. But they would take similar assistance or help from a municipal body, would they?—As a kind of relief works; we find men willing to accept relief works where they have an idea that they are really earning their own living.

10845. But it must be divorced in some way from pauperism?—Yes.

10846. Then there is another point about which I should like to ask your opinion. When a man gets relief, not the ordinary pauper, of whom I do not wish to speak with disrespect, not the ordinary man who is obliged to come on the roll of paupers, but another kind of man, the workman who is thrown out of employment accidentally and takes relief, would you continue the condition that now applies, that he should lose his vote if he has one?—No, I do not think any man should be disfranchised simply because he accepts relief of any kind.

10847. Even the regular pauper; I mean the man who is constantly on the rates?—I believe any man or woman outside the workhouse should be in a position to exercise the vote.

10848. A man in receipt of ordinary out-door relief?—Yes; he should be allowed to use his vote, as any other citizen. It is not their fault that they are poor.

10849. It may be, of course?—I do not know. I do not think the people themselves are altogether responsible. I think society is to a great extent responsible for the misery and pauperism around us at the present time. Take such a place as Shadwell or Ratcliff Highway; you get a child brought up by parents perhaps a little bit shaky and ricketty; but take that child away, and put it in some other part of the country and with parents who will bring it up and rear it, and you will find that child turn out to be as healthy and as good a citizen perhaps as any child that has been born. Therefore I think when a child is allowed to remain in such wretched surroundings it has a tendency to make them criminals, what we call loafers at the present time.

10850. You would abolish this disfranchisement provision altogether?—Personally, I would not disfranchise anyone.

10851. But you are aware that one effect that that change would have is that the man in receipt of Poor Law relief would himself have a vote for the election of the guardians who administer

that

Chairman—continued.

that relief; do you see any harm in that?—I do not see any more harm in that than a man having a vote who is working for the municipality and giving his vote to a particular candidate standing as town councillor, because he has an idea that by a certain individual getting returned it will be a means of increasing his wages and reducing his hours; therefore I do not think it is any worse for a man to give a vote for a guardian in that direction than for a man working for a municipal corporation giving a vote for a town councillor.

10852. Have you any suggestions beyond what you have said as to the prevention of the periodic recurrence of depression in trade and consequent dearth of employment; is that covered by what you have told us?—I should say, of course, that the cause of the periodic recurrence of depression in trade, and consequent dearth of employment, is on account of the great development that is taking place in machinery and workmen in all parts of the country being in the position to produce, as it were, a greater amount of commodities in a certain time than they could some years ago. I think that comes pretty well under the head of machinery. You see in times of prosperity machinery is introduced and developed in all its stages; the cotton workers and all other sections of men are in a position to produce more now than ever in the history of this country, and in a less time even; therefore I think that is the cause why we have these periodical depressions, and undoubtedly people manipulating markets has something to do with it; the commercial men manipulating the markets has something to do with bringing these depressions about.

10853. Commercial men develop the market a good deal, do they not?—I do not think so. I think I find just as much employment as any commercial man, although I am only an ordinary working man. I use clothes, boots, and furniture, and it is only by that method we are in a position to live. Therefore I contend I find as much work for an ordinary workman as you do yourself.

Mr. *Mather.*

10854. And the cheaper your clothing is the more you can afford to buy?—Cheapness is not the best thing always.

10855. But if we have, any of us, a pound to spend, the cheaper the clothing is the more we can get?—That carries something else if I get a suit of clothes which is only going to last me six months.

10856. Of equal quality, I mean?—I quite agree, equal quality; but the principle now is to work as cheap as you can, and all kinds of shoddy is put into it.

Chairman.

10857. I think I have asked you questions on all the points that you wish to touch upon?—There is the question of overtime, which I think has something to do with the matter of the unemployed. I am entirely opposed to overtime, of course. I was speaking about Marshall's great engineering works in Gainsborough. For the last 16 years that firm has been working overtime, with

Chairman—continued.

the exception of a small break at the time of the miners' lock-out, when they could not get coal; they work from an hour to an hour and a-half and three hours' overtime per night, and have done for the last 16 years. And there are many other departments of labour where they work overtime; and yet we find in this engineering factory that is working overtime, and in many other parts of the country, they say trade is depressed. It seems to me that you should put an end to this overtime system. I know it is a question that will have to be dealt with either by the trades unions or by the Legislature, which, perhaps, may be very objectionable to some men; still, sooner or later, I think overtime will have to be knocked on the head. And I think when the Government are giving out contracts to various firms, such as Marshall's, Maudsley's, Penn's, and those other places, it should be a condition of the contract that the workman should not be allowed to work overtime. I think that should be in specifications.

10858. You would not allow it even in time of exceptional pressure for a day or two, or even for a week or two?—I would not object to any exceptional circumstances where anything was required very hurriedly, if it was exceptional; but only on that one point would I be prepared to give way.

Mr. *Mather.*

10859. Do you know that overtime is very unprofitable to the employers?—I do not think it is always.

10860. I have had great experience of overtime, and I have known overtime in my own works. Like Marshall's, for many years, probably 15 years, I was obliged to work overtime for three months in the year. I ceased to work overtime, and enlarged the means of production, and improved the means of production, and I found it very much better. You have not considered that, perhaps?—Take a place like Marshall's; if they did not work any overtime, or if it was not allowed, the result would be that they would have to extend their factory, and lay down more plant and machinery, and extend their buildings.

10861. It does not always follow; mechanical invention is not a finite quantity, and if the employer is compelled by force of circumstances to exercise more ingenuity in actually doing away with labour altogether, it might come in the long run that the pressure of the law that prevents his working more than a certain number of hours would increase the mechanism so much in his trade that the men would be permanently reduced in number?—Personally, I believe that, even if no pressure were brought to bear upon employers, if they can see a means whereby they can increase their methods of production, they will do it in spite of anyone.

10862. There is a degree of pressure, of course?—Perhaps if there is a little pressure brought to bear upon them that may be the means of their seeking around for further improvements in machinery.

10863. I entirely agree with you that overtime is a mistake and ought to be abolished?—That is my opinion.

Mr. *Randell.*

10864. On the question of allotments you do not wish us to understand, do you, that you are opposed to the granting of allotments to agricultural labourers?—Under the present system I should perhaps have to give way upon that point. But I do not believe in the allotment system at all as a kind of solution of this unemployed question.

10865. But dealing with society as you find it to-day, are you opposed to allotments for agricultural labourers?—As they are paid in such a miserable way, I find that in some instances it has a tendency to drag down wages. I am not altogether opposed to men having allotments if they are not purchased. In some districts the men are allowed allotments, and allowed to pay them off by instalments. In many places where they are in a position to purchase these allotments, as soon as the employer of labour begins to find out that the man has saved a few pounds, or has borrowed a little more money with a view of purchasing the land, then, when the purchase is completed, the employer of labour knows perfectly well that that man cannot very well remove, on account of the piece of land that he has purchased, as otherwise it would mean the man's removing to another part of the country, and he will leave the greater portion of the few pounds that he has invested in that land. Therefore, it has a tendency that way. I cannot mention any case in England, but I could cite a case in France where this system has been the means of dragging down the wages.

Chairman.

10866. That is to say, it gives the employers a hold over the men?—Yes. There is a different system, but on the same lines, in Gainsborough, where a number of men have saved a few pounds, borrowed the remainder, and purchased the house. The result is that when they have purchased the house they cannot very well leave Gainsborough, because if they do they must sell the house and lose the few pounds; and the employer of labour knows he has a hold on them, and he can pay them a low wage, and that reduces their wage.

Chairman—continued.

10867. That is not peculiar to allotments, however; any kind of fixed property would have the same effect?—I think it would.

Mr. *Logan.*

10868. On the question of allotments, do you not think that the agricultural labourer with a piece of allotment is a much more independent man than a man without an allotment?—No, I do not think he is.

10869. But that is only your opinion. You have had no experience of allotments?—Only by casual conversation with men when I have been in agricultural districts.

10870. Do you not know that in many agricultural districts men say that they do not know how they could have got through the winter at all if it had not been for their allotments?—I admit that they say that; but we find that before the allotment system was introduced men used to get on pretty well.

10871. But the allotment system is a very old one in this country?—Yes, but it has greatly developed in the last few years.

10872. I know a large number of agricultural labourers who have said to me that they did not know what they would have done if it had not been for their allotments?—It seems to me an absurdity for a man after he has been at work upon a farm 12 or 14 hours a day to have to turn to again, as it were, just to make both ends meet.

10873. I agree with you that an allotment to help a man to eke out a miserable wage is wrong in principle; but knowing, as I do, that you are anxious to improve the condition of your fellow workman, I am surprised to hear you say that you do not think that an agricultural labourer with an allotment is a more independent man than one who has no allotment?—It may, perhaps, be so in some districts, but in others I do not think it is the case.

Tuesday, 18*th June* 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Campbell-Bannerman.
Mr. Wootton Isaacson.
Mr. Heywood Johnstone.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Round.
Mr. John Wilson (Durham).

THE RIGHT HON. A. H. DYKE ACLAND IN THE CHAIR.

Mr. ERNEST AVES, called in; and Examined.

Chairman.

10874. I THINK you have been making a special study of the building trades in London in connection with some of Mr. Charles Booth's work, the result of which has been published in some of his books?—That is so.

10875. Can you tell us the kind of method in which you have carried on the special study of a trade like this?—Most of the facts and opinions that I shall state to-day are included in the report that I made for Mr. Charles Booth. The purely statistical part, in so far as it is derived from the census returns, was got out by Mr. Booth's own staff. My own part of the inquiry was connected with a more special study of the building trade as organised in London. The method of inquiry was by obtaining particulars in answer to circulars sent round to a very large number of employers in the trade, by interviews with several of those employers, by particulars obtained in the same way from the representatives of the various trade societies, and by interviews with individual employés.

10876. Have you anything to say with regard to the general composition of the building trade group with reference to the question of the unemployed?—I think one very important point is to realise how very composite the group is, how very much the different sections differ as regards the degree of skill their various members possess, as regards the conditions under which they work, and, therefore, largely as a consequence of these two points of difference, the different degree in which disturbing influences affect the different sections.

10877. If we take the case of severe weather in which kind of work are the members of the skilled branches most likely to be thrown out?—May I, in continuation of the former question, indicate two or three points. First of all, there is the main division between the skilled and the unskilled branches, and then the important distinction between work carried on inside, that is to

Chairman—continued.

say, under the shelter of the shop or the stone-yard, and outside on the buildings themselves.

10878. Will you tell us as to the severe weather and its effects?—It turns mainly on that question as to whether work is carried on in the buildings themselves or under the shelter of the workshop, as in the case of the joiners or machinists, because of the greater or less exposure to the weather to which the works under the one condition or the other would be subjected.

10879. And yet I suppose all the trade is interdependent, and that one part of it cannot go on very long without the help of the other. How far is that the case?—It is true to a very great extent. The other branches are dependent, for instance, on the work of the bricklayers and the masons as fixers of the stone, and the slaters and roof-tilers as being responsible for getting the roofs on. Of course, if the walls are not up and the roof is not on, the various classes of inside workers, house carpenters, plumbers and others, cannot get in and begin their work.

10880. So that the cessation of the work on the building itself very quickly affects any employment in the shops, I suppose?—It affects them, although it affects them somewhat later on. It would affect almost at once the subsidiary trades that were going to follow on, say the bricklayers on the building itself, but somewhat more remotely those who were working in the shops or the stone-yard. The joiner might go on, and probably would go on for a very much longer time than the masons as fixers. Certainly the joiners would go on much longer than the house carpenters or the plumbers would be able to, but ultimately, of course, they would be affected by inclement weather, for two reasons, I think: partly because, even if the orders were already in hand, the questions of storage of the finished work and of risk would become important, and partly because the question of lock-

Chairman—continued.

ing up the capital would also begin to have weight.

10881. Is any distinction to be drawn between the work which is done on new buildings and the work which is done on existing buildings in the way of repairs and renewals from this point of view?—Yes, I think so generally; because work on old buildings in the way of repairs and renewals is more protected, and therefore less subject to the influence of the weather, and also because work on old buildings (I mean the work of repair and renewal) is more subject to special influences, social and economic in their character, than work on new buildings. I can illustrate that by the effect that the London season would have on the West London painters and decorators for instance, and the corresponding influence on those who have to get their shops and warehouses and so forth ready for the busy season. Another good instance of the same thing is the fact that the joiners who are engaged by the big shop-fitting firms, are generally busiest in the winter time, because then they are preparing for the fitting up of shops, which in their turn will be busy when the summer season comes on.

10882. Is there a tendency during the season for some of these skilled workmen to find difficulty in getting employment in this special trade of shop-fitting?—I do not know that it amounts to that, because work on the whole in shops of that kind is fairly continuous, but in so far as there is a variation, the tendency is for them to be busier in the winter than in the summer. There is a certain amount of export trade in this branch which tends also to equalise the amount of employment throughout the year.

10883. In that particular branch there is a certain amount of export trade, which I suppose tends to make general employment somewhat steady throughout the year?—Quite so.

10884. Now, as to the two main classes of workers, taking the skilled workers first, can you give us any particulars as to their wages?—The average rate for almost every branch of the skilled trades is 9½*d.* an hour. The chief exceptions of those who earn habitually more are the plumbers, who earn 10½*d.*, and the masons when employed as fixers, that is to say, not in dressing stone, but in fixing it in position, who earn 10¼*d.* an hour. Masons, also, who work on granite, are paid 10¼*d.* Of course, there are other exceptions in the case of skilled men, specially skilled joiners and specially skilled decorators, for instance, who might earn more than the 9½*d.*, but those as a class are exceptions. The prevailing rate for the skilled men is 9½*d.* The chief exception below the 9½*d.* of the skilled men is the 8½*d.* rate for painters.

10885. The rate that you speak of, I suppose, is what would be ordinarily called the union rate?—I am speaking of the union rate which on the whole prevails.

10886. For men not in the union you would say, on the whole, the same rate of payment prevails?—On the whole it would prevail for most of the main branches. The painters that I mentioned just now are, of course, the most composite section in the whole group. The half-skilled brush hand very often does not get more than 7½*d.*; on the other hand, the highly-skilled painter and decorator, the man who can do the best work of all kinds, gets as much as 10½*d.* or 11*d.*, or even 11½*d.*

10887. Then, leaving out the painter for a moment, whose wage varies rather more, the ordinary rate for the skilled worker is 9½*d.* an hour?—Yes.

10888. And that prevails pretty largely throughout the whole group?—Yes. Another class that one would be inclined to mention as offering exceptions would be the handy men, the men who do not stick to one branch or the other, who might be bricklaying one day and jobbing of some other kind the next. They, as handy men, would very often earn lower rates. There are carpenters of the same class, but with the fully skilled man in all the main branches 9½*d.* prevails, whether he be a unionist or not.

10889. Now, come to the general labourers, whom we, perhaps, are more directly concerned with. What class of workers do you indicate by the term general labourers. Do you classify the general labourer at all in the building trade?—Yes. The term general labourer is not one that I use or that is used, as a matter of fact, in connection with that trade. The term general labourer is very much wider. It includes a great many workers who might never have done a day's work in connection with the building trade at all; porters of various kinds, navvies, and a nondescript class who habitually earn a promiscuous livelihood, who would do any kind of labouring work, all those and a great many others might quite well schedule themselves as general labourers, and undoubtedly would often do so.

10890. But are labourers who work in connection with the building trade to be divided into classes?—Yes, and they again can be subdivided.

10891. Would you say how you classify them?—The main divisions are the following: first of all, three classes of men who very often, although, of course, not exclusively, keep to their own special branches of labouring work. These are the scaffolders, the hoisters, and the timber men. The scaffolders, of course, are the men who put up the scaffolding; the hoisters are the men who either with or without a crane do the hoisting and putting into position of girders and big things, and help in moving the stone and other heavy things. Then there are the timber men, who are responsible for the strutting up of the sides of deep foundations. Those are what one may call the most skilled branches of the unskilled. Then there is another class of men who are called housebreakers, who are, to a considerable extent, interchangeable with the other branches, and especially with the scaffolders. They are men who are employed in demolishing old buildings that are going to be pulled down, and to clear sites. Then the third class consists of the various sections attached to the skilled trades: the bricklayer's labourer and the mason's labourer, the carpenter's labourer, the plumber's labourer, the painter's labourer, and the plumber's, smith's, and fitter's mates. There is then the excavator, the man who is employed in digging foundations, mixing concrete, and filling in

Chairman—continued.

in foundations, largely interchangeable with the third class, namely, those attached to skilled trades, but including also a great many who cannot get work in any other capacity.

10892. Will you tell us at this point what are the wages of these labourers so far as you know?—The scaffolders, hoisters, and timber men are paid 7*d.* an hour. Those attached to skilled trades, and the excavators are paid 6½*d.*, and men employed as housebreakers are also paid 7*d.* because of the additional risk; standing on a wall that is being pulled down is a very risky operation, and they get the extra halfpenny too; 6½*d.* and 7*d.* are the prevailing rates.

10893. Are these classes subject to the influences of the weather more than the first class we have spoken about, the skilled workmen?—Not as a class. To a very great extent of course they are subject to exactly the same influences as the skilled men.

10894. Especially those who are attached to the skilled men?—All those who are attached are exactly in the same position.

10895. With reference to the others, what do you say?—With regard to the rest, the excavators are most likely to be stopped by inclement weather. They work on soil, and soil if it gets hard and frozen cannot be worked, and they would be stopped. Those who are least subject to the effects of the weather are the scaffolders.

10896. Which of the class on the whole tend to be least well-off from the point of view of what they may earn in the whole year?—I should say certainly that class which is most exclusively employed on the foundations as excavators.

10897. Their wages are the most uncertain?—Yes, most uncertain; and also as a class a man who is working the greater part of his employed time, or almost the whole of it, on that branch of the building trade, will probably be a less valuable man than a man working on any other branch of labour, and will thus be most liable to dismissal.

10898. Can you tell us at all, from your observation, whether these labourers, speaking generally, are mostly town-born men or men who have come in from the country to compete with the town-born men?—I have no full particulars on that point; but I think there is no doubt about it that a very large majority are *born* in the country, but I think that a very much smaller proportion probably may be described as having been *bred* in the country than is true of, say, the bricklayers or the carpenters or plasterers. A very large proportion of those classes are not only born, but get their initial training, in the country, the country being for many reasons the best training-ground. But I do not think that that would hold with the labourers.

10899. You think that more of the skilled labourers will have been born and trained in the country than the labourers?—Of those branches that I mentioned (not, for instance, of the plumbers, and not the painters), but of the bricklayers, the plasterers, and the carpenters and the joiners, and I ought also to have mentioned the masons.

10900. You have made some inquiries, and asked questions, and so forth, to bring you to this opinion?—I have a certain amount of data, but I also draw the conclusion from my knowledge of the men, from those that I have seen, and from the character of their work. A man who comes up from the country when he is an adult is not, as a rule, a man who comes in to the lowest rank of any group of trades. In the building trade, a man who comes up as an adult and takes his place in the ranks of the trade is the man who knows some branch of the trade. I think one may rightly say of the builder's labourer that he does not come up as a rule from the country as an adult.

10901. Is your view confirmed at all by conversation with large employers on this matter?—No, I cannot say that it is.

10902. I suppose it is a very difficult subject to be sure about?—It is very difficult.

10903. You think you have fair ground for the view that you hold?—Yes, I think so.

10904. I think in some part of Mr. Booth's books there have been some special inquiries with relation to certain building firms on this matter. Did not Mr. Llewellyn Smith make certain inquiries?—Yes, in the first volume.

10905. And his special inquiries tended in the same direction?—Yes. I should not like to commit Mr. Llewellyn Smith to what I have stated, but the general burden of his conclusion was that men who came up from the country came, as a rule, to a definite job, and did not come to take their chance.

10906. They did not come to what is called the residuum, but they came to a pretty good job when they came up?—Yes.

10907. Before we leave this question of the work of the skilled labourers will you tell us what is the ordinary number of hours per week that they work?—The exact number varies with the season, being longer in the summer than in the winter, but according to the agreement of 1892, it averages out for the whole year at just about 48 hours per week.

10908. Then in some weeks it is less than 48?—Yes, for a certain number of weeks in the winter.

10909. That applies broadly throughout the trade?—Yes.

10910. Both for skilled men and unskilled?—Yes, broadly. Of course the unskilled men being so very largely dependent on the others, what rules with the skilled men almost necessarily rules for the unskilled.

10911. In the trade generally is there anything which accentuates the difficulty of season in relation to this trade?—Yes, I think there are two or three rather important influences. I suppose that, generally speaking, one would say that everything that tends to make employment irregular also tends to increase the chance of men being not only out of work but in difficulties when out of work when the dull season comes round, and there are two things especially that do tend to make employment irregular in this group. First of all, the practice of shifting so very constantly from employer to employer, sometimes done voluntarily when a man has some preference, because he likes a foreman or a shop

Chairman—continued.

a shop, or because he has a chance of getting work nearer home, or whatever it may be; but more often of course compulsorily shifting. Then the difficulty is very largely due to the contract system, by which contracts are undertaken by contractors and the men are taken on very largely by the foreman for the individual job. They are all subject to an hour's notice, and although if they are competent workmen and are steady they would be kept on, where they are wanted, they are all liable to dismissal at an hour's notice.

10912. I suppose it is much more difficult in this trade than in other trades, which are fixed in a particular locality, to be certain of continuous employment for many of the men?—Very much more difficult.

10913. They have to be constantly watching to see if a new building is rising as soon as they have finished one job in order to obtain another?—Yes. One finds that almost every foreman would have a nucleus, on any big job, of men that he knows, and very likely would have their names and addresses, and would write to them if the men did not follow him up on their own account, but the main body taken on would be taken on simply as casual applicants for work.

10914. Therefore, there is always a large fringe of the workers who are somewhat uncertain as to whether they will get a job in a few week's time or not?—Yes, put in that way a very large proportion.

10915. As a matter of fact, a great many of them do not often go more than a week or two without finding work, I suppose?—That is so, except, of course, at times of the year either when trade is exceptionally dull or when the weather is inclement.

10916. What is the worst time of the year?—Of course any given time when there is a frost.

10917. Apart from frost?—The early months; January would undoubtedly be the worst month. May I mention one point on the other matter, in the jobbing trade; that is to say, when employers have to send men to do odd jobs in private houses and so on, it is a much more common practice for them to have a permanent staff. There are, of course, many advantages in this: they are able to move them about from job to job, and the individual man secures more continuous employment. In the case of one employer, he said he did not hand over, as was the common practice, the responsibility of taking on men to his foremen, but did it himself, with this special object of having men permanently, and being able, as the foreman is not able to do, to move them on from job to job, the foreman being unable to pass them on to another job of which another foreman would be in charge. Although one understands why the other practice is adopted, it seems a very desirable thing that the practice of this individual employer should be more widely followed.

10918. Does the employer you speak of desire to give greater continuity of work to his men?—Yes. I have not got his evidence with me, but I remember he speaks of the proportion to which he is able to give regular work, and it is very much above the average.

Chairman—continued.

10919. You think that possibly some further organisation of the trade might give better security to the individual man?—I think it might give better security. Of course, from the conditions of the trade, and the fact that in one year a firm may be employing two or three thousand men it may be, and another year only 700 or 800 men, it is evident that there must be a very great deal of discontinuity.

10920. Is the employer you spoke of just now a large employer?—He is a contractor, but not a very large employer.

10921. Has anything occurred in the building trade of late years to disturb or alter the conditions of employment; the larger use of machinery, for instance?—In the case of machinery not to any very considerable extent excepting as regards labourers. One does hear a great many complaints that they are displaced very largely by the hoister and the Scotch steam derricks. I am inclined to think, myself, that although a certain number may be displaced by machinery, the effect of its introduction is rather to change the character of the labourer's work than simply to eliminate him. In the skilled branches, there is most machinery employed in the machinists' shops, which tends to deprive the joiners of some of their work. Different opinions are held among joiners as to what the real effect upon them is, some of them holding that a joiner is rapidly becoming a man who simply puts together pieces of work prepared by other people and makes nothing; others holding that the increased cheapness of the simpler parts of the work enables architects to estimate for more elaborate work, and in that way to secure to the joiner himself not less but a greater amount of work actually due to the introduction of machinery. I should add, it is not new machinery, but rather adaptations and improvements of old machinery, and a wider extension of its use.

10922. Should you say, from your own observations, that any very large proportion of the skilled men have been thrown out of work and fallen into a lower grade in consequence of these new processes?—No, I think not.

10923. They have been absorbed into new forms of work, which has not injured them?—I do not think, as regards any branch of the skilled trades, the effect of the introduction of machinery is sufficiently important to have displaced any considerable number.

10924. And your view with regard to labourers is the same?—In the main, with somewhat greater qualification. You asked me if there was any disturbing influence, and I should like to mention what seems to me more important than the introduction of new machinery, that is to say, the introduction of new processes and the introduction of new materials. I have put down some instances such as the use of terra-cotta or fancy brick facings for plaster stucco facings and stonework; for roofs the use of zinc instead of lead affecting the plumbers' trade and introducing the new class of zinc workers. The substitution of electric lighting for gas-fittings; the extended use of iron and steel girders and the patent flooring of different kinds, tending to affect the house carpenters; the use of metal lathing

Chairman—continued.

lathing instead of the ordinary wooden laths, affecting lathers; the use of slab plaster work displacing to some extent the ordinary plasterers. The last has not up to the present time been a very important influence, but it may become so.

10925. What has the effect of those new processes been?—They all tend to make things harder for the special section that they affect. The gasfitter, for instance, is having rather a hard time, and the old bellhanger, due to the introduction of electric lighting and electric bells.

10926. You do think that difficulties and hardships have arisen out of these changes?—I do, decidedly; hardship to many individuals who belong to the section affected.

10927. Then taking the case of such men who may be out of work through such causes or through any other cause, can these men easily fall back on alternative employments?—In the main I should say not easily. Skilled men as a rule keep exclusively to their own trade, and in a good many cases even what I have described as the more skilled of the labourers do. Such a man as a clever scaffolding hand, for instance, would do nothing else. If he could not get scaffolding work he would wait till it came round again. Of course, there are a certain number of labourers who go into the gasworks and have entirely different employment in the winter time. The painters, as I have said, are a very composite group, and many of those are only painters for, it may be, a few weeks in the year; they may be anything at any other time, waiters or scene-shifters, or anything. I am speaking now of men who ought not to be called painters properly, and for whom the term would be objected to by many in the trade, but they class themselves as such, and therefore have to be considered as such. There is another kind of work which is open to some men when they are out of work, and that is taking small jobs on their own account. It is the sort of work that bricklayers and carpenters especially are able to do, and, no doubt, a great deal of home work is done by carpenters.

10928. Small jobs for their neighbours?—Small jobs for their neighbours, or they make things to sell, and so forth. In my report I alluded to this, and said that it existed, certainly, as a possible alternative in some trades to a considerable extent, but that it rather had to be recognised as a resource; and that it was quite impossible to measure its actual use. Then at any given time when the unemployed question, as such, is before us, the neighbours of these men would probably not be very flush, and as their chief, their customers would not be very likely to be buying things or making work.

10929. So that, practically, you do not think that with reference to the skilled men and even the more skilled labourers that there is much for them to fall back upon when they are out of work?—Not for skilled men, except in the case of these nondescript painters. Much more so in the case of labourers.

10930. We have been sometimes told that work would be better distributed so as to cover what

Chairman—continued.

are ordinarily slack times with advantage. Have you considered that question, and have you any suggestion to make in relation to that?—In that connection I should like to mention two things, one is (and I mention it without any technical knowledge of what it is worth) a report made by the Consul General at Christiania, on the possibility of doing bricklayers' work in frosty weather. This memorandum is printed in "Laxton's Builders' Price Book", for 1894, page 37.

Mr. *Pickersgill.*

10931. Is the reference to the Parliamentary Papers given?—No, it is called the Report of Her Majesty's Consul General at Christiania, and the reference is not given. The practice seems to require greater care, but as far as one can judge not necessarily greater expense, and the main points seem to be that in the mixing of the lime special precaution has to be taken, and that the bricks used must be kept dry. Once or twice or even more in the collection of evidence I was told that a certain amount of the cessation of work during inclement weather is a cessation due not always to absolute necessity, but rather to the convenience of the employer. I would not attach undue importance to that, but as there would not be very much work going on, and capital might be short, and wages would not have to be paid, work might very often, I think, be stopped a bit earlier than it really need have been. Also, I have come across cases where work has been carried through during quite severe weather, which proves that with care it is possible to do it, but I am not prepared to say as to the extent to which the need of extra care means additional risk, or, on the other hand, to say to what extent it may also mean additional expense.

Chairman.

10932. I suppose their ordinary contracts are made without any proposals to incur additional expense at times like these?—Yes, certainly; and of course in the ordinary form of agreement, in the clause which refers to industrial disputes and disturbing influences of that kind, inclement weather is also mentioned, so that the contractor is protected. There is one other point in that last question of giving out the work that I should like to mention. It seems to me to be a quite possible plan and one that could be carried out to a greater extent than it is at present.

10933. You mean the putting out the work at a particular time of year when the trade is normally slack?—Yes; although I have not sufficient technical knowledge of the trade to know to what extent the work would be open to the risk of being less well done or done at greater expense; but one point in connection with the unemployed that I should like to mention is, that if work was put out in that way during the normally dull times, by hypothesis at that time a very large number of men would be out of work, including not only the more necessitous cases of the unemployed, but also many of the more competent men, and those men, of course, would naturally be chosen to do the work. There is no proposal that the London School

Chairman—continued.

Board, or any such body, should choose the more necessitous cases; they would choose the more competent hands, and therefore it follows that not only would the more necessitous not get work during the unusually dull times, but when the busy times came round they would have so much less chance of getting work according to the amount which had been given out during the dull time.

10934. You mean it would be more continuity for the skilled men without doing very much for those who are more necessitous?—Quite so. It might not only not be very much, but it might even tend to make their position harder.

10935. At other times?—Taking the year through.

10936. Have you anything more to say on that point?—No, except to note that it tends for a certain section to produce a greater regularity of employment. I think that in spite of the point I have mentioned above it is a desirable practice, but it always seems to me that it ought to be done with a clear understanding of what the effects would tend to be.

10937. Would you tell me generally whether you think the building trade has been a fairly prosperous trade in London of late years?—Yes, there is no doubt about it; I am not prepared to speak for 10 years.

10938. Five years?—Certainly for the last three or four years. I think I should be quite safe in saying for five years.

10939. You have not observed yourself, I suppose, a great amount of suffering and distress from want of employment arising in that particular trade?—No, I cannot say that I have.

10940. You have no further or special suggestion to make in relation to want of employment in that particular trade?—No.

10941. You think that on the whole your observations would tend to show that there is no very special case for change, or asserting any particular remedy in this particular group of trades?—Yes; speaking generally, that is so.

Mr. *Mather.*

10942. If that is so, I presume the Committee need not, so far as you are concerned, make any closer investigations into the conditions of the building trades in London. So far as your own experience is concerned you would say the Committee need not spend much time in considering the position of the building trade in London?—That might be my opinion, but, of course, the building trade is a seasonal trade. The ordinary seasonal condition of the trade seems to me to be such as to enable me to answer you in the negative, but, naturally, when one has such a season as the season of 1894 and 1895, there would be in some branches of the trade a special degree of necessity, but that does not mean that the trade, as a whole, considering it in its fairly normal conditions, is a trade which should be made the special subject for inquiry.

10943. Your opportunities for observation, I presume, have been somewhat extensive and very long?—Do you mean in connection with this trade?

Mr. *Mather*—continued

10944. Your observations connected with the building trade must have extended over some period of time?—Yes, for about three years. I began to inquire about three years ago, and although I have had other work to do and have not been able to keep at it I have had it in my mind since then.

10945. Apart from actual statistics which you have calculated, upon which I presume there is no doubt, what opportunities have you possessed for inquiring into the various matters on which you have expressed an opinion this morning; have you, for instance, had many opportunities of discussing the building trade conditions with large employers of labour?—Yes, with a certain number of large employers and with a very large number of men in the trade generally.

10946. Are the opinions you have expressed this morning as matters of opinion chiefly the result of the information derived from those employers?—No, I should say not chiefly; they are the result of the whole inquiry, which included interviews and reports of interviews made for me in a few cases by others who were helping me, in every branch of the trade; professional men, architects and others, and employers and the working men themselves.

10947. You have, I presume, investigated yourself personally, or caused investigation to be made, into the conditions of the unions in the building trade, and the opinions of the union leaders, and also the ordinary working men in the various branches?—Yes.

10948. Therefore, the information you gave us this morning is based on the evidence collected from experts in the trade, both working men and employers of labour and architects?—That is so.

10949. And no opinion you have offered to the Chairman is based on an academic view of the case, but is a practical view derived from this information?—I ought to be able to carry my mind back to all answers that I have given, but I think I can answer you in the affirmative.

10950. There was one discrepancy, if one may call it so, in your evidence. You said that the skilled men are employed during the winter months, at a time when buildings are not being erected, in the workshops of the builders, and the stonemasons are employed in preparing the work for the buildings, and that work is frequently stored up for months together, and finally brought to the buildings when the building opportunities occur. In relation to the general labourers including all the classes you have named you gave us four classes of labourers. These persons are entirely engaged on out-door work, are they not?—Yes.

10951. Therefore, their work is contingent on the weather, and the opportunity of erecting the building?—Almost entirely.

10952. You intimated that they shared somewhat the same advantages as the skilled men, but they had other employment apart from that of workmen on the buildings under erection?—I did not mean to imply that the skilled men who were working in the shops, or under shelter in the winter, were the same men who had been working on the buildings. I meant that those who were employed

Mr. *Mather*—continued.

employed in the joiners' shop, or in the stone-yard, or under shelter in the shops, would have a greater chance than the skilled man in the same trade, or the allied trade, who was habitually employed on the building.

10953. It frequently happens that the man who is employed in the shop is sent out to the building?—Very often. In the case of the carpenters and joiners, they are generally distinct.

10954. It is not the case that general labourers can be taken from the building, whether they be excavating or erecting scaffolding and turned on to the workshops?—No, and I did not mean that to any considerable extent the carpenters who were working on the buildings would be taken inside the joiners' shops. My impression is that it is done to a small extent. Might I say that in London, although there is a certain amount of interchange between the shops and the job, in the case of carpenters and joiners, in the main the men work at one or other of the branches, and it is a feature of the London building trade that there is more specialisation than I suppose there is in the same trade in any part of the world.

10955. Turning to the matter of statistics on which, I presume, you are infallible, because you may obtain correct statistics from these points, we come to the wages of skilled men. You said the average week consisted of 48 hours, and a man at full work during the week would earn about 38*s.* Can you give us that which you have not yet, I think, stated to the Committee namely, what would be the yearly income of a man earning 38*s.* a week when in full work, but taking the building trade as a whole with all its peculiarities, subject to changes of weather and spasmodic influences of all sorts, what would be the average yearly income of a good skilled tradesman in the building trade. Would it not, at 48 hours per week, and 50 weeks in the year, be 95*l.* per year. As compared with 95*l.* per year you possibly have statistics of what would be the income of such a person, namely, the well-conducted working man?—I have, as a matter of fact, got three kinds of evidence bearing on that point. First of all, the returns made by a considerable number of employers for single weeks, which, in the case of the bricklayers, average out at 35*s.* 2*d.* Then I have also had a certain number of specific cases in which bricklayers, masons, joiners, carpenters, painters, scaffolders, and a labourer had kept their own private accounts, in some cases, for long periods; in one case for 14 years, in another case for six years, in another for 11, and so on. Those I have averaged out, and, in the case of the masons and the bricklayers, those that have been given me averaged out at 33*s.* 10*d.* They are actual cases.

10956. Do you mean 33*s.* 10*d.* for 50 weeks?—For 52 weeks. That is, however, the actual average earnings of a certain number of specific cases that have been handed in to me.

10957. In order to give the Committee an idea of what the condition of workpeople is in the building trades as a whole have you no statistics to show what is the average earning of a thousand men during the year, well-conducted

Mr. *Mather*—continued.

working men, who work whenever work is to be obtained?—I have not, myself, facts of that kind as to so large a number of men as that, but I have a certain number of estimates, and, personally, I think you would have to wait a very long time before you got returns for 1,000 men who had kept an exact record from January to December. These estimates average out at 31*s.* 6*d.* per week, and in this chapter of Mr. Booth's book I express my opinion that this amount is not far from the actual truth, that taking the average weekly earnings for the whole year of a man who is neither exceptionally smart or exceptionally incompetent, if I put it at 31*s.* 6*d.* for the bricklayers and plasterers, I am not far from the mark.

10958. Can you explain what surprises me, because everyone knows the condition of the building trade, and how fluctuating it is. Comparing the statement you have made with one's own knowledge of the men in the engineering trade, for instance, where employment is much more regular where it is not governed by the weather, in that trade, taking the average of the men at 38*s.* per week for a full week, the average on the year comes very far below the total number of weeks at 38*s.* a week, and I am rather surprised to hear that in the building trade you have kept so near the actual wage?—The 33*s.* 10*d.* is only the average of a certain number, quite a small number, of selected cases of men who have kept a long record of their earnings. I do not accept that as the true average, except in the case of the few instances that I have given.

Mr. *Logan.*

10959. Exceptional men?—Exceptional men.

Mr. *Mather.*

10960. You can give the Committee no information on the point as to the average yearly earnings in the trade of the bricklayers, carpenters, and stonemasons?—I can in the way I have just mentioned, but taking all these facts together, the normal yearly rate, the average returns from employers, the specific instances, and the average of a certain number of selected estimates, I have arrived at the conclusion that we can put the average down at 31*s.* 6*d.*

10961. For the whole year?—For the whole year.

10962. If that has been proved to be the case I am not surprised you should say the building trade is in a very happy condition. Can you give us any idea with reference to the earnings of the general labourers on the whole year?—I cannot give them with as much assurance. My estimates there were between 17*s.* per week and 31*s.* per week for scaffolders and labourers, and the estimates average out at 23*s.* 3*d.* I am inclined to think that this may be a little bit over the mark, but I do not think it is very far out.

10963. Do you mean that builders' labourers, in anything like a general sense, obtain over 1*l.* a week all the year round?—I think a builders' labourer who works consistently as a builders' labourer probably earns that.

10964. Under the conditions of the trade,

Mr. *Mather*—continued.

with the peculiar fluctuations, and the weather influences being regarded as very important factors in the matter, do you believe that a general labourer in the building trade, a well-conducted thrifty man, can obtain work throughout the year to give an average of 21*s.* or 22*s.* per week for the whole year?—Yes.

10965. Those facts are very satisfactory, but they surprise me. Have you any knowledge of the effect upon the earnings of the workpeople in the building trade, and the reduction in the hours of work, which I think was established in London about three years ago. They reduced the number of hours per week for the whole trade?—Yes.

10966. Have you any knowledge of what the effect of it was upon the earnings of the men, or on the regularity of the work, or on the increase of work?—On the whole it has tended to make work more regular. Of course, not only has the length of the working day been shortened, but overtime in some branches has been almost entirely abolished.

10967. Have you any personal knowledge on that head or did you make any special inquiry on that point?—It came up constantly, of course, in conversation, but I cannot give any figures illustrating the actual effect on the actual earnings of the change.

Mr. *John Wilson* (Durham).

10968. I want to ask you in relation to this amount of money earned per week, that Mr. Mather has been asking you about. May I be allowed to ask you how you took those statistics as to the amount of money the men averaged per week the whole year round. You gave it, I think, at 31*s.* 6*d.*?—The conclusion I arrive at by a process of comparison with other figures that were available, and also by considering what amount of idle time would be possible for a man whose average was 31*s.* 6*d.* per week.

10969. How much idle time would a man have in the year to average 31*s.* 6*d.* per week in the year; it means one day per week, does it not?—About eight or nine weeks in the year.

10970. It is one day per week?—Yes.

10971. Is it your experience of the London building trades that they only lose one day per week, including holidays, and frosty weather, and sickness?—Of course there are very many men who lose a good deal more, but I have instance after instance of men who for years and years have lost practically no time at all.

10972. Are you now speaking from a number of special cases, and not from the aggregate number of men employed?—Yes.

Mr. *Benn*.

10973. Your evidence has been confined to the building trade?—Yes.

10974. Would you take it that the prosperity of that trade is a fair type of kindred trades in London; when I say kindred trades, I mean trades subject to the same class of fluctuation?—My own opinion is that it compares favourably.

Mr. *Benn*—continued.

Are you thinking of the carmen's trade, for instance.

10975. Yes, take the carmen's trade?—Speaking generally, I should say that the building trade has been a more flourishing trade than trades with which it might be compared in London.

10976. Would you not place it at the top of the list?—Yes, I should be inclined to, of any big group.

10977. And much above most others?—Comparisons of this kind are very difficult to make off-hand, but my impression is that it is certainly well a-head.

10978. It would not be wise for this Committee to take the prosperity of the building trade as a guide with regard to similar industries?—No, I think not.

10979. Now you have had, as I am aware, exceptional experience in the East-end in dealing with this problem of a man, a competent man in many cases, being thrown out of employment for no fault of his own and owing to the prolonged cessation of work, being in view of the workhouse. Have you any suggestion to make to the Committee as far as London is concerned which would enable some form of relief to be offered to that man without his either losing his vote or becoming a pauper?—Do you mean relief offered either by the State or the municipality.

10980. I ask you for a suggestion. You know the London problem well?—No, in those circumstances I do not think I have any suggestion to offer.

10981. You have nothing but the Poor Law and the Charity Organisation Society?—I did not mention them. You are using the Poor Law as symbolising all official forms of relief, and the Charity Organisation Society as symbolising all forms of voluntary charitable effort and friendly help, are you not.

10982. Yes?—With that definition I should say I have no further suggestion.

Mr. *Logan*.

10983. Do you not think that the prosperity of the building trade in London causes a large number of men to flock to London when the trade is busy?—It certainly is constantly exercising an attractive force. It has not been mentioned as a special subject of complaint to me, but the fact does remain, of course, that men are constantly coming in from the country.

10984. You would not be prepared to deny that it is a fact, if I were to put it to you as a fact, that the prosperity of the building trade in London has a tendency to draw men from various parts of the country?—It certainly has a tendency, the strength of which, however, would be entirely determined by the corresponding activity of the same trade in the provincial centres.

10985. Quite so, but may not the prosperity in one particular trade in London, acting as it does as a means of drawing men to London, be the cause of a number of men being out of employment, men coming here and not being able to find work?—The fact of men attracted by the prosperity.

10986. Yes,

Mr. *Logan*—continued.

10986. Yes, may not the exceptional state of prosperity in the building trade so attract men as to bring more men to London than can find work?—Personally I do not think it does work out quite in that way, because, as I said earlier in the evidence, speaking of the migrants from the country, as a class I do not think they are the men who are out of work. As they come they undoubtedly tend to make it harder for some others who are already on the spot.

10987. You said, in answer to the Chairman, that you thought it would be desirable, if it could be arranged, to give out the work during the time of the year when work is generally slack?—Yes.

10988. Is not that asking people to do the impossible, for instance, all builders work whenever it is possible for them to work, and the only reason why the builder does not work in the winter is because he cannot. Are you not, in suggesting he should work during the very time he tells you he cannot, asking him to do an impossibility?—There are two points on that: First of all, there is only the suggestion of an amateur that work may be possible in a greater part of the year than is generally considered to be the case, and even during frost as is suggested in the report I have mentioned; and secondly there are some branches of the trade in which work is certainly not impossible. It is only perhaps to be described as necessarily done under somewhat less advantageous circumstances.

10989. Taking the building trade as a whole, do not you think that the builders of London work all the hours they can work in the winter?—No, I am not prepared to answer that in the affirmative without qualification. Of course the stock exception is the painting.

10990. The painting is only done when the house is finished. The time when that work is stopped is the time of frost, or in the time of pouring wet weather. If the weather is fit to work, if it does not rain so as to compel the builders to stop, he does not stop; it is not to his interest to stop?—Not as a rule.

10991. You say the London builder does stop when he might work?—I said that it had been suggested to me that in some cases work was stopped sooner than was absolutely necessary.

10992. You do not tell the Committee of your own knowledge that that is the practice in London?—Not to any considerable extent. I agree with you that new work, on the whole, could not be started during the normally dull times; on the other hand, I should think one would be quite safe in holding the opinion that in connection with the organisation of the labour in the building trades by the exercise of more care and consideration on the part of the employer, greater continuity of employment could be secured.

10993. You think that the employer does not work the length of time that he might do in the winter months?—In some cases.

10994. That is the inference we must draw from what you say?—In some cases I should be inclined to say that.

Mr. *Logan*—continued.

10995. Do you think that it pays the builder to let everything stand when he has got all his staff organised ready to go on with the work?—As a rule not, but in exceptional cases it might be a convenience to do so.

10996. What sort of exceptional cases?—It might be shortness of capital, for instance.

10997. I do not think you ought to lead this Committee to infer that an improvement can be made as you suggest, in the way in which work is done, based upon the practice of a builder, who is short of capital, and, therefore, not able to do the work in the best possible manner; that is a thing that does not apply to the great bulk of London builders?—When I made the suggestion I was not thinking of new work.

10998. As a practical man I am anxious that the Committee should not take it from you that any great amount of building work can be done in the winter time more than is done now. I want to know from you whether you are of opinion that the builders of London stop their works in the winter when they might carry them on?—It is a difficult question for me to answer off-hand, because there are certain unknown quantities. At the moment I should say no.

10999. You seemed to infer just now that the uncertainty of work on the contract system is largely answerable for men being out of employment?—In so far as it tends to bring about great discontinuity in the employment of the individual man.

11000. I agree with you, and I think it is the main cause myself. Are you of opinion, supposing municipalities did their own work, that that would tend to greater continuity of work for the trades generally?—I have a great difficulty in answering that question, because it seems to me to depend entirely upon the policy in conducting and carrying out their own works that would be adopted. Speaking generally, I do not see why it should unless they did it from the same motives as led the London School Board to do some of its painting in the winter time; but the answer seems to me to resolve itself into a question of administration.

11001. Is it not the fact that now in one six months the amount of work done may be double or treble, say in London, that done in the corresponding six months in the year before by a given municipality?—Yes.

11002. Supposing a municipality divided its work over three, four, or five years, and did the same constant amount of work per month, do not you think that they would be simply stopping the influx of labour into London, and so providing constant employment for the men that are here?—Assuming there is that body of work waiting to be done that could be thus controlled, it would certainly have that effect.

11003. But the work is to be done year by year, and I should like to know whether it would not be infinitely better to divide that work over a certain period of time, instead of having, as is the case to-day, in one June 500 bricklayers employed, and perhaps in the corresponding June in the next year only 350 bricklayers employed. I ask you whether you do not think it

Mr. *Logan*—continued.

it would be a good thing for the working classes generally if municipalities so arranged their work as to do about the same amount of work month after month?—I do not think it follows that it would be advantageous if the municipality did its own work. It might give out the work with the same discretion whether it employs contractors or whether it does it itself.

11004. I do not bind you to the wisdom of a municipality actually doing its own work; that is a matter of opinion?—In the way you suggest it certainly might be split up

Mr. James Morton, called in; and Examined.

Chairman.

11005. Are you Chairman of the Unemployed Executive Committee of West Ham?—Yes.

11006. Will you tell us how long that committee has been in existence?—It has been in existence since last November.

11007. It was formed, in fact, at the beginning of the winter?—Yes.

11008. You want, I think, to tell us something about your opinion and that of others whom you represent on the work which has been done in West Ham for the unemployed, do you not?—Yes.

11009. What is your own view of the work which has been actually carried out this winter?—My individual opinion is that it has not touched the fringe of the unemployed question. It has been simply playing with it. At the meetings that were held of the unemployed and the public, they all agreed that what had been done, so far as the Poor Law Guardians were concerned, did not really deal with the matter. We applied to them, after the statistics had been gathered by the Trades Councils of the unemployed at West Ham.

11010. May I ask how your committee was formed?—It was elected amongst the unemployed assembled in the Grove one day. They had been promised some work by the cleansing department of West Ham. They were disappointed; they were indignant at the disappointment, and they assembled in the Grove, and I, as one, was selected as one of the spokesmen.

11011. To go to the town council?—To go to the highways committee, and to get an understanding with regard to this disappointment and the reason. We went to the works committee as a deputation of six.

11012. Had your committee been formed then?—No; the committee was appointed at this meeting. This deputation was formed as a committee for the rest of the season until something was done for the unemployed. We waited on the works committee, and it was shifted from the shoulders of one to the other, and we left the highways committee just as wise as we went to them. We did not bother any more with them, seeing we could not get anything from them, and we went to the West Ham Poor Law Guardians with the same deputation. When we went to them they offered us nothing else but the stoneyard. The stoneyard at that time was pretty full up; in fact, they said they could not take any more in; and even the house itself was over-crowded as well as the stoneyard.

11013. What did you ask them for?—We asked for work. So far as work was concerned, they said they could not give it to us unless we could formulate some scheme to them whereby they could give it to us.

Chairman—continued.

11014. Within their power under the law?—The work we asked for was within their powers.

11015. What kind of work did you ask them to give?—At Forest House, which belongs to the guardians, there is ample ground to put a number of men on for the purpose of cultivating it for kitchen garden produce for the use of the union. We drew up a scheme to that effect, and we asked the corporation and the guardians to contribute so much each for starting the unemployed there. We submitted the scheme to them, and they were highly pleased with it, only the Local Government Board would not allow them to go on with such a scheme.

11016. Did the board of guardians submit the proposal to the Local Government Board?—I believe they did. They gave us to understand they had sent the scheme there, and also a deputation of the board, to the Local Government Board. On the second visit we paid to the Poor Law Guardians they gave us to understand they had visited them, and also communicated by letter with the Local Government Board, and that they would not allow them to go on with such a scheme, and, consequently, we had to go back to the borough council. We went back to the borough council, and we were more successful the second time, because the snow being on the ground after Christmas, from 400 to 600 men were employed in clearing the streets in that direction.

11017. That was before the bad weather came on?—We went about from one place to another prior to the bad weather; we got practically nothing done for us until the bad weather set in.

11018. Then they began clearing the streets from the snow?—Yes; if the bad weather had not set in there would have been a large sewer opened, which is now started, and a number of men are employed on that; and there were two streets in Old Canning Town which were opened up for paving. They would have been opened up earlier had it not been for the severe frost that set in, but before the frost had properly cleared away they did open up the ground, and employed some 800 to 1,000 men per week. They gave one man one day, perhaps, out of eight or nine, 6*d.* an hour for six hours per day. That continued till that job was finished. Even that in itself did not materially help the unemployed in any way, because it only meant 3*s.* out of eight or nine days, which was not sufficient to keep any man and his wife and family.

Chairman—continued.

family. Then the unemployed met from time to time; and as our meetings were open-air ones, the public generally attended them as well. We had very large meetings, and the question was thoroughly discussed, and the public took part in them as well as the unemployed. Various suggestions were made, and we sent a deputation to the council to bring pressure to bear on the Government to do something on behalf of the unemployed. They agreed to do so, and I believe they did. The opinion generally was that the Government ought to do something on behalf of the unemployed.

11019. Are you going to tell us what the opinion was at your meetings on this subject, or are you going to criticise the actual work that was started?—No, I am going to speak of what took place at the meetings and what was the opinion of the meetings. The opinion of the meetings was (and they were composed of all sections of opinion, both political and orthodox, and otherwise), seeing that there were so many people starving and no proper means of feeding, and also keeping them warm in such severe weather, that the Government ought to do something for them, and the unanimous opinion was, that seeing there was so much waste land and idle labour, and so much money going out of this country for food stuffs, that the Government ought to step in and insist on the land that is now lying idle being brought into cultivation, or having the land taken possession of by various bodies deputed by the Government.

11020. You are not speaking of land only in West Ham, but land generally throughout the country?—Yes. The opinion of the meeting

Chairman—continued.

was in the general sense, not locally upon these questions, because they all recognised that it was a national question.

11021. The feeling was that a great many of those who were not employed in West Ham would take advantage of such a proposal, and go and work on the land?—Yes, because if it was started in West Ham they would flock from other districts, of course; and to prevent that it was absolutely necessary that it should be a national question, and the proposal was put forward that the parishes of London should be divided into four districts—north, south, east, and west, and the land most convenient to those districts would be procured, and that the *bonâ fide* unemployed would be put there, or more probably those who had been reared on the soil, and who had been forced through circumstances into the industrial centres should have the opportunity of going back. This raised another question again as to who would be willing to go back. We held meetings in various parts of the borough and took the opinion of the workers, and I may say that each meeting we held with regard to this question as to who would be willing to go back, we found that a great many, I may say from 20 to 30 per cent. of the meeting, was in favour of going back to the land even under the present conditions, if opportunities offered themselves of getting work, with a small wage and the same conditions under which the farm labourer works to-day. But they found it was impossible in the country to get work under the present conditions, and therefore they could not go back, and they were compelled to stay where they were.

MR. CAMPBELL-BANNERMAN TOOK THE CHAIR.

Chairman.

11022. Will you continue what you were saying when the Committee adjourned; you were telling us the opinions of your committee on the question of employment?—Our executive and the unemployed and the public who attended our meetings, as I have said already, were of opinion that the Government should do something, seeing that there was so much land lying waste, and so much labour, and so much money in the country, and also that there was so much money going out of the country for foreign produce in the matter of foods which the people could grow in the country themselves. That raised the question in this discussion as to the difference in cost that would arise between the labour employed by the Poor Law Guardians or the relief given by the Poor Law Guardians, and the labour given by the Government in establishing national farms or national colonies to deal with the unemployed. That, as I say, raised the question of the cost between the two sections. In West Ham, as it is reckoned, it would cost about 5*s.* 4*d.* per individual per week to maintain the men in the union. Taking 100 men with average families, it would come to about 150*l.* per week to maintain those people. It was also pointed out that even under the system

Chairman—continued.

of national colonies, paying 6*d.* an hour for 48 hours a week, it would only come to 120*l.* paid in wages, which would maintain an average family, and which to-day has to maintain more than an average family; and in this way it was reckoned that the unemployed would have the opportunity of earning a portion of the 60 or 70 millions of money which goes out of the country for food stuffs. Of course, objections again were raised with regard to competition, and as to the restrictions placed upon the land. The meetings were also of opinion that the Government ought to see that facilities should be given, or they should insist upon more facilities being given, for this land being acquired in the direction I have mentioned; that is, as I said, dividing London into four districts, and the various parishes throughout the country, according to the number of the population, being divided into districts, each district to have an establishment responsible to Government, but which it managed itself. The unemployed were to be set to work to produce food for themselves, and also food for the various institutions which depend upon the rates, and also to supply even the Government Departments; for it was pointed out on various occasions, as it has been pointed out since in this

Chairman—continued.

House in discussions that took place not long ago, that a great percentage of the commodities used in the Army were of foreign produce, and even since then there have been great objections as to that taking place; it is every-day talk in working men's organisations. Such a plan as that would give the unemployed an opportunity of earning that money instead of its going abroad.

11023. Do you consider that an ordinary unemployed labourer, who has never been accustomed to work upon the soil at all, if he was put to ordinary farm work, could do much good in the way of producing corn and beef and other commodities in competition with the foreigner?—I may say that point was dealt with, and it was suggested, or it was given out, that in the industrial centres there was an enormous number of farm labourers who had been attracted to industrial centres, and who had been forced, through want of employment in the rural districts, and one thing and another over which the workers themselves had no control, to come to those centres. The opinion was expressed pretty freely that a great number of those would be only too glad to get back to the land. Consequently the committee held meetings in various parts of the borough, and took the opinion of the meetings, and I think I may safely say that from 20 to 30 per cent. of the meetings were of opinion that even under the present conditions the farm labourers would be only too glad to go back to the land, providing an opportunity were given to them for doing so. But it was pointed out that even in the country, as well as in the industrial centres, it was almost impossible for a farm labourer to get work because of the various new methods, or improved methods, of cultivation as regards reaping, and so forth, and in that way they were driven into the industrial centres or into the union where they lived, or they had to make a living the best way possible. The opinion was, that if the Government were to do as I have described, or to assist these districts to do it, the farm labourer would have the first preference of going back to the occupation of his choice or of his birth. In coming in contact with men who have been brought up in the country they have expressed to me individually that they would be only too glad to go back to the country, no matter on what conditions. The opinion was expressed that those men would thus have the first preference of going back to the soil, and that would give a man, who was born and brought up in an industrial centre, an opportunity of getting work at the industry or occupation at which he has been in the habit of working.

11024. It would relieve the congestion and competition in the industrial centres?—Yes. If we look at all our large industrial concerns on the railways, and large factories, for instance, we find the labouring section are composed chiefly of farm workers and farm labourers; they are more keenly sought after because of their being strong and robust men, and more capable of doing a hard day's work than a man who has been brought up in an industrial centre because of his physique. That puts the town man at a disadvantage, and a great number of these men coming in owing to

Chairman—continued.

improvements in machinery, and one thing and another of that kind which cheapens the cost of production, and does away with manual labour, we find these men are forced into the ranks of the unemployed. Even to-day on my way here I had to pass on my way to the Town Hall the new theatre which is being built at Stratford; and I was surrounded there by a number of men who have somehow been casually employed since the winter; many of them one could hardly say had been employed it may be a week or a fortnight at a time. There were about 200, if not more, at that theatre, where they have begun to excavate the ground for the purpose of laying the foundation of the building, and looking round that body of men we have a class of men who would be only too glad to go back to the country again. Not only that, but we have found tradesmen who are out of work because younger men are preferred. One man in particular came to me, and he came to me last winter also. I had made careful inquiries into that man's circumstances last winter, because I thought he was a suspicious man; but I found that the man's circumstances deserved immediate attention; he is only one of many thousands I have come across during this last winter that were situated in the same position. That man is not an old man; he has not turned 50; but simply because he has grey hair he cannot get work. He is a painter by trade; he has had odd jobs from landlords and from some employers who have been extra pushed for men; but as to permanent employment, he tells me it is impossible to get it; they employ young men now in preference to old. This tells very much even against skilled workers. Even engineers and men from all classes and conditions of skilled labour are flocking to the ranks of the labourers, and in that way it is making the chances of work for a man who has not been brought up to a trade more precarious; and therefore, no matter how good a man's abilities may be as a workman, or his references as to respectability and sobriety, those things do not stand him in good stead now, simply because there are so many men in the market. During the taking of the census by the Trades' Council of the Borough of West Ham, I had charge of one district as agent, and I had four canvassers with me, and, of course, being unemployed myself at the time, I did a good deal of canvassing myself. In the district from Stratford Bridge (that is where the station of the Great Eastern Railway to Woolwich is) to Bow Bridge the visitations were 1,738. Deducting 642 women workers who were also unemployed, we had 1,096 in work out of 1,738; but taking the whole census in the borough right through, there were upwards of 10,000 unemployed altogether, that is, including Canning Town, Silvertown, and all within the Borough of West Ham, which is a wide one, including Forest Gate as well. In visiting those people I came across people who generally reckoned themselves to be of the respectable working class who would rather suffer than show their misery or their poverty. Those people are a class of people who never apply

Chairman—continued.

apply to the Poor Law; and that reason being shown, that is why the unemployed and the public generally in West Ham were not so very well pleased with the figures of the Poor Law guardians being taken as statistics for the unemployed, because they did not give reliable information. The only way we could get reliable information was from a house-to-house canvass, which we did by volunteers from various trade organisations, political organisations, and otherwise in the borough. With regard to these national farms, some people again contended that they could not produce the necessaries of life in this country cheaper than it could be done on the Continent. Taking the statistics of various eminent scientists and writers who have studied the question, such as Cobden, Ogilvie, Mechie, and Prince Krapotkine, and General Sir Arthur Cotton, of Woodcote Farm, Dorking, who, in 1893, after a scientific experiment on his farm, produced a crop of wheat yielding 130 bushels to the acre, with 6½ tons of straw, the fact can be proved; and taking, as Cobden says, the average production of England at 30 bushels to the acre, and taking this 130 bushels, we find that the 130 bushels is produced at almost the same cost as the 30 bushels; and if we take scientific methods of cultivation, we find the 130 bushels have been produced cheaper, and therefore there is no fear of foreign competition in that direction, if the Government would do as the public generally believe they can do, and are able to do if they are only willing, viz., to put such restrictions upon the land as to prevent people from keeping it lying idle as it is doing to-day. There is so much labour lying waste, and also so much money going out of the country which these unemployed do not get the chance of earning.

11025. Are you not afraid of being too sanguine in your views. Take the case of what are known as derelict farms, that is, farms which have been in cultivation and which have gone out of cultivation, because it was not found that it would pay to cultivate them, do you not think that private individuals, if that land was capable of producing 130 bushels of wheat, would come in and take the benefit of that fact?—There are farmers who no doubt would like to go in for them, but they are afraid of doing it. They do not study the scientific side of cultivation; they work rather on the present competitive system of cultivation, trying to take as much as they possibly can out of the land at the cheapest possible rate, and therefore impoverishing the land, and in consequence the land is no good to them in a few years, and they have to give it up or become bankrupt.

11026. You are familiar with Scotland; do you know the agricultural system in Scotland?—In Scotland, I may say, in the neighbourhood to which I belong, and where I was born and reared.

11027. Where is that?—Logie Almond, north of Perth; in that district which, in my boyhood days, used to consist of small farms, two years ago when I was north visiting the place, the farms I used to see when a boy were entirely absent, and the land lying waste.

11028. Not absolutely uncultivated, I suppose?—Yes; there were even weeds and shrubs growing out of the very windows of the houses; and some of the farms were lying desolate, you may say a wreck. In making inquiries of some of the people round about there, as I did (because at this time I had got to take an interest in these questions), I was given to understand that by the time the farmers of that district had produced their crops and brought it into the market, it would not pay them, because large farmers, such as General Arthur Cotton, by applying the latest improvements of science to the land, and the cultivation of it, were able to have their produce in the market quicker and in a better state than the small farmers were able to do; and, consequently, these small farms went to the wall, and the labourers who used to work upon their farms went into industrial centres. I may say the whole district round there is completely depopulated to what it was when I was a boy. Then, again, so far as tradesmen are concerned, as I have already said, taking the ranks of the labourers generally, I care not what section of the labourers, in the shipbuilding yards or the engineering shops, or the building trades, you will find all classes and conditions of skilled workers and skilled tradesmen, who have served an apprenticeship to various trades, working there as labourers. Where I am working at the present time (that is with the West Ham Corporation) there is a man working beside me who was a carpenter, and one who was a compositor. I myself unfortunately, or fortunately, in my younger days, when my parents came into town, went to a trade, and served my apprenticeship to it, but I never worked a week as a journeyman at it, because machinery at that time just came in and did away with the manual work; that was the rope and twine spinning. From that I went to sea, and even there you find now that the latest appliances are being brought into use there and displacing seamen also. Having had about 12 years at sea, I am now forced to take work in any occupation which I find I am capable of doing. It is the same with skilled labour, even among the engineers and cabinetmakers, and I find it is so even in the case of clerks. I was at a meeting last Sunday where there were some clerks complaining of want of employment, and consequently they will have to come down to the ranks of the labourers. The only way in which the difficulty can be met, so far as we can see, is that the natural resources of the country must be attended to. There was another point which was raised by some patriot at one of the meetings which we held in the Grove at Stratford; and I may say this man was very, very enthusiastic on this point: he instanced a case where a country was at war, and the grain was prevented from being exported after a certain date; that was when Turkey and Russia were at war; and he put it that if this country had any complications with any of the continental nations, seeing that we have to get all our food stuff from those countries, a crisis would arise, and, consequently, we would be starved into submission, or something of that kind. That might happen by a combination of the European powers, and this man contended that

Chairman—continued.

that if that was to be averted this Government, or any Government in power at the time, must, of necessity, take up this question, even from that standpoint alone. I may say that these enthusiastic meetings were all in favour of what the speaker said, although, from my own personal standpoint, I do not put much stress upon it; I am simply giving the opinions of the meetings, and the public who attended our meetings, on this point. Of course, so far as I am concerned with my own individual opinion, it conflicts a good deal with some of the opinions that have been put forward; but as I am simply a delegate here to give the opinion of those I represent, it would not do to give my opinion unless I was asked for it.

11029. There is one point which I do not know that you have touched upon, namely, the question whether depriving a man of his vote because of his receiving relief is a material element in the question?—Yes. I have omitted to deal with that point, and I am glad you have drawn my attention to it, because that was one point that was strongly pressed upon me, that various men, whom I know, even among those belonging to the Labourers' Union, of which I am a member, instead of applying to the union, even went the length of selling and pawning their household effects so as to save their votes, and they contended also at those meetings that it was a cruelty practised upon those men that they should be put in this position so that they would not have the rights of citizenship to raise their voice to right any wrongs that existed in the community, simply because, through no fault of their own, they were compelled to seek parish relief for their wives and families.

11030. That is to say, you would exempt men who, having been hard working and decent living men, and prudent men, through some misfortune, not of their own bringing about, have got into distress; would you extend the same exemption to others who received Poor Law relief of the ordinary kind, or would you draw a distinction?—I would draw no distinction. My reason for saying so is that those people, no matter what their social condition is, that are compelled to seek Poor Law relief, are not themselves responsible for the misfortune they are placed in.

11031. In all cases?—I may say in all cases. I am speaking now my own personal opinion; and I say so because whatever cause outside the want of work, and outside, also, old age and infirmity, has brought a man or woman into that condition, that man or woman is not, I would say, responsible for the cause, because the cause has been brought about by economic forces.

11032. What I mean is, you would not make that universal, would you. Supposing, for instance, a man, instead of being thrifty and saving, and well-living, drinks pretty heavily and brings himself to poverty, you would not say that was due to economic causes, would you?—Yes, it is.

11033. You would go so far as that?—Yes; I go down to the causes of the drinking custom, or the drinking amongst the working classes as they may be gathered from the evidence or the conclusion of all the inquiries that have ever been

Chairman—continued.

made upon the drinking amongst the working classes, even taking the late Earl of Shaftesbury's opinion upon it in his evidence given in this House upon the question. He contended that the working classes did not drink for drinking sake, but that they are forced to it by the insanitary and unhealthy conditions under which they have to live, and adulterated foods they have to eat, which do not give them nutrition, or do not sustain their energy, and therefore fly to this drink in their ignorance, and also with the hope of reviving their energy for the time being.

11034. Of course, that is true enough as a corrective to the tendency to impute to the whole class drinking habits, but we must all know that there are individuals who have no insanitary houses, and no adulterated food, and yet who drink. I think you will admit that there are some people who are more apt to become paupers than others, through their own character, or want of character; would you not make any distinction in their case. Hitherto it has always been considered that the fact of losing their vote has the effect of inducing and stimulating men to exert themselves to avoid coming on the rates at all; would it not be a good thing to maintain that?—That is just the very reason why I would give these people who are down in the world an opportunity of raising themselves by giving them self-confidence again, and giving them to understand the responsible position they hold in society, that being amenable to the laws of the land they would also have a voice in making those laws.

11035. You do not include in-door paupers in that, do you?—So far as regards the aged and infirm people, I would say that they should have the same voice and the same rights as men in health and strength.

11036. Would you give a man in that position a voice in Poor Law elections, in the parochial elections which govern the management of the very fund from which he himself benefits?—Most decidedly; because while he was in health and in work, and a citizen, he contributed to those funds up to the time when, through physical inability, he was not able to earn a living to contribute to them any longer, and therefore I contend that he is living only upon the funds that he had contributed to during the time that he was able to do so.

11037. You do not think that that would lead to extravagant management of the local funds?—No, I do not believe so. As regards the vote for the Poor Law guardians, in my experience as being at one time a representative of a parochial board in Scotland, I found the more comfortably you kept the patients and the more you worked the institution to their interests, the more also the inmates tried to study the interests of the institution.

11038. In Scotland there is no out-door able-bodied relief, is there?—There is no able-bodied relief.

11039. That makes a great difference between the two countries?—But then, so far as the Poor Law of Scotland is concerned, there is one point I should like to refer to with regard to the want of giving out-relief in Scotland to able-bodied men, which is liable to lead to mischief in this way;

Chairman—continued.

way; I have, in fact, seen it myself while I was resident in Dundee. I may say I was also very active in the unemployed movement there in the winter of 1893, and I found men, and women also, who were in health, but who yet, so that they would not be able-bodied, inflicted upon themselves a wound which made them unfit for work; and then applied for relief and got it, because they could not be refused. That is making workmen and working women, in their desperation, dishonest both to themselves and to the community; so that I think the sooner that law is amended the better; and, in fact, the sooner the Poor Law system is swept out of existence the better.

11040. There cannot be many cases of that sort, I should think?—There are not many of them; but still when a disease like that takes root, it soon spreads amongst an increasing population, and having regard to the destitution.

11041. Some further questions will be asked you by Members of the Committee, but is there any other point you would like to volunteer a statement upon?—There is no statement that I could volunteer, except that, so far as the unemployed question is concerned, I can only see one way out of it. All schemes that may be tried, such as even schemes for finding work for the unemployed throughout the winter, or starting any scheme which is not taken up by the nation, but only by individual or local effort, will not deal with the unemployed question, but simply aggravate it. It aggravates it because, as we experienced in West Ham this last winter, there were a section of the people such as those whom you have referred to who have been brought to the lowest stratum of social disorder, that is, they are brought down to the lowest rung of the social ladder; those people with these agitations take advantage of them when they crop up. And not only so, but this last winter, after we had been fairly successful with the corporation in getting work, various other institutions opened up ways and means whereby food could be got, coals could be got, and clothing and blankets could be got; and upon making inquiry and visiting those places myself, I found out that even people who were in work were receiving those benefits, and the *bonâ-fide* unemployed were not. In that way I contend those institutions do more harm to the *bonâ-fide* working man than they do good, simply because when this class of people, who are sunk down to the lowest stratum and have lost all self-respect, take advantage of these institutions, people who do not think out these questions for themselves just jump at these instances to ridicule the unemployed movement or any movement that may be put forth on their behalf, and describe the unemployed generally as loafers or thriftless people.

11042. You spoke just now of there being only one solution of the matter; would you make your meaning a little clearer; what do you say is the one solution?—That the land and the people must be brought together. That is the only solution that I can see for it; that is to say, that the State shall take the collective ownership of the land. Of course we know that the question will be raised here of compensation to

Chairman—continued.

landlords, but the question arises again, Where is the compensation that the workers have got when they have been disinherited? At one time in our history we find the land was the possession of the nation, and we read in the works of various writers that even the mines were the property of the nation in the early mining age, and even long afterwards we find the land also, to a certain extent, was in the possession of the people. In books of history written by some writers we find that the land was the property of the people, and therefore we contend as workers that this inheritance of the people ought to be returned to the people; and so far as compensation is concerned, we consider the landlords have had enough of compensation out of it when they have been able to heap up all the amount of wealth which they have heaped up out of it until to-day, seeing also that the workers have been the sufferers all along; and the only compensation that the workers have had is the suffering they have endured up till now; and this unemployment is the outcome of it.

Mr. *Mather.*

11043. Are you representing here to-day the committee of unemployed persons constituted in West Ham during the last winter?—Yes.

11044. Did that committee comprise all classes of the unemployed?—All sections of skilled and unskilled workers.

11045. Was it a very large committee, representing all the opinions of persons in that position?—There were five on the committee and myself; that was the committee that formed the deputation. Outside of that there were 25 members of the working committee, as we called them. When we were to hold meetings in any special part of the district that committee of 25 was called together.

11046. And what was there outside that again, what was the outer circle; who elected these committees?—The unemployed themselves.

11047. What would be the number at the mass meeting?—At the first meeting we assembled, I believe, there would be from 500 to 600, as near as I could guess.

11048. Would you be prepared to say here to-day that the views given by you represent the views of the whole of the unemployed in the district of West Ham?—Yes, in so far as we never had any opposition to those views.

11049. Did you discuss at your larger committee meetings any other remedies than this, which you have stated to-day to be the only solution of the difficulty. For instance, did you discuss the remedy put forward by the honourable Member for West Ham, that a large sum of money should be granted by the Government at every period of distress, and distributed among the unemployed persons, irrespective of any work they did for it or any duty performed to society; did you discuss that plan?—I may say that that question was hardly ever touched upon, because it was only looked upon as a temporary relief.

11050. You devoted yourself chiefly to finding out a permanent cure?—Yes, to finding out a permanent cure.

11051. To find a cure for what I may call the

Mr. *Mather*—continued.

chronic unemployed in districts like West Ham?—Yes.

11052. And you came to the conclusion that the only remedy was to prevent the labouring classes coming in from the country?—Yes, by making the land more attractive, and the labour on the land more attractive.

11053. Also, having stopped the stream from the country, you think you could cause a counter stream from the towns back to the land of those who had originally come from the country?—Yes, that was the prevailing idea among the unemployed.

11054. Is that your own opinion?—No, it is not my individual opinion. My indvidual opinion is that that would stem the tide for a time only, but that ultimately, with the progress of science and genius, machinery would still be brought in and still continue to displace men; and no matter what palliative may be brought forward for benefiting the unemployed outside the unemployed or the community whose wants and necessities would be met, no real benefit would accrue.

11055. Then the committee must understand that there is a distinction between your own private opinion and the opinion expressed by the committee which you represent?—Yes.

10156. The committee whom you represent thought that national farms which might be taken up by the Government and paid for and compensated for by the Government in some reasonable way, would not be more expensive to the ratepayers of the country than the present system of Poor Law relief?—They contended that that would be cheaper.

11057. And that yet it would give employment to those working men who will not receive relief in any other form but through work?—Yes.

11058. That is the view of your committee?—Yes.

11059. But you go a step further than that, and say all the land should be taken away by the Government for nothing and divided up among the people of the country?—I do not say to be divided up.

11060. How would you deal with it?—Simply that the State should take control of the land and establish those institutions which I have already referred to. Those institutions will simply produce for the wants and the necessities of the community of Great Britain.

11061. The difference between you and your committee of the unemployed of West Ham therefore was that you would cause this national movement to be conducted without any compensation at all, and your colleagues on the committee, and generally the working people of West Ham, would give the proprietors of the land some compensation for the land taken from them; that is to say, they should be paid rent for it?—So far as the question of compensation for the land is concerned, that point was not touched upon. It was left as a matter of detail for the bodies who would take the matter into consideration.

11062. Without going into these somewhat abstruse questions, may the Committee conclude, as regards the unemployed of West Ham; that is to say, those people who felt the pinch of the shoe, and suffered hunger and all the difficulties connected with unemployment, that it was their opinion that instead of going to the guardians and obtaining public money in the way of doles, or going to the workhouse to be kept out of the rates, they wanted Parliament or society to find a solution in the form of some constant work, and that you thought that the only constant work that could be obtained was through the land?—That is the opinion of the unemployed themselves. I, as chairman, was under their guidance.

11063. I was only asking what was the opinion of the mass meeting, and not simply the individual opinions of the committee or of yourself; I gather that that was the opinion of the unemployed themselves; that they wanted work, and not doles of charity, and not employment through the rates, or test employment, or any relief other than ordinary work given for ordinary pay?—I may say that there were many men of pretty good social standing who attended our meetings and took a great interest in them; and so far as regards the contention in favour of this method of employing labour upon the land they contended that this method of employing the unemployed labour would be one of the best labour tests that could be put, because the labour in itself was elevating and it would give the individual an opportunity of raising himself in the social scale.

11064. Do you know anything about the work done on Wanstead Flats under the scheme suggested by Mr. Hills?—I did not go into the question minutely, simply because of the principle involved in regard to the remuneration.

11065. Did you take any interest in the work done by those men, apart from the question upon which you split about wages; did you watch the experiment with any interest?—I may say that the experiment that has taken place was simply useless.

11066. When you say that the experiment was useless, do you mean that they did no work?—They did no productive or remunerative work, and, of course, we contend, and, in fact, the unemployed themselves, and the organisations throughout Stratford, distinctly contended, that the labour executed upon that land in itself was degrading, because it was not remunerative or in any way elevating or productive; it was simply turning over the soil and there was nothing to come from it.

11067. But I have seen the results of the labours of those men, and I suppose you have also; one finds some very beautifully laid out pitches for cricket and places levelled for all sorts of games, and roads made over commons, and a lake formed, and large pleasure grounds formed out of what was formerly a rough piece of ground that had been in a state of neglect for hundreds of years; that has all been done by this labour which I am speaking of; have you not seen the work which has been done?—Yes. I have been over the plots on several occasions.

11068. You do not believe that the work was done by these men at the same price as it would have been done had the authority given out the contract

Mr. *Mather*—continued.

contract to a general contractor for the purpose?—So far as the contract was concerned, if you compare dealing with a contractor and the scheme of Mr. Hills, no doubt Mr. Hills' scheme was cheaper than under a contractor. But in West Ham, in such a case as that of preparing ground, or making roads, or anything of that kind, the Borough Council do it themselves, and employ their own labour direct, and consequently they are able to do the work more satisfactorily and cheaper.

11069. You have not followed the experiment with any personal interest, in consequence of the difference of opinion you had on the question of wages, I suppose?—No.

Mr. *John Wilson* (Durham).

11070. I think you have only given us, up to the present, the opinion of the unemployed in West Ham?—That was all I was delegated to give.

11071. Their opinion resolves itself into this, does it not: that the solution of the unemployed problem would lie in getting the men back to the land; is it your opinion or their opinion that seeing there was a million and a quarter of unemployed (according to the evidence given to us by the honourable Member for West Ham), that million and a quarter of people could be employed upon the land of this country?—Yes.

11072. How would you do that. You said you would take four committees and divide London into four districts?—I would divide the parishes of London into four districts, and those districts would control their own localities or their own unemployed upon these institutions which they would be authorised to start; but they would also have to be responsible to the Government.

11073. Take the district in which you live (West Ham), the East-end district would include more divisions than West Ham?—In the Union of West Ham we have eight parishes.

11074. And how many unemployed have you?—To take the whole of the Union of West Ham, I could not definitely say; we only took the census of the unemployed within the Borough of West Ham. We have parishes in the union that lie a good distance out, such as Walthamstow. There are eight parishes. There is West Ham itself, Walthamstow, Wanstead, Woodford, East Ham, Leyton, Cann Hall, and Little Ilford. All those parishes are embodied in that union.

11075. If you divide London into four quarters, one quarter would include West Ham and a number of other places in the East-end of London, each of which has it own volume of unemployed. Taking your own district as it would be under this proposed arrangement, how would you take the unemployed from this district and put them upon the land, supposing you were on the committee for that district?—For that district it would simply be done in this way: that we would have a labour bureau where every workman would come and register himself as unemployed, his calling would be taken, and those who had been reared upon the land would be taken in, and those who had not been on the land would be grouped and put alongside of men

Mr. *John Wilson* (Durham)—continued.

who had been reared upon the land and who knew the whole of the industry, and in that way the one would educate the others.

11076. It is very interesting, because if you could sketch out a plan by which the unemployed could be employed, this Committee might adopt it; and having formed this plan in your mind, I am asking you, supposing you were a member of the committee in the east district of London, how far would you go from London to get land to employ all the men who were unemployed?—Personally, I am not acquainted with the geographical position of the unoccupied land outside, and therefore I could not answer that question straight off.

11077. I think you spoke about the collective ownership of land; you did not mean by that to parcel land out to each individual, did you?—No.

11078. Have you any views about collective ownership in any other direction?—Yes.

11079. Would you have collective ownership for all industries as well as land?—I would have it all through: for land, for the instruments and means of production, and for the means of exchange and transit.

11080. Could you inform us how you would start to carry that out?—Each industry would manage the carrying on of its own industry. Taking engineers, for example; from the engineers the best men would be taken and would be put as supervisors or guiders of the industry for carrying it on; but they would be responsible to the central body of the country.

11081. That is the theoretical part; let us get to the practical side of this question. I quite agree that in any system, whether private or collective, the best men should be the supervisors, but let us start at the beginning. Take the engineering industries, and supposing you divide London into four districts such as you described, would you by Act of Parliament take those industries from private owners and put them under national management?—It does not require an Act of Parliament.

11082. How would you do it?—Simply by starting the industries in these institutions that the Government would take on. Are you speaking of it apart from the four institutions got up for the unemployed?

11083. You have said that you would have collective ownership of land without compensation?—Yes.

11084. Would you also have collective ownership of industries without compensation?—Yes.

11085. How would you do that without an Act of Parliament; would each district take the industries within its district and say, "These are ours"?—We would start it as one firm starts up against another; the nation would start up on the co-operative principle against the individual.

11086. Taking the industries which you have in West Ham, in which the men cannot be employed at the present time, would you have the nation go there and start opposition industries to those now in operation?—Not in the locality; it must be a national movement. It would not survive if it took only a given locality.

11087. In

Mr. *John Wilson* (Durham)—continued.

11087. In West Ham the people are living there in their houses and working at various trades of which I do not know the names; is it your idea that you would start trades outside of West Ham and remove the people outside of West Ham, or would you start trades under Government control in West Ham?—The idea is to decentralize the population just as much as possible.

11088. Those are terms I do not understand; I want to get at the truth of things, and to use the plainest terms; "decentralization" is a thing I do speculate much upon; is it your opinion that the Government should start an industry or industries in West Ham in opposition to the industries in West Ham, or should they take some localities where there are no industries and remove the people *en bloc* to those localities?—I presume if it was started under Government control, you would do just identically the same as you have done in starting shipbuilding under the Government or engineering under the Government. You have those establishments established already; you are already in competition with private firms there. Therefore if you carry the same principle out nationally there is no more harm in doing it nationally than doing shipbuilding and all that work at Pembroke, or Portsmouth or Chatham.

11089. Now, going to the other point you mentioned, about the method of selection and getting the best men; you will grant that private industries in this country depend very largely upon the employers picking out the most skilful men to manage the work?—You see the employer himself is not the conductor of the industry. It is the working man, the man who has risen from the ranks who conducts it, whom he selects from amongst his workers. The same thing could be done under the co-operative system.

11090. But the working man does not place himself in that position; the employer watches and sees that he is a skilful man and puts him in the place; he has been a man who works himself up; is that your idea?—So far as the employers are concerned I do not find that as a general rule.

11091. How would you select the best men to put in supervision of a national concern?—The best way would be this: seeing that it was to be a national concern, the individuals in a given shop, or in a given work, would themselves be the best judges of who would conduct the workshop under the national principle; and therefore the workers themselves would select the men from amongst themselves, who would guide the industry, seeing it was to their own interests.

11092. The people of London, taking the East and the West-end of London together, would pay their quota to start every one of these industries, but those who paid in the West-end where there are no industries, would have no choice in selecting the men to manage these national concerns; it would be simply the people working in them who would have the choice of the men?—So far as the choice is concerned, those in the West-end of London would have an industry no matter what it may be; it may be in the East-end of London; and at the same time, education will spread to that extent that they will be able to recognise that those people are looking after the interests of the community in selecting the best men from amongst themselves, and therefore no jealousy will spring up upon that point.

11093. You think no jealousy will arise?—There will be no jealousy or injustice, because along with the spread of this principle and the spread of education, people will come to look upon these things more as a duty.

11094. Do you not think you are aiming at an ideal that is hardly within our touch at the present time when you speak about principles guiding men?—No.

11095. It is a laudable ideal to aim at, but is it not rather outside our touch at present?—All principles should be guides.

11096. Is anybody guided by principles?—We can be guided by principle, and we must show an example to people who are not.

11097. We will be egotistical enough to think, if you like, that we are guided by principle; but leaving that point, is it your idea that the sole cause of the drinking in this country is an economic cause?—Yes.

11098. Is there no moral cause whatever connected with it?—There is a moral cause. That moral cause comes from the side of society, which brings about the economic evils.

11099. Do you think that if you could by any legerdemain whatever, form a colony, and give every man a good house and pleasant surroundings, and leave them there with facilities to drink, every man you put there would be sober?—I do not exactly say that every man would be sober, but ultimately he would come to be a sober man.

11100. You say ultimately he would become sober; how far would it be off?—We cannot expect to change a man within 24 hours into what we like.

11101. That is just what I am saying about collective ownership; the principles would have to work and be accepted?—I say those principles would spread.

Mr. *Round.*

11102. You admit, as I understand, that the ranks of the unemployed are swelled a good deal by the labourers who come from the country into the towns?—Yes.

11103. And they come there because their employers cannot make the cultivation of the land pay; you admit that is the reason why they come there, do you not?—Yes.

11104. That being so, would you not first, before you go into your scheme, think it right to remove the obstacles which prevent the successful cultivation of the land now?—Yes, and I say my individual opinion is that the only obstacle lying in the way of the cultivation of the land at the present time is landlordism.

11105. You will admit that there are heavy charges upon the land?—Yes, by the landlords.

11106. Taking, for instance, rates, land tax, and other charges that have to be paid which render the cultivation of land not a pecuniary success, do you think those burdens should be removed

Mr. *Round*—continued.

removed first?—Those taxes are not, speaking economically, a tax upon the land; they are a tax upon industry; and although they are called land taxes they are so only in name, but actually they are a tax upon industry, because the landlord, if he is taxed upon his land values, simply puts it upon his rent, and the farmer puts that tax, which the landlord charges him, upon the price of the commodities he has produced, and consequently it is a tax upon the farmer's industry that puts the farmer in such a position that he is unable to produce the commodities from the land in such a way as would give him remuneration for his labour.

11107. At the end of the harvest the farmer calculates his receipts from his own harvest, and he has to pay his labour and whatever rates and taxes he has promised to pay, and then he finds at the end that he has not got enough to go on with, and so he is obliged to discharge his labourers?—Yes.

11108. Would you not think it right to remove those heavy charges on the land first, so as to enable the present occupiers who do understand the cultivation of the land to go on with their industry?—We say that the best way to do away with these taxes upon land is by the State taking the control of it; you would do away with them in that way. We say, instead of the landlord receiving the rent, the State should receive the rent from anyone who may choose to rent the land.

11109. You are going further than my questions. I was taking one point only. For instance, taking the roads all over the country, they are paid for now in England by the occupiers of houses and land?—Yes

11110. Would you not throw upon the whole community the keeping up of the roads instead of one class only?—The community, so far as I understand, pay for the up-keep of the roads already; because, no matter in what way the money is received for the up-keep of those roads, it all comes from labour, and no matter which channel the money goes through, it all comes from one source.

11111. You refer to Sir Arthur Cotton, as having grown 130 bushels of wheat to the acre: what reference do you give for that case; did it happen in England?—It was at Dorking, upon General Sir Arthur Cotton's Woodcote farm at Dorking.

11112. Do you know how many acres of wheat were grown?—I did not pursue the article right through and take the amount of acres of which his farm consisted; I simply got the fact that he produced a crop of wheat yielding 130 bushels to the acre, and 6½ tons of straw.

Mr. *Mather.*

11113. It was about half-an-acre of land that Sir Arthur Cotton planted, I think, was it not?—It says 130 bushels to the acre.

11114. The whole of it was not an acre; it was about half-an-acre in a garden; it was a purely scientific experiment?—I believe it was an experiment made simply for scientific purposes.

Chairman.

11115. It was not continued year after year, was it?—No, it was only in 1893, I think.

Mr. *Round.*

11116. You know, do you not, that 28 bushels is the average we grow in England per acre?—Yes, I am given to understand 28 bushels is the average. Cobden in his work gives it as 30.

11117. We will take it at 28 or 30; you are aware, are you not, that a far greater average per acre is produced in England than in any other country in the world?—Yes.

11118. Therefore you could hardly deduce any results from any larger figure than that, could you?—Yes; taking Ogilvie, he says that if the whole of Cheshire belonged to him he could make it produce three times its present production, and he has in some of his works said at that time he was prepared to come before this House and prove it. Mechie said that England could be made to produce 424,000,000*l*, which is more than the produce of the land to-day.

11119. Mr. Mechie made a good many improvements, and benefited others by his experiments, but he was obliged to go back to the old system of farming before he died?—Then Prince Kropotkine, in his scientific methods of cultivation, says that the crops of this country could be increased by 75 per cent. by the selection of seeds and scientific methods of cultivation.

Mr. *Bartley.*

11120. Do I understand you to say that the land is to be owned by the State, and that different people are to pay rent to the State?—Yes; that is, providing any one has the inclination which leads him to farming, or anything else for scientific purposes, or even for amusement, if the State so willed it they could let him a portion; but instead of his paying the rent to an individual he would pay to the State, and so the community would get the benefit.

11121. If people paid rent to the State instead of to the landlord, how would that make farming so much more profitable?—Because it would do away with the heavy draws that there are upon land at the present time.

11122. Why?—Because of the rates and various other things that are imposed upon the landlord; the landlord pays it, but at the same time he puts it upon industry, and industry really pays for it.

11123. Who would pay for the keeping up of the roads and the police and other things that now come out of the rates?—I have no doubt that the community (until such time as they could do without those forces) would see that they paid it collectively. There is no trouble about maintaining the police at the present time, or maintaining anything that is necessary for the welfare and government of the nation.

11124. Would not somebody have to pay it?—The nation would pay it collectively. The burden would not fall upon one section of the community as it falls to-day.

11125. If the nation pays collectively, is not that another way of saying that the individuals in the locality would pay their share?—Not necessarily;

Mr. *Bartley*—continued.

necessarily; because some localities are poor and others are rich.

11126. Taking the country all round, the result would be the same, would it not; that individuals would have to pay their share of the police and roads, and so on, and they would pay their rent to the State?—So far as altering the position, it simply means that they would pay it to their own exchequer instead of to individuals; that is all the difference.

11127. You think that paying it into another pocket would make agriculture prosperous at once?—Yes, to a certain extent it would.

11128. You said that 75,000,000*l.* was paid to foreign countries for food?—Yes, for foreign produce and food.

11129. If this plan which you propose were adopted you said that that money would be saved?—It would give those who are unemployed to-day an opportunity of keeping this money in the country by producing that which comes from other nations.

11130. How is that 75,000,000*l.* worth of food paid for now?—It is paid in various ways.

11131. Is it not paid chiefly by the manufacture of goods?—In some instances.

11132. Is it not entirely paid by the manufacture of goods?—No.

11133. Does any money pass in exchange; does any coin or gold leave this country; is it not all received from abroad into this country?—No, money changes hands as well as commodities.

11134. Is it not the fact that the exports of this country largely exceed the imports?—Yes.

11135. Does not that mean that goods are manufactured in this country that pay for the 75,000,000*l.*?—Yes.

11136. If that 75,000,000*l.* worth of food was not wanted from abroad, would it not mean that the 75,000,000*l.* worth of goods could not be made in this country?—If that 75,000,000*l.* were made in a collective sense in this country, or if the workers received the 75,000,000*l.* But they do not; it is a section of the community called employers and merchants who receive it, and therefore the workers do not gain by the importation into this country of the 75,000,000*l.*

11137. Do they not get wages for the manufacture?—Yes, those who are employed.

11138. Do any of those things grow of themselves; are not they all manufactured?—Yes.

11139. Is not the great bulk of the cost of manufacture the cost of wages?—Yes.

11140. Would not all that be stopped, and therefore the result would be that instead of making manufactured goods you would turn people to agriculture, which is not so profitable?—You see, the exports being in excess of the imports, it does not occur that the labour is employed all the more. Looking at the excess of exports, one would think that there was no man unemployed in this country; but the reverse is the case, because the improved machinery and the displaced labour cause the market to be glutted with unemployed men and women, and that shows that this money, or these goods that are exchanged for the imports, only go into the exchequer of a certain section of the community. Those who are displaced on the introduction of this machinery do not receive any benefit whatever.

Mr. *Bartley*—continued.

11141. Surely the workers in the industrial centres who produce these things which we export receive wages?—They receive wages.

11142. If you reduce the amount of manufactured goods that we export in exchange for the 75,000,000*l.* worth of food, do you not cut off so much labour in a way that would reduce the amount of employment to the country at large?—No.

11143. You do not think so?—No.

Mr. *Heywood Johnstone.*

11144. I understood you to say that the persons employed on Wanstead Flats considered the labour was degrading as it was not remunerative?—Yes; I contend that all work that is neither remunerative nor productive is degrading.

11145. Do you mean it was not remunerative to themselves or to those who employed them?—To the community.

11146. Including in "the community" those who employed them?—Yes.

11147. Do you admit that labour which is not to be degrading must involve profit to somebody, to the community or the individual?—It must be a benefit to the whole community.

11148. If it is a benefit to the individual, and not to the whole community, it is degrading?—It may be reckoned as a benefit to the individual in so far as for the time being it may find him a breakfast or a dinner, or pay for his night's lodging; but still, at the same time, the next day he is in the same place as he was prior to when he got this day's work, and therefore it is degrading because it raises up a man's hopes and the next day it crushes them down, and consequently it makes the man lose self-respect.

11149. My point is that from your point of view all labour must be profitable; is that so?—Necessarily.

11150. Your remedy for the existing state of things is to put people back to the land?—Yes, that must be the first step.

11151. From what you have said, it implies, as I understand, that the cultivation of the land must involve profit?—Not necessarily, providing that the community receive the advantage in so far as they are kept in comfort and in health, and with all their wants sufficiently supplied; beyond that there is no need for profit.

11152. Those who go back to the land are to be kept in comfort and health with all their wants supplied, even though it may be at the expense of the community?—Under the present system they are living at the expense to the community.

11153. Please answer my question. Is not the result of what you have just told us, that they are to be kept in health and comfort, with all their reasonable wants supplied, whether their labour results in profit to the community or not?—Yes.

11154. That is so; you admit that?—Yes.

11155. Therefore the question of profit is not a necessary part of your scheme for bringing the men back to the land?—No.

11156. The

Mr. *Heywood Johnstone*—continued.

11156. The scheme is the same, whether there is any profit to be made out of it or not. But you consider there is a large profit to be made out of the cultivation of land?—I consider that a great amount of profit could be made out of it under the present system, providing the restrictions upon the land at the present time were removed, or greater facilities were given for the land being brought into cultivation.

11157. You found yourself mainly, I think, on Sir Arthur Cotton's experiment?—Yes.

11158. You tell us you do not know whether that experiment has ever been repeated?—I cannot say. I have never heard any report to that effect.

11159. You do not know upon what area this wheat was grown; whether it was more than half an acre or not?—No; that was simply the figure given per acre.

11160. You base your idea as to profit entirely upon that?—I base my proposition upon this, that if 130 bushels per acre can be produced upon that land under those conditions, then, even under the present system, the land can be brought into such a position as to supply the market with that commodity which is brought from the Continent, and in this way it would employ a great section of the unemployed.

11161. You do not go so far as to say that every acre would produce 130 bushels?—I do not say every acre; but seeing that we have upwards of 20 million acres of arable land in this country, not including deer forests or land enclosed for other purposes, out of that 20 million acres, surely we could get as much as would meet the wants and the necessities of the unemployed, and, in fact, the whole community.

11162. Would you let me go by steps; what yield per acre do you expect to get from the 20 million acres; what would your average yield be?—Taking the figures of those men of experience who have made scientific experiments, and the figures of every statistician, and striking an average between them and the figures of General Sir Arthur Cotton, we may take it at 60 or 70 per cent. Sir Arthur Cotton gives 130 bushels to the acre and Cobden gives 30 bushels to the acre.

11163. You would take it at about 90 as the mean average?—I will give it at between 60 and 70.

11164. Shall we take 65 as the mean average production of the 20,000,000 acres of England?—Yes.

11165. Have you considered the question of soil at all?—No; I have not been able to go into that.

11166. That perhaps you would allow would make a little difference; can you grow the same quantity on the chalk that you can upon the clay?—I have not gone into details.

Chairman.

11167. You could not grow 130 bushels of wheat at Logie Almond, could you?—I do not say that we could grow 130 bushels all over the country. I have taken an average as 65.

11168. That is the point that the honourable Member is putting; what may be grown upon the best soil could not be grown upon inferior soil?—If we strike an average, we can get what would meet the wants of the community.

Mr. *Heywood Johnstone.*

11169. We may have possibly to recommend your scheme to the House for acceptance, and therefore I want to know exactly what it involves. You say you take as the average figure for the 20,000,000 acres about 65 bushels an acre?—Yes.

11170. You base your views virtually upon that. Do you know what the average production at the present time is in Norfolk?—No, I could not say definitely. I have read the production of last autumn in various parts of the country, and there were different figures given.

11171. May I put Norfolk as a fairly well farmed county; has not Norfolk a good reputation as a good corn-growing county?—I believe it has. I could not say definitely.

11172. Are you aware that the last Report of the Norfolk Chamber of Agriculture states that it is perfectly impossible at present prices to grow wheat at a profit at all?—Under the present conditions, and under the present system of culture; but using the latest and most improved condition, things would be different.

11173. What do you mean by "the present system of culture"; do you mean the four-course system, or what?—I mean by the present system just simply year after year planting and sowing seed in the ground without feeding the ground with proper manure, and without giving it the proper food, so that it will be able to rear the seed and be in a healthy condition.

11174. You are under the impression that it is very much a question of manuring?—Not exactly that. A good deal lies in the tilling of it; some simply till the surface and others go a good depth. The contention generally is that if you can till pretty deep and manure it well it will produce a stronger and heavier crop.

11175. Have you any practical experience in these matters?—I have not practical experience; I am simply going upon what I have read.

11176. You regard the question of production as simply a question of manuring and cultivating?—There is knowledge also required of seed, and so forth.

11177. Both manuring and cultivation, I presume, are questions of money?—Yes.

11178. If it paid to put into the ground either manure or cultivation, the private individual would do it, would he not?—No; because farmers have found that the more they improve the land the more burdens have been placed upon them, where farms have been taken under short leases and the like, and in regard to various other burdens that are placed upon them.

11179. I will not pursue that question, however interesting it may be. But take the case where a man owns his own land, is there any reason why he should not make it pay?—Unless the man has the capital to bring in all the latest improvements and uses scientific methods of cultivating the land, it would not pay.

Mr. *Heywood Johnstone*—continued.

11180. Then is it a question of capital?—Yes.

11181. You think that if a man has sufficient capital he would make the land pay?—If the man was in a position to apply it and is able under the present system to compete in the market with the large farmer who has all the latest improvements and uses all the latest improvements of cultivating the land and attending to it he will be able to succeed.

Mr. MATHER took the Chair.

Chairman.

11182. You come here to give the views of the Committee of the Unemployed of West Ham; are you not now going rather deep into the ground?—Members of the Committee are asking me questions which lead me into it.

11183. It is for you to judge whether honourable Members are carrying you beyond your knowledge?—I simply come here as chairman of the Unemployed Committee of last winter.

Mr. *Heywood Johnstone.*

11184. Then, may I take it that the Committee of the Unemployed of West Ham know just about as much of the cultivation and the tenure of agricultural land as you yourself do?—No; there are some far better versed in it than I am, because of their practical experience and knowledge: men, for instance, who have been reared in farm life the greater part of their lives.

11185. Are they men who have farmed themselves?—I will not say they have farmed themselves.

11186. They are lookers on who have seen most of the game?—They have worked as farm labourers and tilled the soil and attended to the farm as servants of the farmers.

11187. You represented their views when you say it is all a matter of dung and labour?—I am not going to say I represent their views on that particular point, because I have never got their views with regard to matters of detail as regards tilling and farm work.

11188. Can you tell us their views upon this one point: if tilling of the soil can be made to pay at present prices, why is it not made to pay by private enterprise?—The explanation that has been made here already is because of the heavy burdens that have been placed on the farmer.

Mr. *Heywood Johnstone*—continued.

11189. Whether he be tenant or occupier?—Whether he be tenant or occupier.

11190. Or an owner?—Or even owner. For instance, the railway tariff prevents a man from bringing his commodities into the market; there is a heavy tax put upon industry in that direction.

11191. It is really the weight upon the agricultural community in the shape of the burden of taxation and similar burdens which prevents the cultivation of land at a profit at the present time?—Yes.

Chairman.

11192. I suppose you do not wish the Committee to conclude, from anything you have said to day, in cross-examination, that either your own Unemployed Committee in West Ham, or yourself, desire to say anything more upon this question of employment than that you regard the land as a possible resource, not yet brought in, for the employment of the surplus labour in the towns; you do not go any further than that: that you regard the land as the best source, and the only source left, for the absorption of the unemployed labour?—That is the first step towards the solution of the unemployed question.

11193. That is the sum and substance of what you have to say?—Yes.

Friday, 21st June 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Lawrence.
Mr. Mather.
Mr. Round.
Mr. John Wilson (*Govan*).
Mr. Stuart-Wortley.

THE RIGHT HON. A. H. DYKE ACLAND, IN THE CHAIR.

Mr. BOLTON SMART, called in; and Examined.

Chairman.

11194. YOU are, I believe, Honorary Secretary to the Mansion House Committee on the Unemployed?—Yes.

11195. You are also a Poor Law Guardian of Stepney?—Yes.

11196. And a member of the Vestry of Ratcliffe?—Yes.

11197. I think you wish to give us just a short outline of the origin and the continuation of the scheme carried out by the Mansion House Committee; I assume you can give us that somewhat briefly?—Yes; the origin of the scheme, which took place in 1893, was owing to the consolidation of labour at the docks; that grew out of the dock strike of 1889, and the tendency, of course, was to eliminate casual labour, such as had been employed previously, taken on at the dock gates; and, as far as possible, to consolidate the labour which was necessary by increasing the number of permanent men, and making more permanent the casual labour. Of course, there was still casual labour left, but it was of a more continuous character, and a more permanent nature.

11198. Then the committee was formed specially to deal with this dock problem?—Yes, to deal with that particular problem.

11199. When did your committee begin actual work in this matter?—In 1893. The committee was called together at the latter end of 1892, and the work was commenced in January 1893. I may say the origin of the committee was after this fashion. It was felt by those of us who were living in the East End that a very great problem lay at our doors, as a very great number of men, probably about 7,000, would be cast adrift from their usual modicum of work at the docks; and a meeting of East End ministers and others engaged in philanthropic work was called at the Great Assembly Hall, Mile End. Then, unknown to us, another meeting was called by Canon Barnett at Toynbee Hall, and when the committee discovered their whereabouts and their intent an effort was made to join hands with them; that was successfully accomplished, and the whole situation was discussed then by a joint committee sitting at Toynbee Hall. The result of that was that it was definitely arranged that something should be done; certain principles were laid down and agreed to, which, of course, entailed a very great deal of give and take, as the joint committee was composed of extremes both in the direction of collectivism and individualism. However, eventually a common policy was agreed upon; then came the question of raising a fund. It was thought desirable that the Lord Mayor should be approached, and he undertook the chairmanship of the committee that was thenceforth called the Mansion House Conference. We met at the Mansion House, and, after considerable discussion, other members being added to the Conference at the suggestion of the Lord Mayor, he agreed to raise a fund for the scheme. Then the principal difficulty that seemed to face the committee was how to provide an efficient test of work for this casual element with which they had to do. They felt it was very essential that a strong test should be provided for these men. We were casting about at that time as to the possibilities of taking land for the purpose. At that time the County Council approached us through some of their members, suggesting that some 30 acres of waste land which they had, adjoining the Abbey Mills Pumping Station at Stratford, could be utilised for the purpose, the land to be eventually used for workmen's allotments; and we were given to understand that under the Small Holdings Act they would be obliged to fix the rent on the basis of out-of-pocket expenditure. Of course, if the London County Council had paid for all labour it would have sent up the rent too high for allotments. Eventually the offer of the County Council was accepted, and the work commenced in January 1893. The method of procedure upon application for help was, that men applying for assistance, who appeared to be within the scope of the scheme, were asked questions, and the case was taken down upon this form (*producing a form*), which is identical with that used by the Charity Organisation Society. The number of applicants applying in the first

Chairman—continued.

instance, that is those actually coming into contact with the secretaries, was 716.

11200. Was that during the early part of 1893?—Yes; out of that number the number of cases entered upon the case papers was 372. Of the 372 there were 70 rejections for various causes, and 22 applicants withdrew their cases. Of the 70 applicants who were rejected by this preliminary sifting process of inquiry there were some cases which were rejected as fraudulent, others as physically unfit for employment, others as ineligible through drunkenness, or other conspicuous defects in character, or for other causes. Of course we inquired into those cases in the usual way, very thoroughly, by application to past employers, relieving officers, the Charity Organisation Society, at previous addresses, and so on; and in every case the home was visited.

11201. Was it a necessary condition that these men should have worked in the docks at one time or another?—Yes; one condition was, that they must have been at least waterside labourers, either dockers or those who were dependent upon work at the docks in a subsidiary way.

11202. Will you now describe the nature of the work at Abbey Mills?—Yes. The mode of procedure was that if a man was accepted for the test at Abbey Mills he was given a work ticket, of which I have one here (*handing in a ticket*), with certain rules printed on the back. That work ticket reads thus: "The work given by this committee is only temporary, and this ticket is not available beyond the week in which it is issued. Rules: (1.) The wages will be 6*d.* an hour for a day of eight hours (8 a.m. to 12 a.m. and 1 p.m. to 5 p.m.). No man taken on after 8 a.m. (2.) No pay for meal time. (3.) No smoking allowed while at work. (4.) The foreman has authority to discharge any man at once for idleness or bad conduct. (5.) This ticket must be given to the foreman at the end of the week." With regard to the work ticket, I ought to say that it was non-transferable. The work was controlled by a superintendent and a staff of gangers. The superintendent was a skilled man, who was recommended to us for the purpose by Messrs. Cutbush, the horticulturists. Under the superintendent and the gangers the work was carefully supervised. As far as possible the committee wished to preserve the normal conditions of labour; and the superintendent and gangers were instructed not to drive the men, for that would defeat the purpose of the committee. We wished to know whether the men were really willing to work, and therefore we preserved, as far as possible, the normal conditions of labour. The gangers were instructed to carefully watch each man each day, and hand in a report, if necessary, to the superintendent each evening as to how the men had behaved and whether any man was shirking his work. If any man was found to shirk his work, he was warned once, and then dismissed if it occurred again. Each man, when put to his work, was instructed to carefully review his own position during his spell of work, and, if possible, to prepare some scheme for his permanent benefit, when he came before the committee for settlement; for the object was to provide for the permanent reinstatement of the men.

Chairman—continued.

11203. You do not mean, I presume, permanent reinstatement in the docks?—Permanent reinstatement anywhere.

11204. Because I presume reinstatement at the docks was more or less out of the question?—Yes. We were able to reinstate about nine men with B. tickets in the docks. The committee began by using their personal interest; but they immediately dropped that, because they found that although, by using personal influence, they could push a man in, they almost invariably pushed another man out.

11205. Do you mean using their personal influence with private employers of various kinds?—Yes, with the docks especially.

11206. With regard to the 372 applicants who were entered on the case papers and whose cases were actually taken for visitation, they were not all set to work?—No, they were not all set on the work. I will now give a general classification of those 372 applicants before going to work, or before arriving at the committee stage. Ninety-six were not offered test work for various reasons; five of those were helped in other ways; 276 were offered test work; 12 refused, having obtained other employment; 11 refused for other various reasons; 25 were dismissed from work for idleness or insubordination. I may say that nearly the whole of the 25 were dismissed at one sweep. We had some little difficulty, and we thought the best way would be to nip it in the bud, and one whole gang was accordingly dismissed there and then.

11207. They were not employed again?—No. That accounts mostly for the 25; then four were dismissed for incompetence or physical unfitness; and 224 finished their period of test-work.

11208. What was the period of test-work?—It varied. The test proper was 14 days, and if any scheme was possible for a man, the committee kept him in hand till it was carried out.

Mr. *Lawrence.*

11209. Do you say the length of the test was 14 days?—It was 14 days before they came back to the committee for settlement.

11210. How long were they working when you say the test was 14 days, did not some of them stay seven weeks?—Yes; but for the purpose of the test in the first instance, as to the willingness of a man to work, it was 14 days. Then he came back to the committee and presented his scheme for settlement, either for a migration or emigration, or in some other way.

Chairman.

11211. I believe you have some particulars as to the 372 applicants whose cases were entered on the case papers?—Yes, the case papers give a number of interesting particulars relating to the applicants. To take the birthplace first, an analysis of the alleged birthplaces of the 372 applicants shows that there were 228 born in London; urban, 36; rural, 2; uncertain, 12; Scotland, 3; Ireland, 17; abroad, 3; not stated, 71; making a total of 372; out of that total 228 were

Chairman—continued.

were stated, as I say, to have been born in London. The Committee felt that this birth table went to show that town poverty of the type that leads to a demand for relief was very largely a town product. It is indirectly influenced by the influx of countrymen, but it is directly a town product. The countryman does not come on our hands, but he pushes out another member of the community who comes upon our hands.

11212. The number of actual country-born in England was only two, I understand?—There were only two returned as rural.

11213. The fact that so very few of these men were country-born is evidence, in your mind, that the country-born man gets a better position when he comes to London than these town-people have?—Yes, decidedly.

Mr. *Mather.*

11214. He is stronger, I suppose?—Yes.

Chairman.

11215. Then, I think, you have some particulars as to the ages of the applicants?—Yes; under 25 years of age there were 30 applicants, over 25 and under 35 there were 134, over 35 and under 45 there were 122; over 45 and under 55, there were 74, over 55 and under 65 there were 12; 65 was the limit of age we drew in 1893. Then, I have some figures as to the number of rooms occupied by each family, as showing the class of men dealt with; the figures represent families in every case, because we only dealt with married men. The number of families who occupied one room each was 192, occupying two rooms 103, three rooms 45, four rooms 13, and not stated 19.

11216. I understand you only dealt with married men?—Only married men; there were just one or two exceptions, but those had relatives dependent upon them, an aged mother or something of that kind; so that practically they were in the position of married men.

11217. I think you have some statistics as to the number of applicants in trade societies?—Yes; 189 out of the 372 stated that they were or had been members of a trade society; but of those 99 had run out of membership; 22 societies were included in the list, in spite of the limitation to dock and water-side labourers, which goes to show, what is very well known, that casual docking was resorted to by every kind of man who happened to be thrown out of his own employment.

11218. How many of them were still paying members of trades unions?—189 were or had been members of a trade society, and had run out; so there were 90 in a trades society.

11219. And still paying?—Yes; that is, they had not run out. Of course there is a certain amount of grace given.

11220. Did you ascertain at all how long any of these men had been in a trades union?—No; except that I remember very distinctly in the personal cross-examination of these people that very many had not been in a trade society until the commencement of the agitation which eventually produced the strike of 1889.

11221. That means that some of them had been for a comparatively short time in the union that was formed at the time of the Dock Strike?—Yes, necessarily so, because the organisation of casual labour was in a very backward state until immediately previous to the strike.

11222. It is probable that very few of those casual men had been connected with the more organised unions that existed in the skilled trades?—Yes, we had a few instances, but they were quite exceptional.

11223. You have also some particulars as to their membership in friendly societies, have you not?—Yes, 158 out of the 372 stated that they were, or had been, members of a club or benefit society, and 70 of these had run out; so that about the same number were still in a benefit society.

11224. You know, of course, the report from the Board of Trade on the subject of the unemployed?—Yes.

11225. I see the number of applicants are classified under trade societies at page 246 of that report?—Yes; these figures are from that report mostly. Mr. Llewllyn Smith had full access to our case papers.

11226. The information which is given in the report is partly obtained from you?—Yes. The information may be taken as absolutely correct. It was confirmed also by private inquiry.

11227. Will you tell us how the cases were finally dealt with after they had passed through the test?—Of the 224 who completed the relief work, 19 got work of their own accord; two got work with the assistance of the Committee; helped with tools or equipment, 14; provided with the B. ticket at the docks, 7; fees paid to the trade society, or money advanced for this purpose, 23 (that was, in instances where it was impossible for a man to go to work unless he was re-instated); emigrated, 16; migrated, three; set up as hawker or dealer, five; temporarily assisted with money, six; passed on to another agency, one; not permanently helped, or no record, 128. Of course it will be remembered with regard to these figures that the unit represents the family, which averages five persons to each.

11228. Then I gather that one-third of the cases received no permanent assistance after you had dealt with them?—Quite so. As regards those men, so far as the main purpose of the Committee went, it failed. Of course there was the subsidiary help in the relief work given; but that was not the main object of the Committee.

11229. Will you tell us what you think were the causes of failure?—With regard to the reasons of some of the failures, I may say many of the men had no idea of re-instatement beyond getting a temporary job. Some who were considered suitable for emigration declined (usually throwing the responsibility upon the wife); others could only advance impracticable suggestions which the Committee were unable to entertain. If you will let me, later on in my evidence, I should like to mention some other difficulties which cropped up later, in the following year, which may have some bearing upon that point.

11230. Did you make any inquiry into the cases that were more or less satisfactorily started as

Chairman—continued.

as emigrants after they had been settled out in the colonies for a time?—Yes.

11231. Can you give us the particulars with regard to those cases?—The particulars were obtained six months after the sailing of 14 out of the 16 families emigrated to Canada, and they were as follows: A. was found to be earning 25*s.* per week as a driver, and the sister, who had gone out with the man and wife, is a servant, earning a good wage. Then as to B., the report is, no steady work, dissatisfied (said to be lazy); C., getting on well, earning 6*s.* 3*d.* per day; D., working as a platelayers' labourer, earning about 35*s.* per week; E., stableman at 33*s.* per week; F., blacksmith, four children in work, family earning 3*l.* 15*s.* 3*d.* per week. I have had a letter, subsequent to this report, from that man, in which he states that he has a six-roomed house, furnished well, and that he is doing very well; G., driving stationary engine, earning 7*l.* 18*s.* per month; H., in full work, wages not stated; I., in full work, wages not stated; J., working at forge, earning 4*s.* 2*d.* per day, with prospect of rise; K., obtained and lost several places, last heard of in work; L., employed in iron works, stated to be comfortable; M., employed as general labourer; N., found work, nature not stated. Inquiry was also instituted into the 76 families who were assisted beyond test work; 14 could not be traced; one had died; of the five set up as hawkers, four had failed, and the other one was not flourishing. Of the 23 restored to trade societies, 18 were inquired into, and of these, seven had improved their position; of the seven who received B. tickets at the docks, one could not be traced, and the others had improved their position, in the sense that they were no longer excluded from dock work. Of 15 men (out of 19) who had obtained work themselves at the end of their test work, five appeared to have bettered their positions; nine appeared no better off, and one had died. The two men for whom situations were obtained by the committee were still in the same employment; and of five men traced (out of six) who were assisted with money, three were found to be doing well. Of the 11 men traced (out of 14) who were helped with clothes, tools, &c., having already a definite prospect of work, four had improved their position; six were in much the same position as before, and one was in the workhouse. It was found by this inquiry that a very small proportion of the cases dealt with had subsequently applied for relief, either to the Poor Law authorities or the Charity Organisation Society. I may say that that is a report independent altogether of my committee. The inquiry was conducted by the Charity Organisation Society.

Mr. *Benn.*

11232. You say a very small proportion applied for relief afterwards; can you say how many out of the 370?—I cannot say; the report of the Charity Organisation Society says "a very small proportion." Six months subsequently to the test work given at Abbey Mills very few were found to have applied for relief, either to the Poor Law authorities or the Charity Organisation Society; which goes to show that where the committee did not help in the primary sense of their purpose they had really helped the men, from the fact that they had not since applied to the Poor Law, nor yet to the Charity Organisation Society.

Mr. *Benn*—continued.

Chairman.

11233. Do you think that of those that were settled in some way or another a great proportion have really been permanently assisted by your work?—I think so, decidedly.

11234. What sort of proportion?—Just in the proportion I have read.

11235. I did not know whether you might have a summary of the figures which you have given?—No, I have not got a summary.

11236. It would be a considerable proportion?—Yes.

11237. Had many of those people applied, to your knowledge, to the Poor Law or to the Charity Organisation Society, before they came to you?—A large number of them had had medical relief from the Poor Law. That is very usual in the East End, of course.

11238. You have no particulars about that?—No; the case papers would show, but unfortunately I have not a table setting that forth.

11239. Coming to the question of finance, will you tell us how much was raised in funds for the work in the year you have just described, and what was the expense of the scheme?—Unfortunately I cannot give you the total raised; I can only give you the total of the first year's expenditure; you will understand we have two accounts, and I simply have the committee account. The total amount expended was 1,315*l.* 1*s.* 1*d.*, and the analysis goes to show the following items: "offices, fire, lighting, stationery, printing, postage, &c., 19*l.* 14*s.* 10*d.*; salaries and wages to officials and agents, inquiry officers, &c., 34*l.* 10*s.* 4*d*; superintendent and gangers, 79*l.* 2*s.* 8½*d.*; purchase of tools, 83*l.* 1*s.* 5*d.*; wages paid to unemployed, 564*l.* 16*s.*; relief to unemployed, 107*l.* 17*s.* 4*d.*; sum expended on emigrating unemployed, 416*l.* 17*s.*; various incidental expenses, 9*l.* 11*s.* 6½*d.*; making up the total of 1,315*l.* 1*s.* 2*d.*

11240. Of course there was no profit at all on the work done?—No, except in the sense that it profited the neighbourhood by enabling the County Council to let out the land at reasonable charges to working men in a very poor neighbourhood in Stratford.

11241. That has been done?—Yes.

11242. The land in consequence was fitter to be cultivated after the work your people had done upon it?—Decidedly.

11243. What was the nature of the work there?—Levelling and draining, and the construction of a large dyke from one end to the other, and the laying out of roads, and improving the dykes that already existed. There is a backwash there from the Lea, and the land hitherto has been flooded each winter, and by opening up fresh dykes and improving the banks of the dykes that existed the land was practically rescued from being waste land to become what it is now, viz., allotments.

11244. Would

Chairman—continued.

11244. Would the work include actual digging?—In some cases we dug.

11245. Now turning to the following year, will you tell us what happened then?—The conference at the end of March 1893 adjourned until the 27th of October in the same year, when the industrial conditions of East London were again discussed at a series of meetings extending to the commencement of the new year (that is 1894). It was agreed, early in January 1894, to repeat the scheme of the previous year, with some alterations as to area, &c., as recommended by the executive committee.

11246. What were the reasons why you decided to repeat the scheme early in 1894?—It was thought desirable to do so for many reasons. One reason was that we had a very large number of people who were still affected by the want of work at the docks, on the old lines, and the waterside labour generally was very depressed that year.

11247. Did you make any alteration in your methods?—Yes; the alterations were first of all with regard to the area. In the first year the area included the Poor Law Unions of Stepney, Poplar, St. George's-in-the-East, and Mile End Old Town, with a population of about 378,000, I suppose. The committee in 1894 enlarged the area so as to embrace the whole of the Tower Hamlets. Then in the next place the restriction as to the applicants being waterside labourers was removed, and workmen, except those engaged in seasonal trades, with proper qualifications as to 12 months residence, &c., being eligible for the scheme. We found there was a very great deal of distress on the Bethnal Green side, which includes a very large number of people who are not engaged in waterside labour. Then in the third place the age limit was reduced from 65 to 55. Moreover, it was decided not to entertain any of the 1893 cases, should they apply, unless they presented some distinctly new feature, so that we should not deal with the same men twice. The total number of applicants for 1894 was 414; and of these 30 were out of the area, 38 were single men, 36 were over age, 19 were 1893 cases, 34 were seasonal trades, 116 were unsuitable for various reasons, and 141 cases were entertained, making up the total of 414. The committee found still stronger confirmation than in 1893 that the kind of poverty dealt with is largely a town product.

11248. Do you think that the fact that fewer cases were entertained in 1894 than in 1893 shows that there was less distress?—No; I think the stringent methods of inquiry, and so on, checked the people from coming to us very largely. The first year we had a great many of the "dosser" element, the common lodging-house men, and that swelled the number to 716; and we did not entertain single men at all. The next year they were perfectly well aware of that fact, and therefore they did not come. That accounts, very largely, for the fall in the number of applications.

11249. You had not so many of what you would call good applicants in the second year as in the first?—No; many men were deterred by the inquiries; I have not the slightest doubt about that.

Mr. *Benn.*

11250. Did not the fact that the intention of the committee was to suggest emigration, largely enter in as a test question?—The previous year our emigration cases had been in the main successful, and we were so pleased with our efforts in that direction, that we formulated a rule that every man should have definitely presented to him the idea of emigration; and immediately that began to be talked about among the men in the district, they fought shy.

Chairman.

11251. That is to say they would not apply to you, because they were afraid you were going to press them to emigrate?—Yes.

11252. That was not a correct impression?—It was not an absolute condition; every man had it presented to him.

11253. You did make more efforts to try and persuade them to emigrate in the second year?—Yes.

11254. And many of them fought shy altogether?—Yes.

11255. What happened to the 141 cases which were entertained?—I can give you the details as to their birthplace, if you wish to have them.

11256. If there is anything notable in the way of change, you might tell us that?—There was rather a larger proportion of the London born. There were 94 London born out of the 141; 17, urban; 23, country; 4, Ireland; and 1, Jersey. Then I have a similar table to that, which I gave for the previous year, as to the number of rooms occupied.

11257. I think you need not give us those particulars?—I have one new table here showing the rents.

11258. Will you give us the rents?—The minimum, maximum, and average rent paid per week was as follows: for one room the minimum was 1*s.* 6*d.*, the maximum 5*s.*, and the average 2*s.* 8$\frac{3}{4}$*d.*; for two rooms, the minimum was 2*s.* 9*d.*, the maximum 6*s.*, and the average 4*s.* 2$\frac{3}{4}$*d.*; for three rooms the minimum was 3*s.* 6*d.*, the maximum 6*s.* 6*d.*, and the average 5*s.* 1$\frac{3}{4}$*d.*; and for four or more rooms the minimum was 4*s.*, the maximum 11*s.*; and the average 7*s.* 1$\frac{1}{4}$*d.*; then I have another table showing the number of people in each room, the minimum, maximum, and average number of persons occupying the rooms were as follows: occupying one room the minimum was two, the maximum was seven, and the average three and three-quarters; two rooms, the minimum was two, the maximum 8, and the average four and seven-eights; three rooms, the minimum was four, the maximum ten, and the average six and three-eights; and four or more rooms, the minimum was three, the maximum eight, and the average five and a-half. Then I have particulars as to the ages of the applicants. The ages of course were different that year, because they were all under 55.

Mr. *Bartley.*

11259. Did they work on the same land as in the previous year?—Yes, on the same land; it was the same scheme, except that the work was rather more skilled. I will come to that more in detail presently.

Chairman.

11260. Will you now come to the point of how the cases were finally dealt with?—The 141 cases entertained were dealt with as follows: emigrated to Canada 23 (that represents 115 persons in all, averaging five each family); helped to other centres, four; restored to trade society, one; found employment themselves or with assistance of committee, 16; situations pending at the suspension of work (that is, promised situations), five; applications withdrawn, 10; failed to appear before committee, three; failed to reach emigration office, four; rejected by emigration office (not for any fault of character in many cases, but because they were unsuitable for emigration), 10; refused emigration after approved, 15; discharged for idleness or bad conduct, 14; written off as unsuitable for various reasons, 36; making up the total of 141.

11261. The number of those who may be said to have failed to benefit, was how many?—Ninety-two.

11262. As compared with 128 the year before?—Yes.

11263. Do you wish to say anything more upon that point?—No, excepting that it will be seen that a comparatively small proportion have been permanently helped out of the total number. But it should be remembered that the committee were dealing in the main with men who had been for years compelled to go through all the exigencies of casual dock labour, and where it was not casual dock labour it was casual labour of other sorts; they were almost in every case men of the casual type.

11264. There were fewer men benefited in proportion in 1894 than in 1893?—Yes. That is mainly owing to the fact that so many refused emigration. Many of those people preferred to remain as they were, although their condition was a very serious one, rather than face the new life. Many of them have a horror of this outside life, even in the country here, let alone going abroad.

11265. You mean that if it had not been for that feeling about emigration, you might have had more people to deal with?—Yes, and possibly we should have tried to help them in other ways. We felt the best work we did the year before was emigration, and therefore we directed our best efforts in that direction.

11266. Therefore you were not so much engaged in trying to find them work in this country?—No.

11267. Do you think that pressing emigration in the way you did, with people of that character, was the best course to take?—I think a very grave mistake was made, unintentionally, of course. We received advice from emigration offices, experts, and so on, and we went upon their advice; but undoubtedly there was a very serious depression setting in in Canada previous to our sending out those emigrants, and it was the most unpropitious year we could possibly have had for sending out these kind of men to Canada.

11268. And, moreover, you say this class of men had evinced an extraordinary reluctance to emigration in any case?—Yes.

Chairman—continued.

11269. Was it the case that the reports that came from those who emigrated in the first year had an effect of deterring the others?—Yes, in two or three cases; the two or three failures were very busy in sending letters over to men on this side.

11270. Of course those who had succeeded they did not hear so much of?—No; they were quiet.

11271. Then, with regard to the finance of this scheme of 1894, will you give us some particulars?—The approximate cost of the scheme for 1894 was: Offices, fire-lighting, printing, stationery, postage, &c., 53*l.*; salaries and wages to agents, &c., 36*l.*; salaries and wages to superintendent and gangers, 115*l.*; salaries and wages to unemployed, 540*l.*; relief to unemployed, 24*l.*; emigration, outfitting, &c., 328*l.*; purchase of tools, &c., 6*l.* 19*s.* 1½*d.*; making up a total of 1,102*l.* 19*s.* 1½*d.* You will notice that a larger number of cases were emigrated and cost less than in the previous year. The explanation is to be found in the fact that the emigration offices assisted from their own funds. I ought to say that 40*l.* of the debit for offices, fire-lighting, and so on, belonged to the previous year.

11272. As regards the amount for wages you have given us, you spent nearly as much as that in the previous year for a smaller number of people?—Yes, we continued longer with our work.

11273. Does that mean that you worked a longer number of weeks?—That is so.

11274. What was the maximum number of weeks that you worked in either year?—In 1894 the length of time worked by each applicant varied according to circumstances when they came before the committee for settlement. If it was found impossible to reinstate the man in any way he was at once firmly but kindly told we could do nothing further. If, on the other hand, either by emigration, migration, or written promise of work in the near future, there was any hope of reinstatement, the man was returned to work, pending settlement. The period of work varied, therefore, from a fortnight to upwards of two months.

11275. Two months was the maximum in some cases?—Yes.

11276. Have you anything more to say about the work of that year?—Yes. I have here just a brief report given by the London County Council valuer as to the nature and the character of the work done.

11277. During the two years?—Yes, during the two years; more especially the year 1894. The work of 1893 consisted in digging and levelling; this year the men have accomplished work of a more skilled character. The nature and stability of the work is thus set forth in the Official report of the London County Council Valuer to the Small Holdings Committee of the Council: "The most important work is the new dyke which is 550 feet in length with substantial flood-banks, the latter being constructed to a level of × 8 above Ordnance datum. The work has been satisfactorily completed, though the facing of the bank on the west side

is

Chairman—continued.

is not so well finished as that on the east side" (there is a note that "the west bank was done in the very dry weather of March" of that year, and it was tremendously heavy clay, and it was therefore impossible to do it so well). "The work however is substantial, and will no doubt fulfil its requirements. The flood bank on the west side of field No. 5 has been shifted nearer the existing ditch, and a new 10 feet roadway formed at the bottom of the slope. This work is satisfactory. The removal of a portion of the clay bank in field No. 5, has been partially carried out, and the same remark applies to the trenches for the reception of sewer refuse on the raised clay land. The Committee thus see that a considerable portion of the work which they were able to place at the disposal of the Mansion House Committee has been completed, though I may state that a larger amount still remains for future operations should occasion require."

11278. I suppose no attempt was made to value the total amount of work done?—I think not. I have here a description of an average day's work at Abbey Mills accomplished by a staff of 41 men which I can give the Committee if they wish.

11279. Will you please do so. The description is as follows: "664 wheelbarrow loads of very stiff clay, dug and wheeled 280 yards, shot, levelled, and well rammed to consolidate banks of the new dyke. 240 wheelbarrow loads of hard core, loaded, and wheeled 30 yards, broken, levelled, and well rammed into new road."

11280. Has any attempt been made to value the land as it now stands as compared with what it formerly was?—That I do not know. Then perhaps I might mention some of the other difficulties the committee found in the average applicant. First, as to the difficulties in the applicant himself; he is an unskilled workman who has rarely had any permanent situation; secondly, he is strongly attached to his own locality, and is firmly convinced the committee can find him a job right here; and thirdly, he is generally convinced it is the function of the committee to remodel the whole industrial system with immediate benefit to himself. Having surmounted what may be termed the educational difficulties, the committee were confronted with various domestic hindrances, such as a sickly wife or child, abnormally large family, &c. There were also the grave dangers of loose philanthropy to avoid, and the usual industrial difficulties well known to all who study the conditions of labour. While it is ever easy to give the most demoralised man a dole and pass him on out of sight, it is often difficult, if not impossible, firmly to reinstate an honest man who has been worsted in the battle of life. Then there are certain facts and principles which seem to be demonstrated by the work of the committee, and which I should like to describe briefly. First, it appears from the small number of men dismissed for idleness or bad conduct (14 in 1894, 25 in 1893; or 39 out of a total of 513), a very large proportion of the applicants were willing to work if they could obtain it; secondly, it is quite

Chairman—continued.

clear an efficient test of industry can be applied without recourse to even the modified workhouse test. Thirdly, the character and quality of the work done by the unemployed at Abbey Mills is a standing proof that, with better opportunities, many of these families can be saved from the grip of poverty and pauperism. And, fourthly, the work has been carried on with a minimum of irritation to the hungry applicant, and a minimum of risk by fraud and deception to those who have made the committee their almoner. The men, instead of being put back to starve during the time necessary for proper inquiry in this second year of our work, were at once set to work. If, after inquiry and test work, the applicant was found to be unworthy, or could not be reinstated for other reasons, he had only benefited by getting a few days' hardly earned wage. So that even where the committee failed in its main purpose of reinstatement, it accomplished a most efficient work of relief, safeguarded on every side from the dangers of loose philanthropy. In reference to the cost of the scheme, it must be borne in mind that the committee were dealing in every instance with families, the applicant counting but one in our case return, representing an average of five persons.

11281. You mean that you were dealing altogether with between 2,000 and 3,000 people?—Yes.

11282. I do not think you have told us what would be the ordinary wages earned by the men per week?—So far as I could find out from the applicants, and from inquiries in various directions, I am afraid the casual docker under the old *regime* would average about 13*s.* a week, taking the year round.

11283. How much in an ordinary case would he get from you when at work?—He would get four shillings a day and a short day on Saturday.

11284. Making a total of 22*s.* a week?—Yes.

11285. During that time was he fairly able to keep himself and his family on what you gave him?—Yes. There was a most remarkable improvement in the men. Many of the men were scarcely able to wheel a barrow when they went down to the works.

11286. Many of them were getting higher wages than they had been able to obtain before?—Most decidedly.

11287. Would it be the case that what you were giving to them was about the same as what a docker working through the week would receive at the docks?—Yes; if he worked the whole week they would get exactly the same.

11288. I understood you to say that many of these men had never got near to this 22*s.* a week for many preceding months?—Quite so; the average would be about 13*s.* or perhaps 14*s.* a week. I think it is fair to say in respect to the statement about the average wage of the casual docker, that the docker's wife of course in very many cases earns money.

11289. By various jobs of different sorts?—Yes.

11290. Will you just tell us what was done during the past winter?—The work this year

Chairman—continued.

arose from the very great suffering owing to the prolonged frost. The committee had not intended to do anything at all this winter, unless there should be presented very special features of distress. I may say that the committee themselves this year were urged from various sources to undertake the work. I think they themselves were not at all anxious to re-open the work this season. We were expecting the frost to break every week from the first week. However, when we did get into swing (of course, you cannot start it in two or three days), it was just as the frost broke.

11291. In March?—Yes.

11292. Will you tell us what work you did?—This year when we applied for the work at Abbey Mills, the County Council suggested that they had work of rather a better kind at Lower Sydenham. It seems that they had taken the lease of 10 acres of disused brick fields, and this they intended in some way or other to be prepared for workmen's allotments, answering two purposes, I presume, that is to say, preserving it as an open space, and also providing workmen's allotments for a large number of men employed in the Crystal Palace District Gas Works down there. Therefore we accepted their suggestion, and sent the men to Lower Sydenham instead of Abbey Mills. There is just one distinction I should like to point out in regard to this year; it has not materially affected the returns, but it was understood in the committee, that if any man applied from any part of the Metropolis we should take him if he was suitable, and that we should not confine it to the Tower Hamlets as we had done before. That, however, was not proclaimed, in any way, indeed the scheme was not proclaimed or advertised in any way; we opened the works, and took the men as they came.

11293. Will you give the numbers, as you did in the previous cases?—I myself interviewed about 169; but many men came to the office at other times, whom it was impossible to see. One hundred and sixty-nine were actually interviewed by me, and of these 85 were entertained. I have the particulars here as to the birthplaces of the applicants, and also as to their ages; but there is nothing very special about them.

11294. I think you need not trouble to give us those details. Will you give us the results, showing how the cases were finally dealt with in 1895?—Of the 85 cases entertained, the analysis is as follows: helped to other centres, 1; found employment themselves or with the assistance of the committee, 26; situations pending at suspension of work, 11; applications withdrawn, 2; failed to appear before committee or at work, 5; discharged for idleness or insubordination, 12; written off as unsuitable for various reasons, 12; various schemes for reinstatement either by stock, tools, &c., 16. I may say in every case where tools or stock was provided for a man it was on the condition that he himself paid into my hands a shilling a day from his wages the whole of the time he worked. In that way they provided themselves with tools in several of the cases that are included in that item.

11295. Then about half of them were helped, and half of them failed to obtain any particular relief benefit?—More than half were helped; those who had situations pending at the suspension of work were all under written promises; they had work promised them.

11296. Coming to the financial part of the scheme, would you tell us what it cost?—The cost of the scheme of 1895 was as follows: fire-lighting, printing, stationery, postage, &c., 26*l.* (10*l.* of that belongs to the 1894 account); salaries to inquiry agents, &c., 25*l.*; salaries to foremen of works, gangers, &c., 108*l.*; wages to unemployed, 486*l.*; relief, 69*l.* (53*l.* of that was sent to Canada to help other cases that were in distress from the previous year); outfits, stock, tools, &c., 51*l.*; purchase and repair of plant, &c., 15*l.*; making up a total of 780*l.* We worked longer this time than we had worked previously. We worked practically three months.

11297. A certain number of the men were working three months?—Yes, we were far more strict in taking our cases this year, which accounts for the better proportion. The weeding was done before the men went to work rather than after, and no one was put on to work unless there was a reasonable hope of re-instatement.

11298. You only closed your works some two or three weeks ago, I think?—In the first week of June.

11299. Why did you close them at that particular moment?—The men had gradually been settled until we got down to the number you have here, and it was impossible to keep the staff on another two or three weeks in order to help these men, and we have helped them in other ways, and they will be all in work, I presume, by the end of this week.

11300. I think you wish to say a few words as to the utility of the scheme, apart from the direct cost?—Yes, we felt, and I felt especially, that much good would come from the scheme, because every scheme of this kind carefully carried out helps to focus the problem that must be dealt with. Many of the theories as to how these people can be helped are chastened by experience, we are brought face to face with the causation of the distress, and led to seek remedies for the cause as well as to alleviate the distress, which I am sure we all deplore. I think such schemes also tend to bring philanthropy and economic science nearer to each other, and to become mutually helpful.

11301. You look upon this as being useful as a sort of experiment?—All through the committee have looked upon their work as a sort of experiment.

11302. You look upon it as an experiment, rather than as a particular method of affording relief?—Yes; it has been experimental all through.

11303. You would not, as the result of the three years' work, recommend the expenditure of similar sums of money wherever the unemployed problem presented itself?—In answer to that, I must say I do not know of anything where an attempt has been made that has succeeded so well and has worked so safely, in spite of the smallness

Chairman—continued.

smallness of the returns; it is the best thing that I have any knowledge of at all.

11304. You mean that the money, though a large sum, has been better spent in this way than in many other instances?—Decidedly.

11305. As to the problem generally, have you anything to say as to the result of your experience. Have you any suggestion to make with regard to the question we have before us in this Committee?—Yes. So far as the amelioration of relief goes, I should suggest that it is impossible for any voluntary committee to deal properly with this work. They can only deal with it in a very piecemeal kind of way; they have not at their command the necessary machinery to do it as it ought to be done; and I think, as regards the amelioration, when there is a properly ascertained necessity, help should be granted from the common poor fund, that is, that relief works should be paid for from the common poor fund.

11306. Relief granted to whom?—To applicants who are suffering from temporary out-of-work, from any acute cause.

11307. What I meant to ask was through whom is the relief from the common poor fund to go?—That I am not quite sure about. As a guardian I am very much afraid of suggesting that those people should come to the Poor Law in the ordinary way, or rather should receive it through the usual channel.

11308. If the relief from the common poor fund does not come through the board of guardians, I suppose it must come through the vestry?—I should suggest that works of public utility be undertaken, and a subsidy granted from the common poor fund, but only when there is a properly ascertained special need.

11309. Who is to be the judge of that?—That, I should suggest, would necessitate the reconstruction of our Poor Law government.

11310. You mean in London?—Yes; I think it would be manifestly dangerous to say to a certain district, "Now, we will make you a grant from the common poor fund whenever you desire it," unless you had some safeguard; and the only safeguard I know of is to constitute the whole of London as one Poor Law district, to be governed by an elected body; this elected body, of course, drawing representatives from every section of it, so that those who found the money would have a say upon the question when the need arose.

11311. Would you merge the present Poor Law Unions into one great union?—No; I should preserve the administrative power of the guardians up to a point, and the control would be exercised by an elected body rather than the permanent body we now have.

11312. The control of what?—I am speaking now of the Local Government Board.

11313. Would this elected body you speak of be elected by different bodies of Poor Law guardians?—Yes.

11314. What would its functions be?—Its functions would be to control the expenditure.

Mr. *Bartley.*

11315. How would it be elected; would it be elected specially by itself?—I should presume it would be elected by the boards of guardians.

Chairman.

11316. It is to control the boards of guardians?—Yes.

11317. Would it control their expenditure generally, or their expenditure on this particular point?—I am only looking at it from one standpoint now. Of course, if you say to this district or to that district, "We will supply you with funds for works of public utility from the common poor fund," I can easily see that a very great danger might arise; and some check is necessary as to determining the question whether the problem had become sufficiently acute to demand this special remedy. You must have somebody to settle that point. You cannot leave it to the people in the district. I think it would be unfair to draw money from the common poor fund and then leave it to the people in the particular district to say when they need the money and when they do not.

11318. I understood you just now to say you were doubtful whether this money should be granted to the guardians at all; you thought it might be granted to the vestries?—Yes.

11319. Then I assume the task of this elected body would be to say whether certain monies should be allotted to certain vestries from the common poor fund?—Yes.

11320. You think if they said that such funds should be allotted that would be satisfactory?—I think so.

11321. Have you anything more to say upon that point?—No, I think not.

11322. I suppose you think that the work carried on by the local authorities should, to some extent, follow the lines which your committee has gone upon?—Yes, unless they can devise better plans. I personally do not know of anything better.

11323. But I suppose you would subject it to some restrictions as to its being terminated within a limited time, and so forth?—I presume so.

11324. Certain rules would have to be laid down as to the way in which the money was expended and the conditions under which it was to be expended?—Decidedly.

11325. Have you anything further to say on the general subject before us?—No, I think not, excepting as to adjudging the equitable proportion of responsibility for the unemployed problem. I think that has a bearing upon the question, because there is a disposition in some quarters to unduly press upon those who are suffering under the difficulties of the situation; and I think there should be a very strong recognition of the fact that this is a very, very complex problem, and that whatever faults we may lay at the door of the man himself (and there are very grave ones), there are very many circumstances over which he has had no control, and which have helped to drag him down. The two great causes of degradation, as regards the men themselves, I should set forth as being drink and casual labour. I put casual labour second as a root cause of demoralisation among the men.

Chairman—continued.

11326. Does your experience lead you to suppose that this very difficult problem could be ameliorated by wise action on the part of local authorities in giving employment, the employment being given mainly, I assume, as a test?—Yes.

11327. You wish that to be done not by the Poor Law authorities, but by the vestry?—Yes.

11328. What is your view with regard to the effect of relief in connection with the question of disfranchisement?—My view is, that there should be a broad distinction drawn between a confirmed pauper and a man who is driven, under exceptional circumstances, to seek relief occasionally. We all know that we have a class of people who almost from generation to generation have been paupers, and others who have become confirmed paupers within the length of their own life.

11329. Do you think you could draw a distinction in an Act of Parliament which would disfranchise the regular paupers, as you call them, and which would keep the Parliamentary vote for those who were only applying at a given moment, and for a short time?—I think so; by the number of applications.

11330. You mean when a person had applied so many times he should be disfranchised?—Yes, he should be disfranchised for so long; I do not say he should be permanently disfranchised even then. If the man improved and re-instated himself as a good citizen and a self-supporting man, I would restore to him his rights of citizenship.

11331. Do you think that would work; it is rather difficult to put those things into an Act of Parliament, is it not?—I know it is.

Mr. *Billson.*

11332. Can you tell me what proportion of these people would have come on the Poor Rates if you had not taken them up?—I cannot tell you the proportion; probably very many of them.

11333. You think that a considerable proportion of this sum of 1,315*l.* which the scheme of 1893 cost you would have been paid out of public money if you had not paid it?—I think so.

11334. But you have formed no idea as to the proportion, whether it would be half or three-quarters of it?—No; I have not formed any idea as to the proportion.

11335. If you had had a larger area to deal with, I suppose you would have had a much larger number of people to treat?—Doubtless.

11336. Then do you think that if a system such as yours were extended all over the Metropolis, it would meet with the same sort of results that yours met with?—I do not think I suggested dealing with the whole of the Metropolis under the scheme I suggested, at one time.

11337. You look upon your scheme merely as an experiment?—Yes.

11338. How are you going to apply that experiment to the actual position?—Do you mean under the same conditions as have been suggested?

11339. Yes?—Taking, for instance, St. George's in-the-East, supposing there were some acute problem to be dealt with there through want of employment, the St. George's guardians would represent the matter to the controlling body as suggested; they would hear the evidence about the matter, and judge as to whether the problem was specially acute or not.

Mr. Billson—continued.

11340. Seeing that you give permanent employment, practically if such a scheme were established, would you not draw out a great number of people from other industries?—There is no suggestion to give permanent employment.

11341. How long do you propose to keep them?—I should not like to say off-hand.

11342. You would keep them till you had re-instated them, I suppose?—Not necessarily.

11343. If a man at the docks was only getting 13*s.* a week, would he not be very much induced to throw up that work and come and take work at your place?—I can conceive cases where even with the acute problem it would be absolutely dangerous to give more than a limited length of time for employment at these works; because if an industry is absolutely dead, the best thing is to scatter the people as soon as you can. But there is the immediate problem that has to be dealt with even then.

11344. You would take a man for a certain time as an experiment?—Yes.

11345. If you cannot succeed in re-instating him, would you let him go back again?—If he could not be dealt with under that scheme, no doubt he would have to come down lower, and would have eventually to go to the Poor Law. There is a proportion of the men who have to pass through periods of difficulty from time to time who could be saved by such a scheme from becoming paupers.

11346. Does not it occur to you that your inducement would make a great number of people dissatisfied who now, at all events, are getting on pretty well?—I do not think so.

11347. I mean because of the full wages you give for the time?—I do not necessarily bind myself to that under the scheme.

Mr. *Benn.*

11348. Your idea would be that, instead of an allowance of so much per head per day for paupers as at present obtains, under the common poor fund, it would be the same scheme of allowance of so much per head per day for the unemployed during a crisis we will say, and with the proper safeguards that those thus assisted were honest people out of work through no fault of their own?—Yes.

11349. That is your idea?—Yes.

11350. The scheme with which you have been associated, I take it, would only be utilised by a local authority in the event of the local authority having no local works which would cover the crisis in a particular district?—Exactly.

11351. You have referred to St. George's-in-the-East; do you think if such a fund were available a great deal more could be spent during such a period in St. George's-in the-East than is now spent?—Most decidedly.

Mr. *Benn*—continued.

11352. So that your scheme of test work on the land need only apply to cases of exceptional distress where there was no local work to provide the necessary test?—Yes.

11353. You are familiar with the foreshore of the Thames, are you not?—Yes.

11354. Could you tell the Committee whether, in the event of such a fund being available, it is not a feasible scheme that the foreshore of the Thames could be improved in some such way as that indicated by the Abbey Mills scheme?—I have no doubt whatever, so far as the quality of the labour goes, there would be no difficulty at all. As to the actual work to be undertaken on the foreshore, of course I have heard and read a good deal about it, but I am not in a position to express any opinion personally upon the point. But if there is work to be done in that direction that would be profitable; I am quite sure the labour we have would be admirable labour to use in that direction.

11355. As to the poverty of the Tower Hamlets generally, you have been very intimately in touch with that district for two or three years, have you not?—Yes, for six years.

11356. Can you give us any information throwing light upon the fact that, during the last five years, the pauperism of the Tower Hamlets, judging from the official returns, has trebled. I notice that that is so?—Yes.

11357. What would be the general explanation of that melancholy fact?—There are a variety of causes. I know one great cause of the increase, so far as my own union goes, is that we have to deal with the very great difficulty arising from the influx of a very undesirable type through the opening of free shelters and that kind of thing. In the half-year ending with Lady-day, 45 per cent. of those coming into our workhouse at Stepney come from free shelters or common lodging houses.

11358. Is it not the fact that some districts of London are getting richer and more respectable, while other districts seem to be getting more miserable and poorer?—There is no doubt that is another cause. We find among our men in cases where we succeed in making him more respectable, and restoring him to the normal conditions of living and so on, he takes flight and runs out to Forest Gate or somewhere of that kind.

11359. And leaves you with the residuum?—And leaves us with the residuum. There is no doubt about that.

Chairman.

11360. You think Stepney is poorer now than when you first knew it?—Undoubtedly; it is growing poorer every day, and shops are closing.

Mr. *Benn.*

11361. That, I take it, would be your plea for the application of some general fund for London such as you sketched out?—Certainly.

11362. With regard to the Abbey Mills scheme, did I understand you to say that in the very large majority of cases you were satisfied that those men who came under your care were willing to do the work, and that they would do an honest day's work if they had the opportunity?—Decidedly.

11363. And yet they were to begin with a very unfavourable type because they were mostly London born men and casual dockers?—They were the best men of the lowest type.

Mr. *Bartley.*

11364. As regards the land upon which this work was done, I presume it was not increased in value to anything like the extent of the cost you put upon it?—I should say not.

11365. The cost working out at something like 80*l.* an acre?—Yes.

11366. It was not worth 80*l.* an acre more than when you began?—I forget what rent they are getting for it now.

11367. You do not look upon this as a commercial scheme?—No.

11368. I noticed in your expenses that the amount paid as wages comes to, roughly speaking, about half the cost?—I think that is about the average.

11369. Do I understand the cost of the management of this scheme involves an expenditure of nearly as much as you give in wages?—No, I do not think so.

11370. What proportion is the cost of management?—Looking down the figures at a glance I should say slightly over half. The initial expenditure for tools and plant is very large, but it is smaller the next year.

11371. All I was asking was the proportion of the cost of management; do I understand you to say it came to about half the amount expended?—I have not gone into it sufficiently to say; I have not the proportion here.

11372. It is a very large proportion, is it not?—It is very considerable. I do not like to answer the question haphazard, but I will work it out if you wish.

Chairman.

11373. Could you take any one of the years, the accounts of which you have given us, and see what you make the cost of management come to?—Yes, I will take the first year. I understand I am not to include the purchase of the tools.

11374. Only the cost of management?—Working it out I find that the total expenditure was 1,315*l.* and the cost of management 142*l.*

Mr. *Bartley.*

11375. That is a little over 10 per cent?—Yes.

11376. I understood you to say you did not intend to go on with this experiment this year; the plan was given up after two years, was it not?—Not absolutely given up.

11377. I understood you did not intend to go on with it this year?—We had no intention unless some great need for it was pressed upon us.

11378. Do not I understand that you consider this a sort of permanent system for preventing the pauperising of individuals?—I was simply

Mr. *Bartley*—continued.

drawing a distinction between the adjourned meeting of the first year and the fact that we did not adjourn the next year but we simply ceased our operations and made no arrangements for the next meeting, that is all. It was left open to be called together if necessity arose.

11379. Does that suggest that you thought it was successful, or was it unsuccessful?—I do not think we ever thought it was unsuccessful.

11380. But if it was successful why did you not contemplate going on with it?—Because we think it undesirable to go on unless we have some special problem to deal with.

11381. You mean this is only to meet special cases?—Yes.

11382. As regards the common poor fund, do you not think there is great danger in drawing upon that fund for all districts?—I do not think so if it is properly safeguarded.

11383. Is it not the fact that when a central fund is drawn upon by any district the expenditure is much freer and more lavish than when the expenditure has to be met out of the rates?—Not when it is controlled by the people who find the money.

11384. Do you not think that when money is to be drawn out of the Imperial Exchequer, any locality would draw and spend it more freely than if it had to find the money out of the rates?—I do not think that case is exactly similar to what I am proposing as regards the common poor fund. Here the thing is focussed. We are dealing with London, and every London man understands London interests far more acutely, and feels his own personal responsibility far more than he would do in the case of something that affects the whole country.

11385. You are a Poor Law guardian, are you not?—Yes.

11386. Have you not often noticed in the board when an expenditure has to come from the Imperial Exchequer, the guardians are much more apt to be lavish than if it has to be met out of the rates?—In the case of some guardians, perhaps, there is a good deal of ignorance.

11387. Is it not the case with all guardians that they are more apt to be lavish in their expenditure in such a case?—I do not think so. If you take, for instance, the up-keep of our schools; I am a member of the board of management of the south metropolitan schools, and I am quite sure that there is as much care exercised there in the administration of the funds of that school as in the administration of any relief we have to pay for directly.

11388. You think that if every parish and every union in London were drawing upon the common poor fund for relief works, through the vestry or otherwise, it would not lead to enormous expenditure?—When they could only do so with the consent of the controlling body, I do not think so.

11389. Is this controlling authority to be elected like the County Council?—Yes.

11390. Would you have a special election for that body?—I do not know whether they should be directly elected or nominated by the various Boards of Guardians.

Mr. *Bartley*—continued.

11391. You do not contemplate the election of a second County Council for the purpose?—No. All I am anxious for is that this governing body should not be subject to the same kind of local influence that possibly might be brought to bear on any Board of Guardians for work within their own district.

11392. Would it not be elected by exactly the same people?—No; it would be elected by the whole of the various bodies.

11393. But the same people would have votes?—That is not the point. What I am anxious to avoid is this. Supposing St. George's-in-the-East had the privilege of going to the common poor fund directly, at their own initiation, to obtain funds therefrom to deal with any unemployed problem that might arise in their district, if they themselves could settle when there was a problem which was to be met in that way, I see, as I have said, great danger; but if there is a controlling authority to settle that question in the first place, I say that alters the question altogether.

11394. Do you not think they would return members to this council, or whatever it is, who would be disposed to let them have money for the relief works?—I do not think so.

11395. Why not?—Because they all run equal risks.

11396. Would they not all want to get as much as they could out of the fund?—I do not think so.

Mr. *Round.*

11397. You would not leave this controlling power to the Local Government Board?—I think not.

11398. Why not?—Because they are not an elected body?

11399. That is the only reason?—That is the only reason.

Mr. *Mather.*

11400. The character of the work you gave to the selected men, after you had weeded out all the unworthy persons, was entirely upon the land, was it not?—Yes.

11401. I presume it was work done with the spade, the hoe, and the rake?—The spade and pick principally, and the barrow.

11402. Those men I think you said were almost the whole of them men who were not born in the country, and were not accustomed to agricultural work at all?—Very few of them.

11403. Did you find any difficulty whatever in getting those men, I mean the selected willing men, to work well and ably with the tools you gave them upon the work which they had to perform?—As a rule the first two or three days they suffered a great deal.

11404. But taking them a fortnight or three weeks after they had begun working, how did you find them?—The improvement was marvellous, and the adaptation which they manifested to the work given to them. I think everybody concerned was as astounded on that point as much as anything.

11405. They were employed upon agricultural work, I suppose?—A great deal of it was navvy work.

Mr. *Mather*—continued.

11406. But the levelling of the land and preparing the land would be ordinary farm labourers' work?—Yes; but the dyke work, and much of the work that we did at Lower Sydenham, was very heavy navvy work.

11407. You said this land was prepared for allotments; in fact the land has since been acquired by the County Council and let out for allotments, has it not?—It was theirs previously.

11408. Is it being tilled and cultivated now by working men?—Yes.

11409. Do those men work upon the land as the means of getting their living?—No.

11410. Do they simply work on it in their overtime or their leisure time?—Yes.

11411. Do you suppose, from the experience of the work of those men on this piece of land, that they could have been drafted off under your system of re-instatement, as you call it, into permanent farm work?—Yes.

11412. Supposing they had been taken a step further and had an acre of land given to them under proper control, could they have gone on to regular farm work?—With ordinary instruction they could.

11413. Judging from your experience of those men taken from the docks, for instance, or casually employed persons in the east end of London, there is nothing in their character, or in their capacity, that prevents them from doing work upon the land if they have the chance?—There is one thing that is very strong, and that is the fact that those men had been accustomed to town life all their days. You must remember that they came back to the town each evening after their work.

11414. That is rather the social side of the question; I am speaking of the actual work to be done. From your experience, would you say that this class of men, if they were put under favourable social conditions to work upon the land, they getting their living from the land, would do the work although they had not been born in the country, or had not been trained in early life to do farming work?—Most distinctly I should say so.

11415. And, following up your experience, do you see any objection to a scheme being carried out that would carry forward such men as you have dealt with, I mean well-behaved, well-conducted men, to permanent work upon the land under such social conditions as would make it attractive?—I should very gladly welcome it.

11416. You think they would be quite capable of doing the work?—I think they are quite capable to do it.

11417. You think they are as intelligent to do the work as ordinary farm labourers?—I think so, quite.

Chairman.

11418. I suppose you would hardly say that any part of the work which these men were doing was ordinary farm work?—No, except the digging.

11419. It was rather more, on the whole, what you described as navvy's work, was it not?—Yes, except the digging and levelling, and that kind of thing.

Chairman—continued.

11420. An ordinary farm labourer now-a-days does not have so much digging to do, but he has to do such things as hedge cutting and looking after animals?—Yes. These men would not know about hedge cutting but they would know something about digging, after the experience they had with us.

11421. You are speaking of digging rather than the ordinary farm work, such as looking after animals, and ploughing, and various other kinds of farm labour which require a certain amount of skill, in which your experience with these men, I presume, would not enable you to draw a direct inference as to their capacity?—Yes. I have some ground for forming an opinion upon their capacity because we had some of the men taught milking before they went abroad, and they tumbled to it very easily.

Mr. *Mather.*

11422. Supposing these men had such experience as you might give on such a piece of land as you had, in hedging and thatching and any other farm work, would you suppose that their natural incapacity, or such incapacity as you noticed in them, would prevent their doing that work?—I do not think so. I think they would be very quick at it, myself.

Chairman.

11423. When you said they were accustomed to town life, did you mean that the men on the whole preferred a town life to the country?—No; what I meant was that if you send a man out to the prairie straight from a city, in many cases the wife grows sick and they make straight for a town. But if you could take these men out into the country and give them 12 months round of country life and test them on this side instead of on the other, I think it would be far preferable.

11424. You think if that were done you might get many men who would go out to the colonies and do well there?—I think so.

11425. But you would not expect the first 12 months to be altogether lucrative; somebody must provide the money for that time?—Yes; upon that point I may say I have been making inquiries during the last few months in Lincolnshire, and I find that there are several farmers who would be willing to take families, if they could get something for their keep, and to instruct them in the management of stock and farming generally for 12 months.

11426. Without paying them wages, of course?—Yes; and not only that, but they would want to be paid something; they would be receiving not only the individual man, but the families, and they would want to be paid something for their keep.

11427. It would not be lucrative during that time?—No.

Mr. *Billson.*

11428. Do you find an objection on the part of these people to going into the country?—Yes, in some cases; in other cases I have had men come to me and beg me to find employment upon the land; they are willing to go to the country and to do anything.

Mr. *Stuart-Wortley.*

11429. Do you find amongst this class of people a strong prejudice against going to the colonies?—Yes.

Mr *Round.*

11430. Do you know any cases where farmers in England have taken on men from among those who have worked under the scheme you speak of?—No; there is just this. Many of the men in this district have some knowledge of farming, that is to say, they go every season fruit-picking and pea-picking and hop-picking, and they get a little knowledge of the country in that way.

Mr. Mr. *Round*—continued.

Mr. THOMAS MANSELL, called in; and Examined, as follows:

Chairman.

11431. YOU were foreman, or is it right to say you are foreman?—I was foreman.

11432. You were foreman to the relief works carried out under a committee at West Ham, at the Wanstead Flats?—Yes.

11433. Can you tell us how many were employed when you were at your busiest time?—180 each day; the average about a hundred.

11434. Then I think they were sub-divided into gangs, were they not?—They were sub-divided into gangs; we first tried them in large gangs, then we made them into smaller gangs.

11435. What was the size of the large gangs that you began with?—The large gangs did not get on; they could not earn the amount of money that we allotted for the work.

11436. What was the size of the large gang; how many?—Twenty-five in a gang, two twenty-fives.

11437. That was the beginning?—That was the beginning of digging.

11438. Then, when did you change to smaller gangs?—In about a fortnight. We let those two gangs of twenty-five have about a fortnight to see whether they would get better than they were at the commencement. I ought to say that these two large gangs were not at the commencement of the work in 1895; we were digging and levelling before we put them into gangs on that system.

11439. At first they were all working together?—They were all working together; we divided them into gangs of about twenty, but it was a different kind of work; it was digging, filling, or picking and filling, and wheeling from where the ground was so high to where it was low, and then to be levelled; but where the gangs of twenty-five were, that was tolerably level ground, only turfy, and had to be dug two spits deep for potato planting; that is where the gangs of twenty-five were tested.

11440. And you found that twenty-five was too large, did you?—That was too large; they did not earn near the money they were taking at the rate that was put down per rod.

11441. That is because there was not enough foremen to look after the work?—We judged that.

11442. Then what did you do; what sized gangs did you make then?—We reduced them to gangs of ten; we paid the ganger a penny an hour more than the other men, just to look after the ten men. Then there were nine beside the leader; nine men and the leader constituted a gang of ten.

11443. Then the work paid better?—Oh, yes.

Chairman—continued.

11444. Because the work was better looked after?—Better looked after; that is right, sir.

11445. What was the largest number of gangs of ten that you had?—Seven (seven gangs of ten); about 70 men.

11446. And at that time I suppose the work was paying better than at any other time?—Considerably better; but on the digging it never paid as well as it did on the pecking, filling, wheeling and levelling (that is moving earth); moving it from one place to another; but some of the men in the gangs of ten (we would take notice of two or three of the best men) could earn 2*s.* 6*d.* and 3*s.* 6*d.* a day, whilst others would not earn more than 1*s.* a day at the same rate per rod per man.

11447. And did you find there was much difference between the men when they were levelling and when they were, for instance, potato planting. Some men do better in one kind of work, and some men in the other kind of work?—Some men do better in one, and some in the other. Those which had been brought up on the land when young you could trust to level and plant more than those which had not been used to it when young.

11448. Had you a good proportion of them who had been on a farm when they were lads or young men?—Well, the gangers principally had been brought up on the land; the men that we picked out to lead the others. Then we would give each gang perhaps two, three, or four men that had been something used to it. I allotted them out so far as I possibly could so that the gangs should be somewhat similar to each other.

11449. You knew quite well which were the men that had some experience of this sort?—That is right.

11450. And most of these men had been country born men?—Yes, I believe so.

11451. Do you know at all how far these men have got into other work since they left off your work?—Well, of course the good workmen that were intelligent and willing to work were, as far as possible, provided with work at the Thames Ironworks. We got them situations when there were men wanted there; we drafted them from the Wanstead Flats to the Thames Ironworks.

11452. Are there a good many of them now in work at the Thames Ironworks?—There is a good few of them at work at the Thames Ironworks.

11453. Has the business of the Thames Ironworks increased then so as to take on more men?—It was increasing just about that time, about the middle of the season; about February and March they were getting rather busy there.

11454. And

Chairman—continued.

11454. And Mr. Hills made arrangements for taking them on?—Whenever I saw a man that was worth recommending I sent his name on to the timekeeper and arrangements were made for a good few of the men as far as possible.

11455. I suppose that might have happened in any case, apart from Mr. Hills' interest in your work?—Yes; we got work at several other factories there for men from the Wanstead Flats, where I had a little influence and could recommend them.

11456. Then what sort of work would they be getting now at the ironworks?—General labour; we had chippers and drillers there, men who could use a hammer and chisel and could drill.

11457. And who were out of work?—Who were out of work.

11458. And when they got back to the ironworks they took up their old style of work?—That is right.

11459. Do you think most of the deserving men who have been working under you have got back to work now?—The majority of them. We did have a few left even until the last with us that were tradesmen, men who had served their time at a trade; they were rather old, they were "past forty" as the saying is, 50 years of age, or something like that, and they cannot get situations so readily as younger men.

11460. And some of those are out of work still, I suppose?—I believe some of them are out of work still.

11461. But on the whole the bulk of them have got back again?—On the whole the bulk of them have got back again.

11462. Now as to the character of the men as a whole (of course, I suppose there were some exceptions), were most of them pretty willing to do their best to do a good day's work?—Well, more than the majority of the men that we took, I think, were willing to try to earn the money that they took; but we did have some that did not care; they only looked after the money at night that we paid them. That is all they wanted; you had to make them work, or nearly so. Some we had to discharge because they would not work, or we considered they did not do sufficient, or what they might do. There were some who were not quite capable of doing as much as others, but they were willing; they were physically incapable, and they could not earn as much as other men.

11463. But they did their best?—They did their best. If you put them in the gangs some men would grumble at having to carry others upon their backs; but we must find them work somewhere. We allotted them in the best way we could. We averaged the gangs as near as possible, so that there should not be any ill-feeling in the matter.

11464. But some of the members of one gang earned more money than others?—Yes; if we had paid them singly there were some men who would have taken a bonus every day or every week (they took it weekly); they would do more work than would come to the money that they took.

Chairman—continued.

11465. Some of those men who were willing but were really not fit to do a full day's work, were, as you expressed it, carried on the backs of the others?—That is right.

11466. But you tried to allot these gangs of ten in such a way that each gang should be equal to the other gangs as far as possible?—Quite right.

11467. Would you just tell us how the men were paid, and how much they received, each gang?—Well, each man had a minimum rate of 4*d.* per hour, and then we gave them a shilling a rod for double digging.

Mr. *Bartley.*

11468. In addition?—No; we allowed them to work six hours a day, which amounted to 2*s.*; if they could earn 2*s.* 6*d.*, 2*s.* 3*d.*, or 2*s.* 4*d.*, or whatever they could earn, they had it at the end of the week as a bonus. Their work was measured up every day, and, as I have said before, there were some men that could earn a good deal more than they received. If they had taken the money they did earn at the rate of a shilling per rod, they would have taken as much as (often) 3*s.* 6*d.* per day.

11469. But they could not earn that, because they were working in the gang?—The other men kept them back.

11470. And I suppose those men you speak of who were the best workmen are probably the men who have got employment now?—That is quite right.

11471. Then as to the whole work, when you look back upon it, I suppose it has not been a paying transaction from a business point of view?—No. Some people say "not"; others say "yes." I suppose the same amount of work taken by contract may be done for less money than that was done for, but, taking all-comers, I question whether it would or not. You see, if the contractor undertakes to do a certain amount of work of that kind, he picks his men. We took all-comers, as it were, you see; they were registered; they had a ticket given to them, they were sent to me, and I found them work.

11472. You were bound to find work for them whether you thought them good workmen or not?—If they were willing. If they would not work, and we thought they could work, we had to pay them off.

11473. Then you think that is the chief reason why, if it had been a contract, it would not have turned out a paying contract, because you had to take the weaker men?—That is right; but I believe it could be made to pay at that rate.

11474. Even on that system?—Not taking all-comers. I meant at the rate of pay.

11475. Supposing you had been the contractor, and had been able to pick your men, and took the best half of the men that you did employ, you think you might have made a paying job of it?—Yes, I have no doubt at all about it.

Mr. *Mather.*

11476. Was there anything in the nature of the employment there that you think was unfitted for the mixed quality of men you received; that is, was the work very hard for them; was it

Mr. *Mather*—continued.

a cruel test of their willingness to do the work you had to offer them?—No, it was not a "cruel test," because the minimum rate was 2*s.* per day, or 4*d.* per hour.

11477. I do not mean in the sense of payment, but you took, as you say, all sorts and conditions of men, mixed men?—Yes.

11478. Were some of them so incapacitated from doing such heavy work as digging, excavating, and so on, as to make it rather a cruel test upon their physical strength in that given work?—Well, some of them could not do a day's work; perhaps 5 per cent., five men out of every hundred.

11479. When they first came?—Well, they never would be able to do a good day's work (not a real day's work) not like another man; and I question whether at the rate of 1*s.* per rod at any time they would be able to earn their 2*s.* per day.

11480. Were they physically weak?—Physically weak.

11481. I suppose many men came to you emaciated and hungry in a certain sense?—That is right.

11482. They only came to you at the last stage of their distress?—We had men who when they had been at work perhaps an hour or two hours of a morning would fall down in the winter time; in the cold weather they would fall down. We have had to carry them into the shed and give them a little food and bring them round, and in the course of a week they have been men who could do a day's work.

11483. After having been a fortnight or three weeks with you were they reinstated in fairly good health and capable of doing a decent day's work?—I believe all the men (I might say the bulk of the men) were in better condition when they left us at the fortnight's end than when they came to work.

11484. After a fortnight?—That is the time we kept them on. We kept about 23 or 24 men as leaders continuously.

11485. Did you find as a rule that the men took up the work quickly; were they able to go and dig and wheel the soil, and so on quickly?—They did very well indeed, some of them.

11486. You told me that when you were there you had all sorts of men; even a watchmaker was there digging, a man accustomed to such delicate work as watch making was there digging the soil?—Yes.

11487. You had clerks?—Yes, clerks.

11488. Men unaccustomed to use tools were there?—We had clerks, electricians, engineers (various descriptions of engineers), and as I have said before, chippers and drillers, boatbuilders, and those who were on boat building when at their trade; of course, we had a good number of painters, bricklayers, and men of that kind, because it was a hard winter, and those men were out of work, they could not get any work in their own business, and they registered and came to work with us.

11489. On the whole, do you think the men you dealt with were fairly well satisfied with the form of relief you offered them in the way of work?—The way they wanted to keep on showed that, because it was hard to get rid of them at the end of their fortnight; they would ask for another week, or a day or two, or something of that sort.

Mr. *Mather*—continued.

Mr. *Stuart-Wortley.*

11490. What was the maximum number of hours a day that you allowed them to work?—Six.

Mr. *Bartley.*

11491. Do you think you permanently relieved and took off the labour market any casuals?—Yes, we did. Of course, some of our men, after doing the fortnight's work, would then go to stone-breaking; they would go down to the Leytonstone Union.

11492. Then you think that, in addition to the absolute relief at the moment (which, of course, is important), you did tend to cure some and to make them more permanent workers?—Oh, yes. There were plenty there that would have a knowledge of using their spade or shovel, or a pick, who had not that knowledge when they came to us, that would be tolerably decent fellows to go digging, or land-levelling, or anything of that.

11493. What proportion do you think you permanently improved, I mean as to the power of earning their own livelihood?—Well, I should say, taking those out that were used to that kind of work, or who had been brought up to it when young, taking painters and paperhangers, and those kind of men, they got so that they could use a spade or shovel, or wheel a barrow on a plank; those men would be capable of going to work at that kind of work wherever it was offered to them at any time now, I believe, which they could not do when they came to us.

11494. You mean you technically taught them?—Yes.

11495. Did ever any of them show signs of being more independent at the end and more reliant upon themselves than when they came to you?—The painters and paperhangers, of course, we lost; they came, perhaps, two or three times during the cold weather, but as soon as the weather broke and they could go to their own trade we lost those kind of men.

11496. But did not you tell us that a great many wanted to stop longer even after the inclement weather was gone?—Yes, those would be men who had not found employment; but I said those who had a trade (painters and paperhangers for instance) were anxious to stay as long as the frost stayed, or as long as the hard weather was on. As soon as they could get work, of course they left us; but we always had more men than we could take on from the registry office.

11497. The fact is that you paid them lower wages as an inducement to them to leave you as soon as possible, I suppose, and go to their own trade?—That was the reason.

11498. I believe the works are not going on now, are they?—No.

11499. If they were going on now, do you think you would still have men in this height of the summer?—We had men at the finish, the latter end of the first week of May; I think it

Mr. *Bartley*—continued.

was about the 9th or 10th of May. We had men then that had not work to go to, as far as I know, although the numbers had decreased considerably; both the registry offices were closed, but these were men that continued to go for tickets each week, they went to see if they could get a ticket.

11500. Were they the physically weak ones?—No.

11501. Could those do a good day's work?—They were merely surplus labourers in the borough; there were more men in the borough than there was work for, and these were men that had not work, therefore they came there.

Chairman.

11502. Is there anything else specially connected with the work that you would like to say to us?—Well, I have been here in the Committee-room on Tuesday and to-day and I have heard the gentlemen speaking (Mr. Martin and the gentleman that was here to-day), and I think there have been some good suggestions put. There ought to be something that would be of a permanent character for the unemployed. Where the money is to come from is for you gentlemen to decide, and how it is to be done. There ought to be something of a permanent character, because I believe the unemployed men can earn what they take; and if it was systematised the unemployed men could earn money enough to keep themselves and their families, I believe.

11503. You are speaking, I suppose, of the times of special distress, are you?—Yes; or wherever in any district or in any borough there are more men than there is work for. I suggest continuous land cultivation.

11504. Do you think that West Ham is exceptional in having more men about than there is work for?—Yes.

11505. You think it is rather a special case?—Yes, I do. On account of the docks and various factories down there, there is a glut in the labour market there, and there are more men out of employment, as a rule, in that district than in most districts round London.

11506. Do you think these men could be taken out on to the land in the country?—I think so.

11507. Are you able to find out at all from the men you employ whether any of them would like to go back into the country again?—Yes.

11508. They would?—I know they would. I have had a little fruit farm for two or three years; planted a new plantation; I have gone to live at Bishops Stortford, and there are men who have offered to go with me down there if I could take them.

11509. From West Ham?—From West Ham. They have offered to go down there if I could take them, and work down there at the same wage that they had on Wanstead Flats.

Mr. Bartley.

11510. Two shillings a day?—Twelve shillings a week, sir. Of course, I do not say that is sufficient; I am only saying what they told me.

Mr. *Mather.*

11511. They were willing to go?—They were willing to go.

Mr. *Bartley.*

11512. And men who really would work?—Really would work. One of those men was a ganger down at the Flats; he had a gang to lead.

Chairman.

11513. I suppose you know men who have come up from the country who have got very good jobs of work, and who have stayed in them?—Yes, a number of them.

11514. But there are a certain number like those you speak of who have not managed to find work?—That is so.

11515. And you think some of those would be willing enough to go back to the country if they could find work?—That is the way they express themselves.

11516. But I suppose they are not willing to go back to look for work in the country?—No; it would be no use to go to look for work in the country, I think unless there was a situation provided for them.

11517. Is that because they guess that there are already in the country quite as many labourers there as are wanted?—That is right.

11518. But your opinion is that some method should be found, when there are a large number of unemployed men, to carry on something like the work that you carried on?—Yes.

11519. Or some similar kind of work in the country?—I think so.

11520. Of course, it might cost a good deal?—Yes, it would cost a good deal, because there would have to be provision made (unless the railways would carry them cheap) for housing them; there would have to be cottages erected, or something like that.

11521. But you think it would have a good influence upon the men?—I think it would have a good influence upon the men and it would relieve the labour market; it would take the men from the congested parts of the city or manufacturing districts round the city.

11522. Do you think it would improve their character?—I do.

11523. Keeping them steadily at work instead of idling about?—That is right.

11524. Of course, if done on a very large scale, it might cost a great deal of money; you admit that?—Yes, that is the question to be settled. Where is the money to come from; who will find the money?

Mr. *Mather.*

11525. But you say they could support themselves if they got the chance?—That is my opinion.

11526. It is only the start that would cost the money?—That is it. I believe they would support themselves.

Chairman.

11527. The pick of them?—Yes, the pick of them, of course.

11528. There will always be some weak ones who cannot earn their living?—There are always some weak ones.

Mr. *Mather.*

11529. You would select those that were to go to the land?—I think they ought to be selected.

Mr. *Mather*—continued.

I believe two or three good workmen can carry another one (a middling one) with them as a rule; and on the land there are always some easier jobs than others; they are not all hard.

Mr. *Bartley.*

11530. They do not like carrying them, do they?—Those that are good workmen object.

Mr. *Bartley*—continued.

We appealed to their common sense, and told them that the others had got to live the same as they, and we generally got on pretty well with them.

Chairman.

11531. That was the condition on which they came there?—That is it.

Tuesday, 25th June 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Wootton Isaacson.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Round.
Mr. John Wilson (*Durham*).

MR. MATHER, IN THE CHAIR.

Mr. WILLIAM VALLANCE, called in; and Examined.

Chairman.

11532. YOU are, I believe, Clerk to the Whitechapel Board of Guardians?—I am.

11533. You are prepared to give evidence as to the powers at present possessed by the guardians in dealing with cases of distress?—Yes.

11534. What are the powers at present possessed by the guardians in dealing with cases of distress resulting from want of employment?—The powers possessed by Poor Law authorities in relation to cases of distress are derived from the Poor Law Amendment Act of 1834. In London and other urban unions the Out-door Relief Regulation Order of the 14th December 1852 operates. The rule which at present obtains under this Order, requires, as a condition of relief to able-bodied male persons on the ground of want of employment, either the acceptance of an order of admission to the workhouse or the performance of an adequate task of work as a labour test. There are exceptions; firstly, in cases of sudden and urgent necessity; secondly, where a person requires relief on account of any sickness, accident, or bodily or mental infirmity affecting such person or any of his family; thirdly, in the case of a person requiring relief for the purpose of defraying the expenses of the burial of any of his family; fourthly, in the case of the wife or children of a person in custody of the law; and fifthly, in the cases of resident families of non-resident heads. There is also a general power given to guardians to depart from the regulations as to relief (with one exception) if, upon consideration of the special circumstances of any particular case, they deem it expedient to do so, conditional upon their reporting the same, and the grounds thereof, to the Local Government Board; the relief so given between the date of such departure and the receipt of an answer from the Board not being deemed to involve any violation of the order.

Chairman—continued.

11535. Can you furnish any comparative statistics of Whitechapel pauperism, say in 1870 and 1894?—Taking 1870 and 1895, the number of in-door paupers (being the mean of those relieved on the 1st of July and the 1st of January) was 1,311 in 1870, and 1,546 in 1895. The number of out-door paupers was 3,554 in 1870 and 322 in 1895, making the total for 1870, 4,865, and for 1895, 1,868. It is difficult to make any useful comparison of the number of able-bodied males included in the foregoing figures, since there was no separate infirmary in 1870, and there was, consequently, no sub-division of those in health and those who were temporarily disabled by sickness. It may be stated, however, that the highest pauperism was reached early in February of 1870, when the number relieved in-door was 1,419 and out-door 5,339. Of the former, 112 were classed as "able-bodied," and of the latter 1,683 were so classed.

11536. May I ask what is the population of the district over which you have control?—74,462.

11537. Were there any special circumstances connected with the administration in the former year, that is, 1870?—Prior to 1870, the policy and practice of the guardians were neither better nor worse than those adopted in other unions in other parts of London and the country. Its relief system may be said to have been that of meeting apparent existing circumstances of need by small doles of out-door relief; the in-door establishments being reserved for the destitute poor who voluntarily sought refuge in them. Able-bodied men, who applied for relief on account of want of employment, were set to work, and in return were afforded out-door relief in money and kind. Under this system the administration was periodically subjected to great pressure; so much so that the aid of the police had not infrequently to be invoked to restrain disorder and afford necessary protection to officers and property. Police protection was

Chairman—continued.

even at times required for the guardians during their administration of relief. The experience of the winter of 1869–70, however, was such as to lead the guardians to review their position, and earnestly to aim at reforming a system which was felt to be fostering pauperism, demoralising the poor, and wronging the ratepayers.

11538. Since these changes were made has there been any recurrence of the exceptional pressure upon the rates?—In Whitechapel, notwithstanding the virtual suspension by the guardians of the Order of 1852 (that is the Order in operation as regards out-door labour) there has been, during the last 25 years, no exceptional pressure (other than upon the accommodation of the separate infirmary) such as to necessitate the opening of a labour yard. During the last winter, there was perhaps more distress than in previous years, owing probably in part to the severity of the weather and to other seasonal causes, not forgetting the fact of the stranding of many of the second-rate labourers, as the result of labour combinations. But notwithstanding that the Poor Law authority and organised and unorganised charity have sometimes been exercised as to the best means of providing for the absolute wants of the poor without undermining their self-respect and engendering a pauper spirit, it has not been found necessary, to adopt exceptional measures of relief.

11539. Has any complaint been made by the clergy, workers among the poor, and others, that the policy of your administration has entailed suffering?—On the contrary, there is evidence of sympathy and approval on the part of the clergy and workers. The clergy are well represented on the board of guardians; the Whitechapel Committee of the Charity Organisation Society are working in closest co-operation; and others who are and have been for years seeking to ameliorate the condition of the poor, largely concede that the policy of the guardians has been contributing to a better state of things. They bear testimony to the fact that, however sad may be the lives of many, there has broadly been a raising of the standard of existence; whilst certain it is that more money is put by in savings banks, rents are better paid, and the poor are more contented than formerly.

11540. Can you tell us what changes have been brought about as the result of the experience of the winter of 1869–70 to which you have alluded in relation to the relief of the able-bodied who seek relief on account of want of employment?—First of all, as to workhouse administration, I may say the Whitechapel guardians have invariably sought to carry out fairly the policy of neither making paupers nor neglecting them. In their workhouse the guardians have departed from the ordinary workhouse rules as regards labour, by practically abandoning oakum-picking, stone-breaking, and other forms of associated labour, and by substituting corn and coffee grinding, wood-chopping, sawing and bundling (for firewood), flour-dressing, mat-making, tin working, smith-work, carpentering, coffin-making, furniture-making, bricklaying, whitewashing, painting, glazing, chimney-sweeping, shoemaking, tailoring, water-pumping, gardening, &c.; workmen from outside being seldom required for repairs or work of any kind. Bread-making has also been carried on in the workhouse in supersession of contract for the supply of bread for the use of the workhouse and infirmary. Generally, it may be said that every pauper is employed to the extent of his ability, and, as far as possible, at his own trade; the guardians relying upon dissociation and continuous occupation for discipline, and the absence of extra diet for work, however skilled and useful, as a deterrent. In connection with workhouse administration I may also say that, perhaps, the weakest point is in the withdrawal, more or less, of official supervision and restraint during the evening hours; that is, from half-past six to eight o'clock; there being thus no check upon idle and vicious conduct and conversation. In 1882 the guardians sought to remedy this state of things by obtaining the authority of the Local Government Board to enforce the attendance of the able-bodied male paupers in the dining hall of the workhouse during these evening hours; and they appointed a male and female instructor (a male instructor for the male paupers, and a female instructor for the female paupers) to attend in the evenings; the design being, not so much to impart mental instruction as to exercise a salutary restraint upon conduct and conversation during the evening hours, and to inspire the paupers to renewed efforts to obtain an honest livelihood. The occupation, in the case of the men, consists mainly of readings and conversation upon such subjects as the conditions of labour, emigration, thrift, temperance, &c., the subject being usually suggested to the instructor by some passing event in connection with labour. The female instructor is usually occupied with the women in their day-room in reading useful and helpful books, and in teaching those who are willing to learn to knit socks, scarves, infants' boots, hats and hoods. The arrangement, it may be said, has been entirely successful, and is still at work; whilst more than one Board of Guardians has, after a visit to the workhouse, readily followed the example. Beyond this, I may say that the master and matron have strict instructions to carefully examine into all cases of admission to the workhouse for the first time, and, where a man is admitted for the first time apparently with some good in him, and he answers his questions satisfactorily, the master is authorised and required to communicate at once with me if any difficulty arises, or, if he sees it is a case which can be so helped, to send a note with the inmate to the Charity Organisation Society. In the case of young women who come for the first time, in the same way the matron seeks to save them from contact with others by taking the young woman into her own kitchen and keeping her as her servant, and providing for her sleeping in a separate dormitory with some three or four others of a similar character. In that way we seek by every reasonable means to make the workhouse helpful rather than hurtful.

11541. As to the labour test, you have adopted, I believe,

Chairman—continued.

I believe, useful and profitable employment upon which these inmates may cheerfully engage, rather than the ordinary labour test associated with the workhouse?—The experience which the guardians had prior to 1870 led them in that year to close their labour yard. The guardians felt it was a more eligible form of relief than the workhouse; that it was attractive to the least deserving, and encouraged the belief that the legal obligation is imposed upon guardians to find employment for persons out of work. The guardians felt that it was susceptible, too, of great abuse, and partook of the character of relief in aid of wages since the man whose employment at his trade is partial, or, during a portion of the year, only sees in this form of relief the undertaking of the State to make good the deficiency. I am strongly of opinion that recourse to the labour yard under the regulation order should be reserved alone for periods of exceptional pressure. With regard to the enforcement of the workhouse test, especially in seasons of great depression, there is a public sentiment antagonistic to a form of relief which is thought to have the effect of breaking up the home, not that it really does involve the breaking up of the home, but in order to avoid even the appearance of breaking up the home, the guardians in 1887 sought from the Local Government Board the issue of a modified workhouse test Order, which would enable them to deal with any exceptional pressure by reason of want of employment without involving the appearance of breaking up the home. Under that Order the guardians were able to ensure the preservation of the home, and, at the same time, to afford adequate security against a too ready dependence upon the rates for support by affording out-door relief to the wife and dependent children of an in-door pauper so long as he might remain an inmate of the workhouse. The Order was not put in operation, because the guardians undertook that only under exceptional circumstances would they do so; but under this Order it is provided that, "(1) The guardians of the poor of the said Whitechapel Union may, after not less than seven days' notice of the proposal has been sent by their clerk to each guardian, pass a resolution to the effect that the powers conferred by this Order shall be exercised by them, and a copy of such resolution shall be forwarded to us by the clerk within one week of the same having been passed; (2) From and after the passing of such resolution, and during a period not exceeding 12 calendar months from the date hereof, it shall be lawful in the case of any able-bodied male person relieved in the workhouse who shall not in any one week, ending on Saturday, be absent from the workhouse more than once, not for a period exceeding 24 hours, nor without the consent of the guardians, for the guardians to relieve out of the workhouse the wife and family of such able-bodied person, and also such person while he is so absent from the workhouse as aforesaid without setting such person to work during the time or any part thereof that he is so absent." Those were the provisions of the Order which we sought. But under ordinary circumstances the necessities of out-of-work cases were found to be sufficiently

Chairman—continued.

met by dealing in a precisely similar way with the head of the family as regards the workhouse, and asking organised charity to co-operate with us to keep the home together outside. It was only, indeed, in the event of any exceptional pressure, when voluntary charity would be unable to cope with the numbers, that we sought this authority from the Local Government Board. The authority contained in that Order has expired, but, no doubt, were the necessity again to arise, there would be no difficulty in obtaining its re-issue.

11542. Have you tried any experiments connected with the employment of the unemployed upon land?—For several years past the Whitechapel Guardians have at intervals had under consideration the question of the practicability, either directly by the development of the workhouse system in the direction of an agricultural training home, or indirectly by co-operation with voluntary agencies, of so dealing with the destitute unemployed as to make the provision as helpful as possible without inducing recourse to the poor rates for support. It is to be observed that at no time have the guardians sought to break down the barriers of a wise and sound administration, but rather to strengthen their position as strict administrators by bringing ameliorating influences to bear upon exceptional cases of distress. It is now more than seven years (it was in January 1888) since the Whitechapel Guardians appointed a committee to consider a "proposal for training able-bodied men in country pursuits by means of the Poor Law." It was felt at that time that the statistics of pauperism had to be read side by side with such facts as the congested condition of the labour market, the gravitation of the unemployed to London and other large centres, the gradual decline of agriculture in England, the dependence of the country upon foreign importations, not alone for bread but for meat, fruit, poultry, and dairy and garden produce, and the loss of wealth and employment which is involved in the abandonment of the soil. It was felt, however, that the condition precedent to any single Board of Guardians formulating a practicable scheme must necessarily be that such Board is in actual need of workhouse accommodation, since in the hands of the guardians an industrial or agricultural settlement in the country would be but an additional form of in-door relief. Under these circumstances, and having in view that the guardians were not in need of such accommodation, it was decided to invite the guardians of all the Metropolitan unions to meet in conference to consider the question. I may say the proceedings at those several conferences will probably be found very interesting; but of course it would take too much time to go into them.

11543. Are they published anywhere?—Yes; I can furnish the Committee with the whole of them; and I think they would really be very interesting, as showing what led to the various conclusions. The consideration of the question, as I have said, commenced in January 1888, and in July of the same year we invited

Chairman—continued.

the Metropolitan guardians to meet in conference, and we met in Bartholomew Close.

11544. Can you give the reference to where the reports of this Conference are published?—I can furnish the Committee with the full report, if necessary.

11545. Can you give the reference, in case we desire to investigate them?—Yes; the references to the reports are as follows:

Report of a committee of the guardians of the Whitechapel Union, charged with the consideration of the subject of a "Proposal for training able-bodied men in country pursuits by means of the Poor Law, dated 13th March 1888" (marked A.):

Report of a committee appointed at a meeting of metropolitan guardians, held on the 23rd of July 1888, "To inquire into the practicability of establishing Agricultural Training Homes under the direction of the Poor Law" (marked B.):

Report of the "Agricultural Training Homes" Committee of the guardians of the Whitechapel Union, dated 13th June 1893 (marked C.):

Report of committee of the guardians of the Whitechapel Union *re* "English Land Colonisation Scheme," dated 3rd October 1893 (marked D):

Report of the General Purposes Committee of the guardians of the Whitechapel Union *re* the "Unemployed," dated 9th April 1895. (*See* Appendix).

As I have said, the Metropolitan guardians did so meet in conference, and, as a preliminary result, they decided to appoint a committee to inquire into the practicability of applying the surplus labour of the Metropolis to the unproductive land at home and in the Colonies, and the desirability of carrying out a scheme for this purpose under the direction of the Poor Law. At this stage it was felt by the Committee that they could not hope to arrive at any satisfactory conclusion without the advice and assistance of practical agriculturists, especially those connected with Poor Law administration; and they accordingly sought the co-operation of chairmen of boards of guardians in the county of Essex, in the direction of obtaining advice, information and assistance, to enable the Committee to determine the practicability of the proposal. The replies received were not encouraging, and as it was found that the "Mansion House Conference on the Unemployed" was then actually engaged in launching a scheme of "Agricultural Colonies to be worked by private charity," the Conference eventually decided to allow the question to stand in abeyance pending the result of the Mansion House experiment.

11546. Was that the Abbey Mills scheme?—It was an experiment prior to that which fell through altogether. Then, in common with a large and thoughtful section of the community, it was felt by the guardians that the last word had not been said upon the subject; hence in April 1893 the guardians again took up the subject and re-appointed the Committee. The Committee forthwith called in experts to confer with them, including Captain Gretton, Mr. Hazell, and Captain Trotter; and the opinions of selected farmers and others were sought as to whether men with their families could be housed, employed, and fitted for emigration in consideration of a capitation payment. The replies received were as discouraging as those received in response to previous communications, one farmer and guardian observing that "if the man's morale and physique promised well for the experiment, he would not be in such a case." I may say my own personal conclusion upon the whole matter was expressed in the following paragraph of the report which I drafted: "In considering how far the establishment of an agricultural training home or homes is practicable, it has to be borne in mind that guardians can alone approach the question from the standpoint of the Poor Law, that is to say, from the standpoint of a possible development of the workhouse system in the actual treatment of paupers. If the guardians should foresee the possibility of improving their workhouse administration and making it more and more contributory to character, self-help, and industrial habit, they would doubtless be quite justified in seeking means to that end, whether in the direction of the establishment of an agricultural training home or otherwise, seeing that any such provision would not be, in its broad features, a departure from the principle of maintaining the able-bodied poor in a well-regulated workhouse. Possibly this even may seem to some an ambitious proposal; and yet those with the largest experience are those who are most conscious of the importance of making in-door relief as helpful and as little hurtful as possible. On the other hand, there are those who would so far relax Poor Law administration as to attract the 'out-of-work' men of the better sort who now suffer privation rather than resort to the Poor Law; and truly if one class more than another claims commiseration and practical help, it is the latter. But here it seems to be of great importance, not only to give priority to the claims of the self-respecting poor in any scheme for improving the condition of the unemployed, but equally so to see to it that the aristocracy of the poor are not attempted to be saved from the Poor Law by the machinery of the Poor Law. Such an attempt would be fatal to character, and inimical to the interests of the community. Dealing, therefore, with this class alone, and not with those who already resort to the workhouse, your committee are of opinion that any scheme of an agricultural training home must necessarily be carried out by a body or organization outside the Poor Law." The committee re-opened the question again in October 1893, upon receiving a communication from the English Land Colonisation Society, and a proposal was made that the guardians should send a given number of men to a farm, under the direction of the society. One paragraph from the report of the committee of the guardians will explain what was done under that: "Your committee desire in the first place to state that they are not prepared to make any recommendation which is calculated to weaken or impair the strict, uniform, and well-understood administration of the last 23 years. At the same time, it must not be forgotten that during that long period the guardians have continuously sought to attract voluntary

Chairman—continued.

voluntary and organised effort in the direction of saving the poor from pauperism ; and the success of that effort has been contributory to the unbroken character of the administration. In the present instance, it does not appear to your committee to be necessary for the guardians to indentify themselves with the actual scheme of the English Land Colonisation Society, by giving adhesion to its principles, supporting its methods, predicting its success, or even accepting the statements as regards the condition of the labour market upon which the proposals are based. The society is about to try an experiment in the direction of saving a certain class of destitute poor from pauperism ; and the sole question is whether the guardians will, under the statutory powers already existing, be disposed to assist in it, seeing that as regards Poor Law administration it will in no way impair its efficiency, whilst in the present state of public opinion it will present an interesting and instructive object lesson." The result of this was that, inasmuch as the society itself had not a farm, and Mr. Walter Hazell was actually starting at that time a small farm at Langley in Essex, where "men and youths, who, either from their own fault or from misfortune, cannot make a living in London, are received for a few weeks with a view to giving them a little farm training and to test their fitness to work on the land in Canada," the guardians sent six men to this farm.

Mr. *Lawrence.*

11547. I suppose they were selected men ?—They were men who first of all appeared to be fit for out-door work, and who in the next place were willing, and apparently thoroughly in earnest. The condition was that they should "grind their teeth," as we term it, at work, that they should go to this farm for 12 months, and then be willing to be sent to a colony where they would be received and put on to their feet. In my letter to the Local Government Board I give the particulars of the six men sent, and then the letter continues : "With regard to the result of the experiment of sending the above-named men to the farm, I am to state that, in the opinion of the guardians, it has been as successful as could have been expected. Of the six men, but one failed to reach the farm, whilst the reports from the manager of the conduct of the remaining five have been entirely satisfactory."

Chairman.

11548. Did they walk to the farm from London ?—In two cases they walked ; in the other cases we thought that test was too stringent. I may say that Mr. Hazell's own suggestion was that that test should be first applied ; but, as I say, it was only applied in two cases. The letter goes on to say :—"It is to be observed, however, that in sending the men to the farm the guardians had no intention of seeking a relaxation of the conditions of relief to the able-bodied as a class, but alone to justify the rule of a strict application of the workhouse test by co-operating with voluntary agencies in the redemption from pauperism of those who do not ordinarily resort to the workhouse, and who give evidence of an

Chairman—continued.

earnest desire to obtain their own livelihood. The six men who were selected were the only inmates of the workhouse who were adjudged to come within that category, and who, at the same time, appeared to be physically equal to the strain and exposure of farm work, and they were sent to the farm on the distinct understanding that they conducted themselves well, and would, at the end of a probationary period of training, be willing to emigrate to an English colony. The two men who have already emigrated to New Zealand left this country full of hope and an evident determination to do their best. They had, physically and otherwise, greatly improved by their stay at the farm ; they expressed their gratitude for what had been done for them, and gave assurance that if they failed in the colony it would be from no fault of their own. At the same time it is to be borne in mind that the cases referred to were specially selected, and that the scheme of agricultural training of which they were the subjects was upon a very small scale, the number of men at the farm being but eight or 10 in the whole. Had the selection of men been a less careful one, or had the numbers at the farm been relatively large, the results would doubtless have been much less satisfactory, whilst the farm itself would have been but attractive as an eligible form of subsistence rather than as a means to self-dependence." Now with regard to the small number selected there, I may just say that later I sought to find other men to send to the farm in succession to those men, and I got the master to schedule all the men in the workhouse at that time (it was in the early part of this year) who were classed for diet as able-bodied. Some of those men are over 60, yet they are classed as able-bodied ; some are partially disabled ; but, as a rule, they are so classed because they are presumed to be able, if they make an effort, to do a day's work and to get their living. One hundred and eight was the total number of men classed as "able-bodied" in the workhouse. Out of those the number scheduled as physically able to do out-door work was 46. Of the 46, the number willing to go to a farm for training and thence to Canada was 30 ; 16 were not willing. Of the 30 who expressed their willingness to go to the farm but eight were adjudged by the master to be really fitted to bear the strain and exposure of farm work; that is to say they had been about London so long that they had got into an enervated condition. The judgment of the master appeared to be justified in the fact that a week afterwards, when I was about to give practical effect to the application for the eight, the master said, "Of the eight I scheduled last week, seven have taken their discharge"; they took advantage of the first gleam of sunshine, and they had gone, and but one remained. That one I did not deal with at the time, for the reason that I was very anxious in sending men to the farm to send them always in company, so that each man when he left this country for Canada or New Zealand, or anywhere else, might have a chum with him. I think there is a good deal in that.

11549. Have you anything to say as to the nature of the co-operation of the guardians with

Chairman—continued.

the organised charity and local authorities; you have already told us that you worked in connection with the charitable organisations in your district to some extent in keeping the homes together of those persons whom you give relief to?—Yes. The relieving officers are in constant communication with the Charity Organisation Committee with a view to saving from the Poor Law those who being in stress of circumstances are obliged to apply for assistance. In seeking the co-operation of the Charity Organisation Society we are not seeking the co-operation of another body akin to the Poor Law; because all the assistance which is rendered to the poor through that society (I am speaking of Whitechapel), is rendered through the hands of an almoner, who in every way that is possible tries to befriend them and to save their character and their position. Then for several years the guardians have endeavoured to secure the co-operation of the District Board of Works in cases of what I term "the front rank of resident heads of families of good character whose homes are worth preserving," the condition beyond that alone being that they have had a *bonâ fide* residence in the district for six months. Then, of course, we seek also the co-operation of organised charity for keeping decent homes together.

11550. You have not assisted in starting any relief works in Whitechapel during the last 25 years?—No. It seems to me to be at least open to question whether relief works would, under any circumstances, afford permanent relief. They can only be started by the Government or by local authorities. If by the former, it will be the admission of what seems to be a dangerous principle, the duty of the State to interfere with the law of demand and supply, finding work for the unemployed; and if by local authorities, it will practically amount to a system of present relief out of the pockets of a future generation, regardless of the fact that our children will have their own obligations to meet. Relief works, too, in common with special funds and organisations to meet distress, attract the poor from the country to towns, and add considerably to the distress itself, whilst the future conditions of labour are thereby rendered increasingly difficult.

11551. Have you formed any general conclusions from your long experience in Whitechapel as to the necessity of changes in legislation or administration to meet the question of the unemployed?—Beyond one point, which I will mention presently, I have not. I regard it as in the truest interests of the poor that the administration of the Poor Law, whilst humane, should be strict, uniform, and well understood; and I am of opinion that any attempt to break down the barriers against a too ready resort to it will but sap the foundation of individual character and injuriously affect the interests of the community. I am further of opinion that the existing law, wisely administered and working in co-operation with organised charity, is sufficient to meet ordinary recurrent or seasonable periods of distress; and that where, by reason of exceptional circumstances which prevent such charity from dealing effectively with the families of charge-

Chairman—continued.

able heads, the Modified Workhouse Test Order, if put in force, would afford the ready means of keeping decent homes together, whilst placing the burden of sacrifice upon the man alone. The one point which I have excepted is that in relation to the "habitual pauper," to the man who uses the workhouse as a legal means of avoiding the necessity for self-maintenance by work; who makes a workhouse harder in its conditions than it would otherwise be; who enters and leaves the workhouse (subject to 24, 48, or 72 hours' notice, as the case may be) as and when he pleases. I do not recommend that additional powers of detention be given to guardians, but I am strongly of opinion that the present time, when it is sought to alleviate the conditions of Poor Law relief, is opportune for the Legislature to deal sternly with a stalwart class, who, month after month, and year after year, demand their "legal right" to relief upon the mere asking, who openly defy those who administer the relief, and make no honest effort for their own maintenance. I should be glad to see some provision of law by which a given number of admissions to the workhouse, extending over a given period, should constitute the subject an "habitual pauper," and render him liable to be taken before a justice; and that, upon being brought before a justice, he should be liable, at the discretion of the justice, having regard to all the circumstances, to be convicted and sent to a workhouse, or farm colony, to be specified, there to be detained and trained in useful labour during a period of not exceeding three months. When I speak of my conclusions, I should like to repeat that I still do not think that the last word can have been spoken upon the question of the unemployed so long as there remains in this country any large quantity of land actually out of cultivation, and whilst there is labour that can be put upon that land. Of course in what form it can best be done, or in what way a man can be brought into contact with the land, and be made to see that his future is assured by that contact, it is difficult at present to say. But, at all events, whilst I say that I have not reached any general conclusion, I make the reservation that in my judgment the last word has not been spoken in relation to bringing men back to the land.

Mr. *Pickersgill.*

11552. You have a large Jewish population in Whitechapel, have you not?—Yes.

11553. You have given us the population; do you know how many foreigners you have in Whitechapel. The last Census would give it, I suppose?—I do not know what the figure would be. I have a return here of the nationalities of the inmates of the workhouse, and the number on the 17th March 1894; but that, of course, would not give you the population.

11554. No, that would not give me what I want. Do you not find very few Jews apply to you for relief?—Comparatively few; but there is an increasing number resorting to the Poor Law now. The Jewish Board of Guardians experience more and more the difficulty of dealing with their poor in the absence of a workhouse test

Mr. *Pickersgill*—continued.

test. If the Jewish authorities were to start an institution akin to the workhouse, or if the guardians were to establish a workhouse for the Jewish poor, it would be regarded abroad as a refuge for the Jewish poor, where their religious obligations would be met in every possible way, and so the Jewish Board are fearful of attracting a larger number from Russia and Poland than at present are attracted.

11555. The relief they give is out-relief?—The relief they give is out-relief; but I think the relief that is given now is smaller in extent, and that the money is much more largely spent in paying the expenses of the people back to their own country, or forwarding them on to America, and dealing with them in some such way as that.

11556. You would agree, would you not, that the circumstances of Whitechapel are rendered peculiar by the very large foreign population there?—I should not like to say that Whitechapel can be actually and fairly compared with another urban district, not alone by reason of the Jewish population, but by reason of the large migratory population. I think I am right when I say that there are about 8,000 beds in our common lodging-houses, shelters, and refuges, and institutions of that kind, so that you get a migratory, nomad, population passing through the union, and that condition of things would not exist in perhaps any other union in London or the country.

11557. With regard to the work done in your workhouse, you try to give useful work, as you tell us?—Yes.

11558. Does that involve disposing of any of the products outside?—There is a small quantity of wood sold; but it is kept within very restricted limits. I think I am right if I say it does not average 1*l.* or 2*l.* a week.

11559. When you enumerated the number of industries that were carried on, that was simply work proper to the workhouse?—Yes, work proper to the workhouse.

11560. I understood you to say that you relied on dissociation for discipline; I did not quite understand what you meant by that; in the workshops do they not work together, or is the work cellular?—It is not cellular. By dissociation I mean that the forms of employment are so varied that the men are distributed all over the place. You will find one man in a section of the building cleaning windows, another engaged in painting, lettering, or graining, and another couple of men or three men will be in the carpenters' shop. That is what I mean by dissociation; they are so distributed about the place that that is in itself a sort of discipline; because the habitual pauper is a man who likes a crowd; he likes to sit down on a seat and break stone or pick oakum if he can carry on conversation with his fellows. So that in those cases we rely upon dissociation for discipline.

11561. Coming to another point, I gather your experience has been that very few persons who come upon the Poor Law are fit for farm work?—But few.

11562. Very few?—Very few.

Chairman.

11563. You say that very few are capable of going on to farm work; is that because of their emaciated condition, or because they are altogether unfit physically?—It is the result of their long town life.

11564. Bad food do you mean?—Bad food, and too frequently drink; they have sunk down to such a level that they do not care to obtain regular employment.

11565. You refer to their moral and physical unfitness?—Yes.

Mr. *Pickersgill.*

11566. Supposing they had three months during which they had good air and were well fed, would their physique be sufficiently good for farm work; or do you regard them as permanently disqualified for farm work. Let us take their physical fitness first, and then we will talk about their moral fitness afterwards?—There is no doubt that if a man were sent to a farm and required to remain there for three months, the effect of his stay there upon him physically would be to vastly improve his condition. Morally it would have the effect of inducing, to some extent at all events, in some men the habit of regular work. If a man has been required to work regularly and conscientiously during a period of three months, it is possible by that time that he would have got to such a condition morally that he might be disposed to turn round and respond to any efforts on his behalf.

11567. But may we take it that in the sifting that took place before these men were sent, you had regard only to their then existing condition; that is, you only sent men who you thought were at that time fit for farming work?—That would be so.

11568. Now with regard to the next point, as to co-operation with the Board of Works, you said you had co-operated with them; would you just develop that a little; how have you co-operated with the Board of Works?—The Board of Works have expressed themselves quite ready to co-operate with us under the limitations which I have already explained. I designate the men "the front rank of resident heads of families, of good character, whose homes are worth preserving, and who have had a *bonâ fide* residence within the district for six months." We regard the Board of Works as not a relieving authority, but we rather take advantage of their existence and of their need in winter time of additional labour, to allow us to make a selection of good men who are worth saving, and who appear to be stranded, and to send them to the Board of Works for employment.

11569. Has your co-operation been limited to the winter?—Our co-operation has been limited to the winter.

11570. That is regarding the winter as a time of special pressure?—Yes, and when additional work is needed.

11571. To what extent have they helped you in that way?—I cannot give the figures, but the number is altogether very small.

11572. Have you sent more to them than to the farm?—Yes.

11573. Considerably more?—Considerably more altogether.

Mr. *Pickersgill*—continued.

11574. I should like to get some idea as to what assistance they have rendered; what assistance last winter, for instance, did you get from the Board of Works?—During last winter 200 extra men were employed by the District Board of Works.

11575. Can you supplement that by the figures of the previous year?—In the previous winter 91 above the usual number were employed.

11576. Have you a casual ward in Whitechapel?—We have.

11577. Do you find that the applicants to the casual ward are increasing or diminishing, taking a broad view over some years?—Increasing.

11578. Have you found many children among them?—No, very few. The total number of children during the last completed three months (to Midsummer 1895), was 42, *i.e.*, 27 under seven years of age and 15 between seven and 15 years.

11579. You have some?—We have occasionally some.

11580. Do you keep those who apply for two days?—Two days.

11581. Invariably?—Not invariably. The superintendent of the ward is expected to exercise a good deal of discretion in regard to cases which come for the first time. A large proportion of the vagrants admitted to the ward are men who are well known to the superintendent; but if a stranger comes and there is special reason for it, the superintendent has authority, and exercises it, to discharge that man the following morning at six o'clock.

11582. When you say they are well known to the superintendent, you do not mean that they are applying a second time within the statutory period, whatever it is; is it three months or one month?—One month.

11583. Then those well-known men would only be able to come once a month?—Yes; they may apply any number of times, but their appearance at the casual ward involves their detention for four days. But the order which was issued by Mr. Ritchie not very long since has practically sapped that four days' detention.

11584. You mean by allowing them to go out at an early hour in the morning?—Yes; they have simply to say they wish to go to seek work and require a discharge, and they are discharged the second morning after admission. But I may say, in practice, we have always discharged them at an early hour. We have for years discharged them at six o'clock in the morning.

11585. Even before Mr. Ritchie's order?—Yes.

11586. Under your discretionary powers?—Yes.

11587. With respect to your suggestion as regards strengthening the criminal law; I did not quite catch what it was. Would you mind repeating what you said about strengthening the criminal law with regard to vagrants or habitual paupers. I think you suggested that those who had been frequently in the workhouse should be brought before a justice?—I am not dealing so much with a class of paupers which exists, beyond units at all events, in our own district, but which exists very largely throughout the country; that is, the class of man who leaves the workhouse this morning and goes to the relieving officer this

Mr. *Pickersgill*—continued.

afternoon; he simply comes out to loaf and hang about till night. When such a man comes to the relieving officer, and the relieving officer begins to talk to him in regard to his running in and out in this way, rebuking him for not making an honest effort to get his own living, he will simply tell the relieving officer "that is not your business: I am destitute, and you are bound to relieve me. I want an order." That is what I mean when I speak of a man openly defying the officers. The man asks for the relief which the law provides for him, and to which he is legally entitled, and he insists upon having it. The man leaves the workhouse this morning, we will say, and goes in to-night. No sooner does he get inside the gates than he gives his notice for discharge. He has been frequently in and out, consequently the utmost notice that can be required of him is 72 hours.

11588. That is the class of person you propose to deal with in this exceptional way?—Yes; and it is the existence of that class which makes the administration of the workhouse harder; because in adapting the arrangements to all classes, we cannot shut out the fact of this class, and so consequently it bears more hardly than it otherwise would upon the others.

11589. I think I understand; you propose that if that sort of thing is repeated a certain number of times, it should constitute a sort of quasi criminal offence?—Yes. I do not suggest that the guardians should be endowed with further powers of detention (for I do not think they should), but that the magistrate should make an order if there has been a certain number of admissions within a given period, or extending over a given period; if, for instance, the number of admissions during 12 months has been such as to show the man to be an habitual pauper, and if the magistrate so adjudicates, he shall be liable to be sent to a workhouse or farm colony in the country, and kept there for three months.

11590. If that suggestion were carried out, it involves the setting up of a new sort of establishment, a sort of penal colony, does it not?—Yes, clearly.

Mr. *Lawrence.*

11591. Do I understand that you would specially favour penal colonies with a view to dealing specially with the vagrant class that is now becoming so extensive?—I would.

11592. We have had certain evidence as to the existence of pauperism in Bethnal Green and Stepney; is the condition of your union so different from that of Bethnal Green and Stepney as to make your experience of the careful and strict administration in your union only partially applicable to the cases of those adjoining unions?—Bethnal Green may compare, perhaps, broadly with the conditions of Whitechapel, except that they have not the large number of Jews resident in the district. I do not know what their migratory population in lodging-houses and shelter is, but probably it is not so large as in Whitechapel; otherwise I should think as a whole the districts are very much alike.

11593. Would you acknowledge that your administration has rather tended to weed that class of people out of your district, so that there is not really so much poverty owing to the operation

Mr. *Lawrence*—continued.

tion of your administration of poor relief?—No; I have never been able to reach the conclusion that the administration is responsible for the migration of the poor into other districts.

11594. That you deny?—That I deny.

Chairman.

11595. Have you noticed any repugnance on the part of the poor of your district to seek aid from you in consequence of being disfranchised by that act and losing their vote?—No, I have not; in my experience I have never had a case brought under my notice.

Chairman—continued.

11596. Do you think it is a just thing that a man should be disfranchised on receiving poor relief, either in the workhouse or as out-relief?—I have formed no strong opinion in regard to the Parliamentary franchise, but I do strongly feel that those who receive relief should not be voters for Poor Law guardians.

APPENDIX.

APPENDIX, No. 8.

PAPER handed in by Mr. *F. E. Hilleary*, LL.D., 15 March 1895.

In reply to the *Chairman*.

I AM unable to ascertain precisely the exact number of individuals receiving relief as distinguished from cases, but taking it that one person receives relief once a week, and also the number 77,628 as the number of cases relieved in December 1893 and January 1894, and dividing that number by 9 (the number of weeks in that period you get roughly) 8,600 cases. If it is desired to get at the number of families relieved, the 8,600 should be again divided by 5, which is believed to be the average number of a family.

Replying to Mr. *Renshaw*.

POPULATION.

PARISH.	1861.	1871.	1881.	1891.
West Ham	37,639	66,969	128,953	204,902
Walthamstow	7,144	11,094	21,715	46,346
Leyton	4,794	10,363	23,016	43,906
Woodford	3,458	4,608	7,154	10,984
East Ham	2,264	3,990	9,713	28,741
Wanstead	2,697	5,143	9,413	26,282
Little Ilford	594	675	993	3,969

Replying to Mr. *Bolton*.

NUMBER of Summonses issued for Rates during the last three years:—

In 1892	1,140	summonses.
„ 1893	1,074	„
„ 1894	1,129	„

Replying to Mr. *Pickersgill*.

THE men selected to be sent to the farm at Hadleigh were able-bodied and single. Five of them have been relieved subsequently.

Replying to Mr. *Burns*.

THE cost of emigration for the last three years has been 36*l*. 10*s*. 11*d*. Nine people only have emigrated, consisting of a family of seven and two others.

Replying to Mr. *Burns*.

NUMBER of Casuals in December 1893	922
Ditto - - January 1894	830
Ditto - - February 1894	787
Ditto - - January 1895	999
Ditto - - February 1895	596

There is accommodation for 79 males and 27 females.

Replying to Mr. *Burns*.

NUMBER of Persons relieved during October and November 1893:—

Week ending 5 October	6,271	
Ditto - 12 October	6,769	
Ditto - 19 October	7,210	
Ditto - 26 October	7,494	
		27,744
Ditto - 2 November	7,753	
Ditto - 9 November	8,188	
Ditto - 16 November	8,593	
Ditto - 23 November	9,032	
Ditto - 30 November	9,103	
		42,669

Replying to Mr. *Burns*.

NUMBER of Persons relieved during March and April 1894 :—

Week ending 1 March	8,608	
Ditto - 8 March	8,538	
Ditto - 15 March	8,574	
Ditto - 22 March	8,587	
Ditto - 29 March	8,202	
		42,509
Ditto - 5 April	7,990	
Ditto - 12 April	7,763	
Ditto - 19 April	7,771	
Ditto - 26 April	7,731	
		31,255

Replying to Mr. *Burns*.

As to what proportion of the persons relieved in the stone yard are permanent paupers, I have taken the week ending 20th February, as follows :—

14 February -	850	19 February -	691
15 February -	899	20 February -	683
16 February -	952		4,736
18 February -	661		

and I find the actual number of persons relieved is 1,195, no man being counted twice, or approximately about one-fourth of the cases relieved.

Replying to Mr. *Burns*.

THE application to the Local Government Board for sanction to a loan for relief works was made on the 4th February 1893. Notice of inquiry to be held was received on the 8th April 1893, but as previously stated the works were not delayed on this account.

The daily average number of bundles of wood made from January 1894 to January 1895, was 1,228.

The circumference of the bundles is 14½ inches and 13½ inches, and they are sold respectively at 3*s*. 3*d*. and 2*s*. 11*d*. per hundred bundles.

APPENDIX, No. 9.

PAPERS handed in by Mr. *F. E. Hilleary*, LL.D., 15 March 1895.

WEST HAM EMPLOYMENT RELIEF WORKS.—WANSTEAD FLATS.

The following resolutions were unanimously adopted at a meeting of the central committee, held at Stratford Town Hall, on Monday, 17th December 1894:—

Resolved—1. "That this committee gladly accepts the suggested co operation of the West Ham Guardians in all that pertains to the administration of the poor law, but deprecates any confusion of function which might result from the conjunction of poor law guardians in the experiment of relief by wage-paid employment."

Resolved—2. "That this committee has learned with deep regret of the rescission by the West Ham Council of their resolution to co-operate with them in the experiment of relief by wage-paid employment, and is of opinion that all the circumstances of the rescission are greatly to be deplored, as tending to the discrediting of the stability and authority of the Council of West Ham."

Resolved—3. "That this committee do proceed with their relief works, and that application be made to the Local Government Board for a grant in aid of their operations."

Resolved—4. "That as far as possible all work carried out under the authority of this committee be pieced and measured up upon prices agreed by them, which shall be not less than the current market prices for a similar class of work."

(*b*) "That no workman shall receive less than 4*d.* per hour; that the men shall be squadded in groups of 10 to 20; that the work done by them every week shall be accurately measured up, and that any difference of profit between the agreed piece-prices and the wages paid shall be distributed among the members of the group in proportion to the wages they have earned."

(*c*) "That not less than two weeks of six days' employment be given to each applicant; that not more than six hours a day be worked."

(*d*) "That every applicant shall be expected to do the best he can, even though the work be unaccustomed, and that continued laziness or misconduct will render any workman liable to discharge."

(*e*) "That every applicant for employment must give proof that he has been resident in the borough not less than six months."

(*f*) "That preference, in taking on, be given to married men with families."

Resolved—5. "That to maintain the district rate of wages, it is expedient to draw a strong clear line of demarcation between the wages paid in ordinary industrial employment and those paid in employment relief, and that an arrangement whereby every unemployed worker may be kept in beneficial employment as 12*s.* per week, or half trade union pay, with the opportunity of earning more by diligent and capable service, is for the common benefit not only of the individual, but of society at large, and is a form of legitimate trade socialism which deserves to be encouraged and extended."

Employment Relief.

Registers were opened on 28th December 1894, at the Conference Hall, West Ham-lane, Stratford, E., for the northern portion of the borough, and at 39, Hallsville-road for the southern portion. The following is a copy of a page in the register, showing the particulars required from applicants before work could be given them:—

Date.	Name (in full).	Address.	Age.	Married or Single.	Children.		Previous Employment.	Trade.	Length of Residence in Borough.	Remarks.
					No.	Age.				

The number of names registered during each week are as follows:—

	North.	South.
Week ending 4th January 1895	263	253
Ditto 11th „ „	111	113
Ditto 18th „ „	64	43
Ditto 25th „ „	63	76
Ditto 1st February „	85	112
Ditto 8th „ „	10	25
Ditto 14th „ „	55	36
	651	658

The total number registered to date (27th February) is 1,400, of which 700 have been given a fortnight's employment on Wanstead Flats.

The following table shows the number of men who, after starting work, have left before completing their fortnight's work:—

(*a*) Dissatisfied with work or wages	9
(*b*) Obtained other employment	6
(*c*) Ill	6
(*d*) Faintness while working	2
(*e*) No reason given—presumably obtained other employment	28

Charitable Relief.

The places and times at which the charitable relief committees meet to receive applications are:—

North Workmen's Hall, Stratford—Mondays, Wednesdays, and Fridays - 10 a.m. to 12 noon.

South Tidal Basin Lecture Hall—Tuesdays and Fridays - 11 a.m. to 12 noon.

Books containing recommendation forms similar to the following are sent to all the clergy and ministers in the districts.

Name and address

Character

Length of residence in borough

Number in family

Relief now being received, if any

Personal knowledge of recommender, *re* applicant

No case is attended to unless the applicant brings one of these forms properly filled up and signed.

Up to the present—

429 cases have been relieved in the North, with an expenditure of 65*l*.

1,220 cases have been relieved in the South, with an expenditure of 145*l*.

APPENDIX, No. 10.

PAPER handed in by Mr. *F. E. Hilleary*, LL.D., 15 March 1895.

A BILL to provide for the Economical Administration of Relief.

(A.D. 1895.)

BE it enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Lords spiritual and temporal and Commons in this present Parliament assembled and by the authority of the same as follows :—

Employment relief districts and funds.

1.—(1.) Every borough or that urban district which contained according to the census of one thousand eight hundred and eighty-one a population of not less than ten thousand and the residue of every administrative county exclusive of all such boroughs and urban districts in the county shall be an employment relief district for the purposes of this Act.

(2.) There shall be formed for each employment relief district a fund to be called the Employment Relief Fund of the district.

(3.) The local authority (hereinafter defined) of each such district shall contribute to the Employment Relief Fund of the district in each year a sum not exceeding the amount subscribed thereto in the same year by voluntary contributions and not exceeding one pound for every hundred of the population of the district.

Charitable relief districts and funds.

2.—(1.) Every poor law union situate wholly in one administrative county and where a union is situate in two or more counties such part thereof as is situate in each county shall be a charitable relief district for the purposes of this Act.

(2.) There shall be formed for each charitable relief district a fund to be called the Charitable Relief Fund of the district.

(3.) The local authority (hereinafter defined) of each such district shall contribute to the Charitable Relief Fund of the district in each year a sum not exceeding the amount subscribed thereto in the same year by voluntary contribution and not exceeding one pound for every hundred of the population of the district.

Local authorities for purposes of Act.

3.—(1.) The local authority of an employment relief district shall be—

(*a*) In the case of a borough the Council of the borough.
(*b*) In the case of an urban district other than a borough the District Council.
(*c*) In the case of the residue of a county the County Council.

(2.) The local authority of a charitable relief district shall be the board of guardians of the poor law union of which the district forms the whole or part.

(3.) The contributions of a local authority to a relief fund shall be paid—

(*a*) In the case of a borough council out of the borough fund or rate :
(*b*) In the case of a district council out of the rate applicable to their general expenses of the execution of the Public Health Acts :
(*c*) In the case of a county council out of the county fund or rate ;

Provided that parishes in a borough which is a separate relief district shall not be assessed to county contributions in respect of sums contributed by a county council to a relief fund :

(*a*) In the case of a poor law union out of the poor rate or where a union comprises two or more relief districts a rate to be levied as part of the poor rate in parishes in the district.

Contribution from Exchequer to relief funds.

4. There shall be paid in every year to the Employment Relief Fund of each employment relief district and to the Charitable Relief Fund of each charitable relief district out of moneys provided by Parliament a sum equal to whichever is the smaller of the following amounts namely—

(*a*) The agregate amount of the sums contributed to the fund in that year by voluntary contribution and by the local athority :
(*b*) An amount equivalent to one pound for every hundred of the population of the district.

Joint committees or administration of relief.

5.—(1.) For each employment relief district or charitable relief district a joint committee shall be established consisting of fourteen members or such other number as the Local Government Board may prescribe in each case.

(2.) One half of the members of the joint committee shall be appointed by the local authority out of their own number and the other half shall be elected in manner directed by the rules to be framed by the Local Government Board by the voluntary subscribers of amounts not less than one pound to the Employment Relief Fund or Charitable Relief Fund as the case may be in the year last past out of their own number.

Provided as follows :—

(*a*) When a county council appoints members to a joint committee a county councillor elected for an electoral division wholly comprised in a borough which is a separate relief district shall not take part in the appointment or be appointed ;
(*b*) Where a poor law union comprises two or more charitable relief districts the appointed members of each district shall be appointed by the guardians elected for parishes or other areas in the district from their own number.

(3.) The term of office of a member of a joint committee shall be three years and one-third as nearly as may be of the appointed and elected members respectively shall go out of office in each year on a day to be fixed by the Local Government Board for the election of new members.

(4.) A retiring member may be re-appointed or re-elected.

(5.) If any default is made in appointing or electing any of the members of a joint committee the members actually appointed and elected shall act so long as the default continues.

Administration of relief funds.

6.—(1.) Subject to schemes to be approved by and to the control of the central committee established by this Act an Employment Relief Fund shall be administered by the joint committee of the employment relief district for the relief of distress in their district by the employment of labour and a charitable relief fund shall be administered by the joint committee of the charitable relief district for charitable relief of distress in their district.

(2.) The joint committee of a relief district shall for the purposes of this Act from time to time obtain reports from each rural parish in their district and they may employ the council of each such parish as their agents to administer any relief in the parish.

(3.) Subscribers to an employment relief fund or to a charitable relief fund may either subscribe to the fund generally or may appropriate their subscriptions to relief in any rural parish in the employment or the charitable relief district as the case may be and there shall be expended in each year in employment and charitable relief respectively from the employment or charitable relief fund as the case may be of the relief districts in which the parish is situate an amount not less than four times the amount of the subscriptions so appropriated for employment and charitable relief respectively in that parish.

(4.) The necessary expenses of a joint committee in the administration of a relief fund shall be paid out of the fund.

Central relief committee for each county.

7.—(1.) There shall be in each county a central committee for the control of employment and charitable relief in the county consisting of one member from the joint committee of each employment relief district and charitable relief district in the county for every ten thousand of the population of the district or fractional part of ten thousand.

(2.) The central committee shall frame schemes for the administration of employment and charitable relief in their county and shall have the custody and control of the relief funds of all relief districts in the county.

(3.) The necessary expenses of a central committee shall be paid out of the relief funds under their control in proportion to the amount of those funds.

(4.) Every scheme for employment or charitable relief shall provide for confining the relief to persons having resided for at least a year in the relief district.

(5.) Every scheme for employment relief shall provide—

(*a*) That no person shall be employed on relief works for more than six days of six hours each in any week or (subject as hereinafter mentioned) at a rate of wages exceeding two-thirds of the current rate of wages in the district:

(*b*) That the work shall be pieced at market rates and properly measured up and that any balance of profits shall be paid to those who have earned it in proportion to the wages earned by them and in addition to their wages:

(*c*) For the proper supervision and inspection of the work;

(*d*) That the relief works shall be for the benefit of the district or the inhabitants thereof.

Annual reports.

8.—(1.) Every joint committee and central committee under this Act shall send and give to the Local Government Board such reports returns and information as to the administration of this Act in their district as the Board require.

(2.) The Local Government Board shall in each year lay before both Houses of Parliament a return stating the proceedings and receipts and expenditure of committees under this Act.

Audit of accounts.

9.—The accounts of the receipts and expenditure of Committees under this Act and their officers shall be audited by a district auditor and the enactments relating to audit by district auditors of accounts of urban sanitary authorities and their officers and to all matters incidental thereto and consequential thereon shall apply accordingly.

Rules for carrying out Act.

10. The Local Government Board shall frame rules for the following purposes:—

(*a*) The time and manner of election of members of joint committees by the subscribers to the relief fund (including special rules with respect to a first election under this Act and the retirement of the first elected members) and the filling of casual vacancies:

(*b*) The manner of appointing central committees:

(*c*) The manner of keeping subscription lists for voluntary contributions to relief funds and of ascertaining and certifying the amounts received in each year:

(*d*) The proceedings of joint committees and central committees and the manner of recording and publishing their proceedings:

(*e*) The manner of keeping the accounts of relief funds and the dates to which they are to be made up.

Ascertainment of population.

11.—(1.) The population of any district for the purposes of this Act shall unless the contrary is expressed be the population according to the last census for the time being.

(2.) Where by the alteration of boundaries or otherwise the population of any district cannot be ascertained it shall be estimated for the purposes of this Act by the Local Government Board and their estimate shall be conclusive.

Relief not to disqualify.

12.—Where any enactment imposes any disqualification on persons being or having been in receipt of relief the disqualification shall not extend to relief received under this Act.

Application of Act to Scotland and Ireland.

13.—(1.) In the application of this Act to Scotland:—

(*a*) The employment relief districts shall be the counties (including therein burghs represented on the county council) and burghs other than those represented on the county council and the local authority thereof respectively shall be the county council or town council;

(*b*) The charitable relief districts shall be the parishes within the meaning of the Local Government (Scotland) Act 1894 and the local authority thereof shall be the parish council.

(2.) In the application of this Act to Ireland—

(*a*) The employment relief districts shall be the counties and municipal boroughs containing a population of not less than six thousand and the local authority thereof respectively shall be the grand jury or town council or town commissioners and the rate out of which contributions to relief funds are payable shall be the grand jury cess or borough rate and in the case of a county the members appointed to a joint committee shall be appointed by the grand jury from the justices of the peace:

(*b*) The charitable relief districts shall be poor law unions and the local authority thereof shall be the board of guardians.

Short title.

14. This Act may be cited as the Administration of Relief Act 1895.

APPENDIX, No. 11.

PAPER handed in by Mr. *H. Llewellyn Smith*, 26 March 1895.

I.—TABLE showing the Value of the Imports of Foreign and Colonial Merchandise into the Port of London,* and at other Ports of the United Kingdom, in each of the Years 1889 to 1893 inclusive.

Year.	London.	Other Ports.	TOTAL.
	£.	£.	£.
1889	144,711,517	282,926,078	427,637,595
1890	144,515,992	276,176,005	420,691,997

1890	999	976	984
1891	1,033	1,011	1,018
1892	997	988	991
1893	978	930	946

[Includes Tilbury and Queenborough.]

APPENDIX, No. 12.

PAPER handed in by Mr. *H. Llewellyn Smith*, 26 March 1895.

(*Labour Gazette*, July 1893.)

Paris Labour Exchange.—Sir J. C. Crowe, Her Majesty's Commercial Attaché at Paris, under date of 30th June last, reports that for some time past there has been disagreement between the Government and the syndicates connected with the new Labour Exchange, which has been built and endowed with an annual subsidy of 2,000*l.* by the Municipality of Paris. The syndicates exist and hold a legal status under a statute of 1884, which enacts that persons engaged in a common trade may form themselves into associations for the purpose of developing their business interests, and combine with other syndicates to form a union. The most important of the conditions to which these syndicates are subject are contained in Clause 4 of the law, which is as follows:—

> The founders of every professional syndicate must deposit its bye-laws, together with the names of those who are in any way charged with its administration or direction, at the office of the Mayor of the locality in which the syndicate is established, or, if in Paris, at the Prefecture of the Seine, and this action must be repeated on the occasion of each change in the directorship or in the bye-laws.
>
> The bye-laws are to be forwarded to the Procureur de la Republique by the Mayor or the Prefect of the Seine.
>
> The members charged with the administration or direction of any syndicate must be of French nationality and in the enjoyment of civil rights.

The law, however, does not assign any fixed time for the performance by the syndicates of the acts above enumerated, and there are, in consequence, numbers of associations established in a permanent way at the Bourse du Travail in Paris which have not complied with the statute. It appears that a syndicate is illegal if composed of members of different trades. The bye-laws to which such a syndicate might agree would probably not meet with approval from the legal authorities. Hence the issue of an order in the first days of June under which the Prefect of the Seine proclaimed that syndicates which did not comply with the provisions of the fourth clause of the Act of 1884 should on the 5th of July cease to hold their offices in the Bourse du Travail.

The Bourse has a central hall, which holds 3,000 people, and large rooms in which workers on strike can meet, committee rooms where syndicates deliberate, offices where business is transacted, a library with books of reference and many newspapers. The number of associations privileged to use the building is now about 270. The grant of the municipality in aid of the syndicates varies with the number of associations; at first it amounted to 500 francs; now it is 184 francs per syndicate. The municipality recently passed a resolution increasing the annual grant to 75,000 francs (3,000*l.*). But the Government have not yet sanctioned this resolution, which is subject to their approval, as indeed is the distribution of funds, which they may suspend if they think fit. The right to control the grants is one of those to which the syndicates object. The Government has threatened to stop the distribution of funds to such syndicates as neglect to comply with the rules laid down by the statute of 1884. Great indignation has been displayed in consequence of this intervention. Meetings have been held and proclamations have been placarded by the syndicates, and a general strike is threatened for the 10th July. One of the chief occupations of the syndicates should be to find employment for men out of work, but it appears that in 1891 there were only 70 syndicates attached to the Bourse du Travail which attended to this business; and the number of operatives engaged either permanently or temporarily was only about 32,000. The syndicates occupy themselves with promoting other special objects, such as the formation of a federation of labour exchanges, which claims to include 800 syndicates representing 900,000 workers.

> [*Note.*—The Government has since taken action in the matter, and the Central Labour Exchange, as well as its branch establishment in the Rue Jean Jacques Rousseau, were, on the afternoon of 6th July, occupied, and remain closed for the present.]

(*Labour Gazette*, August 1893.)

Paris Labour Exchange.—"The Journal des Debats" states that, in consequence of the closing of the Paris Labour Exchange, the *Allemanist* section of the Socialists issued a manifesto on 23rd July advocating a general strike. The unions, however, have declared themselves averse to such a step. The trial of the members of the Labour Exchange, charged with non-compliance with the law of 1884, began early in August, and resulted in each of the defendants being condemned to pay a fine of 50 francs and costs. The court also ordered the dissolution of all the syndicates involved, including the Council General of the Executive Commission of the Bourse du Travail.

(*Labour Gazette*, September 1893.)

Closing of the Paris Labour Exchange.—At a meeting of the Executive Committee of the Labour Exchange and the managers of the irregularly constituted trades unions, held on 14th August, it was decided to appeal against the sentence pronounced against them.

"The Bulletin de l'office du Travail," October 1894, states that in 1892 the Paris Labour Exchange registered 53,691 applications for work, and 36,611 offers of work. It found permanent work for 38,611 persons, and temporary work for 10,281. A labour exchange has meanwhile been established in the Rue de Boudy, but it receives no municipal aid. No information is given as to its operations or constitution.

APPENDIX, No. 13.

PAPER handed in by Mr. *H. Llewellyn Smith*, 26 March 1895.

X.—Loan Societies.

Twelve new societies were certified during 1892, under the Loan Societies Act (3 & 4 Vict. c. 110).

The following is a summary of the return relating to Loan Societies for the year ending 31st December 1892, presented to both Houses of Parliament in compliance with the requirements of the Loan Societies Act (3 & 4 Vict. c. 110), but not ordered by either House to be printed; together with a comparison of its results with those of the previous year :—

Table XXIII.

	Total.	Increase in 1892.
Number of loan societies to which forms of return were sent	721	
Number of societies making returns	358	60
Number of members	40,492	5,916
Amount actually advanced and paid by depositors and shareholders in the year	£. 92,935	£. 9,440
Total amount due to depositors and shareholders	£. 290,582	£. 31,868
Sums in borrowers' hands	£. 269,880	£. 28,173
Amount circulated in the year	£. 381,454	£. 38,384
Number of applications for loans	78,570	13,538
Number of borrowers to whom loans are granted	68,823	10,706
Amount paid for interest by borrowers or sureties	£. 20,827	£. 1,963
Expenses of management	£. 11,276	£. 1,462
Net profits, after paying expenses	£. 15,115	£. 2,324
Loss (if any) during the year	£. 4,734	£. 3,055
Number of summonses issued	3,204	659
Number of distress warrants issued	454	95
Amount for recovery of which summonses were issued	£. 7,372	£. 1,348
Amount recovered	£. 5,541	£. 648
Amount of costs incurred by society in recovering loans	£. 825	£. 136
Amount of costs paid by borrowers or sureties	£. 567	£. 80

Note.—Labour Loan Societies are not separated from other Loan Societies.

In addition to the Loan Societies included in the above Table, there were in 1892, 27 Loan Societies and Trading Banks, which were registered under the Industrial and Provident Societies Act of 1876. The following particulars as to these were published in the Annual Report for 1892, Part B., p. 127.

Number of societies making returns	27
Total number of members	3,089
Total receipts during 1892	£. 1,367,670
Total expenditure	£. 1,370,303

APPENDIX, No. 15.

PAPER handed in by the *Chairman*, 5 April 1895.

THE UNEMPLOYED.

Analysis of the Burgh Returns.

Returns have been received from 204 burghs, from which it appears (1) that there was no exceptional distress in 140 burghs; (2) that there was exceptional distress in 64 burghs, due in 53 cases to severe weather alone, in two cases to dulness of trade, and in nine cases to both causes.

Of the 64 burghs in which there existed exceptional distress, relief measures were taken in 62 cases. In the remaining two cases, both of them small burghs, where no measures were taken, the distress was as much due to dulness of trade as to the severity of the weather.

It should be noted, however, that out of the 140 burghs where there was no exceptional distress, in a certain number of the cases (82 in all) the town clerk reports that distress to some extent prevailed during the severe weather, but even in those cases measures were taken by 78 local authorities out of 82.

Altogether the number of cases in which relief was given either by local authorities or by voluntary agencies, whether the distress was exceptional or not, is most remarkable. Out of the 204 burghs measures were taken in 151 cases.

Tabular Statement of Burgh Returns.

1. No exceptional distress in		140 burghs.
2. Exceptional distress due to—		
(*a*) Severe weather	53	
(*b*) Other causes	2	
(*c*) Both severity of weather and local causes	9—64	
Total	204	„
3. Measures taken by	151	„
4. No measures taken by	53	„
Total	204	„

Note.—In regard to the applications for parochial relief, some nine parishes state they had one application, four or five state they had two or three or four applications. The parish of Glasgow, however, never had so many applicants for relief in the present inspector's experience, and in the parish of Govan the applications are also stated to be materially increased. A few of the other inspectors use such phrases as "some of the old men became paupers on account of the severe weather;" "the Parochial Board authorised the inspector to relieve female outworkers;" "not much increased during the severe weather;" Parochial Board have been liberal in their dealings;" "some tramps;" "not much in excess;" "slightly increased demands;" "a few pounds of casual relief given." The inspector of Edinburgh states that there have been "only six applications to me in excess of those for last year, although there are 21 more in the poorhouse at 16th instant than last year at the same time. This arises from men remaining longer in the house in consequence of the severe weather." The inspector of Elgin states, "of 103 applications for relief made to the Parochial Board from 28th December to 16th February, only 28 (11 males; 17 females) able-bodied persons sought relief, ... but very few of them were what could be held to be *bonâ fide* unemployed."

SUMMARY of Returns made by Inspectors of Poor in *Scotland* as to Distress, &c., among the Unemployed.

* And nine districts of parishes with separate inspectors = 894 Returns received.

Col. 2.—The Returns here would appear to indicate that there is no distress at all. Cols. 3 and 4.—The total number of parishes in which distress appears to exist (in many cases very slightly) as shown by these columns is 298. (Note in 30 cases the distress is stated to be due not solely to the severe weather, and in nine cases it would appear to be ascribed to "other causes.") Col. 6.—By "no measures taken," is meant no measures by "public authorities" or "voluntary agencies," *i.e.*, no providing of stonebreaking, or soup kitchens, &c In the majority of the 42 cases mentioned in this column the inspectors used some such phrase as "private parties," or "private benevolence," assisting.

APPENDIX, No. 16.

PAPER handed in by Mr. *H. Llewellyn Smith*, 26 March 1895.

[*See* Questions 4845, 4846].

MEMORANDUM on the Employment of WOMEN and GIRLS in Occupations in which they compete with MEN and BOYS (based on the Census Returns).

The following Memorandum has been prepared by Miss *Collet*, one of the Labour Correspondents of the Labour Department of the Board of Trade :—

IN the following comparison between the changes in employment of men and boys, and the changes in employment of women and girls between 1881 and 1891, in trades in which men and women compete, the increase in population has been taken into account. Thus, in comparing the rate of increase in the employment of women and girls with the rate of increase in the employment of men and boys, the ratio of the number of women and girls occupied in any trade to the number of female population living above 10 years of age, is compared with the ratio of the number of men and boys occupied in that trade to the number of the male population living above 10 years of age.

In England and Wales, notwithstanding the large number of "details" or headings in the Census Report (349 in all), more than four-fifths of the females returned as occupied in 1891 are included under 18 headings. Each of the remaining groups of trades placed under one heading employed less than one per cent. of the females returned as occupied; and the total returned as occupied under these 331 headings was less than seven per cent. of the number of females living above 10 years of age.

Of the 18 occupations employing any considerable number of women and girls, competition in one form or another between men and women is found to exist in the following :—the cotton, woollen, worsted, and silk trades, the tailoring, and boot and shoe trades, shop assistance, inn and hotel service, and the teaching profession.

Cotton, Cotton Goods Manufacture.

The number of females employed in the cotton trade diminished from 303 per 10,000 females above 10 in 1881, to 290 per 10,000 in 1891. The number of males employed increased from 199 per 10,000 males above 10 in 1881, to 201 per 10,000 in 1891.

The decline in the employment of women (relatively to population), shows itself at each age period above 15 years. The increase in the employment of men showed itself between the ages of 25 and 45.

The proportion of children employed increased both amongst girls and boys.

Woollen Cloth Manufacture.

The number of females employed per 10,000 above 10 decreased from 59 in 1881, to 54 in 1891.

The number of males employed per 10,000 above 10 decreased from 62 in 1881 to 58 in 1891, a smaller decline than that amongst females.

Worsted Stuff Manufacture.

The number of females employed per 10,000 above 10 decreased from 64 in 1881 to 61 in 1891.

The number of males employed per 10,000 above 10 was 38 in 1881 and also in 1891, the actual numbers increasing at the same rate as the population.

Silk, Satin, Velvet, Ribbon Manufacture.

The number of females employed per 10,000 above 10 decreased from 41 in 1881 to 28 in 1891.

The number of males employed per 10,000 above 10 decreased from 20 in 1881 to 15 in 1891, a smaller decline than that amongst females.

In both cases there was an actual decrease in the number employed, not merely a decline relative to population.

Tailoring Trade.

The number of females employed per 10,000 above 10 increased from 53 in 1881 to 78 in 1891.

The number of males per 10,000 above 10 decreased from 116 to 113.

The increase among women and girls showed itself at every age period.

The decrease amongst men (relatively to population) was very slight between the ages of 25 and 45, being 1 per 10,000. There was an increase amongst young men and boys under 25.

Boot and Shoe-making.

The number of females employed per 10,000 above 10 increased from 36 in 1881 to 40 in 1891.

The number of males employed per 10,000 above 10 decreased from 202 in 1881 to 191 in 1891.

The increase among females was entirely among young women and girls under 25 years of age.

The decrease among males was entirely amongst men above 25 years of age. The increase amongst young men and boys under 25 was greater than that amongst young women and girls.

Draper, Linendraper, and Mercer.

The number of females employed per 10,000 above 10 increased from 29 in 1881 to 40 in 1891.
The number of males employed per 10,000 above 10 decreased from 58 in 1881 to 57 in 1891.
The increase among women and girls showed itself at every age period.
The slight decrease amongst men was entirely amongst men between 25 and 45 years of age.

Inn and Hotel Service.

The number of females employed per 10,000 above 10 increased from 26 in 1881 to 39 in 1891.
The number of males employed per 10,000 above 10 also increased from 38 in 1881 to 44 in 1891.

Teaching.

The number of females employed per 10,000 above 10 increased from 123 in 1881 to 126 in 1891.
The number of males employed per 10,000 above 10 decreased from 49 in 1881 to 48 in 1891.
The increase amongst women was entirely between the ages of 25 and 45.
The decrease amongst males was amongst young men and boys under 25 and amongst old men over 65.

TABLE showing for the whole of *England* and *Wales* the number of MALES and FEMALES per 10,000 of each Sex respectively above 10 years of age engaged in certain occupations, according to the Census of 1891, with the Increases or Decreases on the previous Census.

OCCUPATION.	Per 10,000 Females of and above 10 years.				Per 10,000 Males of and above 10 years.			
	1891.	1881.	Increase.	Decrease.	1891.	1881.	Increase.	Decrease.
Cotton, Cotton Goods Manufacture	290	303	–	13	201	199	2	–
Worsted Stuff Manufacture	61	64	–	3	38	38	–	–
Woollen Cloth Manufacture	54	59	–	5	58	62	–	4
Silk, Satin, Velvet, Ribbon Manufacture	28	41	–	13	15	20	–	5
Tailor	78	53	25	–	113	116	–	3
Shoe, Boot, Patten, Clog Maker	40	36	4	–	191	202	–	11
Draper, Linendraper, Mercer	40	29	11	–	57	58	–	1
Inn, Hotel Servant	39	26	13	–	44	38	6	–
Schoolmaster, Teacher, Professor, Lecturer	126	123	3	–	48	49	–	1
TOTAL for above Occupations	756	734	22	–	765	782	–	17

In the four textile groups it will be noticed that the total decrease was 34 per 10,000 females, and only 7 per 10,000 males.

The tailoring and boot and shoe trades are the only ones in this table which might seem to indicate an increase in the employment of women and girls at the expense of men engaged in the trades. The increase or decrease at each age period is therefore given here for these two trades.

NUMBER of MALES and FEMALES occupied in 1891, per 10,000 of each Sex respectively, at each Age Period, with the Decrease and Increase on the previous Census.

	Of 10 and under 15 years.			Of 15 and under 25 years.			Of 25 and under 45 years.			Of 45 and under 65 years.			Of 65 years and upwards.		
	1891.	Comparison with 1881.		1891.	Comparison with 1881.		1891.	Comparison with 1881.		1891.	Comparison with 1881.		1891.	Comparison with 1881.	
		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.		Increase.	Decrease.
Tailor:															
Males	20	7	–	120	18	–	128	–	1	141	–	35	143	–	21
Females	32	20	–	148	64	–	66	11	–	58	8	–	30	4	–
Shoe, Boot, Patten, Clog-maker:															
Males	58	21	–	201	21	–	199	–	23	256	–	43	245	–	47
Females	28	11	–	83	16	–	33	–	–	17	–	5	9	–	3

The growth of the factory system is the cause of the changes in both trades. In neither case has there been a decline in the actual number of males employed, but the increase in numbers has not been so rapid as the increase in population; but the change from the domestic system to the factory system has not been favourable for the time being to the older men. The actual number employed are as follows:—

NUMBERS employed at each Age Period—

	Of 10 and under 15.	Of 15 and under 25.	Of 25 and under 45.	Of 45 and under 65.	Of 65 and upwards.	Total of 10 Years and upwards.
Tailor:						
Males - 1881 - - -	1,813	24,275	41,824	30,976	8,780	107,668
Males - 1891 - - -	3,218	32,564	47,272	27,741	8,701	119,496
Females - 1881 - - -	1,620	20,852	19,173	9,663	1,672	52,980
Females - 1891 - - -	5,133	42,582	26,446	12,732	2,331	89,224
Boot, Shoe, Patten, Clog Maker:						
Males - 1881 - - -	5,244	42,899	71,974	52,532	15,664	188,313
Males - 1891 - - -	9,340	54,571	73,727	50,147	14,863	202,648
Females - 1881 - - -	2,357	16,839	11,500	4,245	805	35,746
Females - 1891 - - -	4,577	23,964	13,131	3,806	663	46,141

Clearly, there has been a displacement of the old by the young. In the tailoring trade this has not shown itself among women, as the factory system, while withdrawing work from the tailor who made the garment throughout, increased the quantity of work requiring to be "finished" after machining, a process that could be performed by married women at their own homes.

In the boot and shoe trade the possibilities for home work among women are much less, and have been diminished by the factory system; the decline among elderly women is therefore only less noticeable than that among elderly men, because so few women were engaged in the industry.

Besides these large industries, there are two industries which, although employing but a small proportion of the population of England and Wales, are so concentrated as to be of considerable importance locally, viz., the hosiery and the earthenware trades.

Hosiery Trade.

The number of females employed per 10,000 above 10 increased from 21 in 1881 to 27 in 1891.

The number of males employed per 10,000 above 10 decreased from 20 in 1881 to 17 in 1891.

The increase amongst females was entirely amongst young women and girls under 25; there was a decrease amongst women over 45.

The decrease amongst males was at every age period above 15, and the decrease was an actual one, not merely relatively to population. But, as in the tailoring and boot and shoe trades, an actual diminution in numbers is only apparent after the age of 45.

Earthenware, China, and Porcelain Manufacture.

The number of females employed per 10,000 above 10 increased from 18 in 1881 to 19 in 1891.

The number of males employed per 10,000 above 10 increased from 31 in 1881 to 33 in 1891, a somewhat larger increase than was shown amongst females.

In addition to these occupations there are certain occupations employing a very insignificant number of women and girls, in which, relatively to the actual numbers employed in 1881, the increase in their employment was very great in the subsequent 10 years.

Relatively to population, however, the increase has been very small, and the increase which has in each case shown itself amongst males is much more remarkable. The number of women employed is so small that in the following table the numbers are given in terms of 100,000 above 10 years:—

TABLE showing, for the whole of *England* and *Wales*, the number of FEMALES and MALES per 100,000 of each Sex respectively, above 10 years of age, engaged in certain Occupations, according to the Census of 1891, with the increase on the previous Census.

OCCUPATION.	Per 100,000 Females of and above 10 Years.			Per 100,000 Males of and above 10 Years.		
	1891.	1881.	Increase.	1891.	1881.	Increase.
Commercial Clerk - - - - -	156	60	96	2,166	1,884	282
Paper-box, Bag Maker - - - -	150	87	63	20	13	7
Tobacco Manufacturer, Tobacconist -	139	86	53	124	120	4
Civil Service (Officers and Clerks) -	75	32	43	298	240	58
Printing Trades - - - - -	39	22	17	774	639	140
Telegraph and Telephone Service -	38	22	16	100	77	23
TOTAL for above Occupations - -	597	309	288	3,482	2,968	514

In these occupations, therefore, the employment of males relatively to male population has increased nearly twice as much as the employment of females relatively to female population.

(*See* Question 4847.)

A.—STATEMENT SHOWING THE NUMBER† OF WORKPEOPLE EMPLOYED IN THE MINING AND METAL INDUSTRIES IN GERMANY IN EACH OF THE UNDERMENTIONED YEARS.

[*Compiled from "Statistisches Jahrbuch für das deutsche Reich."*]

INDUSTRIES.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.
Mines:										
Coal	207,577	214,728	218,725	217,581	217,357	225,452	239,954	262,475	283,227	289,415
Iron	39,658	38,914	36,072	32,137	32,969	36,009	37,762	38,837	35,390	36,032
Other	86,902	87,117	87,597	87,475	87,308	88,537	91,180	94,027	97,368	97,456
TOTAL Mines	334,137	340,759	342,394	337,193	337,634	349,998	368,896	395,339	415,985	422,903
Metals:										
Pig Iron	23,515	23,114	22,768	21,470	21,432	23,046	23,985	24,846	24,773	24,325
Cast Iron	43,012	45,726	46,161	45,813	48,668	53,326	59,437	63,960	62,743	61,293
Wrought Iron and Steel	86,440	86,468	84,594	85,045	89,526	94,035	101,907	106,793	107,525	107,081

* Including the Grand Duchy of Luxemburg.

† The figures in each case represent the numbers of workpeople engaged in operations *primarily* connected with the industry to which they are said to belong. (*Hauptbetriebe*).

B.—STATEMENT SHOWING THE NUMBER OF PERSONS EMPLOYED IN THE TEXTILE INDUSTRIES IN GERMANY IN 1892.

[*Compiled from the German Industrial Census of 1882.*]

BRANCHES OF INDUSTRY.	Number of Workpeople.
Cotton	210,686
Wool	196,812
Flax, Hemp, and Jute	136,157
Silk	91,100
Hosiery	82,333
Trimmings, &c.	31,275
Crochet, Lace, Embroidery, &c.	36,760
Weaving of Rubber, Hair, and mixed goods	78,111
Net, Sail and Sack Making	18,912
Weaving (materials not specified)	4,134
Bleaching and Dyeing (materials not specified)	26,924
TOTAL TEXTILES	913,204

III.—SWITZERLAND.

STATEMENT SHOWING THE NUMBER OF PERSONS EMPLOYED IN THE UNDERMENTIONED INDUSTRIES IN SWITZERLAND IN EACH OF THE YEARS 1880 AND 1888.

[*Compiled from Les Résultats du Recensement Fédéral du 1er Décembre* 1888.]

INDUSTRIES.	1880.	1888.
Metals and Engineering:		
Watchmaking	43,905	44,147
Machinery, tools, and iron vehicles	13,469	15,301
Textiles:		
Silk, spinning, weaving, dyeing, printing, and finishing	64,866	60,704
Cotton, spinning, weaving, dyeing, printing, and finishing	50,104	43,868
Embroidery	36,724	45,120
Clothing, &c.:		
Garments and underwear	62,224	52,420
Boots and shoes	30,540	27,393
Agriculture, cattle rearing, and gardening	540,430	481,033
Foods, drinks, and tobacco	45,972	44,115

IV.—BELGIUM.

STATEMENT SHOWING THE NUMBER OF WORKPEOPLE EMPLOYED IN CERTAIN INDUSTRIES IN BELGIUM IN EACH OF THE UNDERMENTIONED YEARS.

[*Compiled from Annuaire Statistique de la Belgique*, 1893.]

INDUSTRIES.	1880.	1885.	1887.	1888.	1889.	1890.	1891.	1892.
Mining:

XI.—UNITED STATES.

STATEMENT SHOWING THE NUMBER OF PERSONS EMPLOYED IN THE UNDERMENTIONED INDUSTRIES IN THE UNITED STATES AS ASCERTAINED BY THE ELEVENTH CENSUS (1890), COMPARED WITH THE CORRESPONDING FIGURES AS ASCERTAINED BY THE TENTH CENSUS (1880).

[*The figures for Mines have been taken from "Report on Mineral Industries in the United States at the 11th Census, 1890"; the remaining particulars from Census Bulletin, No. 380, of 6th April 1894.*]

INDUSTRIES.	1880.	1890.
Mining:		
Coal	170,867	299,599
Iron	31,688	38,227
Metal Trades:		
Iron and steel *	140,978	152,535
Blacksmithing and wheelwrighting	50,634	50,867
Agricultural implements	39,580	42,544
Tin and coppersmithing, and sheet iron working	27,116	38,442
Iron work, architectural and ornamental	1,934	18,672
Iron and steel pipe, wrought	5,210	12,064
Foundry and machine shop products	145,351	247,754
Textile Trades:		
Cotton goods	185,472	221,585
Woollen goods	86,504	79,351
Worsted goods	18,803	43,593
Silk, and silk goods	31,337	50,913
Clothing Trades:		
Boots and shoes (factory product)	111,152	139,333
Clothing, men's	160,813	243,857
Clothing, women's (factory product)	25,192	42,008
Hats and caps (except wool)	17,240	27,193
Hosiery and knit goods	28,885	61,209
Shirts	25,687	32,750
Printing and publishing	58,478	164,935
Lumber and other mill products	147,956	286,197

* Does not include in 1890 establishments that continue the manufacture of the metal into a more finished product, *e.g.*, wire, nails, and spikes.

[Questions 4896—4898.]

EMPLOYMENT OF ENGINEMEN AND THATCHERS IN 1894-95.

THE following Memorandum has been prepared by Mr. *Wilson Fox*, the Agricultural Correspondent of the Labour Department of the Board of Trade:

There is no doubt that the winter of 1894–95 was much better than the winter of 1893–94 as regards employment, both for men in charge of, and those working with, engines, and also for thatchers, on account of the more prolific harvest in the latter year as compared with the former.

My information up to the period of the frost in January 1895, showed that work was more constant than during the corresponding period of 1894, partly owing to there being more threshing. And my information received during the period of the frost showed that, if it had not been for the threshing work, the labourers in a number of the arable districts would have been much worse off.

The harvest of 1894 yielded something like three stacks for every one produced in the 1893 harvest, and it is apparent that this must have involved the employment of more labour both for thatching and threshing. From the farmer's point of view the harvest of 1894 was a disastrous one, because it was prolific in quantity, but very disappointing in quality, and, in addition to this the prices are lower than they ever have been. Notwithstanding this, the crops were very costly to harvest, partly owing to the bulk, and partly to the fact that they were much beaten down by the storms preventing the use of the "self binder."

I may observe that, since the depression, employment for enginemen has, in some districts, been of an unsatisfactory nature, owing to the decrease in the area of corn crops and to the growing practice of farmers to leave their seeds down for two or three years before ploughing them up, with the object of saving labour.

Consequently

Consequently there has been less corn to thresh, and this has no doubt affected both the enginemen and, to some extent, the thatchers. But work for thatchers has also decreased considerably of late years, owing to the substitution of tiles and slates for thatch for the roofs of cottages and farm buildings and sheds. Also the thatching of stacks of hay done in the plainest and cheapest way, and "fancy" thatching is seldom seen.

With reference to wages of enginemen I am not in a position to say whether the skilled man who drives the engine, and is usually in the employment of a firm of engine proprietors, have been reduced owing to agricultural depression, they are skilled mechanics, and are not always easy to find, and it is I think probable that their wages have been maintained. On large farms where an engineman is kept their wages would usually fall in proportion to those of the other skilled men and ordinary labourers. The labourers who go about with engines, or who are taken on to help at threshing in the district where an engine is employed, usually receive the current day wages.

Thatchimg is generally done by piecework at about 10*d.* a yard for stacks in the Eastern Counties, if undertaken by a man not on the staff of the farm, which is usually the case. As a rule thatchers are scarce, and, as every one wants them at the same time, I understand that in the Eastern Counties prices of piecework are no less than they were.

(Questions 4913—4916.)

LABOUR COLONIES IN VICTORIA.

By the Settlement of Lands Act of 1893 provision is made for the establishment of Labour Colonies. These Colonies are established for the purpose of affording assistance to persons who are absolutely without means, and are in the nature of relief works. They are placed on blocks of Crown land not exceeding 1,500 acres in extent, and are supported partly by the Government and partly by voluntary contributions, the Government granting 2*l.* to every 1*l.* contributed privately. To each Labour Colony five trustees are appointed, who manage it and dispense its funds, and the subscribers may, if they see fit, elect a committee of four persons to assist the trustees. The trustees and committee may admit any person of good character and repute into the Labour Colony, and may establish any trade or industry in connection therewith. The moneys received are paid into the trust account, and may be expended in payment for work done in the erection of buildings, or in purchasing provisions, clothing, building materials, agricultural implements, tools, &c.

Reports in October and November 1893 by Mr. Hayter, the Government statist of the Colony, states that the only Labour Colony in active operation is that of Leongatha, situated in the Gipps Land District, about 80 miles from Melbourne. On joining this Colony each man has to work a week on probation, and then on a small wage fixed by the manager, according to his ideas of the man's worth, After deducting the cost of food and of the clothes and other necessaries supplied him from the store, the balance of the man's wages is placed to his credit and paid him in cash when he leaves the Colony, or the money is paid as earned to his family in town. A labour office has been established on this Colony, and employers are at once supplied, without fee, with pick and shovel men, splitters, bush hands, farm labourers, ploughmen. rough carpenters, cooks, bakers, or skilled tradesmen. It must be borne in mind that the Labour Colonies are not intended to afford permanent homes to the men, but to supply their immediate wants, and to fit them for a rural life. The industries pursued at Leongatha are draining, clearing and cultivating the land, sawing timber, and splitting posts, rails and palings, and at the end of November about 300 persons are employed, and 1,450*l.* had been advanced by the State in aid of its objects.

A later report received through the Emigrants' Information Office in April 1894, stated that the Leongatha Labour Colony had, through want of public support, become involved in financial difficulties, and that the Government would in future administer its affairs.

APPENDIX, No. 17.

PAPER handed in by Mr. *James Bell*, 7 May 1895.

STATEMENT by the Lord Provost of Glasgow regarding Relief Works. 1895.

To the Right Honourable *H. Campbell-Bannerman*, M.P., and Members of the Select Committee on Distress and Want of Employment, London.

Gentlemen, City Chambers, Glasgow, 2 May 1895.

IN response to the letter from Mr. Reginald Dickinson, Secretary to the Select Committee on Distress, requesting a witness from the Corporation to give evidence with respect to our methods of relief for the unemployed, I beg to submit the following statement ; and I shall attend the Committee on Tuesday, 7th May, at 12 o'clock, on behalf of the Corporation of Glasgow.

May I be allowed very shortly to advert to the periods of distress which have been dealt with in Glasgow from 1848 until the present day.

The first occurred in 1848, through a depression in the weaving trade ; and at that time 5,237 individuals, with families numbering 5,264, were relieved.

In 1857, by the failure of the Western Bank of Scotland, a terrible monetary and commercial crisis existed in Glasgow. Relief works were opened, funds collected, and 10,051 heads of families were assisted. Probably not less than forty or fifty thousand persons altogether participated in the benefits of the fund then collected.

In 1862, owing to the suspension of the supply of cotton from the United States, and the war between the Confederate States and the States of the Union, the spinning mills and weaving factories in the city were nearly all closed, and great distress in consequence existed. A large sum of money, over 36,000*l.*, was in two years collected and distributed for the alleviation of this distress, in addition to clothing, blankets, coals, &c. I give a statement of the amount received and expended :—

Received - - - - - - - - - - - - - - £. 36,320. 0. 8.

	£.	s.	d.
Expended on relief in the city - - - - - -	26,232	17	11
Outlying districts for relief - - - - - - -	1,295	–	–
Assisting emigration to Canada - - - - - -	1,987	–	10
Assisting emigration to Queensland - - - - -	130	–	–

Assistance was given to 18,797 persons. Work was found for 1,000 girls in a hall in the East-end, and for 300 in a hall in one of the central districts of the city. Nearly 2,000*l.* was expended on emigration, and the balance, after paying working expenses, was carried forward for general relief. A balance of 776*l.* was ultimately handed over to the Corporation Relief Fund in 1884.

The relief operations above referred to were all carried out by a committee of citizens and members of the Town Council combined ; but in 1878 the Corporation took charge of the disbursing of moneys collected, and in opening of relief works, and have continued to do so since that date.

Great distress and commercial depression prevailed after the failure of the City of Glasgow Bank in 1878 ; and relief works were carried on by the Corporation from 25th November 1878 till 29th March 1879, and again from 17th September 1879 till 31st January 1880. Relief works were opened during the winters 1884–85 and 1885–86, and 1886–87. These were all occasioned by general commercial depression. The commercial activity which succeeded these periods obviated the necessity of providing special employment until 1892–93, when we again opened works on 8th December, closing them on 4th March. The following statements refer to operations prior to this year ; but in the first table statistics for 1895 are added for comparison.

TABLE showing Glasgow Relief Funds, 1878—1895.

GLASGOW UNEMPLOYED RELIEF WORKS, 1895.

Undue distress had to be dealt with in the past winter, the distress being occasioned in Glasgow solely by the extraordinary severity of the weather, and no relief works would have been opened or required had the winter been a normal one. We did not open the relief works until 4th February, and we were enabled to close them on 16th March. The following statement shows the amount of money expended during this period :—

	£.	s.	d.	£.	s.	d.
Wages	2,184	14	4			
Whin Metal	1,468	13	3

				4,854	15	7
Value of Whin Metal when broken				1,894	14	11
Leaving a deficiency of £				2,960	–	8

At the close of 1894 I was waited on by a few men, representing that they were out of employment, and that they represented a condition largely existing in the city. I asked them to address me formally by letter, and I promised that I would have inquiry made. They did not do so, and I afterwards ascertained that several of the deputation had got work, while others had only been a week or so out of employment. On 10th January we were approached by a few men, representing that they were unable to find employment, and the magistrates caused inquiry to be made through the chief constable and his lieutenants, the Charity Organisation Society, the parochial boards, the Association for Improving the Condition of the People, the superintendents of the model lodging houses, the secretaries of various organised trades, and the large employers of labour in the city. The information received prior to 28th January did not disclose any unusual distress, or exceptional difficulty in obtaining employment. At this date the frost had lasted for a month almost without a break, and outdoor labour was being greatly curtailed. The magistrates thereon resolved to open stone-breaking works, and a committee was appointed to carry out the details. It was decided that applications from men with families whose combined earnings amounted to 15*s.* per week ought not to be entertained, and at this stage work was given only to those who had resided in Glasgow for the three immediately preceding months. The rate of pay was similar to that adopted on former occasions, viz., 1*s.* per day, and 1*s.* extra on Saturday to those who had worked the whole week; and, in addition, the workers got a breakfast of tea and bread and butter, and a dinner of soup and bread. Each applicant had to furnish information, which is duly scheduled, giving his age, domestic circumstances, length of residence in the city, former employment, wages, and other matters. The schedules were handed to the Charity Organisation Society for investigation, who reported on them to the committee appointed by the magistrates. On 4th February two stone-breaking yards were opened, on 16th February a third, and on 22nd February a fourth.

The following table shows the number of men employed on each of the 36 working days during which these yards were open; and, for comparison, a similar table for 1892-93 is given above.

NUMBER of MEN working in Stone-breaking Yards from 4th February till 16th March 1895.

Highest Number working 23rd February 1895 – 2,543

TOTAL Number of Breakfasts up till 16th March 1895 – 38,264

TOTAL Number of Dinners up till 16th March 1895 – 36,308

TOTAL Rations – 74,572

The unprecedented severity of the weather continuing, it was found impossible, owing to the rush of applicants, to get the investigation overtaken within a satisfactory time; and, ultimately, all who applied were allowed to begin work, the circumstances of each worker only being noted. The total number who from first to last sought employment, and who had their cases investigated, was 3,643, following 231 different occupations. The following list shows the various trades of the applicants :—

* Last day of daily wage. † First day of piece-work.

Tube workers	1	Waiters	1	Yarn dyer	1
Twisters	9	Warehousemen	1		
		Watchmakers	1		
		Watchmen	3	TOTAL	3,643
Umbrella makers	1	Weavers	47		

The average age of the applicants was about 40 ; and they consisted of—

1,213	single men, without dependents.
477	married men, with no children under 16 years of age.
106	widowers, with families.
149	single men, supporting relatives.
1,698	married men, with families under 16 years of age.
3,643	

The working hours were from 8 a.m. till 5 p.m. on five days of the week, and from 8 till 1 on Saturdays. When the weather became a little milder, the men who were not eligible under three months' residence, and from other causes, were discharged ; and in many cases they were supplied with boots, stockings, shirts, and trousers on leaving. In all cases men with dependents received orders on the soup kitchens for daily rations of soup and bread, according to the number of their families, and in the most needy cases supplies of provisions, fuel, and clothing were also given. By 4th March, when the weather became more genial, numbers of the men were finding employment at their usual occupations, and the committee introduced to the various yards, payment by piece-work—the rates paid being the ordinary rates paid for stone-breaking and stone-wheeling—and no man was allowed to earn more than 7*s.* per week. The rates paid were 1*s.* 10*d.* per cubic yard for stone-breaking, and 2*d.* per cubic yard for stone-wheeling ; 9*d.* per day was paid in advance, and the balance on the Saturday, or on the day of leaving. From the experience of former relief works, we were satisfied that 7*s.* could easily be earned by most of the men in three or four days. Intimation of piece-work greatly reduced the number of men in the yards. On the last day that the daily wage was paid without piece work, 1,465 were at work, but on the morning when piece-work was introduced only 621 put in an appearance. A number of those employed were dissatisfied with the new arrangement, and they induced all the willing workers at the two yards then remaining open to strike work. An indignation meeting was held in George Square, opposite to the Municipal Buildings, and a deputation of eight of their number was sent to interview the committee in charge of the relief stations. After the interview, all the men returned to their work, but the numbers diminished so rapidly, that on 16th March there were only 32 men left. The works were then closed, the men remaining being provided with suitable clothing to enable them more easily to get employment.

Were I again on a relief committee, I should strongly urge, that after the first week all the men engaged should be put on piece-work, even if the ordinary trade rate paid to stonebreakers was exceeded, and the men's earnings limited to whatever sum might be fixed as the maximum by the committee. This would compel a certain amount of diligence, and would give the willing workers an opportunity, as soon as they had earned the maximum, to find employment at their normal occupations.

CITIZENS' RELIEF FUND, 1895.

The preceding information applies entirely to work carried out by the Corporation, and at the expense of the Corporation ; but, in addition to the relief thus given, a citizens' fund was subscribed, and I now give particulars of the way in which it was administered.

On 11th February last, after several days of intense cold, the temperature ranging from four to seven degrees below zero, the magistrates met, and associated with themselves, representatives of the Charity Organization Society, the inspectors of the city, barony, and Govan Parochial Boards, and a gentleman who has laboured long in religious and benevolent work amongst the poor, and whose experience was felt to be of great value. At my suggestion the police were asked to give their assistance, as it was perfectly evident that no other organization existed which could overtake the distress caused by the sudden severity of the weather. Captain Boyd, and his officers and men, took up their new duties with the greatest enthusiasm, and discharged their mission of mercy in a way which evoked the blessings of those who were in distress, and won for them the approval and gratitude of the whole community.

Soup kitchens were at once opened at the Eastern, Southern, Western, Polmadie, and Maryhill police stations, the Charity Organization Society's Shelter at 60, Kyle-street, the Barnhill Poorhouse, the Night Asylum, the Gospel Hall, Saltmarket, and Possil Park—in all, 10 soup kitchens. The well-heated muster-halls and cells of the police offices were thrown open as shelters for the houseless, and arrangements were made for affording medical relief gratuitously to all necessitous cases. On 12th February I addressed a letter to the newspapers asking the citizens for pecuniary aid to enable us to overtake the clamant distress then existing. By the following day fully 2,000*l.* had been sent in, and within a week I had to close the fund, having then received 9,586*l.* 1*s.* 1*d.* ; and it was evident that a much larger sum could have been got. The following table gives particulars of receipt and expenditure of moneys received, and it shows the sum of over 5,000*l.* still unexpended :—

GLASGOW DISTRESS RELIEF FUND, 1895.

		229 1 5	
			4,531 17 8
Leaving a surplus of		£.	5,054 3 5½

In addition to money, we received contributions of coals, clothing, and groceries of all kinds, to the value of 1,361*l.* 17*s.*, which were distributed by the committee. The work of relieving all necessitous cases, except those dependent on the men employed at stone-breaking, was assigned to the police. Every one in need of coals or food was invited to apply either to the police or to the superintendents at the various offices; particulars were taken down, inquiries were at once made by the policeman on the beat at the address given, and every necessitous case relieved without delay. To prevent imposture, the officers of the Parochial Boards and of the Charity Organisation Society regularly visited the police offices and soup kitchens. As long as the kitchens remained open, soup and bread were given to all who applied. Applicants had simply to state that they were in need of food; and we estimate that over 330,000 meals were so given. 4,160 men and 679 women and children availed themselves of the shelter of the police offices during the 29 nights the muster halls were kept open. Over 1,000 tons of coals, about one-half of which consisted of donations, were delivered to 13,151 householders. Groceries to the value of 1,834*l.* 4*s.*, in addition to the quantities sent in to the committee in the form of contributions, were supplied to 22,669 applicants. This form of relief was distributed by ticket, which enabled the holder to get provisions equal to its face value from any grocer in the city. Of these tickets there were issued:

		s. d.
12,428	at	1 –

15	„	2 6
1,732	„	3 –
1,105	„	4 –
22,669		

Almost no relief was given by the committee in the form of cash; but where careful investigation showed that persons who earned their living by hawking fish, crockery, or smallwares, had parted with their means before asking assistance, arrangements were made to enable them to begin business again, in a small way, with a new stock-in-trade. In a good number of cases rents were paid to save necessitous and deserving tenants from ejection; and, in others, arrangements were made with the police authorities to afford some delay in the payment of rates. Through the great kindness of the Charity Organisation Society and the Glasgow Needlework Guild, provision was made for the distribution of large quantities of both new and cast-off garments to those insufficiently clad, more especially amongst children.

While giving these particulars of the assistance afforded through means of the Citizens' Fund, it must be kept in mind that very many other channels of relief were open to those in want. At this time of distress, congregations and philanthropic societies greatly enlarged their ordinary helpful work. New organisations were called into existence, and rations of bread and soup, equivalent to very many thousands of meals, must have been provided through these other agencies.

No

No undue distress existed in Glasgow up till the beginning of the year, and its acuteness was occasioned solely by the extreme severity of the weather. At present we have no rating powers enabling us to open any relief works; and what we have done has been paid, as far as the value of the work was concerned, by a rating body, say, Parks or Roads Trustees, and the balance, viz., the difference between what we paid, and what we could have got the work done for by contract, fell to be defrayed either by private contributions or from the Common Good. It has never happened in Glasgow that when exceptional distress occurred some means have not been found to relieve it. Any national system of relief which could be devised, while not altering the character of the well-doing, would certainly deteriorate weak natures, make the indolent more idle, the careless more indifferent, and the bad-tempered almost unmanageable. The question ought to be left to municipalities and local authorities, to be dealt with by them in times of exceptional distress, and exceptional distress only. Each locality has its special trade or trades, and each would require special forms of relief, which could be adequately judged of only by persons living in the locality, and cognisant of all details. Imperial assistance or control would, in my opinion, weaken municipal responsibility, which is a responsibility more of a social than of an official character, to be called into operation only to avert a calamity.

The problem is totally different in large cities from what it is in small towns or villages, where everyone is or can be known. Into a large city many men and women flock to hide their sins or their sorrows; some even come to hide their poverty in a way they cannot do in a country town; and for these cases it is impossible to provide any general scheme of relief. In a city like Glasgow there will always be a normal percentage of unemployed in all trades. This in the aggregate may be considerable; but spread over 200 or 300 different occupations it does not fall heavily on any individual trade. It is one of the ordinary conditions of a large city which we cannot touch.

In my opiniont, he solution of this unemployed question is to make it perfectly clear that no Government and no local authority have incumbent on them, in the slightest degree, a responsibility either to procure or to provide employment, or to maintain persons while out of employment. The solution of the question rests with the people themselves, and not with any authority. It must be found in prudence, thrift, industry, and sobriety, and the avoidance of early and improvident marriages. This last I see constantly is a very fruitful source of misery. Until these duties are recognised by those who are often out of work in winter time, and provision made by themselves against the days of idleness, we shall have this question annually before us in a more or less acute form.

Those who have had the most intimate acquaintance with this question are aware that respectable men, by the varying conditions of trade, are frequently thrown out of employment; yet these are not the men who, at the beginning of almost every winter, call for relief and assistance. There is a certain proportion of workers who, from infirmity of person or of temper, are always first to be dismissed. Their infirmities do not amount to a disability to work, yet they cause these men to be more often out of employment than the normal condition of their trade warrants, and, having no savings to fall back on, they at once come into evidence when trade becomes dull. We have also the working man who has got beyond his best working days; others who have never learnt to work steadily, and who are nomadic and constantly shifting; and we have still another class, who are constantly being thrown out of employment through being a day off drunk, and finding their positions filled up when they return.

It has been advanced by some that local authorities in times of undue distress ought to carry out public works. These suggestions can be advanced only by those who are not cognisant of the working of municipal institutions. We are constantly carrying out all the work which we think is necessary for the Corporation, and that as speedily as possible, without increasing our rates; but no work, beyond stone-breaking or digging, which the Corporation can originate or carry out, would be of the slightest use to relieve undue distress such as we had last winter. Take the building of a bridge, for example. We, first of all, require to get an Act of Parliament; and the same preliminary applies to any large work or expenditure of money which the Corporation can undertake; and this would require nearly a year. In the case of a bridge, the granite would likely come from Aberdeen or Cornwall, where there might be no undue distress; the iron or steel work from a district probably well employed; and, when we had the materials here, we would find the building work possibly interrupted by frost at the very time when we wished to utilise them, for the purposes of giving employment. It is the same with other work; and similar objections can be advanced against any work in which a local authority can engage.

Our experience here shows that stone-breaking or digging best solves the problem, and stone-breaking for preference, as we get a better return for the money expended; yet you will see that while we spent 4,854*l.* 15*s.* 7*d.*, the value of the stones broken amounted only to 1,894*l.* 14*s.* 11*d.* During the winter of 1892–93 digger work gave a worse return. In my opinion, relief ought to be given only after a labour test, and payment ought to be partly in money and partly in food. I would strongly deprecate any alteration from the present position so far as Glasgow is concerned. We shall always be able, with the assistance of private benevolence and the means at our corporate disposal, to deal with periods of undue distress; but as smaller cities and local authorities may not be in this position, it seems to me the remedy is to enable local authorities to impose a small rate for the establishment of temporary relief works to overtake any season of exceptional distress, but clearly for no other purpose, the rate being well defined, and, while collected along with the usual burgh rates, shown separately, so that the ratepayers may see what the rate is, and be able emphatically to express their opinion and wishes in regard to its imposition and expenditure.

With the assistance of the official staff, police, and others, there would be no difficulty in getting at the character of each applicant for work were it so desired; but this difficulty at once arises: is work to be given to the honest, sober, and well-conducted workman who is out of employment through no fault of his own, on the same terms as to the improvident, drunken, or careless, who may be out of work very distinctly through his own fault, and who, perhaps, works simply to earn a shilling or two to spend in drink? My feeling is, that no relief works ought to be opened until it is clearly demonstated that they have become so necessary, that we must take all who apply and who have not family earnings of, say, 15*s.* a week, subject, of course, to the provision of three months' residence immediately prior to the application, and at least a month's lack of employment. Where such works are opened, the distress will likely be acute, and, alongside of them, some system of relief from private sources of benevolence will have to be carried out. In distributing this winter's fund we invited all who knew of any case of want or distress to send particulars, and in this way we were enabled to relieve many.

I would refer again to the great and good work performed by the police force of Glasgow in relieving distress during the past winter. Every part of the city has a constable day and night on a defined beat, and hence we were able to overtake cases brought before us without loss of time. As the cases to be investigated belonged to an individual beat, there was no chance of overlapping, and the fact that the relief was being given through the medium of the police deterred the criminal class, who otherwise might have attempted imposition.

No fault was found with, or adverse criticism made on the action of, the authorities or on the method devised for the relief of last winter's distress. On the contrary, the combination of private benevolence with the action of the public authorities, and the co-operation of the police, seems to have solved the problem of administering relief in a manner more satisfactory than anything which has hitherto been experienced.

I am, &c.
(signed) *James Bell*, Lord Provost.

APPENDIX, No. 19.

PAPER handed in by Mr. *H. G. Willink*, 10 May 1895.

APPENDIX A.

WAGES.

Agricultural :	
Carters, 13*s.* to 15*s.* + harvest and extras, or Michaelmas money, and perhaps cheap cottage or free	15*s.* to 18*s.* per week, or more.
Undercarters, 9*s.* to 13*s.* + harvest and extras	11*s.* to 15*s.* per week.
Stockmen, 12*s.* to 14*s.* + harvest and extras, or Michaelmas money, and perhaps a cheap cottage or rent free	17*s.* to 19*s.* „ „
Mill men, and machine men	16*s.* to 22*s.* „ „
Farm labourers (first class), 15*s.* + harvest and extras, or Michaelmas money (sometimes cottage)	16*s.* to 18*s.* „ „
Field hands, 12*s.* to 13*s.* + harvest and extras, or Michaelmas money	14*s.* to 16*s.* „ „
Rickbuilders and thatchers	16*s.* to 17*s.* „ „
Woods and forestry, and coppice work (say)	14*s.* to 16*s.* „ „
Building :	
Bricklayers - 7*d.* per hour (say)	32*s.* per week.
Stonemasons - 8*d.* „	36*s.* 8*d.* per week.
Plasterers - 8*d.* „	36*s.* 8*d.* per week.
Carpenters - 7*d.* „	32*s.* per week.
Plumbers - 7½*d.* „	34*s.* 3*d.* per week.
Painters - 6½*d.* „	29*s.* 9*d.* per week.
Plumber's mates, 4½*d.* „	20*s.* 6*d.* per week.
Labourers - 4*d.* „	18*s.* 4*d.* per week.
Railway labourers (say)	18*s.* per week.
Brewing :	
Tunmen, enginemen, coopers, head maltsters	20*s.* to 25*s.* per week.
Ordinary labourers	15*s.* to 18*s.* „ „
Cornmills :	
Various grades	from 18*s.* to 32*s.* 6*d.* per week.
Brick kilns	18*s.* to 25*s.* „ „

APPENDIX, No. 20.

PAPER handed in by Sir *Hugh Owen*, K.C.B., 14 May 1895.

APPENDIX, No. 21.

PAPER handed in by Mr. *J. T. Dodd*, 3 May 1895.

COPY of PETITION mentioned in Reply to Question 7555.

To The Right Honourable *Henry H. Fowler*, M.P., President of the Local Government Board, Whitehall, London.

WE, the undersigned,* respectfully but formally request and require you as President of the Local Government Board, with the other Members of the said Board, to issue Rules or Regulations under 5 & 6 Will. 4, c. 69, enabling Boards of Guardians to hire land (1) for the employment of the unemployed; (2) to let land for allotments to labourers.

* The words "being agricultural labourers now unable to obtain employment," were added here in some cases.

APPENDIX, No. 22.

PAPER handed in by Mr. *H. Llewellyn Smith*, 22 March 1895.

(*See* Evidence, p. 51.)

APPENDIX, No. 23.

PAPER handed in by Mr. *Mather* (a Member of the Committee), 17 May 1895.

To the Chairman and Members of the Select Committee on the Distress arising from Want of Employment.

1. REFERENCE to the formation of land colonies has been made by several witnesses during our inquiries into the "distress arising from want of employment" among the working classes. There has been also much discussion in the public Press and by social reformers on this subject. As our Committee will naturally be expected to examine this question among others, I venture to submit some definite proposals which may enable our Committee to consider it in all its bearings.

2. Though I have taken some interest in the work of two societies which are dealing with the subject by different methods, I have no personal experience of their working; but I have availed myself of that of others to put into a concrete form the results of their experience, combined with views I have long held on the employment of surplus labour.

3. It does not seem impracticable by some such scheme to secure sources of employment in times of need for the well-conducted unemployed working classes, during temporary cessation of their regular occupations over a considerable period, without breaking up their homes or extinguishing their natural and praiseworthy desire to earn their own living.

4. For those permanently displaced from occupations they have followed, the scheme may afford the entrance to a new life, a life of work with hope of contentment. To accomplish this, while at the same time using the resources of nature hitherto unfruitful, and without interfering with the labour of any other men, or wasting the capital required for the purpose, must be to enrich in some degree the whole nation, as well as to provide relief from an ever-growing social danger and industrial burden.

5. Such an object is, I venture to think, well worthy of the time and serious investigation of our Committee before we cease from our labours, even if the result be only to prove the scheme impossible.

6. In devising means whereby self-supporting employment caa be derived from the land for large numbers of those now dependent upon intermittent wage earnings, the fact that agricultural depression has been growing of recent years has not been overlooked. The large capital necessary for land and buildings; the necessity for the possession of skill as well as of some money far working purposes; the different powers of work of various individuals; the varying quality of land; the unoccupied time when labour on the land is unprofitable; and the necessity of the avoidance of competition with existing labour; all these have been carefully considered in drawing up the following proposals.

7. Should the Committee desire to take expert evidence on the scheme as a whole, or as to the practicability of any of the suggestions therein, I shall be glad to submit the names of gentlemen who would be ready to place their knowledge and experience at the service of the Committee.

15 March 1895. *William Mather.*

DRAFT SCHEME to provide Work for the Unemployed Working Classes.

8. There are two distinctly different classes which have to be considered in relation to these proposals. The first of these comprises the temporarily unemployed working classes who are without money or experience of landed work. This class can be assisted by the organisation of "farm training colonies" upon the basis explained in Part I. The other class comprises those who are displaced from industries they have followed, and seek to obtain a permanent living from the land. This class can be assisted by fhe formation of "small farm settlements" as described in Part II.

PART I.—FARM TRAINING COLONIES.

SUMMARY of PROPOSALS.

9.—(1.) The State to advance money for the founding of farm training colonies as an investment, the management to be placed by the Local Government Board in the hands of county councils.

(2.) Such colonies to consist partly of land out of cultivation, partly of land under tillage, and to be worked mainly for arable dairying, but with such other cropping as may give profitable employment for manual labour; the whole working to be under well trained skilled management.

(3.) The number of men received upon the colonies to be regulated by the area of land, and each man, in addition to doing all work on the land that is required in exchange for his maintenance, to have some auxiliary employment for his own benefit.

(4.) Poor law authorities to be authorised to accept applications for work on the colonies from men who are not in receipt of poor law relief; such applications to be made to specially organised departments, distinct from those which deal with the pauper classes.

(5.) Should there be any deficiency in the working of the colonies, each poor law authority to contribute towards the same in proportion to the number of men nominated by it.

10. In taking into consideration the establishment of farm training colonies, it is necessary to recognise the fact that the labour of any able-bodied man upon land can, under proper directions and conditions, be of at least an equal value to the cost of his maintenance.

11. The proposal for having farm training colonies in each county would be, to some extent, following the method adopted in Germany, where there are one or more farm colonies in each of the 18 provinces. The character and class of men received under the conditions here suggested would, however, be quite different from those going to the German colonies, which are mainly occupied by vagrants and semi-criminals.

a. In the case of these colonies there is generally a deficiency varying from 2*s.* to 3*s.* per week for every man, without charging interest on capital. We have, however, in England, special advantages not available to the German colonies, while the men who would wish to be helped here are far better workers than the class of men received upon those colonies. It is, therefore, unlikely that any such deficiency would be experienced here upon any suitable property upon which the work had been specially laid out with the idea of securing maintenance for every man employed.

b. The experience of the Hadleigh colony supports this conclusion. The first balance sheet showed that when it was treated as a farm colony, and most of the men in it were employed on the land, a profit was shown over and above the payment of some rent, the provision for maintenance, and a cash grant to the men employed. When, however, most of the men were set to work at various competitive industries unconnected with the land, the finances of the colony showed considerable losses, which, however, were partly recovered last year when more attention was paid to the farm cultivation.

c. No farm colony to which large numbers of unskilled men are sent can possibly succeed, unless the chief employment of those men is on the land and in auxiliary industries connected with the products of the land. Nor is the introduction of competitive industries necessary to insure continuous employment. An example of this may be seen in the German farm colonies, one of which is described in the report on "Agencies and Methods for dealing with the Unemployed" as having four-fifths of its men working on the land. In the most recently established farm colony, that of La Chalmelle in France, every man is employed upon the land.

12. In order to achieve the best results certain conditions must be observed.

(1.) A colony for men unskilled in agricultural work must mainly consist of land out of cultivation, but such land must be of a nature which is capable of profitable cropping when brought under cultivation.

Work on land of the character named is the only class of labour upon which an uncertain and varying number of men, possessing no knowledge of farming, can be profitably employed. Such land, however, must be of a nature which will pay when labour is expended upon it. This is a matter which has been too frequently overlooked. Thus, for instance, in the case of the land at Dartmoor, and in the penal colonies of Holland, it is evident that the reclamation work which has been done would not have been undertaken by an ordinary landowner. The capability of some land out of cultivation to bear profitable crops is shown by the results obtained at the Hadleigh colony, where a crop of rivet wheat, grown on a part of the land which was out of cultivation at the time possession was obtained, is stated to have given the exceptional return of over 60 bushels of grain with 2½ loads of straw from every acre.

(2.) The colony must also contain considerable areas of land in good cultivation.

If this were not the case, there could be no money return from the labour at the commencement of the work, and no produce to support the men engaged. If a farm colony has to be self-supporting, it must have some good land, and the number of men must be regulated in accordance with the returns from that land. Farm labour colonies in Belgium, Germany, Holland, and Switzerland have all been founded on waste land only, and the heavy cost of annual subsidies necessary in the earlier years of those colonies has arisen solely from this error, which, with the experience we have, can now be avoided.

(3.) The system of management should be to devote special attention to the production of such crops as can only be profitably dealt with when manual labour is largely available, without, however, excluding the use of steam and mechanical appliances.

The most general error made in organising hand labour-colonies, next to the mistake of selecting nothing but poor waste land for the purpose, seems to be undertaking work by hand which can be more profitably done in other ways. On the municipal farms near Berlin, where 900 to 1,200 men resident in the city workhouse are employed, the deficiency is about 4*l.* 10*s.* per man annually, in addition to costs of administration; but here large sums are wasted by hand labour being employed for work which could be more profitably done by the employment of ordinary farm machinery.

(4.) Auxiliary industries must be introduced upon the colony, in order that the time when work upon the land is impossible may be profitably employed.

Probably nearly one-third of the working time of each year cannot be occupied in work on the land owing to weather and other causes. During this time every man should carry on some industrial occupation, the nature of which will be defined subsequently. The whole returns from such auxiliary industry would belong to him, but the larger part would be retained by the authorities of the colony to accumulate for his benefit or to be sent to his family.

13. Provided these four conditions be kept in view, every county council should be authorised to acquire land within its county which would be suitable for a farm training colony, and to erect upon it buildings to accommodate such a number of men as the self-supporting capacity of the land will permit. The buildings should be mainly for single men, with some accommodation for married persons.

14 To such a colony the poor law authorities might send men of the unemployed working classes who seek for relief through employment only. These men would have to undertake to remain and work on the colony for a definite period, during which they would be mainly employed upon the land, and would receive their maintenance in return for their labour. That period should be not less than a month; and no man taken on to a colony should be allowed to quit it without giving a week's notice, unless he can satisfy the manager of the colony that he has the offer of a definite and immediate engagement in some industrial occupation. Of course, on their admission to the colony, their physical capability for hard out-door work and agricultural labour will be tested.

15. No man in receipt of an allowance from a trade union or a friendly society should be disqualified thereby from admission to a colony.

16. The question of the support of families is a matter of vital importance. There will be some women's work to be done upon the colony, and the presence of married women will have advantages. Consequently some of the men

men could be admitted with their wives, provided they have no children dependent on them ; but the wives would have to undertake to do a certain part of the work usually undertaken by women, and they would receive their maintenance in exchange for that work. This, however, would apply to but a small number. From the economic aspect it would be far better to receive upon the colony married rather than single men, if by the work they there performed they were enabled to keep their homes together in their usual place of occupation. In order to enable this to be done, it would be desirable to remit to the wife of every married man a sum of not less than 4*s.* a week on account of the value of his industrial labour, and when this exceeded the total cost of his maintenance and the sum remitted to his wife, the balance could be at his discretion. In some cases also it might be desirable to make a loan for payment on account of rent, in order to prevent the furniture of the house being seized, the amount so lent being a debt upon the earnings of the man. The Poor Law authorities in Berlin advance money for the payment of rent repayable from future earnings, and have found this course practicable and economical. Either of these courses might involve loss, but this loss would not exceed the amount that would otherwise be paid under the present unremunerative system of Poor Law relief, the cost of which has already been put in evidence before the Committee. It must be borne in mind that, were the unemployed working classes to appeal to the authorities for relief instead of, as they now do, bearing great privations rather than adopt this course, the total amount for poor relief throughout the country would be greatly increased, and the difficulties of dealing with it multiplied.

17. The advantages of this system of dealing with the well-conducted members of the unemployed working classes would be threefold. In the first place, the money earned would come largely out of the land which the labour of the man had rendered more productive, thus adding to the national wealth without detracting from the productive labour of any other individual in the nation ; secondly, the man and his family would be wholly or almost entirely sustained by the work of his own hand ; thirdly, no taint of pauperism could attach to this system, and no disfranchisement be connected therewith.

18. Although such a colony should be under the control of a County Council, the liability which would arise from its maintenance should be taken by the Poor Law authorities. This would be done by making the latter responsible for the deficiency in the working expenses (if any) in proportion to the number of men sent to the farm from their union. Before the actual foundation of the colony, it would be advisable for certain Poor Law authorities to agree to send a fixed minimum number of men whom they would select and introduce. The men so selected should be those who were not in receipt of Poor Law relief of any kind, but whose circumstances would compel them to make an application for the same unless they were taken upon the farm. This condition is necessary, as the colonies will be for the unemployed working classes, and not for permanent paupers.

19. There should be no restriction as to the places from which the men might come. In many counties it would be difficult to find suitable land for a colony, while in other parts, such as our East Anglian districts, there are many thousands of acres available, which might be used for men sent by Poor Law authorities in London or other centres. This cannot be done without the assent of the Local Government Board, which, however, has ample powers to give this assent, and has, in fact, already given it in some instances.

20. Care must be taken that the saleable products of such a farm do not compete with existing home products. They should be mainly butter or bacon, the production of which under the arable system of dairying affords opportunity for large employment of labour, while our home demand for these products is now largely met by foreign importation, not because of the lower price of the foreign product, but in consequence of insufficiency of home production. These products could, therefore, be raised without displacing any home farm labour now employed. The land might also be used for flax, beetroot for sugar, and growing farm seeds, for which the amount of hand labour available would give great facilities in competition with foreign products. Our imports during 1894 of flax and flax substitutes exceeded 9,000,000*l.*, in addition to the seed, of nearly 4,000,000*l.* Last year over 700,000 tons of sugar came from Germany, and 300,000 tons from France and Holland, in both cases a continuous increase over previous years being shown, the total quantities from these countries being 130,000 tons in excess of the amount imported in 1892. With skill and ample hand labour, beet can be grown and its saccharine properties developed as successfully in this country as abroad. Our imports of farm seeds in 1894 were of the value of nearly 1,000,000*l.* Vegetables and fruit would be grown and preserved for use on the colony, but, with the exception of evaporated vegetables and such articles as seakale, mushrooms, and asparagus, should not be placed in the market, which is already sufficiently supplied.

21. The auxiliary industries would have to be of a character which require little capital and can be carried on by intermittent labour. The productions therefrom would have to be (*a*) such as are required upon the colony, or (*b*) such as are not now made in this country, or (*c*) those for which the demand here exceeds the existing supply.

22. The industries which comply with these conditions are of a varied character. They should mainly be of a nature arising from the products of a farm. Thus they might include straw-plaiting from straw grown upon the farm ; preparing flax for the market ; various products from rushes, osiers, and pith, if these were grown or found as a waste product ; milling for consumption on the colony ; cleaning and hand-picking seed for market ; curing bacon ; evaporating fruit and vegetables ; and the making and packing of butter, sterilised milk, and other products of the dairy.

23. For the supply of such a community there would be bootmaking, tailoring, repairing clothes, building work of various descriptions, decorative work, carpentry, joinery, furniture making, and upholstery, for those men who have experience in any of these trades prior to coming upon the colony. Men who prove their aptitude in the use of tools might receive training in some of the simpler departments of outdoor work, such as the making fittings for live stock, fencing, the erection of farm outbuildings, and such other things as may be required for use either upon the colony, or by the men who propose to settle permanently on the land in accordance with the proposals contained in Part II.

24. In the selection of an estate, its adaptability for burning bricks, making cement, producing concrete slabs, opening a stone quarry, or working a gravel pit, should be considered, as the products of any of these industries would be of great utility upon the colony.

25. Lastly, a few handicrafts might be introduced which have long since died out in competition with modern manufactures, but which, if now revived, having a quality of their own, might create a new demand for productions not now supplied in this country. It must be remembered that much work which has ceased to be profitable in England as a sole means of livelihood might well be introduced upon such a colony.

26. It has been pointed out that one-third of the working time of each man may be employed by him in auxiliary industries for his own benefit. The two-thirds of his time will be sufficient to supply his maintenance. In order that every colonist may receive some cash payment in addition to his maintenance, even at times when the whole of his labour is required on the land, and he has no spare time to devote to any auxiliary industry, all work employed on the land should, as far as possible, be paid for at the piece-work rates current in the district, and the colonist should be paid at those rates for all work done by him on the land in excess of the amount considered requisite to provide maintenance expenses. When the whole of a man's time is required on the land, and it is not found possible to calculate its value at piece-work rates, then definite duties can be assigned to him to be discharged by him in exchange for his maintenance, and all his excess work—which in this case would be on the uncultivated land only—would be paid for as piece-work and at piece-work rates. If the payment above-named of 4*s.* per week

has been sent to the wife or family of any colonist, then that sum should be deducted from the cash wages earned by him; while if no such payment had been made, the whole of the amount earned by him should be credited to him, a part only to be drawn by him in cash, and the remainder to accumulate and be paid to him when he left the colony.

27. The money advanced by the State for the founding of these colonies would be in the nature of an investment.

(1.) The land purchased would become and remain national property, to be dealt with by the State as it thought fit.

(2.) The value of the land, a large portion of which would be land that had either never been cultivated or had gone out of cultivation, would be greatly enhanced by the labour bestowed on it under skilful management and favourable conditions.

(3.) As soon as the land provided for a farm training colony had been brought to such a state of cultivation that there no longer existed any uncultivated portions, it would cease to be adapted for training purposes, and would be suitable for the permanent settlements and small farms described in Part II. When this stage was reached, the land would bring in rent; and in view of the advantages which the tenants of these settlements would enjoy, in the way of assistance by skilled managers, the benefit of co-operation, and the specially good condition of the land itself, there would be no reason to doubt that the returns from their labour upon the land would be such as to admit of the payment of rents which would not only pay interest on the money advanced by the State, but also a sinking fund out of which the capital sum could be eventually repaid.

28. Under these circumstances no interest should be charged by the State on the money advanced to found the colony, so long as it remained a farm training colony; because, as has been pointed out, there will be a constantly growing increment in the value of the land due to the labour of those employed upon it; and that increment will in itself—apart from any consideration of the use of the land for the purpose of meeting and dealing with a great social difficulty—accrue to the State as a valuable asset to set off against any loss of interest during the years when the land is being used as a training colony, and before the period when it will have become an interest-bearing investment.

29. The financial possibilities of farm training colonies upon this system; the liabilities and prospects which Poor Law authorities would have in connection with them; and the means the State would have for securing and obtaining a return of the money invested; will be best shown by an example.

30. The cost of such a colony to accommodate 200 persons may be estimated at about 30,000*l.*, this amount being made up as follows:

	£.	£.
Purchase of cultivated farm of 600 acres at 15*l.* per acre	9,000	
Purchase of 600 acres of uncultivated land at 5*l.* per acre	3,000	
Capital expenditure on 200 acres of latter at 8*l.* per acre	1,600	
Capital expenditure on 400 acres of latter at 3*l.* 10*s.* per acre	1,400	
Total expenditure for land		15,000
New buildings necessary for colony	6,000	
Furniture and fittings for the same	2,000	
Other permanent capital		8,000
Working capital for farm and industries		7,000
		£. 30,000

31. In this example it will be seen that the amount set down for the purchase of the land averages 10*l.* per acre for the entire area of 1,200 acres. At this price large tracts of arable land can be obtained, which may have been subject to some degree of tillage, and have yielded remunerative cereal crops, but are now going out of cultivation. It will be further noticed that there is an allowance of 8*l.* per acre for expenditure upon a part of the uncultivated land. This will be required for the costs of one year's maintenance of 50 men (out of the 200), who will be employed entirely on that land: and to cover salaries and wages for skilled labour and supervision over the whole colony, as well as to provide piece-work remuneration for work done by the men over and above the amount required from them in exchange for their maintenance. On the remaining 400 acres a sum of only 3*l.* 10*s.* per acre is allowed, as no separate provision is needed for the maintenance of the men employed on this portion of the uncultivated land, because they are included among those whose maintenance is derived from the proceeds of the cultivated land. The amount put down for the new buildings would be required for the erection of tenement houses for those living with their wives, and lodging houses for the others. There would also have to be erected sheds for the auxiliary industries and stores. There would probably be found some cottages upon the property, and also two or more farm houses, which should be adapted to accommodate the management staff and skilled labourers. The existing farm buildings would probably be ample, but the amount allowed above would permit of any additions found to be necessary. The sum put down for furniture and fittings would be found sufficient not only for the lodging houses, but for the complete equipment of the married men's quarters. The last item of working capital would be necessary for implements, live stock, cash for salaries, wages, maintenance of men, and farm expenses, and for materials and expenses of carrying on the auxiliary industries.

32. Coming now to the current expenses of the cultivated portion of a colony so acquired and equipped, the farm working expenses to be provided would include tithe, rates, wages of farm manager and skilled labourers, steam cultivation, horse labour, seed, manure, depreciation of implements, and general costs of administration. Seeing that the farm would be worked on the arable dairying system, and kept in high cultivation, these payments might be estimated to amount to 2,500*l.* per annum. In addition to this there would be the cost of maintenance of the other 150 colonists, which would come from the products of the cultivated land, and which, at 16*l.* each, would amount to 2,400*l.*, making a total annual expenditure of 4,900*l.* to be provided for.

33. As to the returns—With the increased produce from hand surface tillage under skilled direction, and the profitable nature of some crops, which the hand labour available would render possible, the annual value of the crops on the 600 cultivated acres might reasonably be expected to be 9*l.* per acre, or 5,400*l.* But of this produce about a third will be consumed in the maintenance of the colonists. The remaining produce will be converted, for sale in whatever form is the most profitable, by the industrial departments of the colony; and the cost of such conversion would be got out of the price realised for the product in excess of the value of the crop. From this source would be derived the money to buy for the colony all those consumables required, such as coal, &c., which are not raised upon the colony, and also the funds to meet the farm working expenses.

34. It

34. It has been shown that the returns given in this example amount to 5,400*l.*, while the total expenses are 4,900*l.* There would, therefore, be a margin of 500*l.*, which will provide the cash payments for piece-work, or otherwise, which might be paid to the men on account of their work upon the cultivated land. If the returns were only 7*l.* 10*s.* per acre each year, which may be taken as the present average return from any ordinary farm not having the opportunities of the special hand cultivation, and advantages which the colony would possess, the total returns would only be 4,500*l.*, but the costs of harvesting and other expenses being less, would reduce the farm payments by at least 300*l.* Allowing, however, for the same possible payment of 500*l.* to the colonists, in addition to maintenance, there would be a total cost of 5,100*l.*, showing a deficiency on the year's working of 600*l.*, which would have to be made up by the Poor Law authorities. This loss would amount to 3*l.* for each of the 200 men, or about 1*s.* 3*d.* per head per week. The above figures have reference only to the land in cultivation at the time the colony was entered upon.

35. As to the finance of the work upon the uncultivated land, it will be seen that in the example given a sufficient amount of capital is provided for the maintenance during the first year of 50 men, to be solely employed in bringing 200 acres under cultivation. When these 200 acres have been brought into a state of full cultivation the products from them will be of a similar value to those from the other cultivated land, and they will contribute in like proportion to the maintenance of the men employed thereon. Consequently, with 800 acres of cultivated land the full number of 200 colonists would be maintained, and with the capital expenditure of about the amount estimated of 3*l.* 10*s.* per acre, more of the uncultivated land could be gradually brought under tillage, and the self-supporting powers of the colony thus still further increased.

36. In cases where the number of acres of cultivated and uncultivated land were not equal, as in the example given above, the methods would have to be different. If the estate consisted more largely of uncultivated land, then either the number of men would at the commencement of the colony have to be less in proportion to the total area, or larger sums would have to be allowed for capital expenditure upon the land. If the estate consisted more largely, or even entirely, of land which was more or less cultivated, then more skilled supervision would be required for the gradual introduction of hand labour in cultivation, and the number of men received should be strictly limited to the work necessary for the land. In the latter case the capital expenditure would be less, and the whole estate would the sooner yield the highest possible results, and therefore it would be the more speedily prepared for a permanent farm settlement, as described in Part II.

37. From the same example it will now be shown how the amount invested by the State is secured, and can be returned if necessary. When, by the above procedure, the whole 1,200 acres have become highly cultivated, they will be adapted for the permanent settlements referred to in Part II. The land would then have a minimum value of certainly 20*l.* per acre if used for that purpose. It could then be offered to the trustees of such settlements, either at a rental of 3 per cent. on that value, which would be 12*s.* per acre per annum, or, if the State decided to sell to the trustees of the settlement, the sale could be made by payment of an annual sum for interest and sinking fund, which would be 4½ per cent. if spread over a term of 50 years, or a higher sum if a shorter term were arranged. The State would thus receive interest on the full improved value of the property from the time that it was used for the purposes of the settlement.

38. Moreover, the State will have an equivalent for the interest on capital while the property was being used for a training colony. It will be seen from the above example that the land, when in a condition for the formation of a settlement, will have a value of 24,000*l.*, that is 9,000*l.* in excess of the 15,000*l.* originally paid and since expended upon it. But if the land alone, after complete cultivation, has a total value of 24,000*l.*, there will only remain a difference of 6,000*l.* between that value and the 30,000*l.* originally invested by the State. The value of the assets in the equipment of the colony, other than land, could not fail to cover that difference by more than the interest accruing if taken over a period of five years at 3 per cent., as well as leaving a sum sufficient to write off depreciation in the floating capital, buildings, and stock. Thus, during the period necessary for bringing the whole area into a complete state of cultivation, the labour of the men employed would, besides having provided for their own maintenance, have added to the value of the land a sum sufficient to cover the accrued interest on the State's investment, as well as providing for the depreciation of the working plant and equipment of the farm, on which half of the State capital had been spent.

39. It will be seen from the foregoing statement that when the whole area of 1,200 acres is completely cultivated and ready for use as one of the farm settlements described in Part II., the State will have more security for its capital investment of 30,000*l.* than when the training colony was founded; for the condition of the land would enable the settlers easily to pay interest as a rent for their holdings, together with a sinking fund spread over 50 years. If such land were to be offered for sale to private owners with the property upon it, the full amount invested by the State in its purchase and equipment could be realised. It must, however, be borne in mind that the whole purpose of the scheme is to encourage settlers to remain permanently on the land, and to show that such settlements, maintained in a high state of cultivation under skilful management, may afford permanent occupation to that portion of the population which, but for this outlet, would add to the present difficulties of finding constant employment for able-bodied men in the manufacturing centres of this country. Consequently, the land, once acquired, should be for ever devoted to the object for which it was purchased. It should remain vested in trustees under the county council as national property, notwithstanding that the money provided by the State had been repaid by a sinking fund.

40. In concluding these suggestions relating to farm training colonies, it must be pointed out that their success will largely depend upon their management. The whole colony should be under the direction of some competent and trained superintendent, who has a scientific and practical knowledge of agriculture and thorough cultivation, in order to direct the uninitiated labour which would be received upon the farm for the purpose of obtaining the highest possible results. It is obvious that, with such management, not only would each individual have a higher value when working in common with others, but exceptional opportunities would be afforded for the utilisation of the fruits of his labour. For the direction of the small industrial occupations, which will be required when work is not wanted on the land, it would not be difficult to obtain the services of skilled persons at very moderate remuneration, to control and direct these departments of labour to the greatest advantage of the men and the needs of the colony. This would supply an opening for the employment of men who have become too old to compete with younger men in the manufacturing districts, but whose skill and experience would make them very useful in this capacity.

41. It will be observed that farm training colonies offer no attraction as a permanent means of livelihood to those who seek its assistance, and that even if the costs were higher, and the results less than those named in the example, it would have the advantages already stated over the existing system. The men, after having been temporarily assisted with healthful work, which would enable them to live and support their families without resorting to poor law relief, would either go back to their occupations, or would acquire a sufficient knowledge and taste for permanent country life to enable them to be assisted under the methods described in Part II.

42. The funds to be provided by the State for the founding of such colonies might be derived from a source similar to that from which the funds are now provided for the purposes of technical education for the industrial classes. An annual grant of 780,000*l.*, derived from the duties on whiskey and beer, is made by the State to local authorities, which they may apply either to the object of promoting technical education or to the relief of local burdens; and, as a matter of fact, a total sum of 654,000*l.* is now being annually spent by the various local

authorities on educational purposes. It is obvious that a similar allocation of the money of the State as that made in one year only by the State to the local authorities for the above purposes, would establish, at least, 25 such farm training colonies at a cost of 30,000*l.* each ; and if, in the present year, only one-fourth of that amount were devoted to this object, six of such colonies could be founded at once, which would be sufficient to test the success of the scheme without any risk of ultimate loss to the State of the capital sum, with a reasonable expectation that the money would be recovered, even if the results did not justify the adoption of the scheme to its utmost possibilities, viz., that of providing remunerative work for large masses of the population.

43. The control of these farm training colonies being vested in the county councils might enable a system of management to be adopted by them which would utilise the zeal and activity of voluntary helpers, who would associate with the working life of the colonists such recreations and moral influences as would tend to elevate those who lived there, for however short a period. It is now usual for county councils to invite the voluntary aid of persons interested in technical education to join the committees of the councils to manage their schools. In like manner they might invite the co-operation of zealous and discreet persons in the various localities where farm training colonies were established, to take a large and active part in their management. It is also not unreasonable to suppose that the colonies would attract the generosity of those who would desire to make them a great success, by contributing funds to the managers to provide recreations and recreative instructions, which would prevent the life of the colony becoming monotonous or depressing.

Part II.—SMALL FARM SETTLEMENTS.

1. In order to meet the case of those who are displaced from industries they have followed, and who may be encouraged to seek to obtain a permanent living from the land, it will be necessary to provide suitable estates for small farm settlements. Where the lands used for the farm training colonies described in Part I. have reached so high a state of cultivation as to be unfit for that purpose, they can at once be used for permanent settlements. Where such lands are not available, county councils should be authorised to negotiate with landowners in their counties who may be willing to supply the requisite areas of suitable land, either with or without the necessary buildings.

2. The method of procedure for converting farm training colonies into permanent settlements has already been dealt with in Part I. Where land has to be specially acquired for such settlements, the method of procedure should be as follows :—

3. Every county council should receive applications from those who seek to obtain a permanent living from the land. Landowners should be asked to send to the county council particulars of any available farms which may be suitable for the purpose. On the general suitability of any farm being approved, the council should convene a meeting of the applicants, and if the farm be accepted at such a meeting by a sufficient number to take up the entire area, the council should appoint provisional trustees or managers to act for the applicants. These trustees should then arrange terms with the owner of the land, and settle its allotment and the buildings suitable for the applicants. They should next submit to the county council full particulars of the terms which can be settled with the owner of the land, the areas desired to be taken by each of the intending occupiers, and the cost of the buildings necessary. If the county council approve of the proposed terms, they should then recommend a loan to be made by the State to the trustees of the sum necessary for the erection of the buildings and laying out the property.

4. On such a loan being sanctioned, the trustees would acquire the property and erect the buildings, and the holdings would be allotted to the respective applicants. Before possession was given, every applicant would have to undertake to do, within six months of entry, the fencing and certain other specified work, mainly in relation to the outbuildings, which could reasonably be required to be done by the occupier. He might then take possession on any one of three different systems: He might (*a*) sign an ordinary agreement of tenancy on terms agreed upon with the trustees ; or (*b*) pay at least one-tenth the cost of the buildings upon his holding, executing at the same time a deed stating the amount remaining due from him for the same, and the annual charge upon it, calculated at 4 per cent. interest ; or (*c*) agree to pay annually 6 per cent. interest on the total cost for a term of 25 years, which at the end of that term would discharge his liability in respect of the buildings.

5. Wherever possible, the land should be secured on a perpetual lease. To the owner this system would secure an annual rent on so certain a tenure that it would be saleable without difficulty at short notice at any time. To the occupier it would give a permanent tenure without any obligation to pay the capital value of the land. Lastly, a loan only being required for the erection of the buildings, the total sum necessary to be advanced by the State would be much less than if the purchase money was to be paid for the land. This system, though little used in England, would be practically introducing the principle of the Scottish feu rent. If, however, no sufficient number of farms were found which the owners were able to lease in this manner, the trustees should be authorised to buy the land. In this case the whole of the purchase money would be advanced to them, and the property made subject to an annual charge, which would provide the interest on the purchase money and form a sinking fund to repay the capital to the State at the end of a term not exceeding 50 years. If the full period were allowed for repayment, an annual payment of under 4¼ per cent. would be sufficient for the purpose.

6. To give an example of the working of this suggested system. A suitable farm of 500 acres might be offered on a perpetual lease at 300*l.* per annum. The trustees might apportion this rent at an average of 15*s.* per acre, thus securing a profit rental in order to provide the management charges. An occupier requiring 8 acres of average land, with house and buildings costing 140*l.*, would then obtain entry on agreeing to do certain work upon the holding, and undertaking either (*a*) to pay a rent of 12*l.* per annum for the house and land ; or (*b*) to make a payment of 15*l.* and sign a mortgage deed for 125*l.* at an annual interest of 5*l.* with the perpetual ground rent of 6*l.* per annum for the eight acres of land ; or (*c*) to agree to pay the sum of 9*l.* per annum for a term of 25 years with a perpetual rent of 6*l.* for the land. If the land were purchased at 25 years' purchase upon the rent named in the example, the price for the land of each holding might be capitalised at the same rate, and made repayable by each occupier at the rate of 4¾ per cent. if the payments were to extend for a period of 50 years, or of 6 per cent. if the payments were to extend over only 25 years. The former would amount to 7*l.* 2*s.* 6*d.* and the latter to 9*l.* per annum, in the place of the 6*l.* perpetual rent named in the example. The annual value of the crops from the eight acres would average from 60*l.* to 80*l.*, nearly one-half of this being produce for consumption, while the remainder would be converted into products for sale. The amount of mortgage charged upon the holdings when the buildings were purchased could be reduced at the wish of the occupier at any time.

7. The margin between the rates of interest named to be chargeable to the occupiers, and the 3 per cent. at which the money should be lent by the State, would be sufficient to defray all management costs, and leave a small surplus fund in the hands of the trustees. On every settlement it would be necessary to erect central buildings for general use. These should comprise dairy factory, bacon-curing sheds, fruit and vegetable-preserving room, mill, seed stores, bakery, the cost of same varying from 800*l.* to 1,500*l.*, according to the size and requirements of the settlements. The whole of the amount necessary for the erection of such buildings should be advanced by the State,

State, subject to an annual payment of 5½ per cent. which would provide for interest and repayment of principal at the end of 25 years. The charge made to the tenants for the use of the buildings would then be such amount as would meet this annual payment, in addition to defraying the working expenses of the business carried on in the buildings.

8. Taking into consideration the security to the State, it will be seen that the work which the occupier would have to do for the property at the time of entry, the improvements and additions which the majority of the occupiers would make to the houses, and the greatly improved value which in every case would be given to the land by the labour of the occupiers, would speedily create a valuable tenant-right. Judging from the experience of small holdings, this tenant-right of the land alone might amount to from 6*l.* to 10*l.* per acre within even three years, so that continual occupancy would be certain under ordinary circumstances. If in exceptional cases an occupier suddenly left, the trustees would be able at once to sell his interest to another occupier. If the land were purchased by the trustees, then the annual charge for the holding would be heavier than if the land were leased; but as payment on account of the land would entirely cease at the end of the agreed term, a further element of security for continued occupancy would be given.

9. In many cases, if the system of loan for the erection of buildings for this class of small occupiers were sanctioned, landowners themselves, without assistance from the county councils, would be willing to form such settlements and give their personal aid and direction to their formation. It is the difficulties of finding money for the erection of buildings that has hindered the foundation by private landowners of settlements of small farms for the benefit of those intending occupiers who would gladly rent such properties if available, and that of getting a sufficient number of simultaneous applications through a competent body.

10. In the case of owners erecting the buildings, loans should be granted to them either permanently at 3 per cent. interest, if not more than two-thirds the cost of erection was required, or, if the loan were made repayable by annual instalments to cover principal and interest over a term not exceeding 30 years, then the entire cost of the buildings might be lent.

11. It will thus be seen that under such a system, through a combination of landowners, county councils, and the State, it will be feasible to afford to these unemployed classes an outlet on the land which has never before existed, and would not be possible under any other arrangement.

12. The first question to be considered in connection with these proposals is whether there is a large number of men who would form these settlements. If the possession of not less than 20*l.* or 30*l.*, which is a third of the total amount of capital necessary for a settler on entering upon the land, be held to justify the loan of the remaining two-thirds, there can be little doubt as to there being many thousands of such men. They include those who have been displaced from industrial pursuits in the towns in consequence of the changes in manufactures; town workers who have country wives, and who, for the sake of their families or for their own health, wish to go into the country even at a sacrifice of income and some comforts; country mechanics who no longer have a sufficiency of work in the rural districts, and who will be joining the intermittently "unemployed" in our towns unless assisted in a country life; army pensioners or reserve men, whose income is insufficient to keep them from competing for work with unskilled labourers; and country labourers to whom friends, relatives, or late employers would be willing to supply the small capital needed, if other conditions were afforded to enable them to secure a living upon a small holding. To give assistance to these classes will be as beneficial to the destitute unemployed as if given direct to the latter, owing to the fact that the former, though they possess some means, are at present competing in the labour market.

13. Secondly, there is the economic question as to whether the land of England will sustain a largely increased number. On this point it is only necessary to point out that, whereas the census returns of 1871 showed the number of agricultural labourers in England and Wales in that year to be 980,054, in 1891 the number had fallen to 779,527, notwithstanding the increase in population. We thus see that in only 20 years, over 200,000 wage-earners, representing with those dependent upon them a population of probably 1,000,000 persons, went away from the land, either to become dependent upon charity or to compete for work in our towns. As long as we have this continual and rapid decrease in the number of those maintained from the land, with a growing population, the difficulties of employment are certain to increase.

14. Thirdly, there arises the question whether there is reasonable ground for expecting that the men taken on to these small farm settlements will be able to make a living on them for themselves and their families.

For an answer to this question we may look to experience derived from various sources.

(*a.*) Probably the largest co-operative settlement of small tenants is at Frederiksoord, in North Holland. Here a charitable society is working 1,250 acres of land mainly for training labourers, and has established those who have been trained upon about 220 holdings of less than seven acres each. This property is most unsuited for its purpose. It consists of poor sandy land, situated many miles from the nearest market; the tenants apparently do not possess sufficient capital; the current price of produce is less than half the amount realised in England; and there are no industries in operation except for training young people. Nevertheless the tenants seem to be able to live and pay a rent, although the latter in many cases is much in arrear.

(*b.*) In Guernsey the size of the farms averages about the same as that at Frederiksoord, and the difference in the result is mainly owing to suitable land, adequate capital, and sufficient skill. On this island there is a population of 35,000 persons maintained upon less than 30,000 acres. There is no waste of manure; the hedges and ditches are kept clean; every available yard of land is utilised; the dairy stock is fed and reared especially in view of butter production; all possible appliances are used to improve the products and reduce labour; and there is united action in the realisation of produce. Here, therefore, we find the conditions named, and the result is entirely satisfactory. No doubt Guernsey possesses some advantage in climate, but against this there is the disadvantage of the heavy rent, which varies from 4*l.* to 7*l.* per acre.

(*c.*) In France it is computed that there are 1,500,000 small owners cultivating their own land in holdings of less than eight acres each. The character of the land is not superior to what we have in England, while prices for surplus produce are much less. Within the past few years the necessity of co-operation has been more fully recognised, and particularly in Normandy it is being largely introduced with the greatest benefit.

(*d.*) In Switzerland we find the small holders living in a most adverse climate; but here, again, by reason of the possession of an auxiliary industry, many of the occupiers of even a smaller area than that named in the above conditions are able to earn a living, although, owing to inclement seasons, it is a hard and difficult one.

(*e.*) France with its small cultivators is able to produce the greater part of the food needed for its population, while our imports during 1894 of agricultural produce for the purposes of consumption exceeded a value of 115,000,000*l.* Of this amount nearly 20,000,000*l.* was live stock or meat, which our small farmers could not produce. Corn and wheat exceeded 48,000,000*l.*, out of which barley would be a profitable crop for small growers here, though the import of 710,000 tons in 1892 had increased to 1,560,000 tons in 1894. Of butter, cheese,

cheese, bacon, ham, pork, lard, and milk, all direct or indirect products of the dairy, and which can be produced profitably from small holdings, the imports were nearly 35,000,000*l.* Imported butter alone was of the value of 13,470,000*l.*, the quantity being nearly 130,000 tons as compared with under 110,000 tons in 1892. For foreign eggs we paid 3,780,000*l.*, and of potatoes, onions, apples, fresh fruit, and vegetables, the imports exceeded 5,000,000*l.* When we remember that in addition to these articles we also imported vast quantities of linseed, clover, and other seeds, hay, straw, rabbits, poultry, flax fibre, and other agricultural products, some of which cannot be grown by large farmers, but can be profitably produced by small cultivators, there can be no doubt that, with skilful direction, small holders can find home markets for such produce as they do not require for consumption, until at least some thousands of additional acres of our land are under more thorough cultivation.

(*f.*) In England small farms are usually considered as being of 40 or 50 acres, and when of that extent and mainly of arable land, they have proved most unsatisfactory. The tenants of these small farms have to contend with the same adverse conditions as large farmers, but without the advantages of machinery, large capital, and wholesale buying.

15. The method by which a larger number of persons can be helped to a living upon land is not therefore in the extension of such isolated small farms as we are now acquainted with in this country, but by the formation of definite settlements of small farms where the conditions of success as above stated can be supplied; where the same skilled general management and supervision as that described as essential to the success of the farm training colonies will be continuously maintained at the cost of the whole settlement; and where the production will be principally for home consumption and only partially for competitive sale.

16. Probably many of the settlers would require assistance to enable them to secure adequate working capital. This could safely be provided upon the adoption of the co-operative principle which was introduced by Herr Raffeisen, and has been so great a success among the small holders on the Continent, provided that the loan in no case exceeded two-thirds of the amount of capital actually used upon a holding by the cultivator. The men upon any particular settlement would form a co-operative body for mutual help in harvesting and marketing, and for obtaining labour-saving appliances. Loans might safely be made to that body upon their joint responsibility. This responsibility would naturally not be undertaken for the purpose of granting loans to any borrowers except those of a known good character, and unless the amount lent was for an approved purpose of a productive nature. The adoption of this principle of mutual liability for obtaining additional credit would not be quite new in England, for such co-operative credit societies are already in operation in this country. Some fund must, therefore, be provided to be loaned to the committee of the occupiers, to be used by them for such purposes as the committee may sanction, and subject to some such conditions as the model rules issued by the Agricultural Banks Association show to be necessary.

17. To carry out the system of settlement here suggested involves the possession of more means than those who had been on a training colony would usually possess. A commodious house, therefore, should be erected upon the property chosen for a settlement, to be used as a lodging house for those coming from a training colony and wishing ultimately to secure an independent farm. The old farmhouse upon the property might possibly be enlarged and adapted for this purpose. To any man having skill, but no capital, might be allotted a particular portion of the land as a tenant, with the understanding that he should be supplied with the seed, manure, and other articles required for efficiently working the area appropriated to his use, while the trustees would realise his produce, paying him the sum obtained, less the cost of articles supplied by them and the cost of his maintenance in the house. Under this system the tenant would be free to use his time in any way that he desired, provided that he kept his land in good cultivation. By securing harvest wages from a large farmer, or by obtaining specially remunerative returns from his industrial work in addition to good profits from the land held by him, he might soon be able to provide the necessary sum which would enable him to be assisted in securing one of the holdings with a house erected upon it. In some cases two or more single men might join together to take one of such holdings.

18. But in suggesting the extension of the number of cultivators, the reasons for quitting country life must not be forgotten. These are numerous; but by far the greatest are the hopelessness of the life of a rural labourer to our younger men and the deadly dulness of country life. The introduction of a recognised system of small holdings, under which they will speedily obtain a home, where there will be a continual interest in improvements and additions; and the collection of such small cultivators on to one settlement, giving an opportunity of social recreation, will rid a country life of what are at present its greatest disadvantages. These settlements would also afford a large field for the work of benevolent members of the cultivated and wealthier classes, who would devote time and zeal to bring refinement and recreation to the lives of the settlers, and many of whom might be willing to act as trustees of the settlements under the county councils.

19. It is not suggested that these proposals to form farm colonies and settlements will give immediate work to the hundreds of thousands who are now in need of employment. They can, however, be commenced without fresh legislation or delay. That there is plenty of land suitable for the purpose, and ready to be restored to cultivation, may be seen from a comparison of the agricultural returns for 1892 with those of 20 years ago. These show that within that period the total acreage of land under tillage had decreased from 13,600,000 acres to 11,800,000 acres; that is, 1,800,000 acres which were formerly under arable cultivation had become permanent grass land. Of these 1,800,000 acres a sufficient quantity could be obtained, together with the necessary proportion of cultivated land, for the purpose of forming, in the course of time, any necessary number of the farm training colonies and farm settlements described in this scheme. In view of our growing population, and of the increasing and pressing desire of many to be assisted in the directions named, there can be little doubt that as these colonies and settlements are created, they will absorb to the utmost of their capacity those who now form the unemployed industrial classes, anxious for work and asking only for the opportunities to be given them to maintain themselves.

20. The effects of such a system properly carried out would be far-reaching. There would be good grounds for hope that the stream of the younger men to the towns would be checked, and that a considerable portion of that large population which 25 years ago was maintained by the land, but which has since left it, would return thither. Not only would it gradually provide a remedy for the present and apparently chronic distress arising from want of employment, but the growth and extension of the system of placing unemployed men on the land and bringing unemployed land into cultivation, would increase the wealth of the country by developing home products, would release a large amount of capital now lying in the land idle and profitless, and would lessen the congestion of population and the consequent fierce competition of labour in our manufacturing districts.

21. It will be seen that these proposals to meet the great problem submitted by Parliament to the Select Committee are based on the principle that "prevention is better than cure," so far as concerns the want of employment of the well-conducted working classes.

APPENDIX, No. 24.

PAPER handed in by Mr. *Bramwell Booth*, 28 May 1895.

SCHEDULE of the various Shelters for Homeless Men and Women.

Price per Night.	Number of Shelters.	Extent of Accommodation.	Nature of Accommodation.	Food supplied.	Character of Men using Shelters.
1*d.*	1	500	Comfortable wooden seat in a warm building, slice of bread, ample lavatory accommodation, with hot and cold water and towels.	Soup, ½*d.*; bread (6 ozs.), ½*d.*; jam or butter, ½*d.*; other varieties of good wholesome food at low rates.	Chiefly the lowest possible grade, homeless, destitute, and often starving.
2*d.*	10	3,490	Bunk for each man, with seaweed mattress, pillow and covering, hot and cold water, towels, &c.	Soup, ½*d.*; bread (6 ozs.), ½*d.*; jam or butter, ½*d.*; other varieties of good wholesome food at low rates.	A little improved, and more likely to be raised, and in course of elevation.
3*d.*	1	100	Bunk with mattress and covering in a cubicle like a ship's cabin; lavatory accommodation as in the 2*d.* shelter.	Soup, ½*d.*; bread (6 ozs.), ½*d.*; jam or butter, ½*d.*; other varieties of good wholesome food at low rates.	A middle class, securing privacy when they can afford it.
4*d.*	5	738	(*a*) Bunk similar to last class, with food. (*b*) Separate bedstead; lavatory accommodation.	(*a*) Roll (6 ozs.); pint of tea, coffee, or cocoa, both supper and breakfast. (*b*) Without food.	Improved class, many boardcarriers, bill-distributors, and odd job men.
4*d.* and 6*d.*	4	590	Separate bedstead, reading and smoking rooms, bath, &c.	Food not included, can be had at cheap rates.	Gathered principally from those who have come up from the preceding classes.
TOTAL - - -		5,418			

APPENDIX, No. 25.

PAPER handed in by Mr. *Bramwell Booth*, 28 May 1895.

RETURN showing the number of men passed through the Hadleigh Colony, and with what results, up to 30th September 1894.

The number of men passed through the Colony is 1,616; of these 128 left immediately after or before commencing work, so that the number who became colonists is 1,488.

Number restored to friends	51
Number sent to situations obtained for them through the scheme	283
Number enlisted in Her Majesty's Army and emigrated	51
Number left, whose conduct was satisfactory, with situations in view	602
Other satisfactory cases	6
Left without notice on their own account	146
Discharged as unsatisfactory for various reasons, including drunkenness and being unwilling to work	349
TOTAL	1,488

RETURN of Food and Shelter Section of Darkest England Scheme for 12 months ended 30th November 1894.

	£.	s.	d.
Income for shelter	10,007	9	2
Income for food	18,809	6	–
TOTAL CREDIT	£. 28,816	15	2

The Disbursements were :—

	£.	s.	d.
Rent, rates, taxes, and insurance	4,460	3	5
Gas and water	1,589	13	3
Fuel	985	7	9
Repairs and replacements	1,070	13	11
Incidental expenses (soap, disinfectant, legal and medical charges)	1,687	9	1
Wages of officers, cooks, cleaners, &c.	2,851	11	1
Management expenses	873	12	–
	13,518	10	6
Purchases of food, &c.	14,695	5	9
TOTAL DEBIT	£. 28,213	16	3

STATEMENT showing the loss on the Farm Colony at Hadleigh, 1894 : the average number of colonists at work the distribution of the colonists, and the average loss per week per man.

	£.	s.	d.
The loss for the year was	2,445	6	4

The average number of colonists at work was 243

	£.	s.	d.
Showing a weekly average loss per man of about	–	3	10

Note.—Of the loss, 1,400*l.* was from exceptional and mechanical causes in no way affected by the labour of the men : the remainder, 1,045*l.* 6*s.* 4*d.* divided by 243, gives a weekly average loss on each man of about 1*s.* 6*d.*

The men were distributed as follows :—

Farm	19	Bricks	63
Market garden	50	Works	34
Nursery, dairy, poultry	11	Baker, butcher, boots, &c.	12
Traffic	23		
Home hospital, laundry, &c.	23	TOTAL	243
Office and stores	8		

RETURN showing analyses of trades of 222 men (about 32 per cent. of 700 unemployed men) working in connection with the Darkest England Scheme, in February 1895.

Carpenters - - - - 25	Stokers - - - - 6	Bookbinders - - - 2
Painters - - - - 23	Brickmakers - - - 5	Pictureframe makers - - 2
Engineers - - - - 19	Blacksmiths - - - 5	Glass blowers - - - 2

APPENDIX, No. 26.

PAPER handed in by the *Chairman*, 26 June 1895.

Sir, Stockton Rectory, Rugby, 14 June 1895.

In answer to your inquiry on behalf of the Select Committee on Distress, I have the honour to make the following statement:—

My experience of this parish extends over little more than a year. During that time I have carried on the arrangements made by Mr. Tuckwell with regard to the glebe land, making only such alterations and modifications as appeared to me necessary.

I explained to the tenants that the agreements between them and Mr. Tuckwell expired with his resignation (as indeed was stated in the agreements, but not thoroughly understood by all the men), but that if they liked to make fresh arrangements with me, they were welcome to do so. I pointed out that I had no power to bind my successor, and that our agreements would be from year to year, terminable by six months' notice prior to Michaelmas, or by my decease or resignation.

The other alteration I made was a re-adjustment of rent, according to the position and quality of the land and the demand for it. I found that those tenants whose land was at a little distance from the village were jealous of those who held allotments which were more handy, but let at the same price. Consequently, those in the two nearest fields now pay 30*s.* per acre, those in the next 25*s.*, and in the furthest 1*l.* This was the best arrangement I could devise, but of course it was not made without some little friction. The land, however, is all let, and the men are, for the most part, I believe, satisfied. I may point out that the rent of the nearest allotment field stood at 3*l.* per acre before Mr. Tuckwell lowered it to 1*l.*, and that, I believe, my highest rent for arable land is lower than the lowest of any other allotments in this or the neighbouring parish of Southam.

You, sir, will judge whether your Committee need be troubled with these details, but I have written them partly in my own defence against the charge preferred by Mr. Tuckwell, in his evidence before you, that I had upset his arrangements.

There are two points, however, that I should like to make: The first is that it is a mistake to suppose that the population of this parish consists of agricultural labourers, or, that there is any real distress which cannot be met in the usual way. (I mention this because Mr. Tuckwell's evidence seems to imply that this is a typical agricultural parish.) I should say that not more than one man in 30 out of a population of nearly 800 is an agricultural labourer, and this view is confirmed by others well qualified to judge. There are three sets of lime and cement works in the parish, and almost every man and boy is employed in them throughout the year. The result is that the population rapidly increases, which would not be the case in a typical agricultural village.

The second point is this: That though most of the men are glad to have from one-third to half an acre of allotment, they do not want more, as they have neither the time nor the strength to work it. Most of them, too, are well housed, and have capital gardens attached to their cottages.

The chief cause of any distress we ever have is the fact that, as a rule, money is not saved but spent in drink.

I have, &c.

The Right Hon. H. Campbell-Bannerman, M.P. (signed) *C. L. E. Parker.*

APPENDIX, No. 27.

PAPER handed in by the *Chairman*, 26 June 1895.

To the Chairman of the Committee on the Distress of the Unemployed.

Dear Sir, Waltham Rectory, Grimsby, 24 June 1895.

Mr. Parker states, in the letter which you are good enough to send, that he has re-adjusted, not upset, my Stockton covenants. These are the facts as reported to me by the persons concerned. On his appointment, Mr. Parker wrote to the principal tenant a letter, which lies before me, announcing that he should continue my arrangements as regards the land. After coming into residence he ejected this tenant from his land with scant notice, and without option of remaining at a higher rent; ejected from house as well as land, another tenant of some 30 acres, who had been my right hand in allotment management; raised to 6*l.* 10*s.* the rent of a cottage, set down in the cottage schedule as worth 5*l.*, the rent of about 25 allotment tenants from 20*s.* to 30*s.* an acre; of about 12 more to 25*s* an acre; and cancelled my 14 years leases of which eight years were still to run, replacing them by a yearly tenancy.

Prolonged security of tenure and a maximum 20*s.* per acre were, in my judgment, vital to the success of my scheme, for reasons stated in a published leaflet, which I sent to Mr. Parker. His letter does not show that he had weighed these reasons, or given any consideration to the economic value of the experiment in the men's interest, and to the danger of injuring them by its infraction.

I do not see the bearing of his statement that three-fourths of the tenants are cement-makers, not agricultural labourers. Their average income is 15*s.* a week, a sum which means poverty alike to labourer and artisan; my enterprise increased this to 19*s.* a week, in the case of one-acre tenants, who formed the majority, proportionally in the case of smaller holders; and this increase is imperilled, in my opinion, by Mr. Parker's re-adjustment. The jealousy of which he speaks was never manifested to me, except in the case of an out-lying field let later on, whose rent I accordingly lowered; the original tenancies, far and near, were distributed by lot to the entire satisfaction of the men. That this satisfaction is at an end I have abundant evidence. They resent the raised rent, still more bitterly the yearly tenancy. These strike at the essentials of my plan, and I feel justified in visiting them with an anathema.

Yours, &c.

(signed) *W. Tuckwell.*

APPENDIX, No. 28.

PAPER handed in by Mr. *H. Llewellyn Smith*, March 1895.

PERCENTAGE OF UNEMPLOYED MEMBERS OF TRADE UNIONS.

APPENDIX, No. 29.

PAPERS handed in by Mr. *Vallance*, 25 June 1895.

AGRICULTURAL TRAINING HOMES FOR THE UNEMPLOYED.

A.

REPORT of the Committee of Guardians of the Whitechapel Union appointed on the 24th January 1888 to consider the following "Proposal for Training Able-bodied men in Country pursuits by means of the Poor Law," as introduced by the Rev. S. A. Barnett, viz. :—

"1. That the guardians of London, represented by a central authority under the Metropolitan Poor Act, or an existing board of guardians, purchase uncultivated land in the neighbourhood of London.

"2. That such guardians provide on or near this land accommodation for in-door poor either in existing buildings or in sheds built for the purpose.

"3. That the Local Government Board be asked to issue a Special Order to administer this country settlement, so that its arrangements may be adapted to the training of the inmates in country work without forcing them to conform to rules which are suggestive of the workhouse.

"4. That the guardians offer able-bodied persons of good character and of apparently solid determination residence in the country settlement, and an offer of the fixed tenure of land in England or the Colonies at the expiration of their time.

"(These are rather proposals on which discussion may be raised than part of a well-prepared plan. Discussion might bring out happier suggestions and might show how charity might supplement the Poor Law. Wages, for instance, might be credited to the men out of a charity fund, and means might be found for keeping the families without bringing them into touch with the Poor Law.)"

The consideration of the question referred to your committee has been entered upon with a due appreciation of its importance and an anxious desire to ascertain whether Poor Law administration in this country is capable of development in the direction of training the unemployed and destitute poor in agricultural pursuits. The country is face to face with a social problem of no ordinary difficulty, and it seems to your committee to be fitting that Poor Law guardians should take their part in dealing with it, at all events to the extent of adapting their administration to modern needs and making it as remedial and as helpful as possible. The statistics of pauperism do not, perhaps, in themselves, justify a pessimistic view of the future, but they must be read side by side with such facts as the present congested condition of the labour market, the gravitation of the unemployed to London and other large centres, the gradual decline of agriculture in England, the dependence of the country upon foreign importations, not alone for bread, but for meat, fruit, poultry and dairy and garden produce, and the loss of wealth and employment which is involved in the abandonment of the soil. In the existence of such facts as these appears the justification for the present reference; and your committee think they will best discharge their responsibility by adverting to the proceedings at their several meetings before reporting the conclusion at which they have arrived.

Your committee accordingly desire to state that at their first meeting, on the 31st of January, the Rev. S. A. Barnett explained that his object was to deal with the existing conditions of distress in the Metropolis in a manner which would inspire the individual with hope and energy and either place him (by means of amended Land Laws) in occupation or possession of soil in this country, or fit him for life in the colonies. The proposal was intended to meet the cases of the better class of unskilled workmen who now shunned the workhouse and were fast becoming, by enforced idleness, demoralised and unfitted for labour. Something had to be done, and there seemed to be more hope in this being done by the Poor Law than by private or organised benevolence. If a farm of, say, 100 or 150 acres were procured at a moderate distance from London, the unemployed labourers might be drafted there and trained in farm work, building, draining, and such handicrafts as would fit them for independence in England or the Colonies. They might be received upon condition that they agreed to remain for, say, six months; their families being meanwhile relieved at home by Poor Law or charity. Or, there was the alternative of providing for whole families on the farm and single men—an incentive to good conduct and industry being afforded by some charity fund undertaking to credit each of the inmates with a weekly sum which would be alone paid upon the satisfactory completion of the period of training.

The discussion which ensued—and which it was arranged should be preliminary to the more detailed consideration of the proposal at a future meeting—*inter alia* raised the points whether the scheme would not be more likely to be successful on Canadian rather than on English soil—whether, do what guardians may, the stigma of pauperism will not attach to the scheme, seeing that an "agricultural settlement" will be but a country workhouse under relaxed conditions—and whether, pending an amendment of the Land Laws, emigration is not the only available remedy for present distress.

At the second meeting of your committee, on the 28th February, letters and papers which had been received by the clerk, as the result of the publicity given to the original proposal, were submitted and read as follows, viz :—

Letter from a gentleman stating that he has 152 acres of first-class land at Swanley, Kent, on which he proposes to test the question of "home colonisation" with some 20 families, and asking for co-operation.

Letter from a practical farmer in Essex stating that the scheme under consideration had attracted his attention, and commended itself to him as one of real utility and practicability, and adding, that if any guardian would like to give him a call, he would explain how, in his opinion, it could be carried out at a small cost, with prospect of a remunerative return in the near future.

Letter from Mr. A. E. Petrie, Assistant Commissary General, accompanying copy of his published pamphlet, entitled, "Labour and Independence : or Profitable Work for those in need of it." Mr. Petrie's scheme is for the employment by the State of the unemployed on waste and other unoccupied lands, such as New Forest, Exmoor, Dartmoor, &c., by means of "Labour Centres." Single men and women, married men and women, and boys from 10 to 15 to be there received. The work to consist mainly of land cultivation, and the object in view the fitting the employés

employés for colonial life. It is proposed that the parish sending an inmate should pay a daily sum of 6*d.* to the Government for his or her maintenance; and further, that the estates of deceased persons falling to the Crown should be applied, in part, to the expenses of the labour centres, and, in part, to expenses of emigration by lot.

Letters from a lady, accompanying copy of a paper explanatory of her efforts to achieve independence when left in 1879 a widow in London, without means and with six children to maintain. In this paper the writer speaks of her earliest efforts to provide for her little ones by painting pictures, which at first brought her in some 30*s.* a week, but which later on was brought into competition with German importations until it became impossible to get bread, and with want came illness, and with the doctor, the mandate, "rest and nourishment—complete rest for months." In her distress and need, clinging to life for the sake of her children, and, seeking Divine guidance, she was led to see a "vista of hope" in the prospect of being able to do in the country what farm labourers were said to be able to do—live upon 10*s.* a week—this amount having been recently promised by a relative "to help with her rent." She then tells her pathetic story how she yearned for the country; how she left London and took a four-roomed cottage in a distant village, with bread oven in kitchen, two sheds, some fruit trees, and ¼-acre of garden ground for 4*l.* 19*s.* per annum. The worst furniture was taken down, the rest sold; and then the writer goes on to say how she and her children lived there; how they worked; how they tilled the garden; how they succeeded with poultry and animals; how they learned dairy farming; how at Michaelmas, 1886, they removed into another house (eight rooms) with 4½ acres of ground at a rent of 16*l.*; how they succeeded there; how circumstances improved and health returned, until at length she is led to say, "Friends, where is my poverty? I have lost it; it has gone. I am in the midst of abundance, and yet I have not worked hard one day, but only used prudence and the usual amount of common sense which every Londoner's worked brain possesses."

In the course of the discussion which followed, it was observed that the scheme formulated by Mr. Barnett differed essentially from that of the Home Colonisation Society; the former being akin to the German system which provides solely for men, the relief being only for a few months; and the latter being akin to the Dutch system under which whole families and persons may spend their lives in industrial colonies. It was further suggested as open to question whether the English labourer was, by education and temperament, as likely to succeed as the German and Dutch labourer, and whether, before the labourer could be got into possession of the land, the Land Laws would not have to be altered and facilities for transfer afforded. A point was also raised whether the State should not undertake the care of the roads throughout the country. The condition of those in the county of Essex, notwithstanding that the highway rates amounted to 1*s.* in the £. were stated to be very bad indeed, especially with so much adjacent land out of cultivation (20,000 to 25,000 acres, it was said), and so much consequent neglect of hedging and ditching; and that an immense amount of work was awaiting to be done and should be done if the State could only be induced to undertake it. At this stage information was desired as to the existing accommodation in the London workhouses and the maximum number of paupers relieved therein during the present winter; and the clerk was directed to seek such information and further formulate, in draft, a resolution.

At the third and last meeting of your committee held this day, the clerk submitted the replies which he had received to his circular of inquiry as to the accommodation and the pauperism of the Metropolitan workhouses, from which it appears that in 30 workhouses there is certified accommodation for 30,786 inmates, and that the highest number maintained therein at any time during the present winter has been 30,905; but that, notwithstanding the small aggregate excess of paupers over accommodation, the numbers for which the workhouses are certified have been exceeded this winter in 15 establishments. The resolution which had been formulated, in draft, by the clerk was then submitted and read; and after a further discussion it was unanimously decided to make representation of the conclusions at which your committee have arrived upon the subject, as follows, viz.:—

"That, in the opinion of your committee, the primary object sought to be attained by the proposal contained in the reference, namely, to provide the means of training in agricultural work so as to fit men of good character and solid determination for the profitable occupation of the soil in this country, or the colonies, is one which deserves the earnest consideration of Poor Law guardians and all who are seeking to serve the cause of the poor.

"The facts appear to be undeniable that labour, especially unskilled, is largely in excess of the demand in this country—that the unemployed are gravitating to London and other large cities and there becoming enervated and demoralised by enforced idleness and the conditions of city life, as well as increasingly chargeable to the poor rates for support—that agricultural land is rapidly going out of cultivation—and that, to a corresponding extent, the production of wealth is being diminished, whilst millions of money is annually paid for meat, and dairy and garden produce imported from abroad. It is with these facts that guardians have to deal when they seek to make their administration helpful in the direction of the removal of causes of pauperism and distress.

"The condition precedent, however, to the Whitechapel, or any other, single board of guardians formulating a practicable scheme must necessarily be that such board is in actual need of workhouse accommodation; since, in the hands of guardians, an industrial or agricultural settlement in the country would be but an additional form of in-door relief. Under these circumstances, and having in view that the Whitechapel guardians are not in present need of such accommodation, your committee are of opinion that the guardians of all the Metropolitan unions should be invited forthwith to meet in conference to consider the question.

"Your committee submit accordingly.

"13 March 1888. (signed) *John Outhwaite*, Chairman of the Committee."

Agricultural Training Homes for the Unemployed.

B.

Report of the Committee appointed at a meeting of Metropolitan Poor Law Guardians, held at the City of London Board Room, 61, Bartholomew-close, on the 23rd July 1888, "to inquire into the practicability of applying the surplus labour of the Metropolis to the unproductive land at Home and in the Colonies, and the desirability of carrying out a scheme for this purpose under the direction of the Poor Law."

Your committee have to report that, as a preliminary to the consideration of the subject-matter of reference, they deemed it essential that information, both general and specific, should be sought from the chairman of each board of guardians in the county of Essex, being an agricultural county and contiguous to the Metropolis. A circular letter was accordingly addressed to the chairman of each of the Essex unions, as follows, viz.:—

"Agricultural Training Homes for the Unemployed.

"Dear Sir,

"A committee of guardians of Metropolitan unions and parishes has been formed for the purpose of considering "the question of the practicability, by means of the Poor Law, of adapting workhouse administration in the metropolis and large centres to the education and training of able-bodied men in country pursuits, in order to fit them for agricultural life in England, or the colonies.'"

"This committee emanates from a conference of metropolitan guardians which was held at the board room of the City of London Union on the 23rd of July, at which the following resolution was adopted, viz. :—

"That this conference is of opinion that it is desirable to appoint a committee to inquire into the practicability of applying the surplus labour of this metropolis to the unproductive land at home and in the colonies, and the desirability of carrying out a scheme for this purpose, under the direction of the Poor Law; and to report to a future conference."

"Naturally, in the consideration of the question, the committee feel that they cannot hope to arrive at any satisfactory conclusion without the advice and assistance of practical agriculturists, especially those who may be connected with Poor Law administration. I have accordingly been desired to address you and other chairman of boards of guardians in the county of Essex, and seek the favour of your co-operation with the committee in the direction of information, advice, and assistance, to enable them to determine the practicability of the proposal.

"Specifically, the committee would desire to ask you (1) whether there is any land in your union capable of utilisation for the purpose of establishing an 'Agricultural Training Home'; (2) whether, in your opinion, such an institution, worked under the Poor Law, could be managed so as to pay working expenses, or at least, without a loss to the ratepayers of the union from which the men there employed might be sent; (3) whether it would be possible to find employment for, say 80 or 100 men on the land, or farm, during the winter months; (4) whether employment could, in your opinion, be found for the men on neighbouring farms after a period of instruction; and (5) whether, in the event of there being no land available for the purpose of an industrial farm, under Poor Law management, any farmer in your neighbourhood would, in your opinion, be willing to take men sent to them from metropolitan unions as agricultural apprentices bound to serve for a fixed period of time.

"Enclosed herewith, for your information is a copy of a report of a committee of the Whitechapel Board of Guardians which led to the conference of metropolitan guardians; and if you, or your colleagues, can find opportunity and means of aiding the committee in any way, either personally at a meeting of the committee or by letter, I am to say that your assistance will be gratefully received.

"I am, &c."

To this circular letter four replies have been received by your committee; and as these afford a valuable contribution to the subject under consideration, it will be interesting here to append extracts from each such reply, as follows, viz. :—

The chairman of one union writes :—

"(1.) There is no land in this union capable of utilisation for the purpose of establishing an agricultural training home. Farms in the district have been recently re-let, at lower rents, and some land is in hand; but there is none out of cultivation in this union.

"(2.) It is quite certain that an institution, worked under the Poor Law, could not be managed to pay working expenses. Practical men, who have been at the work for years, with a thorough knowledge of the details of management, find great difficulty surrounds their task; and the officials of the Poor Law system would have neither the energy nor perseverance of these men. They could not make it pay, even if their labour, or a large portion of it, cost them nothing. The competition from the continent, the colonies, America, and India, is so severe, that prices for cereals and vegetable produce is forced down to a very low figure. Until this season, much of the latter has never found a market at all, but wasted in the fields. There is not a sufficient margin of profit for the cultivator who has made the subject a study; consequently, the master, manager, or other official, would not have the slightest chance.

"(3.) In the winter few hands are required on the land. These must be useful men, and those inured to exposure and hardship. London artisans would be of no value, and would suffer from the wet and cold.

"(4.) Farmers naturally employ their neighbours in preference to strangers, and naturally so. Extra hands are welcomed at special periods; hay-time, hopping, or harvest, find the Irish in the country, delighted to leave the smoke of London for a change of air. Thus they gain a holiday in imitation of the middle and upper classes.

"(5.) Occupiers hold their farms, in many instances, on short tenures, and would hesitate to be tide to their servants for long periods. The difficulty here arises as to boarding and caring for young hands. In the north of England, hirings are extended to 12 months.

"In this union, the guardians purchased a field adjoining the workhouse, to find employment for the men and boys, who might at any time be able to labour out of doors. They were placed under the direction of the master and an assistant, the latter being on the ground most of the time that the paupers were. The spade was used, the land cleaned and brought into a good state. But there was no wish to work on the part of the labourers; their desire was to smoke, to gaze at the passers by, to idle away and waste their time; there was not tho slightest energy to perseverance. The guardians, disgusted with their little farm, gave up agriculture, let their freehold, and took up wood-chopping. At all events, the lazy inmates are in-doors out of sight, and not a scandal to the neighbourhood. This is the experience of men, most of whom know a little of, and are interested in, horticulture or husbandry.

"There are two difficulties apparent; that the guardians met with, and others would find, to obtain suitable overlookers for the task, men never tired, never wearied, men who understand the work and fond of it; then to find labourers who would face the weather, the heat, the cold, and all the changes of our fickle climate.

"The first step is, not to send more men into the country, but to endeavour to keep those that are there. Those that have been brought up to the plough, have learned to stack, to drill, to ditch, to care for stock, &c., &c. In some parishes of Essex, the young men all wish to go to London, to be policemen, railway porters, bricklayers, carpenters, or labourers, &c., and no wonder when the farmers are unable to offer sufficient remuneration.

"The decline of agriculture in England is occasioned by the price returned for the products of the soil. Just take examples at the present moment of vegetable produce—potatoes, 60*s.* per ton; cabbages, 3*d.* to 4*d.* per dozen; scarlet beans, 1*s.* 6*d.* per bushel (40 lbs.); &c., &c. The list might be extended to any length. We are surfeited with vegetables, which is only a natural sequence to the low prices which cereals realise. And this has been the state of trade in these articles all through the year. Cultivation of these useful necessaries has increased so much in many parts of England, till the puzzle now is what to grow that will find a market when it comes to perfection.

"Under these conditions, the time seems inopportune for Poor Law authorities to embark in such a speculation in an industry that is manifestly overdone."

Another chairman writes :—

"(1.) There is land in this union, uncultivated or imperfectly cultivated, which might be utilised for training homes. (2) I cannot form an opinion as to this, it would depend on so many circumstances. (3) There is less demand for labour on the land in winter than at any other season, and it would be almost impossible, even on a very large farm, to find employment for the number of men named. (4) This would be doubtful. (5) I do not know of any; the probabilities would be against it; farmers generally know so little about apprenticeship."

The

The vice chairman of one union writes :—

"(1.) Land in any quantity can be purchased at low rate. (2) Most certainly not. The men, under such a system, would assuredly earn less than half their maintenance. (3) Eighty or 100 men are sufficient for the working of 2,500 acres of land in the winter months. Drainage, &c., once done lasts many years, besides which it is work that only picked labourers can do. (4) In this neighbourhood there is abundance of labour. (5) Our board has tried a modification of this plan with our union house boys with but little success. Could fruit growing be successfully started and carried on by limited companies much more labour might be profitably utilised. With present low prices for general produce it is now out of the question."

The clerk of another union writes :—

"Whilst admitting the desirability of the course proposed, my board is strongly of opinion that it will be found impracticable in this part of the county of Essex. In reply to your first query, I may answer, no. To your second, that it could not be managed to pay working expenses, or without loss to the ratepayers. To your third query, certainly not in this union or neighbourhood. To your fourth query, it is believed not, except, perhaps in hay-time or harvest. During the winter months we have a large number of unemployed able bodied men. Lastly, my board, which consists almost exclusively of farmers, was unanimosly of opinion that the farmers, as a body, would not be troubled with agricultural apprentices."

Other communications of an interesting and suggestive character were also received, as will be seen by the following extracts, viz. :—

An Essex clergyman writes :—

"In my county, Essex, the depression is great. My own glebe is let under 7*s.* an acre, tithe-free, and yet the tenant says he can barely live. Consequently farmers employ fewer and fewer labourers, and pay no more than 10*s.* a week, and make deductions for wet days and bad weather. Since Christmas last (1887) many men have earned less than usual owing to the unusual amount of bad weather. Young men and lads yearn therefore to quit the country and seek work in the towns, where wages are higher and hours shorter. They hope that they may succeed, though others fail, and thus the stream runs from the country into the towns. Your scheme seems to propose to force an opposite current from town to country ; but can you do it ? Before you spend money upon it, might it not be prudent to take into your counsel some persons who live in the country and could give you an accurate idea of the great changes that are silently going on in its condition. My own opinion is that few of your town men would be equal to the hard work done by our fellows here for wages at 2*d.* an hour. I am often distressed at seeing them and dare not blame any young man for trying to leave such toil for other and lighter work. We hear a great deal about the sufferings of the poor in towns, but I say that the poor in the country have to endure terrible hardships. Last winter I felt constrained to supply at my own cost soup dinners to half the children in the parish school. But the sufferings of the country make less noise than those of the town."

Another clergyman writes :—

"We find in the country that there are already hundreds and thousands of men unemployed. There is room for all of them if the farms were let. But unfortunately many of the farms are quite without tenants and on those which are farmed too few men are employed. Machinery and the poverty of the farmers have made poor cultivation the rule, and one man to a 100 acres is the average. The land, if cultivated, will bear 20 men on a 100 acres. The only way to secure better cultivation and more employment of hands, in my opinion, is to grant the land in small lots under a manager at a fair rent. * * * For the unemployed of London I consider that several farms might be started, and with very little training each man could learn to manage an allotment. A man can live on three acres ; I know those who live on less. I am obtaining two farms from noblemen for unemployed labourers and shall be glad to give you any evidence or information which would help you to carry out your idea successfully."

Miss Twining, 84, Palace Gardens-terrace, writes :—

"I cannot help expressing my opinion, of whatever worth it may be, that the effort, so far as it regards our metropolitan able-bodied, will be an impossible and hopeless one. I do not speak quite without knowledge of the circumstances. I hear of our able-bodied poor at our Mary-place Workhouse and I know of the efforts that have been made there to provide and to persuade to work outside. I have read of the plans made in Holland and elsewhere in this direction, and I heard about them when I was in Holland some years ago. From none of these sources do I gather encouragement to embark on similar plans. Lastly, I know something of the metropolitan poor, having worked amongst them for over 40 years in various parishes. This experience leads me to believe that such will never consent to be sent to, or remain in, country work of any kind. Had they preferred the country they would not have come up to London, which, with all its miseries, has an attraction and a fascination for them. I have just been reading through the reports on Foreign Relief and I came across this passage. In speaking of plans adopted in Denmark, the author adds—'An attempt to employ paupers without coercion on land, absorbed large sums of money and failed in 1842.'"

These and other letters were read and considered at the meeting of your committee which was subsequently held. At this stage, however, it was felt by the committee that an important factor in the inquiry had recently been introduced in the shape of an issue of the "First Report of the Mansion House conference on the condition of the unemployed," and that care should be taken not to enter into competition with voluntary effort, but rather to work in concert with it. From this report of the Mansion House conference and its appendices, it appeared that not only had the opinion been reached that "any experimental scheme of agricultural colonies should be worked by private charity, in co-operation, as far as possible, with the Poor Law, rather than as part of the Poor Law system," but that a detailed scheme had been formulated, offers of land invited, and a public appeal for funds made. Under these circumstances, it was decided as a preliminary to further consideration of the question, to empower the chairman (Mr. J. G. White) to seek a meeting of the committee with the members of the Mansion House sub-committee, for the arrangement of a conference, at which the question whether the scheme should be undertaken by the Poor Law, or by voluntary charity, should be discussed. A joint meeting of the committee was accordingly convened and held with the result, however, that no concerted action between the two committees was found to be at the moment practicable ; the following resolution being, after a long discussion, carried by a majority of those present, viz. :—"That the representatives of the board of guardians be respectfully asked to submit the question at issue to the metropolitan boards of guardians and to inform the Mansion House committee of the result, before any further steps are taken"

Under these circumstances your committee are of opinion that they will best discharge their responsibility under the reference by submitting to the conference the information which they have gathered, and reporting the result of their recent interview with the Mansion House sub-committee ; and further by asking the conference to determine

(1.) Whether, in view of the steps taken by the Mansion House council to establish, out of voluntary funds, an agricultural training home, it is inexpedient, or unnecessary, for the Poor Law to enter upon a competitive scheme ; or

(2.) Whether, as a direction of development of Poor Law administration, it is still possible and desirable that the conference should continue their deliberations and action in the matter ; or

(3.) Whether the question shall be allowed to remain in abeyance pending the result of the agricultural training home experiment on the part of the Mansion House council.

Your Committee submit accordingly."

(signed) *J. G. White*, Chairman.

The conference accordingly again met on the 4th of February last, when it was resolved—"That, in the opinion of this conference it is not desirable that it should be immediately dissolved, but that the question of the expediency of establishing agricultural training homes for the unemployed under the direction of the Poor Law, be allowed to remain in abeyance pending the result of the agricultural training home experiment on the part of the Mansion House council."

(C.)

WHITECHAPEL UNION.

Agricultural Training Homes for the Unemployed.

At a meeting of the "agricultural training homes" committee of the guardians, held on Tuesday, the 13th June 1893, the following draft report was submitted and read by the clerk, viz. :—

Your committee resumed to consideration of the question of "agricultural training homes for the unemployed" on the 13th of December last, at the point at which the question had been left by a former committee in 1888, and subsequently by a joint conference of metropolitan guardians held at the board-room of the City of London guardians in Bartholomew-close.

Your committee started with the proposition that the only means by which guardians could establish an agricultural training home would be by a development of the workhouse system. The points, therefore, formulated were : (1) whether such a development is expedient ; (2) whether an agricultural training home can be best administered in the interest of the struggling poor by a Poor Law authority or by a voluntary body ; (3) whether, in the latter event, the "home" should be in part maintained by capitation payments by guardians, or by subscriptions under the 42 & 43 Vict. c. 54. s. 10 ; (4) whether it should be reserved for "able-bodied persons of good character and of apparently solid determination," or whether it should be open to all comers as a test of such character and determination ; (5) what means should be taken for placing men, who may have satisfactorily passed through a period of training in agricultural employment, or possession, or both ; or (6) whether the training should have for its object the placing of men and their families in a position of hope and possibility in the Colonies.

At their meeting on the 7th of February, Captain Gretton, hon. secretary of the East London Emigration Fund, attended in conference, and in the course of his remarks, suggested that what was wanted was a farm where men could be sent for a year, at the least, and where they would go through all the rotation of work, both in the farmyard and in the field, including milking, rough carpentering, &c. A dock labourer, for instance, was not physically fitted to compete in the agricultural labour market ; therefore he would require a long period of training. In the cases of married men, not only should they be sent to the farm, but also their wife and children, in order that one and all should become accustomed to country life. He illustrated this by referring to cases within his own experience in Canada, in which the wife, for want of a preparation for country life, became bored by the solitude, and prevailed upon the man to migrate into a town. In the country they were trained by necessary circumstances to habits of frugality and sobriety, the wife taking her share in learning to milk, make cheese and butter, and so preparing herself for natural occupation on a farm. He further advised that, experimentally, a selection should be made of, say, three or four families, who should be placed in cottages, and provided for during a probationary period, and an arrangement entered into with a neighbouring farmer for their training in agricultural pursuits.

On the 7th of March a communication was read from Mr. Walter Hazell, 15, Russell-square, regretting his inability to meet your committeee, but stating that he had in a very limited measure, experimented in the matter of an agricultural training home. He had a farm, he said in Essex of about 28 acres, with a comfortable farmhouse, where he took eight or ten lads or men at a time. As a rule they stayed for two or three months, and if their conduct was satisfactory, they were drafted off elsewhere, largely to Canada, by the aid of the "Self Help Emigration Society." A small proportion had turned out quite unsatisfactory, but in the last two years 40 men and boys had successfully passed through the farm ; and although, from a financial point of view, the effort had been a failure, socially and morally it had been a great success.

At this point it was suggested that the committee were face to face with two schemes, one to form a colony of men who should be trained in agriculture for a time and then settled on land in this country or the colonies, and the other, arising out of Captain Gretton's suggestion, to arrange with farmers to take men and women and to give them training in in-door and out-door work, including poultry rearing and dairy farming.

At this point the chairman of your committee intimated that he had already sent out to a number of selected farmers and others the following questions, viz. :—

> "Assume a Londoner, intelligent, enfeebled by poor living, but with a good physique and some energy, married to a decent wife, and with two or three children.
>
> "Could such a man, with his wife and family, be settled in a hut or cottage in your neighbourhood ? Could he, while receiving sufficient for support from London guardians, be worked by you ? Could you, that is, give him work on your farm so that he might at a year's end have some skill in digging, rough carpentering, and milking, be, in fact, fit for emigration ? Would it be possible to pay you for your trouble by a capitation grant on every man capable of digging, &c., &c. ? And might it be a condition that during the year so much waste land might be reclaimed ? This last condition is imposed to obviate the substitution of country by London labour."

In reply, one correspondent, a farmer at Thetford, said he thought the only practical method would be for boards to take farms and manage them on the lines of Booth's and Mills' farms. This gentleman has communicated with four farmers, three of whom appear to be guardians. They all think the scheme either illegal or impracticable for various reasons :—

(1.) There is not sufficient cottage accommodation.

(2.) Much jealousy would be stirred amongst the country people.

(3.) There is hardly any digging on farms. As to milking, the cows being most sensitive on the subject, no stock-owner would allow strangers to learn in that way.

(4.) Even

(4.) Even supposing a tolerably likely townsman, you could not convert him into a countryman in 12 months.

(5.) But the supposition itself appears most unlikely. If the man's morale and physique promised well for such an experiment, he would not not be in such a case.

(6.) Country guardians would object most indignantly if poor persons were allowed to be sent into parishes in the country and kept there a year, just long enough to make them chargeable to such country parish. A relieving officer is punishable for conniving at such a thing in the present state of the law (*sic.*).

Another correspondent said the scheme suggested seemed impracticable to all the farmers whom he had consulted. He thought, however, they would willingly form a committee down there (Chelmsford) to advise and supervise. A friend of his had further asked the question, "Where are the cottages, the farmers and the land for such experiments."

An Essex rector said he would gladly help were it not that the plan seemed to him "Utopian."

An Oxford vicar said he had 20 cottages vacant, and between 1861 and 1891 the population had decreased by 450. There was not work enough to keep the people.

A Buckingham farmer and Poor Law guardian thought there was little opening for such a man as a regular farm labourer, but thought he might get enough by odd jobs to gain experience in farm work.

Another correspondent said it was "a big question," and required great consideration. He added, that "on farms there is no digging done, it is too expensive, and, as to milking, such men as you mention would spoil the cows; and we have no waste land to reclaim."

Still by another correspondent, the scheme on any large scale was regarded as "impracticable." "Very few farmers" he said, "would be willing to undertake it, and even if they did, the man to be taught would probably soon drift into the lowest and least instructive work. I feel sure that a far better plan would be to take a piece of low-rented land and put several families on it under a superintendent. There may be objections to this of a different kind, but in this way the men might learn something."

At the same meeting, Mr. Trotter spoke of his experience in connection with General Booth's Farm Colony at Hadleigh. He said they had about 280 men at work, all single men. He picked them out of the Salvation Army workshops, generally taking a batch of about 20 at a time and paid their fares down. There they were put to hard manual labour in the brickfields or otherwise. It made them ache all over for two or three weeks, but after that their pains went and very often they had come forward and testified to their own improved physical condition. After describing the internal economy of the farm, Mr. Trotter said that about 1,100 had passed through it, some had been there the whole time, but the average was about three months. He would not be able to trace more than a dozen of them. Very often men would ask to stay as they were afraid, they said, of the influence of drink elsewhere. No men had been sent out to the colonies, and for the most part he did not know what became of those who left.

Mr. James Brown also submitted for consideration a scheme for purchasing a farm of, say, 300 acres; 200 acres to be retained for agricultural purposes, and the remainder divided into 33 plots of three acres, with a cottage, &c., on each; the 33 men to work on the farm at piece-work; and after 12 months to be allowed (*a*) to emigrate if they wish, or (*b*) to buy their own land at a price proportionate to that originally paid for the whole.

At their meeting on the 25th of April your committee had the advantage of the attendance of Mr. Bolton Smart, Mr. F. C. Mills, J.P., Miss Charlton and Miss Crawford, guardians of the Stepney Union. At this meeting, also, a letter was read from Mr. T. Hancock Nunn, who had been in communication on behalf of the chairman of this committee, with farmers and other practical men, enclosing a communication from another correspondent to the effect that the writer had talked the matter over with various individuals in different parishes, but that he only knew of one farmer who approved of it. "The scheme," he said, "of sending men to live on farms with their families for training in agriculture was looked upon as impracticable: (1) on account of the expense; (2) the insufficiency of any payment to compensate for the trouble and time necessary for an ordinary farmer to give to train the men; (3) the objection to introducing strangers and their families among the villagers; (4) the dissatisfaction which would be occasioned among the ordinary employés; and (5) the impossibility of guaranteeing the reclamation of waste land, since the farmer willing to take the men would probably have no waste land to be reclaimed. The writer goes on to say that it is generally considered, by those best able to judge, that a far better plan would be for the guardians themselves (or the district councils or town councils, or whatever body takes the place of the guardians under the Local Government Bill introduced last week) to purchase a farm that has got into a bad state of cultivation and work it themselves, with a competent manager and as few other skilled labourers as practicable. On this farm they might employ unskilled labour to as great an extent as it would be possible to do the work by hand labour, the manager all the time aiming to train the men to take up work on a colonial farm to be carried on concurrently by the guardians, and from which the men might be assisted into situations or to take up land on their own account. Gradually the home farm might be worked into a garden state of cultivation, and then sold at a large cost over first profit, this profit helping to recoup the ratepayers for the cost of carrying on the farm."

The foregoing narrative of the proceedings of the committee will sufficiently explain the nature and bases of the discussions which have taken place.

In considering, however, how far the establishment of an agricultural training home, or homes, is practicable, it has to be borne in mind that guardians can alone approach the question from the standpoint of the Poor Law, that is to say, from the standpoint of a possible development of the workhouse system in the actual treatment of paupers. If the guardians should foresee the possibility of improving their workhouse administration, and making it more and more contributory to character, self-help, and industrial habit, they would doubtless be quite justified in seeking means to that end, whether in the direction of the establishment of an agricultural training home, or otherwise, seeing that any such provision would not, in its broad features, be a departure from the principle of maintaining the able-bodied poor in a well-regulated workhouse. Possibly even this may seem to some an ambitious proposal; and yet those with the largest experience are those who are most conscious of the importance of making in-door relief as helpful, and as little hurtful as possible. On the other hand, there are those who would so far relax Poor Law administration as to attract "out of work" men of the better sort, who now suffer privation rather than resort to the Poor Law; and truly if one class more than another claims commiseration and practical help it is the latter. But here, it seems to your committee, to be of great importance, not only to give priority to the claims of the self-respecting poor in any scheme for improving the condition of the unemployed, but equally so to see to it that the aristocracy of the poor are not attempted to be saved from the Poor Law by the machinery of the Poor Law. Such an attempt would be fatal to character, and inimical to the interests of the community. Dealing, therefore, with this class alone, and not with those who already resort to the workhouse, your committee are of opinion that any scheme of an agricultural training home must necessarily be carried out by a body or organisation outside the Poor Law. No doubt to many this will be a disappointing conclusion, inasmuch as the Poor Law possesses means of enforcing rules, and of controlling numbers, which would not be possessed by any voluntary organisation. At the same time, it is to be borne in mind that it is the comparatively well-disposed and self-respecting whose circumstances would be met by the establishment of an agricultural training home, and therefore they would embrace a class of men presumably the most amenable to influence and disciplinary rules.

Your committee would welcome any proposal for thus bringing the unemployed into contact with agricultural life, and aiding them in achieving an independent existence under conditions helpful to themselves, and conducive to the interests of the community. But to attain this end, something more than training and acclimatisation is required. A man when he voluntarily submits himself to a course of preparation for agricultural life, must, in some

some form or other, have his future assured to him ; and if this is not in the occupation and possible ownership of the soil, his self-imposed hardships will have been in vain. There may have been more fiction than fact in the words of the poet that—

"There was a time ere England's woes began,
When every rood of ground maintained its man,"

but yet it would be strictly true to say that there was a time when a large portion of the soil of England was occupied by the rural population ; and if such a time could again be brought about, it would no doubt be to the interest of the poor, and conduce to the welfare and wealth of the nation. Failing this, the only outlook will be in the direction of emigration, and here again the possibilities of the future must be seen to be definite, sufficient, and assured.

As to the other class of able-bodied men who now resort to the workhouse, many of them upon any and every pretence, it is to be feared that but few would be found to be men of "solid determination," or be likely to be attracted by a proposal, however considerate and humane, which would withdraw them from their associates in London. Then again, if an agricultural training home were so designed as to offer special attraction to the "ne'er-do-well," and to tempt him to apply for parochial relief, it might be held to be opposed to the fundamental principle of the English Poor Law : that "the condition of the pauper should, upon the whole, be less eligible than that of the independent labourer." Still, something might, no doubt, be done in the way of providing in such an institution, whether designated a "home" or "workhouse," not precisely an eligible subsistence, but one in which there would be to the hopeful the elements of hope and possibility as to the future ; and to the "habitual pauper" a greater degree of deterrent influence than if relieved in a London workhouse. But even this would not be practicable without the power of enforcing detention during a reasonable period, and for this legislation would be necessary ; whilst it is open to serious question whether such an arrangement could be carried out successfully by any single board of guardians.

Upon the reading of the foregoing Report, the Chairman expressed his and, probably, other members' disappointment at its conclusions, as being a very poor outcome from the deliberations of the Committee ; and, with a view to assisting the Committee in reaching a less negative result, he (the Chairman) submitted the following alternative draft Report, viz. :—

The course which the Committee's inquiry should take was sketched at one of the earlier meetings, when the following points were raised for future consideration.

(1) Whether such a development of the present system as agricultural training farms would involve, is expedient ?

(2) Whether such homes would be best administered by the Poor Law or by voluntary bodies ?

(3) In the latter case whether the guardians should support the voluntary body by capitation payments or by subscriptions under the 42nd and 43rd Vict. ?

(4) Whether such farms should be open only to men of ascertained solid determination or whether they should be open to all able-bodied men, to serve as a test of such "solid determination" ?

(5) What means could be devised of dealing with the men when trained ?

(6) Whether the Colonies should be held out as the ultimate destination of the men ?

(1.) As to its expediency. The able-bodied who are out of work may roughly be divided into those who can work, but will not, and those who will work, but cannot obtain it. The charitable public have no means of discriminating between these two classes. The Poor Law was intended to help the public by offering relief coupled with ineligible conditions to those who professed to be destitute. These conditions are felt to be too hard for those who, although destitute, perhaps, through their own fault, are yet anxious to redeem their characters and earn an honest livelihood. The latter class is therefore constantly, but in most cases unavailingly, helped, by the charitable, along with a great many whose cases are practically hopeless.

To prevent the public from dealing with a problem which private charity is powerless to solve, it does appear expedient that the Poor law should take upon itself the responsibility of dealing with the unemployed. To do this adequately it must discriminate between those who are, and those who are not, willing to work. And it must do this without attempting to investigate character, and without making relief more eligible than independence. It is, therefore, proposed that boards of guardians should have power to offer work, which should not be degrading in itself, which should open up a chance of an honest career by training a man to earn a livelihood, and which should be ineligible to all but men of solid determination.

(2.) It is suggested that the guardians should use the charitable energy of the community to the full by appointing committees largely composed of well known and well tried charitable workers.

By thus opening a door of escape for the unemployed who seriously desired to work, the Poor Law would be enabled to deal from more severely than public opinion at present permits with the mere loafer and the "sturdy vagabond."

(3.) It would be necessary, of course, too, that guardians in offering the training should hold out reasonable hope that at its end a chance of a livelihood should be opened. Guardians at present have full powers of emigrating families, and there is a steady demand in Canada for agricultural labourers.

In order that no excuse should be available it would be desirable that the home of the man should be kept up during his training by means of a small allowance for his wife and family, its amount depending upon their earning power.

In order that a trial might be made of such a scheme, it is suggested that a board of guardians, willing to apply the principle, should acquire a small dairy farm, and engage a master, who should be capable of acting as foreman. The master-foreman would engage two or three experienced gangers, who would work with the men, instruct them, supervise and report upon their work. The produce of the farm would be utilised at the workhouse and the infirmary.

Whereupon it was Resolved :

That the alternative Reports now submitted be printed and circulated among the Committee ; and that this meeting do now stand adjourned until Tuesday the 3rd day of October next.

(D.)

REPORT of Committee of the Guardians, *re* "English Land Colonisation Scheme," which was submitted to the Board of Guardians and adopted at their meeting on Tuesday, 3rd October 1893 :

"Your Committee have been in conference with Mr. Harold E. Moore, Honorary Treasurer of the English Land Colonisation Society, touching the proposals of the society as set forth in recent letters addressed to the Guardians.

"The

"The definite inquiry submitted to the guardians is whether they will be prepared to make payment to the society in respect of such number, not exceeding 40, of the able-bodied poor of this union, as might be selected for the colony which the society proposes to found in Essex; the places vacated from time to time to be filled up by other men.

"The object of the society is to provide agricultural and other productive work 'to carry on such industries as are connected with farming,' and 'to introduce other minor industrial employments, which will bring in some return without competing with existing English products, and which may in the future be useful to the men so employed.'

"Annexed hereto is the draft of alternative Reports which have been formulated and already stand for consideration by your Committee, and which will be found to bring the history of the question. as presented to your Committee during the last five years, down to date.

"In view, however, of the nature of the representations made to the guardians by the English Land Colonisation Society in reference to their contemplated experiment, your Committee have deemed it expedient to anticipate the further consideration of the question, by dealing at once with the proposals submitted to the guardians by the Society.

"In doing so, your Committee desire in the first place to state that they are not prepared to make any recommendation which is calculated to weaken or impair the strict, uniform and well understood administration of the last 23 years. At the same iimt, it must not be forgotten that during that long period the guardians have continuously sought to attract voluntary and organised effort in the direction of saving the poor from pauperism, and the success of that effort has been contributory to the unbroken character of the administration.

"In the present instance, it does not appear to your Committee to be necessary for the guardians to identify themselves with the actual scheme of the English Land Colonisation Society, by giving adhesion to its principles, supporting its methods, predicting its success, or even accepting the statements as regards the condition of the labour market upon which the proposals are based. The Society is about to try an experiment in the direction of saving a certain class of destitute poor from pauperism; and the sole question is whether the Guardians will, under the statutory powers already existing, be disposed to assist in it, seeing that, as regards Poor Law administration, it will in no way impair its efficiency, whilst in the present state of public opinion it will present an interesting and instructive 'object lesson' It will also enable the guardians, in a practical way, to determine the character of the able-bodied men who now resort to the workhouse, and go far to justify a strictness of administration in those cases in which men decline to respond to efforts on their behalf.

"Under these circumstances, your Committee recommend that the guardians do consent, at the expiration of twelve months from the Society actually commencing operations, to subscribe to its funds a sum based upon a computation of the number of men actually received from this Union at a rate of 5*s.* per head per week; the Guardians to be satisfied by such evidence and means as may be determined that such 'men' are in a destitute condition and that they have resided in the Whitechapel Union 12 months and upwards immediately prior to such reception.

"The proposal to make such grant will be under the Act 42 & 43 Vict. cap. 54, sect. 10, upon the ground that the English Land Colonisation Society is an Institution which appears to the guardians 'to be calculated to render useful aid in the administration of the relief of the poor' and will be subject to the approval of the Local Government Board.

"Your Committee recommend accordingly.

(signed) "*Saml. A. Barnett.*
Chairman."

(L.)

REPORT of the General Purposes Committee, submitted to the Guardians, 9th April 1895.

YOUR Committee have had under their consideration the letter addressed to the Local Government Board by the Paddington Board of Guardians on the 3rd of December last, a copy of which has been received by the guardians of this Union, as also communications from other metropolitan boards of governors upon the subject of the "Unemployed."

Taking up the question where it was left by the guardians of this Union last rear, it is to be observed that the experiment of sending certain selected men to the Bird Tree Farm, Langley (Newport), Essex, for training, with a view to emigration, has been more successful than could have been expected. Of the six men sent to the farm in the early part of the year, one did not reach his destination, one left for *bonâ fide* reasons, having succeeded in obtaining suitable employment, two have already been emigrated to an English colony, and the remaining two are on the eve of assisted emigration under equally hopeful conditions. True, the experiment has been a very limited one, and has, of course, made no perceptible impression upon the pauperism and poverty of the district. At the same time, it has been a very suggestive one, and has pointed (1) to the desirability of dealing, sympathetically and helpfully, with the exceptional cases of men who drift into the workhouse from no fault of their own, or if from fault or failure, who are sufficiently in earnest to respond to efforts for their redemption; (2) to the possibility of saving some from recourse to the workhouse at all; and (3) to the immense advantage of the Poor Law and voluntary agencies working in concert in dealing with the "unemployed." The managers at the farm in question did what the Poor Law could not do; whilst the necessity which was imposed upon Mr. Hazell in curtailing numbers and restricting the operations of the farm has been in no small measure a guarantee for the success of the experiment.

The position which has been up to the present taken by the guardians in relation to the question is sufficiently expressed in the following resolutions which were some time since adopted by the London and District Poor Law Officers' Association and subsequently concurred in by the guardians:—

"1. That in the opinion of this meeting of Poor Law officers, the question of the establishment of agricultural training homes for the unemployed, has alone a relation to Poor Law administration, in so far as it presents a development of the workhouse system without any weakening of its safeguards, or otherwise affords boards of guardians the means of co-operating with organised voluntary effort in cases of exceptional desert.

"2. That whilst the history and experience of labour colonies abroad afferd no sufficient data upon which to predict the success of an extended scheme of agricultural settlements in England, it ia yet worthy of consideration whether in dealing with 'out-of-work cases of the better sort, who suffer privation rather than resort to the Poor Law,' it would not be to the interest of such men, and conduce to the wealth and welfare of the nation, if they could be trained to an industrial life, and be brought eventually into permanent contact with the land.

"3. That to this end, and in supplementation of fragmentnry efforts already being made, it would be of great public value and interest, if, upon a limited scale, an agricultural home could be experimentally established by some voluutary organisation commanding public confidence, with a view to determining whether such an institution can be made the means of effectually training and improving the condition of any number of the unemployed.

"4. That it is not expedient that boards of guardians should enter into relations with voluntary bodies for the mere provision by the latter of a maintenance—possibly more eligible than in the workhouse—to able-bodied destitute persons; and that such co-operation should be strictly confined to selected cases of desert from the workhouse, with the definite object and intention of redeeming them from a condition of dependence.

"5. That this Meeting do re-affirm the following resolutions, which were, *inter alia*, adopted at the meeting of this Association on the 12th of May 1893, viz.:—

'That where an able-bodied pauper of the ordinary class has been an inmate of the workhouse at intervals of time ranging over a period of not less than six months, and who, during a period of one month has been admitted to the workhouse on more than three occasions, he should be deemed to be "an habitual pauper" and be liable to be taken before a Justice,' and

'That "an habitual pauper" upon being brought before a Justice should be liable—at the discretion of the Justice, having regard to all the circumstances—to be convicted and sent to a workhouse or farm colony to be specified, there to be detained, and trained in useful labour during a period of not exceeding three months.'"

As in previous years, the country is still face to face with the problem of the "Unemployed"—a term sufficiently vague to include the unfit and the unwilling as well as those of good character who are honestly seeking to maintain their independence but failing to obtain employment. The question thus again arises whether the circumstances of those "who make great personal sacrifices, in order to avoid the stigma of pauperism, to maintain their independence" can be met by the Poor Law, short of actual admission to the workhouse. Your Committee, therefore, submit that, whilst any general relaxation of the conditions of relief would be as inimical to the interests of the poor as to those of the community, no effort should be spared to make the administration of such relief helpful to those who are driven to the Poor Law by sheer necessity as well as deterrent to those who resort to it upon any and every pretence.

The experiment of sending men to a farm for training, with a view to emigration, has been alone tried in the cases of certain unmarried men, and it is difficult to see how it can be applied to those of married men with families, without involving their separation from their homes. At the same time, where a married man might desire to participate in the advantages of such an arrangement, it would, no doubt, be possible to provide for a shorter period of probation and training, and then to assist the emigration of the entire family. At all events, your Committee would submit that where a man, having a wife and family, is of good character, in possession of a decent home, and has resided in the union for at least 12 months, and who, from no fault of his own, is out of work and destitute, he might be offered assistance in the form of agricultural training for emigration, the wife and children being afforded adequate assistance through voluntary agencies, or failing this, in the form of out door relief. In other cases of exceptional desert, the arrangements contemplated by the modified Workhouse Test Order of 18th April 1887, might be sought to be resuscitated, assuming, of course, that voluntary charity should be found unequal to the task of relieving the families and keeping homes together.

Of course there would still remain the promised co-operation with the District Board of Works in the nature of "recommending for employment persons who, from their previous circumstances and condition, it is most desirable should not be placed under the necessity of receiving relief at the cost of the rates;" thus dealing in an exceptional manner with "the front rank of resident heads of families of good character, whose homes are worth preserving."

APPENDIX, No. 30.

PAPERS handed in by Sir *Hugh Owen*, K.C.B.

POWERS AND DUTIES OF GUARDIANS AND THEIR OFFICERS AS TO RELIEF.

Administration of Relief.

ENGLAND and Wales, for the purpose of the relief of the poor, is divided into 654 unions, each union being under a separate board of guardians. Each union has its staff of relieving officers. The unions vary very much in population and in extent; in some unions there is but one relieving officer, whilst in others there are several such officers, each of them having a separate district for which he acts. In some cases the relieving officers have the services of assistants. The appointments and salaries of the officers are subject to the sanction of the Local Government Board.

Each union has also a staff of medical officers, on whom it devolves to attend the sick poor in the workhouses, and the out-door poor in respect of whom they receive orders for their attendance.

Every person who is destitute has a right to relief. The relief may be given in the discretion of the guardians, either in the workhouse or (subject to certain restrictions imposed by Orders of the Local Government Board) by way of out-relief.

The guardians usually hold their meetings weekly, but in some cases the meetings are held fortnightly. Between the meetings of the guardians it devolves on the relieving officers to deal with the applications for relief which may be made to them.

It is the duty of a relieving officer, under the General Consolidated Order of 24th July 1847—

Duties of Relieving Officers as to Relief.

(*a*) To receive all applications for relief made to him within his district, or relating to any parish situated within his district, and forthwith to examine into the circumstances of every case by visiting the house of the applicant, if situated within his district, and by making all necessary inquiries into the state of health, the ability to work, the condition and family, and the means of such applicant, and to report the result of such inquiries in the prescribed form to the guardians at their next ordinary meeting; and also to visit from time to time as requisite all paupers receiving relief, and to report concerning the same as the guardians may direct.

(*b*) In any case of sickness or accident requiring relief by medical attendance, to procure such attendance by giving an order on the district medical officer, or by such other means as the urgency of the case may require.

(*c*) In every case of a poor person receiving medical relief, as soon as may be, and from time to time afterwards, to visit the house of such person, and until the next ordinary meeting of the guardians to supply such relief (not being in money), as the cases on his own view, or on the certificate of the district medical officer, may seem to require.

(*d*) In every case of sudden or urgent necessity to afford such relief to the destitute person as may be requisite, either by giving such person an order of admission into the workhouse and conveying him thereto if necessary, or by affording him relief out of the workhouse, provided that the same be not given in money.

(*e*) Duly and punctually to supply the weekly allowances of all paupers belonging to his district or being within the same, and to pay or administer relief of all paupers within his district to the amount and in the manner in which he may have been lawfully ordered by the guardians to pay or administer the same.

It is further the duty of the relieving officer to enter in a book termed the application and report book the particulars of all applications for relief which have been received by him, the result of his inquiries as regards the applicant, and the relief which has been given by him in any such cases; and in this book any orders which may be given by the guardians for the granting of relief or the continuance of relief are also entered.

Duties of Masters of Workhouses as to admission to Workhouse.

It is the duty of the master of the workhouse to admit into the workhouse any person for whose admission an order has been given by the board of guardians or by a relieving officer. It also devolves on him to admit a person without any order in a case of sudden or urgent necessity. The duties which devolve on the master as regards admissions to the workhouse are to be discharged by the matron of the workhouse in the absence of the master or his inability to act.

Out-door Relief.

In a case of sudden and urgent necessity, an overseer of the poor may also provisionally grant an order for the admission of a destitute person into the workhouse.

Out-door Relief Regulation Order.

With regard to out-door relief certain restrictions are imposed by Orders of the Local Government Board in pursuance of powers conferred by the 4 & 5 Will. 4, c. 76. These restrictions have reference chiefly to the relief of the able-bodied.

In the metropolis and a large number of provincial unions, especially in the manufacturing districts, the Out-Door Relief Regulation Order, which was first issued on the 14th December 1852, is in force. The Order contains the following provisions:—

Whenever the guardians allow relief to any able-bodied male person, out of the workhouse, one-half at least of the relief so allowed shall be given in articles of food or fuel, or in other articles of absolute necessity.—(Art. 1.)

In any case in which the guardians allow relief for a longer period than one week to any indigent poor person, resident within their union or parish respectively, without requiring that such person shall be received into the workhouse, such relief shall be given or administered weekly, or at such more frequent periods as they may deem expedient.—(Art. 2.)

Out-door Relief Regulation Order—*continued.*

It shall not be lawful for the guardians or their officers—

To establish any applicant for relief in trade or business ;

Nor to redeem from pawn for any such applicant any tools, implements, or other articles ;

Nor to purchase and give to such applicant any tools, implements, or other articles, except articles of clothing or bedding where urgently needed, and such articles as are hereinbefore referred to in Article 1 ;

Nor to pay, directly or indirectly, the expense of the conveyance of any poor person, unless conveyed under the provisions of some statute, or under an order of justices or other lawful authority, or in conformity with some Order or regulation of the Poor Law Commissioners, or the Poor Law Board [or the Local Government Board], except in the following cases, viz. :—

1st. The case of a person conveyed to or from a district school, or an hospital or infirmary, or a lunatic asylum, or a house licensed or hospital registered for the reception of lunatics ;

2nd. The case of a person conveyed to the workhouse of the union or parish in which such person is at the time chargeable ;

3rd. The case of a person conveyed to or from any other workhouse, or other house or establishment for the reception of poor persons, in which for the time being it shall be lawful for the guardians to place such person ;

Nor to give money to or on account of any such applicant for the purpose of effecting any of the objects in this article mentioned.

Nor to pay, wholly or in part, the rent of the house or lodging of any pauper, nor to apply any portion of the relief ordered to be given to any pauper in payment of any such rent, nor to retain any portion of such relief for the purpose of directly or indirectly discharging such rent, in full or in part, for any such pauper.

Provided always, that nothing in this article contained shall apply to any shelter or temporary lodging procured for a poor person in any case of sudden or urgent necessity or mental imbecility.—(Art. 3.)

No relief shall be given from the poor rates of any of the said parishes, or of any parish comprised in any of the said unions, to any person who does not reside in some place within such parish or union respectively, save and except in the following cases :—

1st. The case of a person casually within such parish, and destitute.

2nd. The case of a person requiring relief on account of any sickness, accident, or bodily or mental infirmity, affecting him or her or any of his or her family.

3rd. The case of a widow, having a legitimate child dependent on her for support, and no illegitimate child born after the commencement of her widowhood, and who, at the time of her husband's death, was resident with him at some place other than the parish of her legal settlement, and not situated in the union in which such parish is comprised.

4th. The case of a child under the age of sixteen, maintained in a workhouse or establishment for the education of poor children not situate within the union or parish.

5th. The case of the wife or child residing within such parish or union of some person not residing therein.—(Art. 4.)

No relief shall be given to any able-bodied male person while he is employed for wages or other hire or remuneration by any person.—(Art. 5.)

Every able-bodied male person, if relieved out of the workhouse, shall be set to work by the guardians, and be kept employed under their direction and superintendence so long as he continues to receive relief.—(Art. 6.)

Provided that the regulations in Articles 5 and 6 shall not be imperative in the following cases :—

1st. The case of a person receiving relief on account of sudden and urgent necessity.

2nd. The case of a person receiving relief on account of any sickness, accident, or bodily or mental infirmity, affecting such person or any of his family.

3rd. The case of a person receiving relief for the purpose of defraying the expenses of the burial of any of his family.

4th. The case of the wife, child, or children of a person confined in any gaol or place of safe custody.

5th. The case of the wife, child, or children, resident within the parish or union, of a person not residin therein.—(Art. 7.)

The guardians shall, within thirty days after they shall have proceeded to act in execution of Article 6, report to the [Local Government] Board the place or places at which able-bodied male paupers shall be set to work, the sort or sorts of work in which they or any of them shall be employed, the times and mode of work, and the provision made for superintending them while working, and shall forthwith discontinue or alter the same, if the [Local Government] Board shall so require.—(Art. 8.)

No relief which shall be contrary to any regulation in this Order shall be given by way of loan, but any relief which may be given in conformity with the provisions of this Order to or on account of any person to whom relief may be lawfully given above the age of twenty-one, or to his wife, or any part of his or her family under the age of sixteen, may, if the guardians shall think fit, be given by way of loan.—(Art. 9.)

If the guardians shall, upon consideration of the special circumstances of any particular case, deem it expedient to depart from any of the regulations hereinbefore contained (except those contained in Art. 3), and within twenty-one days after such departure shall report the same, and the grounds thereof, to the [Local Government] Board, the relief which may have been so given in such case by such guardians before an answer to such report shall have been returned by the said Board shall not be deemed to be contrary to the provisions of this Order, and if the [Local Government] Board shall approve of such departure, and shall notify such approval to the guardians, all relief given in such case after such notification, so far as the same shall be in accordance with the terms and conditions of such approval, shall be lawful, anything in this Order to the contrary notwithstanding.—(Art. 10.)

It will be observed that the guardians of the unions to which the Order applies are not precluded from granting relief to able-bodied men who require it in consequence of being out of employment, subject to the conditions specified in the above mentioned Articles. When out-relief is granted by the guardians, the amount of the relief is in their discretion, and the Orders of the Local Government Board impose no conditions in this matter.

matter. But it is the duty of the district auditor when auditing the accounts of the union, if he finds that any moneys belonging to the union have been wasted or misapplied, to surcharge the officer or other person accounting with the amount so wasted or misapplied, and if the sums granted by way of relief were clearly in excess of the requirements of the case he would be empowered to surcharge the amount of the excess.

Out-door Relief Regulation Order—*continued.*

In other unions, comprising chiefly agricultural districts and towns with a small population, relief is administered under the Out-door Relief Prohibitory Order. The provisions of that Order are as follows:—

Out-door Relief Prohibitory Order.

Every able-bodied person, male or female, requiring relief from any parish within any of the said unions, shall be relieved only in the workhouse of the union, together with such of the family of every such able-bodied person as may be resident with him or her, and may not be in employment, and together with the wife of every such able-bodied male person, if he be a married man, and if she be resident with him; save and except in the following cases:—

1st. Where such person shall require relief on account of sudden and urgent necessity.

2nd. Where such person shall require relief on account of any sickness, accident, or bodily or mental infirmity affecting such person, or any of his or her family.

3rd. Where such person shall require relief for the purpose of defraying the expenses, either wholly or in part, of the burial of any of his or her family.

4th. Where such person, being a widow, shall be in the first six months of her widowhood.

5th. Where such person shall be a widow, and have a legitimate child or legitimate children dependent upon her, and incapable of earning his, her, or their livelihood, and have no illegitimate child born after the commencement of her widowhood.

6th. Where such person shall be confined in any gaol or place of safe custody, subject always to the regulation contained in Article 4.

7th. Where such person shall be the wife, or child, of any able-bodied man who shall be in the service of Her Majesty as a soldier, sailor, or marine.

8th. Where any able-bodied person, not being a soldier, sailor, or marine, shall not reside within the union, but the wife, child, or children of such person shall reside within the same the board of guardians of the union, according to their discretion, may, subject to the regulation contained in Article 4, afford relief in the workhouse to such wife, child, or children, or may allow out-door relief for any such child or children being within the age of nurture, and resident with the mother within the union.—(Art. 1.)

In every case in which out-door relief shall be given on account of sickness, accident, or infirmity, to any able-bodied male person, resident within any of the said unions, or to any member of the family of any able-bodied male person, an extract from the medical officer's weekly report (if any such officer shall have attended the case), stating the nature of such sickness, accident, or infirmity, shall be specially entered in the minutes of the proceedings of the board of guardians of the day on which the relief is ordered or subsequently allowed.

But if the board of guardians shall think fit, a certificate under the hand of the medical officer of the union, or of the medical practitioner in attendance on the party, shall be laid before the board, stating the nature of such sickness, accident, or infirmity, and a copy of the same shall be in like manner entered in the minutes.—(Art. 2.)

No relief shall be given from the poor rates of any parish comprised in any of the said unions to any person who does not reside in some place within the union, save and except in the following cases:—

1st. Where such person, being casually within such parish, shall become destitute.

2nd. Where such person shall require relief on account of any sickness, accident, or bodily or mental infirmity, affecting such person, or any of his or her family.

3rd. Where such person shall be entitled to receive relief from any parish in which he or she may not be resident, under any order which justices may by law be authorised to make.

4th. Where such person, being a widow, shall be in the first six months of her widowhood.

5th. Where such person is a widow, who has a legitimate child dependent on her for support, and no illegitimate child born after the commencement of her widowhood, and who, at the time of her husband's death, was resident with him in some place other than the place of her legal settlement, and not situated in the union in which such parish may be comprised.

6th. Where such person shall be a child under the age of sixteen, maintained in a workhouse or establishment for the education of pauper children not situate within the union.

7th Where such person shall be the wife or child residing within the union, of some person not able-bodied, and not residing within the union.—(Art. 3.)

Where the husband of any woman is beyond the seas, or in custody of the law, or in confinement in a licensed house or asylum as a lunatic or idiot, all relief which the guardians shall give to his wife, or her child or children, shall be given to such woman, in the same manner, and subject to the same conditions, as if she were a widow.—(Art. 4.)

It shall not be lawful for the guardians, or any of their officers, or for the overseer or overseers of any parish in the union, to pay, wholly or in part, the rent of the house or lodging of any pauper, or to apply any portion of the relief ordered to be given to any pauper in payment of any such rent, or to retain any portion of such relief for the purpose of directly or indirectly discharging such rent, in full or in part, for any such pauper.

Provided always, that nothing in this Article contained shall apply to any shelter or temporary lodging, procured in any case of sudden and urgent necessity, or mental imbecility, or shall be taken to prevent the said guardians, in regulating the amount of relief to be afforded to any particular person, from considering the expense to be incurred by such person in providing lodging.—(Art. 5).

Provided always, that in case the guardians of any of the said unions depart in any particular instance from any of the regulations hereinbefore contained, and within fifteen days after such departure report the same, and the grounds thereof, to the [Local Government] Board, and the [Local Government] Board approve of such departure, then the relief granted in such particular instance shall, if otherwise lawful, not be deemed to be unlawful, or be subject to be disallowed.—(Art. 6.)

Out-door Relief Prohibitory Order —*continued.*

No relief which may be contrary to any regulation in this Order shall be given by way of loan; and any relief which may be given to, or on account of, any person above the age of twenty-one, or to his wife, or any part of his or her family under the age of sixteen, under Article 1, or any of the exceptions thereto, or under any of the exceptions to Article 3, or under Article 4, or under the proviso in Article 6, may, if the guardians think fit, be given by way of loan.—(Art. 7.)

Out-door Labour Test Order.

In the case of a large number of unions to which the regulations in the Out-door Relief Prohibitory Order apply, an Out-door Labour Test Order has been issued, and there has been no indisposition on the part of the Local Government Board to comply with an application from a board of guardians for the issue of the Out-door Labour Test Order when the circumstances have appeared to be such as to require it. The provisions of that Order are as follows:—

Subject to the provisions of the [Out-door Relief Prhibitory Order], every able-bodied male pauper who receives relief within the union, and is relieved out of the workhouse, shall be relieved in the following manner; that is to say:—

Half at least of the relief given to such pauper shall be given in food, clothing, and other articles of necessity.

No such pauper shall receive relief from the guardians, or any of their officers, or any overseer of any parish in the union, while he is employed for wages or other hire or remuneration by any person; but every such pauper so relieved shall be set to work by the guardians.—(Art. 1.)

The guardians shall, within fourteen days after the day when this Order comes into force, and from time to time afterwards as the Local Government Board may require, report to the Local Government Board the place or places at which able-bodied male paupers shall be so set to work in the union, the sort or sorts of work in which they or any of them shall be employed, the times and mode of work, and all such other matters relating to the employment of such able-bodied paupers as the said guardians shall deem material to be communicated to the Local Government Board, or as the Local Government Board shall require.—(Art. 2.)

If the guardians shall depart, in any particular instance, from any of the regulations hereinbefore contained, and shall, within fifteen days after such departure, report the same and the grounds thereof to the Local Government Board, and if the Local Government Board shall approve of such departure, then the relief granted in such particular instance shall, if otherwise lawful, not be deemed to be unlawful, or be subject to be disallowed.—(Art. 3).

In the case of persons who are set to work under a Labour Test Order as a supplement to the Out-Relief Prohibitory Order, the amount of the out-relief to be granted is in the discretion of the guardians, as in the case of persons relieved under the provisions of the Out-Relief Regulation Order.

(A.)

Out-Relief to Aged Poor.

No regulations have been made by the Local Government Board restricting the discretion of guardians in regard to the relief of destitute persons chargeable to their union, other than the able-bodied and their families. The guardians have full power to grant out-door relief to destitute aged persons, when they think such relief suitable, in amounts adequate to meet fully the necessities of the case.

The Royal Commission on Aged Poor in the Summary in their Report, p. lxxxiii., issued in the present year, state as follows:—

"We have seen that, except in crowded urban areas, the great majority of aged poor in receipt of relief are "given out-door relief, while those receiving indoor relief are usually persons for whom it is necessary for substantial "reasons. The view often held that the aged labourer has in general only the workhouse before him in which to "end his days has been shown to be erroneous. We are of opinion that no fundamental alterations are needed in the "existing system of Poor Law relief as it affects the aged, and that it would be undesirable to interfere either by "statute or order with the discretion now vested in the guardians as to the manner in which such relief should be "given, since it is in our view of essential importance that guardians should have power to deal, on its merits, with "each individual case. At the same time we are convinced that there is a strong feeling that in the administration "of relief there should be greater discrimination between the respectable aged who become destitute and those "whose destitution is distinctly the consequence of their own misconduct; and we recommend that boards of "guardians, in dealing with applications for relief, should inquire with special care into the antecedents of destitute "persons whose physical faculties have failed by reason of age and infirmity; and that out-door relief should, in "such cases, be given to those who are shown to have been of good character, thrifty according to their "opportunities, and generally independent in early life, and who are not living under conditions of health or "surrounding circumstances which make it evident that the relief given should be indoor relief. We desire to "place on record in strong terms our conviction that where out-door relief is given the amount should be adequate "to meet fully the extent of the destitution, and that proper investigation and supervision should be ensured in all "cases in which application is made for relief. . . . We do not ourselves advocate any restriction of the present "powers of guardians to grant out-door relief in the case of destitute aged persons, and, as appears from the "preceding recommendations, we are of opinion that the mode of relief should always be settled with a due regard "to the past character, health, and surroundings of the applicant, and should be fully adequate to meet the "destitution. It accordingly appears to us eminently desirable that boards of guardians should adopt rules in "accordance with the general principles which we have indicated, by which they may be broadly guided in "dealing with individual applications for relief, and that such rules should be generally made known for the "information of the poor of the union, in order that those really in need may not be discouraged from "applying."

It may be mentioned that the Out-door Relief (Friendly Societies) Act, 1894, enacts that "it shall be lawful "for any board of guardians, if they think fit, to grant relief out of the poor rates to any person otherwise "entitled to such relief, notwithstanding that the said person shall, by reason of his membership of a friendly "society, be in receipt of any sum; and that in estimating the amount of the relief that shall be granted to such "person being a member of a friendly society as aforesaid, it shall be at the discretion of the board of guardians "whether they will or will not take into consideration the amount which may be received by him from such "friendly society."

(B.)

Relief on Loan and its Recovery.

By the 4 & 5 Will. IV., cap. 76, sec. 58, "any relief or the cost price thereof, which shall be given to or on "account of any poor person above the age of 21, or to his wife, or any part of his family under the age of 16, "and which the [Local Government Board] shall, by any rule, order, or regulation, declare or direct to be given "or considered as given by way of loan, and whether any receipt for such relief, or engagement to repay the "same, or the cost price thereof, or any part thereof, shall have been given or not by the person to or on account "of whom the same shall have been so given, shall be considered, and the same is hereby declared to be, a loan to "such poor person."

The

The Out-door Relief Regulation Order and the Out Relief Prohibitory Order contain provisions to the effect that any relief which may be given in conformity with the provisions of those Orders to or on account of any person to whom relief may be lawfully given above the age of 21, or to his wife, or any part of his or her family under the age of 16, may, if the guardians shall think fit, be given by way of loan.

By 4 & 5 Will. IV., cap. 76, sec. 59, it is provided that where relief is given or treated as given by way of loan, under the rules, orders, and regulations of the Board or the provisions of the Act, it shall be lawful for any justice upon the application of the guardians and upon proof of such relief having been given, and the same or part thereof still remaining due, to issue a summons requiring the person to whom the relief was given, and his employer or some person on his behalf, to appear before any two justices, and show cause why the wages due to such person should not be paid over in whole or in part to the guardians; and if no sufficient cause be shown to the contrary, the justices shall by order direct the employer to pay "either in one sum or by such weekly or other "instalments as the said justices shall in their discretion think fit, taking into consideration the circumstances of "such poor person and his family," out of such wages to the guardians the amount of such relief, or so much thereof as shall from time to time be due or unpaid.

By 11 & 12 Vict., cap. 110, sec. 8, it is enacted that relief granted to any pauper upon loan may also be recoverable in the county court or other court for the recovery of small debts for the district, on the plaint of the guardians appearing through a duly authorised officer.

These powers are in addition to the general power of guardians, under 12 & 13 Vict., cap. 103, sec. 16, to recoup themselves from money or security for money found in the possession of any pauper the expenses incurred on relief given to him during the preceding twelve months.

(C.)

Employment of the Poor by Boards of Guardians for Wages.

The 43rd Eliz. cap. 2, section 1, provides that the churchwardens and overseers of the poor of each parish "shall "take order from time to time, by and with the consent of two or more justices of peace, for setting to work the "children of all such whose parents shall not by the said churchwardens and overseers, or the greater part of them, "be thought able to keep and maintain their children; and also for setting to work all such persons, married or "unmarried, [who], having no means to maintain them, use no ordinary and daily trade of life to get their living "by, and also to raise . . . by taxation . . . a convenient stock of flax, hemp, thread, iron, and other "necessary ware and stuff to set the poor on work." 43 Eliz. c. 2.

No power was given by the Statute to provide buildings for setting the poor to work. The work to be provided would seem to have been intended to be carried on in the dwellings of the poor. This "setting the poor to work" was, therefore, something quite different from the workhouse system, in which work is merely one of the incidents of in-door relief.

By 59 Geo. III. c. 12, section 12, after reciting that by the 43 Elizabeth the churchwardens and overseers "are "directed to set to work certain persons therein described," and that "by the laws now in force, sufficient powers "are not given to the churchwardens and overseers to enable them to keep such persons fully and constantly "employed," the churchwardens and overseers are authorised, with the consent of the vestry, to take into their hands any lands belonging to the parish, or "to purchase, or to hire and take on lease, for and on account of the "parish, any suitable portion or portions of land within or near to such parish not exceeding 20 acres in the whole "(increased to 50 acres by 1 & 2 Will. IV. c. 42), and to employ and set to work in the cultivation of such land, on "account of this parish, any such persons as by law they are directed to set to work, and to pay to such of the poor "persons so employed as shall not be supported by the parish reasonable wages for their work." 59 Geo. 3, c. 12, and 1 & 2 Will. 4, c. 42.

In regard to the extent of the practice of giving work as relief, the Poor Law Commissioners of 1834 reported that "it appears from the Parliamentary Returns that payment for work is the most unusual form in which relief is "administered. The Poor Rate Returns for the year ending 25th March 1832 state that out of 7,036,968*l.* expended "in that year for the relief of the poor, less than 354,000*l.*, or scarcely more than one-twentieth part, was paid for "work, including work on the roads and in the workhouses."

Under the Poor Law Act, 1834, the ordering, giving, and directing of all relief to the poor is vested exclusively in the guardians of the poor. 4 & 5 Will. 4, c. 76.

Doubt has been felt with regard to the meaning of the provisions of the 43rd Elizabeth as to setting the poor to work, and especially as to whether they apply to persons who ordinarily live by their labour, and are only temporarily out of work. Further, it has been urged that, looking to the system set up under the Poor Law Amendment Act, 1834, the provisions of the earlier Acts as to the employment of the poor for wages must be regarded as obsolete, and as having ceased to exist. Upon these and some other points the law officers of the Crown were desired, in 1893, to express their opinion.

The law officers have advised that it was the intention of the Statutes referred to that the persons employed should be given relief in the form of wages for work done, and that relief was not distinguished from wages.

They also advised that the effect of the Poor Law Amendment Act, 1834, was to transfer to the guardians the powers of the overseers under the Act of Elizabeth.

Since the system established under the Act of 1834 came into operation, poor persons have not been employed by guardians or overseers for wages, and the provisions under which they might have been so employed have been regarded as obsolete. At the same time the provisions have not been repealed, and consequently they are still on the Statute Book.

(D.)

Expedition of Loan Sanctions.

Urban and rural district councils can carry out any works within their statutory powers without reference to the Local Government Board. The only cases in which the sanction of the Board is required are those in which it is proposed that the cost of the works should be defrayed by means of borrowed money. The district councils are not empowered to borrow without the Board's sanction, and it devolves on the Board to prescribe the period within which a loan sanctioned by them shall be repaid.

It is the practice of the Board, under ordinary circumstances, before sanctioning a loan, to direct a local inquiry by one of their inspectors, after due notice published in the district. At this inquiry any persons interested are entitled to attend and make any representations which they think fit with respect to the proposal of the district council. Of late years there has been a very great increase in the number of inquiries held by the engineering inspectors of the Board, and in consequence of this increase arrears accumulated, and it must be admitted that there were many cases in which there was considerable delay in the holding of the inquiries. Some additional assistance was obtained, but this was found to be insufficient, and further temporary appointments were sanctioned by the Treasury. By means of the help thus obtained the arrears of inquiries have been dealt with, and for some months past the Board have been enabled to arrange for the inquiries being held within a short time after the cases are ripe for inquiry. During the period of exceptional distress in the early part of this year every effort was made to secure the inquiries being held promptly, and in some instances, where the amount to be expended in works was not considerable, the Board caused visits to be made by their inspectors without formal inquiry, in order that the requisite information prior to the loans being sanctioned might be obtained without any delay.

The Board, before sanctioning loans, require full particulars to be furnished as to the works to be carried out, together with plans and detailed estimates of the cost, and it not infrequently happens that delay is occasioned by the necessary particulars not being furnished to the Board.

It is certainly of much importance, especially at times of exceptional distress, that the Board should have such a staff of inspectors as will admit of the inquiries being held with promptitude and the sanctions being given without any delay that can be avoided. But the fact that a local authority are induced to expedite works during a period of distress, with the view of providing employment at a time when it is specially needed, would not be regarded by the Board as affording sufficient ground for dispensing with such particulars being furnished and such inquiries being held as they may deem necessary for the purpose of satisfying themselves that the circumstances are such that the works ought to be carried out with borrowed money, which involves a charge not merely upon the present ratepayers, but also upon the ratepayers of future years.

(E.)

LABOUR TESTS FOR ABLE-BODIED OUT-DOOR POOR.

THE Out-door Labour Test Order and the Out-door Relief Regulation Order provide that able-bodied male paupers relieved out of the workhouse under their provisions shall be set to work, and that the place of work, the amount and nature of the work, and other matters relating thereto, shall be reported to the Local Government Board.

Provision for enforcing the due performance of such work is made by the Statute 29 & 30 Vict., cap. 113, section 15. That Statute provides that "where the guardians . . . . shall prescribe a task of work to be "performed by any poor person to whom . . . . relief shall have been lawfully granted by such guardians out of "the workhouse, such task being suited to the age, sex, strength, and capacity of such person, and being of a "nature and description of which the [Local Government] Board shall have previously approved, and such person "shall refuse or wilfully neglect to perform such task . . . . he shall be deemed to be an idle and disorderly "person within the meaning of" the 5 Geo. 4, cap. 83, and shall be liable to be dealt with and punished accordingly.

This Statute requires that the task shall have been approved by the Local Government Board if the person refusing to perform it is to be deemed idle and disorderly. It is the practice, therefore, of the Board formally to approve of the tasks of work reported to them in such cases, if satisfied that they are suitable, and the person refusing to perform the task is then liable to imprisonment with hard labour for one month.

(F.)

POWERS OF BOARDS OF GUARDIANS AS REGARDS MAKING GRANTS IN AID OF WORK THAT WILL ANTICIPATE PAUPERISM, AND ACCEPTANCE OF SUMS TO BE USED BY THEM IN THE ANTICIPATION OF PAUPERISM.

THE Local Government Board consider that a Board of Guardians are not empowered to make grants out of the rates to local authorities towards the cost of works which those authorities have power to carry out, or to make grants towards funds which are subscribed for the purpose of affording employment, with the view of rendering it unnecessary for those who may be so employed to apply for Poor Law relief.

The Board are of opinion that boards of guardians are not precluded from becoming the trustees of funds to be used by them for purposes other than those for which they have been constituted, and that they are not precluded, therefore, from accepting moneys to be used by them in anticipation of pauperism.

APPENDIX, No. 31.

PAPER handed in by Sir *Hugh Owen*, K.C.B.

Constructive and other Works in the Execution of which Labour may be Employed by Local Authorities.

County Councils.

The county council are empowered to maintain, repair, improve, and enlarge main roads within their county. These powers are, however, subject to the right of an urban district council or a sanitary authority in the County of London or the Common Council in the City of London within 12 months of the coming into operation of the Local Government Act, 1888, or where a road becomes a main road at any subsequent date, within 12 months of that date to retain the management of any main road within their district. The county council may also contract for the undertaking by a district council or other highway authority of the management of the main roads within their district. The county council may, if they think fit, contribute towards the cost of the maintenance, repair, enlargement, and improvement of any highway or public footpath in the county, although the same is not a main road.

The county council are liable for the repair of public bridges in the county, and not within any city or town corporate. They are empowered to purchase or take over on agreed terms, bridges, and to erect new bridges, and to maintain, repair, and improve any bridges so purchased, taken over, or erected. They may contribute, to an extent not exceeding one-half of the cost, towards the erection of any bridge.

A county council may erect and furnish such halls, buildings, and offices as they require.

They may establish, maintain, and contribute to reformatory and industrial schools.

They may provide and maintain shire halls, county halls, assize courts, judges' lodgings, lock-up houses, court-houses, justices' rooms, police stations, and other county buildings, *e.g.*, militia storehouses, technical schools.

A visiting committee of the county council may provide and maintain lunatic asylums.

Where a county council are of opinion that there is a demand for small holdings, they may acquire suitable land, and adapt it for small holdings by dividing and fencing it, making occupation roads and executing other works.

Additional Powers possessed by the London County Council.

The London County Council have special powers in connection with various matters which are not possessed by county councils generally.

They may provide and maintain fire engine stations, stables, and houses for firemen.

They may under various statutory powers, provide, maintain and improve parks, gardens, open spaces, &c.

Under the Main Drainage Acts they may construct and maintain sewers, precipitation works, machinery, appliances, &c.

Under Part I. of the Housing of the Working Classes Act, 1890, the London County Council may, in the execution of a scheme confirmed by Parliament for the re-arrangement and re-construction of the houses in an unhealthy area, clear the area to which the scheme relates, and lay out, form, pave, and sewer the streets, and with the express approval of the Local Government Board rebuild houses in the area.

Under Part III. of the same Act, the county council may erect, furnish, and maintain lodging-houses for the working classes, including separate houses or cottages, whether containing one or several tenements.

The London County Council may make, widen, or improve any streets, roads, or ways, for facilitating the passage and traffic between different parts of the metropolis, or contribute to the cost of such street improvements, and maintain certain of such streets.

They may by a license of the Board of Trade, or by Provisional Order confirmed by Parliament, supply electricity for any public or private purpose in such parts of their county as they are authorised to light, and may execute the necessary works.

They may construct tramways where authorised by Provisional Order confirmed by Parliament.

The county council must provide and maintain proper accommodation for holding inquests. This may be done by contracting with a vestry or district board for the use of a mortuary provided by the vestry or board.

The county council may provide and fit up one or two suitable buildings for the retention for purposes of identification of unidentified bodies.

Vestries and District Boards in Metropolis.

The vestry or district board repair and maintain the highways (exclusive of such as are repaired and maintained by the county council).

They must keep the streets, including the footways, properly swept and cleansed, so far as is reasonably practicable, and collect and remove therefrom, so far as is reasonably practicable, all street refuse.

They may, with the consent of the London County Council, extend, widen, alter or improve any street, road, or way, or any bridge over a canal for the purpose of facilitating passage and traffic, or for any other public purpose, or may contribute to the cost of any such improvement.

The vestry or district board are required to make, repair, and maintain all sewers (other than those vested in the London County Council) and subsidiary works necessary for effectually draining their parish or district.

They may provide and maintain public lavatories and ashpits, and public sanitary conveniences other than privies.

They may provide temporary or permanent hospitals.

They must provide and fit up mortuaries.

They may, and if required by the county council, must provide and maintain proper buildings for holding post-mortem examinations.

They may acquire by purchase or otherwise, lay out and maintain open spaces for purposes of recreation, &c.

They may by license of the Board of Trade or by Provisional Order confirmed by Parliament, supply electricity for any public or private purpose, and execute the necessary works.

Town Councils acting as Municipal Authorities.

Municipal authorities may undertake the erection of town halls, council houses, justice rooms, and any buildings necessary or proper for any of the purposes of the borough.

They are also empowered to construct roads, drains, walls, fences, or other works requisite for converting corporate land into sites for working-men's dwellings.

They may undertake the alteration, widening, repair, improvement, or re-construction of any bridge which they are legally bound to maintain or repair.

The execution of any works authorised to be constructed by trustees under local Acts, whose powers have been transferred to the town council under Section 136 of the Municipal Corporations Act, 1882, may also be undertaken by the municipal authority.

In the case of county boroughs, lunatic asylums are provided by the councils, except when other provision is made.

Municipal authorities may provide buildings for the purposes of the Technical Instruction Acts, 1889 and 1890.

They may also construct any works authorised to be carried out by them in accordance with the provisions contained in local Acts and Provisional Orders (*e.g.*, works of sea defence, works for protecting foreshores, harbour works).

Urban and Rural District Councils.

Urban and rural district councils may provide such sewers and surface drains as are required for the proper drainage of their district. They may also execute works of sewage disposal, including the preparation of land and the erection of the necessary works and machinery.

They may execute works of water supply for their district, including the laying of mains, the construction of reservoirs, the sinking of wells, and all other necessary works. This power is subject to the restriction that notice must be given to every water company who have powers of supply, and the works cannot be constructed so long as any such company are able and willing to supply.

In all urban districts, and in those rural districts where the operation of Section 25 of the Local Government Act, 1894, has not been postponed, the district council have the duty of maintaining and repairing the highways. In the case of main roads, however, the maintenance and repair devolve upon the county council unless the work is undertaken by the district council, under Section 11 of the Local Government Act, 1888.

Urban and rural district councils may undertake or contract for the removal of house refuse from premises, and the cleansing of earth-closets, privies, ash-pits, and cesspools. They may provide refuse destructors.

They may frame schemes under Part II. of the Housing of the Working Classes Act, 1890, for the re-construction of insanitary areas. They may also erect working class lodging-houses.

They may provide and lay out land for allotments and adapt it for letting by draining, fencing, and dividing the same, acquiring approaches, making roads, and otherwise preparing and improving the land.

They may acquire land and lay it out for cemetery purposes, with all necessary walls, buildings, drains, flower beds, paths.

They may provide offices for the transaction of their business; also hospitals, mortuaries, and post-mortem rooms.

Urban District Councils and also Rural District Councils, when Powers for the purpose are conferred on them by the Local Government Board.

Urban district councils may lay out pleasure grounds and open spaces. This work includes the provision or making of paths, flower beds, shrubberies, greenhouses, shelters, seats, conveniences, and the like.

They may cleanse and water the highways in their district.

They may serve notices upon the owners of land in private streets requiring them to sewer, level, pave, metal, flag, channel, make good and light such streets, and upon their default may execute the work.

They may frame schemes for the re-construction of insanitary areas under the Housing of the Working Classes Act, 1890 (Part I.). Such schemes must provide for proper sanitary arrangements, and for sufficient new dwellings for the working classes who will be displaced. The scheme may also provide for widening existing approaches, or otherwise, for opening out the area.

They may construct sea defences such as sea walls and groynes; also bridges and new streets.

They may establish depôts and store yards, gas works, and electric lighting works.

They may light the streets and public buildings within their district, and plant trees by the sides of the roads.

They may execute any works in connection with markets when the market rights are vested in them.

They may erect, alter, repair, extend, and fit up libraries, museums, reading-rooms, baths and washhouses, slaughter-houses, fire-stations, cabmen's shelters, public conveniences, gymnasiums, and technical schools.

Urban district councils, acting as burial boards, may also provide or extend burial grounds under the Burial Acts, and may enclose, lay out, and embellish the same. They may also erect chapels for the performance of the burial service and places for the reception of bodies until interment. In certain cases they may also repair and maintain closed churchyards and burial grounds.

Parish Councils.

Parish Councils may execute any work incidental to or consequential on the exercise of the powers possessed by them in relation to the following matters:—

(*a*) The provision or acquisition of buildings for public offices and meetings, and for any purposes connected with the parish business, or with the powers and duties of a parish council or parish meeting;

(*b*) The provision or acquisition of land for recreation grounds and public walks;

(*c*) Laying out, planting, improving, or maintaining recreation grounds, village greens, open spaces, or public walks under their control;

(*d*) The utilisation of any well, spring, or stream, and the provision of facilities for obtaining water therefrom; and

(*e*) The dealing with, (*i.e.*, the draining, cleansing, covering in, &c.) any pond, pool, open ditch, drain, or place containing or used for the collection of drainage, filth, stagnant water, or other matter likely to be prejudicial to health.

They may undertake the repair of any public footpath in the parish (not being a footpath at the side of a public road).

They may undertake the draining, fencing, and division of land, and the construction of roads or other works of improvement on land, hired by or assured to a parish council for purposes of allotments.

They may erect lamp posts, &c., and lay gas mains when the Lighting and Watching Act, 1833, has been adopted.

They may, where the Baths and Washhouses Acts have been adopted, undertake the erection, alteration, enlargement, repair, improvement, fitting-up, and furnishing of any buildings for public baths and washhouses, and the provision of works in connection with open bathing places.

They may form any public walk, exercise, or play-ground, and improve any open walk or footpath where the Public Improvement Act, 1860, is in force.

They may, where the Public Libraries Act, 1892, has been adopted, undertake the erection, re-construction, alteration, repair, extension, fitting-up, and furnishing of public libraries, museums, schools for science and art, and art galleries.

Where the Burial Acts have been adopted, or where the powers of a burial board have been transferred to the parish council, they may provide and lay out land for burial purposes, and may enclose and embellish the same, and build thereon chapels for the performance of the burial service, and they may provide houses for the reception of the dead previous to interment.

In certain cases, also, they are required to undertake the maintenance and repair of closed churchyards.

The exercise of these powers is subject to the limitation of expenditure by a parish council, which is imposed by the Local Government Act, 1894.

Highway Boards and Surveyors of Highways.

It is the duty of the Highway Boards and Surveyors of Highways, where the powers of these authorities have not become vested in the district councils, to maintain in good repair the highways within their districts.

Highway boards are also empowered to undertake certain works for the improvement of the highways within their jurisdiction.

APPENDIX, No. 32.

SCOTLAND.

LETTERS received from Local Authorities in reply to the following Circular Letter, addressed to them by the Local Government Board at the request of the Chairman of the Select Committee on Distress from Want of Employment.

Local Government Board for Scotland,
Edinburgh, 20 February 1895.

Sir,

I AM directed by the Local Government Board to state that they have received a communication from the Chairman of the Select Committee of the House of Commons on Distress from Want of Employment, in which the Board are requested to issue a Circular to the Municipal and Parochial Authorities in Scotland requesting information with the least possible delay on the following points :—

(1) Whether there is any exceptional distress in the district, and how far this is due to circumstances peculiar to the locality or to the severe weather?

(2) What is being done to meet the distress by public authorities or by voluntary agencies, and the average daily number relieved by each of the agencies during the week ended Saturday the 16th February?

(3) Is an unemployed register maintained, and with what result?

(4) Have you any suggestions to make for the purpose of relieving such distress?

The Board will be much obliged by your furnishing them at the earliest possible moment with the information required by the Committee (on the form of Return herewith sent, or on a larger sheet if necessary), in as much detail as can promptly be given.

The Board rely on your immediately taking such steps as may be necessary for the purpose of furnishing the requisite particulars.

I am, &c.
(signed) *Malcolm M'Neill*, Secretary.

The Town Clerk.
[The Inspector of Poor.]

FORM OF RETURN as to Unemployed referred to in Circular Letter from Local Government Board (Scotland) of 20th February 1895.

BURGH [OR PARISH] OF , COUNTY OF .

1. Is there any exceptional distress in the district? If so, how far is this due to circumstances peculiar to the locality or to the severe weather?

2. (*a*) What is being done to meet the distress by public authorities or by voluntary agencies? (*b*) Give the average daily number relieved by each of the agencies during the week ended Saturday the 16th February.

3. Is an unemployed register maintained, and with what result?

4. Have you any suggestions to make for the purpose of relieving such distress?

(Signature) Town Clerk.
Date [Inspector of Poor.]

I.—BURGHS.

BURGH OF ABERCHIRDER, COUNTY OF BANFF.

Population (1891), 1,222. Assessable Rental (1893-94), £1,652.

Letter from *Henry Wilson*, Town Clerk, 26th February 1895.

1. THERE is a good number of cases of distress within this district; all of whom are of the labouring class, who are wholly dependent on agricultural labour, which has been at a standstill for the past eight weeks owing to the severe snowstorm.

2. A soup kitchen has been started by the Burgh Commissioners, and carried on by public subscription, from which 95 rations of soup and bread are being distributed amongst the most needful three times a week. Other voluntary agents have been distributing coals, bread, and clothing.

Average daily number relieved by Commissioners - - - - 47 persons.
Average daily number relieved by other agencies - - - - 6 persons.

3. No.

4. Nothing further than the above statement.

BURGH OF ABERDEEN, COUNTY OF ABERDEEN.

Population (1891), 124,943. Assessable Rental (1893-94), £583,286.

Letter from *W. Gordon*, Town Clerk, 1st March 1895.

1. A CONSIDERABLE amount of distress has prevailed in Aberdeen during the last two months, due mainly to the severity of the weather, which seriously interfered with building operations and other out-door work, and thus threw an unusually large number of persons out of employment. The present dulness in shipbuilding also contributed to the distress.

2. The distress was not considered by the public authorities to be of such an extent or character as to render it necessary to provide relief works or resort to exceptional measures.

In addition to the relief afforded through the ordinary benevolent channels, the public responded liberally to appeals for assistance which were made through the medium of local agencies. Among these organisations may be mentioned the City Police Force, the Aberdeen United Trades Council, and the Association for Improving the Condition of the Poor. The amount of subscriptions (exclusive of provisions and clothing) received by the various bodies from the public is estimated at not less than 2,000*l.*

The local agencies referred to acted as distributing mediums, the average daily number of cases relieved during the week ended Saturday 16th February being as follows:—

1. The City Police - - - - - - - - - - - - - 250
2. Aberdeen United Trades Council - - - - - - - - - - 200
3. Association for Improving the Condition of the Poor - - - - - - - 70
4. Public Soup Kitchen - - - - - - - - - - 400 to 500
5. Miscellaneous - - - - - - - - - - - - - 20

These cases do not represent the actual number of persons relieved, as in the majority of instances those receiving aid had families dependent on them. The number is also exclusive of the cases dealt with by the parochial boards.

The Town Council voted a donation of 150*l.* towards the relief of the distress, and also empowered their Finance Committee to contribute a further sum of 100*l.* if the distress should continue. This last-mentioned sum, however, has up to the present date not been required.

3. An unemployed register, that is, a labour register, is kept at the office of the Aberdeen Trades Council, and also at the office of the Association for Improving the Condition of the Poor, and attended with good results. The establishment of labour registers throughout the country on a permanent basis would, it is believed, be attended with advantage to employers as well as to employed.

4. Owing to the improvement which has now taken place in the weather, and resumption of out-door work, there is no reason to anticipate any continuation of the distress.

It may be explained that apart from shipbuilding the general trade of the city is in a fairly flourishing condition, and that some of the industries have not been so fully employed for many years.

It is understood that a suggestion has been made to the effect that, in cases of exceptional distress, Government should be empowered by means of an imperial grant to subsidise local authorities in the carrying out of relief works. It is, however, the opinion of the magistrates that such a proposal could not fail to be attended with the most unfortunate results.

BURGH OF ABERFELDY, COUNTY OF PERTH.

Population (1891), 1,469. Assessable Rental (1893-94), £6,758.

Letter from *Charles Munro*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress.

2. The poor of Aberfeldy are remarkably well cared for. Only about 24 ask soup from the soup kitchen, which supplies it gratuitously.

3. No.

BURGH OF CHARLESTOWN OF ABERLOUR, COUNTY OF BANFF.

Population (1891), 1,012. Assessable Rental (1893-94), cannot be given.

Letter from *D. Morrison*, Clerk to the Commissioners, 25th February 1895.

1. SEVERE distress amongst the labouring classes, due entirely to the severity of the weather, which has stopped all out-door work for over eight weeks.

2. This burgh is included within the parish of Aberlour, and the burgh and parochial authorities have been combined in meeting the distress. A full report will be given by inspector of poor, and I beg to refer you to his report.

BURGH OF ABERNETHY, COUNTY OF PERTH.

Population (1891), 852. Assessable Rental (1893–94), £1,514.

Letter from *James Easson*, Town Clerk, 25th February 1895.

1. NONE since 11th current. Most of our male population are salmon fishers, and the net fishing on the Tay commencing on that date gave employment to nearly all our idle men.

2. Nothing has been required of the authorities here to meet the distress, although many who were idle previous to the above date have had to contract debts with the local shopkeepers, which they hope to clear off during the fishing season.

3. No register.

BURGH OF AIRDRIE, COUNTY OF LANARK.

Population (1891), 19,135. Assessable Rental (1893–94), £47,941.

Letter from *James Chapman*, Town Clerk, 25th February 1895.

1. No. The present distress is caused by the severe weather.

2. The local authority gives employment daily to all those who are able to break stones.
Subscriptions are being received by the local authority towards that object.
Twenty-nine persons relieved daily by stone-breaking, and "eleven who are unable to break stones" by donations received.

3. Yes; giving the local authority a better opportunity of judging the most needful cases.

4. In a district such as this I approve of the present method.

BURGH OF ALLOA, COUNTY OF CLACKMANNAN.

Population (1891), 10,754. Assessable Rental (1893–94), £45,175.

Letter from *J. W. Moir*, Town Clerk, 25th February 1895.

1. THERE is no very exceptional distress in this district, and what little there is is mainly due to the severe weather. All the public works are working.

2. (*a*) There is a soup kitchen kept up by private subscription, and which is largely taken advantage of. A local gentleman gave a sum of 100*l.* the other day, which has been distributed among workmen who are out of employment on account of the frost. (*b*) The average daily number relieved by the soup kitchen, inclusive of women, children, and the poor generally, is 330.
Last week the burgh authorities agreed to give 1*s.* 3*d.* a day and dinner to men who would break stones, but few avail themselves of this proposal.

3. No register is kept. The number of unemployed is so small that such a register has not been considered necessary.

4. I have no suggestion to make, as private charity is quite able to cope with any distress that exists.

BURGH OF ALVA, COUNTY OF CLACKMANNAN.

Population (1891), 5,225. Assessable Rental (1893–94), £13,273.

Letter from *Duncan Thomson*, pro Town Clerk, 8th March 1895.

1. THERE are a few exceptional cases among hand-loom weavers, trade having been bad for some time.

2. Cases have been met by voluntary contributions.

3. No.

4. No.

BURGH OF ALYTH, COUNTY OF PERTH.

Population (1891), 2,322. Assessable Rental (1893–94), £7,351.

Letter from *J. Reid*, Town Clerk, 27th February 1895.

1. THERE is exceptional distress, but it is entirely owing to the severe weather.

2. (*a*) The Burgh Commissioners, along with a number of gentlemen, including the clergymen in the burgh, formed themselves into a relief committee, and organised relief works for the purpose of providing employment for

the unemployed at the rate of 2*s.* per day. (*b*) Average daily number relieved by such agency was 36 ; persons relieved being principally labourers, tradesmen out of employment not having yet applied for relief.

3. A register has been kept, with the result that a sum of 21*l.* 4*s.* 2*d.* has been expended on relief works up to the week ending 16th February. Of this sum the Burgh Commission contributed 6*l.*, the balance being voluntary subscriptions. A further sum of 20*l.* has been distributed amongst the aged and infirm poor of the parish.

4. That a grant should be made by Parliament at once to relieve the existing distress. Such grant to be distributed by the local authority (1) for work done of a beneficial nature ; (2) in relieving the most deserving and necessitous cases of persons who on account of sex or other circumstances are unable to take part in the works.

BURGH OF ANNAN, COUNTY OF DUMFRIES.

Population (1891), 3,478. Assessable Rental (1893–94), £13,267.

Letter from *James Skelton*, Town Clerk, 27th February 1895.

1. YES ; wholly due to the exceptional severity of the weather.

2. (*a*) (1) Employment by the Burgh Commissioners for the purposes of removing snow from the streets ; and (2) by the opening of a soup kitchen and relief coal fund by voluntary agencies for the relief of necessitous poor.

(*b*) By public authority (exclusive of 11*l.* 5*s.* 10½*d.* paid for cartage) : on 14th February, 4*l.* 5*s.* paid to 34 men at 2*s.* 6*d.* each ; on 15th February, 4*l.* 12*s.* 6*d.* paid to 37 men at 2*s.* 6*d.* each ; on 16th February, 4*l.* 12*s.* 6*d.* paid to 37 men at 2*s.* 6*d.* each.

Note.—These were the only three dates during the period stated that relief was given by the public authorities.

By voluntary agencies :—

1. At soup kitchen—average daily number - - - } 107
2. Relief coal fund—average daily number - - - }

3. No unemployed register kept.

4. No.

BURGH OF ANSTRUTHER EASTER, COUNTY OF FIFE.

Population (1891), 1,142. Assessable Rental (1893–94), £4,552.

Letter from *William T. Jamieson*, Town Clerk, 1st March 1895.

1. So far as known, there are no cases of exceptional distress in this town, although a number of working people are unemployed in consequence of the severity of the weather.

2. Funds from various sources have been administered to those in charge of them, so as to relieve those who from any cause may be in somewhat straitened circumstances.

3. No.

4. None.

BURGH OF ANSTRUTHER WESTER, COUNTY OF FIFE.

Population (1891), 538. Assessable Rental (1893–94), £1,592.

Letter from *William T. Jamieson*, Town Clerk, 5th March 1895.

1. YES ; it appears to be owing to both.

2. (*a*) The Town Council Authorities have not been in a position to do much more than distribute during December last a small fund of 5*l.* at their command amongst 17 individuals.

(*b*) There used to be a local soup kitchen, but, unfortunately, it has not been organised this season, and the relief has been left chiefly to voluntary individual efforts.

3. No register is kept.

4. Should any public funds be available, a small allocation would be desirable.

BURGH OF ARBROATH, COUNTY OF FORFAR.

Population (1891), 22,821. Assessable Rental (1893–94), £81,408.

Letter from *W. K. Macdonald*, Town Clerk, 28th February 1895.

1. THERE was no exceptional distress in the district until the middle of February, and then only in consequence of the long continuance of the snowstorm and the very intense frost.

2. The

2. The magistrates met on 18th February, and as there was no appearance of any decided change in the weather they resolved to open a soup kitchen, and to ask a few of the leading inhabitants, on whose support they could rely, to subscribe the necessary funds. It is not contemplated to keep the soup kitchen open more than two or three weeks.

There is also a local association, whose object is to provide free breakfasts to a number of poor children on Sunday mornings. For some weeks past such free breakfasts have been provided daily, and 150 to 170 children have thus been receiving a warm breakfast every morning.

Previous to the opening of the soup kitchen a number of unemployed labourers were getting work from the public authorities in clearing the streets of snow and otherwise.

During the week ending 16th February 55 men not on the regular staff were getting partial employment in this way.

3. There is no unemployed register open at present.

4. The weather has now improved, and there is no distress beyond what can be easily dealt with by voluntary agencies.

Burgh of Ardrossan, County of Ayr.

Population (1891), 5,294. Assessable Rental (1893–94), £32,142.

Letter from *James Cook*, Town Clerk, 25th February 1895.

1. No exceptional distress. This was the conclusion arrived at by a meeting of ladies and gentlemen held here last week.

3. No register.

4. The subject here is watched by a voluntary agency, which would, doubtless, be supplied with funds to cope with exceptional circumstances.

Burgh of Armadale, County of Linlithgow.

Population (1891), 3,190. Assessable Rental (1893–94), £4,877.

Letter from *James Thomson*, Town Clerk, 25th February 1895.

1. No exceptional distress prevails here. Men for the most part employed in mining.

3. No.

Burgh of Auchterarder, County of Perth.

Population (1891), 2,524. Assessable Rental (1893–94), cannot be given.

Letter from *William L. Young*, Town Clerk, 25th February 1895.

1. There is a little exceptional distress in the district, owing to the protracted and severe storm ; in consequence of it, out-door labour has been stopped for about eight weeks. There is, too, not quite so much employment in manufacturing of cloth, the staple industry of the district, on account of the present depression in trade.

2. Nothing is being done by the public authorities. Private parties have made gifts of coals and provisions to the poor and unemployed. A soup kitchen was opened on the 23rd instant by an Evangelistic Association here, and a concert is being held to-night the proceeds of which will be applied for behoof of the unemployed. There has not been what can be described as "daily relief" given.

3. No register.

4. No.

Burgh of Auchtermuchty, County of Fife.

Population (1891), 665. Assessable Rental (1893-94), £2,448.

Letter from *Archibald Walker*, Town Clerk, 25th February 1895.

1. There is a want of work for out-door workers on account of the long storm ; but there are not many of them ; and most are of the well-to-do class.

2. (*a*) Private assistance.
(*b*) No note kept.

3. No, as it is unnecessary.

4. The circumstances are quite exceptional, and, with open weather, things should right themselves.

Burgh of Ayr, County of Ayr.

Population (1891), 24,944. Assessable Rental (1893–94), £133,665.

Letter from *A. G. Young*, Town Clerk, 25th February 1895.

1. There is exceptional distress, but it is to a very large extent occasioned by the severe weather.

2. The Town Council have opened a soup kitchen, at which over 800 are relieved daily. The Town Council are also distributing relief to the unemployed and necessitous poor in the shape of food and fuel at the rate of 70*l.* per week. The churches are also distributing relief to their poorer members.

3. No unemployed register has been kept; but the town has been divided into districts, and the administration of relief has been pretty strictly supervised.

4. I have no suggestions to make.

Burgh of Ballater, County of Aberdeen.

Population (1891), 983. Assessable Rental (1893–94), £4,144.

Letter from *John Strath*, Town Clerk, 27th February 1895.

1. A few isolated cases due to severe weather.

2. Relieved hitherto by private individuals, but a committee has now been formed to collect for their relief.

3. No.

4. No.

Burgh of Banchory, County of Kincardine.

Population (1891), 1,400. Assessable Rental (1893–94), £7,130.

Letter from *Joseph Merson*, Clerk to Police Commissioners, 25th February 1895.

1. There must have been considerable privation amongst members of building trades, out-door workers, and labourers. This has resulted entirely from the weather.

2. Voluntary agencies have overtaken all relief work required. Soup kitchen has daily relieved a large number; average required about 90. Other agencies are intermittent.

3. No register.

4. The hardship is already moderating, and will disappear with the frost.

Burgh of Banff, County of Banff.

Population (1891), 3,876. Assessable Rental (1893–94), £11,943.

Letter from *Francis George*, Clerk to the Local Authority, 6th March 1895.

1. There is no doubt exceptional distress in this district, caused by circumstances not so much peculiar to the district as to the severity of the weather, which has continued for such a lengthened period.

2 The generosity of the inhabitants, through voluntary agencies, has been considered sufficient to cope with the distress up to the present, hence it has not been considered necessary to make any public organised effort. Through private agencies large quantities of coals have been distributed, the cost of which has been met from charitable funds and by private individuals. Money gifts have also been distributed in some cases, as well as groceries and other articles of food. It is impossible to give the numbers of persons thus relieved. The soup-kitchen, which is entirely kept up by private subscription, has been open free twice a week, when large numbers have been relieved. In the week ending 16th February last, 820 rations of beef, bread, and soup were given out. This would represent about 200 persons obtaining this kind of relief. As all poor are supplied at the kitchen free, the number of those unemployed cannot be easily ascertained, but, from close observation, very few of those thrown out of employment by the severity of the weather come to the kitchen.

3. No unemployed register has been kept.

4. No.

BURGH OF BARRHEAD, COUNTY OF RENFREW.

Population (1891), 7,500. Assessable Rental (1893–94), cannot be given.

Letter from *John Pattison*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in this district beyond what is attributable to the severe weather.

2. (*a*) The Commissioners have opened a fund, and considerable donations were at once forthcoming.
(*b*) The fund only opened in the week referred to, and consequently it is difficult to give an average number supplied daily, but it would be fairly stated at 200.

3. No.

4. No.

BURGH OF BATHGATE, COUNTY OF LINLITHGOW.

Population (1891), 5,331. Assessable Rental (1893–94), £13,372.

Letter from *Will Allan*, Town Clerk, 27th February 1895.

1. No.

2. Any distress has been met by voluntary contribution. No record kept.

3. No.

4. No.

BURGH OF BIGGAR, COUNTY OF LANARK.

Population (1891), 1,356. Assessable Rental (1893–94), £4,886.

Letter from *Andrew Smail*, Town Clerk, 25th February 1895.

1. THE district being an agricultural one, and their being no industrial works, the distress is comparatively small. The cases existing arise from the severe weather.

2. The Established and two U. P. Churches have collected funds, which they have been, and still are, distributing amongst those necessitous with provisions and coals. The local Curling Club, by a concert and other means, are raising funds, too, to supplement the foregoing efforts.

3. A register kept by the above churches, and all necessitous cases are being provided for.

4. I do not think anything further is meanwhile required.

BURGH OF BLAIRGOWRIE, COUNTY OF PERTH.

Population (1891), 3,714. Assessable Rental (1893–94), £14,110.

Letter from *Jno. B. Miller*, Town Clerk, 25th February 1895.

1. THE chief industry of the district is the spinning of flax and jute. That trade has been somewhat depressed for some time. It cannot be said that there has been "distress" in consequence. The severe weather has caused considerable distress.

2. The public authorities employed a half-dozen or thereby of the unemployed in casual work during part of the severe weather. A soup kitchen and other agencies were started by public subscription to relieve the destitute in consequence of the severity of the weather. About 150 were relieved daily for the week ended 16th February. These agencies will cease with the advent of milder weather.

3. No.

4. No. The only effectual relief would be a revival of the flax and jute industries. The distress occasioned by the severity of the weather will soon pass away.

BURGH OF BO'NESS, COUNTY OF LINLITHGOW.

Population (1891), 4,746. Assessable Rental (1893–94), £20,177.

Letter from *George C. Stewart*, Provost, 26th February 1895.

1. YES. Severe weather.

2. A public soup kitchen is in operation, supported by voluntary contributions.
About 300 daily, chiefly children.

3. No.

4. No.

BURGH OF BONNYRIGG, COUNTY OF MIDLOTHIAN.

Population (1891), 2,514. Assessable Rental (1893–94), £8,693.

Letter from *Robert McBey*, Town Clerk, 28th February 1895.

1. THERE is practically no distress in this burgh, the inhabitants being mostly carpet weavers and miners in full employment. The only unemployed are a very few labourers and out-door workers who are idle through the severe weather.

2. There is no necessity for anything being done by the authorities.
The Burgh Commissioners have just got up a fund amounting to nearly 30*l.*, which is now being distributed among the necessitous poor in provisions, coals, &c.

3. No.

BURGH OF BRECHIN, COUNTY OF FORFAR.

Population (1891), 8,955. Assessable Rental (1893–94), £27,311.

Letter from *James Scott*, Clerk to Local Authority, 27th February 1895.

1. ABOUT 150 men out of employment, almost entirely owing to severe weather. The number of unemployed here is believed to be greater than it would usually have been owing to the number of men engaged in the construction of a new railway in the district.

2. Relief fund by public subscriptions, about 100 families being relieved.

3. No.

4. No.

BURGH OF BRIDGE OF ALLAN, COUNTY OF STIRLING.

Population (1891), 3,207. Assessable Rental (1893–94), £20,102.

Letter from *Eben. Morrison*, Town Clerk, 25th February 1895.

1. NOTHING exceptional.

2. Nothing by Police Commissioners. I am not aware of anything being done specially by any other local authority and voluntary agency.

3. No.

4. Nothing.

BURGH OF BROUGHTY FERRY, COUNTY OF FORFAR.

Population (1891), 9,010. Assessable Rental (1893–94), £48,862.

Letter from *Edward Cowan*, Town Clerk, 25th February 1895.

1. NONE except what has been due to the severity of the weather.

2. Coals, and in some cases food, has been provided by the magistrates. Each church has its poor fund and has been actively employed, but it is impossible to give statistics.

3. No register.

4. No suggestions.

BURGH OF BUCKHAVEN METHIL AND INNERLEVEN, COUNTY OF FIFE.

Population (1891), 4,006. Assessable Rental (1893–94), £12,462.

Letter from *W. T. Ketchen*, Town Clerk, 27th February 1895.

1. NOT much in excess of former years. What has been was caused by the recent severe weather.

2. Nothing publicly.

3. No.

4. No.

BURGH OF BUCKIE, COUNTY OF BANFF.

Population (1891), 5,849. Assessable Rental (1893–94), £12,151.

Letter from *John L. McNaughton*, Clerk to Commissioners, 25th February 1895.

1. YES; principally from the very severe weather, but also, in some measure, from coincident poor results from the white fishing, which is the staple industry of the town during winter.

2. (*a*) (1.) The Burgh Commissioners instructed their Surveyor to employ, at breaking metal for roads, all applicants; but only some half-dozen or so applied and got work. These received the ordinary wages for breaking road metal.
(2.) Under the auspices of the Provost and magistrates, a public voluntary committee has (i.) dispensed soup, beef, and bread from a soup kitchen; (ii.) given three distributions of coals in quantities of 1 cwt.; and (iii.) given quantities of groceries of the average value of 2*s.* 6*d.* to each family. The soup kitchen has been in operation for three weeks ending 25th February, but is to stop on Saturday, 2nd March, if the weather continues open.

(*b*) (1.) Public authority—average daily number relieved, 6 (by work and wages).
(2.) Voluntary committee „ „ 311

3. No.

4. The local voluntary effort has proved amply sufficient to cope with the exceptional distress; and I believe there will be no difficulty in instituting the same measures, with like success, should occasion unfortunately again arise.

BURGH OF BURNTISLAND, COUNTY OF FIFE.

Population (1891), 4,993. Assessable Rental (1893-94), £19,262.

Letter from *Thomas A. Wallace*, Town Clerk, 26th February 1895.

1. IT is understood there is some distress felt in the district owing to want of out-door work and depression in the shipping at the harbour. But no applications have been received by the authorities for relief, and in a week or two it is believed the more pressing wants will be supplied.

2. No steps have been taken by any of the public authorities to give relief. Private help has been given in certain quarters.

3. No register kept.

4. No suggestions to offer in absence of applications for help and information as to extent of individual distress. Clergymen, through Kirk Sessions, and medical men are more likely to be of use in ascertaining where distress is felt, and some united action on their part taken promptly would be valuable in the direction of organised assistance.

BURGH OF CALLANDER, COUNTY OF PERTH.

Population (1891), 1,538. Assessable Rental (1893–94), £8,993.

Letter from *William McMichael*, Town Clerk, 26th February 1895.

1. THERE is no very exceptional distress in this district. Owing to the severe weather there are about 40 working men out of employment, but their necessities have been fairly met by voluntary agencies.

2. Voluntary agencies have been sufficient to relieve all necessitous cases without the public authorities requiring to do anything.

3. No.

4. None.

BURGH OF CAMPBELTOWN, COUNTY OF ARGYLL.

Population (1891), 8,291. Assessable Rental (1893–94), £33,324.

Letter from *Dan Mactaggart*, Town Clerk, 27th February 1895.

1. THERE is, in the opinion of the local authority, no exceptional distress in this burgh at present.

3. No.

BURGH OF CARNOUSTIE, COUNTY OF FORFAR.

Population (1891), 4,134. Assessable Rental (1893–94), £17,155.

Letter from *William Cæsar*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in this burgh, nor in the parishes of Panbride and Barry. The public works give employment to those resident in the burgh and district. These works are a linen manufactory, chemical and manure works, two boot and shoe manufactories, a bleachfield work, &c.

2. (*a*) The Burgh Commissioners have for the past two winters given employment to some out of work in breaking stones for macadamising the streets in the burgh. As regards the poor and the aged, coals have been freely distributed since Christmas, the expenses attending the distribution being defrayed by one or two donors who regularly every year give a sum of money for such purposes. In consequence of the severe weather this year, and on account of its duration, a concert was got up on Saturday the 23rd current, when over 12*l.* was realised, and the distribution of coals is being continued. The concert was got up by Mr. Hugh Hanton, the Inspector of Poor for the parish of Barry. Each year tea and sugar are given out to the poor and aged by the various churches in the burgh and parishes.

3. No.

4. I have no suggestions to offer, as, in my opinion, all real cases of distress are relieved by one or other of the voluntary agencies.

BURGH OF CASTLE-DOUGLAS, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 2,851. Assessable Rental (1893–94), £13,908.

Letter from *John Dunn*, Town Clerk, 27th February 1895.

1. THERE is no exceptional distress in this district, but such distress as there is, is a little more pronounced than usual. This is owing to the severity of the weather.

2. A soup kitchen has been opened by voluntary agency for relief of the labouring classes who have been out of employment, and small sums have been distributed amongst unemployed tradesmen with families. The average daily number relieved by the first of these agencies is 120.

3. No.

BURGH OF CLYDEBANK, COUNTY OF DUMBARTON.

Population (1891), 10,014. Assessable Rental (1893–94), £48,924.

Letter from *John Hepburn*, Town Clerk, 25th February 1895.

1. No distress. A few out-door workers in the shipyards were thrown idle during the severe frost, but only temporarily.

2. The public authorities have seen no necessity for opening relief works. A public fund exists, and a meeting of the trustees was held on 15th instant, but none of the trustees knew of any cases requiring relief.

3. None.

4. None.

BURGH OF COATBRIDGE, COUNTY OF LANARK.

Population (1891), 30,034. Assessable Rental (1893–94), £131,674.

Letter from *John M. Alston*, Town Clerk, 25th February 1895.

1. No, beyond the fact that, owing to the severe weather, a number of labourers connected with the building trade has been thrown out of employment.

2. Nothing was done up to 16th February, but a meeting of magistrates was held on 21st February to look into the matter of the unemployed due to the severe weather, and, so far, some 20 or 30 families have been relieved up to the present moment. Further inquiries are, however, being made by the Chief Constable. The magistrates are receiving money by public subscription.

3. No.

4. No, beyond answer to No. 2.

BURGH OF COCKENZIE, COUNTY OF HADDINGTON.

Population (1891), 1,578. Assessable Rental (1893–94), £2,974.

Letter from *R. H. Hunter*, Town Clerk, 23rd February 1895.

1. No exceptional distress.

3. No.

BURGH OF COLDSTREAM, COUNTY OF BERWICK.

Population (1891), 1,535. Assessable Rental (1893–94), £5,883.

Letter from *John Scott*, Town Clerk, 1st March 1895.

1. NO exceptional distress in this district, and what distress there is, is largely due to the severity of the weather.

2. The burgh authorities have given employment to several workmen with families, in digging for frozen water pipes.
The soup kitchen, which has been largely supported by voluntary contributions, whereby over 60 families have been supplied with free dinners and bread three times a week since December last.

3. No.

4. A change in the weather would cure what distress there is. No suggestions.

BURGH OF COUPAR ANGUS, COUNTY OF PERTH.

Population (1891), 2,106. Assessable Rental (1893–94), £6,606.

Letter from *R. Watson*, Town Clerk, 25th February 1895.

1. ANY distress that there is is entirely due to the severe weather.

2. A soup kitchen has been established by a committee, and maintained by voluntary subscriptions. About 125 persons are daily relieved; besides, soup is sold at a cheap rate to those persons who otherwise might not be able to obtain a hot diet. In some cases fuel is also distributed.

3. No.

4. The assistance rendered must be continued even for some weeks after the break of the storm. Another appeal to the public will require to be made, but as the result of the call is at any time very uncertain, a more satisfactory way of obtaining funds will require to be resorted to. A Parliamentary grant would not be out of place.

BURGH OF COVE AND KILCREGGAN, COUNTY OF DUMBARTON.

Population (1891), 946. Assessable Rental (1893–94), £10,719.

Letter from *Wm. M'Cracken*, Town Clerk 25th February 1895.

1. No distress whatever.

2. Nothing required.

3. No.

4. No.

BURGH OF COWDENBEATH, COUNTY OF FIFE.

Population (1891), 4,249. Assessable Rental (1893-94), £9,858.

Letter from *Geo. Terris*, Town Clerk, 26th February 1895.

1. THERE is no distress whatever except what is due to the pits going short time, the result of the re-action caused by the strike.

3. No applications.

BURGH OF CRAIL, COUNTY OF FIFE.

Population (1891), 1,119. Assessable Rental (1893–94), £3,904.

Letter from *John Guthrie*, Joint Town Clerk, 26th February 1895.

1. No.

2. None.

3. No.

4. No.

BURGH OF CRIEFF, COUNTY OF PERTH.

Population (1891), 4,902. Assessable Rental (1893-94), £25,574.

Letter from *Chas. E. Colville*, Town Clerk, 25th February 1895.

1. YES, caused solely by the severity of the weather.

2. An average of 100 loaves distributed daily, and in addition an average of 71 persons supplied with soup and bread. Work is given to about 49 unemployed men daily on an average.

3. No register is kept. Every man belonging to the town gets work on applying for it.

4. The arrangements are so satisfactory that I have nothing to suggest.

BURGH OF CROMARTY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,338. Assessable Rental (1893–94), £1,813.

Letter from *T. J. McLeay*, Town Clerk, 4th March, 1895.

1. NONE, except in case of the fishermen, who, owing to the severe weather, are unable to go to sea.

2. No general fund for relief. Several charities throughout town, but no knowledge of who gets such.

3. No.

BURGH OF CULLEN, COUNTY OF BANFF.

Population (1891), 2,100. Assessable Rental (1893–94), £4,062.

Letter from *Alex. Sim*, Town Clerk, 26th February 1895.

1. VERY little, except, perhaps, in the sea-town, which is never altogether clear of distress in stormy weather, when the boats cannot get to sea.

2. A daily average of 35 men were employed at relief works, while a daily average of 16 persons received grants of coals and other necessaries during the week ended 16th instant.

3. There is a register kept of the unemployed who apply for work. The number thereon averaged during the past four weeks 37, and were allowed 3*d*. per hour for relief works provided by the public authorities and voluntary agencies.

4. There has been no difficulty in relieving distress in the district in the way indicated by the foregoing answers.

BURGH OF CULROSS, COUNTY OF FIFE.

Population (1891), 370. Assessable Rental (1893-94), £1,629.

Letter from *Alex. Gentle*, Town Clerk, 27th February 1895.

1. No.

2. No distress.

3. No.

4. No.

BURGH OF CUMNOCK AND HOLMHEAD, COUNTY OF AYR.

Population (1891), 3,104. Assessable Rental (1893–94), £8,619.

Letter from *Arch. Brakenridge*, Town Clerk, 26th February 1895.

1. THERE has been exceptional distress among out-door workers such as drainers and labourers, but only to a very limited extent, the numbers being few. It was due to the severe and continued frost which prevented out-door work.

2. Nothing, except that the burgh commissioners gave employment to some men in clearing the streets of snow and opening up streets where bursts in water pipes occurred.

3. No.

4. No. The frost having gone, out-door work will be resumed.

BURGH OF CUPAR, COUNTY OF FIFE.

Population (1891), 4,729. Assessable Rental (1893–94), £21,583.

Letter from *H. Matthew*, Town Clerk, 25th February 1895.

1. EXCEPTIONAL distress has prevailed here for a considerable time (nine weeks), and still prevails. This is wholly attributable to the severity of the weather having put a stop to almost all descriptions of out-door work, on which a large number of families are dependent for their means of existence.

2. (*a*) The Town Council, out of a fund of about 100*l.* available for the relief of the poor (representing the accumulated savings in administration of 15 years), devoted 50*l.* towards the alleviation of the condition of the distressed poor in the town. The several religious bodies have as usual given some relief to impoverished members of their respective congregations, but the amount expended is unknown to me. Under the auspices of Provost MacQueen, about 60*l.* has been obtained from private individuals for the purpose of supplying coals to the poor. During the week ended 16 February, over 200 parties were relieved out of the sums voted by the Town Council, and raised by the Provost as above mentioned.

3. No.

4. No. Everything that local effort can do has been done. The only source from which further relief can be looked to is the Imperial Exchequer.

BURGH OF DALBEATTIE, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 3,149. Assessable Rental (1893–94), £8,324.

Letter from *James Little*, Town Clerk, 25th February 1895.

1. THERE was exceptional distress in this burgh during the last three weeks, due solely to the severe weather. Labourers at the quarries and other works, which had to be closed, were thrown out of employment.

2. After the great snowstorm of Wednesday, 6th February, the Burgh Commissioners employed all labourers who applied in clearing the footpaths of the snow, and during the last two weeks the men were employed by a relief committee formed some years ago to relieve distress, and whose funds were this year augmented to meet the present circumstances. The men were engaged to clear the streets and roads of snow, and do any other useful work which could be found. They were paid 2*s.* 6*d.* a day. During the week ended 16th February, the average daily number relieved in this way by the relief committee was 38. A soup kitchen has also been in operation in this burgh, and the average daily number relieved during the week ended 16th February (including school children) was 95. These agencies were the means of mitigating the distress to a very considerable extent. The quarries and other works are now open, and these will employ the most of the men who were thrown out of employment.

3. No.

4. No.

BURGH OF DALKEITH, COUNTY OF EDINBURGH.

Population (1891), 6,952. Assessable Rental (1893–94), £29,136.

Letter from *Thos. Sturrock*, Town Clerk, 28th February 1895.

1. No ; so far as can be ascertained.

2. Upwards of 100*l.* has been collected by voluntary subscription to purchase coals for the poor and for soup kitchens. Three hundred persons have been supplied with coals since 1st January last.

3. No such register is kept here, and no applications for relief have been made from the unemployed.

4. I think the well-to-do inhabitants will do all that is required. A committee has been formed for the purpose.

BURGH OF DARVEL, COUNTY OF AYR.

Population (1891), 2,024. Assessable Rental (1893–94), £4,445.

Letter from *Andrew Cameron*, Town Clerk, 25th February 1895.

1. No ; the hands in the lace factories are well employed. Some railway workers not natives of the district, but at present working here in the formation of a railway, are idle owing to the frost.

2. (*a*) The distress is slight, but has been met by voluntary contributions in the shape of meal, tea, and sugar.

(*b*) No official agency.

3. No ; do not think this necessary.

4. No ; do not think it necessary for the authorities to do anything.

BURGH OF DENNY AND DUNIPACE, COUNTY OF STIRLING.

Population (1891), 4,161. Assessable Rental (1893–94), £8,279.

Letter from *John Archibald*, Clerk to Commissioners, 13th March 1895.

1. THERE has been no unusual increase in the numbers of the unemployed.

BURGH OF DINGWALL, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,300. Assessable Rental (1893–94), £10,148.

Letter from *Alex. Dewar*, Town Clerk, 25th February 1895.

1. YES, due to severe weather. The severe weather having now broken up to a considerable degree it cannot be said, I think, that there is any exceptional distress in this community.

2. (*a*) A private gentleman sent the Provost a cheque for 10*l.*, and the Town Council voted 10*l.* from the funds of the common good, and the amount (20*l.*) was distributed among some 70 of the unemployed. The Town Council further arranged for a subscription in the community for funds to augment the amount referred to, but it was not found necessary to resort to this form of appeal.
(*b*) Daily payments are not made.

3. No.

4. I think there should be some National Fund from which exceptional distress could be relieved.

BURGH OF DOLLAR, COUNTY OF CLACKMANNAN.

Population (1891), 1,807. Assessable Rental (1893–94), £7,815.

Letter from *J. S. Henderson*, Town Clerk, 4th March 1895.

1. No.

2. The Commissioners of the burgh offered work at stone-breaking by public handbill at the usual rates for such work, but only one person applied.

3. No.

4. No.

Note.—I believe the view entertained by the Commission Board is that where parties are able to work they should be required to do so as a condition of getting assistance. In Dollar, which is a small burgh, the really necessitous are generally known, and it is believed there is a good deal of private charity.

BURGH OF DORNOCH, COUNTY OF SUTHERLAND.

Population (1891), 514. Assessable Rental (1893-94), £2,012.

Letter from *Hector M. Mackay*, Town Clerk, 25th February 1895.

1. NONE.

2. Private charity has hitherto been able to cope with such distress as there is.

3. No.

4. No.

BURGH OF DOUNE, COUNTY OF PERTH.

Population (1891), 940. Assessable Rental (1893–94), £2,800.

Letter from *James A. McLean*, Town Clerk, 23rd February, 1895.

1. THERE is not.

2. A few exceptional cases of a temporary character have been relieved by private individuals.

3. No.

4. No.

BURGH OF DUFFTOWN, COUNTY OF BANFF.

Population (1891), 1,469. Assessable Rental (1893–94), £3,851.

Letter from *A. Walkinshaw*, Town Clerk, 26th February 1895.

1. THERE is no very exceptional distress in the burgh. The unemployed, which is solely due to the weather, is confined to a few mason &c. labourers, and out-door female workers.

2. Nothing been done by local authority.
A soup kitchen, voluntarily supported, supplied a daily average of 70 families with soup and bread.
Besides coals, meal, sugar, tea, and clothing have been given at different times during the snowstorm to the necessitous poor.

3. No.

4. No.

BURGH OF DUMBARTON, COUNTY OF DUMBARTON.

Population (1891), 16,927. Assessable Rental (1893–94), £57,900.

Letter from *John Henderson*, Chief Constable, 25th February 1895.

1. YES. Due entirely to the frost and severe weather.

2. The Town Council of this burgh gave a grant of 10*l.* to the Benevolent Society, which is the principal agency in this town for giving relief to unemployed. The society is kept up by voluntary contributions. The average daily number relieved by this society for week ended 16 February 1895, was 101 individuals, including men, women, and children. Twenty-seven of the above number, being able-bodied men, were employed three days per week, and paid at the rate of 2*s.* per day of eight hours.

3. No.

4. I am of opinion that it would be of considerable use to have an unemployed register kept for the burgh. From my own experience, I find that it is the improvident, and those addicted to drink, who are always the first to ask for relief, especially during dull trade or extreme weather, as take, for example, the past two months. I think the town authorities should have power to employ men at a reduced rate of pay when they cannot find employment elsewhere. I am entirely against giving relief indiscriminately.

Note.—Through the kindness of several ladies, the Chief Constable has been enabled to supply 104 children with boots, stockings, and clothing where necessary, and is still giving to needful cases.
He has also given blankets to six families, and coals have been supplied to 217 families, in quantities of 3 cwt. and upwards.
There is also a "Dorcas" society here, managed by ladies, and maintained by voluntary contribution. During the winter time about 50*l.* is spent amongst the deserving poor in the town in this way.

BURGH OF DUMFRIES, COUNTY OF DUMFRIES.

Population (1891), 12,947. Assessable Rental (1893–94), £64,620.

Letter from *Sam. Brown*, Town Clerk Depute, 25th February 1895.

1. YES. Due solely to severity of weather.

2. (*a*) Employment given in cleaning streets and footpaths by Burgh Commissioners. Average number 60 men. Soup kitchen supplies soup; average, 200 men, women, and children. Poor Association gives tickets for groceries and coals. Average, 100 householders.

3. No.

4. No. Local efforts sufficient to meet the emergency.

BURGH OF DUNBAR, COUNTY OF HADDINGTON.

Population (1891), 3,561. Assessable Rental (1893–94), £14,878.

Letter from *Charles Notman*, Town Clerk, 25th February 1895.

1. No exceptional distress; severe weather interfered with out-door occupation to a considerable extent.

2. Soup kitchen from funds contributed by Burgh Authorities and voluntary subscription in operation for ten days; average daily rations, 180.

3. No.

Burgh of Dunblane, County of Perth.

Population (1891), 2,186. Assessable Rental (1893–94), £9,090.

Letter from *James Watt*, Town Clerk, 26th February 1895.

1. There is no exceptional distress in the district. On account of the severe weather a good many tradesmen have been thrown out of work.

2. There is a soup kitchen open three days of the week; the expense being met by voluntary subscriptions. The average relieved on each of the three days is 150.

3. No unemployed register maintained.

4. No.

Burgh of Dundee, County of Forfar.

Population (as extended on 1st August 1892), 154,118. Assessable Rental (1893–94), £699,067.

Letter from Sir *T. Thornton*, Town Clerk, 28th February 1895.

1. There is no exceptional distress in this district at present.

2. (*a*) There is nothing being done by the local authority to relieve distress beyond clearing the streets of snow which fell during the late storm, but the usual relief is being granted by the Parochial Board, and by the Dundee Charity Organization Society.
(*b*) Average number employed by the local authority clearing streets, 197 per day; average number relieved by the Parochial Board, 13 per day; average number relieved by Charity Organization Society, 10 per day.

3. No.

4. Where practicable, in times of exceptional distress, relief works might be started by the local authority, consisting of road-making and stone-breaking principally. In addition, in cases of exceptional distress, relief might be afforded by such organizations as the Dundee Charity Organization Society.

Burgh of Dunfermline, County of Fife.

Population (1891), 22,157. Assessable Rental (1893–94), £72,254.

Letter from *Wm. Simpson*, Town Clerk, 25th February 1895.

1. There has been some distress, wholly attributable to masons' labourers, and other out-door workers, being thrown idle through the severe weather.

2. (*a*) The Burgh Commissioners have given employment at stone-breaking to all able-bodied applicants at 2*s.* per day, and a fund in the hands of the magistrates has been distributed to necessitous families in shape of provisions and coals.
The *Dunfermline Journal* Relief Fund relieved about 70 cases, giving them provisions and coals of the value of from 3*s.* to 4*s.* per week, and other 30 cases have been relieved since the 16th.
Forty pounds has been raised since the 16th by a concert, and this is to be administered by the Dunfermline United Temperance Council by way of a soup kitchen.
(*b*) The average number employed in stone-breaking during the week ending 16th February 1895, was 55.

3. Yes, a register is kept, with the result that the number of unemployed has increased from 55 on 16th February to 128, which was the number employed at stone-breaking on 23rd inst.

4. The arrangements which have been made in this burgh for the relief of distress have been found quite adequate to meet the prevailing temporary distress.

Burgh of Dunoon, County of Argyll.

Population (1891), 5,283. Assessable Rental (1893–94), £45,378.

Letter from *J. Valrose Clery*, Town Clerk, 26th February 1895.

1. There was exceptional distress, largely due to the severe weather.

2. The corporation have given work to the unemployed at the water works to the number of 31.
Voluntary agencies. Soup kitchen opened daily, from which were issued rations of soup and bread numbering 150 to 200, in addition to coals and provisions.

3. No.

4. The need for relief will largely pass away with milder weather.
No further than the procedure detailed in answer to Question No. 2.

BURGH OF DUNS, COUNTY OF BERWICK.

Population (1891), 2,198. Assessable Rental (1893–94), £8,672.

Letter from *James Millar*, Town Clerk, 25th February 1895.

1. THERE has been some exceptional distress in the burgh, owing entirely to the severe weather. Prior to that there was plenty of work, and with the return of soft weather the labouring classes are likely to be well employed.

2. No special action has been found necessary by public authorities.
A soup kitchen, got up by voluntary subscription, has been open during the severe weather on two days a week.

3. No.

4. None.

BURGH OF DYSART, COUNTY OF FIFE.

Population (1891), 3,022. Assessable Rental (1893–94), £8,722.

Letter from *James Herd*, Town Clerk, received 28th February 1895.

1. NO.

3. No.

4. None.

BURGH OF EARLSFERRY, COUNTY OF FIFE.

Population (1891), 304. Assessable Rental (1893–94), £1,736.

Letter from *James Waddell*, Town Clerk, 23rd February 1895.

1. NONE, except owing to the severe weather.

2. Nothing has been done except by some private voluntary agencies.

3. No.

4. After the severe weather ceases, persons who were in temporary distress will be relieved by getting full employment.

BURGH OF EAST LINTON, COUNTY OF HADDINGTON.

Population (1891), 865. Assessable Rental (1893–94), £2,833.

Letter from *Arthur E. Robertson*, Town Clerk, 7th March 1895.

1. No exceptional distress. People nearly all working now.

2. The parish minister started a soup kitchen, which was very slightly taken advantage of.

3. No.

4. None.

BURGH OF EDINBURGH, COUNTY OF EDINBURGH.

Population (1891), 261,225. Assessable Rental (1893–94), £1,980,409.

Letter from *Thomas Hunter*, Town Clerk, 27th February 1895.

1. YES; due almost entirely to the protracted frost.

2. Agencies for relieving Distress in Edinburgh :—

Name of Agency.	Average Daily Number relieved during Week ending 16th February 1895.	Remarks.
Edinburgh Municipal Authorities :		
Roads Department	209·	For 14th, 15th, and 16th February 1895.
Cleansing Department	35·	For 12th, 13th, and 14th February 1895.
"The Help" or Edinburgh Association for Improving the Condition of the Poor	143·	
The Society for Relief of Destitute Sick	62·5	Rather over the average of ordinary years.
Edinburgh Soup Kitchen	650·	
Simon Square Soup Kitchen	367·	
St. Cuthbert's Soup Kitchen	191·	
Northern District Public Soup Kitchen	100·	
The Vennel Feeding School	200·	(Chiefly children).
Newington Parish Soup Kitchen	44·2	
House of Refuge, Canongate	39·	This is not above the ordinary average.
Night Asylum and Strangers' Friend Society	46·4	

The secretaries of soup kitchens all state that there is a marked increase in the number of persons supplied this year compared with former years.

Note.—This does not include the relief given by the Parochial Boards in the city, with whom there is no perceptible difference.

3. No.

4. The City Police have been extensively employed in assisting in the distribution of help to the unemployed with great advantage, both to the unemployed and to the organizations charitably engaged.

Burgh of Elgin, County of Elgin.

Population (1891), 7,646. Assessable Rental (1893-94), £29,322.

Letter from *Hugh Stewart*, Town Clerk, 25th February 1895.

1. Nothing exceptional, beyond the usual distress caused by the prolonged snowstorm.

2. A soup kitchen under the authority and management of the Town Council in daily operation supported by voluntary subscriptions, at which an average of 150 supplied daily.

A meal, bread, and coal fund, also under the authority and management of the Town Council and supported by voluntary contributions, from which weekly distributions made to an average of 150 families.

Work is also given to unemployed men by the Town Council in cleaning streets, &c., at 3*d*. per hour.

3. No.

4. The Town Council have as yet been able to cope with the distress.

Burgh of Elie, County of Fife.

Population (1891), 723. Assessable Rental (1893–94), £5,173.

Letter from *W. R. Ketchen*, Town Clerk, 25th February 1895.

1. No. The recent severe weather put an end to building operations; but in a few days such is expected to be re-commenced

2. No occasion for such here.

3. No. In ordinary circumstances full employment easily obtained.

4. No.

Burgh of Ellon, County of Aberdeen.

Population (1891), 1,254. Assessable Rental (1893–94), cannot be given.

Letter from *A. J. Raeburn*, Town Clerk, 27th February 1895.

1. Yes. Due to the severe weather.

2. (*a*) About 11*l*. subscribed by voluntary contribution. About 20*l*. contributed by Kirk Session of Ellon.
(*b*) From 16 to 20 married men } by joint contributions.
,, 8 ,, 10 unmarried men }

3. No.

4. No. Ample bequests remain in the hands of the Kirk Session for the relief of such distress.

BURGH OF EYEMOUTH, COUNTY OF BERWICK.

Population (1891), 2,576. Assessable Rental (1893–94), £5,373.

Letter from *John Donaldson*, Town Clerk, 25th February 1895.

1. YES, owing to depressed state of the fishing, and labourers being out of work through severe weather.

2. For nearly a month past about 90 persons have been daily furnished with a good hot meal; coals have also been given to all poor people. This has been done through voluntary agencies, under the supervision of burgh magistrates. Relief ceased meantime, but funds ready to start again if required.
Average daily number relieved during week ended 16th February, 90.

3. No.

4. We are quite able to deal with it meantime.

BURGH OF FALKIRK, COUNTY OF STIRLING.

Population (1891), 17,312. Assessable Rental (1893–94), £54,877.

Letter from *J. Wilson*, Town Clerk, 25th February 1895.

1. YES, there is more distress than usual at this season, apparently arising from the long frost.

2. A soup kitchen has been open for several weeks, supported by voluntary contributions, at which from 130 to 180 individuals have got dinner daily. Work at stone-breaking has also been provided for able-bodied men, for which they are paid the usual rate of wages.

3. No register of unemployed is kept, but a register of those who apply for relief.

4. None. The means adopted seem to have been successful in meeting the necessity.

BURGH OF FALKLAND, COUNTY OF FIFE.

Population (1891), 959. Assessable Rental (1893–94), £2,009.

Letter from *Charles Gulland*, Town Clerk, 25th February 1895.

1. YES; mainly due to the severe weather. Last week the minister of the parish called upon me, urging extraneous help on this account.

2. Voluntary agencies (not public authorities) have been at work. Several gentlemen in the district have, within the last two months, given donations for coals and groceries. This is not given *daily*, but once for all. Then there is "The Dr. Guland Bequest" Fund, from which 31*l.* 10*s.* 6*d.* was given among nearly 100 people this month, but more cannot be given from this source until May. I think there will be from 80 to 100 very poor people here, many of whom are unemployed.

3. No register.

4. A sum might be sent here, either to the Reverend John Barrack, the minister of the Parish of Falkland, or to myself, as Town Clerk of Falkland. Either of us would be willing and ready to distribute. The minister and I both know the deserving poor of Falkland, and the unemployed.

BURGH OF FORFAR, COUNTY OF FORFAR.

Population (1891), 12,057. Assessable Rental (1893-94), £38,334.

Letter from *William Gordon*, Police Clerk, 25th February 1895.

1. THERE is exceptional distress, but only owing to the severity of the weather.

2. The distress is being met by the public authorities providing work for the unemployed and by voluntary agencies. 181 families got supplies from the soup kitchen on 16th February (the opening day), and the same number still.

3. No.

4. Nothing further is necessary than is being done. So soon as the frost gives way, there will be abundance of work, as there was up to the new year, and would have continued but for the frost.

BURGH OF FORRES, COUNTY OF ELGIN.

Population (1891), 3,971. Assessable Rental (1893–94), £14,784.

Letter from *Robert Urquhart*, Town Clerk, 25th February 1895.

1. TEMPORARY distress exists amongst out-door labourers and workmen owing entirely to the severity of the weather. In open weather there is ample employment for working people.

2. (*a*) Funds have been raised by concerts and voluntary subscriptions, and the Town Council has voted a sum, not exceeding 25*l*., to relieve distress. Part of money has been spent in relief works, part in a soup kitchen, and balance distributed chiefly amongst females dependent on out-door labour.
(*b*) About 50 to 60.

3. No formal register, but strict inquiry made into each case.

4. The weather has now moderated, and it is expected that no further relief will be necessary this winter.

BURGH OF FORTROSE, COUNTY OF ROSS.

Population (1891), 871. Assessable Rental (1893–94), £3,746.

Letter from *John Henderson*, Town Clerk, 11th March 1895.

1. THERE is exceptional distress, due chiefly to the severe weather.

2. Local effort is made to meet extreme cases, of which fortunately there are not many.

3. No.

4. As it is only temporary no suggestions are offered in the meantime.

BURGH OF FORT WILLIAM, COUNTY OF INVERNESS.

Population (1891), 1,870. Assessable Rental (1893–94), £7,316.

Letter from *Hector Fraser*, Clerk to the Commissioners, 27th February 1895.

1. THERE are very few, if any, cases of exceptional distress.

2. The public authorities have not moved in the matter, but meal and coals have been distributed on several occasions among the poorer inhabitants of the burgh, and there is considerable relief given privately.

3. There is no unemployed register maintained.

4. Metal-breaking and collecting gravel for the public roads; the material could be stored in some convenient place and used in years to come.

BURGH OF FRASERBURGH, COUNTY OF ABERDEEN.

Population (1891), 7,466. Assessable Rental (1893-94), £28,757.

Letter from *John Proctor*, Town Clerk, 27th February 1895.

1. THERE has been distress amongst the native labouring class, owing to the long-continued severity of the weather, and also amongst a number of navvies, who had come to town in expectation of getting work at the harbour improvements.

2. The Burgh Commissioners are giving employment to 75 men, at 4*d*. per hour. They commenced working on 15th February. Voluntary agencies have been providing relief in the shape of food and lodging for some of the strangers. A soup kitchen and coal fund have been established for many years in this town, supported by voluntary subscription, and a large number of families and aged poor have been daily provided for by this means, with the addition of sugar, tea, and groceries.

3. No register kept, except a time-book.

4. None.

BURGH OF GALASHIELS, COUNTY OF SELKIRK.

Population (1891), 17,252. Assessable Rental (1893-94), £65,663.

Letter from *Richard Lees*, Town Clerk, 5th March 1895.

1. YES. It is almost entirely due to the stagnation of trade owing to the severe weather; but there is usually a certain amount of distress at this season of the year in Galashiels.

2. The

2. The Town Council are employing a large number of the unemployed in clearing snow from the streets; the wages paid varying from the minimum of 2*s.* to the maximum of 3*s.* per day of nine hours. During the week ended 16th February, the number so employed was 64, and the amount paid in wages, 38*l.* 16*s.* 3*d.* Up to the present date, 167*l.* 1*s.* 1*d.* has been expended by the Town Council in this employment. The Town Council have the administration of a bequest of 500*l.* for supplying coals to the deserving poor of the district, which yields about 19*l.* per annum. During the week ended 16th February, five tons of coal were distributed amongst 10 persons, each receiving 10 cwt. Since the month of January, 48 half-tons of coal have been so distributed at a total cost of 20*l.* There is a Voluntary Relief Committee, who have since the 11th of January last been granting relief to deserving persons. They started with a balance of 40*l.* from last year, and the income since up to the present date (including 100*l.* the free proceeds from a concert for the unemployed) has been 129*l.*, together 169*l.* Of this 90*l.* has been expended. Altogether they have granted 392 relief tickets. During the week ending 16th February, the committee granted 83 relief tickets at a cost of 12*l.* 9*s.* The same committee organised on the 24th January a soup kitchen for children. An average of 300 dinners per day are given; the cost of many of such dinners being borne by ladies and gentlemen in the town. During the week ended 16th February, 2,100 dinners or thereby were given at an approximate cost of 13*l.* There are many private sources from which relief is obtained, but of which the Town Council are unable to give any details. The Parochial Board of the parish Galashiels, which embraces the burgh, has also been giving relief of an exceptional kind to the unemployed; but as a communication will have also been addressed to the inspector of poor, it is unnecessary to refer to that agency here. Care has been taken to obviate overlapping by the two authorities.

3. No.

4. No.

Burgh of Galston, County of Ayr.

Population (1891), 4,296. Assessable Rental (1893–94), £7,880.

Letter from *Robert Blair*, Town Clerk, 25th February 1895.

1. No exceptional distress in this district, except among out-door unemployed, due to severity of the weather.

2. Commissioners of Galston have instituted a fund by voluntary subscription, which has been liberally responded to, and are dealing with the necessitous cases reported to them. Average number relieved, 36.

3. No register kept except for those above referred to.

4. None. Should a favourable change in the weather shortly take place out-door work will be resumed, and the distress will then disappear.

Burgh of Gatehouse, County of Kirkcudbright.

Population (1891), 1,226. Assessable Rental (1893-94), £2,695.

Letter from *Henry D. Glover*, Town Clerk, 25th February 1895.

1. There has been exceptional distress in this district. This has entirely arisen in consequence of the severe weather.

2. (*a*) The Provost caused a voluntary subscription to be raised, which the public responded to liberally.
(*b*) About 50.

3. No.

4. None.

Burgh of Girvan, County of Ayr.

Population (1891) 4,081. Assessable Rental (1893-94), £12,376.

Letter from *Peter McKenna*, Town Clerk, 5th March 1895.

1. Yes. The population, with the exception of a small number employed at handloom weaving, which is in a state of chronic depression, depend principally on agricultural labour and fishing, and both of these forms of industry were brought to a complete standstill through the severity of the weather.

2. (*a*) An influential committee of a most representative character, including members of the Police Commission and Parochial Board, raised a fund for the relief of the unemployed and destitute.
(*b*) The total number relieved by the Committee with coals, lines for provisions, &c., was 409½; of this number about 270 received coals only.

3. No.

4. No. Happily such acute distress occurs here only at rare intervals.

BURGH OF GLASGOW, COUNTY OF CITY OF GLASGOW.

Population (1891 *), 658,198. Assessable Rental (1893-94), £3,725,307.

Letter from *James G. Monro*, Town Clerk Depute, 27th February 1895.

1. ON 10th January last the Town Council authorised the magistrates to make inquiries regarding the existence of undue want of work, and, if it should be found that an exceptional amount of distress existed from that cause, authorised them to take any steps they might consider necessary with a view to giving relief in deserving cases. The magistrates at once put themselves in communication with the larger employers in the several branches of trade, and also with the various public bodies and organisations from which they considered they were most likely to obtain reliable information to enable them to form an accurate opinion as to the actual state of matters, and on 28th ultimo, having considered the whole information received in answer to the inquiries they had made, the magistrates were unanimously of opinion that it did not disclose the existence of any exceptional distress. Looking, however, to the then present extreme severity of the weather, they resolved to give a limited amount of work for a short time, as on and from the Monday following, at stone-breaking (which was the only employment the magistrates had at their disposal) for the relief of deserving unemployed citizens. The magistrates were of opinion that the exceptional distress was entirely caused by the exceptional severity of the weather. In consequence of the severe weather continuing, and the increasing number of parties applying for relief, the magistrates resolved, on 11th instant, to expend a sum of 50*l.* in issuing one shilling orders for food and in opening two soup kitchens.

On 13th instant they authorised that provision should be made for affording warm shelter and accommodation night and day in all the police offices for destitute persons; that additional food tickets should be issued, and that a number of additional soup kitchens should be opened. At the same time, an appeal was made to the citizens for subscriptions to meet the expense of providing food, &c.

Under the direction of the magistrates, during the week ended 16th instant, the average daily number of men employed at the stone-breaking stations was 1,020. During the succeeding week the average daily number increased to 2,202. These men received one shilling a day (with an extra twopence per day on Saturday for each of the days they had worked during the week), with breakfast and dinner, and latterly, through the generosity of the Lord Provost, they also received a third meal before leaving for the day.

During the week ending 16th instant, daily orders for soup and bread were issued from the Central Relief Office on one of the soup kitchens, to the wives and families of men who were reported as having actually started work, and, as soon as their circumstances were investigated by officers of experience, weekly tickets in all deserving cases were issued instead. Three hundred such tickets were issued during the week ending 16th instant. Supplies of groceries, clothing, &c., which had been sent to the central offices in response to the Lord Provost's appeal, were also freely given to needy families of the men actually employed on the relief works. Through the various police offices a great many families in necessitous circumstances, whose breadwinners were not engaged on the relief works, were also supplied with orders for groceries, fuel, and medical assistance, after their circumstances had been investigated by the officers of the police force.

Altogether, nine soup kitchens have been opened, at which thousands of needy men, women, and children were daily supplied with soup and bread by merely applying.

3. There is no unemployed register kept in Glasgow except the register of applications for the stone-breaking work.

4. I am not in a position to make any suggestions for the purpose of relieving such distress, but the communication will be submitted to the magistrates at their next meeting.

BURGH OF GOUROCK, COUNTY OF RENFREW.

Population (1891), 4,475. Assessable Rental (1893-94), £30,702.

Letter from *James Glen*, Town Clerk, received 28th February 1895.

1. THERE is no exceptional distress in the district.

BURGH OF GOVAN, COUNTY OF LANARK.

Population (1891), 61,589. Assessable Rental (1893-94), £239,436.

Letter from *A. Macdonald*, Town Clerk, 27th February 1895.

1. THERE is some distress, which is due largely to the prolonged severe frost. Work is not scarce, although the shipbuilding trade might be much brisker; but workmen have been unable to continue their employment, and the labouring class has consequently suffered. The wages of that class are small, so that they are able to save little or nothing for periods such as that which is just passed.

2. (*a*) The public authorities have not taken steps involving expenditure of the rates to meet the distress, but the Provost has organised through the police a relief fund by which clothing, coals, bread, and grocery tickets (value 1*s.*), are being distributed among the needy. Subscriptions having been called for, have come in readily to the amount of about 400*l.*, besides the private benefactions indicated in my letters to Secretary of Local Government Board of 12th and 13th current, Poor Law No. 568-95. There are also the two soup kitchens conducted by agencies unconnected with the burgh.

(*b*) The average number of families relieved from the Provost Fund for week ending 16th February was 209. Relief is distributed twice a week, on Tuesday and Saturday, new applications being dealt with on being received. The average daily number of dinners given out from soup kitchens in the burgh for same week was 270.

3. There is at present no unemployed register. In connection with the Provost Relief Fund, all applications are registered and indexed, and this book may in a general way be described as a register of the unemployed.

4. No.

---

* As extended on 1st November 1891.

BURGH OF GRANGEMOUTH, COUNTY OF STIRLING.

Population (1891), 6,354. Assessable Rental (1893–94), £40,191.

Letter from *Alexander Tait*, Town Clerk, 26th February 1895.

1. THERE is no exceptional distress.

2. The few cases, which are almost entirely chronic or due to illness, are attended to by the Committee of Grangemouth Charitable Fund.
Cases of other deserving poor have also been attended to by other charitable agencies.
The cases referred to have been well attended to.

3. No.

4. No.

BURGH OF GREENOCK, COUNTY OF RENFREW.

Population (1891), 63,423. Assessable Rental (1893–94), £285,267.

Letter from *Colin MacCulloch*, Town Clerk, 25th February 1895.

1. THERE are very few cases of exceptional distress in this district, and these are due to the late very severe weather acting upon trades requiring out-of-door work.

2. Public authorities have started men on stone-breaking, and on clearing the public streets of snow, giving a wage of 2*s.* per day.
The average daily number relieved was as follows :—

Stone-breaking	23.
Street-cleaning	61.
By charitable society acting through the police	80 cases.

3. At present there is no unemployed register maintained, as, generally speaking, there is no necessity for it.

4. As there is not a great amount of exceptional distress in this town, and all the cases can readily be met by local agencies, there are no suggestions to make.

BURGH OF HADDINGTON, COUNTY OF HADDINGTON.

Population (1891), 3,771. Assessable Rental (1893–94), £17,216.

Letter from *G. H. Stevenson*, Town Clerk, 25th February 1895.

1. THERE is in the burgh a certain amount of distress, owing to the long continuance of the severe weather. The distress is mainly confined to women who earn their livelihood by outside work, but I cannot characterise it as very extraordinary distress.

2. (*a*) The soup kitchen, which is conducted under the auspices of the Parochial Board and kept up by voluntary contributions, has been open since 8th February, and this, combined with a certain amount of liberality on the part of private individuals in particular cases, seems to meet the requirements of the burgh. (*b*) Fifty-seven cases, with about 100 dependants.

3. No ; except as regards the soup kitchen, from which register statistics are being supplied by the Inspector of Poor, and from which the answer to query 2 (*b*) is taken.

4. No. I am of opinion that the relieving of such distress as exists is being adequately attended to.

BURGH OF HAMILTON, COUNTY OF LANARK.

Population (1891), 24,859. Assessable Rental (1893–94), £82,268.

Letter from *P. M. Kirkpatrick*, Joint Town Clerk, 25th February 1895.

1. ANY exceptional distress in this burgh is caused by the long-continued and severe frost, which is causing almost all out-door work to be stopped.

2. The Town Council are employing the men idle in making road, &c., on ground which is to be formed into a public park, paying them at the rate of 2*s.* per day of eight hours.
Fifty tons of coal in quantities of 10 cwt., given by the Cadzow Coal Company, were distributed by Provost Wylie.
The average number of men employed daily by the Council for week ending 16th February, was 58.

3. A register of the men employed by the Council is kept by Mr. Watson, Burgh Surveyor. The average daily number for last week was 71. Men belonging to this burgh get the preference. To-day 58 men are employed.

4. None.

BURGH OF HAWICK, COUNTY OF ROXBURGH.

Population (1891), 19,204. Assessable Rental (1893–94), £64,536.

Letter from *Robert Purdom*, Town Clerk, 25th February 1895.

1. YES; due partly to bad trade and partly to the severe and prolonged winter.

2. (*a*) The Town Council have organised (1) a voluntary subscription; (2) amateur concerts; and (3) church collections, from which sources about 300*l.* has been received, and distributed in coals, provisions, bread, and soup.
(*b*) About 200 families weekly.

3. Yes, about 150 names are registered, and work has been found for these, as far as possible, at 2*s.* per day in removing snow from footpaths, breaking stones, and spreading sewage manure on town's farm.

4. From 25 years' experience I have a very strong opinion that in future this matter should be placed in the hands of the parish councils, with full power to open soup kitchens, coal, meal, and bread depôts, and yards for breaking stones, splitting firewood, &c. It is a glaring anomaly that the poor-house authorities should simply fold their hands when an emergency like the present arises, and trust to outsiders doing the work which they are specially qualified to do. The transfer of the parochial board's duties to the parish councils affords a favourable opportunity of giving powers to the latter on the lines indicated.

BURGH OF HELENSBURGH, COUNTY OF DUMBARTON.

Population (1891), 8,409. Assessable Rental (1893–94), £56,891.

Letter from *George Maclachlan*, Town Clerk, 25th February 1895.

1. THERE is a considerable amount of distress in this burgh, owing to the severe weather and the suspension of out-door labour since Christmas. The distress is not due to any circumstance peculiar to the locality.

2. (*a*) The authorities have organised relief works. Over 100 men have been provided with employment at breaking metal and in other ways; 137*l.* paid in wages for three weeks round by voluntary subscription. The Association for Improving Condition of Poor has distributed soup, provisions, and coals.
(*b*) Relieved by authorities, 102; by association, 350.

3. Yes. A Committee of the Police Commission meet twice daily, and the result has been most satisfactory. The wages paid are (1) married men with wives and families, 2*s.* per day; married men with wives only, 1*s.* 6*d.*; unmarried men, 1*s.*

4. We have found the providing of employment the most satisfactory plan, as it preserves the men's independence. There has been no abuse of the help rendered.

BURGH OF HUNTLY, COUNTY OF ABERDEEN.

Population (1891), 3,760. Assessable Rental (1893–94), £8,668.

Letter from *T. A. Duff*, Town Clerk, 27th February 1895.

1. A CERTAIN amount of distress prevails among the out-door labouring class, as many of them have been precluded from earning anything for over eight weeks on account of the severe and protracted weather.

2. The Burgh Commissioners have of late been employing the unemployed in clearing the streets of snow, under which scheme a very considerable amount of relief has been given, while under the agency of a soup kitchen organized by the Provost, and maintained by voluntary effort, special good work has been done. Certain public entertainments have also been the means of supplying coals and grants in money.
The average number employed on streets might be put at 20.
The soup kitchen is open only on three days a week, viz.:—Tuesday, Thursday, and Saturday; 828 rations were served during the week ended 16th February; and as each ration was considered sufficient for two days, the average would stand at 276 per day.

3. No.

4. Voluntary local effort has, and will be amply sufficient to meet the distress.

BURGH OF INNERLEITHEN, COUNTY OF PEEBLES.

Population (1891), 2,501. Assessable Rental (1893–94), £8,731.

Letter from *William Stobie*, Town Clerk, 25th February 1895.

1. YES; due to severe weather entirely.

2. A relief committee of prominent citizens has been formed, who have received subscriptions, and are giving relief twice weekly in the shape of bread, groceries, and coal. The commissioners have also been employing extra men to clear the streets of snow, &c. The names on committee's list number 70.

3. No.

3. No.

4. The distress is being adequately coped with by the above measures.
It is to be noted that those in receipt of regular relief from parochial board are the most necessitous cases, and are included in the above number.

Burgh of Inveraray, County of Argyll.

Population (1891), 743. Assessable Rental (1893–94), £2,407.

Letter from *Arch. Henderson*, Town Clerk, 4th March 1895.

1. No.

2. Nothing required to be done.

3. No.

4. No.

Burgh of Inverbervie, County of Kincardine.

Population (1891), 1,195. Assessable Rental (1893–94), £3,221.

Letter from *A. W. Kinnear*, Town Clerk, 27th February 1895.

1. No exceptional distress.
People only a little longer out of employment than usual, owing to the protracted winter.

2. Nothing beyond voluntary agencies.

3. No.

4. No.

Burgh of Invergordon, County of Ross and Cromarty.

Population (1891), 1,117. Assessable Rental (1893–94), £3,263.

Letter from *Robt. S. Ross*, Town Clerk, 25th February 1895.

1. No ; except as referred to in No. 2.

2. The exceptionally severe weather may have thrown a few workmen out of employment, but there is no real distress among them. Voluntary agencies have been supplying a few of the more needy with soup and coals.

3. No.

4. No.

Burgh of Inverkeithing, County of Fife.

Population (1891) 1,676. Assessable Rental (1893-94), £7,516.

Letter from *John R. Menzies*, Town Clerk, 25th February 1895.

1. There has been some exceptional distress since the beginning of the year among out-door workers and their families, due mainly to the severe weather.

2. A Committee was formed from among members of Town Council, who raised voluntary subscriptions in the district, and from this fund a soup kitchen was opened, the average daily number relieved being 70, and a half-ton of coal each has been sent to 63 families.

3. No unemployed register maintained.

4. The distress being mainly temporary, the existing agencies will in all likelihood be able to meet it.

Burgh of Inverness, County of Inverness.

Population (1891), 19,303. Assessable Rental (1893-94), £94,803.

Letter from *Rod. Paterson*, Depute Town Clerk, 1st March 1895.

1. There does not appear to be exceptional distress in this burgh, and what does exist is due to the severe weather.

2. (*a*) The

2. (*a*) The Town Council opened a subscription list for a fund for the relief of the unemployed, which has been pretty largely contributed to by the public, and the money is being distributed under the direction of the Council and its officials. The Council are also providing work for those of the unemployed who are able to work. Besides the above, there is a fund in the Provost's name out of which supplies of coal are provided for the poor. There are also private individuals rendering assistance to the poor.

(*b*) During the week ending 16th February 1895, 122 persons were employed on works provided by the town; 372 received two stones of oatmeal each; and 125 received a 4-lb. loaf each.

3. There is an unemployed register kept. It shows that a large number of the unemployed have availed themselves of the work provided by the Council.

4. I have nothing to add to what is stated above.

BURGH OF INVERURIE, COUNTY OF ABERDEEN.

Population (1891), 2,549. Assessable Rental (1893–94), £9,224.

Letter from *C. B. Davidson*, Town Clerk, 28th February 1895.

1. ANY distress in this district is caused by the severe weather.

2. Since the 6th of January of this year there has been distributed 65*l.* in money, 33 tons of coal. The soup kitchen is open three days in the week, where soup is distributed to between 70 and 80 poor persons, with or without money. There has also been a good deal of private charity in the shape of tea, sugar, bread, &c. Blankets have also been privately given.

3. We have no unemployed register in our burgh.

4. No suggestions to offer.

BURGH OF IRVINE, COUNTY OF AYR.

Population (1891), 9,086. Assessable Rental (1893–94), £36,224.

Letter from *Jas. Dickie*, Town Clerk, 25th February 1895.

1. SOME exceptional distress, due to the severe weather.

2. The corporation has been making efforts to provide out-door employment for about 50 men. A soup kitchen has been in operation during the winter. At first it was open only two days per week, but for some time past it has been open four days per week. It is supported by the Countess of Eglinton, and by the provost and magistrates from a subscription by the corporation and contributions from private individuals. All are served who apply—the supplies of soup being carried home for the use of the families of the applicants.

3. No.

The number of unemployed is diminishing, at least the number applying for work is much less within the last ten days. It appears some of the men object to being employed at stone-breaking.

BURGH OF JEDBURGH, COUNTY OF ROXBURGH.

Population (1891), 3,397. Assessable Rental (1893–94), £12,702.

Letter from *James Stedman*, Town Clerk, 1st March 1895.

1. THERE is considerable distress in the town, which is almost entirely due to the severe weather.

2. (*a*) A relief fund has been opened by the magistrates, and about 100*l.* has been raised and distributed. Coals have been given by Lord Stratheden and Lord Lothian. A soup kitchen is opened, at which about sixty persons are daily supplied with soup. (*b*) About sixty persons daily.

3. No register is kept.

4. It is thought that the agencies mentioned in No. 2 above are sufficient to cope with the distress.

BURGH OF JOHNSTONE, COUNTY OF RENFREW.

Population (1891), 9,668. Assessable Rental (1893–94), £31,805.

Letter from *Will. Reid*, Town Clerk, 26th February 1895.

1. Exceptional distress prevails in this district, consequent upon the severity of the weather, which continues to prevent out-door labour, a source from which a large number in this district are dependent.

2. (*a*) The

2. (*a*) The Police Commissioners have raised a fund by voluntary public subscriptions, with which they are providing food and fuel to the most necessitous cases.
(*b*) The average number relieved daily by the agency (which is the only one) is about 350 persons.

3. No.

4. I would suggest as approved of by my Commissioners, that a grant should be given by the Treasury or Government towards the fund above referred to, or if possible that public work for the unemployed should be given, but the Commissioners of this burgh are unable to do this as they do not possess any common land.

BURGH OF KEITH, COUNTY OF BANFF.

Population (1891), 4,622. Assessable Rental (1893–94), £12,258.

Letter from *John G. Fleming*, Town Clerk, 25th February 1895.

1. YES, owing solely to the severe weather.

2. (*a*) Nothing by public authorities. A soup kitchen has been open for three days a week since 8th January until 12th February, and daily from that date. A public subscription of about 125*l.* was divided among the most necessitous cases. Besides which over 100*l.* in money and coals have been given to the poor from local charitable endowments. The paupers in the burgh have received coals of the value of 17*l.* beyond their regular allowances. Over 100 daily have been supplied at soup kitchen, and over 100 by provision tickets.

3. No.

4. The distress in this burgh has been met by local effort.

BURGH OF KELSO, COUNTY OF ROXBURGH.

Population (1891), 4,184. Assessable Rental (1893–94), £22,268.

Letter from *G. S. Douglas*, Town Clerk, 25th February 1895.

1. A GOOD many have been out of work since the frost began, but it can hardly be said that "exceptional distress" prevails.

2. (*a*) The authorities and a privately organised relief committee have been giving employment so far as it could be found, and a soup kitchen has been started. Besides these agencies private charity had been at work.
(*b*) Number not procurable.

3. No.

4. As the distress (such as it is) will disappear when good weather sets in, I have nothing to say under this head.

BURGH OF KILMARNOCK, COUNTY OF AYR.

Population (1891), 28,447. Assessable Rental (1893–94), £113,106.

Letter from *W. Middlemas*, Town Clerk, 4th March 1895.

1. THERE is undoubtedly a great deal of destitution and distress in the burgh, but this is principally on account of the severe weather which we have had.

2. The Corporation have given employment to a number of persons on the streets; and a relief committee has been appointed who have given out free dinners daily to about 650 persons, and have distributed twice weekly tickets for food and coals through voluntary subscriptions.

3. No.

4. It is considered that if the frost and severe weather would disappear so would the distress, as the unemployed are mostly of the labouring class.

BURGH OF KILRENNY, COUNTY OF FIFE.

Population (1891), 2,610. Assessable Rental (1893–94), £4,722.

Letter from *Will. T. Jamieson*, Joint Town Clerk, 14th March 1895.

1. THERE is exceptional distress, which is partly due to both causes.

2. The local authorities have no funds at their disposal to meet this distress; but in September and December supplies of coals, tea, and sugar were distributed amongst upwards of a hundred of the poor people from voluntary agencies.

3. No.

4. No.

BURGH OF KILSYTH, COUNTY OF STIRLING.

Population (1891), 6,073. Assessable Rental (1893–94), £11,773.

Letter from *R. M. Lennox*, Town Clerk, 26th February 1895.

1. THERE is exceptional distress, arising from the want of employment in the locality, both owing to the late storm and general dulness of trade.

2. (*a*) Nothing.
(*b*) Nothing.

3. No.

4. General powers might be given to local authorities to provide work for the unemployed.

BURGH OF KILWINNING, COUNTY OF AYR.

Population (1891), 3,835. Assessable Rental (1893–94), £9,200.

Letter from *Robert C. King*, Town Clerk, 25th February 1895.

1. THERE is exceptional distress in the district, solely caused by the severe weather.

2. The Commissioners of Police have raised money by voluntary subscription for the relief of the distress, by means of a soup kitchen. Between 70 and 80 persons daily receive soup, for the relief on an average of four members of their families each, making in all about 300 persons relieved daily during the week specified.

3. No. A register is kept of those receiving relief.

4. What is being done is considered sufficient.

BURGH OF KINGHORN, COUNTY OF FIFE.

Population (1891) 2,036. Assessable Rental (1893-94), £5,538.

Letter from *Wm. Millie Dow*, Town Clerk, 26th February 1895.

1. YES. A number of men, principally masons and labourers, have been thrown out of work through the severity of the weather. The distress is solely due to the severe weather.

2. (*a*) The Corporation employed all such on the roads, &c., at 4*d*. per hour, and retained them so long as the necessity of each case demanded.
(*b*) The average daily number relieved during the week ending 16th February was 10.

3. As the burgh is small, and all such cases well known, no unemployed register was required.

4. No further suggestions are necessary, as all urgent cases have been relieved.

BURGH OF KINGUSSIE, COUNTY OF INVERNESS.

Population (1891), 740. Assessable Rental (1893-94), £3,258.

Letter from *A. Warren*, Town Clerk, 26th February 1895.

1. THERE are no exceptional cases of distress in the burgh so far as I am aware, but such may come to be the case if the present severe weather continues much longer. Labourers of all kinds, as well as masons and others, have not now been able to do any work for about nine weeks owing to the severity of the weather, and they must, without doubt, be very much stinted in consequence.

2. The Commissioners have employed about 25 of the unemployed to clear the snow off the streets. The expenses of this will be paid out of the proceeds of a public entertainment which is being got up for the purpose. I have reason to know that a good deal of relief has been given by private parties, but I am not in a position to say to what extent.

3. There is no unemployed register kept.

4. I would suggest that the District Committee of the County Council should give work to the unemployed in clearing the roads of snow so as to make them fit for traffic. The roads in the district have been opened in a sort of way already. This was done by the unemployed, but I regret to say that it was done gratis, and so was of no benefit in relieving the prevailing distress. The roads are still quite unfit for regular traffic, and in some places they are quite blocked up.

BURGH OF KINNING PARK, COUNTY OF LANARK.

Population (1891), 13,679. Assessable Rental (1893–94), £55,517.

Letter from *William Lucas*, Town Clerk, 27th February 1895.

1. No. Almost entirely to the severe weather.

2. The Provost called a meeting of the Commissioners for the burgh, the clergymen, and some gentlemen connected with the burgh. This was held on 15th February. They formed themselves into a committee to organise relief and procure subscriptions. Under the superintendence of a sub-committee the Sanitary Inspector and Superintendent of Police a soup kitchen was got up and orders were given to shopkeepers to any people needing assistance. The soup kitchen was wholly supplied with butcher meat and vegetables gratis by the shopkeepers in the burgh.

One hundred and fifty families (about 750 people) were supplied with soup and bread daily; 287 orders for goods amounting to about 40*l.* were given: coal also was given, and a breakfast of coffee, bread, cheese, and ham was supplied to between 300 and 400 children last Sunday. Very little, however, was done before 16th February.

3. No. A register is kept of those to whom orders for goods were given.

4. No. The Commissioners could not organise any works that I could think of for the relief of the unemployed. There was a sum of 31*l.* left over from subscriptions for a similar purpose half-a-dozen years ago, and subscriptions have been given to about 150*l.* A good deal more could be got, but it is not likely the half of this will be required. Any subsequent distress could be met by this balance or other subscriptions. It may not be the best fashion of relief, but none other occurs to me as applicable to Kinning Park.

BURGH OF KINROSS, COUNTY OF KINROSS.

Population (1891), 1,902. Assessable Rental (1893–94), £6,360.

Letter from *W. K. Falconer*, Town Clerk, 25th February 1895.

1. THERE is a good deal of distress prevailing in the district arising principally from the severe weather, which has thrown idle a considerable number of tradesmen and labourers.

2. Nothing is being done by the public authorities, but relief is being given by the various church organizations and other charitable institutions connected with the district. I have not information sufficient to give the average number daily relieved.

3. No.

4. No.

BURGH OF KINTORE, COUNTY OF ABERDEEN.

Population (1891), 686. Assessable Rental (1893–94), £2,814.

Letter from *David Edwards*, Town Clerk, 26th February 1895.

1. THERE is no exceptional distress known to the authorities beyond what might happen in any severe winter.

2. (*a*) Private charities including church relief have given assistance to the most urgent and needful cases.

3. There is no register kept.

4. No definite suggestions beyond that of providing work where possible to the unemployed. In this district, however, a change of weather for the better will put an end to the temporary distress lately experienced by permitting the men to return to their ordinary occupations.

BURGH OF KIRKCALDY, COUNTY OF FIFE.

Population (1891), 27,155. Assessable Rental (1893–94), £103,000.

Letter from *Wm. Macindoe*, Town Clerk, 25th February 1895.

1. ANY exceptional distress in this burgh is due chiefly to the severity of the weather, and is confined principally to the labouring class, of which there is not a great number.

2. (*a*) Soup kitchens have been established by voluntary agency, public bodies taking the lead. Coals, provisions, and other necessary comforts are being distributed.

(*b*) There are three agencies. During the week ended 23rd February (they only commenced on the 13th February) the average daily number relieved was 600, but that is for three days of the week only. This number includes all the members of a family. It is the chronic poor who take most advantage of the relief.

3. No register is maintained.

4. I have no suggestions to make. It is considered that the relief that is being given is sufficient, in fact, ample to cope with the distress. It is expected that the relief will cease with this week.

BURGH OF KIRKCUDBRIGHT, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 2,533. Assessable Rental (1893–94), £9,128.

Letter from *John Gibson*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in this district. Until the recent snowstorm the working men were in full employment at their ordinary work, and since the storm they have been employed clearing the streets and roads.

2. A soup kitchen has been established, which is supported by voluntary contributions. The average daily number relieved during said week was 130 families.

3. No register maintained.

4. None except that a grant might be given towards the funds of the soup kitchen.

BURGH OF KIRKINTILLOCH, COUNTY OF DUMBARTON.

Population (1891), 9,314. Assessable Rental (1893–94), £27,821.

Letter from *David Patrick*, Town Clerk, 26th February 1895.

1. EXCEPTIONAL distress has been caused by the severe weather. No exceptional distress due to any other cause exists here.

2. (*a*) Nothing is being done by public authorities as such. These, however, are well represented on the voluntary agencies. The Inspector of Poor and the Inspector of Police both lent valuable aid to the committee.
(*b*) About 140 cases were dealt with during the week in question. In general, relief for a week was given in each case. A family is counted as a unit in the 140.
In addition, a Roman Catholic Temperance Society gave relief in about 60 cases during the same week.

3. No. A note of the names of the applicants for relief is kept, and of the relief given.

4. No.

BURGH OF KIRKWALL, COUNTY OF ORKNEY.

Population (1891), 3,926. Assessable Rental (1893–94), £13,040.

Letter from *Wm. Cowper*, Town Clerk, 25th February 1895.

1. DISTRESS nothing to speak of. If any, owing to present severe weather.

2. Anything being done is by private charity.

3. No unemployed register kept; not requisite.

4. No.

BURGH OF KIRRIEMUIR, COUNTY OF FORFAR.

Population (1891), 2,782. Assessable Rental (1893–94), £8,789.

Letter from *Archd. Smith*, Town Clerk, 25th February 1895.

1. No.

2. During the last 10 days unemployed men have been engaged cleaning the streets, pavement, and channels in the burgh, and the expense is being paid for equally by the Commissioners of the burgh and a distress fund committee established some years ago.

3. No.

4. The authorities seem to be able to deal with it in the meantime.

BURGH OF LADYBANK, COUNTY OF FIFE.

Population (1891), 1,198. Gross Rental (1892–93), £3,313. Return of Assessable Rental (1893–94) not available.

Letter from *W. Geddes Taylor*, Town Clerk, 13th March 1895.

1. No exceptional distress, the protracted frost having little effect on the working population of the burgh, who are mainly artisans, railway servants, and factory operatives.

2. Nothing done towards relief, as no demand has been made.

3. No.

4. For the reason stated in No. 1 no unusual distress exists.

BURGH OF LANARK, COUNTY OF LANARK.

Population (1891), 4,579. Assessable Rental (1893–94), £14,954.

Letter from *William Annan*, Joint Town Clerk, 25th February 1895.

1. YES, due entirely to the severe weather.

2. The Police Commissioners have supplied labour to men and lads—about 45. Public subscriptions have been collected for the relief chiefly in provisions and coals for women, out-door workers chiefly—about 50.

3. No.

4. The plan adopted seems to have been sufficient for the purpose.

BURGH OF LANGHOLM, COUNTY OF DUMFRIES.

Population (1891), 3,643. Assessable Rental (1893-94), £11,849.

Letter from *A. Johnstone*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in this burgh, but on account of the late severe weather there are more outworkers unemployed than there generally are. There are few unemployed who have not some members of their families employed.

2. The only thing which has been done in this burgh to aid the unemployed has been to hold a concert, at which about 40*l.* was raised. That sum has been supplemented by about 10*l.* of private subscriptions. These sums have been divided among the unemployed. It has not been found necessary to do more.

3. No unemployed register has been kept.

4. There is not in this burgh any distress existing requiring exceptional measures to be taken for its relief.

BURGH OF LARGS, COUNTY OF AYR.

Population (1891), 3,187. Assessable Rental (1893-94), £21,855.

Letter from *James Fleck*, Town Clerk, 25th February 1895.

1. THERE is exceptional distress here, due to the severe weather.

2. The Police Commissioners of the burgh have arranged to employ all willing to work at breaking road metal, and a committee was appointed to collect subscriptions. The average number relieved would be 25 families.

3. No register maintained, as the persons are all known.

4. Each place should locally arrange to give employment and start, say, soup kitchens.

BURGH OF LASSWADE, COUNTY OF MIDLOTHIAN.

Population (1891), 1,006. Assessable Rental (1893–94), £3,642.

Letter from *David B. Tod*, Burgh Clerk, 25th February 1895.

1. ANY distress here exists in connection with the building trades, and is owing to the severe weather; this cannot be said to apply to more than a few labourers.

2. The labourers out of their regular employment are, for the most part, engaged in connection with the work entailed by the derangement of water works, pipes, &c., consequent on the severe frost.

3. No.

4. No.

BURGH OF LAUDER, COUNTY OF BERWICK.

Population (1891), 719. Assessable Rental (1893-94), £2,176.

Letter from *Geo. Rankin*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in the district.

3. There is no unemployed register maintained.

BURGH OF LAURENCEKIRK, COUNTY OF KINCARDINE.

Population (1891), 1,426. Assessable Rental (1893-94), £4,740.

Letter from *John Craig*, Town Clerk, 26th February 1895.

1. THERE appears to be very little exceptional distress in this district; any that may exist is caused by the severe weather.

2. Nothing is being done by public authorities. Voluntary agencies have been at work, and are able to cope with and alleviate the distress. There is no regular daily relief.

3. No.

4. None.

BURGH OF LEITH, COUNTY OF EDINBURGH.

Population (1891), 68,707. Assessable Rental (1893-94), £319,027.

Letter from *T. B. Laing*, Town Clerk, 6th March 1895.

1. THERE is a certain amount of distress, owing to the severe weather.

2. The Council have made large contributions to the Association for the Improvement of the Condition of the Poor in Leith, and to the various soup kitchens. These soup kitchens are three in number, and a fourth for the unemployed has also been in operation, all by private benevolence, and at these soup kitchens hundreds have been daily fed.

3. No.

4. No.

BURGH OF LERWICK, COUNTY OF ZETLAND.

Population (1891), 3,889. Assessable Rental (1893-94), £12,337.

Letter from *A. Sandison*, Town Clerk, 27th February 1895.

1. No.

2. No distress.

3. No register necessary.

BURGH OF LESLIE, COUNTY OF FIFE.

Population (1891), 2,177. Assessable Rental (1893–94), £5,659.

Letter from *Robert Archibald*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in the district.

2. The local authority (the Commissioners) have employed a number of men rendered unemployed by the severe weather, at the rate of 2*s.* a day, principally in clearing the streets of snow and ice. More would have been employed, but the men refused to take that wage.

3. No.

4. None.

BURGH OF LEVEN, COUNTY OF FIFE.

Population (1891) 3,998. Assessable Rental (1893-94), £13,550.

Letter from *Alexander C. Dewar*, Town Clerk, 26th February 1895.

1. No. Of course, workmen and labourers connected with the building trades have been out of employment since this year began, but this is solely due to the exceptionally long period of frosty weather.

2. Nothing of the kind is evidently required.

3. No.

4. No.

BURGH OF LINLITHGOW, COUNTY OF LINLITHGOW.

Population (1891), 4,155. Assessable Rental (1893-94), £12,678.

Letter from *John Thom*, Clerk to Police Commissioners, 5th March 1895.

1. THERE is no exceptional distress to the peculiarity of the locality; all the public works have been kept going during the storm; but labourers and other out-workers have been exposed to distress because of the long continuance of the storm.

2. Nothing has been done by public authorities; a relief committee, composed of a number of the public men of the place, have been relieving the distress of the district by distributing money and provisions among the unemployed from funds voluntarily subscribed.

3. No formal register; but all the unemployed are well known to members of the committee.

4. The means at the disposal of the committee have been sufficient to cope with the distress of this locality.

BURGH OF LOANHEAD, COUNTY OF MIDLOTHIAN.

Population (1891), 3,244. Assessable Rental (1893–94), £8,777.

Letter from *William Macfarlane*, Town Clerk, 23rd February 1895.

1. OWING to the long-continued severity of the weather there has been exceptional distress among masons, slaters, and all kinds of out-door workers. The effects of the unfortunate coal strike and the dulness of the mineral oil trade are also apparent in the greater distress this year of many families.

2. A subscription list was started, under the auspices of the Commissioners, to provide coals, &c., and 90 families have been so aided.

3. No. There are few, if any, entirely unemployed persons in this locality.

4. None.

BURGH OF LOCHGELLY, COUNTY OF FIFE.

Population (1891), 4,133. Assessable Rental (1893–94), £7,711.

Letter from *John Small*, Town Clerk, 23rd February 1895.

1. No cases of exceptional distress have been brought under the notice of the authorities.

2. Nothing has been done in the matter.

3. No register of such.

4. No.

BURGH OF LOCHGILPHEAD, COUNTY OF ARGYLL.

Population (1891), 1,320. Assessable Rental (1893–94), £4,074.

Letter from *D. MacLachlan*, Town Clerk, 25th February 1895.

1. No.

2. There has been no necessity for the public authorities or voluntary agencies to do anything to meet distress.

3. No.

BURGH OF LOCHMABEN, COUNTY OF DUMFRIES.

Population (1891), 1,038. Assessable Rental (1893–94), £2,600.

Letter from *Edward B. Rae*, Town Clerk, 25th February 1895.

1. CONSIDERABLE distress in burgh, but not exceptional. Distress due solely to severe weather, many of the inhabitants being workers in a neighbouring quarry.

2. Distress

2. Distress met by voluntary agencies. Soup kitchen open three times a week, and a relief committee formed on 18th February, and considerable assistance given to unemployed in the form of provisions, &c. Ninety-five persons (mostly householders) on roll of relief. The Police Commissioners on 25th February engaged unemployed to break road metal, but advantage not taken to any extent of the offer made.

3. No.

4. By means of voluntary agencies and, where practicable, the providing of work to unemployed by public authorities

---

BURGH OF LOCKERBIE, COUNTY OF DUMFRIES.

Population (1891), 2,391. Assessable Rental (1893–94), £9,385.

Letter from *David McJerrow*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress in this district. Any little distress there is arises entirely from the severe weather, which has prevented masons, plasterers, and labourers from working for nearly nine weeks.

2. The unemployed have been set to clear snow from the roads, and are paid at the rate of 2*s.* 8*d.* per day. A voluntary fund has been raised, which supplies soup daily to the unemployed, and, in addition, the worst cases receive 5*s.* worth of groceries each week, besides coals.

3. No ; it is not felt to be necessary.

4. The unemployed in this district are very well off, as the response of the public to the temporary relief fund has been most ample. Except when prevented by frost, there is plenty of work here for anyone who wishes it.

BURGH OF LOSSIEMOUTH, COUNTY OF ELGIN.

Population (1891), 3,846. Assessable Rental (1893–94), £5,990.

Letter from *J. Hay Glennie*, Town Clerk, 27th February 1895.

1. THERE has been exceptional distress in the district for the past two months or so amongst the poorer class from want of employment, consequent upon the protracted severe state of the weather.

2. A public meeting was called about a fortnight ago, under the auspices of the Burgh Commissioners, for the purpose of considering what steps should be taken with the view of raising funds by public subscription to alleviate the distress. About 60*l.* has been raised by public subscription, and about 30*l.* of this has already been distributed in meat, coals, and other provisions, on two occasions—about 15*l.* on 15th inst., and about 15*l.* on 22nd inst., the average number getting relief being about 60.

3. A list of the unemployed and deserving poor was made up by the committee in charge of the fund.

4. No.

BURGH OF MACDUFF, COUNTY OF BANFF.

Population (1891), 3,722. Assessable Rental (1893–94), £8,217.

Letter from *John Jas. George*, Town Clerk, 26th February 1895.

1. THERE has been much exceptional distress in this district this year, arising almost entirely from the extraordinary and exceptionally prolonged severe weather.

2. In this burgh the normal poor are well looked after. During the last two months the public soup kitchen has been opened on an average of twice a week. This is much taken advantage of. The poor children attending a school called Murray's Institution, which is endowed with a fund for the purpose, receive hot dinners almost all the year round. The Town Council raised a fund for the unemployed by public subscription of over £40. This was taken advantage of by about 50 workmen, who were employed to clear the streets at the rate of 3*d.* an hour. In addition to this, there are other funds which go to provide coals for the poor annually. There was a triple supply of coals given this winter.

3. No.

4. The population of the burgh of Macduff is under 4,000, and in such cases I think local authorities should be able to cope themselves with the unemployed question ; but help from any other source would be very acceptable.

BURGH OF MARKINCH, COUNTY OF FIFE.

Population (1891), 1,350. Assessable Rental (1893–94), £4,720.

Letter from *Wm. Shepherd*, Town Clerk, 26th February 1895.

1. NONE.

3. No.

BURGH OF MAXWELLTOWN, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 4,975. Assessable Rental (1893–94), £18,264.

Letter from *Alex. Sharpe*, Town Clerk, 25th February 1895.

1. ONLY a small number of out-door labourers, who have been unemployed for about six weeks, and that on account of the severe weather only.

2. A voluntary association for relief of the unemployed has expended 42*l.* 11*s.* up to this date for that purpose, and the Town Council have supplemented that by expending about 10*l.* for work done on the streets. The average daily number of unemployed relieved for the week ending 16th inst. was 36. A soup kitchen has also been in operation, and about 70 families have received soup, a piece of butcher meat and bread daily for about six weeks. About 50 tons of coals have also been distributed amongst the most necessitous poor. The soup kitchen and coals are voluntary agencies, and are annually in operation during severe winter storms.

3. A register of the unemployed relieved is kept by the burgh officer.

4. None. It is only temporary, and is expected to cease as soon as the stormy weather is over.

BURGH OF MAYBOLE, COUNTY OF AYR.

Population (1891), 5,470. Assessable Rental (1893–94), £12,431.

Letter from *James Gibson*, Town Clerk, 4th March 1895.

1. THERE are some exceptional cases of distress arising from the severe weather among the class of the population engaged in out-door work.

2. Provision tickets and soup tickets are being issued by the Burgh Commissioners—say 45 to 50.

3. No.

4. The Commissioners are of opinion that all arrangements for relieving distress should emanate from one central responsible source.

BURGH OF MELROSE, COUNTY OF ROXBURGH.

Population (1891), 1,432. Assessable Rental (1893-94) cannot be given.

Letter from *Ralph Dunn*, Interim Town Clerk, 1st March 1895.

1. NONE.

2. An annual fund is subscribed by the gentlemen in the town and administered by a committee.

3. None.

4. None required.

BURGH OF MILLPORT, COUNTY OF BUTE.

Population (1891), 1,668. Assessable Rental (1893–94), £15,921.

Letter from *Robert Wood*, Town Clerk, 2nd March 1895.

1. No.

BURGH OF MILNGAVIE, COUNTY OF DUMBARTON.

Population (1891), 3,103. Assessable Rental (1893–94), £8,609.

Letter from *John Cranmer*, Town Clerk, 5th March 1895.

1. NONE.

2. Although inquiry has been made, no cases of distress have come to the knowledge of the authorities.

3. No.

4. No.

BURGH OF MOFFAT, COUNTY OF DUMFRIES.

Population (1891), 2,291. Assessable Rental (1893–94), £14,563.

Letter from *Thomas Tait*, Town Clerk, 25th February 1895.

1. No exceptional distress but what is caused by the severe weather.

2. Nothing is being done by public authorities or voluntary agencies; but more than ordinary charitable efforts have been used to mitigate the distress.

3. No register maintained.

4. None. There is no public work or trade employing a large number of persons in the district, and there are not many unemployed.

BURGH OF MONIFIETH, COUNTY OF FORFAR.

Population (1891), 1,835. Assessable Rental (1893–94), cannot be given.

Letter from *David Gowans*, Town Clerk, 27th February 1895.

1. No.

2. No unusual distress so far as known to the authorities. The poorer population who are affected by the severe weather get special attention from the Established and Free Church bodies in the burgh and charitably-disposed people; no organised agency.

3. No unemployed register.

4. None.

BURGH OF MONTROSE, COUNTY OF FORFAR.

Population (1891), 13,079. Assessable Rental (1893–94), £52,717.

Letter from *D. C. Wills*, Town Clerk, 25th February 1895.

1. IT was exceptionally high this year, following on the unusual endurance of severe weather and consequent want of work.

2. (*a*) The Town Council for employment ordered a roadway to be formed and levelling of ground over Bent hillocks on sea coast (30). The ordinary soup kitchen privileges to the poor were extended (25). Private charity was considerably increased (20).
(*b*) Relieving on an average during above week about 75.

3. No, not considered needful.

4. The wants of unemployed have been fairly met in Montrose, and there is no suggestion for outside assistance.

BURGH OF MOTHERWELL, COUNTY OF LANARK.

Population (1891), 18,726. Assessable Rental (1893–94), £72,876.

Letter from *James Burns*, Town Clerk, 25th February 1895.

1. TRIFLING—wholly due to severe weather.

2. (*a*) Nothing by public authorities. Charity Organisation Society of district dealing with exceptional cases.

3. No; not necessary.

4. No; unnecessary.

BURGH OF MUSSELBURGH, COUNTY OF MIDLOTHIAN.

Population (1891), 8,888. Assessable Rental (1893–94), £31,617.

Letter from *A. D. Macfarlane*, Town Clerk, 25th February 1895.

1. THERE is exceptional distress in the district, due entirely to the severe weather.

2. (*a*) The Town Council have employed a few of the men in public work; and coals and soup have been distributed by voluntary agencies.
(*b.*) Forty by public authority, viz., the Town Council.

3. This being exceptional distress, no register is kept.

4. The Town Council here have always found some kind of work for the unemployed in exceptional circumstances.

BURGH OF NAIRN, COUNTY OF NAIRN.

Population (1891), 4,014. Assessable Rental (1893–94), £14,176.

Letter from *William Laing*, Town Clerk, 27th February 1895.

1. THERE has been exceptional distress, but it has been caused entirely by the inclemency of the weather.

2. (*a.*) Soup kitchen with distribution of bread and oatmeal managed by a voluntary agency in concert with the police.

(*b.*) Two hundred received soup and bread; and in addition 1*l.* per diem expended for oatmeal in greater or lesser quantities according to numbers in the respective families.

3. No. No unemployed in open weather.

4. No.

BURGH OF NEWBURGH, COUNTY OF FIFE.

Population (1891), 1,506. Assessable Rental (1893–94), £4,379.

Letter from *A. M. Sueddon*, Town Clerk, 25th February 1895.

1. THERE is *no* exceptional distress in the district except what is due to the severe weather.

2. The magistrates gave some employment in cleaning the streets and otherwise, and by voluntary agencies, subscriptions were collected and relief given to the necessitous. It is impossible to give the numbers, as no note was kept.

3. No.

4. No.

BURGH OF NEW GALLOWAY, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 391. Assessable Rental (1893–94), £1,250.

Letter from *Robert Johnstone*, Town Clerk, 25th February 1895.

1. No exceptional distress here, but the labouring classes have been assisted by local efforts, such as voluntary subscriptions, &c., distribution of coals, bread, &c.

2. Nothing by public authorities.

3. No.

4. None.

BURGH OF NEWMILNS AND GREENHOLM, COUNTY OF AYR.

Population (1891), 3,704. Assessable Rental (1893–94), £9,035.

Letter from *Jas. Cunningham*, Town Clerk, 28th February 1895.

1. No exceptional distress, but there is a number of people idle in consequence of the long-continued frost. These are principally workmen on a railway in course of construction here.

2. Money is being raised by voluntary agencies by means of local concerts, and local private subscriptions for the relief of the unemployed. Fifty got a weekly allowance on Saturday 16th February, and Saturday 23rd February 1895.

3. No register. The most of people out of employment known to committee taking charge of funds, and have got assistance.

4. Local concerts and local public subscriptions, as the committee have been doing. The committee see their way to cope with the matter in this district at this time.

BURGH OF NEWPORT, COUNTY OF FIFE.

Population (1891), 2,548. Assessable Rental (1893–94), £19,294.

Letter from *John Scrimgeour*, Town Clerk, 27th February 1895.

1. THERE is no exceptional distress in the district. The severe weather has, of course, prevented masons, gardeners, &c., from working, but there are not many of these classes in the community.

2. No call for the public authorities to do anything, and there have been no special voluntary agencies, though some of the Churches have as usual distributed coal, &c., to poor people.

3. No register.

4. No.

BURGH OF NEWTON STEWART, COUNTY OF WIGTOWN.

Population (1891), 2,332. Assessable Rental (1893–94), £8,623.

Letter from *Robert Carson*, Town Clerk, 26th February 1895.

1. YES, to the severe weather.

2. (*a.*) A relief committee, consisting of the Town Commissioners with the addition of the clergy and principal ladies and others convened by the Provost of the Burgh, have given weekly for three weeks tickets of the value of 2*s.* each to upwards of 50 poor people not in receipt of parochial relief, these tickets being to grocers to furnish provisions for which the committee will be responsible. Then the unemployed men have been provided by the Town Commissioners with work at 2*s.* per day clearing the streets of snow, &c., which work was publicly offered to all who would accept it.

(*b.*) About 25 men would be thus employed, and 56 poor get provisions.

3. No. The committee carefully inquire from time to time and get much assistance from the ladies of the town as to cases requiring attention.

4. Where possible the giving of work is preferable to any other method, but there are cases which cannot be met in that way. Local committees, if properly organised, should know best the most suitable means of relief in their different districts.

BURGH OF NORTH BERWICK, COUNTY OF HADDINGTON.

Population (1891), 1,998. Assessable Rental (1893–94), £12,364.

Letter from *A. D. Wallace*, Town Clerk, 2nd March 1895.

1. NOTHING further than is due to the severe weather.

2. (*a.*) The public authorities from charity funds in their hands distributed during the week mentioned to all needy and deserving cases known to them, grocery goods to the value of 3*s.* 6*d.* In addition there is a public soup kitchen supported by voluntary contribution, from which soup and bread are supplied in any quantity free, or at a merely nominal charge. In addition, there has been both from denominational funds and from voluntary grants otherwise coal distributions among the needy. With the exception of the 3*s.* 6*d.* from funds under the charge of the Corporation, the other charges have been supplied by voluntary subscriptions.

(*b.*) The average daily number who got soup and bread during the week ended 16th February was 12 (exclusive of children).

3. No, not required.

4. But for the severe weather there would have been comparatively little distress and no unemployed. The building and allied trades are all brisk here at present.

BURGH OF OBAN, COUNTY OF ARGYLL.

Population (1891), 4,946. Assessable Rental (1893–94), £36,627.

Letter from *Martin B. Lawrence*, Town Clerk, 2nd March 1895.

1. YES, due entirely to the severe weather.

2. (*a.*) The Town Council have employed about 30 men to clean the beach for six hours a day, at 4*d.* per hour.

(*b.*) Several voluntary agencies have been in operation, but it is impossible to ascertain with accuracy the numbers relieved thereby.

3. No.

4. No.

BURGH OF OLD MELDRUM, COUNTY OF ABERDEEN.

Population (1891), 1,236. Assessable Rental (1893-94), cannot be given.

Letter from *William Baxter*, Town Clerk, 25th February 1895.

1. ANY distress that exists in this district has been caused by the severity of the weather, and the fact that the majority of the population are employed out of doors.

2. Nothing has been done by public authorities, as there were no cases calling for such action. Any little distress that did exist has been alleviated by a voluntary subscription.

3. No.

4. No.

Burgh of Paisley, County of Renfrew.

Population (1891), 66,425. Assessable Rental (1893–94), £269,476.

Letter from *Young & Martin*, Town Clerks, 27th February 1895.

1. There is exceptional distress at present attributable to the recent severity of the weather.

2. (*a.*) Funds for the relief of the unemployed and destitute have been provided by public subscription out of which coals have been provided and soup kitchens opened worked by the poor-house officials. Stone-breaking has also been provided by the authorities.
(*b.*) Up till 16th instant 350 portions of coal of 2 cwt. each were distributed. The average number of portions of soup, &c., distributed during the three days prior to and including 16th instant during which the kitchens were open was 843. These portions consisted of 1 pint soup, 3 oz. beef, 1 lb. bread and 4 oz. oatmeal. The average number of men employed at stonebreaking up to 16th instant was 57. These were paid 1*s.* 6*d.* for six hours and 2*s.* for eight hours work. There have also been 61 men employed at street cleaning, who were paid at the rate of 1*s.* 6*d.* for six hours, and 2*s.* for eight hours work.

3. If by a register is meant a Labour Bureau there is no such register kept. There is, of course, a list kept of the unemployed.

4. It is suggested that Scotland should have the same powers as are possessed by the English authorities for the relief of able-bodied poor from the rates.

Burgh of Partick, County of Lanark.

Population (1891), 36,538. Assessable Rental (1893–94), £178,607.

Letter from *James Donaldson*, Town Clerk, 26th February 1895.

1. There is an exceptional distress in the burgh owing to the severity of the weather.

2. (*a.*) The Provost of the burgh opened a relief fund on 15th current, upwards of 250*l.* was subscribed. In addition large supplies of meal, bread, &c., were given by shopkeepers in the burgh.
(*b.*) On Saturday 16th February current, 2 cwt. of coal were delivered to each of 135 families, which represents 686 persons, each of which got a supply of soup and bread daily. During the week ending 23rd current the numbers increased to 350 families, and 1,600 persons who were supplied daily with soup and bread, and got a supply of coals, meal, tea, sugar, beef and fish, also 1*s.* and 2*s.* lines for groceries.

3. No register is kept of the unemployed.

4. I have none. There has hitherto been no difficulty in meeting such distress by public subscriptions and private charity.

Burgh of Peebles, County of Peebles.

Population (1891), 4,704. Assessable Rental (1893-94), £21,896.

Letter from *William Buchan*, Town Clerk, 27th February 1895.

1. There is no exceptional distress. What distress there is, is due to the long-continued severe weather.

2. A soup kitchen instituted by the Town Council and supported by voluntary contributions. The Town Council also give employment on the streets to those out of work. About 60.

3. No.

4. No.

Burgh of Penicuik, County of Midlothian.

Population (1891), 3,002. Assessable Rental (1893–94), £10,882.

Letter from *John Alexander*, Town Clerk, 4th March 1895.

1. No. A few labourers (not over a dozen) are out of work through the severe weather.

2. (*a.*) Subscription has been opened by the Commissioners.
(*b.*) None.

3. No register is maintained.

4. None. (The subscription opened resulted in a sum of over 7*l.* being collected. It has been distributed in orders for provisions, &c., among the unemployed.)

Burgh of Perth, County of Perth.

Population (1891), 29,919. Assessable Rental (1893–94), £133,768.

Letter from *William MacLeish*, Town Clerk, 26th February 1895.

1. No exceptional distress except such as is due to the prolonged storm.

2. The Police Commission have been finding employment for many labourers out of work Local societies have been very carefully watching for and relieving cases of distress, and recently a special committee was appointed to believe sufferers, about 100*l.* being immediately subscribed. The City of Perth Co-operative Society also voted 100*l.* to relieve distress. It is believed now that there is complete provision for the unemployed in this burgh.

3. No. There seems to be no occasion for such a register in Perth.

4. No.

Burgh of Peterhead, County of Aberdeen.

Population (1891), 12,226. Assessable Rental (1893–94), £34,831.

Letter from *David Martin*, Town Clerk, 26th February 1895.

1. Yes. It is due to the severe weather.

2. (*a.*) The Town Council adopted measures to relieve the distress on Monday, the 11th February, by providing work (the removal of snow from the streets, and the breaking of road metal) for the unemployed able-bodied men who chose to apply for it, and by raising by voluntary subscriptions a relief fund (amounting at this date to 201*l.* odd) for the others in distress consisting chiefly of aged widows and females who earn a living by fish cleaning, washing of clothes and other out-door occupations applicable to females.

(*b.*) (1.) Work Agency.—The average daily number employed during the week ending Saturday 16th February is :—

12 men carting snow and quarrying stones.
23 men clearing pavements, &c.
22 men breaking road metal.

57

(2.) Voluntary Agency.—In this case the relief was not begun until 13th February. The average daily number relieved during the period ending Saturday the 16th is 74. The aggregate number to whom assistance has been given up to date is 325.

3. No.

4. That the authorities should have ample powers to provide works of public utility, and to lay on a special assessment therefor, and to borrow on the security of that assessment.

Burgh of Pittenweem, County of Fife.

Population (1891), 1,962. Assessable Rental (1893-94), £5,563.

Letter from *A. C. Mackintosh*, Town Clerk, 25th February 1895.

1. The staple industry of fishing is in a depressed condition ; and the severe weather has thrown out of work masons, labourers, and field workers ; but the distress resulting has not been exceptional.

2. There is a soup kitchen, supported by voluntary contributions. Average number relieved for week mentioned was fifty families, one hundred persons twice weekly. There has been no increase of casual relief by the Parochial Board, showing that the conditions are not yet exceptional.

3. No.

4. The circumstances do not, it is thought, demand anything beyond what is being done at present.

Burgh of Pollokshaws, County of Renfrew.

Population (1891), 10,228. Assessable Rental (1893–94), £26,660.

Letter from *John Campbell*, Town Clerk, 25th February 1895.

1. There is exceptional distress, due to the severe weather.

2. The Town Council and Parochial Board have jointly established a soup kitchen, and in addition are supplying groceries, provisions and coals, in necessitous cases. They are giving supplies for 700 persons, inclusive of children. The expense is being met by voluntary subscription. Relief was started on 15th February. The number of 700 applies to the week ending 22nd February.

3. A register has been kept since 15th February, on which 40 names appear. They have been employed in removing snow and ice from the roads and streets, for which they are paid 3*d.* per hour, with food and coals.

4. On this, and former occasions of the kind, the distress has been amply met by voluntary contributions, and these may be relied upon in the future.

BURGH OF PORT GLASGOW, COUNTY OF RENFREW.

Population (1891), 14,685. Assessable Rental (1893-94), £51,866.

Letter from *David Maclelland*, Town Clerk, 25th February 1895.

1. OWING to a slackness in shipbuilding, which is the principal trade in Port Glasgow, there has been a large number of people unemployed for several months.

2. Many of these parties have been assisted privately. Since December last the Town Council have employed on an average 60 men in quarrying metal at Port Glasgow Cemetery, and in quarrying metal and enlarging one of their reservoirs. The recent severe weather increased the number of unemployed, and the Town Council opened an unemployed relief fund which has been sufficient to enable the council, and a committee acting along with them, to relieve all cases that have come under their notice.

3. No.

4. None.

BURGH OF PORTOBELLO, COUNTY OF EDINBURGH.

Population (1891), 8,182. Assessable Rental (1893-94), £45,943.

Letter from *A. Brand*, Provost, 25th February 1895.

1. ANY distress in the burgh arises almost entirely from the continued severe weather.

2. (*a.*) The most of the unemployed are engaged at present by the local authority breaking stones, &c., and a soup kitchen supplies a dinner daily to about 130 children.

(*b.*) A voluntary subscription gave relief to 46 applicants, in sums varying from 2*s.* 6*d.* to 5*s.*

3. No register is kept; but the town overseer receives applications from the unemployed, and at no time have they exceeded 24 in number.

4. The sick and destitute society and the various churches in the burgh have up to the present time been successful in coping with such distress.

BURGH OF PORTSOY, COUNTY OF BANFF.

Population (1891), 2,061. Assessable Rental (1893-94), £4,248.

Letter from *James Young*, Town Clerk, 7th March 1895.

1. THERE was during February some distress, caused by the severe weather which prevented workmen engaging in their employments.

2. A committee was formed, who raised voluntary subscriptions, and set on foot and conducted a soup kitchen. About 185 rations were daily given out. Private individuals in the burgh also found work for a number of the unemployed.

3. No register kept.

4. The course adopted was considered the best for the place. The distress is now relieved, the weather having improved.

BURGH OF PRESTONPANS, COUNTY OF HADDINGTON.

Population (1891), 1,606. Assessable Rental (1893-94), £3,962.

Letter from *R. H. Hunter*, Town Clerk, 23rd February 1895.

1. No exceptional distress.

3. No.

BURGH OF PULTENEYTOWN, COUNTY OF CAITHNESS.

Population (1891), 3,550. Assessable Rental (1893-94), £12,551.

Letter from *David Cormack*, Town Clerk, 4th March 1895.

1. YES; the fishing industry has been a decided failure this winter, especially the herring fishing; and added to this, the loss of one boat on the occasion of the severe blizzard on 6th February with her entire crew of nine men. The severe weather, both on land and at sea, have greatly intensified the distress in this exposed locality this year. For weeks outside labour had been suspended.

2. Nothing by public authorities, but by voluntary agencies of a private nature extensive exertions have been made to meet the distress. A general disaster fund exists in the locality, and this is being largely augmented on account of the boat's crew on 6th February above referred to, whereby, six widows and 19 children, besides many other dependants, have been left in many cases destitute. The number relieved during the week ended Saturday the 16th February from all cases of distress cannot have been less than 105, or a daily average of 15 persons.

3. No unemployed register maintained.

4. The State ought greatly to assist in providing a fund for the purpose of relieving such distress, to be dispensed through the respective local public authorities on well-arranged rules, especially to fishing and exposed localities, whereby the people may have food and clothing and suitable work provided in cases of exceptional distress. Legislation might with advantage not only countenance, but encourage, home industries more than it has done heretofore.

BURGH OF QUEENSFERRY, COUNTY OF LINLITHGOW.

Population (1891), 1,531. Assessable Rental (1893–94), £6,550.

Letter from *Peter Miller*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress, but a certain amount of distress has arisen through the severe weather.

2. A relief fund amounting to 11*l.* has been raised by voluntary contributions. There is also a public soup kitchen supported by voluntary effort.

3. There is no unemployed register.

4. The above agencies have been able to relieve such cases of distress as have occurred.

BURGH OF RATTRAY, COUNTY OF PERTH.

Population (1891), 2,225. Assessable Rental (1893–94), £6,158.

Letter from *James Lochhead*, Town Clerk, 25th February 1895.

1. THERE has been considerable distress in Rattray for 18 months or more, but this has been caused by the dulness of the staple industry, the flax and jute trade; but with the exception of several workers engaged in out-door trades, the severe weather has not been the cause of exceptional distress.

2. (*a.*) Nothing has been done by the public authorities, but a voluntary effort has been made by persons resident in the district, and food, clothing, and coal, have been distributed to those in need.

(*b.*) Nearly 200 persons have been relieved daily during the week in question.

3. No such register has been kept.

4. It is thought that the present efforts are sufficient to meet what may be called the exceptional distress.

BURGH OF RENFREW, COUNTY OF RENFREW.

Population (1891), 6,777. Assessable Rental (1893–94), £20,935.

Letter from *W. Herron*, Town Clerk, 25th February 1895.

1. THERE is a good deal of exceptional distress in the district, due almost entirely to the severity of the weather.

2. The magistrates have endeavoured as far as possible to meet the distress by voluntary subscriptions. They issued a circular to the shopkeepers, employers of labour, and others connected with the town, which was generously responded to; a sum of considerably over 100*l.* being handed in within a few days. That money is being expended in supplying coals and provisions to needful cases, and in providing a free dinner to children whose parents are in destitute circumstances. The relief was commenced to be given about the 13th February, and since that date about 150 children are daily getting dinner, and about 50 adults have been supplied with coals and provisions. The police have been instructed to report any cases requiring relief they may hear of.

3. No.

4. No; the distress being almost entirely occasioned by the severity of the weather, it will disappear with a change therein. The magistrates have sufficient funds in hand to meet the distress in the meantime, or any that is likely to occur during the present winter.

BURGH OF ROSEHEARTY, COUNTY OF ABERDEEN.

Population (1891), 1,179. Assessable Rental (1893-94), £2,299.

Letter from *Andrew Ritchie*, Town Clerk, 26th February 1895.

1. THERE is no exceptional distress in this burgh; our principal industry being a fishing industry, the stormy weather has caused hard times.

2. It has not been thought necessary any special agencies to be organised.

February month more favourable than January.

3. No unemployed register kept.

BURGH OF ROTHES, COUNTY OF ELGIN.

Population (1891), 1,548. Assessable Rental (1893–94), £5,214.

Letter from *John Smith*, Town Clerk, 25th February 1895.

1. YES, due to severe weather entirely.
2. (*a.*) Small grants of money, coals and meal, and a soup kitchen, all by voluntary agencies.
   (*b.*) About 220.
3. No.
4. No; the distress will disappear with return of good weather.

BURGH OF ROTHESAY, COUNTY OF BUTE.

Population (1891), 9,108. Assessable Rental (1893–94), £57,488.

Letter from *John T. Wilson*, Town Clerk, 25th February 1895.

1. ANY exceptional distress has been caused by the recent severe weather, and exists amongst masons, labourers' and out-door workmen, whose work was stopped by the snow.

2. (*a.*) A soup kitchen has been started, and a second distribution of coals among the poor.

(*b.*) At the soup kitchen there were during the week mentioned an average of 113 relieved with supplies for 255 individuals. The bulk of these appear to be the ordinary out-of-work people, who always during winter have little work. Very few appear to be those whom the recent severe weather has prevented earning.

3. No.

4. There are no manufactures or trades of any consequence in the burgh, and its position as a summer resort causes a press of work during the spring and summer and a corresponding want of work during winter, and this will continue to be the case. There appears, however, no reason but thriftlessness to prevent the working classes in Rothesay, as a rule and in ordinary seasons, keeping themselves and their families during the whole year with their earnings when they have work.

BURGH OF RUTHERGLEN, COUNTY OF LANARK.

Population (1891), 12,020. Assessable Rental (1893–94), £34,007.

Letter from *George Gray*, Town Clerk, 25th February 1895.

1. THERE is undoubtedly exceptional distress in the burgh, due entirely to the severe weather, which has caused the stoppage in many trades and of all out-door labour.

2. (*a.*) The Magistrates and Town Council have appointed themselves (18 in number) to deal with all cases of distress brought under their notice, and meet in the town hall twice a week for this purpose, when tickets are issued to applicants for bread, meal, and coals.

(*b.*) During week ending 16th February, 65 persons were relieved on 14th February and 98 were relieved on 16th inst.

3. No.

4. No.

BURGH OF ST. ANDREWS, COUNTY OF FIFE.

Population (1891), 6,853. Assessable Rental (1893–94), £41,179.

Letter from *C. S. Grace*, Depute Town Clerk, 26th February 1895.

1. No exceptional distress in district. The only unemployed in this place are masons, labourers, and others connected with building trades, who have been out of work in consequence of severe frost.

2. (*a.*) The authorities employed those who were idle in clearing streets of snow. There is a soup kitchen. Voluntary agency.

(*b.*) 150 to 160 per diem.

3. No.

4. No.

BURGH OF SALTCOATS, COUNTY OF AYR.

Population (1891), 5,895. Assessable Rental (1893–94), £22,740.

Letter from *James Campbell*, Town Clerk, 26th February 1895.

1. NONE, except what is due to long-continued frost.

2. None.

3. No.

4. No.

BURGH OF SANQUHAR, COUNTY OF DUMFRIES.

Population (1891), 1,315. Assessable Rental, (1893-94), £2,873.

Letter from *G. B. Carruthers*, Town Clerk, 25th February 1895.

1. ONLY slight. The severe weather has stopped out-door work, such as brick-making, &c.
2. Voluntary donations have been amply sufficient to relieve all cases of distress.
3. No.
4. None necessary.

BURGH OF SELKIRK, COUNTY OF SELKIRK.

Population (1891), 5,662. Assessable Rental (1893-94), £23,022.

Letter from *John Pollok*, Town Clerk, 25th February 1895.

1. YES, a little exceptional distress due to the severity of the weather.

2. (*a.*) Public authority engaging a few of the unemployed on the streets. A relief committee has been giving employment to labourers, &c., and paying them from fund raised by voluntary subscriptions.
The committee also on 16th instant opened a soup kitchen.

(*b.*) About 30 men altogether engaged in work. Average number supplied through soup kitchen, about 200 daily.

3. No.
4. No.

BURGH OF STEWARTON, COUNTY OF AYR.

Population (1891), 2,687. Assessable Rental (1893-94), £6,437.

Letter from *John Halliday*, Town Clerk, 26th February 1895.

1. THERE is distress of a limited character, due partly to the exceptionally severe weather and partly to a depression of our local industry.

2. (*a.*) The local authority have employed 20 unemployed in cleaning our streets of snow and ice, at a remuneration of 4*d.* (four pence) per hour, from charitable and benevolent institutions in town ; and from private sources £100 stg. have been distributed among the deserving poor, besides about 100 ton coals.

3. No.

4. That Parliament should endeavour to cope with the general question, especially in times of exceptional distress like the present, by finding employment for the unemployed on waste lands or in any way which in their wisdom may seem best.

BURGH OF STIRLING, COUNTY OF STIRLING.

Population (1891), 16,781. Assessable Rental (1893-94), £82,397.

Letter from *Thomas L. Galbraith*, Town Clerk, 25th February 1895.

1. YES. Chiefly owing to severe weather.

2. (*a.*) The Stirling Soup Kitchen Association has made the following distributions : 1st (ordinary), meals at free table ; 2nd, soup to use at home ; 3rd (special), supplies of provisions for which Town Council contributed 5*l.*

(*b.*) 347.

N.B.—During week ended 23rd February over 200*l.* has been raised by subscriptions and entertainments. This is now being distributed and applied in the manner above stated, and also by giving supplies of coals under supervision of Municipal Ward Committees and the Provost of Stirling.

3. No.
4. The methods adopted here are found suitable.

BURGH OF STONEHAVEN, COUNTY OF KINCARDINE.

Population (1891), 4,500. Assessable Rental (1893-94), £14,727.

Letter from *Robert Falconer*, Town Clerk, 25th February 1895.

1. THERE is no exceptional distress here, except that caused amongst out-door workers, who have been prevented from working by the long-continued snow storm.

2. Assistance has been given through the agency of the Public Soup Kitchen, and by voluntary agencies working under the advice of the Chief Constable.

3. No.

4. No ; the snow has now disappeared, and it is expected that out-door work will be plentiful.

BURGH OF STORNOWAY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 3,386. Assessable Rental (1893-94), £14,836.

Letter from *John Ross*, Town Clerk, 26th February 1895.

1. YES, some exceptional distress still, but more, recently. Partly due to both circumstances.

2. Nothing by public authorities. This burgh has no Common Good; some soup kitchens have been opened by private individuals and coals purchased by private subscriptions and distributed. Unable to give the average daily number relieved.

Within the last three weeks a fair fishing has set in, and a considerable amount of the distress has thereby been relieved.

3. No unemployed register maintained.

BURGH OF STRANRAER, COUNTY OF WIGTOWN.

Population (1891), 6,193. Assessable Rental (1893-94), £20,908.

Letter from *Wm. Black*, Town Clerk, 25th February 1895.

1. THERE has been owing to severity of weather in general and disastrous storm of 21st and 22nd December 1894 in particular, by such storm the fishing boats belonging to the fishing population were much damaged, and in some cases destroyed

2. A relief fund for the fishermen was subscribed out of which boats were repaired and other boats acquired by which along with fishing gear purchased, the fishermen are now in a position to earn a livelihood. For six weeks the families of the fishermen were supplied with provisions every week out of the fund.

A soup kitchen got up by public subscription is at present doing good work for the relief of the hungry.

3. No.

4. No.

BURGH OF STROMNESS, COUNTY OF ORKNEY.

Population (1891), 1,698. Assessable Rental (1893-94), £3,324.

Letter from *Jas. Brown*, Town Clerk, 5th March 1895.

1. IN consequence of severe weather a number of working men have been practically idle for eight weeks.

2. Nothing done.

3. No.

4. Any distress was exceptional on account of weather.

BURGH OF TAIN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,636. Assessable Rental (1893-94), £6,257.

Letter from *John Mackenzie*, Town Clerk, 25th February 1895.

1. YES; workmen (tradesmen and labourers) long out of employment owing to long continuance of intense cold.

2. (*a.*) Last week work given by town council to all willing to work on public streets clearing snow off, and this week coals will be distributed to poor and unemployed, the expense being met by public subscription.

(*b.*) None relieved in week referred to.

3. No register kept.

4. Now that weather is milder all tradesmen and workmen can get their ordinary employment.

BURGH OF TAYPORT, COUNTY OF FIFE.

Population (1891), 2,871. Assessable Rental (1893-94), £9,549.

Letter from *Peter K. White*, Town Clerk, 27th February 1895.

1. THE only distress in the district is caused by the exceptionally severe weather preventing masons, joiners, and other tradesmen from working.

2. No.

3. No.

4. No.

BURGH OF THURSO, COUNTY OF CAITHNESS.

Population (1891), 3,936. Assessable Rental (1893–94), £10,611.

Letter from *Andrew Manson*, Town Clerk, 25th February 1895.

1. DISTRESS arising from severity of weather, and consequent want of employment, but not exceptionally severe.

2. Soup kitchen set on foot and carried on by voluntary subscription. Average daily number supplied about 300.

3. No.

4. Hope distress will pass away if the weather, which is fine to-day, continues favourable.

BURGH OF TILLICOULTRY, COUNTY OF CLACKMANNAN.

Population (1891), 3,939. Assessable Rental (1893–94), £11,402.

Letter from *Charles Thomson*, Town Clerk, 26th February 1895.

1. THERE is not any exceptional distress in Tillicoultry at present.

2. Voluntary agencies are dealing efficiently with any distress that exists.

3. No.

4. Nothing further than is referred to under Question No. 2.

BURGH OF TOBERMORY, COUNTY OF ARGYLL.

Population (1891), 1,154. Assessable Rental (1893–94), £3,118.

Letter from *John MacLachlan*, Town Clerk, 25th February 1895.

1. No exceptional distress in the district.

2. Nothing, but the usual distribution at this season, among the very poor, of meal, groceries, and coals by private individuals

3. No.

4. None. The sea fishing here has been good of late and the people are fairly well supplied with salt fish and potatoes

---

BURGH OF TRANENT, COUNTY OF HADDINGTON.

Population (1891), 2,389. Assessable Rental (1893–94), £4,480.

Letter from *John Richardson*, Town Clerk, 25th February 1895.

1. No ; mostly mining population, but no exceptional or general distress.

2. No need.

3. No.

BURGH OF TURRIFF, COUNTY OF ABERDEEN.

Population (1891), 2,341. Assessable Rental (1893–94), £5,722.

Letter from *William F. Stewart*, Town Clerk, 25th February 1895.

1. ON account of the severity of the weather a considerable number of men have been out of employment, but the distress has not been very great.

2. There is a soup kitchen, at which an average of over 100 got free dinners three times a week. A sum of 10*l.* has been subscribed by the Kirk Session of the parish, and 30*l.* by a public concert, and these sums are being spent in relief of the unemployed. There is also more private relief by individuals.

3. No ; but the constables of the burgh have given the matter close attention and have reported all cases of distress to the committee in charge of the above funds.

4 The distress is likely to be met by the above agencies, unless the present severe weather is much prolonged.

BURGH OF WHITBURN, COUNTY OF LINLITHGOW.

Population (1891), 1,185. Assessable Rental (1893-94), £2,341.

Letter from *James Pender*, Town Clerk, 4th March 1895.

1. THERE is no special need for any relief, there is no exceptional distress in the district.

BURGH OF WHITHORN, COUNTY OF WIGTOWN.

Population (1891), 1,403. Assessable Rental (1893–94), £3,762.

Letter from *Robert C. Lawrie*, Town Clerk, 4th March 1895.

1. THERE is no exceptional distress in this district.

2. During the severe weather loaves and other articles of food were voluntarily subscribed for by private parties, including the public authorities, and distributed amongst those thought to be in necessitous circumstances.

3. No.

4. No.

BURGH OF WICK, COUNTY OF CAITHNESS.

Population (1891), 2,962. Assessable Rental (1893–94), £8,187.

Letter from *Hector Sutherland*, Town Clerk, 25th February 1895.

1. YES, exceptional distress due to both. Not easy to determine how much due to one and how much to the other. Capital has been frightened out of the land and from commerce for some years past, and hence there is a want of cash to give employment to labouring men.

2. Nothing done by public authorities or by voluntary agencies more than usual during the period referred to. Public authorities have no funds for this purpose. The rates imposed are for special purposes of which this is not one, and these rates are heavy.

4. I should say that wherever a citizen requires food or clothing, and is willing to work therefor, it is the duty of the State, through the Chancellor of the Exchequer, to provide meat, food, clothing, or work. Further, as the great bulk of our manufactured goods and produce comes from abroad, it necessarily follows that our home workpeople must, to a corresponding extent, be unemployed.

BURGH OF WIGTOWN, COUNTY OF WIGTOWN.

Population (1891), 1,509. Assessable Rental (1893–94), £6,457.

Letter from *Will. McClure*, Town Clerk, 25th February 1895.

1. No The agricultural out-door workers were getting pinched by the long frost, but since the snow storm, *i.e.*, from 7th instant, all males have found ready employment from the railway and road authorities in cutting the snow drifts and opening up the railways and roads.

2. (*a.*) The Parochial Board and Kirk Session have made large distributions of coal, and a considerable quantity has also been provided by voluntary agencies.

3. No.

4. No. Snow is gradually disappearing, and there are indications of more moderate weather which will admit of field work being resumed.

BURGH OF WISHAW, COUNTY OF LANARK.

Population (1891), 15,252. Assessable Rental (1893–94), £32,000.

Letter from *J. Logan*, Town Clerk, 2nd March 1895.

1. THERE are about 100 working men idle on account of the severe weather.

2. The magistrates of the burgh got voluntary subscriptions to enable them to meet the distress. About 50 per day have been relieved since the beginning of February.

3. No.

4. There is sufficient funds in hand to meet the distress until the middle of March, and it is hoped by that time the weather will be such as to allow working men to carry on their usual employment.

II.—COUNTIES.

Parish of Aberdeen, County of Aberdeen.

Population (1891), 51,748. Assessable Rental (1893–94), £207,905.

Letter from *James Wallace*, Inspector of Poor, 27th February 1895.

1. There is exceptional distress in the town, and has been for some weeks, not so much on account of scarcity of employment as on account of the prolonged severe weather.

2. (*a.*) The Town Council has voted 200*l.* towards relieving the unemployed. Voluntary agencies have distributed very large sums of money as well as all kinds of provisions—liberally supplied them. Clothing also, where necessary, has been given.

(*b.*) The Association for Improving the Condition of the Poor - - - - - - - - - - - - - - 70
The Police Force - - - - - - - - - - - - - - - - - - 250
The Trades Council - - - - - - - - - - - - - - - - - 200

3. The Association for Improving the Condition of the Poor keeps a register and is a recognised medium for persons out of employment. The Local Secretary of the Trades Council also keeps one, and both show good results.

4. No. Since the severe weather set in only one application by an able-bodied man for relief has been made at this office. He was granted relief to the extent required.

Parish of Aberdour, County of Aberdeen.

Population (1891), 1,898. Assessable Rental (1893–94), £7,407.

Letter from *John S. Wilson*, Inspector of Poor, 25th February 1895.

1. Yes; due to the severe weather.

2. Voluntary agencies—distribution of coals, tea, &c., and, since Monday 11th inst., a soup kitchen has been in daily operation. Average receiving soup, 50.

3. No.

4. The soup kitchen seems to be meeting all the necessities of the case. Nothing of the kind has ever been in operation in Aberdour before, and it is being generously supported by the public of all denominations.

Parish of Aboyne, County of Aberdeen.

Population (1891), 1,403. Assessable Rental (1893–94), £11,198.

Letter from *Peter Grant*, Inspector of Poor, 25th February 1895.

1. Not to any great extent; owing to the severe weather.

2. Nothing—public authorities or voluntary agencies. A few private individuals have helped the most needy.

3. No.

Parish of Alford, County of Aberdeen.

Population (1891), 1,402. Assessable Rental (1893–94), £8,245.

Letter from *James Reid*, Inspector of Poor, 25th February 1895.

1. Very slight distress, caused by the excessive severity of the weather. Sufferers are chiefly old and decayed people.

2. Aid has been supplied by private individuals and by clubs, in the form of coal, meal, &c. About 23 persons have been relieved.

3. None kept. The parish is entirely agricultural, and the labourers mostly engaged for the six months.

4. To relieve the snow block on public roads the County Council might have supplied work for half the time for all unemployed labourers suffering nearly, in making such roads passable.

PARISH OF AUCHINDOIR, COUNTY OF ABERDEEN.

Population (1891), 1,374. Assessable Rental (1893–94), £5,627.

Letter from *James Wallace*, Inspector of Poor, 26th February 1895.

1. CONSIDERABLE distress caused solely by the severe weather.

2. An average of 14 labourers relieved each day during the week by voluntary agencies by giving work, clearing the snow from the street and roads.

3. No register maintained.

4. Cannot suggest any remedy, but find, in a good many cases, the more you give the more it is relied upon and looked for. The spirit of independence is lost.

PARISH OF AUCHTERLESS, COUNTY OF ABERDEEN.

Population (1891), 1,853. Assessable Rental (1893–94), £11,657.

Letter from *James Beattie*, Inspector of Poor, 25th February 1895.

1. NO. This district is purely agricultural and mostly all servants are engaged half-yearly, so that the prolonged snowstorm does not affect them. There are only one or two day labourers in the parish that are not occupied on the roads or other such work that has not been stopped.

2. There is nothing required.

3. No.

4. There are no suggestions to make as there are no special wants.

PARISH OF BELHELVIE, COUNTY OF ABERDEEN.

Population (1891), 1,613. Assessable Rental (1893–94), £12,474.

Letter from *Robert Rae*, Inspector of Poor, 25th February 1895.

1. THERE has been a little distress in the parish among the labouring class which was due to the severe weather.

2. There has been nothing done by public or voluntary agencies for the purpose of relieving the distress at this time.

3. No.

4. In a rural district like this a little casual relief should be given to destitute families.

PARISH OF BIRSE, COUNTY OF ABERDEEN.

Population (1891), 1,154. Assessable Rental (1893–94), £7,420.

Letter from *James Cassie*, Inspector of Poor, 25th February 1895.

1. THERE is no distress through want of employment in the parish as all out-door workers are mostly employed by the half-year, and, therefore, the weather does not affect them. Those who are day labourers get work from the proprietors and always have work.

2. Nothing is being done as apparently nothing is required.

3. No.

PARISH OF BOURTIE, COUNTY OF ABERDEEN.

Population (1891), 454. Gross Rental (1893–94), £5,474. (Parish not assessed.)

Letter from *William Moir, jun.*, Inspector of Poor, 26th February 1895.

1. No particular distress in this parish. There is no village in this parish.

PARISH OF CAIRNEY, COUNTY OF ABERDEEN.

Population (1891), 1,399. Assessable Rental (1893–94), £6,572.

Letter from *James Wilson*, Inspector of Poor, 25th February 1895.

1. CAIRNEY. This being solely an agricultural district, no exceptional distress has been felt by the unemployed during the severe snowstorm, and when such was likely to arise from sickness or otherwise, the Parochial Board being appealed to has given temporary relief.

PARISH OF CHAPEL OF GARIOCH, COUNTY OF ABERDEEN.

Population (1891), 1,690. Assessable Rental (1893–94), £12,040.

Letter from *James Diack, jun.*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress.
2. Nil.
3. No.
4. No.

PARISH OF CLATT, COUNTY OF ABERDEEN.

Population (1891), 458. Assessable Rental (1893–94), £3,162.

Letter from *John Morrison*, Inspector of Poor, 25th February 1895.

1. No. Most of labouring class here have a bit of land, and are not altogether dependent on day work.
2. Nothing.
3. No.

PARISH OF CLUNY, COUNTY OF ABERDEEN.

Population (1891), 1,196. Assessable Rental (1893–94), £6,596.

Letter from *John Mitchell*, Inspector of Poor, 25th February 1895.

1. I HAVE heard of no case of real want in parish, although the snowstorm has been protracted and severe.

PARISH OF COULL, COUNTY OF ABERDEEN.

Population (1891), 746. Assessable Rental (1893–94), £3,704.

Letter from *William Kennedy*, Inspector of Poor, 25th February 1895.

1. THERE is some exceptional distress in this district. Said distress is due to the severe winter; but I am bound to state, in the case of the able-bodied at least that it is more due to a want of prudence and economy. This I can vouch from records, and talks which I have had with aged industrious men. One man told me that he reared an average number of a family, built his own house, and reclaimed a croft on a hillside. Also he had a small sum in bank; his trade was a carpenter; being a good hand he was foreman, and his highest wages ever earned by him was 9*s.* a week and his food. Another man showed me that as a farm-servant he had reared a family of four, and also built his house and reclaimed a croft. In his youth he rarely had up to 7*l.* a half-year. Now, men of his sort are getting more than double that wages. He often paid 28*s.* and 30*s.* a boll for meal, and the price here this winter has been 12*s.* and 13*s.*, &c., &c., &c.

2. (*a.*) The

2. (*a.*) The public authorities have done nothing to meet the distress as no application has been made. The Minister of this parish (who is also Chairman of the Parochial Board) has some funds at his disposal, which he is distributing to the pressing cases. Also an agriculturalist in the district asked me if I knew of any bad case which was not being attended to. I told him of the only case I was aware of, so he offered him temporary employment.

(*b.*) The average number daily relieved by the whole of the agencies during the week ended 16th February would not exceed four.

3. No.

4. If they had to be relieved from the rates I would suggest that, in this district at any rate, it should be granted as a sort of loan. Otherwise it would be very unfair to the small landholders who have to pay rates, for I am confident that the labouring class pass far more money through their hands in a year than most of these landholders I refer to.

PARISH OF CRATHIE AND BRAEMAR, COUNTY OF ABERDEEN.

Population (1891), 1,534. Assessable Rental (1893–94), £20,041.

Letter from *William Michie*, Inspector of Poor, 25th February 1895.

1. YES, almost wholly due to the severe weather.

2. Nothing is done by public authorities, unless Kirk Sessions be included in that category. The Kirk Sessions and private individuals have been assisting the most needful as their cases became known. There is no weekly or daily distribution of assistance to the unemployed. Therefore, the number relieved during the week ended 16th February cannot be given.

3. No register is kept.

4. The distress being almost wholly due to the severe weather, there would be no want of employment did the weather permit of outdoor work being resumed. But there is no appearance of that in the meantime. I would suggest that the County Councils, or their District Committees, give the unemployed some work clearing their main roads of snow to admit of traffic being resumed, which of itself would increase employment.

PARISH OF CRIMOND, COUNTY OF ABERDEEN.

Population (1891), 825. Assessable Rental (1893–94), £5,345.

Letter from *W. B. Robertson*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. There being no exceptional distress, so far as is known nothing is required to be done; there are no unemployed.

3. No.

3. *See* Answer 2.

PARISH OF CRUDEN, COUNTY OF ABERDEEN.

Population (1891), 3,593. Assessable Rental (1893–94), £14,803.

Letter from *John Charles*, Inspector of Poor, 25th February 1895.

1. NOTHING particularly acute. Parish being chiefly agricultural a little distress perhaps among day labourers and quarriers owing to eight weeks snowstorm. Work now resumed.

2. Nothing.

3. No.

4. None.

PARISH OF CULSALMOND, COUNTY OF ABERDEEN.

Population (1891), 791. Assessable Rental (1893–94), £5,066.

Letter from *William Elder*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish.

PARISH OF DAVIOT, COUNTY OF ABERDEEN.

Population (1891), 520. Gross Rental (1893–94), £4,890. (Parish not assessed.)

Letter from *William Johnston*, Inspector of Poor, 26th February 1895.

1. No exceptional distress.
2. Nothing.
3. No.
4. No.

PARISH OF NEW DEER, COUNTY OF ABERDEEN.

Population (1891), 4,434. Assessable Rental (1893–94), £22,522.

Letter from *William Greig*, Inspector of Poor, 25th February 1895.

1. No.
3. No.

PARISH OF OLD DEER, COUNTY OF ABERDEEN.

Population (1891), 4,694. Assessable Rental (1893–94), £25,823.

Letter from *James Wallace*, Inspector of Poor, 28th February 1895.

1. YES; due to the severe and protracted snowstorm, in consequence of which out-door work has been suspended for eight weeks.

	Average Number daily.
2. The Kirk Session of the parish church have made distributions of money, coals, and meal	40
By soup kitchens (private charity) there were relieved	48
Partly from a charitable bequest and partly from private subscriptions, coals and meal were distributed to	60
	148

3. No.
4. No.

PARISH OF DRUMBLADE, COUNTY OF ABERDEEN.

Population (1891), 956. Assessable Rental (1893–94), £7,524.

Letter from *T. A. Duff*, Inspector of Poor, 28th February 1895.

1. No distress. There being no villages in this parish, and the population being almost entirely agricultural, the severe weather is not felt by the farm labourers, as they have steady wages and allowances.

PARISH OF DRUMOAK, COUNTY OF ABERDEEN.

Population (1891), 869. Assessable Rental (1893–94), £7,197.

Letter from *William Ross*, Inspector of Poor, 25th February 1895.

1. No distress in the district
2. Nothing.
3. No.
4. No.

PARISH OF DYCE, COUNTY OF ABERDEEN.

Population (1891), 1,343. Assessable Rental (1893–94), £7,164.

Letter from *R. D. Williamson*, Inspector of Poor, 25th February 1895.

1. No; it has existed since the depression in agriculture began.

2. Voluntary charity is the means employed in this district.

3. No.

4. The deplorable condition of the agriculturist is at the root of the whole matter. No improvements can be thought of now, consequently labourers leave the country and go to towns, and there increase the number of the unemployed. The only remedy is that the Government do something to improve the farmers' position; labourers would then be employed, and little distress would exist.

PARISH OF ECHT, COUNTY OF ABERDEEN.

Population (1891), 1,207. Assessable Rental (1893–94), £6,807.

Letter from *A. Ledingham*, Inspector of Poor, 28th February 1895.

1. No exceptional distress in this parish.

PARISH OF ELLON, COUNTY OF ABERDEEN.

Population (1891), 3,998. Assessable Rental (1893–94), £21,320.

Letter from *James Walker*, Inspector of Poor, 27th February 1895.

1. No. Nothing but what follows an unusually severe and prolonged snow-storm.

2. (*a.*) Voluntary contributions, and kirk session and extra parochial relief.

3. No.

4. No.

PARISH OF FINTRAY, COUNTY OF ABERDEEN.

Population (1891), 999. Assessable Rental (1893–94), £6,637.

Letter from *William Cumming*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this district that I am aware of.

PARISH OF FORGUE, COUNTY OF ABERDEEN.

Population (1891), 2,239. Assessable Rental (1893-94), £11,902.

Letter from *George Winton*, Inspector of Poor, 25th February 1895.

1. I MAY say there is no exceptional distress in this parish, only two cases having come under my knowledge where relief was required on account of the severity of the weather, the reason being that here few depend on their living altogether from day's wages, the greater part of the labouring population being farm servants and others receiving weekly wages and almost constant employment.

2. (*a.*) One of above cases was relieved temporarily by the parochial board, and the other from funds at the disposal of the Kirk Session.

3. No.

PARISH OF FOVERAN, COUNTY OF ABERDEEN.

Population (1891) 1,945. Assessable Rental (1893–94), £12,327.

Letter from *George G. Crevie*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this parish.

2. Nothing is being done by public authorities as there is no particular distress.

PARISH OF FRASERBURGH, COUNTY OF ABERDEEN.

Population (1891), 8,092. Assessable Rental (1893-94), £34,337.

Letter from *Wm. Pressley*, Inspector of Poor, 26th February 1895.

1. ANY little distress there may be is due more to the severe weather than to want of employment. There are with us, however, a number of strangers unemployed, mostly navvies come to seek work at harbour deepening, for whom the contractors are not quite ready, the works not being sufficiently far advanced.

2. (*a.*) By local authorities, work (quarrying and breaking stones) has been provided for which the men are paid at the rate of 4*d.* an hour. The quarriers would make about 14*s.* and the stonebreakers 16*s.* weekly. As to voluntary agencies, a public committee and the local soup kitchen committee, acting conjointly, have been giving assistance in the shape of provisions, &c.

(*b.*) The authorities have arranged for daily employment to 75 men. About 60 of these are strangers. The joint committee referred to gave, during the week mentioned and the first three days of the following week, coal to 180 (value 23*l.*) and food to 100 cases (value 18*l.*). From the soup kitchen, soup and bread were given daily to 15 strangers and to 40 local cases.

3. No.

4. None. The distress may now be regarded as almost at an end.

PARISH OF FYVIE, COUNTY OF ABERDEEN.

Population (1891), 4,049. Assessable Rental (1893-94), £22,638.

Letter from *James Strachan*, Inspector of Poor, 26th February 1895.

1. VERY little ; and the little that is, is, of course, due to the exceptionally severe winter depriving a few labourers of work, and rendering more fuel necessary.

2. The church has some funds at its disposal, and the minister of the parish church and his kirk session have attended to the more necessitous cases.

3. No.

4. No.

PARISH OF GARTLY, COUNTY OF ABERDEEN.

Population (1891), 928. Assessable Rental (1893-94), £5,562.

Letter from *James Horne*, Inspector of Poor, 26th February 1895.

1. ON account of the severity of the weather there are a few cases of distress.

2. Voluntary agencies are relieving all cases of distress. About twelve have got temporary relief.

3. There are hardly any unemployed in the district.

PARISH OF GLASS, COUNTY OF ABERDEEN.

Population (1891), 964. Assessable Rental (1893-94), £3,981.

Letter from *J. Simon*, Inspector of Poor, 26th February 1895.

1. CANNOT say there is any exceptional distress. It is true the protracted snowstorm has kept some labourers out of employment, but they are all crofters and have meal and milk.

PARISH OF GLENBUCKET, COUNTY OF ABERDEEN.

Population (1891), 408. Assessable Rental (1893-94) £1,710.

Letter from *Alexander Callam*, Inspector of Poor, 26th February 1895.

1. THERE is no distress in this parish.

PARISH OF GLENMUICK, COUNTY OF ABERDEEN.

Population (1891), 2,299. Assessable Rental (1893-94), £19,394.

Letter from *J. Riach*, Inspector of Poor, 25th February 1895.

1. ANY isolated cases approaching distress in this district have been among the labouring class, and up to this date have been cheerfully responded to by sympathising friends and neighbours.
The severity of the weather has been the sole cause of any distress having been felt here.

2. It has not as yet been found necessary to take any public steps, and if weather clear up and a thaw set in soon no such steps will be necessary, as employment is quite plentiful for all classes. But if the snowstorm, which has now existed for eight weeks, prevail much longer I have no doubt but that distress will to a certain extent be felt here.

3. No.

4. Nothing in the meantime.

PARISH OF HUNTLY, COUNTY OF ABERDEEN.

Population (1891), 4,583. Assessable Rental (1893-94), £13,512.

Letter from *William Leslie*, Inspector of Poor, 26th February 1895.

1. THERE is exceptional distress in the district, but not to any great extent. It is due entirely to the prolonged snowstorm.

2. A soup kitchen has been open three days every week since 1st January. Work has been given in clearing the streets of snow. Entertainments have been got up, and subscriptions received in aid of the unemployed.

3. No.

4. I consider the local efforts quite sufficient to cope with the existing distress.

PARISH OF INSCH, COUNTY OF ABERDEEN.

Population (1891), 1,384. Assessable Rental (1893-94), £7,739.

Letter from *George Murray*, Inspector of Poor, 25th February 1895.

1. No exceptional cases of distress. There are a few cases of unemployed, owing to the severe weather, but their wants have been attended to by local contributions.

3. No.

4. None.

PARISH OF INVERURIE, COUNTY OF ABERDEEN.

Population (1891), 2,954. Assessable Rental (1893-94), £10,537.

Letter from *Joseph Hopkins*, Inspector of Poor, 25th February 1895.

1. THERE has been exceptional distress in this district for the last two months, entirely due to the severe weather.

2. (*a*) The public authorities have been distributing coals and money from funds under their charge. The soup kitchen supported by voluntary contributions has been open twice a week, and for the last two weeks three times a week. There has also been one distribution of coals by voluntary contribution. Money has also been distributed by private individuals.
(*b*) From 60 to 70 families took advantage of the soup kitchen each of the three days it was open during the week mentioned.

3. No register kept. There was one distribution of coals during same week to about 80 families. Of those relieved through the above agencies only about half required it owing to unemployment. There is sufficient work in the district if weather permitted.

4. The means used seem to give general satisfaction. It is sometimes difficult to know in some cases if they are really in need.
The ministers of the different denominations in a district like this should be best able to pick out proper cases for relief.

PARISH OF KEIG, COUNTY OF ABERDEEN.

Population (1891), 748. Assessable Rental (1893-94), £4,524.

Letter from *Charles M'Intosh*, Inspector of Poor, 25th February 1895.

1. No; there are very few day labourers in this parish, and we hear of no distress.

2. Nothing.

3. No.

4. None scarcely needed, as any unemployed are clearing roads of snow.

PARISH OF KEITHHALL, COUNTY OF ABERDEEN.

Population (1891), 822. Assessable Rental (1893-94), £7,035.

Letter from *William Craig*, Inspector of Poor, 25th February 1895.

1. I AM not aware of any exceptional distress in this district.

PARISH OF KEMNAY, COUNTY OF ABERDEEN.

Population (1891), 1,799. Assessable Rental (1893–94), £5,489.

Letter from *A. Whyte*, Inspector of Poor, 25th February 1895.

1. THERE is, so far as I am aware, no exceptional distress in this district. Although the weather has been exceptionally severe, the exceptional briskness of the building trade has kept the quarries working most of the winter without much break.

2. Nothing hitherto has been required.

3. No register is kept.

PARISH OF KILDRUMMY, COUNTY OF ABERDEEN.

Population (1891), 569. Gross Rental (1893–94), £4,125 (Parish not assessed).

Letter from *George B. Watt*, Inspector of Poor, 25th February 1895.

1. No; there has been no exceptional distress in this parish during the winter.

3. No; there are no unemployed persons in this parish at present.

PARISH OF KINCARDINE O'NEIL, COUNTY OF ABERDEEN.

Population (1891), 1,830. Assessable Rental (1893–94), £12,294.

Letter from *A. Simpson*, Inspector of Poor, 25th February 1895.

1. No exceptional distress prevails in this district, although we have passed through a rather prolonged snowstorm of more than usual severity.

2. Private benevolence, but no organised effort considered necessary.

3. Not considered necessary in a district such as this.

4. When any exceptional case of distress is known to exist an amateur concert, or such like, is usually found to yield funds to meet the difficulty.

PARISH OF KING EDWARD, COUNTY OF ABERDEEN.

Population (1891), 2,714. Assessable Rental (1893–94), £11,669.

Letter from *William Fraser*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress.

2. Nothing by public authorities.
There is an annual distribution of about 30*l.* of trust funds amongst the poor.

3. There is no unemployed register maintained.

PARISH OF KINELLAR, COUNTY OF ABERDEEN.

Population (1891), 580. Assessable Rental (1893–94), £4,643.

Letter from *Alex. Smith*, Inspector of Poor, 25th February 1895.

1. No. Being an agricultural district, and the labouring class mostly farm servants with yearly or half-yearly wages, they have not suffered as day labourers have done. There is a stone quarry adjacent to the parish, and a few of the workers are housed in the village of Blackburn, but no special case of distress has appeared among them.

2. Under the circumstances no action required.

3. Not necessary.

PARISH OF KINNETHMONT, COUNTY OF ABERDEEN.

Population (1891), 932. Assessable Rental (1893–94), £5,734.

Letter from *John Morrison*, Inspector of Poor, 25th February 1895.

1. NOT that I am aware of. There are not many day labourers here ; most of them get partial employment.

2. Nothing.

3. No.

PARISH OF KINTORE, COUNTY OF ABERDEEN.

Population (1891), 2,409. Assessable Rental (1893-94), £10,076.

Letter from *Alex. Roger*, Inspector of Poor, 26th February 1895.

1. No exceptional cases of distress known to the authorities, further than what might occur in any severe winter.

2. Private charities have been extended to various most neccessitous cases.

3. No register kept.

4. No very definite suggestions beyond furnishing work where possible to those presently idle. The now change of weather will do away with any temporary distress that may have been lately experienced in this district.

PARISH OF LEOCHEL-CUSHNIE, COUNTY OF ABERDEEN.

Population (1891), 1,146. Gross Rental (1893-94), £7,672 (parish not assessed).

Letter from *James Hunter*, Inspector of Poor, 25th February 1895.

1. NONE in particular.

2. Two pedlars relieved by Parochial Board owing to severe weather.

3. No.

4. None.

PARISH OF LESLIE, COUNTY OF ABERDEEN.

Population (1891), 461. Assessable Rental (1893-94), £2,756.

Letter from *W. Ingram*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in the district, parish being purely agricultural and day labourers the exception.

2. *See* above.

3. No.

PARISH OF LOGIE BUCHAN, COUNTY OF ABERDEEN.

Population (1891), 763. Assessable Rental (1893–94), £5,323.

Letter from *William Jaffrey*, Inspector of Poor, 26th February 1895.

1. No. There are only three or four day labourers in the parish, and they are well to do. With the above exception the working class in this parish are farm servants, and get their wages whether they are working or not.

2. The few old people in the parish, who are not on the poor roll, and who are in need of any help, get a good allowance at Christmas from the funds at the disposal of the Kirk Session.
The poor on the poor roll are quite well off.

3. No need of any unemployed register in this parish.

4. There is no case of distress in this parish.

PARISH OF LOGIE COLDSTONE, COUNTY OF ABERDEEN.

Population (1891), 938. Assessable Rental (1893–94), £5,908.

Letter from *Alex. Farquharson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in the district. I have not had a single application for parochial relief. Workmen being scarce and wages consequently high they have been able previously to provide sufficient means for their support till such time as a change in the weather will enable them to resume work.

2. (*a*) There is no necessity as yet for anything being done.
(*b*) None.

3. No.

4. None.

PARISH OF LONGSIDE, COUNTY OF ABERDEEN.

Population (1891), 3,031. Assessable Rental (1893-94), £16,111.

Letter from *Alfred Wedderburn*, Inspector of Poor, 26th February 1895.

1. THERE is no distress in this parish. There are, it is true, a number of working men (labourers) who have not had steady employment for two months back owing to the severe weather, but not one, so far as I can learn, is in want or distress. Some of these men have small crofts and others have by carefulness saved something in the good weather.

2. In the village of Mintlaw, where there are a few unemployed men, a distribution of coals and groceries was given by the better-to-do inhabitants to the value of about 2*s.* 6*d.* each. This was given once.

3. No.

PARISH OF LONMAY, COUNTY OF ABERDEEN.

Population (1891), 2,286. Assessable Rental (1893–94), £10,571.

Letter from *James W. Forbes*, Inspector of Poor, 25th February 1895.

1. THE distress which has prevailed in the parish for the last seven or eight weeks has been entirely due to the severe weather.

2. The Kirk Session after a careful inquiry throughout the parish made a distribution of its funds about the 10th of January, and again on the 18th February; about 35 necessitous cases were relieved at each distribution. The

The storm seems now at an end, and with the present fresh weather there will soon be plenty of work for the labouring classes, and no further distress is expected.

3. No register kept.

4. It is rather late now, but much could have been done by the County Authorities, when the distress was at its worst, by employing men to clear the roads of snow, some of the principal roads being blocked for weeks. It is to be hoped that this matter will be considered before another winter.

PARISH OF LUMPHANAN, COUNTY OF ABERDEEN.

Population (1891), 992. Assessable Rental (1893–94), £5,704.

Letter from *John Milne*, jun., Inspector of Poor, 26th February 1895.

1. No exceptional distress in the district.

2. The Kirk Session and School Board Clerk have the management of a sum of money left by the late Mr. Smith of Glenmillan for distribution among the necessitous poor not on the roll; one distribution has been made, but none of the cases were in any sense of the word destitute.

3. No unemployed heard of in the district, or any one in need of relief by the system you refer to.

PARISH OF NEW MACHAR, COUNTY OF ABERDEEN.

Population (1891), 1,432. Assessable Rental (1893–94), £9,492.

Letter from *Peter McAllan*, Inspector of Poor, 24th February 1895.

1. No exceptional distress in this district.

2. *See* No. 1.

3. *See* No. 1.

4. *See* No. 1.

PARISH OF OLD MACHAR, COUNTY OF ABERDEEN.

Population (1891), 71,579. Assessable Rental (1893–94), £280,695.

Letter from *Thos. Skene*, Inspector of Poor, 26th February 1895.

1. No exceptional distress. What there is must be attributed almost wholly to the long period of severe weather, which caused a total cessation of out-door work.

2. (*a*) Town Council employed from 100 to 200 men clearing snow off streets, &c.

(*b*) The Poor's Association about 70 daily.
The Police Force „ 300 „
The Trades Council from 150 to 200 daily.

There is no information obtainable how many of the above were relieved more than once by Police and by Trades Council.

3. One is kept by Trades Council, and one by the Poor's Association, with fairly good results.

4. So far as I can learn there is quite plenty of work once the weather gets milder. The unemployed appear to be all provided for by one or other of above agencies, to whom there is already a marked decrease in the number of applications.

PARISH OF MELDRUM, COUNTY OF ABERDEEN.

Population (1891), 2,019. Assessable Rental (1893–94), £9,652.

Letter from *William Den*, Inspector of Poor, 25th February 1895.

1. YES, to a limited extent, and arises solely from the long-continued severity of the weather.

2. Soup kitchen open three times a week, from which rations are served out to all who choose to avail themselves of it, the unemployed included, which it is ascertained would amount to about 28.
A sum of 20*l.*, raised by voluntary subscription, has been expended on coals to the same number of unemployed, along with the other poor of the burgh.

3. No unemployed register kept, the number being so small and so well known that a register is unnecessary.

4. The distress here can and will, I am sure, be easily overtaken by voluntary effort; any distress existing being confined to the burgh, the district being agricultural, there is no reason to suppose that there is any exceptional distress existing there.

PARISH OF METHLICK, COUNTY OF ABERDEEN.

Population (1891), 1,905. Assessable Rental (1893–94), £10,023.

Letter from *James Allan*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district just now due to the severe weather.

2. A coal fund has been organised, and a good few families have received coal; that is all that has been done to meet the distress.

3. No.

4. A good supply of coals would relieve any distress in this parish at present.

PARISH OF MIDMAR, COUNTY OF ABERDEEN.

Population (1891), 1,081. Assessable Rental (1893–94), £6,467.

Letter from *Alex. Shewan*, Inspector of Poor, 26th February 1895.

1. No.

2. There is nothing being done, or, as yet, required to be done, by public authorities, or by voluntary agencies, therefore there has been none relieved during the week ended Saturday, the 16th February.

3. No.

4. No distress that I know of, or have heard of, in this parish.

PARISH OF MONQUHITTER, COUNTY OF ABERDEEN.

Population (1891), 2,512. Assessable Rental (1893-94), £10,860.

Letter from *Andrew Henderson*, Inspector of Poor, 26th February 1895.

1. THERE is not much exceptional distress in the district; what there is, is due to the severe weather, which has continued for eight weeks. The labouring people are mostly employed in agriculture, and being engaged by the half-year, their incomes have not been reduced by the severity of the weather. Road labourers and others have been employed in clearing the roads of snow.

2. (*a*) The distress up to this date has not been so great as to call for being taken up by public authorities. A voluntary agency has been promoted by the Rev. Robert McDerment, the parish minister, which has been the means of relieving the distress among the unemployed in the villages of Cuminestown and Garmond, where they mostly reside.

(*b*) On two days of the week ended the 16th February, 45 families were supplied with bread and soup by that agency.

3. No unemployed register has been maintained.

4. An appeal might be made to all those who are able to contribute in money, provisions, clothing, and shoes; and for that purpose collectors might be employed to get subscriptions should the severe weather continue.

PARISH OF MONYMUSK, COUNTY OF ABERDEEN.

Population (1891), 1,025. Assessable Rental (1893-94), £5,851.

Letter from *Wm. L. Chivas*, Inspector of Poor, 25th February 1895.

1. THERE are no acute cases of distress in this parish. A few quarriers are out of work by reason of the weather, but they are mostly crofters, so that they are not destitute, having sufficient to tide over the crisis.

2. Certain funds bequeathed to the parish in aid of poor not on the roll are managed by the Kirk Session and distributed as occasion may arise. An extra supply of coals was given by the parochial board.

3. No; practically no unemployed. No applications have been made.

4. No experience of aggravated distress the same as in towns.

PARISH OF NEWHILLS, COUNTY OF ABERDEEN.

Population (1891), 5,526. Assessable Rental (1893-94), £22,819.

Letter from *John Milne*, Inspector of Poor, 26th February 1895.

1. FOR some time back there has been exceptional distress, entirely owing to the severity of the weather, which has put a stop to out-door work.

2. A large voluntary committee was formed, and the parish divided into wards and visited. About 80 families were relieved, more or less, by money, coals, or provisions, the expenditure being over 80*l*.

3 There is no formal register kept, and no necessity for such in ordinary times; there are two large paper works in the locality in full employment. Those working at the granite quarries have been the chief sufferers.

4. The distress here is but temporary.

PARISH OF OYNE, COUNTY OF ABERDEEN.

Population (1891), 883. Assessable Rental (1893-94), £5,475.

Letter from *Alex. Christie*, Inspector of Poor, 25th February 1895.

1. No.

4. There is no exceptional distress in this parish, and very few unemployed, and these are not in any way in want.

PARISH OF PETERCULTER, COUNTY OF ABERDEEN.

Population (1891), 3,629. Assessable Rental (1893–94), £28,628.

Letter from *J. R. Allardyce*, Inspector of Poor, 1st March 1895.

1. Any distress that may be is due to the severe weather, there being abundance of work.

2. Any help rendered has been by private individuals.

3. No.

4. No; all have resumed work.

PARISH OF PETERHEAD, COUNTY OF ABERDEEN.

Population (1891), 15,830. Assessable Rental (1893–94), £48,015.

Letter from *William L. Murray*, Inspector of Poor, 25th February 1895.

1. NONE; but arises from the very severe snowstorm, and that has now gone so far that outside labour is now being carried on among masons, quarrymen, railway navvies, &c., &c.

2. The Town Council provided labour removing snow from the streets. They also collected subscriptions, and supplied coals, groceries, meal, and bread; but that has now ceased, being unnecessary, on 23rd February 1895.

3. The Town Council opened and kept a list during the time they gave relief; but there is no other. Many of our unemployed getting relief labour are persons who do not work in good weather, but loaf and idle about, and work only sufficient to enable them to drink.

4. No, none; as the relief given was only for a temporary distress, which has for the present ceased. We still continue a public soup kitchen and public coal fund, and there are various charitable institutions in the town.

PARISH OF PITSLIGO, COUNTY OF ABERDEEN.

Population (1891), 2,290. Assessable Rental (1893–94), £7,213.

Letter from *William Laing*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. Some relief has been given by private individuals in cases of ill-health, and to widows. This is a seafaring place, and very few labourers.

4. No.

PARISH OF PREMNAY, COUNTY OF ABERDEEN.

Population (1891), 930. Assessable Rental (1893–94), £4,226.

Letter from *Alexander Mennie*, Inspector of Poor, 26th February 1895.

1. YES, there is exceptional distress in this district. It is almost altogether due to the severe weather, there being a fair supply of work for unskilled workers all the year round, and at some seasons of the year workmen are difficult to get.

2. (*a*) Very little has been done publicly to relieve the distress. Individuals have here and there given to those whom they had reason to suppose were suffering. (*b*) No answer.

3. No register kept.

4. In my opinion the most feasible scheme for relieving distress in inland county districts would be for the County Council to set aside a fund for clearing snow-blocked roads. In many country districts much inconvenience is caused by the roads being blocked for weeks on end. It might almost be asserted that snowstorms, blocked roads, and distress go hand in hand. A tax of one penny per £. would be quite sufficient to meet an ordinary expenditure, and if the fund were allowed to accumulate to a sum equal to twice the amount, possibly ¼*d.* per £. would keep such a fund in working order.

PARISH OF RATHEN, COUNTY OF ABERDEEN.

Population (1891), 2,627. Assessable Rental (1893-94), £9,399.

Letter from *John Jack*, Interim Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish.

2. Several concerts have been held in aid of the poor in Inverallochy and Cairnbulg, and money, blankets and flannel have been distributed among the most needy by the Kirk Session.

3. No.

PARISH OF RAYNE, COUNTY OF ABERDEEN

Population (1891), 1,225. Assessable Rental (1893-94), £8,148.

Letter from *George Beattie*, Inspector of Poor, 25th February 1895.

1. THE severe weather has caused some distress in this parish owing to out-door work being stopped for the last two months by the protracted snowstorm.

2. Mrs. Gordon, of Newton, has given relief to some through the Inspector of Poor. Mrs. Gordon, of Rayne, has given relief through the minister. The Kirk Session gave help to all whom they could find in want. There were nine different families who got relief.

3. The Inspector of Poor went through the parish to try and find out where any relief was required. The Kirk Session published that they would give relief to anyone who was in distress.

4. There are very few in this parish, and the few that are are out-door labourers whom this severe snowstorm has kept from getting work.

PARISH OF RHYNIE, COUNTY OF ABERDEEN.

Population (1891), 1,043. Assessable Rental (1893–94), £3,679.

Letter from *Alexander Morrison*, Inspector of Poor, 25th February 1895.

1. No distress, although a few are not so well off as usual, owing to the severe weather.

2. (*a*) Nothing by public authorities; something, say about 10*l.*, has been raised by public entertainments.

3. No.

4. No. The parish is quite capable of coping with any suffering that may arise.

PARISH OF ST. FERGUS, COUNTY OF ABERDEEN.

Population (1891), 1,318. Assessable Rental (1893-94), £7,700.

Letter from *Alex. Greig*, Inspector of Poor, 26th February 1895.

1. NOT to a large extent. Seven or eight families, where the head of the house is a day-labourer, would be affected by the severe weather to some extent.

2. No relief has been given or required, further than that the Kirk Session gave a boll of meal each to eight persons.

3. No.

4. No.

PARISH OF SKENE, COUNTY OF ABERDEEN.

Population (1891), 1,673. Assessable Rental (1893-94), £9,559.

Letter from *John Wyness*, Inspector of Poor, 25th February 1895.

1. No.

4. The parish is purely agricultural. The small cottages are almost wholly occupied by farm servants. Distress in severe weather is almost unknown.

PARISH OF SLAINS, COUNTY OF ABERDEEN.

Population (1891), 1,279. Assessable Rental (1893-94), £6,512.

Letter from *John Sangster*, Inspector of Poor, 26th February 1895.

1. NO exceptional distress has come under my observation here. Weather has been exceptionally severe, and lasting, which with the irksomeness of the times is being felt more or less by some, no doubt.

2. Nothing beyond ordinary charities, and parochial casual aid.

3. No register maintained.

4. The population of this parish being partly agricultural and partly fishing, I would suggest the re-establishment of small farms, crofts and patches of ground in the former instance, and in the latter instance, plenty of sea ground, the same not to be disturbed by beam trawl.

PARISH OF STRATHDON, COUNTY OF ABERDEEN.

Population (1891), 1,220. Assessable Rental (1893-94), £9,465.

Letter from *James Kennedy*, Inspector of Poor, 25th February 1895.

1. EVERY person and animal has been suffering from the severity of the weather. Those who are improvident and also the poor must have felt it more keenly. I have not heard of any special case of distress and want.

2. Nothing is being done by public authorities. None relieved. Charitably disposed parties have been giving to the poor around. Men out of employment in this rural district get supplies from the merchants till they earn wages.

3. No.

4. To the able-bodied I would give no relief without work being done. The loafers will not work. The improvident will make no provision for such a season. These two classes are entirely beyond the capacity of man to say what can be done for them, and they cry earliest and loudest.

PARISH OF STRICHEN, COUNTY OF ABERDEEN.

Population (1891), 2,552. Assessable Rental (1893-94), £12,675.

Letter from *George Mark*, Inspector of Poor, 25th February 1895.

1. YES. Entirely due to the severe weather. The really unemployed numbered about 25; the others on account of the weather were assisted.

2. (*a*) Voluntary agency. A soup kitchen instituted and in operation three days weekly. Bread given with rations of soup; about 90 supplied from soup kitchen, and 25 of the unemployed day labourers are receiving meal and groceries. In addition the owner of the estate made a distribution of coals to about 80 individuals.

3. No.

4. Neighbourhood purely rural, and day labourers only affected.

PARISH OF TARLAND, COUNTY OF ABERDEEN.

Population (1891), 736. Assessable Rental (1893–94), £3,829.

Letter from *William Simpson*, Inspector of Poor, 25th February 1895.

1. NONE.

2. (*a*) There is nothing required in the parish. (*b*) None.

3. No.

4. None.

PARISH OF TARVES, COUNTY OF ABERDEEN.

Population (1891), 2,344. Assessable Rental (1893–94), £14,077.

Letter from *Wm. Wilson*, Inspector of Poor, 26th February 1895.

1. NO.

2. Any one in distress has been relieved by the Kirk Session from a fund called the Hatt Fund.

3. No.

PARISH OF TOUGH, COUNTY OF ABERDEEN.

Population (1891), 675. Assessable Rental (1893–94), £4,549.

Letter from *Alex. Dow*, Inspector of Poor, 25th February 1895.

1. NO. With the exception of a very few large farms, the whole parish is composed of small farms and crofts, and no exceptional distress exists in the meantime. There certainly is a depression *felt*, but not a single application for relief has as yet been made.

2. Nothing is required in the meantime.
No applications.

3. No register required.

4. No.

PARISH OF TOWIE, COUNTY OF ABERDEEN.

Population (1891), 939. Assessable Rental (1893–94), £5,933.

Letter from *Alex. Henderson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in our district, few labourers residing in it.

2. None necessary.

3. No.

4. None.

PARISH OF TULLYNESSLE AND FORBES, COUNTY OF ABERDEEN.

Population (1891), 975. Assessable Rental (1893-94), £5,598.

Letter from *James McC. Pithie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish at present. During the long-continued and very severe storm labour has been entirely suspended up to this date, but the labouring classes seem to have been prepared for it, as no application for relief has been made by any one.

2 (*a*) Nothing

2. (*a*) Nothing is being done by the public authorities beyond the usual consideration of applications when made, but there has been no application for relief of any kind. There are no voluntary agencies. One of the proprietors generally makes a distribution of coals in the beginning of winter.
(*b*) None relieved.

3. No unemployed register has ever been kept in this parish.

4. I can suggest no means of relieving exceptional distress except by means of the Parochial Board and voluntary charity.

PARISH OF TURRIFF, COUNTY OF ABERDEEN.

Population (1891), 4,253. Assessable Rental (1893–94), £21,884.

Letter from *John L. Keith*, Inspector of Poor, 27th February 1895.

1. YES. Almost entirely occasioned by the severe weather, hence want of employment.

2. Soup kitchen, supported by subscriptions, open several times a week and would be taken advantage of by about 100 persons. Occasionally there are free dinners.
Upwards of 60 persons have been relieved by means of voluntary subscriptions. About 40*l.* was collected, the greater part of which has already been disbursed in kind. There are also yearly distributions of coals and meal to the poor and needy.

3. No.

4. Providing of employment.

PARISH OF TYRIE, COUNTY OF ABERDEEN.

Population (1891), 2,843. Assessable Rental (1893–94), £9,301.

Letter from *Wm. Stewart*, Inspector of Poor, 25th February 1895.

1. THERE has been somewhat exceptional distress in this parish in consequence of the protracted severe weather.

2. The local charities in the district have been largely devoted by the managers to meet the distress prevalent.

3. No.

4. I am of opinion that no steps are meantime required to be taken, as local effort is quite sufficient to cope with the distress.

PARISH OF UDNY, COUNTY OF ABERDEEN.

Population (1891), 1,677. Assessable Rental (1893–94), £12,165.

Letter from *Thos. Duguid*, Inspector of Poor, 26th February 1895.

1. ANY exceptional distress in the district is due to the lengthened severity of the weather. The proportion is so very small that they are looked after by the charitably-disposed people in their own immediate locality.

PARISH OF ARDCHATTAN &c., COUNTY OF ARGYLL.

Population (1891), 1,975. Assessable Rental (1893-94), £17,114.

Letter from *A. M. Sinclair*, Inspector of Poor, 25th February 1895.

1. No. A good number of workers at Banawl Quarries were prevented for some time by the frost from working, but the change of weather will now enable them to resume work.

2. Nothing.

3. No.

4. I do not think any action necessary.

PARISH OF ARDNAMURCHAN, COUNTY OF ARGYLL AND INVERNESS.

Population (1891), 3,636. Assessable Rental (1893–94), £14,300.

Letter from *D. Cameron*, Inspector of Poor, 26th February 1895.

1. No.

2. Nothing.

3. No.

4. No.

PARISH OF CAMPBELTOWN, COUNTY OF ARGYLL.

Population (1891), 10,260. Assessable Rental (1893–94), £49,135.

Letter from *John Stewart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress. The applications for parochial relief since 28th January have only been four, smaller than usual. There is a fairly good herring fishing since the New Year and good prices ruling.

2. (*a*) Public authorities, *nil*. Voluntary agencies, the usual doings.
(*b*) No statistics.

3. No.

PARISH OF COLL, COUNTY OF ARGYLL.

Population (1891), 522. Assessable Rental (1893–94), £2,663.

Letter from *James A. Clement*, Inspector of Poor, 25th February 1895.

1. NONE. In this island those who are not crofters are in regular employment on the farms, or are in the employment of the proprietor of Coll estate.

2. (*a*) Nothing.
(*b*) None.

3. No.

4. So far as this parish is concerned, there is nothing abnormal in the condition or surroundings of the inhabitants, and there has been no extra application made for parochial relief.

PARISH OF COLONSAY AND ORONSAY, COUNTY OF ARGYLL.

Population (1891), 381. Gross Rental (1893–94), £2,799 (Parish not assessed).

Letter from *Neil MacMillan*, Inspector of Poor, 26th February 1895.

1. THERE is not believed to be any exceptional distress.

3. No.

4. No.

PARISH OF CRAIGNISH, COUNTY OF ARGYLL.

Population (1891), 389. Assessable Rental (1893–94), £2,751.

Letter from *Thomas Kay*, Inspector of Poor, 25th February 1895.

1. NOTHING exceptional, though those engaged in outside work have been able to earn little or nothing for seven weeks back.

2. (*a*) Nothing by either.
(*b*) None.

3. No.

4. None.

PARISH OF DUNOON AND KILMUN, COUNTY OF ARGYLL.

Population (1891), 8,683. Assessable Rental (1893–94), £63,876.

Letter from *William Christie*, Inspector of Poor, 4th March 1895.

1. YES; due to the severe weather.

2. (*a*) Employment given by the Police Commissioners, and soup kitchens started by voluntary agencies.
(*b*) 31 men accepted employment from Police Commissioners, and 175 individuals were supplied with soup and bread.

3. No.

4. No suggestions beyond what is indicated in answer 2.

Note.—The above answers apply only to the police burgh of Dunoon. There has been no exceptional distress in the landward part of the parish.

PARISH OF GIGHA AND CARA, COUNTY OF ARGYLL.

Population (1891), 401. Assessable Rental (1893–94), £2,063.

Letter from *Charles Cameron*, Inspector of Poor, 5th March 1895.

1. No.

2. No.

PARISH OF GLASSARY, COUNTY OF ARGYLL.

Population (1891), 3,836. Assessable Rental (1893–94), £13,535.

Letter from *Hugh McDiarmid*, Inspector of Poor, 26th February 1895.

1. THERE has been exceptional distress in this district during the last two months. A number of people were unable to work owing to the severe weather, and I have no doubt a few suffered a little for the time; but now that the weather has taken a decided change for the better, work has been renewed. I refer chiefly to tradesmen, such as masons, &c., who are not connected with estates, but they are not a numerous class. The landward part consists chiefly of an agricultural and fishing population. While admitting there may have been a few cases of hardship, and such cases will be met with any winter, I am not prepared to say that there has been distress of an exceptional character. I may state with regard to applications for parochial relief, that there is no increase as compared with former years, and that no application resulting from non-employment has been made.

2. Nothing has been done by public authorities. I am aware that a considerable sum derived from private sources has been distributed among the most necessitous poor in the burgh of Lochgilphead. A few of the unemployed received some assistance privately, but I am not able to give the number.

3. No.

4. No.

PARISH OF GLENORCHY, COUNTY OF ARGYLL.

Population (1891), 1,641. Assessable Rental (1893–94), £12,056.

Letter from *John Campbell*, Inspector of Poor, 27th February 1895.

1. NONE.

2. None.

3. No.

4. No distress in this district.

INISHAIL DISTRICT, PARISH OF GLENORCHY &C., COUNTY OF ARGYLL.

Population (1891), —. Assessable Rental (1893–94), £— (included in Glenorchy).

Letter from *A. M. Sinclair*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

4. The change in the weather will now enable everyone, who is willing, to work.

PARISH OF INVERARAY, COUNTY OF ARGYLL.

Population (1891), 1,466. Assessable Rental (1893–94), £6,187.

Letter from *John Rodger*, Inspector of Poor, 25th February 1895.

1. NONE.

2. (*a*) None.
(*b*) *Nil.*

3. No.

4. None.

PARISH OF INVERCHAOLAIN, COUNTY OF ARGYLL.

Population (1891), 359. Gross Rental (1893–94), £5,021 (Parish unassessed).

Letter from *Thomas McNab*, Inspector of Poor, 1st March 1895.

1. THERE is no distress in the district.

3. There are no unemployed.

PARISH OF JURA, COUNTY OF ARGYLL.

Population (1891), 724. Gross Rental (1893–94), £5,476 (Parish unassessed).

Letter from *John McGillivray*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish; in fact, no distress at all exists.

2. *Nil.*

3. No.

4. No.

PARISH OF KILARROW, COUNTY OF ARGYLL.

Population (1891), 2,660. Assessable Rental (1893–94), £15,449.

Letter from *M. Mactaggart*, Inspector of Poor, 26th February 1895.

1. THERE are annually a good number of unemployed persons, but there is no exceptional distress this year. The cause of so many people being unemployed is due to the want of any industry in the winter time. The people are either engaged in agricultural labour or fishing, with the exception of a small number employed in the distilleries. In winter time there is very little farm labour required, and no fishing is done.

2. (*a*) There are no voluntary agencies, and nothing is being done. The Islay estate employs at relief works a good number of men who would otherwise be unemployed.

3. None.

4. I can only suggest the establishment of some work in the winter time to keep the agricultural labourers and the fishermen employed.

PARISH OF KILBRANDON, COUNTY OF ARGYLL.

Population (1891), 1,574. Assessable Rental (1893-94), £5,296.

Letter from *Don. McDougall*, Inspector of Poor, 26th February 1895.

1. No.

2. There is nothing done, as there was no marked distress in the parish.

3. There is no unemployed register kept. There is ample employment in the parish for any person willing to work, and there is a number of strangers employed over and above the inhabitants. The snow and frost did not interrupt the State works to any extent. There are very few workmen depending on farm work.

PARISH OF KILCALMONELL, COUNTY OF ARGYLL.

Population (1891), 1,901. Assessable Rental (1893–94), £8,099.

Letter from *A. M'Dougall*, Inspector of Poor, 25th February 1895.

1. THE fishing industry, upon which the majority of the population of the district depend, has been for successive seasons nearly a failure, and were it not that the merchants continue to supply them with provisions, in the hope that next season will be more successful, the distress would be great. Distributions of food, coal, and clothing from several sources have already been made.

2. The proprietor of the district has employed this and last year the most needful of the men for making roads. About 18 have been at work during the past fortnight, and it is expected that double that number will be employed next week. Thirty-four were engaged at similar work last year.

3. None kept.

4. With the exception of the foregoing remarks, I have no further suggestions to make.

PARISH OF KILCHOMAN, COUNTY OF ARGYLL.

Population (1891), 2,697. Assessable Rental (1893–94), £11,251.

Letter from *M. Mactaggart*, Inspector of Poor, 26th February 1895.

1. THERE are annually a good number of unemployed persons, but there is no exceptional distress this year. The cause of so many people being unemployed is due to the want of any industry in the winter time. The people are either engaged in agricultural labour or fishing, with the exception of a small number employed in the distilleries. In winter time there is very little farm labour required, and no fishing is done.

2. (*a*) There are no voluntary agencies, and nothing is being done.

3. None.

4. I can only suggest the establishment of some work in the winter time to keep the agricultural labourers and the fishermen employed.

PARISH OF KILCHRENAN &c., COUNTY OF ARGYLL.

Population (1891), 415. Assessable Rental (1893–94), £4,248.

Letter from *A. M. Sinclair*, Inspector of Poor, 26th February 1895.

1. NO.

2. Nothing.

3. No.

4. I do not consider any action necessary.

PARISH OF KILDALTON, COUNTY OF ARGYLL.

Population (1891), 2,027. Assessable Rental (1893–94), £10,181.

Letter from *Colin Campbell*, Inspector of Poor, 26th February 1895.

1. YES. Distress due principally to severe weather; many families have been rendered homeless, their houses blown down by storm upon 28th and 29th December. Some three or four fishermen lost boats and gear (two, boats and gear completely, and others, partial loss of gear and damage to boats). Labour hindered much by severe weather.

2. Nothing has been done by public authorities till 25th instant, when 5*l.* of a fund at the disposal of the Parochial Board voted for the relief of the distressed. Previous to that time the prevailing distress was partially relieved by voluntary agencies. No account having been kept, no definite information can be given further than that the number relieved up till 16th instant was: in food, clothing, and fuel, (Mrs. Ramsay), 67; in Friendly Society, (Masonic Lodge), 64.

3. No.

Note.—The labour market here is always uniform and, therefore, there are few unemployed (or at any rate there should be few).

4. None. Further than that I think, if there is a fund disposable, that it should be applied towards the providing of some employment to those unemployed, and for some useful purpose such as the forming of a boatslip or winter quarters for fishing boats. A matter of 300*l.* paid out in this direction would tend to prevent the disasters which have taken place this year, as the fishermen could use smaller boats in winter and a smaller quantity of nets and other gear, and to relieve the distressed.

PARISH OF KILFINAN, COUNTY OF ARGYLL.

Population (1891), 2,074. Assessable Rental (1893–94), £13,924.

Letter from *Alexander Stewart*, Inspector of Poor, 28th February 1895.

1. YES, and mostly due to severe weather and failure of the fishing industry. The cause of the latter is generally attributed in this quarter to the practice of seine trawling for herring, which is extensively carried on about Lochfyne and the neighbouring waters of the Firth of Clyde, and which, it seems to be generally admitted, is ruinous to the herring fishing industry and militates very badly against drift net fishing. The trawlers would gladly return to the system of drift net fishing, but are too poor to acquire nets, &c.

2. Nothing by public authorities ; private parties have distributed coals and groceries to needful persons as far as known, but many of the natives here would almost rather die than plead poverty.

3. No.

4. As the severe weather seems now to be at end several buildings will be gone on with in the district immediately, and probably those out of employment will get work. This will keep the fishermen employed till the fishing season arrives. The main cause of their utter destitution is their being landless.

PARISH OF KILFINICHAN, COUNTY OF ARGYLL.

Population (1891), 1,745. Assessable Rental (1893-94), £5,540.

Letter from *Alexander M'Gregor*, Inspector of Poor, 1st March 1895.

1. THERE is exceptional distress in one part of the parish, at Creich, principally due to the stoppage of Tormore Granite Quarries, owing to the severe weather. They will resume next week.

2. A voluntary soup kitchen was started at Bunessan some few weeks ago, and eight persons only of the working classes receive free dinners daily.

3. No.

4. No.

PARISH OF KILLEAN AND KILCHENZIE, COUNTY OF ARGYLL.

1. NONE whatever.

PARISH OF KILMODAN, COUNTY OF ARGYLL.

Population (1891), 351. Gross Rental (1893-94), £4,105 (Parish unassessed).

Letter from *J. MacInnes* Inspector of Poor, 27th February 1895.

1. No.

3. No.

PARISH OF KILMORE AND KILBRIDE, COUNTY OF ARGYLL.

Population (1891), 5,729. Assessable Rental (1893–94), £39,828.

Letter from *Hugh Skinner*, Inspector of Poor, 25th February 1895.

1. ALL the distress that there has been has been owing to the exceptionally severe weather.

2. The Town Council and other local agencies have made provision to meet the existing distress. As to the number relieved I have to refer you to the information given by our Town Clerk.

3. None that I am aware of.

4. I have no suggestions to make.

PARISH OF KILNINIAN AND KILMORE, COUNTY OF ARGYLL.

Population (1891), 2,344. Assessable Rental (1893–94), £12,048.

Letter from *Niel Morison*, Inspector of Poor, 28th February 1895.

1. NOT aware of any distress in this parish.

PARISH OF KILNINVER &c., COUNTY OF ARGYLL.

Population (1891), 407. Assessable Rental (1893–94), £4,629.

Letter from *John Campbell*, Inspector of Poor, 25th February 1895.

1. No. This parish being almost entirely pastoral, the distress prevalent in many other districts is not felt here, I am thankful to say.

PARISH OF NORTH KNAPDALE, COUNTY OF ARGYLL.

Population (1891), 867. Assessable Rental (1893–94), £4,173.

Letter from *Hugh McDiarmid*, Inspector of Poor, 26th February 1895.

1. No distress of an exceptional character exists in this parish.

PARISH OF SOUTH KNAPDALE, COUNTY OF ARGYLL.

Population (1891), 3,017. Assessable Rental (1893–94), £12,361.

Letter from *Alex. L. MacGilp*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in the district, the district being dependent to a great extent on the fishing industry; and the fishing season being practically closed annually in December. The effect of the severe weather since December has not so much to do with any case of actual distress as a bad fishing season.

2. There has been no demand or call for public authorities to intervene.

3. No.

4. No.

PARISH OF LISMORE AND APPIN, COUNTY OF ARGYLL.

Population (1891), 3,135. Assessable Rental (1893–94), £16,903.

Letter from *D. Macintyre*, Inspector of Poor, 26th February 1895.

1. NOT in a pronounced form, but the long spell of severe weather has doubtless made itself felt by the labouring class.

3. No.

4. No.

PARISH OF LOCHGOILHEAD AND KILMORICH, COUNTY OF ARGYLL.

Population (1891), 787. Assessable Rental (1893–94), £7,798.

Letter from *William Smith*, Inspector of Poor, 26th February 1895.

1. No distress of any kind.

PARISH OF MORVEN, COUNTY OF ARGYLL.

Population (1891), 820. Assessable Rental (1893-94), £6,580.

Letter from *Arch. Cameron*, Inspector of Poor, 27th February 1895.

1. THERE is no distress in this district, because all the working people are fully employed. During the severe weather in the month of January outside work was only suspended for a couple of days. No destitution of any kind in the parish.

2. No action on the part of the authorities necessary.

3. No.

4. None.

PARISH OF SADDELL AND SKIPNESS, COUNTY OF ARGYLL.

PARISH OF AUCHINLECK, COUNTY OF AYR.

Population (1891), 6,202. Assessable Rental (1893-94), £24,935.

Letter from *David Smith*, Inspector of Poor, 25th February 1895.

1. EXCEPTIONAL distress has existed only to a very small extent, and that has been due to the severity of the weather.

2. Nothing.

3. No.

4. None.

PARISH OF AYR, COUNTY OF AYR.

Population (1891), 11,179. Assessable Rental (1893-94), £77,637.

Letter from *David Caldwell*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress in the district on account of the severe weather.

2. The municipal authorities have opened soup kitchens, to which the charitable public subscribe, and I am informed that 800 rations are daily supplied. The unemployed and necessitous poor are relieved to the extent of about 70*l.* per week.

3. No.

4. It is quite exceptional the severe weather that we are at present suffering from, because, as a rule, the winters here are very open. For this reason no suggestion can be made of a permanent nature, further than statutory authority might be granted to municipal or other authorities to make provision for exceptional distress when it occurs.

PARISH OF BALLANTRAE, COUNTY OF AYR.

Population (1891), 1,268. Assessable Rental (1893-94), £10,851.

Letter from *James Wason*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress, due to the severity of the weather and the failure of the winter cod and herring fishing.

2. There is no organised authority here having power to deal with such a question. The better-to-do are considerate and kind to the poor, but as such kindness is without ostentation statistics cannot be given. It would, however, I think, be correct to say that no acute case of distress continues to exist for any length of time for the reasons stated.

3. No.

4. Yes. The abolition of seine trawling on the Ballantrae Banks would establish Ballantrae a small Eldorado where poverty, at any rate, would be unknown.

PARISH OF BARR, COUNTY OF AYR.

Population (1891), 549. Assessable Rental (1893-94), £11,159.

Letter from *Adam Caldwell*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Very few poor people in the place except paupers, and these and others have been relieved by different parties at various times in the shape of coals, money, tea, and tobacco, and cannot state the exact number.

3. No register of unemployed is kept in the place, as there are few poor people except paupers.

4. None.

PARISH OF BEITH, COUNTY OF AYR.

Population (1891), 7,126. Assessable Rental (1893-94), £28,796.

Letter from *Sam. Kerr*, Inspector of Poor, 26th February 1895.

1. YES, on account of the severe weather, and one of the largest factories being burned down.

2. Over 120*l.* has been raised by voluntary subscription in the town; a few employed for a few days removing snow off the streets. Three soup kitchens were started on the 13th February and still continue, over 100 being served daily. Tickets are also being distributed throughout the town for provisions.

3. All the parties who receive tickets for provisions are registered.

4. No, except what is being done as stated above

PARISH OF COLMONELL, COUNTY OF AYR.

Population (1891), 1,900. Assessable Rental (1893-94), £22,451.

Letter from *John M'William*, Inspector of Poor, 27th February 1895.

1. No.

3. No.

4. No.

PARISH OF COYLTON, COUNTY OF AYR.

Population (1891), 2,667. Assessable Rental (1893-94), £13,529.

Letter from *John Smith*, Inspector of Poor, 25th February 1895.

1. No exceptional distress. The population consists of farmers and their labourers, and miners. The miners are in full work.

2. Nothing being done, because there is not the slightest occasion for it.

3. No.

4. No distress.

PARISH OF CRAIGIE, COUNTY OF AYR.

Population (1891), 552. Gross Rental (1893–94), £10,408 (Parish unassessed).

Letter from *Andrew McFarlane*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the district.

2. (*a*) Nothing needed.
(*b*) None.

3. No.

4. No distress.

PARISH OF NEW CUMNOCK, COUNTY OF AYR.

Population (1891), 4,419. Assessable Rental (1893-94), £30,036.

Letter from *Alexander Moodie*, Inspector of Poor, 26th February 1895.

1. THERE are a few exceptional cases in the parish, the cause of which is chiefly through the illness of the parents, and the children, in consequence, are suffering from want of food and clothing.

2. A committee has been formed of voluntary agents, who are appealing to the public for subscriptions in aid of those cases above mentioned.
The Curling Club have also been relieving the more necessitous cases by distribution of loaves and oatmeal to upwards of 60 persons.

3. There is no register of unemployed in this district. The only class of unemployed are a few stonemasons and labourers. None of them, even although they had been idle during the last eight weeks, are complaining of urgent distress or poverty.

4. The committee have arranged, and have secured funds sufficiently to meet all urgent and necessitous cases of this kind in the meantime.

PARISH OF OLD CUMNOCK, COUNTY OF AYR.

Population (1891), 4,712. Assessable Rental (1893–94), £21,291.

Letter from *David Smith*, Inspector of Poor, 25th February 1895.

1. THERE has been a little exceptional distress, but only on account of the severity of the weather.

2. Nothing by Parochial Board, a little by voluntary agencies.

3. No.

4. No.

PARISH OF DAILLY, COUNTY OF AYR.

Population (1891), 1,830. Assessable Rental (1893–94), £13,164.

Letter from *Archibald Ritchie*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in the district. The out-door workers have certainly been hard pressed, owing to severe weather, but have been making no complaints.

2. Nil.

3. No.

4. None.

PARISH OF DALMELLINGTON, COUNTY OF AYR.

Population (1891), 5,034. Assessable Rental (1893–94), £14,874.

Letter from *Alexander S. Glass*, Inspector of Poor, 25th February 1895.

1. No.

2. Nil.

3. No.

4. No.

PARISH OF DALRY, COUNTY OF AYR.

Population (1891), 8,164. Assessable Rental (1893-94), £35,631.

Letter from *Alexander Comrie*, Inspector of Poor, 25th February 1895.

1. NO. In this parish, in consequence of the great majority of workers being engaged in mining, and their children in factories, there are very few unemployed, and the severe weather has not affected the wages of the great body of inhabitants.

2. Nothing has been done by the Public Authorities, but the Kirk Session and the authorities of Dissenting Bodies have made a liberal allowance of coals to the poor. The curlers have also distributed from 16*l.* to 20*l.* among the few unemployed and the poor people, but this is done almost annually.

3. As there are practically no unemployed in the parish, no unemployed register has been kept.

4. Having really no great distress in the parish, I have no suggestions to make. In many cases those who have received voluntary contributions would have been better without them, as in several cases they have been misused.

PARISH OF DALRYMPLE, COUNTY OF AYR.

Population (1891), 1,338. Assessable Rental (1893-94), £12,966.

Letter from *William Clark*, Inspector of Poor, 5th March 1895.

1. No exceptional distress. Heads of families in village nearly all in constant employment (railway surfacemen, foresters, &c.).

2. Nothing.

3. No.

4. No.

PARISH OF DREGHORN, COUNTY OF AYR.

Population (1891), 4,057. Assessable Rental (1893-94), £20,493.

Letter from *Ninian Auld*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the parish meantime.

PARISH OF DUNDONALD, COUNTY OF AYR.

Population (1891), 9,545. Assessable Rental (1893-94), £50,147.

Letter from *R. F. Black*, Inspector of Poor, 25th February 1895.

1. NONE. The long-continued and exceptionally severe weather stops out-door employment.

2. The burgh of Irvine is about one-half in Dundonald parish and one-half in Irvine parish. The burgh authorities employed about 50 men daily on week ending 16th February clearing the streets of snow and ice. The number of unemployed who could be procured for this sort of work is diminishing; during last week ending 23rd February, 26 men was the most that could be procured on any day. The Countess of Eglinton provided a soup kitchen, giving free dinners two days weekly. The magistrates supplemented this, and it was kept open four days weekly for the past two weeks; all who apply are served. Seventy applied, and were served with soup and bread on Thursday, 21st February. This is the greatest number of any day during this winter.

3. None.

4. No.

PARISH OF DUNLOP, COUNTY OF AYR.

Population (1891), 1,410. Assessable Rental (1893-94), £14,548.

Letter from *James Stevenson*, Inspector of Poor, 6th March 1895.

1. I AM pleased to report that there has been no exceptional distress in this parish at this time. Being almost entirely

entirely an agricultural district, labourers, &c., are employed as a rule by the year or half-year as the case may be. Work, of course, has certainly been greatly delayed.

2. (*a*) Nothing.
(*b*) Nil.

3. No unemployed register.

4. Not necessary under present circumstances.

PARISH OF FENWICK, COUNTY OF AYR.

Population (1891), 1,007. Assessable Rental (1893–94), £14,807.

Letter from *William Brown*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. A few out-door labourers have been idle since near the New Year from the severity of the weather, but have managed to maintain themselves.

2. No.

3. No.

4. No.

PARISH OF GALSTON, COUNTY OF AYR.

Population (1891), 6,408. Assessable Rental (1893–94), £27,754.

Letter from *John Roxburgh*, Inspector of Poor, 25th February 1895.

1. NO exceptional distress, except with out-door unemployed through the severity of the weather.

2. Commissioners of Burgh of Galston have instituted fund by public subscription, which has been liberally responded to, and necessitous cases dealt with according to requirements. No distress in landward part of the parish.
Average number of cases dealt with 36.

3. No register except in connection with the above.

4. None. Should the weather shortly take a favourable change, out-door work will be resumed, and the distress will then disappear.

PARISH OF GIRVAN, COUNTY OF AYR.

Population (1891), 4,906. Assessable Rental (1893–94), £24,331.

Letter from *W. S. M'Arthur*, Inspector of Poor, 4th March 1895.

1. YES. Almost entirely due to the severe weather.
With the exception of a small number employed at handloom weaving, which is in a state of chronic depression, the population depends principally on agricultural labour and fishing, both forms of industry having been brought to a complete standstill through the severity of the weather.

2. (*a*) An influential committee of a most representative character, including members of the Police Commission and Parochial Board, was formed, and raised a fund for the relief of the unemployed and destitute.
(*b*) The total number relieved by this committee, with coals, lines for provisions, &c., being 409, of this number about 270 were relieved with coal only.

3. No.

4. No. Happily such acute distress occurs here only at long intervals.

PARISH OF IRVINE, COUNTY OF AYR.

Population (1891), 6,141. Assessable Rental (1893–94), £22,680.

Letter from *A. W. Paterson*, Inspector of Poor, 28th February 1895.

1. THERE is no exceptional distress in the district. What distress there was, or is, has been almost entirely attributable to severe weather; the recent coal strike may have had some little to do with any suffering.

2. Unemployed men are being employed by the corporation in improving their works, and between that, private subscriptions, and a "soup kitchen," want has been fairly well met. Week ended 16th February, 50 men got 2*s.* per day from the corporation; all who applied got work, less or more.

3. No.

4. None.

PARISH OF KILBIRNIE, COUNTY OF AYR.

Population (1891), 5,468. Assessable Rental (1893–94), £18,568.

Letter from *Robert Thomson*, Inspector of Poor, 26th February 1895.

1. AT present there is no unemployed in the district except what has been caused by the severity of the weather. A considerable number of labourers, masons and others have been idle from this cause, but, as a rule, they had some of their families employed in the public works, so that there was no absolute want.

2. There was a great deal of destitution in the Glengarnock district, caused by the coal miners' strike for 22 weeks. Mr. Cuningham provided a soup kitchen for an average of 150, including women and children; there was also a public subscription raised to supply the poor children with breakfasts, shoes, and clothing. About 110 were thus supplied for about 14 weeks, but now that the furnaces and steel works are again started, these things are come to an end, and there is no unemployed in the district.

3. No.

4. I am of opinion that if Board of Conciliation were instituted, to which both parties were obliged to submit, it might be the means of preventing such disastrous strikes as have occurred of late.

PARISH OF WEST KILBRIDE, COUNTY OF AYR.

Population (1891), 2,302. Assessable Rental (1893-94), £22,618.

Letter from *William A. Millar*, Inspector of Poor, 25th February 1895.

1. THE severe weather from which we have suffered for the last eight weeks has thrown a large number of masons' labourers and others out of employment, but with the return of open weather, matters will be mended.

2. A soup kitchen was started fully two weeks ago. About 40 families were relieved daily by this agency during the past and previous weeks. Several wealthy gentlemen in the parish have, to my knowledge, given both money and goods to relieve the existing distress. The Northern District Committee, through the road surveyor, employed a large number of men at 3*s.* 4*d.* per day, clearing the roads, &c., of snow.

3. No.

4. No.

PARISH OF KILMARNOCK, COUNTY OF AYR.

Population (1891), 27,968. Assessable Rental (1893-94), £97,416.

Letter from *John Reid*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish except that caused by the severity of the weather. The relief granted is more than is required, as many are receiving relief who do not belong to the unemployed. We are trying to get this put right in future.

2. A voluntary subscription has been raised amounting to fully 400*l.*, and under the direction of the Provost and Town Council, relief has been granted by giving small sums of money and coals, and a free dinner every day. About 200 men and 400 children get relief daily. The supply of food is lavish. I believe many of the children belong to parents in good employment. The fund is only about 400*l.*, including clothing, grants of coals, and bread, but subscriptions are still being sent in.

3. No. But there ought to be a register kept, as I am satisfied that nearly one-half of the men relieved here do not belong to this district. It appears there is a branch railway being formed near Darvel, about 10 miles from this, who are unable to work owing to the frost, and the free dinners bring them here, as no provision has been made for them in Darvel.

4. I think the fund should be dispensed only to the unemployed; their names and addresses should be taken, and also name of their last employer. I have examined the lists of those who have got money and coal, and I find that many of them are in receipt of parochial relief. I have pointed this out to the committee, and expect this will be avoided in future.

COUNTY OF KILMAURS, COUNTY OF AYR.

Population (1891), 4,453. Assessable Rental (1893–94), £22,266.

Letter from *William Lindsay*, Inspector of Poor, 26th February 1895.

1. NO exceptional distress in the parish or district, but a good many tramp labourers, or workers from other places, have been going about begging of late, stating that they could not get employment owing to the severe weather and continued frost.

2. No agencies at work during the week mentioned, but efforts have since been made to get funds for a soup kitchen.

3. No unemployed register kept.

4. The soup kitchen supply goes furthest, and was found most beneficial during the recent miners' strike.

PARISH OF KILWINNING, COUNTY OF AYR.

Population (1891), 7,007. Assessable Rental (1893-94), £35,600.

Letter from *John Milne*, Inspector of Poor, 25th February 1895.

1. THE distress in this parish is very great at the present time, but it is entirely due to the state of the weather, all out-door work being entirely suspended.

2. The Provost and Commissioners have opened a relief fund, and public soup kitchens have been opened. Subscriptions in aid of the same are freely given by private individuals. About 74 families, or 258 persons, are daily supplied with soup and bread.

3. No.

4. The relief fund meets the distress pretty well in this parish. None.

PARISH OF KIRKMICHAEL, COUNTY OF AYR.

Population (1891), 1,870. Assessable Rental (1893–94), £13,147.

Letter from *R. Andrew*, Inspector of Poor, 26th February 1895.

1. IN the villages of Kirkmichael and Crosshill amongst a few of the labouring men there has been exceptional distress, due wholly to the severe weather, and in these cases, I fear, are depending much on credit with their grocer.

2. Nothing, and there has been no applications.

3. No.

4. Open weather would give all employment.

PARISH OF KIRKOSWALD, COUNTY OF AYR.

Population (1891), 1,652. Assessable Rental (1893–94), £13,262.

Letter from *Alex. Herron*, Inspector of Poor, 25th February 1895.

1. I AM not aware of any exceptional distress in the district, due to circumstances peculiar to the locality or to the severe weather.

3. No.

PARISH OF LARGS, COUNTY OF AYR.

Population (1891), 5,320. Assessable Rental (1893–94), £41,295.

Letter from *Bryce Barr*, Inspector of Poor, 25th February 1895.

1. THERE is annually a certain amount of distress through masons and labourers being unable to work. That distress is much aggravated by the long continued severe weather this year. Much has been done both in the past and present season to mitigate it, by the distribution of coals, money, &c., by the different churches and by private individuals.

2. (*a.*) In addition to the usual fortnightly out-door relief, my board instructed me at a meeting on 15th to send 4 cwt. coal to each pauper.
The Police Commissioners provided work, breaking and quarrying stones. As some were unable to do that kind of work, they were sent to clear away snow, and I am informed that by to-morrow no man who is willing to work need be idle.
It is also proposed to open a soup kitchen by private charity.

(*b.*) No information.

3. No.

4. I consider in providing work as they have done, the Commissioners have done their duty. The only regret is that it was not done sooner. It might be pointed out to local authorities the advisability of having some suitable work provided to meet such contingencies.

PARISH OF LOUDOUN, COUNTY OF AYR.

Population (1891), 6,379. Assessable Rental (1893-94), £23,015.

Letter from *James Morton*, Inspector of Poor, 26th February 1895.

1. (1) ORDINARY winter distress aggravated by length of severe weather. (2) Entirely due to severe weather; distress principally amongst out-door workers.

2. Severity not considered sufficient to cause public authorities to interfere; action taken by voluntary agencies, by way of concerts, entertainments, and private subscriptions in Newmilns, where about 50 have been assisted weekly for past two weeks. Hope of similar assistance for next two weeks.
Darvel has not thought it necessary to take any action.

3. No.

4. Am of opinion that with breaking up of frost within a reasonable time, voluntary agencies are able to cope with the distress. The trade (lace curtain weaving) is good in the district, and the average citizen in fairly comfortable circumstances.

PARISH OF MAUCHLINE, COUNTY OF AYR.

Population (1891), 2,339. Assessable Rental (1893-94), £14,106.

Letter from *William Wilson*, Inspector of Poor, 2nd March 1895.

1. No exceptional distress in this district. Labour in the district is at present good. Quarrymen and out-door workers are suffering from the long frost, but no applications for relief of any kind have been made.

2. Nothing being done.

3. No.

4. A good thaw would make all out-door workers very busy in this district.

PARISH OF MAYBOLE, COUNTY OF AYR.

Population (1891), 7,569. Assessable Rental (1893-94), £33,660.

Letter from *John Anderson*, Inspector of Poor, 24th February 1895.

1. THE only exceptional distress in the district is due to the severe weather.

2. Nothing is being done by public authorities. Any pressing needs are being relieved by private individuals.

3. No unemployed register is kept.

4. As there are no urgent cases on hand, I have no suggestions to make.

PARISH OF MONKTON AND PRESTWICK, COUNTY OF AYR.

Population (1891), 2,608. Assessable Rental (1893-94), £16,992.

Letter from *Hugh Boyd*, Inspector of Poor, 25th February 1895.

1. THE distress in this district is not very much greater than in ordinary winter weather. It is entirely due to the protracted severe frost preventing agricultural and building operations.

2. A soup kitchen in each of the villages of Monkton and Prestwick has been in operation voluntarily, in the former all winter, and in the latter for the last few weeks. A supply of coal has twice been distributed among the poor.

3. No

4. I can suggest nothing further than what is being done, as the distress will be almost all past as soon as the frost lifts.

PARISH OF MUIRKIRK, COUNTY OF AYR.

Population (1891), 5,165. Assessable Rental (1893–94), £25,204.

Letter from *R. A. Leslie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress here. The various coal pits and the ironworks in the district have been going regularly. The severe snow and frost caused the County Council to employ men clearing snow and ice off the streets. I could not find a single case of distress for want of work. We have poverty, but it is through improvidence and drink in most cases.

2. Mr. J. G. A. Baird, M.P., of Adamton and Muirkirk, sent me a sum of 10*l.* on the 16th February 1895 to distribute in any cases that might come under my notice, or to help in cases of deserving poor people.

3. No; because a register is not required.

4. Since receiving the donation from Mr. Baird, M.P., I have made a thorough inquiry throughout the parish. I have called upon the employers of labour, and have had meetings with the medical men, the police, and visited every house where there was any chance of finding distress, but did not find any unemployed. There are really no arrangements required here to relieve distress, as it does not exist.

PARISH OF NEWTON-ON-AYR, COUNTY OF AYR.

Population (1891), 8,564. Assessable Rental (1893–94), £25,948.

Letter from *James Brackenridge*, Inspector of Poor. 25th February 1895.

1. THERE is exceptional distress, but it is to a very great extent occasioned by the severe weather.

2. The Town Council of the burgh of Ayr have opened a soup kitchen, at which over 800 are relieved daily. The Town Council are also distributing relief to the unemployed and necessitous poor in the shape of food and fuel at the rate of 70*l.* per week.

3. No

4. No.

PARISH OF OCHILTREE, COUNTY OF AYR.

Population (1891), 1,910. Assessable Rental (1893–94), £17,389.

Letter from *Adam Urquhart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

2. As it has not been necessary nothing has been done to meet distress by public authorities.

3. No.

4. No.

PARISH OF RICCARTON, COUNTY OF AYR.

Population (1891), 7,317. Assessable Rental (1893–94), £25,892.

Letter from *C. S. Reid*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

4. No.

PARISH OF ST. QUIVOX, COUNTY OF AYR.

Population (1891), 7,713. Assessable Rental (1893–94), £22,835.

Letter from *Robert Pyper*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress in the burgh portion of this parish almost wholly occasioned by the severe weather and the stoppage of out-door labour.

2. The Town Council of the burgh of Ayr have opened a soup kitchen, at which about 800 persons are relieved daily. The Town Council are also giving relief to the unemployed and necessitous cases by giving tickets for food and fuel to the extent of 70*l.* per week.

3. No unemployed register is kept.

4. No.

PARISH OF SORN, COUNTY OF AYR.

Population (1891), 3,919. Assessable Rental (1893-94), £19,486.

Letter from *Robert B. Connor*, Inspector of Poor, 25th February 1895.

1. NONE. The mill-workers and miners are all fully employed, and, with the exception of a few quarrymen and out-door labourers, who during the severe frost were off work for a short time, there is no distress in this parish, and no complaints or applications have been made to the public authorities.

2. None.

3. No.

4. None required.

PARISH OF STAIR, COUNTY OF AYR.

Population (1891), 1,289. Assessable Rental (1893-94), £11,361.

Letter from *R. L. Robertson*, Inspector of Poor, 28th February 1895.

1. NO.

PARISH OF STEVENSTON, COUNTY OF AYR.

Population (1891), 6,209. Assessable Rental (1893-94), £20,368.

Letter from *Andrew W. Donaldson*, Inspector of Poor, 26th February 1895.

1. THERE were a few labourers idle here during the frost, but all working now.

2. As far as I can learn, they were relieved privately by well-to-do individuals.

3. No.

4. No.

PARISH OF STEWARTON, COUNTY OF AYR.

Population (1891), 3,804. Assessable Rental (1893-94), £23,379.

Letter from *James Dunlop*, Inspector of Poor, 26th February 1895.

1. DURING the last eight or nine weeks much distress has prevailed here among out-door workers on account of the extreme severity of the weather; and this has been accentuated in many cases by a partial stagnation in our local industry. However, the worst seems past, the weather conditions being much ameliorated by the thaw which has now fairly set in, and out-door work will be briskly resumed in a few days.

2. The Police Commissioners last week employed 20 men for five days to clear away ice and snow from the streets, and paid them 4*d.* per hour, besides which, sums of money, amounting in the aggregate to about 100*l.* sterling, have been distributed by the parish minister, the lord of the manor, the Charity Organisation, trustees of a charitable bequest, and the Race Committee, and about 140 tons of coal have been distributed by the three churches and the Parochial Board.

3. None kept.

4. None.

PARISH OF STRAITON, COUNTY OF AYR.

Population (1891), 1,060. Assessable Rental (1893-94), £11,793.

Letter from *John McFadzean*, Inspector of Poor, 25th February 1895.

1. NO exceptional distress in parish.

2. Nothing requires as yet to be done.

3. No register kept.

4. Meantime our parish has been very fairly provided for; the poorer classes were well looked after, and any out of employment seem not to be badly off as yet.

PARISH OF SYMINGTON, COUNTY OF AYR.

Population (1891), 621. Assessable Rental (1893–94), £5,150.

Letter from *James Currie*, Inspector of Poor, 25th February 1895.

1. No. The parish is purely agricultural, and no man is entirely out of employment. The people are thrifty, and no one complaining.

2. Nothing.

3. No.

4. Thrift and temperance would, to a certain extent, prevent it.

PARISH OF TARBOLTON, COUNTY OF AYR.

Population (1891), 3,586. Assessable Rental (1893-94), £21,717.

Letter from *John Crawford*, Inspector of Poor, 25th February 1895.

1. OWING to the long-continued frost a considerable number of agricultural labourers and quarrymen have been thrown idle for about two months.

2. A voluntary committee was formed in the village of Tarbolton to receive subscriptions, and these have been liberal considering the means of the population, and altogether about 60 cases have been dealt with during the week ended 16th February.

3. No register is kept, as the persons relieved are all personally known to the committee.

4. There is still a balance of the fund in hand which, should the thaw now continue, may serve to meet the necessities of the case.

PARISH OF ABERLOUR, COUNTY OF BANFF.

Population (1891), 2,165. Assessable Rental (1893-94), £9,078.

Letter from *W. M'Gowan*, Inspector of Poor, 24th February 1895.

1. THERE is no exceptional distress, further than what may be expected in long severe weather.

2. Voluntary contributions have been given to help the most needy, and from 12 to 20 men have been kept at work cutting snow. Paid by voluntary contributions.

3. No.

4. It is found here that men prefer rather to work for good wages than take money as charity. We have paid them here 4*s.* a day.

PARISH OF ALVAH, COUNTY OF BANFF.

Population (1891), 1,435. Assessable Rental (1893–94), £9,890.

Letter from *F. W. Runcie*, Inspector of Poor, 26th February 1895.

1. So far as I am aware, there is no exceptional distress in this district.

3. No.

PARISH OF BANFF, COUNTY OF BANFF.

Population (1891), 4,763. Assessable Rental (1893-94), £15,602.

Letter from *Charles W. Cosser*, Inspector of Poor, 25th February 1895.

1. TEMPORARY distress exists, entirely owing to the severe weather restricting employment.

2. (*a.*) Public authorities have considered, and find that it has not been necessary to make any public organised effort to meet emergency. Private and voluntary efforts have been sufficient to cope with the case.
(*b.*) Soup-kitchen opened free twice in the week ended 16th February. Rations (each consisting of soup with meat cut up among it and one lb. of bread—thus a family of five would get five lbs. of bread and five ladles of soup) : on the 13th, 336 rations ; on the 16th, 484 rations. Large quantities of coal have been distributed from charitable funds and by private individuals. Money gifts have also been distributed.

3. No.

4. None.

PARISH OF BOHARM, COUNTY OF BANFF.

Population (1891), 1,266. Assessable Rental (1893–94), £6,514.

Letter from *Robert Grant*, Inspector of Poor, 28th February 1895.

1. No.

2. (*a*) The different proprietors have given a few pounds to be distributed among those who might be expected to suffer from the severe weather.

3. No.

4. No.

PARISH OF BOTRIPHINE, COUNTY OF BANFF.

Population (1891), 729. Assessable Rental (1893–94), £5,649.

Letter from *John R. Hunter*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress here.

2. The Kirk Session, having regard to the continued severity of the weather, distributed 2*l.* in doles of 5*s.* to eight poor people, not paupers. The time was considered suitable for distributing a small surplus in their funds. In no case was the participant in actual want, only in narrow circumstances.

3. No.

PARISH OF BOYNDIE. COUNTY OF BANFF.

Population (1891), 2,113. Assessable Rental (1893–94), £8,105.

Letter from *John McCulloch*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish. This community consists of fishermen, who are doing fairly well, and farm servants, who being engaged by the half year do not feel the severity of the weather or its accompanying distresses. There is no such class as day labourers in this parish.

2. Nil.

3. No.

PARISH OF CABRACH, COUNTY OF BANFF.

Population (1891), 646. Assessable Rental (1893–94), £2,929.

Letter from *James Beattie*, Inspector of Poor, 27th February 1895.

1. I HAVE not heard of any in the parish of Cabrach.

2. There is nothing done, as it is not required.

3. None.

4. None.

PARISH OF CULLEN, COUNTY OF BANFF.

Population (1891), 2,319. Assessable Rental (1893–94), £4,617.

Letter from *George Ross*, Inspector of Poor, 25th February 1895.

1. THERE is a good deal of distress in this district at present, particularly in the burgh portion of the parish. With agricultural and general labourers the distress is on account of the severe weather. The fishing community are also suffering a good deal from the same cause, but mostly for want of proper harbour accommodation which prevents them getting to sea on many occasions.

2. (*a.*) A relief committee of the Town Council, with several ladies and gentlemen added, were appointed, who have collected subscriptions to provide work and otherwise relieve distress.

(*b.*) A daily average of 35 men were employed at relief works, while a daily average of 16 persons received grants of coals and other necessaries during the week ended Saturday, 16th February.

Relief works were started on 30th January.

3. A register

3. A register is kept of all unemployed who apply for work, by means of which the committee were greatly assisted in finding out many cases of exceptional distress.

4. With regard to the distress among the fishing community, which occurs almost periodically, I would suggest that the Government should assist the Local Harbour Board in improving the harbour, while distress caused by severe weather should, in my opinion, be left for local authorities to deal with supplemented by grants from Government to assist where the distress extends over a lengthened period.

PARISH OF DESKFORD, COUNTY OF BANFF.

Population (1891), 745. Assessable Rental (1893–94), £4,189.

Letter from *John Reid*, Inspector of Poor, 4th March 1895.

1. NONE.

2. The Countess of Seafield gave five pounds, and our late Minister one, which has been given to those having a family.

3. No.

4. None.

PARISH OF FORDYCE, COUNTY OF BANFF.

Population (1891), 4,268. Assessable Rental (1893–94), £18,408.

Letter from *Robert Thow*, Inspector of Poor, 25th February 1895.

1. YES. Due to the severe weather.

2. Work was given by the Dowager Countess of Seafield to the unemployed during the severe weather to about forty men, who were paid 2*s.* per day. A soup kitchen was also opened, and kept up by voluntary subscriptions, and the average rations given out daily were 176.

3. No.

4. The distress has now ceased, owing to the recent thaw. There is now plenty of work.

PARISH OF FORGLEN, COUNTY OF BANFF.

Population (1891), 714. Assessable Rental (1893–94), £4,496.

Letter from *John L. Keith*, Inspector of Poor, 27th February 1895.

1. EXCEPTIONAL distress, little or none, would be occasioned by the severity of the weather.

PARISH OF GAMRIE, EAST DISTRICT, COUNTY OF BANFF.

Population (1891), 7,003. Assessable Rental (1893–94), £20,817.

Letter from *James Milne*, Inspector of Poor, 27th February 1895.

1. THERE is no apparent exceptional distress in this district.

The majority of the population are engaged in the fishing industry, which during the winter months has been very successful.

There have been no applications for relief; neither for additional relief, by those on the roll, since the commencement of the severe weather.

2. Nothing.

3. No.

PARISH OF GAMRIE, MACDUFF DISTRICT, COUNTY OF BANFF.

Population (1891) } Included in Gamrie.
Assessable Rental (1893–94) }

Letter from *James Gray*, Inspector of Poor, 25th February 1895.

1. THERE has been distress to a limited extent owing to the severity of the weather, which has now changed for the better, and the labouring classes, who were the principal sufferers, resume work to-day.

2. The Town Council had at its disposal a sum of money amounting to 10*l.*, which has been supplemented by subscriptions from private individuals. The whole fund, amounting to about 35*l.*, has been expended in wages to all those out of work who cared to apply. On an average 33 individuals have received benefit from this fund.

3. No unemployed register kept.

4. The distress should now be at an end, as work is plentiful should the weather remain favourable.

PARISH OF GRANGE, COUNTY OF BANFF.

Population (1891), 1,685. Assessable Rental (1893–94), £8,053.

Letter from *John Clarke*, Inspector of Poor, 26th February 1895.

1. No. Out-door work is at a standstill owing to the snowstorm, and many are out of work, but as soon as the weather opens there will be work for all those who are willing and able.

2. (*a.*) Nothing.
(*b.*) None.

3. No.

4. The parish depends wholly on agriculture, and anything that would lift that from its present depression would at once enhance the value of labour.

PARISH OF INVERAVON, COUNTY OF BANFF.

Population (1891), 2,319. Assessable Rental (1893–94), £8,014.

Letter from *Alex. Strathdee*, Inspector of Poor, 25th February 1895.

1. No.

2. (*a.*) Nothing.
(*b.*) Nil.

3. No.

4. There are no unemployed to relieve. The parish is wholly agricultural, and labourers have a fixed half-yearly or yearly wage, as the case may be.

PARISH OF INVERKEITHNY, COUNTY OF BANFF.

Population (1891), 826. Assessable Rental (1893 94), £4,788.

Letter from *Peter Chapman*, Inspector of Poor, 26th February 1895.

1. I COULD not say that there is any exceptional distress. There are very few employed by the day or the week in this parish. There is, however, no doubt that many families have suffered from the severity of the intense storm through which we are passing.

2. There has been nothing done by the parochial board, and, with the exception of one application for relief, there has been nothing out of the usual.
The parish Minister and Kirk Session have distributed 17*l.* 8*s.* among old and infirm persons and those whom they thought to be most in want. I am not able to give you the exact amount for week ending Saturday.

3. There is no unemployed register maintained.

4. It would be a good thing if in country districts the unemployed could be employed in clearing the roads of snow.

PARISH OF KEITH, COUNTY OF BANFF.

Population (1891), 6,704. Assessable Rental (1893–94), £21,065.

Letter from *George Hendry*, Inspector of Poor, 25th February 1895.

1. YES. Working men have been longer out of employment than usual on account of the exceptionally severe and prolonged snowstorm. There are no peculiar circumstances known to me affecting the present position of matters.

2. (*a.*) A soup kitchen has been in full operation since the 8th ultimo. It was open three days a week up to 12th instant, and since then daily. The first week of January the Parochial Board distributed three cwt. of coals to all registered poor here, whether belonging to this or other parishes. On 12th January the Town's Commissioners divided the burgh into districts, and went round, obtaining as subscriptions 74*l.* 12*s.* 6*d.*, which was at once divided in money or tickets. From two entertainments 25*l.* was raised. Lady Seafield sent 10*l.*, which was supplemented privately to the extent of other 10*l.* The Duke of Fife sent 20*l.*, ten of which was for Fife Keith within the burgh, and ten for Newmill which, while beyond the burgh, is in the parish. Last week members of Parochial Board contributed a second three cwt. of coals to all registered poor. In addition to this there are annual endowments amounting to over 150*l.*, all of which have or are being distributed. Over 100 supplies are given out daily by soup kitchen, each day more than one supply often going into one family. The other money has been distributed chiefly in coals and provision tickets, and these latter would number over 100, and are used daily.

3. There has never been any register of unemployed kept and no necessity for such, because even during the present season there has, with the weather at its worst, been employment to the quarriers at our local lime works, and although there has not been anything like full wages, still enough has been earned to keep their families from want.

4. It is the duty and privilege of every Christian community to relieve any special distress that may be created among them by exceptional and transitory causes, like the present snowstorm. But to anticipate such distress by providing funds beforehand to meet it would, in my opinion, tend to undermine the principles of forethought and self-help we all desiderate and wish to see cultivated amongst the working classes.

PARISH OF KIRKMICHAEL, COUNTY OF BANFF.

Population (1891), 1,043. Assessable Rental (1893-94), £4,753.

Letter from *Alexander Innes*, Inspector of Poor, 4th March 1895.

1. NO. As fuel is somewhat scarce, Mr. Skinner, Drumin, factor to His Grace the Duke of Richmond and Gordon, our generous landlord, has very considerately given a supply of wood for fire to the most necessitous of the labouring class in the parish.

3. No.

PARISH OF MARNOCH, COUNTY OF BANFF.

Population (1891), 3,006. Assessable Rental (1893–94), £11,221.

Letter from *Henry Wilson*, Inspector of Poor, 26th February 1895.

1. THERE are no exceptional cases of distress in the landward part of this district; but there are a good many cases within the burgh of Aberchirder, all of which are due to the severe weather.

2. The parochial authorities of this parish have given no relief to the unemployed. Those in distress in Aberchirder are being relieved by the burgh authorities, &c., in manner stated in my return of said burgh.

3. No.

4. I think that there ought to be an amendment of the Poor Law Act, in order to allow "unemployed" able-bodied being relieved from the poor rate in exceptional cases of distress.

PARISH OF MORTLACH, COUNTY OF BANFF.

Population (1891), 3,035. Assessable Rental (1893–94), £10,516.

Letter from *G. Innes*, Inspector of Poor, 27th February 1895.

1. THERE is no distress in the landward part of the parish.

2. The Parochial Board allowed each pauper residing in the parish 2 cwt. coals.

PARISH OF ORDIQUHILL, COUNTY OF BANFF.

Population (1891), 684. Assessable Rental (1893–94), £3,499.

Letter from *Alexander Gray*, Inspector of Poor, 25th February 1895.

1. I AM not aware of any distress in this parish, nor of any one being unemployed.

PARISH OF RATHVEN, COUNTY OF BANFF.

Population (1891), 12,925. Assessable Rental (1893-94), £27,843.

Letter from *James Gordon*, Inspector of Poor, 27th February 1895.

1. THE earnings of the sea-faring population were not so great as in many former years, owing to the stormy weather, but neither the fishermen nor any connected with the fishing industry, found it necessary to appeal for aid in any form, their credit with their merchants and assistance from relatives and friends having been sufficient to tide them over the past inclement weather. There are very few day labourers. None of them either found it necessary to appeal for aid.

2. Nothing has been done, or is being done, as the circumstances were not so grave as to call forth action on the part of the Parochial Board. In some of the villages the usual distribution of coals from private sources took place. In the police burgh of Buckie, which is in the parish, a soup kitchen supplied the wants, the funds having been raised by public subscription, and the Police Commissioners gave employment to day labourers out of work at stone-breaking. A return has been made by the Clerk to Police Commissioners of Buckie.

3. No.

4. No.

PARISH OF ROTHIEMAY, COUNTY OF BANFF.

Population (1891), 1,291. Assessable Rental (1893–94), £4,896.

Letter from *James Primrose*, Inspector of Poor, 26th February 1895.

1. NO. There would have been, but for the timely and generous aid of some of the proprietors and others, who have given largely this winter to old people and to the destitute unemployed.

2. The Established Church minister has the interest of some 500*l.* to distribute annually, which he does very judiciously, taking no notice of denomination. There has been no weekly distribution, but some have got help two and three times. From the above funds some 40 or 50 families have got help since Christmas, from 5*s.* and 10*s.* to 1*l.* and 2*l.* each family.

3. No register is kept (except in private note-book), but the whole parish is well known.

4. But for the assistance from No. 1, a public meeting was to have been called to consider the matter.

PARISH OF ABBEY ST. BATHANS, COUNTY OF BERWICK.

Population (1891), 246. Assessable Rental (1893–94), £2,298.

Letter from *William Moyes*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this district.

PARISH OF AYTON, COUNTY OF BERWICK.

Population (1891), 1,827. Assessable Rental (1893–94), £14,135.

Letter from *Thomas Thompson*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nothing.

3. No.

4. No.

PARISH OF BUNKLE AND PRESTON, COUNTY OF BERWICK.

Population (1891), 672. Assessable Rental (1893–94), £8,180.

Letter from *G. Mason*, Inspector of Poor, 25th February 1895.

1. As this is wholly an agricultural parish, and the *employés* engaged for the year with an upstanding wage, there is no exceptional distress in this parish.

2. Nothing.

3. No.

4. No.

PARISH OF CHANNELKIRK, COUNTY OF BERWICK.

Population (1891), 545. Assessable Rental (1893–94), £5,355.

Letter from *Henry M. Liddell*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF CHIRNSIDE, COUNTY OF BERWICK.

Population (1891), 1,459. Assessable Rental (1893–94), £10,332.

Letter from *John Ferguson*, Inspector of Poor, 25th February 1895.

1. NOTHING that can be called distress.

2. Any temporary hardship arising from the severe weather has been met by the parish minister and a few private individuals.

3. No need for such a register in this parish.

4. None.

PARISH OF COCKBURNSPATH, COUNTY OF BERWICK.

Population (1891), 1,112. Assessable Rental (1893–94), £8,679.

Letter from *A. W. Henderson*, Inspector of Poor, 23rd February 1895.

1. NONE.

2. No distress, and nothing being done.

3. No.

4. The parish is agricultural, and the servants' wages are paid, work or no work. Vagrants are more destitute, but live on the charity of the people.

PARISH OF COLDINGHAM, COUNTY OF BERWICK.

Population (1891), 3,016. Assessable Rental (1893–94), £24,912.

Letter from *James J. Craik*, Inspector of Poor, 27th February 1895.

1. No actual distress in the district; 71 men were idle during the period between 1st January and 16th February, solely owing to the severe weather, but they were able to obtain credit, which, however, will require some months saving to redeem.

2. (*a.*) Nothing.
(*b.*) None.

3. No.

4. No applications having been made, no suggestions are deemed necessary.

PARISH OF COLDSTREAM, COUNTY OF BERWICK.

Population (1891), 2,388. Assessable Rental (1893–94), £16,800.

Letter from *Alexander Simpson*, Inspector of Poor, 25th February 1895.

1. No. A few masons and labourers are out of employment owing to the severe weather.

2. We have had the soup kitchen twice weekly since Christmas Day, and on each day about 60 families are supplied with soup, meat, and a loaf of bread. Potatoes have also been given by private parties, as well as quantities of mutton.

3. No.

4. I do not think there is any distress here, as the soup kitchen supplies as much soup to all the persons applying as will serve ordinary families for nearly all the week.

PARISH OF CRANSHAWS, COUNTY OF BERWICK.

Population (1891), 132. Gross Rental (1893–94), £2,026. (Parish unassessed.)

Letter from *Robert Pringle*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish. Population consists of ploughmen and shepherds, all in very comfortable circumstances.

PARISH OF DUNS, COUNTY OF BERWICK.

Population (1891), 3,137. Assessable Rental (1893–94), £20,323.

Letter from *Wm. Home Waite*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress. What there is is due to the severe weather, and will disappear with it, as there is work to be got so soon as weather permits.

2. Nothing is being done by public authorities.
The usual soup kitchen is in operation, and is open twice a week, viz., Tuesday and Saturday.

3. No.

4. No.

PARISH OF EARLSTON, COUNTY OF BERWICK.

Population (1891), 1,766. Assessable Rental (1893–94), £11,254.

Letter from *Robert Smith*, Inspector of Poor, 26th February 1895.

1. IT cannot be said that there is even "distress" in this district, and the need that is felt is "exceptional" only in that degree which corresponds to the greater severity of the winter.

2. All that has been required here has been a somewhat opener hand on the part of individuals who ordinarily interest themselves in the poor, and of the Kirk Session of the parish church.

3. No.

4. No.

PARISH OF ECCLES, COUNTY OF BERWICK.

Population (1891), 1,446. Assessable Rental (1893–94), £19,179.

Letter from *William Leitch*, Inspector of Poor, 25th February 1895.

1. VERY little. The only exceptional distress is caused by the long continuation of severe weather, and that only in the case of a few masons and some labourers engaged by the day.

2. Nothing done by public authorities; nor are there any regularly organized voluntary agencies.

3. No.

4. The distress in this parish is not at all marked, the great majority of the population (male and female) being employed on the farms, with upstanding wages for all weathers. The day labourers, who have been long idle, might, I think, be employed branching trees or cutting some down and preparing them for firewood and other purposes. A local committee might arrange for this.

PARISH OF EDROM, COUNTY OF BERWICK.

Population (1891), 1,361. Assessable Rental (1893–94), £14,630.

Letter from *John Cameron*, Inspector of Poor, 25th February 1895.

1. THE workpeople in the paper factory here were kept fully employed. The bulk of the population are agricultural hands with annual engagements. A small percentage of the general labourers may have been affected by the severe weather, but there is no exceptional distress.

2. Nothing done.

3. No.

4. No.

PARISH OF EYEMOUTH, COUNTY OF BERWICK.

Population (1891), 2,686. Assessable Rental (1893–94), £7,979.

Letter from *John Donaldson*, Inspector of Poor, 25th February 1895.

1. YES, owing to depressed state of fishing and labourers being out of work through severe weather.

2. For nearly a month past about 90 persons have been daily furnished with a good hot meal. Coals have also been given to all poor people. This has been done through voluntary agencies under the supervision of magistrates of the Burgh of Eyemouth. Relief ceased meantime, but funds ready to start again if required. Average daily number relieved during week ended 16th February, 90.

3. No.

4. We are quite able to deal with it meantime.

PARISH OF FOGO, COUNTY OF BERWICK.

Population (1891), 420. Assessable Rental (1893–94), £5,220.

Letter from *Thomas Duncan*, Inspector of Poor, 25th February 1895.

1. No. With very few exceptions all the working men in this parish are either employed on the estates of the proprietors, or on the farms in the parish, and being yearly servants the severe weather does not affect either their work or wages.

2. (*a.*) Nothing necessary.
(*b.*) None.

3. No.

4. None.

PARISH OF FOULDEN, COUNTY OF BERWICK.

Population (1891), 351. Assessable Rental (1893–94), £3,897.

Letter from *James Shed*, Inspector of Poor, 25th February 1895.

1. No exceptional distress whatever.

2. Nil.

3. No.

4. Nil.

PARISH OF GORDON, COUNTY OF BERWICK.

Population (1891), 843. Assessable Rental (1893–94), £8,196.

Letter from *James Leitch*, Inspector of Poor, 25th February 1895.

1. THE only part of this parish in which distress is known is the village, where a portion of the inhabitants earn a living as daily labourers. Employment of this sort is scarcer in winter than during the other seasons of the

the year. The recent storm put a temporary stop to the out-door labour, but most of the villagers are now employed. There is no really great distress, as the people are well known to the shop-keepers, who credit them until they get employment.

2. A soup kitchen is open during the winter at the public school, where the children are fed at a cost to them of about a farthing per day. The farmers supply all vegetables free, and funds are raised in its aid by public entertainments. The funds of the parish church are used for relieving families in distress.

3. No.

4. I am not aware of any way in which employment could be found for the day labourer of the village during periods of stormy weather.

PARISH OF GREENLAW, COUNTY OF BERWICK.

Population (1891), 1,110. Assessable Rental (1893–94), £9,953.

Letter from *John Williamson*, Inspector of Poor, 25th February 1895.

1. YES, the exceptional distress is entirely due to the long continuance of severe weather.

2. (*a.*) A special meeting of Parochial Board was held in the Castle Inn on Saturday, 23rd current, and a committee was formed to collect funds, ascertain the destitute among the unemployed, and to give intimation to the inspector who is authorised to grant relief from the Special Fund.
(*b.*) No relief was given prior to 23rd February 1895.

3. No; but the persons relieved on Saturday afternoon, 23rd February, have been written down, and the relief given entered. The following persons have been relieved, viz.:—

I. { Alexander Frater, mason - } One child.
{ Mrs. Frater, wife - - }
II. { William Meiklejohn, general labourer.
{ Catherine Meiklejohn, wife.
III. { Annie Corcoran, out-door worker, and three illegitimate children.
{ Mary Corcoran, out-door worker.

4. If some kind of work were offered, such as breaking stones, splitting wood, or cleaning snow from the streets, the really destitute are more likely to be reached, because decent working men will hardly accept charity.

PARISH OF HUME, COUNTY OF BERWICK.

Population (1891), 375. Assessable Rental (1893–94), £3,890.

Letter from *John Cuthbert*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF HUTTON, COUNTY OF BERWICK.

Population (1891), 815. Assessable Rental (1893–94), £7,580.

Letter from *John Brown*, Inspector of Poor, 25th February 1895.

1. THIS being an agricultural district, there is no exceptional distress in the district.

PARISH OF LADYKIRK, COUNTY OF BERWICK.

Population (1891), 339. Assessable Rental (1893–94), £4,767.

Letter from *William Milne*, Inspector of Poor, 25th February 1895.

1. No distress in this parish.

PARISH OF LANGTON, COUNTY OF BERWICK.

Population (1891), 417. Assessable Rental (1893–94), £5,657.

Letter from *William Home Waite*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.
2. Nothing is being done by public authorities.
3. No.
4. No.

PARISH OF LAUDER, COUNTY OF BERWICK.

Population (1891), 1,499. Assessable Rental (1893–94), £14,176.

Letter from *George L. Broomfield*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this district.
3. There is no such register kept.

PARISH OF LEGERWOOD, COUNTY OF BERWICK.

Population (1891), 475. Assessable Rental (1893–94), £5,681.

Letter from *Robert Martin*, Inspector of Poor, 25th February 1895.

1. SEVERE weather makes no difference in this parish, as it is purely agricultural.

PARISH OF LONGFORMACUS, COUNTY OF BERWICK.

Population (1891), 278. Assessable Rental (1893–94), £4,901.

Letter from *John Browne*, Inspector of Poor, 25th February 1895.

1. TWO or three labouring men in our village have been thrown out of work for about eight weeks, but there are no complaints of "distress."
2. Nothing.
3. No.
4. No.

PARISH OF MERTOUN, COUNTY OF BERWICK.

Population (1891), 622. Assessable Rental (1893–94), £7,238.

Letter from *James Dodds*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in this parish. There is no village in the parish, and the district is purely agricultural.

PARISH OF MORDINGTON, COUNTY OF BERWICK.

Population (1891), 324. Assessable Rental (1893–94), £3,832.

Letter from *Daniel Sinclair*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF NENTHORN, COUNTY OF BERWICK.

Population (1891), 391. Assessable Rental (1893–94), £3,557.

Letter from *William Winton*, Inspector of Poor, 25th February 1895.

1. NONE.

3. No.

PARISH OF POLWARTH, COUNTY OF BERWICK.

Population (1891), 203. Assessable Rental (1893–94), £2,195.

Letter from *R. Johnstone*, Inspector of Poor, 25th February 1895.

1. DURING the past severe winter, I am happy to state that there has been no exceptional distress in the district.

2. No distress.

3. No unemployed register.

4. No distress.

PARISH OF SWINTON, COUNTY OF BERWICK.

Population (1891), 847. Assessable Rental (1893–94), £7,026.

Letter from *Georye Tweedie*, Inspector of Poor, 25th February 1895.

1. I HAVE not heard of cases of exceptional distress in the parish. Some men in Swinton village have lost work during the severe weather, but the worst seems past.

2. None.

3. No.

4. No.

PARISH OF WESTRUTHER, COUNTY OF BERWICK.

Population (1891), 615. Assessable Rental (1893–94), £6,752.

Letter from *James T. Wilkie*, Inspector of Poor, 26th February 1895.

1. No.

2. Nothing out of the ordinary (*See* No. 1 answer).

3. No.

PARISH OF WHITSOME, COUNTY OF BERWICK.

Population (1891), 573. Assessable Rental (1893–94), £5,828.

Letter from *Robert Lees*, Inspector of Poor, 2nd March 1895.

1. THERE is no "exceptional distress" in this parish. The population consists almost entirely of farm servants, who are hired from term to term, and whose wages are therefore "upstanding." Even female out-workers are presently receiving 9*s*. and 10*s*. per week.

PARISH OF CUMBRAE, COUNTY OF BUTE.

Population (1891), 1,801. Assessable Rental (1893–94), £18,116.

Letter from *James Ross*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. Out-door labourers have, of course, not been earning wages since the severe weather began, but there is no real distress.

2. No applications for relief have been made to the public authorities.

3 No, none is needed.

PARISH OF KILBRIDE, COUNTY OF BUTE.

Population (1891), 2,331. Assessable Rental (1893–94), £11,906.

Letter from *John R. Thomson*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in the parish. There has been no application for parochial relief during the past two months.

PARISH OF KILMORY, COUNTY OF BUTE.

Population (1891), 2,519. Assessable Rental (1893–94), £13,000.

Letter from *John R. Thomson*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in this parish, so far as I have heard, and I have been over the whole of it recently.

PARISH OF KINGARTH, COUNTY OF BUTE.

Population (1891), 1,062. Assessable Rental (1893–94), £9,616.

Letter from *William L. Thomson*, Inspector of Poor, 25th February 1895.

1. THE great majority of bread-earners in the parish receive their stated pay independent of circumstances such as weather, being employed by Lord Bute or his tenant farmers. Some out-door workers have for a period of ten days and upwards been unemployed, but the few particular cases cannot be isolated. No exceptional distress can, on inquiry, be made out by Inspector as general.

2. Nil.

3. No.

4. None.

PARISH OF NORTH BUTE, COUNTY OF BUTE.

Population (1891), 1,385. Assessable Rental (1893–94), £11,439.

Letter from *Archibald Brown*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish. There were a few idle men unable to follow their calling through the severe weather, but their families were all engaged at their usual work, so that they could assist when necessary.

2. The question was brought before the statutory meeting of the Parochial Board held on the 16th instant, but the Board were of opinion that there was no distress existing.

PARISH OF ROTHESAY, COUNTY OF BUTE.

Population (1891), 9,306. Assessable Rental (1893–94), £51,409.

Letter from *John Kidd*, Inspector of Poor, 25th February 1895.

1. YES, wholly due to the severity of the weather. Rothesay being practically a watering place, the labouring and lower classes make a moderate living in summer, but in winter there is nothing to do, and they are nearly as ill-off every winter as they are now. The tradesmen are generally more economical, and manage, with the help of their grocer, to tide over the winter without other aid.

2. A soup kitchen has been relieving the distress :

1895.					
February 10th, Sunday	85	tickets	193	supplies.	
„ 11th, Monday	100	„	227	„	
„ 12th, Tuesday	109	„	242	„	
„ 13th, Wednesday	121	„	269	„	
„ 14th, Thursday	127	„	285	„	
„ 15th, Friday	126	„	286	„	
„ 16th, Saturday	123	„	284	„	
	791		1,786		
Average	113	Average	255		

N.B.—Each supply consists of a thick slice of bread (½ lb.), and fully 1 pint of soup. When the butchers send beef to make soup, the beef, when cold, is sliced, and each party gets a slice with the bread.
Rabbits are cut in pieces and served in the soup.
About 220 tons of coal have been supplied in quantities from 6 to 12 cwt. each family
Voluntary agency.

3. No.

4. None.

4 None. The soup kitchen seems to be enough, as the demand is falling off now. The tradesmen or unemployed *proper* do not seem to have taken advantage of the soup as could be wished. If stone-breaking had been offered, perhaps they would have accepted that in perference.

PARISH OF BOWER, COUNTY OF CAITHNESS.

Population (1891), 1,506. Gross Rental (1893–94), £8,269. Parish unassessed.

Letter from *W. Baikie*, Inspector of Poor, 27th February 1895.

1. No. This being an agricultural district the severe weather is not felt. The few labourers who would suffer have been pretty regularly employed by the County Council clearing the snow from the roads.

PARISH OF CANISBAY, COUNTY OF CAITHNESS.

Population (1891), 2,392. Assessable Rental (1893–94), £4,737.

Letter from *James Sutherland*, Inspector of Poor, 26th February 1895.

1. NONE.

3. No.

PARISH OF DUNNET, COUNTY OF CAITHNESS.

Population (1891), 1,488. Assessable Rental (1893–94), £5,324

Letter from *Alexander Hay*, Inspector of Poor, 26th February 1895.

1. PERHAPS not in the sense meant in this form, but, as recently reported by Mr. Penney, "the proportion of paupers to population is regrettably high, but it does not appear that any receive relief who are not entitled thereto." This high proportion of paupers tends to raise the rates exceptionally high also.

3. Parochial Board books.

4. A Government Grant, something on the lines of that paid to Parochial Boards in January 1890, seems to be very needful in order to keep the poor rate from becoming unduly high.

PARISH OF HALKIRK, COUNTY OF CAITHNESS.

Population (1891), 2,577. Assessable Rental (1893–94), £19,192.

Letter from *H. J. Mackay*, Inspector of Poor, 28th February 1895.

1. No actual distress in parish.

2. Nothing.

3. No.

PARISH OF LATHERON, COUNTY OF CAITHNESS.

Population (1891), 5,875. Assessable Rental (1893–94), £14,936.

Letter from *Donald Gunn*, Inspector of Poor, 27th February 1895.

1. No evidence of such as yet.

2. (*a*) No necessity as yet.
(*b*) None.

3. No.

4. Not as yet.

PARISH OF OLRIG, COUNTY OF CAITHNESS.

Population (1891), 1,837. Assessable Rental (1893–94), £7,481.

Letter from *James Gunn*, Inspector of Poor, 27th February 1895.

1. OWING to the severity of the weather the workmen at the pavement quarries had to cease work for almost two months, and there was, undoubtedly, privation in the case of large families, but no application was made by anyone to the Parochial Board.

2. Nothing.

3. No.

4. A supply of meal and coals would have been very acceptable in many cases.

PARISH OF REAY, COUNTY OF CAITHNESS.

Population (1891), 1,182. Assessable Rental (1893–94), £7,947.

Letter from *George MacLeod*, Inspector of Poor, 28th February 1895.

1. No.

2. Nothing.

3. No.

4. No.

PARISH OF THURSO, COUNTY OF CAITHNESS.

Population (1891), 5,825. Assessable Rental (1893–94), £21,000.

Letter from *W. S. Auld*, Inspector of Poor, 26th February 1895.

1. No exceptional distress; but, owing to the severity of the weather for the last two months, a good many of the pavement workers and other out-door labourers have been idle.

2. A soup kitchen has been got up by voluntary subscription, where about 250 to 300 including dependants have been relieved daily.

3. No.

4. The weather now having moderated, it is expected that out-door work will be resumed immediately.

PARISH OF WATTEN, COUNTY OF CAITHNESS.

Population (1891), 1,390. Assessable Rental (1893–94), £7,595.

Letter from *D. Alexander*, Inspector of Poor, 26th February 1895.

1. THERE is almost no exceptional distress in this parish, on account of its being almost all agricultural and pastoral, so that the farm servants and shepherds are engaged by the year or half-year. The few who are dependent on a daily wage have got some employment at snow-cutting, &c.

PARISH OF WICK, COUNTY OF CAITHNESS.

Population (1891), 13,105. Assessable Rental (1893–94), £37,038.

Letter from *D. M'Cormack*, Inspector of Poor, 26th February 1895.

1. THERE is exceptional distress, caused by the inclemency of the weather, the want of trade owing to the usual supply of fish having failed, and the want of proper carriage for forwarding the fish caught to the market.

2. Nothing exceptional, so far as I am aware.

3. No.

4. I am of opinion that those who have, should assist those who have not, and who are really deserving.

PARISH OF ALLOA, COUNTY OF CLACKMANNAN.

Population (1891), 15,862. Assessable Rental (1893–94), £64,495.

Letter from *Thomas Bowie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish further than occasioned by the severe weather.

2. The Burgh Council last week offered employment at stone-breaking at 1*s.* 3*d.* a day and a warm dinner. Besides a soup kitchen, carried on by voluntary agency, a gentleman gave 100*l.* to be distributed among those idle on account of the weather. The number at stone-breaking last week averaged 30, and the number at work to-day is 22. About 200 children attend the soup kitchen daily, and about 100 adults receive a supply to take home. The special donation has been distributed among 150 families. A liberal supply of coals was distributed among the poor, as is generally the case, in the beginning of the winter through various agencies.

3. There is no unemployed register kept.

4. It is believed that the agencies at work are meeting any prevalent distress in the parish. The public works are all fairly well employed.

PARISH OF ALVA, COUNTY OF CLACKMANNAN.

Population (1891), 6,366. Assessable Rental (1893–94), £18,049.

Letter from *William Drysdale*, Inspector of Poor, 25th February 1895.

1. No.

2 Nothing.

3. No.

4. None.

PARISH OF CLACKMANNAN, COUNTY OF CLACKMANNAN.

Population (1891), 2,996, Assessable Rental (1893–94), £14,763.

Letter from *William Wilson*, Inspector of Poor, 29th February 1895.

1. THERE is no exceptional distress in this parish at present, this being a mining district and the miners fully employed ; the few labourers there are being mostly employed by the Coal Company.

PARISH OF DOLLAR, COUNTY OF CLACKMANNAN.

Population (1891), 2,221. Assessable Rental (1893–94), £7,982.

Letter from *James Low*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the district. The past two months of continuous and intense frost threw two or three of the labouring class idle, but the number of men thus thrown idle is small ; and, if the fresh weather set in, out-door work will soon be resumed.

2. The Police Commissioners of the burgh of Dollar, acting as the local authority, met together on 22nd February current, and that municipal body have made provision of stone-breaking at 2*s.* 6*d.* per cubic yard for the few unemployed in the district. One man has set to work, but it is questionable if any more will avail themselves of the provision of stone-breaking. The wants of the few unemployed have been, and are being, relieved by private charities.

PARISH OF TILLICOULTRY, COUNTY OF CLACKMANNAN.

Population (1891), 5,695. Assessable Rental (1893–94), £16,418.

Letter from *Jas. R. Hendry*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nothing.

3. None.

4. None.

PARISH OF ARROCHAR, COUNTY OF DUMBARTON.

Population (1891), 1,457. Assessable Rental (1893–94), £4,558.

Letter from *James Carmichael*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish. I have heard of none, and I have had no applications.

4. None, as there is no distress.

PARISH OF BONHILL, COUNTY OF DUMBARTON.

Population (1891), 14,379. Assessable Rental (1893–94), £45,099.

Letter from *A. H. Lindsay*, Inspector of Poor, 25th February 1895.

1. SINCE beginning of January the distress has been exceptional among outdoor workers, owing to the severity of the weather.

2. Nothing by public authorities, but a number of local gentlemen met in this office on 15th February and organised a distress fund, and a ready response was given to their appeal for subscriptions. I give number relieved daily from 16th February to date :—

16th February - - 24.	20th February - - 21.	23rd February - - 20.
18th „ - - 10.	21st „ - - 10.	25th „ - - - 8.
19th „ - - 14.	22nd „ - - 19.	

3. No.

4. This is the first occasion during my 20 years of office in the parish it has been found necessary to institute a relief of distress fund. I think such periods of exceptional distress can easily be met by the benevolence of the charitable. At present there is every prospect of having a oonsiderable balance left in hand for future purposes.

PARISH OF CARDROSS, COUNTY OF DUMBARTON.

Population (1891), 10,550. Assessable Rental (1893–94), £40,883.

Letter from *William S. Paterson*, Inspector of Poor, 26th February 1895.

1. WITHIN Burgh of Dumbarton.—Yes, caused by severe weather.
Within Renton District Landward.—Yes, caused by severe weather.
Within Cardross District Landward.—No exceptional distress.

2. Within Burgh of Dumbarton.—The Benevolent Society, kept up by voluntary contributions, are relieving unemployed ; average number for week mentioned, 29 persons.
Within Renton District Landward. — Nothing by public authorities. Local employers of labour, Messrs. Stirling and Sons, and Dorcas Society, kept up by voluntary contributions, are relieving more freely than usual such cases of distress amongst the unemployed as are reported.
Within Cardross District Landward.—No exceptional distress to relieve in this district.

3. In all above districts no register is being kept.

4. If there is to be any legislation with the view of giving relief to able-bodied unemployed, this ought only to be done under very stringent safeguards, so as not to encourage the idle and vicious. I consider that the relief of such cases will be better left in the hands of private charity.

PARISH OF CUMBERWAULD, COUNTY OF DUMBARTON.

Population (1891), 4,283. Assessable Rental (1893–94), £19,391.

Letter from *John Longwill*, Inspector of Poor, 25th February 1895.

1. NONE.

PARISH OF DUMBARTON, COUNTY OF DUMBARTON.

Population (1891), 14,065. Assessable Rental (1893–94), £48,005.

Letter from *James MacDonald*, Inspector of Poor, 25th February 1895.

1. YES, temporary distress owing to the severity of the weather. A fortnight ago all the outside workers in the shipyards had to give up work, owing to the intensity of the frost, but the most of them have now resumed work.

A number of the thriftless workmen thus thrown idle became destitute, but were attended to and assisted by the Benevolent Society.

2. The Town Council did nothing, but gave a grant of 10*l.* to the Benevolent Society to meet distress. The society is kept up by voluntary contributions, and was instituted to assist workmen temporarily out of employment. The society has relieved all needful cases up to date, and has funds to do so for a couple of months yet.

Unemployed at work	- - - - - - - - -	27
„	receiving cash grants or goods - - - - -	9
„	men, women, and children receiving dinners -	70
		106

Over and above this, ladies supplied 104 children with boots and stockings, and other clothing where necessary, and six individuals got blankets; also Dorcas Society gave clothing to the value of about 50*l.*, and gentlemen gave coals (not less than 3 cwt.) to 155 individuals in this portion of the burgh, and to 90 in Cardross portion.

3. No.

4. There should be no distress here but for drink, and the only remedy I see to cure it in future is to abolish retail whisky shops and encourage emigration.

(This is a cutting from our local paper, which speaks for itself.)

The Frozen Poor of Dumbarton.—Appeal for Funds.

The past and present severe weather has been telling keenly on the poor of the town, and the members of the Benevolent Society have been kept busy. During the past two weeks the applications for relief have been constant and numerous. Even should the weather improve there will be much suffering, because of the loss through want of work, and the consequent leeway that must be made up, and the enfeebling influence of the destitution. The secretary and treasurer of the Benevolent Society annex a statement of the society's present financial statement, from which it will be seen that additional funds will be required before long. Donations may be sent to either of these gentlemen.

Benevolent Society.

19th February 1895. *James MacDonald*, Church Street, Treasurer.
William Thompson, "Herald" Office, Secretary.

Parish of Kilmaronock, County of Dumbarton.

Population (1891), 900. Assessable Rental (1893–94), £9,722.

Letter from *Robert M'Kinlay*, Inspector of Poor, 26th February 1895.

1. No.

4. There is no distress in this parish.

PARISH OF NEW KILPATRICK, COUNTY OF DUMBARTON.

Population (1891), 8,309. Assessable Rental (1893–94), £79,739.

Letter from *Hugh Carmichael*, Inspector of Poor, 26th February 1895.

1. NONE.

2. Extra donations in coal have been given this winter, in which the small number of unemployed have shared.

3. No register.

4. None.

PARISH OF OLD KILPATRICK, COUNTY OF DUMBARTON.

Population (1891), 17,775. Assessable Rental (1893–94), £69,560.

Letter from *William Fraser Mackenzie*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this parish. A few of the agricultural labourers thrown idle on account of the severity of the frost, and some of the old men have become paupers on account of the severity of the weather. The work in the Shipbuilding Yard at Clydebank is in a backward state, on account principally of the recent coal strike, and a good many tradesmen are idle.

2. Nothing done up to the above-mentioned date.

3. No register, this year, kept.

4. The assessments in the parish are all better paid this year, and I am informed that there has been an increase of the depositors in the Savings Banks.

PARISH OF KIRKINTILLOCH, COUNTY OF DUMBARTON.

Population (1891), 12,427. Assessable Rental (1893–94), £48,551.

Letter from *Robert Davie*, Inspector of Poor, 25th February 1895.

1. YES. Almost entirely due to the severe weather.

2. (*a*) Being relieved by voluntary agencies, the relief being given in provisions by committee appointed.
(*b*) Relieved by Committee for Relief of Distress. Average per day 20.
Relieved by Roman Catholic Temperance Society „ „ 9.

3. No; but a register is kept of all parties relieved, and inquiries made in each case, as to whether employed or not, before relief is given.

4. No. I am a member of the Committee for Relief of Distress, and I consider the funds are well managed, and relief properly administered. The Catholics have a committee of their own in connection with Temperance Society above named.

PARISH OF LUSS, COUNTY OF DUMBARTON.

Population (1891), 633. Assessable Rental (1893–94), £5,780.

Letter from *Andrew Forsyth*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this parish.

PARISH OF ROSNEATH, COUNTY OF DUMBARTON.

Population (1891), 2,064. Assessable Rental (1893–94), £17,538.

Letter from *James Henderson*, Inspector of Poor, 26th February 1895.

1. NONE, except what is due to the severity of the weather.

2. Nothing.

3. No.

4. No; as soon as the frost breaks up every one will be working.

PARISH OF ROW, COUNTY OF DUMBARTON.

Population (1891), 11,172. Assessable Rental (1893–94), £71,832.

Letter from *Alexander Kinniburgh*, Inspector of Poor, 26th February 1895.

1. To severe weather. Did not affect Parochial Board. Town's Commissioners supplied the unemployed. See their report. No distress known in Landward part of parish.

2. See Town's Commissioners' Report.

3. See Town's Commissioners' Report.

4. None.

PARISH OF ANNAN, COUNTY OF DUMFRIES.

Population (1891), 5,941. Assessable Rental (1893–94), £31,117.

Letter from *John Laurie*, Inspector of Poor, 26th February 1895.

1. YES. Due entirely to the severe weather. Quarrymen and labourers being most affected, and a few fishermen.

2. (*a*) The Police Commissioners gave employment to about 30 men for four days during the week referred to, to clear the streets of snow; 2*s.* 6*d.* a day was allowed each man. Voluntary agencies provided soup daily, and also supplied coals, at a cost of about 2*l.* 10*s.* daily (for both).
(*b*) One hundred and seven, of which 20 were on the roll of registered poor.

3. No.

4. No. I think, however, that not a few of the above number might save a part of their earnings during the summer months, instead of spending them in intoxicating liquors. A few of the men engaged by the Commissioners disposed of their wages in this way.

PARISH OF APPLEGARTH, COUNTY OF DUMFRIES.

Population (1891), 858. Assessable Rental (1893–94), £12,240.

Letter from *James Paterson*, Inspector of Poor, 25th February 1895.

1. THERE have been a few men out of employ since end of December, but there is no exceptional distress or any call for relief.

2. There has been relief given by voluntary agencies, but nothing further than what has been required in former years.

3. No.

4. No; but if relief is required it will be fully met by the above agencies.

PARISH OF CARLAVEROCK, COUNTY OF DUMFRIES.

Population (1891), 921. Assessable Rental (1893–94), £7,332.

Letter from *Alexander McWilliam*, Inspector of Poor, 26th February 1895.

1. NOT aware of any exceptional distress.

2. No voluntary agencies.

3. No.

4. If necessary, it could only be done by voluntary agency, unless restrictions against relief of the able-bodied from the Parochial Board were suspended.

PARISH OF CANONBIE, COUNTY OF DUMFRIES.

Population (1891), 2,476. Assessable Rental (1893–94), £12,655.

Letter from *Rowland Reed*, Inspector of Poor, 26th February 1895.

1. Forty-five people unemployed owing to the severe weather, chiefly drainers and quarrymen, and a few masons and farm labourers.

2. (*a*) Through

2. (*a*) Through voluntary agencies 51*l.* 15*s.* has been collected to relieve the distress, and the Parochial Board has received a gift of 35 tons of coal for division amongst the registered poor and unemployed.
(*b*) Nothing was done to meet the distress until the 18th day of February.

3. No.

4. It is believed that the subscriptions now received will be sufficient to meet the distress in this district.

PARISH OF CLOSEBURN, COUNTY OF DUMFRIES.

Population (1891), 1,333. Assessable Rental (1893–94), £13,588.

Letter from *George McFarlan*, Inspector of Poor, 25th February 1895.

1. No. Any men idle from the severe weather could get work, if willing, at shovelling the snow off the roads.

2. (*a*) Nothing required as yet.
(*b*) None.

3. No.

PARISH OF CUMMERTREES, COUNTY OF DUMFRIES

Population (1891), 1,105. Assessable Rental (1893–94), £8,990.

Letter from *A. Sinclair Nicol*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish. A number of agricultural labourers are in straitened circumstances from want of employment due to the severity of the weather.

2. Nil.

3. No.

4. Nil.

PARISH OF DALTON, COUNTY OF DUMFRIES.

Population (1891), 563. Assessable Rental (1893–94), £5,105.

Letter from *Arch. Galbraith*, Inspector of Poor, 25th February 1895.

1. No.

2. Nil.

3. No.

4. Nil.

PARISH OF DORNOCK, COUNTY OF DUMFRIES.

Population (1891), 831. Assessable Rental (1893–94), £6,101.

Letter from *Irving Latimer*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish but what is due to the severe weather ; as soon as the thaw sets in, the idle will have plenty of work.

2. There is nothing being done by public authorities. Those who needed it have been relieved partly by the Kirk Session, and by private people giving coals, meal, groceries, &c.

3. No.

PARISH OF DRYFESDALE, COUNTY OF DUMFRIES.

Population (1891), 3,233. Assessable Rental (1893–94), £18,200.

Letter from *James Morrison*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. What little distress there is, is confined to the police burgh of Lockerbie, and is due entirely to the severe weather, which has prevented masons, plasterers, and labourers from working. Joiners and plumbers are busy.

2. Some of the unemployed have been employed clearing the snow from the roads at about 2*s*. 8*d*. per day. A voluntary subscription has been raised (over which the magistrates and ministers of Lockerbie have formed themselves into a committee) which supplies soup daily to the unemployed, and the worst cases now receive 5*s*. worth of groceries per week, as from the 18th inst. Coals are also supplied.

3. No. A list is being kept of those supplied with soup, &c., but it is not felt necessary to keep a regular register.

4. No. The unemployed cannot be said to be ill-off, as the response of the public to the temporary relief fund has been very liberal; and as soon as a thaw sets in, there is plenty of work for all who are inclined for it.

PARISH OF DUMFRIES, COUNTY OF DUMFRIES.

Population (1891), 17,878. Assessable Rental (1893–94), £73,840.

Letter from *Miles McInnes*, Inspector of Poor, 25th February 1895.

1. YES, but only so far as out-door labourers are thrown out of employment by the severity of the weather. There is no want of work in factories.

2. The Burgh Commissioners, during this storm, have given work to 60 or 70 of the unemployed daily, to clean the streets, &c. The "Association for Improving the Condition of the Poor" also employ a large number of men and women cutting firewood; besides, they supply groceries and coals to all the unemployed. Then the soup kitchen supplies a warm dinner to many hundreds daily.

3. There does not appear to be any proper register kept.

4. No; I think any distress caused by the severity of the weather is amply met here by voluntary effort. In fact, there are a number of men and women who never work, and somehow live, and they are better provided just now than in summer when there is less charity.

PARISH OF DUNSCORE, COUNTY OF DUMFRIES.

Population (1891), 1,260. Assessable Rental (1893–94), £11,762.

Letter from *James Laurie*, Inspector of Poor, 25th February 1895

1. THERE is no very exceptional distress for want of employment. The parish is agricultural, and those dependent on out-door work seem to save as much in summer, or get credit, to tide them over the winter. The severe weather does not seem, meantime, to have made much difference.

2. The Parochial Board have lately admitted two or three cases where destitution seemed more evident than disability. The usual distribution has been made by the Kirk Session of over 40 carts of coals and tickets for goods, but no new or special agency has been started this winter.

3. No.

4. None.

PARISH OF DURRISDEER, COUNTY OF DUMFRIES.

Population (1891), 1,076. Assessable Rental (1893–94), £9,392.

Letter from *Robert Shields*, Inspector of Poor, 25th February 1895.

1. No.

2. None required.

3. None.

4. None required.

PARISH OF ESKDALEMUIR, COUNTY OF DUMFRIES.

Population (1891), 488. Assessable Rental (1893-94), £8,563.

Letter from *D. Mackintosh*, Inspector of Poor, 25th February 1895

1. No.

PARISH OF EWES, COUNTY OF DUMFRIES.

Population (1891), 299. Assessable Rental (1893–94), £4,999.

Letter from *Joseph C. Lyall*, Inspector of Poor, 25th February 1895.

1. NONE.
2. Nothing needed.
3. No.

PARISH OF GLENCAIRN, COUNTY OF DUMFRIES.

Population (1891), 1,647. Assessable Rental (1893–94). £15,393.

Letter from *Adam Semple*, Inspector of Poor, 1st March 1895.

1. No exceptional distress, only the severe weather.
2. (*a*) By voluntary agency, 60 tons of coal have been distributed, giving 14 cwt. to 84 persons or families.
   80 quarts of soup daily given from the soup kitchen.
   180 stones of meal have been distributed.
3. No.
4. No.

PARISH OF GRAITNEY, COUNTY OF DUMFRIES.

Population (1891), 1,141. Assessable Rental (1893–94), £9,900.

Letter from *T. H. McTaggart*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this district.
2. As there is no exceptional distress in this district nothing is being done.
3. No register.
4. No.

PARISH OF HALF-MORTON, COUNTY OF DUMFRIES.

Population (1891), 484. Assessable Rental (1893-94), £4,534.

Letter from *John Murphy*, Inspector of Poor, 28th February 1895.

1. No.
2. Any distress existing has been relieved privately.
3. No.
4. No.

PARISH OF HODDOM, COUNTY OF DUMFRIES.

Population (1891), 1,533. Assessable Rental (1893–94), £9,660.

Letter from *Robert Park*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress, and nine-tenths of it is owing to the severe weather, the remainder to local circumstances.
2. Nothing by public authorities ; something by voluntary agencies. Some forty have received rations of money, and soup with bread.
3. No register maintained.
4. Prohibit the sale of drink.

PARISH OF HOLYWOOD, COUNTY OF DUMFRIES.

Population (1891), 1,011. Assessable Rental (1893–94), £10,318.

Letter from *William Wilson*, Inspector of Poor, 25th February 1895.

1. NONE. No case of destitution has come under my notice.

2. Nothing. No cause for any agencies to meet any distress.

3. No. Not thought to be necessary, as the poor are considered fairly well off.

4. The deserving poor are periodically relieved by a small sum in bank, and frequent charitable donations of coal, &c.

PARISH OF HUTTON, COUNTY OF DUMFRIES.

Population (1891), 726. Assessable Rental (1893–94), £10,921.

Letter from *James Hay*, Inspector of Poor, 25th February 1895.

1. NONE whatever.

2. Nothing required.

PARISH OF JOHNSTONE, COUNTY OF DUMFRIES.

Population (1891), 927. Assessable Rental (1893–94), £6,909.

Letter from *John Jardine*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish, as all the labouring men in it work on the estate (with the exception of two or three quarrymen), and they have all been working up to about a fortnight ago, and there has been a good deal distributed among them from Curling Spiels and other sources.

PARISH OF KEIR, COUNTY OF DUMFRIES.

Population (1891), 639. Assessable Rental (1893–94), £6,218.

Letter from *James Wilkie Moir*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish.

2. Nothing requires to be done.

3. No register maintained.

4. No suggestions.

PARISH OF KIRKCONNEL, COUNTY OF DUMFRIES.

Population (1891), 1,087. Assessable Rental (1893–94), £10,160.

Letter from *William Kirkland*, Inspector of Poor, 25th February 1895.

1. No distress. Most of the working people in the parish are employed at the colliery, and have been getting constant employment during the recent severe weather. During the recent "strike," our men took no part in it, worked all the time, and consequently were quite comfortable. At the present time there is no single case of starvation or want known to me needing inquiry in this parish.

2. (*a*) Nothing. Such steps not being required.
(*b*) None.

3. No.

4. None meantime. If any case of need arises it will be inquired into at once, and help given.

PARISH OF KIRKMAHOE, COUNTY OF DUMFRIES.

Population (1891), 1,159. Assessable Rental (1893–94), £12,248.

Letter from *James Dinwiddie*, Inspector of Poor, 25th February 1895.

1. NOTWITHSTANDING the protracted storm no peculiar distress in the parish.

2. Nothing done by public authorities. The Kirk Session distributed a small sum in coal, and several small sums won at curling likewise distributed in the shape of coal, meal, and tea.

3. None kept.

PARISH OF KIRKMICHAEL, COUNTY OF DUMFRIES.

Population (1891), 808. Assessable Rental (1893–94), £8.923.

Letter from *John Smith*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF KIRKPATRICK FLEMING, COUNTY OF DUMFRIES.

Population (1891), 1,248. Assessable Rental (1893-94), £11,607.

Letter from *John B. Leslie*, Inspector of Poor, 26th February 1895.

1. A FEW day labourers out of employment owing to the long-continued frost; only one found it necessary to apply for relief, which was given.

2. None.

3. No.

4. There is plenty of employment for the population of the parish when the frost goes; it being purely an agricultural district: and when capital can be remuneratively employed, there will always be plenty of work for the working man who is willing to work.

PARISH OF KIRKPATRICK JUXTA, COUNTY OF DUMFRIES.

Population (1891), 976. Assessable Rental (1893-94), £12,563.

Letter from *James Ballantyne*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

PARISH OF LANGHOLM, COUNTY OF DUMFRIES.

Population (1891), 3,970. Assessable Rental (1893–94), £14,212.

Letter from *Henry Erskine*, Inspector of Poor, 25th February 1895.

1. No very exceptional distress in this parish. Some labourers have been out of work on account of severe weather.

2. A voluntary concert was held, which realised over 40*l.*, which has relieved the labouring class. Committee had a difficulty in distributing the money, and have still about 12*l.* in hand. They gave them about 15*s.* a case (no daily allowance).

3. No register kept.

4. Some of those offered relief stated they would rather borrow than accept of assistance from concert fund.

PARISH OF LOCHMABEN, COUNTY OF DUMFRIES.

Population (1891), 2,522. Assessable Rental (1893–94), £14,418.

Letter from *William Clarke*, Inspector of Poor, 25th February 1895.

1. NO. There are some in straitened circumstances owing to the severe weather, but the credit the most of them can obtain has prevented any acute form of distress—of course, seriously handicapping them for the future. Most have been out of work for seven weeks now.

2. (1) Public authorities—In Burgh: Police Commission have to-day (25th inst.) offered work at stonebreaking at 1*s.* 6*d.* per day; four men have turned out.
(2) Voluntary agencies—In the Burgh: Two soup kitchens open for week referred to—one for five days, relieving 36 daily; other three days, relieving 105 daily (the last one open daily now, relieving 160 daily.) Relief committee, formed on 18th inst., has distributed about 5*s.* worth (to each) in coals and goods to about 90 individuals, 66 of these being heads of families; say 230 relieved thereby. Landward—Road authorities cutting snow—a week's work to, say, 30 men. Distribution of coals and goods, in parish—say 20*l.*—chiefly amongst aged and infirm, besides.

3. No.

4. Find work, at fair remuneration, for all able-bodied applicants (say at stonebreaking, &c.). No payment to such, except for work performed. Reserve charities to aged and infirm. But for drink and improvidence there would not be half a-dozen families in this parish to-day in need of assistance in any form. In relieving the need, do not foster the cause of it.

PARISH OF MIDDLEBIE, COUNTY OF DUMFRIES.

Population (1891), 1,806. Assessable Rental (1893–94), £14,119.

Letter from *Thomas Richardson*, Inspector of Poor, 25th February 1895.

1. NO exceptional distress, but what is due to the long-continued severe weather.

2. Nothing has been done by public authorities, but a good deal has been done in the shape of coals, bread, and meal, by voluntary aid, from private contributions, curling clubs, and the Kirk Session of the parish.

3. No.

4. I cannot suggest anything in the meantime unless complaints are made by those at present idle through stress of weather, and who would all again be employed as soon as a change of weather comes round.

PARISH OF MOFFAT, COUNTY OF DUMFRIES.

Population (1891), 2,977. Assessable Rental (1893–94), £29,432.

Letter from *James Grieve*, Inspector of Poor, 25th February 1895.

1. THERE has been no exceptional distress in the district further than among the usual persons who cannot work owing to the severe weather.

2. Nothing has been done by the public authorities to meet any distress occasioned by the severe weather, as any distress that may have been has been fully met from private sources.

3. No register has been kept.

4. There being no public works in the district, the only persons who suffer on account of the severe weather are the labouring classes and tradesmen who work out of doors; and should the severe weather continue, and any distress occur, I have no doubt it will be met by voluntary or private agencies.

PARISH OF MORTON, COUNTY OF DUMFRIES.

Population (1891), 1,855. Assessable Rental (1893–94), £9,519.

Letter from *Alexander Hewison*, Inspector of Poor, 26th February 1895.

1. NOT to my knowledge, except with a few improvident quarrymen.

2. The Curling Society has provided by spiel coals, collected a considerable sum by subscriptions and proceeds of a lecture, and divided as they thought proper among the unemployed above named, &c.

3. Not that I am aware of.

4. None. I do not know that there are half-a-dozen labourers in the parish who are not in the continuous employment of the sole proprietor, who pays them regular wages with little dependence on weather.

PARISH OF MOUSWALD, COUNTY OF DUMFRIES.

Population (1891), 500. Assessable Rental (1893–94), £5,243.

Letter from *James Stafford*, Inspector of Poor, 24th February 1895.

1. NO.

3. No.

PARISH OF PENPONT, COUNTY OF DUMFRIES.

Population (1891), 1,063. Assessable Rental (1893–94), £8,465.

Letter from *William Lawson*, Inspector of Poor, 26th February 1895.

1. ACTUAL distress is not apparent in this district; that considerable pinching exists is undoubted, arising solely from the severity of the weather, rendering out-door work impossible. Private means or credit have prevented any actual distress showing itself.

2. Public authorities have not taken any action. A soup kitchen is open, and 50 quarts of soup distributed daily, and other distributions have been made of bread, &c. through private donations.

3. No unemployed register kept.

4. No.

PARISH OF RUTHWELL, COUNTY OF DUMFRIES.

Population (1891), 858. Assessable Rental (1893–94), £6,660.

Letter from *Alexander L. Davidson*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish.

2. No special efforts have been required.

3. No register has been found necessary.

PARISH OF ST. MUNGO, COUNTY OF DUMFRIES.

Population (1891), 603. Assessable Rental (1893–94), £6,866.

Letter from *John Paterson*, Inspector of Poor, 27th February 1895.

1. NO exceptional distress.

PARISH OF SANQUHAR, COUNTY OF DUMFRIES.

Population (1891), 2,910. Assessable Rental (1893-94), £15,967.

Letter from *William Brown*, Assistant Inspector of Poor, 25th February 1895

1. ONLY slight. Severe weather has stopped brickworks, &c.

2. Voluntary donations have been sufficient to amply relieve all distress.

3. No.

4. None required.

PARISH OF TINWALD, COUNTY OF DUMFRIES.

Population (1891), 902. Assessable Rental (1893–94), £9,948

Letter from *William Crockett*, Inspector of Poor, 26th February 1895.

1. No.

PARISH OF TORTHORWALD, COUNTY OF DUMFRIES.

Population (1891), 921. Assessable Rental (1893–94), £6,361.

Letter from *John Hamilton*, Inspector of Poor, 25th February 1895.

1. NOTHING very exceptional; a few able-bodied men out of employment.

2. Nothing has been done by public authorities; quantities of coal have been distributed to needful poor.

3. No.

4. A discretional power might be given to the Board to relieve able-bodied men out of work.

PARISH OF TUNDERGARTH, COUNTY OF DUMFRIES.

Population (1891), 439. Assessable Rental (1893–94), £6,981.

Letter from *William Kerr*, Inspector of Poor, 25th February 1895.

1. No actual destitution. Any hardship caused by the severe weather has been relieved by work obtained in clearing the roads of snow, and the woods of fallen timber. Timely aid was also supplied by the gift of a cartload of coals from Sir R. Jardine, Bart., to each necessitous case in the parish.

3. No.

4. The present situation calls for no special effort.

PARISH OF TYNRON, COUNTY OF DUMFRIES.

Population (1891), 359. Assessable Rental (1893–94), £5,112.

Letter from *John Laurie*, Inspector of Poor, 25th February 1895.

1. There is none.

PARISH OF WAMPHRAY, COUNTY OF DUMFRIES.

Population (1891), 458. Assessable Rental (1893–94), £6,612.

Letter from *George Rae*, Inspector of Poor, 26th February 1895.

1. NO. Nearly all the agricultural labourers in this parish are engaged by the year.

2. Nothing, except the principal proprietor sent a quantity of coals to be distributed among the widows and old people in the parish.

3. No.

4. No.

PARISH OF WESTERKIRK, COUNTY OF DUMFRIES.

Population (1891), 454. Assessable Rental (1893–94), £5,825.

Letter from *William S. Irving*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress, so far as known, in this parish. (Population limited; very few not in regular employment.)

3. No.

4. No.

PARISH OF BORTHWICK, COUNTY OF EDINBURGH.

Population (1891), 3,102. Assessable Rental (1893–94), £16,179.

Letter from *Robert Stoddart*, Inspector of Poor, 25th February 1895.

1. THERE is very little exceptional distress in this district. What is is owing to the severe weather.

2. Mr. Dundas, of Arniston, has asked me to relieve at his cost any cases which may arise. Another gentleman (Mr. Pendreigh, of Catcune Mill) offers to give coal.

3. No.

4. No.

PARISH OF MID CALDER, COUNTY OF EDINBURGH.

Population (1891), 3,126. Assessable Rental (1893–94), £22,087.

Letter from *Samuel Hislop*, Inspector of Poor, 4th March 1895.

1. I HAVE made inquiries at oil works where about 1,000 men are employed, and they state that there is no exceptional distress there; the works being in full going order, work is readily obtained there. No exceptional distress in the other parts of Mid Calder parish.

2. None required in Mid Calder parish.

3. No.

4. None.

PARISH OF WEST CALDER, COUNTY OF EDINBURGH.

Population (1891), 8,456. Assessable Rental (1893–94), £38,056.

Letter from *William Millar*, Inspector of Poor, 23rd February 1895.

1. No.

3. No.

4. About 60 tons of coal have been distributed amongst deserving families gratuitously supplied by gentlemen connected with the parish.

PARISH OF CARRINGTON, COUNTY OF EDINBURGH.

Population (1891), 563. Assessable Rental (1893–94), £6,983.

Letter from *Robert B. Brunton*, Inspector of Poor, 25th February 1895.

1. No, because the bulk of the people in the parish belong to the agricultural or mining class and are all working.

2. Nothing is being done as there is no distress.

3. No.

4. No.

PARISH OF COCKPEN, COUNTY OF EDINBURGH.

Population (1891), 4,495. Assessable Rental (1893–94), £19,922.

Letter from *John Muir*, Inspector of Poor, 26th February 1895.

1. THE industries of this parish are all fully employed, but owing to the severity of the weather, masons and out-door labourers have been unemployed for seven or eight weeks.

2. The Police Commissioners have raised money by subscription, and are relieving the necessitous poor.

3. No.

4. No.

PARISH OF COLINTON, COUNTY OF EDINBURGH.

Population (1891), 4,549. Assessable Rental (1893–94), £29,087.

Letter from *Andrew Shankie*, Inspector of Poor, 26th February 1895.

1. A CONSIDERABLE number of persons whose labour depends on weather have been idle for weeks, but any distress that exists in this district is solely due to the severe weather.

Previous to Christmas 1894, every person in this parish, able and willing to work, was fully employed; when milder weather returns there is every prospect of abundance of work in this locality.

2. Nothing has been done by public authorities; the benevolence of private individuals has done much to alleviate distress in the families of those who have been thrown idle by the severe weather; but I have no means of ascertaining the extent of the relief given or the number relieved.

3. No unemployed register is maintained in this district.

4. No suggestions.

PARISH OF CORSTORPHINE, COUNTY OF EDINBURGH.

Population (1891), 2,329. Assessable Rental (1893–94), £20,821.

Letter from *James E. Cowan*, Inspector of Poor, 25th February 1895.

1. No cases of exceptional distress have come under my notice. The protracted frost has caused some destitution, but this appears to have been met by the increased liberality of charitable people in the district.

2. Nothing done, except by way of private charity.

3. No.

4. I do not think that anything need be done in this parish.

PARISH OF CRAMOND, COUNTY OF EDINBURGH.

Population (1891), 3,077. Assessable Rental (1893–94), £28,966.

Letter from *J. G. Tait*, Inspector of Poor, 26th February 1895.

1. No.

3. No.

PARISH OF CRANSTON, COUNTY OF EDINBURGH.

Population (1891), 859. Assessable Rental (1893–94), £5,982.

Letter from *Robert Hanton*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in this district. The chief industries in this parish are agriculture and mining, and in these industries nothing has occurred to call for exceptional treatment. The weather has not affected their wages in the least.

2. Nothing has been done by any public authority as no application for relief has been made on the ground of want of employment on account of the severity of the weather.

3. No register needed.

4. No.

PARISH OF CRICHTON, COUNTY OF EDINBURGH.

Population (1891), 946. Assessable Rental (1893–94), £5,903.

Letter from *Geo. Noble*, Inspector of Poor, 25th February 1895.

1. I DO not think there is any exceptional distress in the district. The parish is almost all agricultural; very few out of employment.

2. At the beginning of winter I am entrusted with a few pounds to distribute amongst the poor. I have not yet spent all, and cannot see any special reason for doing so.

PARISH OF CURRIE, COUNTY OF EDINBURGH.

Population (1891), 2,580. Assessable Rental (1893–94), £23,784.

Letter from *Malcolm W. Scott*, Inspector of Poor, 26th February 1895.

1. ALLEGED to be among quarrymen and out-door labourers, due to the severity of the weather. So far as I am officially concerned, I have only had one application made to me for relief, that of a female out-door worker, who has been out of work owing to the severe weather.

2. Among the working class themselves they organised a committee who canvassed for subscriptions from the better off throughout the parish, collecting in all about 14*l*., which they distributed to 40 men, giving 8*s*. each to 15 married men and 5*s*. each to 25 single men. The committee declined to furnish me with the names to whom assistance was given. In one instance, I learn, they gave 18*s*. of the money to a man and two grown-up sons who live in family with him, and whose joint income as quarrymen when employed amounted to 4*l*. a week. In addition to this, a great amount of coal has been distributed as private charity to the needy.

3. No.

4. As the parochial boards are deterred from granting assistance from the poor rate to able-bodied men out of employment, the new Parish Council should have authority to organise and control voluntary efforts to assist those in destitution at periods, when from severe weather or other causes exceptional distress prevails.

PARISH OF DALKEITH, COUNTY OF EDINBURGH.

Population (1891), 7,704. Assessable Rental (1893–94), £28,200.

Letter from *Walter J. Jones*, Inspector of Poor, 25th February 1895.

1. THERE has been a good deal of distress among the working class of late, due to the severity of the weather, but so far as I can learn this is now much mitigated.

2. Under the auspices of the public authorities, coal has twice been distributed to those in distress; on the last occasion 350 supplies having been given, the funds for which were raised by public subscription. There have been soup kitchens open three times a week, which I understand it has been proposed to open daily, and free dinners daily to poor children. These latter formerly paid one halfpenny a meal, but this winter the dinners have been free.

3. No.

4. In my opinion the distress has been fairly met by the means taken for its relief as mentioned above, and with a change of weather for the better, there will be no need for any continuance of relief.

PARISH OF DUDDINGSTON, COUNTY OF EDINBURGH.

Population (1891), 9,643. Assessable Rental (1893–94), £52,209.

Letter from *Elias Suding*, Inspector of Poor, 25th February 1895.

1. THE distress in this district is almost entirely among the labouring classes, and is due to the severe weather. I would not say that the distress is exceptional, but I am sorry to say that the "cry for relief" is.

2. The magistrates opened a subscription list, which was heartily responded to, out of which funds they relieved about 50 people. A private gentleman supplied 5 cwt. of coals to 93 people, and a soup kitchen has been opened by the Destitute and Sick Society.

3. No.

4. I would suggest that the magistrates should make preparations at the beginning of every winter to give employment to those who may be thrown out of employment by severe weather; and that every application be thoroughly investigated, as I have reason to believe that many of those calling themselves unemployed would not work if they got an opportunity.

PARISH OF EDINBURGH, COUNTY OF EDINBURGH.

Population (1891), 58,563. Assessable Rental (1893–94), £630,362.

Letter from *G. Greig*, Inspector of Poor, 27th February 1895.

1. THE severe weather has occasioned a considerable amount of distress in the parish, but there have been only six applications to me in excess of those for last year, although there are 21 more in the poorhouse at 16th instant than last year at the same time. This arises from men remaining longer in the house in consequence of the severe weather.

2. The Town Council have for about the last three weeks been employing a large number of men at stone-breaking and sweeping the streets, and have also been distributing coal *gratis*. They are sending in a return. The Society for Improving the Condition of the Poor have employed or relieved a considerable number. The committee of the soup kitchen in Fountain Close have distributed daily about 1,000 dinner rations, and the Destitute Sick Society supplied the wants of 60 families daily.

3. I understand the Town Council have a register in which the names of all who allege they are unemployed is entered, prior to inquiry being made as to their cases; but they are reporting.

4. The present distress appears to be fairly well met by the Town Council and the charitable associations I have named, and other smaller ones; and I have nothing further to suggest.

PARISH OF FALA AND SOUTRA, COUNTY OF EDINBURGH.

Population (1891), 285. Assessable Rental (1893–94), £2,711.

Letter from *Geo. Noble*, Inspector of Poor, 25th February 1895.

1. NONE, so far as I know. The parish is purely agricultural, and all are employed.

3. No.

4. No suggestions necessary.

PARISH OF GLENCORSE, COUNTY OF EDINBURGH.

Population (1891), 1,451. Assessable Rental (1893-94), £11,643.

Letter from *John Alexander*, Inspector of Poor, 4th March 1895.

1. NONE

PARISH OF HERIOT, COUNTY OF EDINBURGH.

Population (1891), 443. Assessable Rental (1893–94), £5,481.

Letter from *William Weir*, Inspector of Poor, 26th February 1895.

1. No.

2 Nothing is needed.

3 No.

4. No.

PARISH OF INVERESK, COUNTY OF EDINBURGH.

Population (1891), 11,509. Assessable Rental (1893–94), £48,862.

Letter from *Robert Cook*, Inspector of Poor, 25th February 1895.

1. I DO not think the distress is very exceptional. The principal industries of this parish are collieries, paper mill, net factory, two oil mills, two breweries, fishing, and farming. A spell of frosty weather does not affect the workers' incomes in any of the branches. The only class who have at all suffered are a few general labourers and caddies.

2. The Town Council have employed 79 persons for about eight days, commencing on the 15th instant, paying them 2*s.* a day. Out of the 79, two were masons, a good many loafers, the remainder being labourers and caddies. A soup kitchen is being maintained by public subscription, which is in use every year. Ninety-three tons of coals have been distributed amongst the poor of the parish. I saw a pretty large list of names for coal distribution, not one being even a general labourer, most of them widows and old people, a good many of whom are on the list of registered poor. The caddies receive free dinners daily from the clubs and presents of tobacco from a publican.

3. No regular register of unemployed maintained. To-day most of them are back to their regular work. The work for unemployed suspended, and will, in all probability, be discontinued.

4. None; any little destitution being met by the agencies already mentioned. I may say that I have been collector of poor and school rates for upwards of 20 years, and never had a more successful year's collection than the present. The town treasurer informs me that his collection for police rates has also been successful. Applications for parish relief have not been more than usual. A fund exists here for the special benefit of tramps, administered by the police, which brings a great many idle and worthless characters about the place.

PARISH OF KIRKNEWTON, COUNTY OF EDINBURGH.

Population (1891) 3,352. Assessable Rental (1893–94), £18,362.

Letter from *William Dick*, Inspector of Poor, 25th February 1895.

1. THERE has been no exceptional distress in this district. A few quarrymen were idle for about three weeks, and female field workers have been mostly idle owing to the severe weather. Quarrymen are again working, and field workers have been employed indoors two or three days per week.

2. Public authorities are doing nothing. The parish minister and the kirk session, from monies given to them by private parties, are attending to the few unemployed cases. The totals will not exceed 20 cases in all.

3. No.

4. No. Hitherto voluntary effort has been sufficient for all purposes.

PARISH OF LASSWADE, COUNTY OF EDINBURGH.

Population (1891), 10,455. Assessable Rental (1893–94), £50,263.

Letter from *Peter Milne*, Inspector of Poor, 25th February 1895.

1. THE exceptional distress is very limited, it exists among masons, slaters, &c., and is entirely owing to the severity of the weather.

2. Charitable people by giving gifts of coal have greatly mitigated the distress.

3. No.

4. None; as the weather has improved the external distress will speedily disappear.

PARISH OF NORTH LEITH, COUNTY OF EDINBURGH.

Population (1891), 21,747. Assessable Rental (1893–94), £102,683.

Letter from *James Miles*, Inspector of Poor, 26th February 1895.

1. THERE is, and has been lately, a good deal of destitution in this district, chiefly among the very poorest class, owing principally to the long-continued severe weather.

2. The town council have voted 100*l.* to the Association for Improving the Condition of the Poor, whose work extends into this parish. They have also voted 10*l.* to assist the North Leith Soup Kitchen, which has recently been established, and is being supported by voluntary contributions. The daily average number of persons (including children) relieved for week ending 26th instant has been 386. This includes a number of cases from neighbouring parishes. The soup kitchen committee have considerable funds at their disposal.

3. The Association above referred to keeps a register, and they do all they can to procure work for those who apply. The Association assists those out of work with provisions and coals.

4. I am of opinion that what is being done in this parish is sufficient in present circumstances, and that with a return of mild weather the present exceptional state of matters will pass away.

PARISH OF SOUTH LEITH, COUNTY OF EDINBURGH.

Population (1891), 56,874. Assessable Rental (1893–94), £258,576.

Letter from *A. C. Simpson*, Inspector of Poor, 28th February 1895.

1. ANY exceptional distress has been due to the severity of the weather.

2. By voluntary agency a soup kitchen has been put in operation in the parish, and the Leith Town Council, as a public authority, contributed a donation of 100*l.* towards the expenditure required for carrying on the soup kitchen, but nothing further has been done by any public authority. The soup kitchen, however, is an annual event in the winter season. By voluntary agency employment has been made obtainable in the docks for the unemployed, and about 20 have been employed in that way, but several who got orders for the work never presented themselves to avail themselves of it. The average daily number taking advantage of the soup kitchen is 250, but no inquiry as to the circumstances of these participants is made.

3. No register is kept.

4. In view of the general state of matters, and of the severity of the weather having abated, no suggestion, in the direction referred to, appears necessary.

PARISH OF LIBERTON, COUNTY OF EDINBURGH.

Population (1891), 8,266. Assessable Rental (1893–94), £76,109.

Letter from *James Fraser*, Inspector of Poor, 26th February 1895.

1. NOT so far as I am aware, or have been able to ascertain from inquiry in different quarters, although a good many persons, whose work is outside, have been idle owing to the severe weather.

2. Coal is distributed annually by the Kirk Session and landed proprietors, assisted by donations from other persons. At Gilmerton, one of the villages, there has been a soup kitchen for nearly three months, which supplied about 40 families twice a week. It has now stopped, however. One pound of tea and four pounds of sugar were recently given to about 70 persons by Liberton Kirk Session and Liberton Benevolent Association jointly.

3. No.

4. The population being largely mining, and not adversely affected by the severe weather, there is no exceptional distress, and if the fresh weather continues most of the persons at present idle will be able to obtain work.

PARISH OF NEWBATTLE, COUNTY OF EDINBURGH.

Population (1891), 3,650. Assessable Rental (1893–94), £13,784.

Letter from *Walter J. Jones*, Inspector of Poor, 25th February 1895.

1. No. The population being mainly engaged in mining operations, there is at present no distress, so far as known to me.

PARISH OF NEWTON, COUNTY OF EDINBURGH.

Population (1891), 1,180. Assessable Rental (1893–94), £11,938.

Letter from *Chas. B. Hutchison*, Inspector of Poor, 25th February 1895.

1. No.
2. Nothing.
3. No.
4. No.

PARISH OF PENICUIK, COUNTY OF EDINBURGH.

Population (1891), 4,914. Assessable Rental (1893–94), £22,908.

Letter from *John Alexander*, Inspector of Poor, 4th March 1895.

1. None.

PARISH OF RATHO, COUNTY OF EDINBURGH.

Population (1891), 1,839. Assessable Rental (1893-94), £13,532.

Letter from *David Clark*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the district owing to the severity of the weather. Some are unemployed, whose wants have been attended to by subscriptions collected in the village and parish.

2. There is no case of distress or destitution, and those who have been relieved are quarrymen out of work.

3. No.

4. Everything is being done to supply the wants of the unemployed, and any relief given is in provisions and coals. No money is given.

PARISH OF ST. CUTHBERT'S COMBINATION, COUNTY OF EDINBURGH.

Population (1891), 195,471. Assessable Rental (1893–94), £1,234,301.

Letter from *And. Ferrier*, Inspector of Poor, 27th February 1895.

1. THERE at present appears to be a number of the labouring non-pauper class out of employment, owing to the recent severe weather.

2. Town Council have provided stonebreaking and cleaning the streets. Stonebreaking, daily average for three days prior to 16th instant, 209 ; cleaning streets, daily average for three days prior to 14th instant, 35. There is also a fund in the hands of the Lord Provost for supplying coals to the poor, but none had been distributed prior to the 16th instant. Voluntary agencies, daily average relieved during week to 16th instant: Destitute Sick Society, 63 ; St. Cuthbert's Soup Kitchen, 223 ; Simon-square Soup Kitchen, 367 ; Northern District Soup Kitchen, 100 ; Society for Improving the Condition of the Poor, 227.

3. Not known.

4. The Town Council and the voluntary agencies have been able to cope with the distress as yet. I have no suggestions to make.

PARISH OF STOW, COUNTY OF EDINBURGH.

Population (1891), 2,201. Assessable Rental (1893-94), £20,827.

Letter from *P. J. Carruthers*, Inspector of Poor, 25th February, 1895.

1. No.
2. Nothing requires to be done.
3. No.
4. No.

PARISH OF TEMPLE, COUNTY OF EDINBURGH.

Population (1891), 455. Assessable Rental (1893-94), £13,253.

Letter from *Robert Stoddart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. The long-continued frost has thrown labourers out of work, but they seem able to pull through, so far as it has gone.

2. Nothing. I understand that Mr. Dundas of Arniston has instructed the local grocer to supply provisions, at his cost, should help be needed.

3. No.

4. No.

PARISH OF ALVES, COUNTY OF ELGIN.

Population (1891), 1,096. Assessable Rental (1893–94), £8,388.

Letter from *Robert Stronach*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress. This parish being wholly agricultural, there are only a few day labourers in it; most of these have been out of employment owing to the severe weather, but being well-doing men, they have been able to tide over the storm without much difficulty, but they will feel the effects for some time, as they must have been obtaining goods on credit.

2. The parochial board is the only public authority, and it has not been necessary to take any steps on account of distress. There are no voluntary agencies.

3. No register maintained.

PARISH OF BELLIE, COUNTY OF ELGIN.

Population (1891), 2,210. Assessable Rental (1893–94), £8,321.

Letter from *G. C. Chrystie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. The labouring men, with few exceptions, are very regularly employed.

PARISH OF BIRNIE, COUNTY OF ELGIN.

Population (1891), 405. Assessable Rental (1893–94), £2,476.

Letter from *William Morrison*, Inspector of Poor, 28th February 1895.

1. No exceptional distress.

2. (*a*) Donation of 3*l.* from Lady Seafield, the proprietrix.

3. No.

4. None.

PARISH OF CROMDALE, COUNTY OF ELGIN.

Population (1891), 3,026. Assessable Rental (1893-94), £16,480.

Letter from *D. G. Lawson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district, and what there is is due almost entirely to the severity of the weather.

2. The sum of 40*l.* was distributed the week referred to, being the proceeds of a concert on behalf of the unemployed and private subscriptions. The number of recipients would be about 90.

3. There is no register kept.

4. None.

PARISH OF DALLAS, COUNTY OF ELGIN.

Population (1891), 860. Assessable Rental (1893–94), £ 5,236.

Letter from *James Elder*, Inspector of Poor, 26th February 1895.

1. NONE.
2. None.
3. None.
4. None.

PARISH OF DRAINIE, COUNTY OF ELGIN.

Population (1891), 3,922. Assessable Rental (1893–94), £12,031.

Letter from *Alex. Wiseman*, Inspector of Poor, 26th February 1895.

1. NONE but what is due to the severe weather and the improvident.

2. Apart from an allowance of coals given by the Parochial Board to each pauper, a public subscription was raised to the amount of about 60*l*., and vested in a committee, who distributed by ticket on 16th February, in shape of coal, meal, and groceries, to about 80 recipients, and the remainder of the fund has since been distributed to parties whom the committee thought most necessitous.

3. Nil.

4. None, though I may state employment for out-door workers, male and female, is plentiful, but the majority of the recipients were improvident, and became the first to suffer from the severe weather, hence the deserving portion have not benefited so much by the fund as the improvident, as the rule of the committee was to supply those in most destitution at the time.

PARISH OF DUFFUS, COUNTY OF ELGIN.

Population (1891), 4,299. Assessable Rental (1893–94), £12,890.

Letter from *Jno. Nicoll*, Inspector of Poor, 27th February 1895.

1. No.

2. Nothing done by public authorities, or by voluntary agencies. Any cases of distress in this parish have been dealt with privately.

3. No.

PARISH OF DYKE, COUNTY OF ELGIN.

Population (1891), 1,044. Assessable Rental (1893–94), £7,910.

Letter from *Alexander Paxton*, Inspector of Poor, 25th February 1895.

1. No.
2. Nothing.
3. No.
4. No.

PARISH OF EDINKILLIE, COUNTY OF ELGIN.

Population (1891), 1,032. Assessable Rental (1893–94), £7,562.

Letter from *Geo. M. Calden*, Inspector of Poor, 25th February 1895.

1. No. In my opinion, from the following causes, viz. : (i.) The class likely to suffer most are day labourers, who form a small percentage of the population. (ii.) This class has decreased very much of late years owing to the fact that the farm labour market is understocked, consequently labourers, being induced by high wages, have engaged as farm servants for the year or half year. (iii.) The few that remain are mostly engaged as estate labourers, and practically have constant employment. (iv.) Men who are available are frequently employed by the county council officials in snow-cutting to open the roads for traffic. (v.) Flockmasters need extra assistants for supplying provender for sheep. (vi.) This parish is purely agricultural.

2. Nothing is being done by the public authorities. Under voluntary agencies may be mentioned the local landowners, who are very mindful of the poor on their respective estates, particularly Lady Gordon Cumming of Altyre.

3. No.

3. No. Only one case of destitution, attributable to the weather, came under my observation as Inspector of Poor, which I relieved from parochial funds.

4. If distress prevailed, I would suggest that the county authorities would employ men to keep county roads open all along the route, and not partially in thickly populated parts, as at present, while parish authorities might do the same to important thoroughfares other than county roads; this latter would greatly benefit children attending schools. Parish councils might also with advantage acquire unreclaimed land, suitable either for allotments or common grazings, in anticipation of seasons of distress for the unemployed.

PARISH OF ELGIN, COUNTY OF ELGIN.

Population (1891), 9,285. Assessable Rental (1893–94), £36,210.

Letter from *James Elder*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in the district. Such distress as exists is due to the prolonged snow-storm.

2. The Elgin Town Council have undertaken the work of relieving the distressed, chiefly by means of a public meal fund, from which there have been three distributions of provisions (meal, tea, sugar, and bread) and coals. About 150 have been relieved on each occasion; all the recipients, however, were not strictly "Unemployed," a goodly number being poor people who claim a share of any public charity that is going. A soup kitchen, also under the auspices of the Council, is in daily operation. About 150 are supplied, but most of them are poor scholars. A small number of men were also employed in cleaning the streets of snow and such-like work, for short periods. Many were relieved by voluntary agencies also.

3. There is no register of unemployed. All applications for supplies from the meal fund are entered in a cheque-book with counterfoil. This is the only record preserved. Of 103 applications for relief made to the Parochial Board from 28th December to 16th February, only 28 (11 males and 17 females) able-bodied persons sought relief, and all were supplied; but very few of them were what could be held to be *bonâ fide* unemployed. The relief given was for brief periods, for when relief was otherwise obtained they did not return, as a rule, to the Parochial Board.

4. No. Having assisted at all the Council distributions and given help to private distributions as well, I think the Council's mode of relieving the distress to be efficient. No one was refused, and in several instances men with numerous families, who did not care to come to seek help in public, had supplies given to them unsolicited. The aid given by well-to-do people in contributing to the Council's meal fund was most praiseworthy.

Note.—These remarks apply to Burghal Elgin. The distress in the Landward District was confined to the village of New Elgin, and it was overtaken by the Town Council.

PARISH OF FORRES, COUNTY OF ELGIN

Population (1891), 4,801. Assessable Rental (1893–94), £20,982.

Letter from *A. K. Leitch*, Inspector of Poor, 26th February 1895.

1. TEMPORARY distress exists amongst out-door workers, both male and female, owing entirely to the severity of the weather. In open weather there is sufficient employment for working people.

2. (*a.*) Funds have been raised by concerts and voluntary subscriptions, and the Town Council voted a sum of 25*l.* to relieve distress. A soup kitchen has been open for about six weeks.

(*b.*) From 50 to 60.

Note.—The Parochial Board authorised the inspector to relieve female out-workers previous to other steps being taken.

3. No formal register is kept, but each case is inquired into.

4. The weather has now moderated, and it is expected that no further relief will be necessary.

PARISH OF KINLOSS, COUNTY OF ELGIN.

Population (1891), 958. Assessable Rental (1893–94), £6,695.

Letter from *A. K. Leitch*, Inspector of Poor, 26th February 1895.

1. NONE.

2. None

3. None.

4. None.

PARISH OF KNOCKANDO, COUNTY OF ELGIN.

Population (1891), 1,712. Assessable Rental (1893-94), £9,048.

Letter from *P. Margach*, Inspector of Poor, 25th February 1895.

1. No. A few have suffered from the continued severe weather.

2. Nothing has been done by public authorities, but a good deal has been given voluntarily to relieve distress ; but there have been no organised agencies set on foot.

3. No. There are no unemployed here ; when there are, they can work outside.

PARISH OF NEW SPYNIE, COUNTY OF ELGIN.

Population (1891), 1,708. Assessable Rental (1893–94), £7,379.

Letter from *James Elder*, Inspector of Poor, 26th February 1895.

1. No. Distress is due solely to severe weather, and it has been confined to Bishopmill, which is included in the Burgh of Elgin. There is no distress in the Landward District.

2. Relief is being supplied by the Elgin Town Council and by voluntary agencies. I cannot give the average without great research. About 40 have got assistance from the Council's meal fund ; but that number has been included in the Town Clerk's return, I believe, and also in the Elgin Parochial Board return.

3. No. No applications by unemployed have been made to the Parochial Board.

4. No. But the Town Council's manner of relieving the distress has been efficient, and the contributions of wealthy people have been liberal. I have assisted voluntary agencies, and I am able to state that no person has been in want or has suffered anything like privation. The desire of people having relief to bestow is rather to seek out persons in want, or who are supposed to be, than to refuse assistance.

PARISH OF RAFFORD, COUNTY OF ELGIN.

Population (1891), 982. Assessable Rental (1893–94), £7,174.

Letter from *John Stuart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress.
During the week ending 16th February there were no applications for relief, nor has the Parochial Board been called upon to relieve any single case of distress from want of employment during the present year.

2. Nothing is being done.

3. No.

PARISH OF ROTHES, COUNTY OF ELGIN.

Population (1891), 2,299. Assessable Rental (1893-94), £10,496.

Letter from *John Mackinnon*, Inspector of Poor, 25th February 1895.

1. YES. It is entirely due to the severity of the weather, all out-workers being thrown idle.

2. (*a.*) A fund for exceptional times of distress like the present has been largely drawn upon, and freely distributed in coal, meal, and money.
A soup kitchen was also started and has been kept going for the last five weeks by voluntary subscriptions.
(*b.*) Sixty families, representing over 200 individuals, were daily supplied with bread and soup.
Note.—The Parochial Board have also distributed suitable supplies of coal to paupers.

3. No.

4. The distress here has been and is being adequately relieved.

PARISH OF ST. ANDREW'S LHANBRYDE, COUNTY OF ELGIN.

Population (1891), 1,299. Assessable Rental (1893–94), £8,510.

Letter from *Geo. Petrie*, Inspector of Poor, 26th February 1895.

1. No.

2. Nothing ; no need.

3. No.

4. None required.

PARISH OF SPEYMOUTH, COUNTY OF ELGIN.

Population (1891), 616. Assessable Rental (1893–94), £5,546.

Letter from *John Simpson,* Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish worth mentioning. The parish is almost entirely rural, and besides farm labourers steadily employed, there are few others required in the parish.

2. The other labourers are employed chiefly by the proprietor at his salmon fishings, or on his estate, and when work cannot be found for them the older and more infirm workers are granted half-pay ; but even during the present severe weather work is found for them.

3. I can safely say there are not more than six labourers in this parish who would be to any extent affected by the severe weather.

4. The most severe of these were relieved by the parochial board by receiving "casual relief ;" the others by the Kirk Session out of the church funds.

PARISH OF URQUHART, COUNTY OF ELGIN.

Population (1891), 1,917. Assessable Rental (1893–94), £9,023.

Letter from *John Boyne*, Inspector of Poor, 27th February 1895.

1. NO ; if any, it is not known.

2. Nothing being necessary.

3. No ; not necessary.

4. Paupers got a small supply of coals. Other poor people had got their annual supply of coals provided by special collection in the churches before the storm came on. His Grace the Duke of Fife annually contributing 5*l.* to this fund helps to make actual distress in this parish of rare occurrence. The labouring class are mostly farm servants, whose food is, so to speak, tied to their heads.

PARISH OF ABBOTSHALL, COUNTY OF FIFE.

Population (1891), 6,934. Assessable Rental (1893-94), £22,806.

Letter from *John S. Foreman*, Inspector of Poor, 25th February 1895.

1. NOT very serious. The families of out-door labourers attached to the building trade have suffered through the severity of the weather, but so far pauperism is about the same as last year. Trade here generally is fairly good.

2. Subscriptions were opened by the magistrates and a considerable sum collected. A soup kitchen has been started (on 13th instant), giving a supply of soup, beef, and a pennyworth of bread to each applicant (soup, &c., being taken home in vessels), averaging about 160 per day. Coals, clothing, and groceries, &c., have been distributed among the most necessitous cases and among old women.

3. No.

4. The agencies at work seem to meet the requirements for the present. I may state a number of the applicants by misrepresentation received more than one supply of food daily from the soup kitchen. Children principally were the messengers, and had been coached by their parents before sent out. Many of the families are always in destitution, no matter what amount of income they may have.

PARISH OF ABDIE, COUNTY OF FIFE.

Population (1891), 754. Gross Rental (1893-94), £7,676. Parish unassessed.

Letter from *John Cameron*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

4. None.

PARISH OF ABERDOUR, COUNTY OF FIFE.

Population (1891), 1,955. Assessable Rental (1893–94), £16,108.

Letter from *Andrew Redford*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish.

2. There being no exceptional distress to meet, nothing is being done either by public authorities or voluntary agencies, except that the Earl of Moray is giving a few tons of coal to the more necessitous poor, in addition to the usual annual distribution.

3. No such register is kept.

4. No.

PARISH OF ANSTRUTHER EASTER, COUNTY OF FIFE.

Population (1891), 1,033. Assessable Rental (1893–94), £3,436.

Letter from *James Young*, Inspector of Poor, 26th February 1895.

1. THE only distress existing in this parish at the present time has been chiefly caused by the severe weather, and has been mostly felt by labourers and field workers.

2. Nothing this year, except occasionally supplying coals to the aged poor. In previous years a soup kitchen existed, which gave them free dinners each day, but they seem to think it unnecessary this year.

3. No.

4. I have no suggestion to make, as I think the voluntary effort is quite sufficient to relieve any exceptional distress in the district.

PARISH OF ANSTRUTHER WESTER, COUNTY OF FIFE.

Population (1891), 606. Assessable Rental (1893–94), £2,852.

Letter from *William P. Wilson*, Inspector of Poor, 25th February 1895.

1. THE severe frosty weather has certainly caused in this district a certain amount of distress, seeing that a large section of the inhabitants are dependent on general labour.

2. By public authorities, nil; by voluntary agencies and private donations, a quantity of coals and necessaries given, which are generally distributed during the winter months.

3. No.

4. No.

PARISH OF AUCHTERDERRAN, COUNTY OF FIFE.

Population (1891), 6,194. Assessable Rental (1893–94), £19,351.

Letter from *John Small*, Inspector of Poor, 23rd February 1895.

1. NO cases of exceptional distress have been brought under the notice of the authorities.

2. Nothing has been done in the matter.

3. No register of such.

4. No.

PARISH OF AUCHTERMUCHTY, COUNTY OF FIFE.

Population (1891), 2,002. Assessable Rental (1893–94), £8,493.

Letter from *Robert Skinner*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

2. (*a*) The poor, and those who cannot get work owing to the severe weather, have been supplied with coals, sugar, tea, and bread, by sum raised by subscriptions.

(*b*) No numbers kept.

3. No.

4. No.

PARISH OF AUCHTERTOOL, COUNTY OF FIFE.

Population (1891), 721. Assessable Rental (1893–94), £4,790.

Letter from *David Millar*, Inspector of Poor, 25th February 1895.

1. None whatever.
2. (*a*) No distress.
   (*b*) None.
3. No.
4. Very few idle in the parish; and no distress that I am aware of.

PARISH OF BALLINGRY, COUNTY OF FIFE

Population (1891), 2,231. Assessable Rental (1893–94), £12.745.

Letter from *William Shaw*, Inspector of Poor, 5th March 1895.

1. No; quite the opposite in the Landward part of parish; one gas coal company working double shift.
2. No application has been made for relief.
3. No.
4. None.

PARISH OF BALMERINO, COUNTY OF FIFE.

Population (1891), 688. Gross Rental (1893-94), £6,182. Parish unassessed.

Letter from *Walter Scott*, Inspector of Poor, 26th February 1895.

1. No distress.
2. No relief required.
3. No register.
4. No.

PARISH OF BEATH, COUNTY OF FIFE.

Population (1891), 8,298. Assessable Rental (1893–94), £27,064.

Letter from *George Terris*, Inspector of Poor, 26th February 1895.

1. No, except what is caused by pits being on short time, the result of the reaction caused by miners' strike.
3. No application.

PARISH OF BURNTISLAND, COUNTY OF FIFE.

Population (1891), 6,174. Assessable Rental (1893–94), £26,345.

Letter from *James C. Watson*, Inspector of Poor, 25th February 1895.

1. I HAVE no doubt there are a number of cases of exceptional distress in this district, although none have been reported to me; chiefly owing to the late miners' strike, also to the now severe weather.

2. (*a*) I believe that all the clergymen in this town from their church funds have relieved a number of cases that have come to their knowledge. Otherwise, nothing has been done by any of the public bodies.

   (*b*) No daily relief given.

3. No.

4. By public subscription.

PARISH OF CAMERON, COUNTY OF FIFE.

Population (1891), 886. Assessable Rental (1893-94), £7,557.

Letter from *John Robertson*, Inspector of Poor, 25th February 1895.

1. No. The parish is entirely agricultural.
2. Nothing required to be done.
3. No.
4. No.

PARISH OF CARNBEE, COUNTY OF FIFE.

Population (1891), 952. Assessable Rental (1893-94), £10,278.

Letter from *J. Pentland Smith*, Inspector of Poor, 27th February 1895.

1. No exceptional distress.
2. See 1.
3. No.
4. See 1.

PARISH OF CARNOCK, COUNTY OF FIFE.

Population (1891), 987. Assessable Rental (1893–94), £5,745.

Letter from *Henry Anderson*, Inspector of Poor, 26th February 1895.

1. A FEW labourers are out of work owing to severe weather, but cannot be said to be in distress.
2. Nothing special.
3. No.

PARISH OF CERES, COUNTY OF FIFE.

Population (1891), 1,677. Assessable Rental (1893–94), £11,155.

Letter from *James Pearson*, Inspector of Poor, 25th February 1895.

1. 1st. No. 2nd. A number of labourers have been out of employment for several weeks. This parish being situated in an agricultural district, about three-fourths of the workmen are under yearly engagements as farm servants. In the villages and hamlets the majority of the labourers appear to have provided for a storm by their own industry.

2. (*a.*) A quantity of coals has been distributed chiefly amongst aged females, the funds for which have mostly been provided through the Kirk Session.

3. No.

4. Abundance of work will be got when the weather becomes milder.

PARISH OF COLLESSIE, COUNTY OF FIFE.

Population (1891), 2,093. Assessable Rental (1893-94), £12,597.

Letter from *Alexander Honeyman*, Inspector of Poor, 23rd February 1895.

1. A FEW tradesmen and labourers going idle on account of the severe weather; about 12 in all.

2. Paupers have received coals twice this season from the rates; about 25 deserving poor have received coal, bread, &c., from subscription.

3. No.

PARISH OF CRAIL, COUNTY OF FIFE.

Population (1891), 1,740. Assessable Rental (1893-94), £10,770.

Letter from *David Band*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

2. Nothing being done.

3. No.

4. There has been no application to me for relief from the unemployed.

PARISH OF CREICH, COUNTY OF FIFE.

Population (1891), 325. Gross Rental (1893-94), £2,623. Parish unassessed.

Letter from *Geo. J. Leslie*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

3. No.

PARISH OF CULROSS, COUNTY OF FIFE.

Population (1891), 1,096. Assessable Rental (1893-94), £7,537.

Letter from *John Penney*, Inspector of Poor, 23rd February 1895.

1. No.

2. Nil.

3. No.

4. No.

PARISH OF CULTS, COUNTY OF FIFE.

Population (1891), 680. Assessable Rental (1893-94), £5,148.

Letter from *John Thoms*, Inspector of Poor, 26th Febrnary 1895.

1. THERE is no exceptional distress in this district.

PARISH OF CUPAR, COUNTY OF FIFE.

Population (1891), 6,990. Assessable Rental (1893-94), £29,641.

Letter from *James A. Welch*, Inspector of Poor, 23rd February 1895.

1. THERE has been, principally among labourers and other outdoor workers. Chiefly on account of the severe weather.

2. A meeting of the principal inhabitants was convened by the provost of the burgh on 9th February, and a committee, consisting of the clergymen of all denominations, the provost and magistrates, the chairman of the parochial board, and myself, was appointed to inquire into and relieve deserving cases, with the result that 245 heads of families were supplied with coals, beef, bread, tea, and sugar, and several men were supplied with work.

3. A list of deserving persons was made by the Committee.

4. None, unless the adoption of the measures above stated, which in the case of Cupar were, I think, most satisfactory.

PARISH OF DAIRSIE, COUNTY OF FIFE.

Population (1891), 606. Assessable Rental (1893-94), £4,641.

Letter from *James Beveridge*, Inspector of Poor, 25th February 1895.

1. No exceptional distress I would say. It is an agricultural district, and so almost all the men have yearly engagements. Females employed at the farms have, owing to the severe weather, not been at work daily. They have, however, I understand, been employed for more than half-time.

2. Dairsie Kirk Session and Dairsie Parochial Board distributed coals about the beginning of the year among the poor. Several ladies and gentlemen in Dairsie and neighbourhood have also distributed coals, sugar, tea, &c., during the last two months, but no more has been done this year than during any previous year.

Cannot answer (*b*) as the work was done privately.

3. No unemployed register.

PARISH OF DALGETY, COUNTY OF FIFE.

Population (1891), 1,341. Assessable Rental (1893–94), £6,312.

Letter from *David Inglis*, Inspector of Poor, 25th February 1895.

1. No distress caused by the storm in the parish, and no application made for relief, and the miners all working.

PARISH OF DUNINO, COUNTY OF FIFE.

Population (1891), 277. Gross Rental (1893–94), £2,898. Parish unassessed.

Letter from *Jas. W. Somers*, Inspector of Poor, 25th February 1895.

No.

PARISH OF DUNBOG, COUNTY OF FIFE.

Population (1891), 290. Gross Rental (1893–94), £3,726. Parish unassessed.

Letter from *John Cameron*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

4. None.

PARISH OF DUMFERMLINE, COUNTY OF FIFE.

Population (1891), 28,667. Assessable Rental (1893–94), £96,197.

Letter from *John T. Meikle*, Inspector of Poor, 25th February 1895.

1. THERE has been a good deal of distress, principally through the severity of the weather; this has been met by the burgh authorities providing work, and from public benevolence. I have not heard of any distress in the landward part of the parish; the population there is mining principally, and they have all been working three or four days weekly.

2. On the above date 55 persons were employed by the burgh at stone-breaking. 104 families, comprising 461 persons, have been relieved by the magistrates' private fund, and to-morrow a soup kitchen is to be opened from the proceeds of a concert got up for the benefit of the unemployed.

3. The burgh authorities have kept a register, which shows 55 to begin with, and increasing daily until it reached 128 at above date.

4. I think the present agencies will be able to cope with all the distress that is likely to arise in this quarter.

PARISH OF DYSART, COUNTY OF FIFE.

Population (1891), 13,626. Assessable Rental (1893–94), £39,636.

Letter from *D. Nicholson*, Inspector of Poor, 26th February 1895.

1. No.

2. Owing to the severe weather, a soup kitchen was opened a week or so ago; but it is to be closed at the end of this week, 2nd proximo.

3. No.

4. None.

PARISH OF ELIE, COUNTY OF FIFE.

Population (1891), 1,172. Assessable Rental (1893–94), £8,406.

Letter from *Robert Birrell*, Inspector of Poor, 23rd February 1895.

1. No.
2. Nothing.
3. No.

PARISH OF FALKLAND, COUNTY OF FIFE.

Population (1891), 2,470. Assessable Rental (1893–94), £11,999.

Letter from *Lawrence Reid*, Inspector of Poor, 25th February 1895.

1. No.
2. (*a*) Nothing.
   (*b*) None.
3. No.
4. No.

PARISH OF FERRY-PORT-ON-CRAIG, COUNTY OF FIFE.

Population (1891), 3,008. Assessable Rental (1893–94), £10,046.

Letter from *John Erskine*, Inspector of Poor, 25th February 1895.

1. THERE is some exceptional distress, owing to the severe weather, but very limited.

2. Private benevolence has rendered assistance in various ways. Nothing by public authorities or voluntary agencies.

3. No unemployed register.

4. A change to fine weather will put all in their ordinary condition here.

PARISH OF FLISK, COUNTY OF FIFE.

Population (1891), 248. Gross Rental (1893–94), £3,308. Parish unassessed.

Letter from *D. M. Dingwall*, Inspector of Poor, 25th February 1895.

1. No.
2. (*a*) Nothing.
   (*b*) None.
3. No.
4. No.

PARISH OF FORGAN, COUNTY OF FIFE.

Population (1891), 3,763. Assessable Rental (1893–94), £24,865.

Letter from *Fred. G. Kemp*, Inspector of Poor, 26th February 1895.

1. THERE being no works in this parish there are no very poor people. The few jobbing gardeners and masons that reside here have been out of work for some time, but as yet I am not aware of any special case of distress. Most of those who are poor and needful just now have been given coals, &c., by the church office bearers and others residing in Newport and district.

2. As above.

3. No.

4. As above.

PARISH OF INVERKEITHING, COUNTY OF FIFE.

Population (1891), 2,943. Assessable Rental (1893–94), £40,273.

Letter from *Robert Telford*, Inspector of Poor, 25th February 1895.

1. THERE has been a deal of distress since the severe weather came on, as all outdoor work has been at a standstill since the new year came in. The severe weather is the only cause of distress in this district.

2. A committee has been formed and collections made for the relief of those in distress, who are being supplied with food daily. On the 16th there were 70 families supplied, and about the same number continue to be supplied daily. Sixty-three families have also been supplied with half a ton of coal each through the same committee.

3. None.

4. In my opinion what is being done will relieve those in distress until the weather breaks up.

PARISH OF KEMBACK, COUNTY OF FIFE.

Population (1891), 794. Assessable Rental (1893–94), £3,944.

Letter from *William S. Seath*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish; the men employed at the Freestone Quarries have not wrought a turn for seven weeks in consequence of frost; but our people being of a thrifty and saving disposition have been able to tide over the difficulty without any outside assistance.

2. Nothing is being done of a public nature. A few gentlemen of the parish have given a few shillings here and there, and a number of loads of coal have been divided amongst the most necessitous cases.

3. No register.

4. None.

PARISH OF KENNOWAY, COUNTY OF FIFE.

Population (1891), 1,458. Assessable Rental (1893–94), £6,940.

Letter from *A. H. Rintoul*, Inspector of Poor, 23rd February 1895.

1. No. The greater number of workpeople in this parish have had employment during the present winter, and we have had very few whose occupations depend solely on the state of the weather.

2. It has not been necessary to take any steps.

3. No.

4. None; the matter not having had to be considered here.

PARISH OF KETTLE, COUNTY OF FIFE.

Population (1891), 1,939. Assessable Rental (1893–94), £10,838.

Letter from *James Cellars*, Inspector of Poor, 26th February 1895.

1. No exceptional distress.

2. No action whatever has been taken.

3. No.

4. I have no suggestions to make.

PARISH OF KILCONQUHAR, COUNTY OF FIFE.

Population (1891), 1,642. Assessable Rental (1893–94), £13,413.

Letter from *James Lawson*, Inspector of Poor, 25th February 1895.

1. DISTRESS caused by severe weather.

2. Voluntary agencies:—Bread given regularly to 50 people. Soup kitchen, supplying about 35 families daily for six days a week.

3. No.

PARISH OF KILMANY, COUNTY OF FIFE.

Population (1891), 588. Gross Rental (1893–94), £7,447. Parish unassessed.

Letter from *J. Geddes*, Inspector of Poor, 26th February 1895.

1. No. The parish being entirely agricultural, labourers are yearly servants.

2. Nothing.

3. No.

PARISH OF KILRENNY, COUNTY OF FIFE.

Population (1891), 2,998. Assessable Rental (1893–94), £10,224.

Letter from *D. Bruce*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF KINGHORN, COUNTY OF FIFE.

Population (1891), 3,837. Assessable Rental (1893–94), £16,459.

Letter from *James Wyllie*, Inspector of Poor, 23rd February 1895.

1. YES; a number of men, principally masons' labourers, have been thrown out of work through the severity of the weather.

2. (*a.*) The Corporation employed all such on the roads, &c., at 4*d.* per hour, and retained them so long as the necessity of the case demanded.
(*b.*) The average daily number retained during the week ended 16th February was 10.

3. As the burgh is small, and all such cases well-known, no unemployed register was required.

4. No further suggestions are necessary, as all urgent cases have been relieved.

PARISH OF KINGLASSIE, COUNTY OF FIFE.

Population (1891), 1,436. Assessable Rental (1893–94), £10,142.

Letter from *Duncan Macara*, Inspector of Poor, 26th February 1895.

1. No.

2. Donations from private individuals have been distributed amongst the most necessitous cases, in the form of coals and money. These sums have been spent since the 16th instant.

3. No.

4. There is no outstanding case of distress here within my knowledge.

PARISH OF KINGSBARNS, COUNTY OF FIFE.

Population (1891), 731. Assessable Rental (1893–94), £5,721.

Letter from *David Scott*, Inspector of Poor, 25th February 1895.

1. No. A few have, on account of the prolonged frost, done no work for some weeks; but their circumstances do not call for anything being done.

2. Nothing has been done here by the local authorities, there being no necessitous cases.

3. No.

4. No. With a return to milder weather, outdoor work would go on as before.

PARISH OF KIRKCALDY, COUNTY OF FIFE.

Population (1891), 9,994. Assessable Rental (1893-94), £40,862.

Letter from *George Anderson*, Inspector of Poor, 25th February 1895.

1. THIS being a manufacturing district, any exceptional distress is confined to the outdoor labouring class (a limited number), and is due to the severe weather.

2. By voluntary agency, headed by the public bodies, a soup-kitchen was started on the 13th February. Arrangements were also made for supplying coal, groceries, &c., and the whole expenditure has not exceeded 5*l.* per week. The distribution of the above was not confined to the unemployed, but was largely taken advantage of by the poor and pauper classes.

At the soup-kitchen, 120 supplies were given, but this includes families. A note of the number relieved daily has not been kept.

3. No.

4. What is being done seems sufficient to meet the distress.

PARISH OF LARGO, COUNTY OF FIFE.

Population (1891), 2,324. Assessable Rental (1893-94), £13,462.

Letter from *Robert Black*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. Of course, a good many have been idle owing to the severe weather, but I hear of none suffering want in consequence.

2. None.

3. No.

4. No.

PARISH OF LESLIE, COUNTY OF FIFE.

Population (1891), 3,886. Assessable Rental (1893-94), £16,885.

Letter from *William Taylor*, Inspector of Poor, 28th February 1895.

1. THERE has been, comparatively speaking, little exceptional distress in this district, as the residents are mostly engaged in the manufacturing industries, which have all been working full time.

2. Any exceptional destitution arising from the want of outdoor employment has been mostly met by private charity, in money and goods, but no agency was formed. The Police Commissioners employed a number of men for a few days in removing the snow and ice from the streets.

3. No.

PARISH OF LEUCHARS, COUNTY OF FIFE.

Population (1891), 2,370. Assessable Rental (1893-94), £19,569.

Letter from *James Rait*, Inspector of Poor, 23rd February 1895.

1. NO. None has come to my knowledge.

2. A good deal is given at this season in coals and money bequeathed by former parishioners.

3. No.

PARISH OF LOGIE, COUNTY OF FIFE.

Population (1891), 360. Gross Rental (1893-94), £4,789. Parish unassessed.

Letter from *David Imrie*, Inspector of Poor, 27th February 1895.

1. NO.

3. No.

4. None.

PARISH OF MARKINCH, COUNTY OF FIFE.

Population (1891), 5,798. Assessable Rental (1893–94), £31,346.

Letter from *James Rankin*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district at present.

2. A private gentleman has given orders to the keeper of a coffee house here to give anyone who may apply a dinner, but few have applied, unless a few tramps passing through the village.

3. No.

4. We have little or no distress here ; a few masons and their labourers were idle during the storm, but now working.

PARISH OF MONIMAIL, COUNTY OF FIFE.

Population (1891), 769. Assessable Rental (1893–94), £7,443.

Letter from *John Andrews*, Inspector of Poor, 23rd February 1895.

1. NO ; being an agricultural parish, the farm servants receive their pay whether at work or not.

2. (*a.*) Nothing beyond the usual winter donations of coal and cash from the resident gentry to the old people.
(*b.*) None.

3. No ; not required.

PARISH OF MOONZIE, COUNTY OF FIFE.

Population (1891), 128. Gross Rental (1893–94), £1,749. Parish unassessed.

Letter from *J. Y. Douglas*, Inspector of Poor, 25th February 1895.

1. No distress in this district.

2. None.

3. No.

4. No.

PARISH OF NEWBURGH, COUNTY OF FIFE.

Population (1891), 1,852. Assessable Rental (1893–94), £7,117.

Letter from *L. Webster*, Inspector of Poor, 25th February 1895.

1. YES. Due almost entirely to severity of the weather.

2. Burgh authorities have given employment in clearing streets. Coals, bread, &c., have been distributed from proceeds of private subscriptions. Parochial board gave two supplies of coals, five cwt. each time, to each pauper on the roll. No daily relief granted.

3. No.

4. No.

PARISH OF NEWBURN, COUNTY OF FIFE.

Population (1891), 322. Assessable Rental (1893–94). £3,894.

Letter from *Fred. R. Lumsden*, Inspector of Poor, 23rd February 1895.

1. No exceptional distress has been heard of.

2. Nothing.

3. No register kept. Mostly agricultural people with regular supplies of milk and oatmeal.

4. None.

PARISH OF PITTENWEEM, COUNTY OF FIFE.

Population (1891), 1,991. Assessable Rental (1893–94), £5,622.

Letter from *John N. Young*, Inspector of Poor, 25th February 1895.

1. THERE is no more distress at present than what is usual during winter, with this difference, that it is more felt owing to the protracted storm and severe frost.

2. There has been a well managed soup kitchen kept up by public subscription for some years. At present it is relieving about 50 families (about 100 individuals) twice weekly.

3. No.

4. Let the country have sound legislation on trade disputes, make strikes illegal, substitute boards of arbitration for them, put down paid agitation; there would be more employment to be got and more money to pay people with. Keep the trade in the country instead of driving it out.

PARISH OF ST. ANDREWS, COUNTY OF FIFE.

Population (1891), 7,538. Assessable Rental (1893–94), £50,395.

Letter from *George Wilson*, Inspector of Poor, 23rd February 1895.

1. YES. Due to the severe weather.

2. (*a*) Soup, beef, bread, &c., has been served out daily by a voluntary agency to which the parochial and other boards have subscribed.
(*b*) 140 (or about 70 families).

3. No.

4. Nothing further than what has already been done. Those at present unemployed expect to resume work next week, and the above mentioned agency will continue for at least another week thereafter.

PARISH OF ST. LEONARDS, COUNTY OF FIFE.

Population (1891), 1,217. Assessable Rental (1893–94), £5,371.

Letter from *Gilbert Gray*, Inspector of Poor, 25th February 1895.

1. EXCEPT a demand for coal during the severe weather, I am not aware of any special distress in the district.

2. No public scheme of relief needed. Voluntary help always at hand if required, the extent of which is difficult to count. In the middle of the severe stormy time the Kirk Session of St. Leonards distributed some 23*l.* of best Fife coal, besides what others gave. Now that the parish is about to be taken from us these streams of charity in many cases will cease to flow. The poor, the only sufferers.

3. Such a register is not needed here as yet.

4. The poor in this district are always relieved, I have no suggestions therefore to make.

PARISH OF ST. MONANCE, COUNTY OF FIFE.

Population (1891), 1,998. Assessable Rental (1893–94), £5,178.

Letter from *James Lawson*, Inspector of Poor, 25th February 1895.

1. POPULATION mostly composed of fishermen. No exceptional distress to call for aid to be given.

PARISH OF SALINE, COUNTY OF FIFE.

Population (1891), 760. Assessable Rental (1893–94), £8,373.

Letter from *James C. Mudie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish. The collieries in the parish are the chief industries, and the workmen there have been in regular employment. No necessity exists for any special agency.

PARISH OF SCOONIE, COUNTY OF FIFE.

Population (1891), 4,693. Assessable Rental (1893–94), £19,153.

Letter from *James Philp*, Inspector of Poor, 26th February 1895.

1. As this is mostly a mining and manufacturing district the severe weather has only affected out-door labour, and there is no exceptional distress known of; we have had 14 masons, two bricklayers, four joiners, six plasterers, four gardeners, and 16 labourers partly unemployed during January and February on account of the severe weather.

2. Nothing.

3. No.

PARISH OF STRATHMIGLO, COUNTY OF FIFE.

Population (1891), 1,772. Assessable Rental (1893–94), £11,700.

Letter from *James Peggie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district, so far as I can learn.

2. The local gentry each winter give a supply of coals to the deserving poor, and this winter, owing to the severe weather, they have given more liberally than usual. In coals and other necessaries fully 35*l.* worth have been distributed, and now the storm is away I apprehend there will be no further need.

3. No.

4. No.

PARISH OF TORRYBURN, COUNTY OF FIFE.

Population (1891), 1,032. Assessable Rental (1893–94), £6,631.

Letter from *William Hunter*, Inspector of Poor, 25th February 1895.

1. No. The miners are in full work, and those engaged in agricultural work have yearly engagements.

3. No.

PARISH OF TULLIALLAN, COUNTY OF FIFE.

Population (1891), 2,177. Assessable Rental (1893–94), £7,155.

Letter from *Andrew Bowie*, Inspector of Poor, 25th February 1895.

1. YES. Owing to the severe weather.

2. With the assistance of voluntary contributions I have been having a daily supply of soup for the most cases free, and making a small charge in other cases admitted after investigation of circumstances; average 16 families.

3. No.

4. I think the plan adopted here a good one.

PARISH OF WEMYSS, COUNTY OF FIFE.

Population (1891), 10,534. Assessable Rental (1893–94), £50,989.

Letter from *W. Ness*, Inspector of Poor, 4th March 1895.

1. No.

2. Nothing.

3. No.

4. No. All casual workers having chiefly left for the large towns.

PARISH OF ABERLEMNO, COUNTY OF FORFAR.

Population (1891), 926. Assessable Rental (1893–94), £7,805.

Letter from *James Stewart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

3. No.

PARISH OF AIRLIE, COUNTY OF FORFAR.

Population (1891), 741. Gross Rental (1893–94), £8,961. Parish unassessed.

Letter from *David Taylor*, Inspector of Poor, 25th February 1895.

1. THERE is no distress, arising either from circumstances due to the locality, or from the severity of the weather.

2. Nothing is being done, or required to be done, for the purpose of relieving any special distress.

3. No ; it is not necessary.

4. This parish being under a voluntary assessment, the Parochial Board have every winter given a small supply of coal to those persons who were known to be needy or in distress. Four persons have received such a supply this winter.

PARISH OF ARBIRLOT, COUNTY OF FORFAR.

Population (1891), 848. Assessable Rental (1893–94), £9,167.

Letter from *D. B. Steele*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish. The severity of the weather has partially suspended out-door labour ; but our parish being wholly agricultural, the farm servants have either yearly or half-yearly engagements ; their wages and allowances are secured.

2. As there has been no exceptional distress there has been nothing done, no relief being asked or given.

3. There is no register.

4. From what is stated above, I have no suggestion to make.

PARISH OF ARBROATH, COUNTY OF FORFAR.

Population (1891), 9,633. Assessable Rental (1893–94), £33,694.

Letter from *Henry G. Seaton*, Inspector of Poor, 25th February 1895.

1. THERE has been distress amongst the labourers here, which is due to the severe weather.

2. (*a*) The Police Commissioners employed from 45 to 50 daily to assist in removing the snow from the streets.
(*b*) There was no other assistance given until the past week, when a soup-kitchen was opened on the 20th, and since then there have been about 150 supplied daily with rations. Private parties have also been assisting the distressed, but not through any general fund.

3. No.

4. I expect that as the weather has now improved the distress will gradually disappear.

PARISH OF AUCHTERHOUSE, COUNTY OF FORFAR.

Population (1891), 566. Assessable Rental (1893–94), £9,835.

Letter from *John Robertson*, Inspector of Poor, 2nd March 1895.

1. No.

2. Nothing.

3. No, not required.

4. No.

PARISH OF BARRY, COUNTY OF FORFAR.

Population (1891), 3,787. Assessable Rental (1893–94), £16,698.

Letter from *Hugh Hanton*, Inspector of Poor, 25th February 1895.

1. NONE.

PARISH OF BRECHIN, COUNTY OF FORFAR.

Population (1891), 10,453. Assessable Rental (1893-94), £39,868.

Letter from *Robert Allan*, Inspector of Poor, 26th February 1895.

1. SINCE the commencement of the storm about 100 outdoor workers have been knocked off work. So far as I know, there is no exceptional distress in this parish. Factories are all going full time. There is no increase of applications for relief this winter.

2. (*a*) Private subscriptions have been raised, and are being distributed, to meet the distress caused by the severe weather.
(*b*) During the week ended 16th February last, 60 cases were relieved from said subscriptions.

3. No.

4. No.

PARISH OF CARALDSTONE, COUNTY OF FORFAR.

Population (1891), 198. Assessable Rental (1893–94), £1,835.

Letter from *James Lowson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district.

2. No special steps have had to be taken.

3. No.

PARISH OF CARMYLLIE, COUNTY OF FORFAR.

Population (1891), 1,083. Assessable Rental (1893–94), £6,793.

Letter from *James Taylor*, Inspector of Poor, 25th February 1895.

1. No.

2. The minister of this parish, to whom I showed your circular, informs me that the Earl of Dalhousie sent him a sum of £10 for distribution among the poor of the parish. Mrs. Ouchterlony, wife of Colonel Ouchterlony, The Guynd, also gave him £3 to relieve any distress in his congregation.

3. No.

PARISH OF CORTACHY, COUNTY OF FORFAR.

Population (1891), 615. Assessable Rental (1893-94), £10,263.

Letter from *Thomas P. Black*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the district.

2. No action required.

3. Not required.

PARISH OF CRAIG, COUNTY OF FORFAR.

Population (1891), 2,472. Assessable Rental (1893–94), £10,627.

Letter from *Alexander Clyne*, Inspector of Poor, 25th February 1895.

1. THERE has been no exceptional distress in this district.

2. Nothing being done by public authorities. The poor in this district have twice received a supply of coal, during the severe weather, through voluntary agencies.

3. None.

4. None.

PARISH OF DUN, COUNTY OF FORFAR.

Population (1891), 552. Gross Rental (1893–94), £7,944. Parish unassessed.

Letter from *James Cameron*, Inspector of Poor, 25th February 1895.

1. No.

4. This parish is wholly agricultural, and the work-people have half-yearly engagements.

PARISH OF DUNDEE COMBINATION, COUNTY OF FORFAR.

Population (1891), 157,359. Assessable Rental (1893–94), £608,300.

Letter from *James Kyd*, Inspector of Poor, 25th February 1895.

1. As a result of my enquiries, and from my own observations, I beg to state that compared with previous years (last year excepted) there does not appear to be any exceptional distress in the district. The severe weather experienced during the last few weeks caused the stoppage of out-door labour to a great extent, and the number of the unemployed was thereby temporarily increased.

The number of applications dealt with by the Charity Organization Society during the past three months was 270; during the same period of last year, which was an exceptional year in Dundee, the number was upwards of 1,600. The number for the current year is about the average of previous years, with the exception of last year, as above stated.

The number of applications for parochial relief for the period from 1st to 25th instant is 312. Corresponding period of 1894 the number was 405.

2. The Town Council have taken no steps this year to deal with the unemployed. The matter has been several times before the council, and after due deliberation the council came to the conclusion that there existed no necessity for exceptional measures in the shape of relief works, &c., being started. But since the recent storm, and mainly with the view of relieving the distress which it would temporarily entail, the Police Commissioners have employed a large number of men in cleaning the streets and thoroughfares at 3*s.* per day. The sum expended since 7th instant amounts to £403. The highest number employed in any one day was 280, the lowest, 176, and the daily average for the week ended 16th instant was 210. There are still 157 men employed, and another 100 men are temporarily employed by the Police Commissioners (Works Department) cleaning the Statute Labour Roads within the burgh. The average number of families daily relieved by the Charity Organization during the week ended 16th instant was 10. I am not aware that there is in Dundee any other voluntary agency dealing with the unemployed. The number of persons present on 24th instant at the free breakfast given each Sunday morning was 200 or thereby. The present average daily number of applications at the Carr Night Refuge for the homeless is 19.

3. No unemployed register is kept.

4. I have no practical suggestions meantime to offer on the subject; but I think that in dealing with the unemployed the principles and recommendations contained in the minute of the Board of Supervision of 12th December, 1878, should be, as far as possible, strictly adhered to. The Town Council has already the power to inaugurate relief works at the expense of the rates, and the council have in the past not been slow to avail themselves of the powers they possess when it appeared to them necessary.

The Charity Organization Society was established in 1886, and has for its main object the relief of poor persons in temporary distress who are not proper objects of parochial relief. Being a permanent institution, and conducted with great care and efficiency, its work has had useful and beneficial results. Within the last few days, and quite unsolicited, upwards of 300*l.* has been sent to its treasurer, thus showing that the utmost confidence is reposed in the society as a means of guiding the voluntary benevolence of the public. A considerable proportion of the unemployed who have been dealt with by the society during the last few months have been previously through hands, and their cases are well-known. It has to be borne in mind that Dundee is a great centre of female labour. Many of the unemployed men have either their wives or some members of their family working, and their earnings prevent extreme destitution.

The improvement in the shipbuilding industry which has recently taken place, and the resumption of out-door labour, will, to a considerable extent, reduce the number of the unemployed; and there is little doubt but the Charity Organization will be able to meet the remaining cases of distress, so that, as far as Dundee is concerned the adoption of exceptional measures is not considered necessary.

PARISH OF DUNNICHEN, COUNTY OF FORFAR.

Population (1891), 1,233. Assessable Rental (1893–94), £5,280.

Letter from *John Young, junr.*, Inspector of Poor, 23rd February 1895.

1. THERE is no exceptional distress in the district. No doubt, masons and quarrymen have done little work during the last eight weeks owing to the frost, but I have had no extra applications for relief, and I do not hear of exceptional distress.

2. Nothing being done, either by authorities or voluntary agencies.

3. No.

4. No.

PARISH OF EDZELL, COUNTY OF FORFAR.

Population (1891), 700. Assessable Rental (1893–94), £5,921.

Letter from *John Milne*, Inspector of Poor, 25th February 1895.

1. A FEW are unemployed on account of the severe weather, but no distress seemingly exists.

3. No.

PARISH OF EASSIE AND NEVAY, COUNTY OF FORFAR.

Population (1891), 553. Gross Rental (1893–94), £6,998. Parish unassessed.

Letter from *John Jack*, Inspector of Poor, 26th February 1895.

1. NO. The greater portion of the parishioners are hired agricultural servants, whose incomes are not affected by the severe weather. One or two cases of old and needy persons have been looked to privately.
All resident paupers, or others in poor circumstances, lately shared in the bounty of clothing and coals, allowed annually by Lady Wharncliffe.

2. It has not been necessary to organise for relief.

3. Not considered necessary.

4. No unusual distress prevailing. No.

PARISH OF FARNELL, COUNTY OF FORFAR.

Population (1891), 627. Assessable Rental (1893–94), £5,640.

Letter from *Alexander Robertson*, Inspector of Poor, 25th February 1895.

1. NONE.

PARISH OF FEARN, COUNTY OF FORFAR.

Population (1891), 277. Assessable Rental (1893–94), £3,694.

Letter from *James Miller*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this rural parish. Wage-earners here consist of farm-servants, and although severe weather has caused stoppage of work this does not in the case of ploughmen mean stoppage of pay.

3. No.

PARISH OF FORFAR, COUNTY OF FORFAR.

Population (1891), 13,665. Assessable Rental (1893–94), £42,010.

Letter from *James Rodger*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress, but only owing to the severity of the weather.

2. The distress is being met by the public authorities providing work for the unemployed, and by voluntary agencies. 181 families got supplies from the soup kitchen on 16th February (the opening day), and the same number still.

3. No.

4. Nothing further is necessary than is being done. So soon as the frost gives way, there will be abundance of work, as there was up to the new year, and would have continued but for the frost.

PARISH OF FOWLIS EASTER, COUNTY OF FORFAR.

Population (1891), 283. Assessable Rental (1893–94), £2,844.

Letter from *David Crabb*, Inspector of Poor, 25th February 1895.

1. THIS parish or district is wholly agricultural. There is not any distress or unemployed within its bounds.

PARISH OF GLAMIS, COUNTY OF FORFAR.

Population (1891), 1,464. Assessable Rental (1893–94), £11,585.

Letter from *Alex. Jack*, Inspector of Poor, 25th February 1895.

1 No exceptional distress, except through the severe weather.

2. There is nothing being done in this parish, and no person was relieved at the time stated.

3 No.

4. No.

PARISH OF GLENISLA, COUNTY OF FORFAR.

Population (1891), 676. Assessable Rental (1893–94), £9,554.

Letter from *Alex. Robertson*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF GUTHRIE, COUNTY OF FORFAR.

Population (1891), 267. Gross Rental (1893–94), £3,388. Parish unassessed.

Letter from *James Smith*, Inspector of Poor, 25th February 1895.

1. THERE is a little distress in the parish, due to the prolonged frost preventing out-door work, but not to an extent requiring exceptional measures.

2. There are none in absolute want. Those unemployed at present work in quarries, and are usually in receipt of good wages.

3. No.

4. As I have said, there is as yet no need.

PARISH OF INVERARITY, COUNTY OF FORFAR.

Population (1891), 926. Assessable Rental (1893–94), £9,191.

Letter from *Peter Elder*, Inspector of Poor, 25th February 1895.

1. No.

2. (*a*) Nothing.

3. No.

4. No.

PARISH OF INVERKEILOR, COUNTY OF FORFAR.

Population (1891), 1,531. Assessable Rental (1893–94), £13,590.

Letter from *James Sadler*, Inspector of Poor, 26th February 1895.

1. No, further than what is caused by the prolonged storm.

2. Voluntary and charitable agencies have been distributing coals, oatmeal, and clothing, in the more distressing cases. This is done annually, and the cases mostly chronic.

3. No. Inhabitants mostly farm servants under six months' engagements, the others quarriers and labourers, the latter employed on the roads, and have been extra busy. The quarriers have felt it more severely, but not so far as I can learn approaching to destitution.

4. No; but I would consider it more a question in succeeding years for Parish Councils if they were elected. There is no provision in the Poor Law for providing assistance to able-bodied poor.

PARISH OF KETTINS, COUNTY OF FORFAR.

Population (1891), 722. Gross Rental (1893–94), £10,116. Parish unassessed.

Letter from *Donald MacQueen*, Inspector of Poor, 25th February 1895.

1. No; but I may add that the resident proprietors do a great deal to add to the comfort of the deserving poor by giving money, coals, and clothing; and the Parish minister from funds in his possession has added materially to the comfort of many parishioners.

3. None unemployed.

PARISH OF KINGOLDRUM, COUNTY OF FORFAR.

Population (1891), 368. Gross Rental (1893–94), £5,242. Parish unassessed.

Letter from *William Edward*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the district. I am not aware of any distress at present, nor for a length of time.

2. There has been no necessity for anything being done. A small quantity of coal was distributed as usual by the Kirk Session to the deserving poor not in receipt of parochial relief.

3. No.

4. There is no distress more than usual.

PARISH OF KINNELL, COUNTY OF FORFAR.

Population (1891), 653. Assessable Rental (1893–94), £6,162.

Letter from *William Gauldie*, Inspector of Poor, 25th February 1895

1. In this rural parish there is no exceptional distress.

2. No relief measures are required.

3. No unemployed register, as none is required.

4. None.

PARISH OF KINNETTLES, COUNTY OF FORFAR.

Population (1891), 340. Gross Rental (1893–94), £5,050. Parish unassessed.

Letter from *George Martin*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF KIRKDEN, COUNTY OF FORFAR.

Population (1891), 1,541. Assessable Rental (1893–94), £7,926.

Letter from *John Edward*, Inspector of Poor, 26th February 1895.

1. NONE, excepting what is due to the weather.

2. Voluntary agencies. One or two cases treated by the public authorities.

3. No.

4. None required here. When the weather moderates it will disappear.

PARISH OF KIRRIEMUIR, COUNTY OF FORFAR.

Population (1891), 6,090. Assessable Rental (1893–94), £24,887.

Letter from *Charles Samson*, Inspector of Poor, 26th February 1895.

1. EXCEPTIONAL distress arising almost wholly from the entire stoppage of out-door work owing to the severe weather.

2. (*a*) Police Commissioners in conjunction with local distress committee have provided work for unemployed in cleaning the streets by removing snow, &c.
(*b*) Average daily number employed for week ending 16th February, 12 ; since that date average increased to 15. Relief in money or goods granted from private sources to a very few.

3. No register kept

4. Were the road authorities in counties required to keep the roads open and free from obstruction by snow, &c., much work might be provided for the poorer class in seasons when they were laid off from stress of weather. In this district many of the roads have been impassable for long periods. The course adopted in the town appears to have secured the desired end of relieving the most necessitous cases with considerable advantage to the public. Parish Councils might be given the option, in times of exceptional distress, of co-operating with municipal and county authorities in contributing to relief works for the unemployed.

PARISH OF LETHNOT, COUNTY OF FORFAR.

Population (1891), 239. Assessable Rental (1893–94), £3,177.

Letter from *David Philip*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

PARISH OF LINTRATHEN, COUNTY OF FORFAR.

Population (1891), 558. Gross Rental (1893–94), £11,471. Parish unassessed.

Letter from *William Edward*, Inspector of Poor, 28th February 1895.

1. No application was made for relief, nor was it known that there was any exceptional distress in the district.

2. No case was known, there being none unemployed, to the public authorities or voluntary agencies.

3. No.

4. None, as they are not required.

PARISH OF LOCHLEE, COUNTY OF FORFAR.

Population (1891), 343. Assessable Rental (1893–94), £4,082.

Letter from *Alexander Bowman*, Inspector of Poor, 28th February 1895.

1. No.
2. Nothing necessary.
3. No, not necessary.
4. No.

PARISH OF LOGIE-PERT, COUNTY OF FORFAR.

Population (1891), 979. Assessable Rental (1893–94), £7,460.

Letter from *George Porteous*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district. One or two agricultural labourers, drainers, &c., have had less work on account of the weather.

PARISH OF LUNAN, COUNTY OF FORFAR.

Population (1891), 349. Gross Rental (1893–94), £5,093. Parish unassessed.

Letter from *Archibald Wilson*, Inspector of Poor, 25th February 1895.

1. No distress. Population consists entirely of farmers and farm-servants, and their families, with a few railway men.
3. No unemployed.

PARISH OF LUNDIE, COUNTY OF FORFAR.

Population (1891), 301. Assessable Rental (1893–94), £3,263.

Letter from *John Scott*, Inspector of Poor, 26th February 1895.

1. No exceptional distress in this district. Work-people engaged for a year or six months.
2. (*a*) Nothing.
   (*b*) None relieved.
3. No.
4. No.

PARISH OF MAINS AND STRATHMARTINE, COUNTY OF FORFAR.

Population (1891), 3,998. Assessable Rental (1893–94), £25,706.

Letter from *Thomas Forbes*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this district. Poor Roll five less than at this date last year.
2. Nothing required.
3. No.
4. No.

PARISH OF MARYTON, COUNTY OF FORFAR.

Population (1891), 270. Assessable Rental (1893–94), £2,849.

Letter from *L. D. Marr*, Inspector of Poor, 24th February 1895.

1. No exceptional distress.

PARISH OF MENMUIR, COUNTY OF FORFAR.

Population (1891), 664. Assessable Rental (1893–94), £6,079.

Letter from *David Gourlay*, Inspector of Poor, 25th February 1895.

1. THIS parish is entirely an agricultural one. The most of the working class are engaged as farm servants, consequently there is no unemployed or distress here.

2. There is no necessity for anything being done.

3. No.

4. As the unemployed and distressed are mostly in burghs and villages I have nothing to suggest.

PARISH OF MONIFIETH, COUNTY OF FORFAR.

Population (1891), 10,531. Assessable Rental (1893–94), £47,342.

Letter from *W. B. Spence*, Inspector of Poor, 28th February 1895.

1. No exceptional distress. Severity of the weather.

2. The magistrates and other local bodies are doing much to relieve distress. There is also a soup kitchen.

3. No.

4. No.

PARISH OF MONIKIE, COUNTY OF FORFAR.

Population (1891), 1,328. Assessable Rental (1893–94), £15,126.

Letter from *A. Cameron*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish, which is almost entirely rural and agricultural.

PARISH OF MONTROSE, COUNTY OF FORFAR.

Population (1891), 14,428. Assessable Rental (1893–94), £53,894.

Letter from *John Spalding*, Inspector of Poor, 25th February 1895.

1. THERE has been more distress in the district this year than usual, following on the long continuous severity of the weather, and consequent want of work.

2. (*a*) The Town Council ordered the making of a roadway, and levelling of ground over the Bent Hillocks on the links and sea coast, giving employment to 30. The soup kitchen privileges to the poor were extended 25, and private charity was increased by 20.

(*b*) Relieving about 75 on an average daily during the week ended Saturday the 16th February.

3. No register is kept, such not being considered necessary.

4. The wants of the unemployed here have been fairly well overtaken, and there is no suggestion for other assistance.

PARISH OF MURROES, COUNTY OF FORFAR.

Population (1891), 905. Assessable Rental (1893–94), £9,040.

Letter from *W. F. Liddell*, Inspector of Poor, 25th February 1895.

1. THIS parish depending to a considerable extent on quarry work, there must be to some extent pinched circumstances in several families, but scarcely amounting to distress. At all events, distress is not in any way (other than by inference) evident to the public. The severe weather has closed one of the quarries from 1st January to this date, while the other two in this parish have only wrought at intervals. Work is now in full swing, and as wages are high, when work is available the straitened condition of families will be got over. There is no chronic distress.

2. Nothing has been done, as so far as is known it does not seem called for.

3. No.

4. None deemed necessary.

PARISH OF NEWTYLE, COUNTY OF FORFAR.

Population (1891), 833. Assessable Rental (1893–94), £10,410.

Letter from *John Jack*, Inspector of Poor, 26th February 1895.

1. NO. The severity of the weather has not affected residenters here to any extent.
2. Nothing urgently called for.
3. No, not necessary.
4. No unusual distress existing.

PARISH OF OATHLAW, COUNTY OF FORFAR.

Population (1891), 399. Gross Rental (1893–94), £4,595. Parish unassessed.

Letter from *A. Thomson*, Inspector of Poor, 25th February 1895.

1. NOT that I have heard.
2. Nothing.
3. No.

PARISH OF PANBRIDE, COUNTY OF FORFAR.

Population (1891), 1,741. Assessable Rental (1893–94), £12,345.

Letter from *James P. Morison*, Inspector of Poor, 26th February 1895.

1. NO.
2. The Parochial Board, and a few private individuals, have distributed money, coals, sugar and tea, &c., to the most necessitous poor.
3. No unemployed register maintained in this parish, as the poor are all well cared for.
4. None.

PARISH OF RESCOBIE, COUNTY OF FORFAR.

Population (1891), 660. Assessable Rental (1893–94), £7,544.

Letter from *Walter Graham*, Inspector of Poor, 25th February 1895.

1. NONE.
4. No distress being known to the Parochial Board, I have no suggestions to make.

PARISH OF RUTHVEN, COUNTY OF FORFAR.

Population (1891), 188. Assessable Rental (1893–94), £1,910

Letter from *Henry Patterson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. Although the winter has been an exceptionally severe one, all the people have been employed. So much has labour been in demand here during winter, that workmen from other districts have been brought in to supply the deficiency.
2. Nothing is required to be done.

PARISH OF ST. VIGEANS, COUNTY OF FORFAR.

Population (1891), 15,620. Assessable Rental (1893–94), £52,388.

Letter from *Robert Stuart*, Inspector of Poor, 25th February 1895.

1. THERE has been more or less exceptional distress in Arbroath, owing solely to the long-continued severity of the weather. To-day, however, builders and other out-door workers have resumed their usual employment.

2. The Police Commissioners provided work for all who applied. The average daily number was about 40. A soup kitchen was opened and service prepared for 150, but the highest number of applications in one day was only 130.

3. No.

4. The measures taken by the public authorities and voluntary agencies appear to have been sufficient.

PARISH OF STRACATHRO, COUNTY OF FORFAR.

Population (1891), 505. Assessable Rental (1893–94), £4,626.

Letter from *James C. Inverarity*, Inspector of Poor, 2nd March 1895.

1. NO.

PARISH OF TANNADICE, COUNTY OF FORFAR.

Population (1891), 1,117. Assessable Rental (1893–94), £13,225.

Letter from *Thomas Stevenson*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF TEALING, COUNTY OF FORFAR.

Population (1891), 630. Assessable Rental (1893–94), £5,113.

Letter from *P. M. M'Kenzie*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF ABERLADY, COUNTY OF HADDINGTON.

Population (1891), 1,063. Assessable Rental (1893–94), £9,067.

Letter from *John Congalton*, Inspector of Poor, 25th February 1895.

1. WE have had no exceptional distress in the district, the working classes being mostly farm servants who are in constant employment and pay. The other labourers, being mostly employed by Lord Wemyss and Mr. Hope, find regular employment. There have been a few young men and lads out of work by the severe weather, but they reside with their parents; the frost having apparently gone the usual work will be resumed by them.

2. There has been nothing done here, either by public authority or voluntary agencies, there being no special distress so far as I know. I may mention that at Christmas time, when the Countess of Wemyss and Lady Mary Hope distributed their usual gifts, there were no new applications this year to put on their lists.

3. No register required; but four men who worked on the public roads have lost a fortnight during the storm, but have resumed work to-day.

4. There has been no special distress by the severe weather so far as I am aware of here, and the frost having apparently gone now, I have therefore no suggestions to make.

PARISH OF ATHELSTANEFORD, COUNTY OF HADDINGTON.

Population (1891), 741. Assessable Rental (1893–94), £9,402.

Letter from *John Craig*, Inspector of Poor, 25th February 1895.

1. NO. The great majority of workers are employed on farms and a few on the railway, where the work is practically constant. A few tradesmen have been unemployed for several weeks, but they are all steady careful men, who are not in need.

2. Nothing.

3. No.

PARISH OF BOLTON, COUNTY OF HADDINGTON.

Population (1891), 271. Assessable Rental (1893–94), £2,848.

Letter from *Edward J. Wilson*, Inspector of Poor, 25th February 1895.

1. THERE is not any distress. The district is purely agricultural, and every one able to work is engaged by month or year.

2. No need of relief in any shape.

3. No.

4. No.

PARISH OF DIRLETON, COUNTY OF HADDINGTON.

Population (1891), 1,445. Assessable Rental (1893–94), £13,819.

Letter from *William Palmer*, Inspector of Poor, 23rd February 1895.

1. NONE.

2. None.

3. No.

4. The Parochial Board, the Kirk Session, the Proprietors of Dirleton Estate, and others, take care that no actual destitution takes place.

PARISH OF DUNBAR, COUNTY OF HADDINGTON.

Population (1891), 5,210. Assessable Rental (1893–94), £32,858.

Letter from *Robert Masterton*, Inspector of Poor, 26th February 1895.

1. YES; to the severe weather.

2. A public soup kitchen, where about 180 rations of bread and soup have been supplied daily.

3. No.

4. No; with a return of mild weather matters will resume their normal condition.

PARISH OF GARVALD, COUNTY OF HADDINGTON.

Population (1891), 600. Assessable Rental (1893–94), £6,954.

Letter from *James Boucher*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this district because the parish is wholly agricultural, and the farm servants have yearly engagements and receive their pay the same during all weathers. No applications for relief have been made this year.

PARISH OF GLADSMUIR, COUNTY OF HADDINGTON.

Population (1891), 1,604. Assessable Rental (1893–94), £13,149.

Letter from *J. Winton*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish.

2. No application has been made during the storm either to the Kirk Session or Parochial Board.

3. No.

PARISH OF HADDINGTON, COUNTY OF HADDINGTON.

Population (1891), 5,216. Assessable Rental (1893-94), £29,803.

Letter from *T. W. Kemp*, Inspector of Poor, 25th February 1895.

1. THERE is distress, but I would not say that it was very exceptional. Haddington being an agricultural district, and hence a large number employed at field and out-door work, the present distress is wholly due to the severe weather.

2. (*a*) A soup kitchen, under the management of the Parochial Board and maintained wholly by voluntary subscription, was opened, and is still continued, whereby a good supply of broth and bread is given out to applicants in quantities according to the size of the family, and, through the Ladies' Society, almost the whole of the applicants for soup have been supplied with coal also.

(*b*) For week ending 16th February, the average number supplied daily was 57 cases with about 100 dependants. There has been a considerable amount given away privately, of which I could not give any estimate.

3. There is a proper soup kitchen register kept of all those relieved, together with the number of rations granted daily to each case. (A ration consists of one pound of bread and a quart of broth.)

4. In all cases of distress, such as the present, any charity to be given away should be done through one agency, and parties anxious and willing to do something towards the relief of the distress to be asked publicly to give to that one agency, and to whom all applicants for relief should be referred; such agency would then be responsible for dealing with all applications, and would thus do away with the present system (which is too much indulged in in this district) of women calling after nightfall upon the more charitable inhabitants of the town seeking relief.

PARISH OF HUMBIE, COUNTY OF HADDINGTON.

Population (1891), 791. Assessable Rental (1893–94), £5,984.

Letter from *J. Stuart*, Inspector of Poor, 25th February 1895.

1. NONE.

PARISH OF INNERWICK, COUNTY OF HADDINGTON.

Population (1891), 761. Assessable Rental (1893–94), £9,630.

Letter from *Peter Purdie*, Inspector of Poor, 25th February 1895.

1. THERE is no distress whatever in this parish. The parish is wholly agricultural, and, generally speaking, the employees are in very comfortable circumstances.

2. Nil.

3. No.

PARISH OF MORHAM, COUNTY OF HADDINGTON.

Population (1891), 199. Assessable Rental (1893–94), £2,225.

Letter from *William Graham*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. (*a*) Nothing.
(*b*) None.

3. No.

4. No.

PARISH OF NORTH BERWICK, COUNTY OF HADDINGTON.

Population (1891), 3,038. Assessable Rental (1893–94), £23,152.

Letter from *Thomas Lees*, Inspector of Poor, 26th February 1895.

1. THERE is, and this may be accounted for by the fact that ours, being a summer residence and golf centre, there always will be more or less scarcity of work in the winter months. This year the distress has been greater than has been for many years, owing entirely to the severe weather, as workmen were unable to prosecute their labours.

2. (*a.*) Nothing by the public authorities, but a good deal by voluntary agencies, and the average daily number relieved in the week mentioned would be about 13 families, these being relieved with coal, groceries, money, bread, soup, beef, and other necessaries, &c.

3. None maintained.

4. In a parish like this I have little to add, as it is generally admitted there are few parishes where voluntary relief is so much given as ours. Any work of an in-door kind that would keep workmen going for a few weeks in winter would be sufficient to relieve distress.

PARISH OF OLDHAMSTOCKS, COUNTY OF HADDINGTON.

Population (1891), 443. Assessable Rental (1893–94), £4,340.

Letter from *A. Grainger*, Inspector of Poor, 25th February 1895.

1. NONE.
2. Nothing.
3. Not required.
4. No.

PARISH OF ORMISTON, COUNTY OF HADDINGTON.

Population (1891), 1,178. Assessable Rental (1893–94), £6,250.

Letter from *Robert Henderson*, Inspector of Poor, 23rd February 1895.

1. THERE is no exceptional distress.
3. No.
4. No.

PARISH OF PENCAITLAND, COUNTY OF HADDINGTON.

Population (1891), 1,125. Assessable Rental (1893–94), £7,434.

Letter from *Alexander Wood*, Inspector of Poor, 25th February 1895.

1. NONE, so far as I know. Population principally coal miners and ploughmen with regular wages in all kinds of weather.
2. (*a.*) Nothing.
   (*b.*) None.
3. No.
4. None.

PARISH OF PRESTONKIRK, COUNTY OF HADDINGTON.

Population (1891), 1,802. Assessable Rental (1893–94), £13,455.

Letter from *John Lumsden*, Inspector of Poor, 26th February 1895.

1. ANY exceptional distress there may be is on account of the severe weather.
2. A soup kitchen has been opened by voluntary agency where 26 people have got relief.
3. No.
4. No.

PARISH OF PRESTONPANS, COUNTY OF HADDINGTON.

Population (1891), 2,659. Assessable Rental (1893–94), £13,098.

Letter from *R. H. Hunter*, Inspector of Poor, 23rd February 1895.

1. No exceptional distress.

3. No.

PARISH OF SALTON, COUNTY OF HADDINGTON.

Population (1891), 495. Assessable Rental (1893–94), £4,532.

Letter from *W. A. Findlay*, Inspector of Poor, 26th February 1895.

1. BEING purely an agricultural parish, there is no one unemployed in it, or thrown idle by the weather, consequently no exceptional distress.

PARISH OF SPOTT, COUNTY OF HADDINGTON.

Population (1891), 475. Assessable Rental (1893–94), £5,356.

Letter from *Robert Grieve*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in the district. Most of the people are agricultural workers. The ploughmen are yearly servants, and the out-workers are employed except on very stormy days.

PARISH OF STENTON, COUNTY OF HADDINGTON.

Population (1891), 556. Assessable Rental (1893–94), £4,927.

Letter from *James Brown*, Inspector of Poor, 25th February 1895.

1. THIS being a purely agricultural district, there is no exceptional distress in it. The farm servants and labourers on the adjacent estates have employment all the year.

3. No register kept.

PARISH OF TRANENT, COUNTY OF HADDINGTON.

Population (1891), 5,470. Assessable Rental (1893–94), £22,515.

Letter from *John K. Gardner*, Inspector of Poor, 25th February 1895.

1. No exceptional distress. Mining the principal labour. The cold weather causing distress among the poor.

2. Nothing.

3. No.

PARISH OF WHITEKIRK, COUNTY OF HADDINGTON.

Population (1891), 933. Assessable Rental (1893–94), £9,020.

Letter from *John Wood*, Inspector of Poor, 26th February 1895.

1. IT cannot be said that any exceptional distress exists in this parish. There has, of course, as in other places, been a cessation from work in consequence of the severity of the weather, but being an agricultural parish, wages have suffered no diminution.

3. No.

PARISH OF WHITTINGHAME, COUNTY OF HADDINGTON.

Population (1891), 586. Assessable Rental (1893–94), £5,700.

Letter from *J. W., pro George Hay Winton*, Inspector of Poor, 6th March 1895.

1. NONE.

2. Nothing required.

3. No.

4. No.

PARISH OF YESTER, COUNTY OF HADDINGTON.

Population (1891), 716. Assessable Rental (1893–94), £6,715.

Letter from *W. M. Allan*, Inspector of Poor, 25th February 1895.

1. MASONS, slaters, and plasterers, and labourers connected with these trades, idle since 1st January owing to snowstorm; in all about 10 men.

2. Nothing required.

3. None.

4. Fresh weather.

PARISH OF ABERNETHY, COUNTY OF INVERNESS.

Population (1891), 1,354. Assessable Rental (1893–94), £8,930.

Letter from *George MacKenzie*, Inspector of Poor, 27th February 1895.

1. WE have had no exceptional cases of distress in this district from want of employment or otherwise during the recent severe weather. Being an agricultural and wood manufacturing district, few were, except for a short period during the winter, without employment, and these are, as a rule, partly prepared for a rest during the dead of winter.

2. By voluntary contributions twenty-five pounds (25*l.* sterling) was distributed within the parish betwixt the 25th December 1894 and the 16th February 1895. This amount went over about 30 persons, and was given at different dates.

3. No unemployed register is maintained in the parish.

4. As already mentioned, we have no extra distress.

PARISH OF ALVIE, COUNTY OF INVERNESS.

Population (1891), 656. Assessable Rental (1893–94), £9,353.

Letter from *Duncan MacBean*, Inspector of Poor, 25th February 1895.

1. No. There are a few of the labouring population and tradesmen (such as masons) who have been idle for eight weeks, but I cannot say that there is any actual distress. Generally, they are industrious and of good character, and they get along in winter on "credit," which is met by their summer's earnings.

2. (*a*) Nothing.
(*b*) None.

3. No.

4. No.

PARISH OF ARDERSIER, COUNTY OF INVERNESS.

Population (1891), 1,914. Assessable Rental (1893–94), £3,280.

Letter from *John Joss*, Inspector of Poor, 27th February 1895.

1. A LITTLE, by length of time of severe weather.

2. (*a*) Something by private subscription.
(*b*) Not ascertained.

3. No.

4. Weather not so severe; it is hoped at an end.

PARISH OF BARRA, COUNTY OF INVERNESS.

Population (1891), 2,365. Assessable Rental (1893–94), £2,466.

Letter from *Angus Macdonald*, Inspector of Poor, 27th February 1895.

1. No exceptional distress.

3. No.

PARISH OF BOLESKINE AND ABERTARFF, COUNTY OF INVERNESS.

Population (1891), 1,438. Assessable Rental (1893–94), £9,716.

4. No.

PARISH OF CROY, COUNTY OF INVERNESS.

Population (1891), 1,225. Assessable Rental (1893–94), £6,003.

Letter from *John Joss*, Inspector of Poor, 27th February 1895.

1. A LITTLE, on account of length of time of severe weather.

2. (*a*) Something by private individuals privately.
(*b*) Not ascertained.

3. No.

4. Weather not now so severe ; it is hoped to be ended.

PARISH OF DAVIOT, COUNTY OF INVERNESS.

Population (1891), 1,106. Assessable Rental (1893–94), £11,382.

Letter from *Duncan McGillivray*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish.

2. None required.

3. No.

PARISH OF DORES, COUNTY OF INVERNESS.

Population (1891), 923. Assessable Rental (1893–94), £7,040.

Letter from *Andrew Urquhart*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nothing specially required.

3. No.

4. None.

PARISH OF DUIRINISH, COUNTY OF INVERNESS.

Population (1891), 3,923. Assessable Rental (1893–94), £5,513.

Letter from *J. Nicolson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in my parish at present. There are a number out of employment, but as the "credit system" is so much in force here, they are usually supplied by merchants with goods until such time as they find employment.

3. None.

4. I have no doubt but there will be considerable difficulty to procure seed oats among the crofters this spring, and to enable them to procure such, I would suggest that some public work be started, such as the repairing or improvement of existing roads (which they urgently require), *e.g.*, the public road between Dunvegan and Portree, where so many accidents occurred owing to defective engineering, &c.

PARISH OF DUTHIL, COUNTY OF INVERNESS.

Population (1891), 2,431. Assessable Rental (1893-94), £11,674.

Letter from *R. C. Lobban*, Inspector of Poor, 26th February 1895.

1. THERE is exceptional distress in the district, due (1) to the number of navvies and other workmen at present located in the parish in connection with the construction of the Aviemore Railway; (2) to the weather, which is, and has been, exceptionally severe this winter, on account of which out-door work is at a complete standstill since Christmas; (3) to the mountainous character of the district. Parts of the parish are almost inaccessible since the beginning of the storm, and communication is altogether very difficult. The face of the country is in such a state that, should good weather set in now, out-door work cannot be prosecuted for at least three weeks.

2. (*a.*) Public authorities have not been called upon to any extent. A soup kitchen has been started in connection with the railway works. A distribution of oatmeal, coals, &c., has been made to the unemployed more immediately connected with the district.
(*b.*) The average daily number relieved during the week in connection with the soup kitchen was 80, of which about 40 reside in the neighbouring parish of Moy; 40*l.* has been collected for this object. The amount expended in the distribution of coals and meal, &c., to the native unemployed up to date is 10*l.*, and the number relieved, 50.

3. The distribution of meal, &c., has been entrusted to the Inspector of Poor, who keeps a list of those relieved. The railway contractor keeps a list of the navvies relieved at the soup kitchen. There is thus no overlapping of the two voluntary agencies.

4. The agencies noted above have, so far, been able to cope with the distress. The number relieved, however, only form a fraction of the unemployed, and if the severe weather holds out much longer, the rates are likely to be called upon to a large extent.

PARISH OF GLENELG, COUNTY OF INVERNESS.

Population (1891), 1,503. Assessable Rental (1893–94), £7,339.

Letter from *D. M'Lure*, Inspector of Poor, 4th March 1895.

1. No.

2. Such is not known in the parish.

3. No.

4. None.

PARISH OF HARRIS, COUNTY OF INVERNESS.

Population (1891), 5,024. Assessable Rental (1893-94), £5,211.

Letter from *Angus Macdonald*, Inspector of Poor, 6th March 1895.

1. THERE is no distress in this district, further than what is peculiar to the locality.

2. Four families relieved by the proprietor, with 19 dependants. Three families relieved by the Inspector of Poor by casual relief, with 17 dependants.

3. None.

4. The best system for relieving them here is to give them work on roads through the hills to enable the children the more easily to attend school, and to facilitate access to the burying grounds, &c.

PARISH OF INVERNESS, COUNTY OF INVERNESS.

Population (1891), 24,186. Assessable Rental (1893-94), £103,595.

Letter from *Hugh Fraser*, Inspector of Poor, 26th February 1895.

1. YES; due to severe weather.

2. (*a.*) Work and food given by the Town Council, and food, coals, &c., by voluntary agencies.
(*b.*) During the week 144 men were employed at 4*d.* per hour, working six hours a day, and 1,199 stones of oatmeal and 144 loaves of bread were distributed. The above by Town Council by means of subscriptions, concerts, &c. Voluntary agencies: Soup kitchen, 80 daily relieved. Free breakfasts, 60 daily relieved. All the churches giving relief, and number relieved not ascertained.

3. Yes, at Burgh Police Office. Gave relief as above.

4. No. The distress here will disappear on the return of good weather.

PARISH OF KILMALLIE, COUNTY OF INVERNESS.

Population (1891), 4,312. Assessable Rental (1893-94), £25,392.

Letter from *John Robertson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish. The Burgh of Fortwilliam would be the first to suffer, and although out-door labour was at a standstill owing to a long continuance of frost, all who wished for employment could be employed clearing the snow block on the West Highland Railway.

2. All chronic cases share the usual contributions in coals and meal during the winter season, and paupers are not excluded. There is no voluntary agency, and these necessaries are furnished by the charitably disposed, and is done more or less every winter.

3. No.

4. Looking to the future, I would suggest that the Burgh Commissioners of Fortwilliam, or other body, should construct a stone depôt at some place convenient to the burgh, in order to afford work to the able-bodied in case of meeting with a winter similar to what is now past.

PARISH OF KILMONIVAIG, COUNTY OF INVERNESS.

Population (1891), 2,205. Assessable Rental (1893-94), £22,496.

Letter from *William Ross*, Inspector of Poor, 25th February 1895.

1. I AM not aware of a single case of distress in the parish.

3. No.

4. None.

PARISH OF KILMORACK, COUNTY OF INVERNESS.

Population (1891), 2,093. Assessable Rental (1893-94), £15,489.

Letter from *Donald McLean*, Inspector of Poor, 25th February 1895.

1 No.

2. All known distress was relieved by voluntary subscriptions and contributions.

3. No.

4. No.

PARISH OF KILMUIR (SKYE), COUNTY OF INVERNESS.

Population (1891), 2,394. Assessable Rental (1893-94), £3,034.

Letter from *A. Mackinnon*, Inspector of Poor, 26th February 1895.

1. THERE is no unusual distress in this district at present.

3. No.

4. None.

PARISH OF KILTARLITY, COUNTY OF INVERNESS.

Population (1891), 1,922. Assessable Rental (1893–94), £10,503.

Letter from *William Fraser*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF KINGUSSIE, COUNTY OF INVERNESS.

Population (1891), 1,941. Assessable Rental (1893–94), £17,521.

Letter from *John Campbell*, Inspector of Poor, 25th February 1895.

1. THERE is considerable distress in this district due to the severe weather.

2. (*a.*) In the burghal portion of this parish the Police Commissioners are employing the distressed in clearing the streets and roads within the burgh of snow. In the landward portion voluntary agencies are distributing food and fire where such are required.
(*b.*) There was no pressing need for relief up to the 16th February. Since then 18 families have been relieved by me out of a voluntary contribution of 15*l.* received for their benefit.

3. There is no such register maintained, but on 16th February I visited at their homes such families as I thought would be in distress in the district, and reported 18 as cases where relief in fuel and food was urgently required. Their wants were promptly attended to out of the contribution mentioned under 2 (*b*) above.

4. I would suggest that the district committee of the County Council should give work to the unemployed by opening up the county roads, which in this district have been blocked up with snow for the past two months. By doing so the distress in this quarter would be altogether relieved and the public greatly convenienced.

PARISH OF KIRKHILL, COUNTY OF INVERNESS.

Population (1891), 1,307. Assessable Rental (1893–94), £8,734.

Letter from *Hector MacLean*, Inspector of Poor, 26th February 1895.

1. PARISH is mainly agricultural. Distress not exceptional. The principal difficulty is the cheapness of food Workpeople fairly sober.

2. Nothing.

3. No.

4. No.

PARISH OF LAGGAN, COUNTY OF INVERNESS.

Population (1891), 857. Assessable Rental (1893–94), £12,297.

Letter from *Roderick Macdonald*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the district to my knowledge.

2. There being no exceptional distress no exceptional relief is necessarily required.

3. In the circumstances no unemployed register necessary.

4. In the circumstances I have no suggestions to make.

PARISH OF MOY AND DALAROSSIE, COUNTY OF INVERNESS.

Population (1891), 730. Assessable Rental (1893–94), £8,701.

Letter from *John Watson*, Inspector of Poor, 26th February 1895.

1. MANY of the native population of the parish have certainly suffered from privation, both on account of the blocked state of the roads and the severity of the weather, but hitherto there has been no distress to excite anxiety, or demand special relief in the case of any. On the other hand, the navvies employed in the construction of the new Aviemore line, and resident in the parish, have had very trying times of it during the storm, but the contractors, Messrs. Ross & Son, are doing everything in their power to alleviate the distress.

2. The public authorities have done nothing as yet to relieve distress. The Mackintosh of Mackintosh has generously opened a soup kitchen at the roadside here, at his own expense, for the relief of all necessitous cases in the district.

3. No.

4. At present there is no special necessity for making further provision, or making any suggestion for the purpose of relieving local distress.

PARISH OF PETTY, COUNTY OF INVERNESS.

Population (1891), 1,298. Assessable Rental (1893–94), £8,092.

Letter from *Alexander Marr*, Inspector of Poor, 25th February 1895.

1. I AM not aware of any.

PARISH OF PORTREE, COUNTY OF INVERNESS.

Population (1891), 3,176. Assessable Rental (1893-94), £8,690.

Letter from *Geo. W. MacKenzie*, Inspector of Poor, 26th February 1895.

1. I AM not aware of any exceptional distress just now.

2. Nothing has been done as the Poor Law relief is supposed to be sufficient.

3. No.

4. I have none. There is a scarcity of work in this district, and undoubtedly if Government encouraged local industries, it would greatly promote the prosperity and comfort of the inhabitants.

PARISH OF SLEAT, COUNTY OF INVERNESS.

Population (1891), 1,843. Assessable Rental (1893–94), £3,411.

Letter from *John MacKenzie*, Inspector of Poor, 27th February 1895.

1. I HEAR of no distress in the district.

2. There has been no claim for exceptional relief other than the ordinary parochial.

3. No.

4. I have no suggestion, further than that Government should erect boatslips at the different fishing grounds to allow fishermen to prosecute their calling, which would relieve any distress.

PARISH OF SMALL ISLES, COUNTY OF INVERNESS.

Population (1891), 436. Assessable Rental (1893–94), £2,755.

Letter from *James Campbell*, Inspector of Poor, 1st March 1895.

1. No distress except the usual chronic want of industry on the part of a few who always return home from employment in winter.

2. Nothing, as the distress is not general, and may be said to be voluntary.

3. No.

4. None.

PARISH OF SNIZORT, COUNTY OF INVERNESS.

Population (1891), 1,908. Assessable Rental (1893–94), £3,731.

Letter from *A. Mackinnon*, Inspector of Poor, 26th February 1895.

1. THERE is no unusual distress in this district at present.

3. No.

4. None.

PARISH OF STRATH, COUNTY OF INVERNESS.

Population (1891), 2,399. Assessable Rental (1893–94), £4,497.

Letter from *P. C. MacKenzie*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish.

PARISH OF NORTH UIST, COUNTY OF INVERNESS.

Population (1891), 4,187. Assessable Rental (1893–94), £4,837.

Letter from *M. MacDonald*, Inspector of Poor, 28th February 1895.

1. THE people in this parish did not suffer any hardships through the recent severe frost, and are in no way in distress for want of food.

PARISH OF SOUTH UIST, COUNTY OF INVERNESS.

Population (1891), 5,821. Assessable Rental (1893–94), £6,513.

Letter from *J. A. MacLeod*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this district at present. There are no works in it with which the severe weather interfered to any appreciable extent. There are no public works in this place. Crofting and a little fishing are the leading industries of the parish (only potatoes), and will be so scarce that crofters will not be able to plant as much as they were wont in former years, and so scarce that they cannot buy from a distance.

3. There are no public works in the parish, and I am not aware that there is an unemployed register kept. Certainly none by the Parochial Board.

4. As stated in 1, there are no public works in the district, and those of the crofters who have but a few acres of very indifferent lands, and have nothing else by which to make, would be much benefited if employment could be given them in the district, as the produce gets exhausted later on, say about the end of spring. The potato crop having been a comparative failure this year distress is sure to follow.

PARISH OF URQUHART AND GLENMORISTON, COUNTY OF INVERNESS.

Population (1891), 2,040. Assessable Rental (1893–94), £11,790.

Letter from *Angus Grant*, Inspector of Poor, 25th February 1895.

1. No, there is no exceptional distress in this parish arising from the want of employment. No constant employment is ever expected here in winter, except in connection with estates, such as erecting fences, working in plantations and woods, &c. During the storm, there was more work than usual going on in the woods on account of the ease with which timber can be dragged over snow. There are a few labourers who do not get much to do on the estates, and who are content with occasional jobs in winter. On account of the prolonged storm these are getting less to do than they expected. Some may be therefore pretty hard-up, but as yet there is no complaint

2. (*a.*) In cases of hardship, there is a Dorcas Society with funds at their disposal. On the Seafield Estates the factor has the power to give assistance in deserving cases, and such assistance has been given at my recommendation
(*b.*) I am not aware that any application has been made for that week.

3. No.

4. No.

PARISH OF ARBUTHNOTT, COUNTY OF KINCARDINE.

Population (1891), 795. Assessable Rental (1893-94), £6,590.

Letter from *John Jackson*, Inspector of Poor, 25th February 1895.

1. NONE.

PARISH OF BANCHORY DEVENICK, COUNTY OF KINCARDINE.

Population (1891), 1,981. Assessable Rental (1893-94), £11,274.

Letter from *J. Simpson*, Inspector of Poor, 25th February 1895.

1. THIS parish being wholly agricultural, with the exception of the fishing villages of Portlethen, Downies, and Findon (where the catches of fish, as reported to me by the fishermen themselves, are at present, and have been for some time, very good), there is little or no distress in this district, as is apparent from the fact that not a single application for relief has been made to me since 6th November last.

PARISH OF BANCHORY TERNAN, COUNTY OF KINCARDINE.

Population (1891), 3,193. Assessable Rental (1893-94), £20,750.

Letter from *Joseph Merson*, Inspector of Poor, 25th February 1895.

1. THERE has been considerable privation amongst members of building trades, out-door workers and labourers, arising almost altogether from the inclement weather.

2. Voluntary agencies have overtaken all relief work required. A soup kitchen within the burgh has daily relieved large numbers there, where the hardships have been more keenly felt than amongst the landward population. Daily average wanted, 90. Other agencies are intermittent, and no daily figures can be given.

3. No register.

4. No special recommendations can be made. The return of good weather will bring immediate effects of the distress to an end.

PARISH OF BENHOLM, COUNTY OF KINCARDINE.

Population (1891), 1,552. Assessable Rental (1893-94), £7,346.

Letter from *William Low*, Inspector of Poor, 26th February 1895.

1. No distress beyond the usual at this season of the year.

2. There is no cause for anything being done by the public authorities in this parish or district.

3. No; register not required.

4. None.

PARISH OF BERVIE, COUNTY OF KINCARDINE.

Population (1891), 2,387. Assessable Rental (1893-94), £6,390.

Letter from *James Roberts*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the district.

2. There is no special distress in this parish at the present time.

3. There is no unemployed register kept by any public authority in this parish.

PARISH OF DUNNOTTAR, COUNTY OF KINCARDINE.

Population (1891), 2,739. Assessable Rental (1893–94), £10,605.

Letter from *John Macpherson*, Inspector of Poor, 25th February 1895.

1. THERE are some cases of exceptional distress, and all are attributable to the severe weather.

2. The chief constable has collected altogether fully 30*l.*, and through the committee of the public soup kitchen about 170 separate families of one or more persons have been daily supplied with soup and bread. The Society of Ancient Shepherds, under the auspices of the town council, held a concert, at which 24*l.* were netted for the relief of the unemployed, and the Kirk Session of Fetteresso have given 20 tons of coal. About 300 persons have been assisted daily during week ending 16th February, mostly with soup and coals, but I cannot give specific numbers.

3. No.

4. No; I am of opinion that the distress, which applies to the out-door labourers—the fishermen, a good many of whom live here, have not been affected—has been generously met. There have been no applications to the parochial board on account of the special distress.

PARISH OF DURRIS, COUNTY OF KINCARDINE.

Population (1891), 918. Assessable Rental (1893–94), £8,611.

Letter from *Francis Duncan*, Inspector of Poor, 27th February 1895.

1. No; there is no distress in this district, and no necessarily idle man in the parish. Practically, the whole parish is owned by Mr. H. R. Baird, of Durris, who gives work on his estate to all resident upon it who want employment.

2. *See* above.

3. No. *See* above.

4. *See* above.

PARISH OF FETTERCAIRN, COUNTY OF KINCARDINE.

Population (1891), 1,421. Assessable Rental (1893–94), £9,498.

Letter from *David Prain*, Inspector of Poor, 25th February 1895.

1. TAKING "exceptional" into consideration, I should say, No. I would say that any distress that may be affecting a very few families is entirely due to the late severe weather (happily now somewhat abated), and this applies only to day's wage labourers. Officially, I am glad to say, not a single extra application for relief has been made to me during the prevalence of the storm.

PARISH OF FETTERESSO, COUNTY OF KINCARDINE.

Population (1891), 5,527. Assessable Rental (1893–94), £31,322.

Letter from *A. Thomson Wood*, Inspector of Poor, 25th February 1895.

1. THERE is not much distress in this parish. The severe weather has stopped out-door labour in a great measure during the last two months.

2. (*a.*) The public authorities have not required to take any action. The soup kitchen, which is always open three days a week at this season, has lately been open six days a week. The Kirk Session, who annually distribute 20 tons of English coal, have this year distributed 40 tons. Twenty pounds was raised by a dramatic entertainment, and is being given in oatmeal and groceries. Nearly 20*l.* was sent to the chief constable, who is giving meal, coal and groceries to the most necessitous.

(*b.*) There is no regular daily relief.

3. No.

4. No. Every really necessitous case is being attended to.

PARISH OF FORDOUN, COUNTY OF KINCARDINE.

Population (1891), 2,004. Assessable Rental (1893–94), £15,744.

Letter from *A. C.* pro. *Robert Bruce*, Inspector of Poor, 25th February 1895.

1. NONE.

2. None.

3. No.

4. No.

PARISH OF GARVOCK, COUNTY OF KINCARDINE.

Population (1891), 415. Assessable Rental (1893-94), £4,334.

Letter from *James B. Greig*, Inspector of Poor, 25th February 1895.

1. No; nearly all the working class residents are in farm service under six monthly engagements.
2. Nothing by public authorities. Private charity copes with any existing want.
3. No.
4. No distress.

PARISH OF GLENBERVIE, COUNTY OF KINCARDINE.

Population (1891), 887. Assessable Rental (1893-94), £7,518.

Letter from *John J. Wallace*, Inspector of Poor, 25th February 1895.

1. No.
2. Nothing; as it is not necessary.
3. No.
4. No.

PARISH OF KINNEFF AND CATTERLINE, COUNTY OF KINCARDINE.

Population (1891), 907. Assessable Rental (1893-94), £5,786.

Letter from *James Glegg*, Inspector of Poor, 25th February 1895.

1. No.
2. Nothing.
3. No.
4. None.

PARISH OF LAURENCEKIRK, COUNTY OF KINCARDINE.

Population (1891), 1,934. Assessable Rental (1893-94), £10,186.

PARISH OF MARYCULTER, COUNTY OF KINCARDINE.

Population (1891), 1,030. Assessable Rental (1893-94), £7,014.

Letter from *James Macdonald*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in the parish. Only a very few persons are wholly unemployed, and none of these are under any distress.
3. No.

PARISH OF MARYKIRK, COUNTY OF KINCARDINE.

Population (1891), 1,307. Assessable Rental (1893-94), £10,302.

Letter from *John Scott*, Inspector of Poor, 26th February 1895.

1. No; there is no exceptional distress in this district.

PARISH OF NIGG, COUNTY OF KINCARDINE.

Population (1891), 4,513. Assessable Rental (1893–94), £20,225.

Letter from *Andrew D. Barnett*, Inspector of Poor, 27th February 1895.

1. I BELIEVE so, but not to a large extent. The line fishermen have had very poor incomes during past six months, partly on account of stormy weather and other circumstances; quarry labourers, stone cutters, and general labourers have had little employment on account of the severe weather.

2. (*a.*) The Trades Council of Aberdeen, Police, and other agencies have been distributing charitable relief perhaps to the value of 10*l.* to 15*l.* No regular daily relief afforded. No application made to me as Inspector of Poor.

3. Not in this Parish.

4. I suggest that in open winters public authorities should have work reserved to offer, rather than encourage applicants for charity.

PARISH OF ST. CYRUS, COUNTY OF KINCARDINE.

Population (1891), 1,327. Assessable Rental (1893–94), £14,808.

Letter from *George Moir*, Inspector of Poor, 25th February 1895.

1. No.

2. No applications for relief have been made to me during the recent storm.

3. Register not required.

PARISH OF STRACHAN, COUNTY OF KINCARDINE.

Population (1891), 655. Assessable Rental (1893–94), £4,395.

Letter from *Neil Gilchrist*, Inspector of Poor, 25th February 1895

1. THERE is no exceptional distress in the district.

2. (*a.*) There is nothing being done as the state of matters is normal.
(*b.*) None.

PARISH OF CLEISH, COUNTY OF KINROSS.

Population (1891), 539. Assessable Rental (1893–94), £4,980.

Letter from *Thomas Dobbie*, Inspector of Poor, 27th February 1895.

1. No.

2. Nothing.

3. No.

4. No.

PARISH OF FOSSOWAY, COUNTY OF KINROSS.

Population (1891), 1,053. Assessable Rental (1893–94), £12,853.

Letter from *William Hunter*, Inspector of Poor, 25th February 1895.

1. No. A few labourers, such as drainers, cannot get at their usual work, but can find other employment.

2. (*a.*) Nothing by Public Authorities.
(*b.*) One gentleman, Mr. Mowbray of Naemoor by Dollar, distributed about 20 tons of coals last week among the poor and some of the labouring class.

3. No.

PARISH OF KINROSS, COUNTY OF KINROSS.

Population (1891), 2,385. Assessable Rental (1893–94), £15,692.

Letter from *Robert Wylie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress here on account of want of employment or the severe weather, and no application has been made by any parishioner for parochial relief, from either of these causes, all this winter.

2. Nothing done by any public authorities.

3. No.

PARISH OF ORWELL, COUNTY OF KINROSS.

Population (1891), 1,852. Assessable Rental (1893–94), £16,375.

Letter from *John Watson*, Inspector of Poor, 25th February 1895.

1. NO exceptional distress in this parish. Masons, plasterers, slaters, &c., are idle owing to the severe weather, but they are provident as a rule; should their savings run done, no difficulty in getting credit until they resume work. Agricultural servants are engaged by the year, consequently income not affected by weather.

2. (*a*) Nothing done by public authorities; there has been a good deal of charity by private individuals and churches in the shape of coals, tea and sugar, &c. In Milnathout, with a population of about 1,100, 50*l*. since the beginning of the year; that is within my knowledge, and, I presume, a good deal I have not heard of.

3. No.

4. I am of opinion the Poor Law is quite able to deal with the matter here.

PARISH OF PORTMOAK, COUNTY OF KINROSS.

Population (1891), 844. Assessable Rental (1893–94), £8,923.

Letter from *Wm. Glass*, Inspector of Poor, 27th February 1895.

1. I DO not think there are half a dozen unemployed within the parish, and no case of destitution exists.

PARISH OF ANWORTH, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 724. Assessable Rental (1893–94), £5,325.

Letter from *John McClellan*, Inspector of Poor, 6th March 1895.

1. NONE.

2. (*a*) Public subscription raised and work given.

(*b*) Twenty.

3. No.

4. No.

PARISH OF BALMACLELLAN, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 745. Assessable Rental (1893–94), £9,140.

Letter from *George Coltart*, Inspector of Poor, 26th February 1895.

1. So far as I am aware there is no exceptional distress in this parish at present. The "doles" from the Kirk Session have been distributed and have been more bountiful than on former occasions, consisting of coals, meal, tea, sugar, and bread. At statutory meeting of Parochial Board held here last Thursday, there was only one application for relief, and that was dealt with as "casual."

2. The curlers in this district have most kindly, on two or three occasions, distributed coals, meal, bread, &c. These donations have been chiefly to the deserving poor, not to those receiving parochial relief, and have been greatly appreciated by the workers during this severe weather.

3. No.

PARISH OF BALMAGHIE, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 839. Assessable Rental (1893–94), £8,516.

Letter from *William Sproat*, Inspector of Poor, 26th February 1895.

1. VERY little, if any; if there is, it is wholly due to the severe weather. I feel sure not a person in the parish is in want.

2. Nothing by public authorities, the annual gifts of coals, &c., by private parties have again been given and have been gratefully received, especially on account of the severe weather, the recipients being those on the poor roll, and other poor through age or illness.

3. No.

4. No, none necessary.

PARISH OF BORGUE, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,121. Assessable Rental (1893–94), £11,002.

Letter from *John Henderson*, Inspector of Poor, 25th February 1895.

1. NONE.

3. No.

PARISH OF BUITTLE, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 960. Assessable Rental (1893–94), £10,399.

Letter from *Hugh Knox*, Inspector of Poor, 25th February 1895.

1. No.

2. *See* answer to 1.

3. No.

4. *See* answer to 1.

PARISH OF CARSPHAIRN, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 394. Assessable Rental (1893–94), £9,045.

Letter from *Geo. C. McMillan*, Inspector of Poor, 25th February 1895.

1. No exceptional distress here.

PARISH OF COLVEND, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,127. Assessable Rental (1893–94), £10,182.

Letter from *James McLelland*, Inspector of Poor, 25th February 1895.

1. YES. This is due to the circumstances peculiar to the severe weather.

2. (*a*) Nothing by public authorities, but by voluntary agencies.

(*b*) Six by private charity and voluntary agencies.

Note.—Agricultural labourers are suffering most, having had no work for about two months, but in a good many cases, members of their families, hired by the half-year, get advances from their masters and then assist their parents.

3. No.

4. If a sum of, say, 50*l.*, could be placed in the hands of the Kirk Session or of the Parochial Board, much distress could be alleviated for a time.

PARISH OF CROSSMICHAEL, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,348. Assessable Rental (1893–94), £11,280.

Letter from *John Clark*, Inspector of Poor, 24th February 1895.

1. YES. The district is purely agricultural and the exceptional severity of the weather lately has precluded the possibility of field work.

2. Nothing is being done by public authorities; a good deal by private benefaction. About 80 or 90 stones of meal, and several tons of coal (resulting from curling matches), have been distributed among the necessitous cases. All having been done privately, it is impossible for me to give numbers.

3. No.

4. No outside assistance seems to be required in this parish. Doles to the needy (from donations and bequests) are also made by the Kirk Session from time to time, but privately.

PARISH OF DALRY, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 925. Assessable Rental (1893–94), £10,314.

Letter from *James Barbour*, Chairman, *pro* Inspector of Poor, 25th February 1895.

1. NO exceptional distress.

2. The interest of an endowment under the management of the Kirk Session, and other doles supplied by private charity, have been found sufficient to meet any cases of hardship, but no applications have been made for special relief.

3. None.

4. No.

PARISH OF GIRTHON, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,354. Assessable Rental (1893–94), £8,331.

Letter from *John Hunter*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress in the parish, caused principally by severe weather.

2. Public authorities employ 20 to 30 men for 10 days clearing away snow. County Council employed about 30 for 10 days clearing away snow. Voluntary agency maintain a soup kitchen, where about 20 to 25 are relieved daily.

3. No.

4. No.

PARISH OF KELLS, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 931. Assessable Rental (1893–94), £9,823.

Letter from *George Linton*, Inspector of Poor, 25th February 1895.

1. NO; there is no exceptional distress in the parish. Any cases of a little hardship caused by the severe weather have been, and are being, met by voluntary distribution of coal and meal, &c.

2. The public authorities have not been called upon in the matter; there is no necessity for them; there is no record of the numbers relieved voluntarily; they are not many.

3. No; there is no register, none being required.

PARISH OF KELTON, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 3,692. Rateable Rental (1893–94), £23,604.

Letter from *John Welsh*, Inspector of Poor, 24th February 1895.

1. HAVE not been made aware of any exceptional case of distress in the parish, nor any applications for relief on account of the weather.

2. Ordinary winter soup-kitchen in the Burgh of Castle Douglas in this parish. The Town Clerk will be giving particulars of this in his return, as the kitchen, I understand, was primarily under the control of Town Council.

PARISH OF KIRKBEAN, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 714. Assessable Rental (1893–94), £8,421.

Letter from *James Fulton*, Inspector of Poor, 25th February 1895.

1. No.
2. Nothing.
3. No.
4. No.

PARISH OF KIRKCUDBRIGHT, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 3,477. Assessable Rental (1893–94), £19,259.

Letter from *F. Finlayson*, Inspector of Poor, 25th February 1895.

1. No.

2. The recent snowstorm has necessitated the clearing of the roads and streets, consequently there is no appreciable number of unemployed. In order to protect the bridge which spans the Dee at Kirkcudbright, the fishermen have been employed breaking the ice. A daily allowance of soup is supplied to all in need; the kitchen is supported by voluntary contributions.

3. No.

4. The means now employed are quite sufficient.

PARISH OF KIRKGUNZEON, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 539. Assessable Rental (1893–94), £7,066.

Letter from *William Copland*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF KIRKMABRECK, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,599. Assessable Rental (1893–94), £9,738.

Letter from *John Carson*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

4. In explanation:—I have had only one application for parochial relief since the New Year. The granite quarries, which are almost the sole industry of the place, were at a standstill since the snowstorm on February 6th until the 20th, when re-lays of men have been working since then. I understand the full force of men will be employed in a day or so.

PARISH OF KIRKPATRICK DURHAM, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,157. Assessable Rental (1893–94), £10,112.

Letter from *Robert Grierson*, Inspector of Poor, 26th February 1895.

1. NOTHING other than that caused by the severe weather.
2. Voluntary distributions of meal, coals, bread, tea, &c., during severe weather, to working people.
3. No.
4. Labourers might be more fully employed after a snowstorm clearing the roads for traffic.

PARISH OF KIRKPATRICK IRONGRAY, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 747. Assessable Rental (1893–94), £9,225.

Letter from *David Douglas*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish. Most of the working people are employed as yearly or half-yearly servants.

2. There is no need for anything being done by public authorities or by voluntary agencies. Some of the gentlemen have given money to purchase coals for the poorer families; but this is done every year to make their condition more comfortable during the coldest part of the year.

3. No register is kept.

4. No.

PARISH OF LOCHRUTTON, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 534. Assessable Rental (1893–94), £7,174.

Letter from *Henry R. Sewell*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district.

3. No register of unemployed is kept, there being no need of such.

PARISH OF MINNIGAFF, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,425. Assessable Rental (1893–94), £13,513.

Letter from *James M'Kie*, Inspector of Poor, 25th February 1895.

1. NONE at present.

2. Plenty of charitable bequests to meet all demands.

3. None.

4. None.

PARISH OF NEW ABBEY, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 866. Assessable Rental (1893–94), £6,027.

Letter from *Peter M'Donald*, Inspector of Poor, 25th February 1895.

1. ANY distress here is due to severe weather.

2. Any cases of distress here has been very well attended to through private sources, proceeds from a charity ball, money from the Kirk Session. There has been coals distributed, and also meal, and are still distributing coals to-day.

3. None.

4. None.

PARISH OF PARTON, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 692. Assessable Rental (1893–94), £6,972.

Letter from *W. Browne*, Inspector of Poor, 25th February 1895.

1. No no unemployed in district.

PARISH OF RERRICK, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 1,582. Assessable Rental (1893–94), £16,425.

Letter from *James Ramsay*, Inspector of Poor, 26th February 1895.

1. As some of the working men in this locality have done very little work since the frost began their families must be getting hard up, but I cannot say there is any exceptional distress in the district. Any distress that exists must be attributed to the severe weather, as, only for that, all the working men would have been fully employed.

2. (*a*) A good deal of charity has been dispensed in the shape of coals, oatmeal, loaves, and tea and sugar, by voluntary agencies.
(*b*) I cannot give any numbers; but, as this is a thinly-populated district, any necessitous case is soon known of and attended to.

3. No.

4. I can offer no suggestions.

PARISH OF TERREGLES, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 478. Assessable Rental (1893–94), £5,119.

Letter from *John A. Carse*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF TONGLAND, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 845. Assessable Rental (1893–94), £10,807.

Letter from *George Hunter*, Inspector of Poor, 25th February 1895.

1. "EXCEPTIONAL distress" cannot be said to exist. A few day labourers have been longer than usual off work owing to frost; they are all settled "residenters," who, as a rule, would get credit for a time after savings were exhausted; and, *see* under No. 2.

2. Every year, by means of concerts, a small fund is provided for exceptional and temporary needs. Some of the funds of the current and previous years still remain accessible to Inspector of Poor and County Councillor. About seven men (otherwise unemployed) were engaged at 3*s.* 4*d.* a day to help the regular surfacemen to clear roads during week ending 16th February.

3. Not required.

4. No.

PARISH OF TROQUEER, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 5,887. Assessable Rental (1893–94), £32,557.

Letter from *John Maxwell*, Inspector of Poor, 25th February 1895.

1. EXCEPTIONAL distress owing to the severe weather.

2. (*a*) Employment has been given by an association formed to collect subscriptions and provide work for the unemployed, and to distribute coals and soup to those in destitute circumstances.
(*b*) I understand the average number of men daily employed during the week ending 16th February 1895 to be about 36.

3. Yes, one is kept by the burgh officer.

4. In ordinary years the charitable agencies already mentioned have been found sufficient to cope with the distress.

PARISH OF TWYNHOLM, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 694. Assessable Rental (1893–94), £7,240.

Letter from *John Watson*, Inspector of Poor, 25th February 1895.

1. No.

2. Happy to report that there is no exceptional distress from want of employment.

PARISH OF URR, COUNTY OF KIRKCUDBRIGHT.

Population (1891), 4,589. Assessable Rental (1893–94), £24,002.

Letter from *John Lowden*, Inspector of Poor, 27th February 1895.

1. THERE is more or less distress every winter when work is stopped by storms or frost, which this year has been longer and more severe than usual.

2. A good deal has been done by public authorities and voluntary agencies to meet the temporary distress in cleaning roads and streets of snow.

3. No.

4. No suggestions. Granite quarries, which is the principal trade of the parish, is very brisk at present; the men were only off work for a short time.

PARISH OF AVONDALE, COUNTY OF LANARK.

Population (1891), 5,069. Assessable Rental (1893–94), £35,247.

Letter from *Alexander Wilson*, Inspector of Poor, 26th February 1895.

1. YES, wholly caused here by severe weather.

2. Parochial Board gave extra allowance to all in receipt of relief. Over 60 cases got provision orders for 2*s.* 6*d.* to 5*s.* weekly from subscriptions. Sixty labourers temporarily resident at waterworks here are being supported by private charity. A soup kitchen is open to all comers, but as the soup is carried away the number relieved in this way is not known accurately, say 30.

3. No register.

4. I have visited all the cases relieved privately and would respectfully suggest that parochial boards should have power to meet this distress either by providing work or giving temporary aid. Fuller inquiry would tend to better classification and fairer treatment of well-doing deserving cases.

PARISH OF BARONY, COUNTIES OF GLASGOW AND LANARK.

Population (1891), 309,812. Assessable Rental (1893–94), £1,411,480.

Letter from *James R. Motion*, for Inspector of Poor, 25th February 1895.

1. THERE is at present considerable exceptional distress due, in my opinion, chiefly to the severity of the weather whereby out-door labour had generally to be suspended. On 17th ultimo special reports by my assistants, from inquiries made in the various districts, showed that there was no unusual distress, and had mild weather continued there would have been no necessity for exceptional measures of relief. (*See* copy letter to Town Clerk and relative reports enclosed herewith.)

2. The municipal authorities, the Charity Organisation Society, and public subscription have provided employment at stone-breaking, &c., for able-bodied men and opened soup kitchens controlled by the police, who also give other relief in money, provisions, and coals. The average daily number relieved can only be given through the Town Clerk of Glasgow and the Charity Organisation Society.

3. An unemployed register has been maintained by the Charity Organisation Society in a small way, but with little satisfactory result.

4. Measures taken by the authorities to cope with the distress have been carried out with little or no discrimination, and, in my opinion, will take years to eradicate the evils resulting therefrom. I am confident that about one-fifth of those relieved are habitual paupers either in receipt of out-door relief or who will not remain in the poorhouse. Few of the men engaged at stone breaking are *bonâ fide* unemployed tradesmen, but are composed chiefly of the discharged prisoner, the tramp, and the loafer. Barlinnie and Duke Street Prisons, I am informed, had never fewer inmates than now. The relief of such distress should be entrusted to the poor law authorities, who should have power to acquire or lease land for labour colonies, and the churches, trades unions, and other ordinary channels of private charity could then, without difficulty, cope with the small class of unemployed tradesmen.

Enclosure.

Parochial Board, Barony Parish, Glasgow,
17 January 1895.

Unemployed.

Dear Sir,

In reply to yours of the 15th instant with reference to the above, I may state that on its receipt I called my out-door staff together and instructed them to make special inquiry as to the state of trade, &c., in their respective districts, and enclosed you have press copy of their individual reports.

You will observe that these reports are all to the same effect, viz., that trade is even better at present than it has been during the past year or two at this season, and that there is no call whatever for relief works for unemployed.

I have

I have also obtained and send you likewise statistics showing you the state of the collection of rates for the present year compared with past years, which speak for themselves. Two extensive house factors report also that rents are not more difficult to obtain just now than in previous years at this season. Of course, the magistrates are quite aware that at all seasons there are a number of so-called unemployed, and when it is remembered that from 40 to 60 persons are daily discharged from Barlinnie, and go to swell the ranks of the unemployed, it is not difficult to account for a great portion of those who are unable to find stated employment. If relief works were set in operation, and inquiry made at those who came forward, I have no doubt it would be ascertained that they were largely of the class I have indicated; but apart from this I am quite satisfied that the existing agencies are quite able to cope with the alleged destitution of the unemployed.

Yours, &c.
(signed) *Jas. R. Motion*,
Acting Inspector of Poor.

James G. Monro, Esq.,
Town Clerk Depute.

(State of Trade on 1st District.—Includes Possilpark, Springburn, Townhead, Blockhairn, Parkhead, and Camlachie.)

I have made inquiry regarding above, and have to state that trade generally in above districts is very good indeed; in fact, is better at this season of the year than what it has been for at least nine years. All the large iron, &c., works in these districts, where thousands of men are employed, are mostly on full time; a few of the smaller works being slack, but still enjoying a fair share of trade.

The building trade is also in a very fair condition, large blocks of dwellings being erected in Possilpark, Springburn, &c., employing a good number of masons, builders, slaters, joiners, &c.

Printers, compositors, painters, &c., are slack, but a good number of the men are in the different societies, and in receipt of benefit.

I spoke to several idle men, but most of them were general labourers. One of them was a steel worker, idle through a breakdown of machinery in the work; he expected to start daily. I also called on several respectable householders in these districts, and they could not point out to me a single case of destitution caused by a tradesman being idle.

I would point out that the state of trade can be pretty fairly gauged by the number of men found on the streets at Saracen Cross, corner of Parliamentary-road, and Castle-street, Springburn Cross, and Parkhead Cross. During the new year holidays large crowds of men congregated there, but now there is comparatively few, and most of these are unskilled labourers, the usual amount of "loafers," and others unfit for work supposing they got it.

(signed) *J. P. Brand*,
Assistant Inspector.

Glasgow, 17 January 1895.

(Work.—Calton and Mile End District.)

I beg to report that, as far as I can ascertain, work in the district at the present time is fairly brisk and remunerative.

Building, *Plasterers*, *&c.*, being busy (of course, during the frost masons, plasterers, joiners, &c., were idle).

The Mills for some time back were on short time, but since the holidays are working full.

Engineering work fairly brisk.

Railway (underground) and sewer works busy.

The only drawback is the stoppage of the works of Messrs. Laird and Thomson (where a great number of old men were employed as hand-loom weavers, and old women as outside pirn winders), but I hear that the works have been sold, and work is likely to commence in a month or so.

In this district there are always a number of so-called "unemployed," from the fact that they would rather loaf or beg than work. This class always swell the ranks of the unemployed.

I have inquired at several employers, who affirm that the winter has been open, work on the whole fairly busy, and that the time for the unemployed cry is past and gone.

16 January 1895. (signed) *M. D. Toner*,
Assistant Inspector.

(Unemployed.—Bridgeton District.)

From personal observations and inquiries made, I am satisfied that general trade in this district is up to the average standard of the past two or three years. Iron works, boiler works, and engineer works are all working full time, although, in some instances, the full complement are not employed. Tube works are fairly busy, and fully employed. The weaving trade is improving, and although all the mills are fully employed, in many instances the wages earned are small, the class of work being bad; but this has been the case for over a year past.

Potteries are very slack meantime, but nothing else is expected at this time of the year.

Miners are all working.

On the whole, I am of opinion that the respectable unemployed are not numerous—certainly not above the average at any time of the year, and so far as this district is concerned no call exists for the starting of relief works.

(signed) *A. B. Maclean*,
Assistant Inspector.

Glasgow, 17 January 1895.

(State of Trade.—Anderston District.)

I have this day inquired at several of the leading works in the above district as to the present state of trade, and the information obtained is as follows:—

Manager of Foundry says, trade is a little dull these times, and a good many men are going about idle; they could not employ any more at present.

Foreman of Engineering Works states their work presently is as brisk as at other times, not worse than three years ago, and wages are as formerly.

Manager of another Engineering Work says:—Extra busy at present with day and night shift, and our labourers are being paid from 16*s*. 10½*d*. to 18*s*. per week. Many through drink or failing to rise early enough lose their places, and so are thrown idle. He believes the shipbuilding yards are now also busy, although many were unavoidably idle during the recent severe frost, because of the danger of working upon scaffolding, and the difficulty experienced in handling cold iron.

Chief Clerk of Galvanising Works says that they have a day and night shift working, and their men earn from 20*s.* to 25*s.* per week presently, working full time.

Timekeeper in Rivet Works says they work only five days per week at present, on account of their trade being slack. They have no night shift.

Foreman of Brass and Copper Works says they are very busy, working day and night (different men for each shift). Wages 30*s.* 6*d.* per week. He says there are many who will not work. Some time ago a woman successfully pled with him to get her husband a job, but he worked only two days when he (without cause) disappeared, and he sent his son back to the works for what he had earned.

Foreman Labourer says there are doubtless many men in Glasgow idle at the present time, and numbers apply daily to get work. With them (at the Underground Railway) labourers earn from 22*s.* to 24*s.* per week.

A Carter says that trade in their line is not worse now than at other times; they earn from 22*s.* to 28*s.* per week.

Stevedore states that the labourers at the Harbour are not worse off now than they were two months ago. Most of those working earn from 4*s.* 6d. to 5*s.* per day.

(signed) *J. Chisholm*,
Assistant Inspector.

38, Cochrane-street, Glasgow,
16 January 1895.

(State of Trade.—Cowcaddens and Maryhill Districts.)

I have to-day made inquiry in the districts as to the state of trade, and the number of unemployed men.

In the Building Trade work is in a very healthy state at the present time in the Maryhill District, large blocks of houses being put up in Gairbraid Street, Oran Street, Campbell Street, Gilshochiel, &c., both masons and joiners being fully employed on the new properties. During the recent frost they were thrown idle, and also at the usual holiday season at the new year time, but work has been now generally resumed, and as far as I can learn there is no scarcity of work in the above trades and also for the general labourers. I am also informed that in the various potteries work is fairly good; although they are not working full time there is a general five days a week in them, with the exception of one pottery, where most of the men, girls, &c., are idle at present, and have been since the New Year's holidays, but I am told this is expected to be merely a temporary slackness.

Among the various foundries in the district there seems to be a fair share of work going; most of them are working five days a week, and one or two of them full time, and as far as I can learn there is only about the usual number of moulders and labourers unemployed at the present time of the year.

In going about the districts I do not see that there is any special increase in the number of men standing about the street corners, with the exception of a number of railway labourers who were employed on the different sections of the Underground Railway now completed. Among the canal labourers there is the usual amount of work going on, neither better nor worse, as in former years.

On the whole, I do not think there is any special want of work in the district at this time of the year.

(signed) *Duncan McInnes*,
Assistant Inspector.

Glasgow, 16 January 1895.

Parish of Biggar, County of Lanark.

Population (1891), 1,902. Assessable Rental (1893–94), £10,214.

Letter from *David Thomson*, Inspector of Poor, 2nd March 1895.

1. (1.) Only a little more than is usual in winter, and what is may be said to be confined within the boundaries of the burgh.
(2.) Due to unusual severity of the weather preventing labourers and other out-door workers from working.

2. (*a.*) There has not been distress requiring to be relieved by public authorities.
(*b.*) By voluntary effort of a few private individuals about 12*l.* was collected, and groceries and coals to that amount were distributed amongst poor persons—60 cases in all, including a few persons who could not work.

3. No.

4. During the week ending this date 28*l.* (realized as the proceeds of a concert) for the purchase of groceries and provisions have been distributed amongst about 80 cases—poor people including unemployed, and at Christmas 40 tons of coal were divided in like manner out of subscriptions collected annually for an annual distribution.

Parish of Blantyre, County of Lanark.

Population (1891), 11,352. Assessable Rental (1893–94), £35,894.

Letter from *A. B. Maxwell*, Inspector of Poor, 25th February 1895.

1. Being almost entirely a mining populace there is no exceptional distress in the parish. The few who are unemployed being stonemasons and bricklayers, and the labourers connected with them have almost wholly found temporary employment at the collieries.

2. There has been nothing done either by the County Council or Parochial Board, the only public authorities in the district, or by any voluntary agencies. None relieved.

3. No register of the unemployed has been kept.

4. None.

PARISH OF BOTHWELL, COUNTY OF LANARK.

Population (1891), 31,484. Assessable Rental (1893–94), £146,666.

Letter from *James Muir*, Inspector of Poor, 25th February 1895.

1. No. Masons and joiners have been thrown idle through the recent long frost, but as these classes of workmen, are usually thrifty there has been no public necessity for aiding them. Miners and ironworkers are, on the whole steadily employed at present.

2. *See* answers as above. As showing that there is no exceptional distress in this parish, it may be stated that there have been only 55 applications for relief from 1st December 1894 to date, as against 82 for the same period of 1893–94.

3. Not required.

4. In view of above replies I consider it unnecessary to offer any suggestions on the subject.

PARISH OF CADDER, COUNTY OF LANARK.

Population (1891), 8,232. Assessable Rental (1893–94), £44,411.

Letter from *Thomas M'Lelland*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the parish at the present time. During the recent severe frost scarcity of work was to some extent experienced by those engaged in the building trade, but not to such an extent as to entail hardship or privation to any special degree.

2. (*a.*) As stated above, no special distress prevails in the meantime.

(*b.*) There has been no voluntary agency at work in the parish.

3. No.

4. As stated above, no special distress prevails in the meantime.

PARISH OF CAMBUSLANG, COUNTY OF LANARK.

Population (1891), 15,364. Assessable Rental (1893–94), £82,344.

Letter from *Andrew Robertson*, Inspector of Poor, 25th February 1895.

1. COMPARATIVELY little; what does exist is due to the severe weather.

2. Public authorities have not done anything to meet what distress exists. Voluntary agencies have distributed some coals, meal, and bread on two occasions.

3. No.

4. Did the distress require it, soup kitchens would be started.

PARISH OF CAMBUSNETHAN, COUNTY OF LANARK.

Population (1891), 22,709. Assessable Rental (1893–94), £68,418.

Letter from *W. Calderhead*, Inspector of Poor, 25th February 1895.

1. THERE is no very exceptional distress in this district. Any distress is caused entirely by the severity of the weather, the sufferers being masons, plasterers, slaters, and their labourers.

2. The burgh magistrates are collecting subscriptions; 142 grocery orders for 2*s.* each have been issued since 16th February (the date on which they were commenced). A large quantity of coal has also been distributed during the winter; the unemployed received 20 tons on the 21st instant, and another 20 tons are to be distributed to-morrow, 26th February.

3. There is no register kept, but it is estimated that the total number of unemployed does not exceed 80.

4. No suggestions. The number of unemployed is limited, and they are being dealt with at present.

PARISH OF CARLUKE, COUNTY OF LANARK.

Population (1891), 8,058. Assessable Rental (1893–94), £38,507.

Letter from *Daniel Murray*, Inspector of Poor, 25th February 1895.

1. THERE is not much exceptional distress in this district, but what there is is due to the severe weather.

2. (*a.*) Voluntary subscriptions to the amount of 50*l.* or thereby have been collected. Relief was given in the form of provisions and coals, and, in some cases, money.

(*b.*) No daily relief was given.

3. No register maintained.

4. No.

PARISH OF CARMICHAEL, COUNTY OF LANARK.

Population (1891), 593. Assessable Rental (1893–94), £8,927.

Letter from *William Cadzow*, Inspector of Poor, 25th February 1895.

1. THERE is no particular distress in this parish. The population is small, and scarcely a cot house in the parish.

2. Nothing is requiring to be done.

3. No, not required.

PARISH OF CARMUNNOCK, COUNTY OF LANARK.

Population (1891), 703. Gross Rental (1893–94), £7,820. (Parish unassessed.)

Letter from *William Fleming*, Inspector of Poor, 25th February 1895.

1. No.

2. Not required.

3. Not required.

4. No.

PARISH OF CARNWATH, COUNTY OF LANARK.

1. THERE is no exceptional distress in this district.

PARISH OF COULTER, COUNTY OF LANARK.

Population (1891), 420. Assessable Rental (1893–94), £5,883.

Letter from *Joseph Walker*, Inspector of Poor, 25th February 1895.

1. THERE are no works of a public nature in this parish, men being chiefly employed in agricultural pursuits. They have been kept from working, but there has been no "distress," only inconvenience.

2. The resident registered poor were granted extra coals by the parochial board. They are three in number. No other action was necessary.

3. No.

4. No.

PARISH OF DALSERF, COUNTY OF LANARK.

Population (1891), 11,325. Assessable Rental (1893–94), £32,800.

Letter from *Robert Nicol*, Inspector of Poor, 26th February 1895.

1. WE have no exceptional distress. Our population being a mining one the severe weather has very little effect.

2. There is a local committee who distribute annually about 100 tons of coal amongst the deserving poor. There is also a good working Dorcas Society who give warm clothing and boots to the same class of people, otherwise there has been nothing done.

3. No.

4. None.

PARISH OF DALZIEL, COUNTY OF LANARK.

Population (1891), 19,228. Assessable Rental (1893–94), £77,123.

Letter from *John Miller*, Inspector of Poor, 25th February 1895.

1. TRIFLING, wholly due to severe weather.

2. Nothing by public authorities. Charity Organisation Society of district dealing with exceptional cases.

3. No, unnecessary.

4. No, unnecessary.

PARISH OF DOLPHINTON, COUNTY OF LANARK.

Population (1891), 248. Gross Rental (1893–94), £2,768. (Parish unassessed.)

Letter from *Colin M'Kenzie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish. The majority of the workmen are employed on the estates of the proprietors or with the farmers. Our three masons, one blacksmith, and one slater were, for a time at least, enjoying the frosty weather on the curling pond, with the *et ceteras*.

2. (*a.*) Nothing by the public authorities or by voluntary agencies.
(*b.*) None relieved.

3. No register.

4. Should it occur, I shall at once take what measures I can for its relief.

PARISH OF DOUGLAS, COUNTY OF LANARK.

Population (1891), 2,266. Assessable Rental (1893–94), £19,736.

Letter from *Alexander Hutchison*, Inspector of Poor, 25th February 1895.

1. NO. None.

2. The parochial board is the only agency through which relief to the deserving poor is being obtained, but neither the registered or casual roll has been much increased during the severe spell of weather. The Curlers played in aid of the poor, and a concert is coming off in 10 days ; proceeds to be devoted to the same good cause.

3. No ; not required.

4. None necessary, in so far as this parish is concerned.

PARISH OF DUNSYRE, COUNTY OF LANARK.

Population (1891), 191. Gross Rental (1893–94), £4,884. (Parish unassessed.)

Letter from *David Ayton*, Inspector of Poor, 25th February 1895.

1. NONE at all.

2. No extra agency required.

3. None required.

4. None.

PARISH OF GLASGOW, COUNTY OF GLASGOW.

Population (1891), 176,824. Assessable Rental (1893–94), £1,043,075.

Letter from *A. Dempster*, Inspector of Poor, 25th February 1895.

1. YES. Due almost wholly to exceptionally cold and severe weather, and to all the consequences flowing therefrom, such as out-door work stopped, water supplies disturbed, and various works unable to get along without water, bread-winners thrown out of employment, and illness resulting. It may be said that the frost, with fogs occasionally, has lasted over 50 days in Glasgow.

2. The

2. The corporation a fortnight ago started stone-breaking yards for men (2,100 working this morning), and set up soup kitchens in various parts of the city, and this is still going on, but more rigid investigation is now to take place; 9,000*l.* and upwards of a relief fund have come from citizens and others. The police constables and police offices have been utilised largely. Charity organisation is also lending assistance. This Board never had so many applicants for relief in my experience. There were 84 last Thursday, and 50 and 60 each day has been a common number for some time, the average number daily during the year being about 21.

Sorry I cannot supply the figures of the different agencies without inquiries, but the Town Clerk could do so.

3. I have no doubt an unemployed register is kept. The Town Clerk can furnish this information.

4. As to suggestions for relieving distress, I would fain hope that the worst is past, and with the end of the present week the numbers should be very much reduced. Relief by the corporation to those in need is at present being given to men in return for work; their families get lines for coal and food, and all who apply get soup. The Parochial Boards provide for all cases which may be brought under their notice, and these are many.

PARISH OF GLASSFORD, COUNTY OF LANARK.

Population (1891), 1,317. Assessable Rental (1893–94), £8,655.

Letter from *Andrew M'Ghie*, Inspector of Poor, 26th February 1895.

1. NOTHING exceptional. I have had no extra applications for aid. The severe weather has been felt by the poor most from want of fuel.

2. Nothing has been done by public authorities. A good many have been supplied with coals by voluntary aid.

3. No.

PARISH OF GOVAN COMBINATION, COUNTY OF LANARK.

Population (1891), 286,281. Assessable Rental (1893–94), £1,184,891.

Letter from *Andrew Wallace*. Inspector of Poor, 25th February 1895.

1. YES, there is exceptional distress in this parish mainly caused by the inclemency of the weather preventing out-door employment, and also producing a considerable amount of ill-health, such as bronchitis, &c. Trade in the parish, such as house-building, ship-building, and ordinary labourers' work would not be abnormally slack but for the severe weather. Warehouses, shops, and factories in the city and parish are not in a very thriving state, and a good many young people usually engaged in these places are idle.

2. The applications to the Parochial Board for relief have materially increased during the past month, and especially during the last two weeks, as will be seen from the following figures:—

Number of applications week ending			2nd	February,	111.	Corresponding period last year,		97.	Increase,	14.
Ditto	-	ditto	-	9th	„	106.	Ditto	-	ditto	87.	Ditto	19.
Ditto	-	ditto	-	16th	„	159.	Ditto	-	ditto	106.	Ditto	53.
Ditto	-	ditto	-	23rd	„	249.	Ditto	-	ditto	93.	Ditto	156.

The greater portion of these have been granted relief, out-door chiefly. This Board also granted 2 cwt. of coals to each pauper on the out-door rolls to the number of about 2,000, following a precedent during the winters of 1879-80 and 1880-81. The City of Glasgow, Govan, Partick, and Kinning Park Burgh Authorities have been giving employment at stone-breaking, &c., to about 4,000 or 5,000 unemployed men, and have also given lines for food, and opened soup kitchens in every district.

3. An unemployed register has been kept by the burgh authorities of those to whom employment was given. Inquiries have also been made by the police and Charity Organisation Society into those cases where orders for food have been granted. But soup has been given to nearly every one who applied. Along with some of my assistants I have aided the city authorities in the soup distribution. A good many cases of imposture have been discovered, but on the whole, the relief of the unemployed and destitute in the city and parish has been signally efficient, and I am not inclined to think that in any case has there been absolute want or starvation.

4. The relief works and soup kitchens will be continued for some time longer, but there is every appearance that the worst of the inclement weather is past.

PARISH OF HAMILTON, COUNTY OF LANARK.

Population (1891), 35,132. Assessable Rental (1893–94), £210,392.

Letter from *A. L. Smith*, Inspector of Poor, 25th February 1895.

1. ANY distress in this district is due to the severity of the weather, which is affecting out-door labour.

2. The Town Council are employing the unemployed at 2*s.* per day making a public park. The average daily number working 58. The Cadzow Coal Company gave Provost Wylie 50 tons of coal to be distributed, and Rev. Dr. Hamilton, parish minister, distributed 20 tons, and other churches are giving coals and clothing.

3. Mr. Watson, Burgh Surveyor, keeps a register of the unemployed working in the public park, and the average daily number for week ending the 23rd February, was 71. A good many of which are of the tramp class.

4. I have no suggestions to make, as the Town Council are employing all the unemployed who are willing to work.

PARISH OF EAST KILBRIDE, COUNTY OF LANARK.

Population (1891), 3,861. Assessable Rental (1893–94), £34,832.

Letter from *John Calderwood*, Inspector of Poor, 27th February 1895.

1. CERTAINLY there is exceptional distress, but it is caused wholly by the severe weather, rendering working men idle for seven or eight weeks.

2. (*a.*) By voluntary agencies alone nearly £100 was raised, and meted out to families (in the shape of grocers' lines, &c.) by a self-appointed committee, to extend over a number of weeks, dealing with every case on its own merits; 100 tons of coal was given in the same way (*i.e.* by private agencies), and distributed at intervals; 20 dozen of 4lb. loaves have twice over been distributed by private benevolence, and meal and butter in small quantities by the principal farmers.

(*b.*) The average daily number might be on date mentioned 100, inclusive of all agencies.

3. No.

4. The unemployed have been especially well looked after and provided for during their enforced idleness, and all through voluntary agencies. The worst has now passed off.

PARISH OF LANARK, COUNTY OF LANARK.

Population (1891), 7,110. Assessable Rental (1893–94), £28,109.

Letter from *John Skinner*, Inspector of Poor, 24th February 1895.

1. THERE is exceptional distress in the burgh of Lanark at present, mainly due to the severity of the frost, and its long duration. In the rural districts around here, there is virtually no distress.

In the town of Lanark there are many masons, slaters, and other tradesmen idle on account of the frost retarding the building industry. Day agricultural labourers are also out of employment.

This is a great fruit growing district. A large number of woman and children find employment at fruit gathering during the season which enables many households to save sufficient to tide them over the winter, but last year owing to the miners' strike taking place at the time the supply of labour was excessive, and the employment of those usually engaged at the work considerably reduced in consequence, therefore they save less than formerly. Single women especially have suffered much on this account.

In the landward parts there are many large private estates, and the proprietors, also the farmers have retained their workers, doing occasional work about the houses and grounds; moreover being a more provident class, so far, as I can ascertain, there is virtually no distress as the day labourers reside in the town, and are dealt with as stated.

2. In the burgh, the police magistrates are dealing with the male unemployed. About 45 engaged clearing away snow and ice from streets.

A committee of ladies and gentlemen formed, and subscriptions obtained. They mainly deal with the female workers out of employment. About 50 females in receipt of relief.

3. No register kept. Not required in a small town.

4. Not at present. A thaw set in on 23rd, and if it continues, it is expected work will be plentiful shortly.

PARISH OF LESMAHAGOW, COUNTY OF LANARK.

Population (1891), 9,752. Assessable Rental (1893–94), £57,296.

Letter from *George Scott*, Inspector of Poor, 26th February 1895.

1. NO, except a few masons on account of the weather.

2. Nothing.

3. No.

4. None.

PARISH OF LIBBERTON, COUNTY OF LANARK.

Population (1891), 486. Assessable Rental (1893-94), £6,908.

Letter from *William B. Smellie*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing. Workmen are mostly engaged at the farms.

3. No.

4. No.

PARISH OF NEW MONKLAND, COUNTY OF LANARK.

Population (1891), 33,860. Assessable Rental (1893–94), £109,584.

Letter from *Andrew T. Alston*, Inspector of Poor, 25th February 1895.

1. THERE is considerable distress in this district amongst out-door workers; generally, the industries of the district are fairly active, but the severe frost has stopped all out-door work.

2. The Town Council are asking for subscriptions, which are used for giving employment to men at stone-breaking. A townsman distributed 100 carts of coals last week. Private charity is the only relief in the landward district. Daily average relieved for week to 16th February, 40.

3. The only register is a list of the men employed, and the sum earned.

4. That powers be given to the landward committees to start relief works where required.

PARISH OF OLD MONKLAND, COUNTY OF LANARK.

Population (1891), 44,616. Assessable Rental (1893–94), £168,341.

Letter from *William B. Burnett*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district. There are some 150 tradesmen, more or less, consisting of masons, plasterers, slaters, and their labourers, who are idle through the severe frosty weather.—N.B. To day (26th) the weather has changed and the prospect of constant employment is now assured.

2. The magistrates of Coatbridge have opened a subscription list which has been responded to by the public, and the most necessitous cases belonging to the class above stated, and numbering about 20, have been temporarily assisted.—N.B. There is no parochial check on the administration of this charity, any one may get it.

3. No.

4. I have no suggestions to offer. I would respectfully ask your perusal of the accompanying statement, obtained by special inquiry, which gives the state of employment in this large industrial (coal and iron) centre of the West of Scotland at the present day.

Addenda. Unemployed.

Old Monkland Parish, County of Lanark.

In continuation of Unemployed Return referred to in Circular Letter from Local Government Board, Scotland, 20th February 1895.

Preamble.

To obtain full and reliable information on the subject of the unemployed, I visited the principal works in the parish, also the model lodging-houses, tramps' mission-house, brick works, and other resorts of the unemployed. I also interviewed the Town Clerk of Coatbridge and the Captain Superintendent of Police for the burgh. The following is the result:—

1. There are three model lodging-houses in which were found 43 out of employment, mostly masons, labourers, and quarrymen.

2. A. & J. Stewart & Clydesdale's Tube Works, Coatbridge, number employed about 1,000. The manager tells me there are on an average from 18 to 20 men waiting about the doors of the works for employment each morning. The work is on full time and taking on hands when vacancies occur. No exceptional distress and no complaints.

3. Phœnix Iron Works, 300 men fully employed.

4. Coats' Tube Works, 160 men fully employed.

5. Clifton Iron Works, nearly fully employed, 300 is their full strength, but they are working at present with 280.

6. Kipp's Railway Workshops, 300 men fully employed.

7. Waverley Iron and Steel Company, 800 men fully employed. No exceptional measures necessary, and no complaints.

8. Sunnyside Engineering Works, 200 men working on short time. Discharged about 30 since the New Year. An average of six applications daily for work.

9. Gartsherrie Works (Coal and Iron), 1,350 men employed full time; more labourers wanted for special class work; no extra effort necessary. Work plentiful to all willing to work.

10. Summerlee Iron Works, 569 men employed. No exceptional measures necessary. Fully employed, and no complaints have reached their office. There is, of course, considerable less demand for work at times, but, on the other hand, they would be prepared to engage more good hands if they could get them.

11. Messrs. Robert Addie & Sons, Coal and Iron Masters, 900 employed; on an average one or two call at the works daily and have been taken on when vacancies occur. The want of employment in this branch does not exist at present.

12. Calder Iron Works (Coal and Iron), 450 men fully employed. No complaints. No want of employment in their firm. Brick works are all going full time.

13. Speedwell Engineering Works, number of men employed, when full time, 300. Now working at the reduced number of 196. Trade in this line dull since October last. Most of the men discharged have obtained employment elsewhere.

14. Whifflet Foundry, usually employ 120, but now working with 100, but of these 20 have obtained employment elsewhere. No exceptional measures necessary at present.

15. The Town Clerk of Coatbridge has given me the information contained in answer to Query 2.

16. The Superintendent of Police states that he has made personal investigation and finds that the want of employment only exists among the class of tradesmen detailed in answer to Query 1 and whose cases are being dealt with.

Parochial Office, Coatbridge.
26 February 1895.

William B. Burnett,
Inspector of Poor,
Parish of Old Monkland.

PARISH OF PETTINAIN, COUNTY OF LANARK.

Population (1891), 259. Assessable Rental (1893–94) £3,589.

Letter from *Adam Smith*, Inspector of Poor, 26th February 1895.

1. No.

3. No.

4. We have no distress in this parish.

PARISH OF RUTHERGLEN, COUNTY OF LANARK.

Population (1891), 16,178. Assessable Rental (1893–94), £65,836.

Letter from *Allan S. Edmiston*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress, wholly due to the exceptional severity of the weather. The applicants for assistance are almost wholly confined to the labouring class, whose occupations are dependent on the weather.

2. (*a*) The Town Council alone have met the distress.
(*b*) The number relieved is as under :—
On the 14th February, 65. On the 16th February the relief was continued to the 65 and other 33—Total, 98.

3. None.

4. None.

PARISH OF SHOTTS, COUNTY OF LANARK.

Population (1891), 11,957. Assessable Rental (1893–94), £66,425

Letter from *James King*, Inspector of Poor, 25th February 1895.

1. THERE is no very exceptional distress in this district, the bulk of the population being employed in pits and in iron making. There are a number of navvies and builders' labourers thrown out of work through the severe frost, but many of these have left the district and gone into the larger towns, while those who had practised some little thrift are quite able to maintain themselves off their savings.

2. My Board, at their last half-yearly meeting on 7th inst., increased the aliment of nearly the whole of their out-door paupers from one-fifth to nearly one-half, and gave a considerable amount of clothing more than they were in the habit of giving. Some time ago a table soirée was held, also a jumble sale, which raised a considerable amount of clothing, coals, &c., which were distributed for nothing, or next to nothing, amongst those who were thought to be needful, or those who pretended to be needful. I am of opinion that the coming Parish Councils election has created a charitable action in a number of individuals for, I think, securing votes at the coming election, and in many cases their charity is given where little required.

3. No.

4. I have been Inspector of Poor in this parish for upwards of 20 years, and never during that time have poor people, or those who made themselves appear to be poor, been anything like so well attended to. In fact, I think they are being pampered. The other day I found employment for one of a number of navvies who were considered to be the worst off in the district, but he declined to start unless he got at least 3*s.* per day. I presume he preferred to live on what he could get from the charitable instead of on the fruits of his own labour. My opinion is that there is a great deal more being done for the poor and unemployed than is necessary, and that that action is creating a beggarly spirit in many.

PARISH OF STONEHOUSE, COUNTY OF LANARK.

Population (1891), 3,400. Assessable Rental (1893–94), £11,798.

Letter from *Alexander Anderson*, Inspector of Poor, 25th February 1895.

1. THIS being principally a weaving and mining district, no appreciable distress exists. Both industries named are in a normal condition.

2. Nil.
Private donations have been increased to meet the requirements of those suffering from the late severe weather, and who are annual recipients of relief.

3. No.

PARISH OF SYMINGTON, COUNTY OF LANARK.

Population (1891), 432. Assessable Rental (1893–94), £4,211.

Letter from *Thomas Hamilton*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in the district.

2. Nothing requires to be done.

3. There is no unemployed register.

4. No suggestions necessary to make.

PARISH OF WALSTON, COUNTY OF LANARK.

Population (1891), 301. Assessable Rental (1893–94), £2,758.

Letter from *Matthew Anderson*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF WANDELL AND LAMINGTON, COUNTY OF LANARK

Population (1891), 305. Assessable Rental (1893–94), £6,420.

Letter from *Christopher Watson*, Inspector of Poor, 25th February 1895.

1. THERE are no unemployed in this parish, and no exceptional distress.

PARISH OF WISTON AND ROBERTON, COUNTY OF LANARK.

Population (1891), 497. Assessable Rental (1893–94), £7,245.

Letter from *A. F. Duncan*, Inspector of Poor, 26th February 1895.

1. No.

2. No aid asked.

3. No.

4. No.

PARISH OF ABERCORN, COUNTY OF LINLITHGOW.

Population (1891), 863. Assessable Rental (1893-94), £9,274.

Letter from *Ralph Hardie*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish.

3. No unemployed register is kept.

PARISH OF BATHGATE, COUNTY OF LINLITHGOW

Population (1891), 11,359. Assessable Rental (1893–94), £39,113.

Letter from *John Smith*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. Various small donations are given annually by charitably disposed gentlemen in the district.

3. No.

4. None.

PARISH OF BO'NESS, COUNTY OF LINLITHGOW.

Population (1891), 6,399. Assessable Rental (1893–94), £24,209.

Letter from *John Paul*, Inspector of Poor, 25th February 1895.

1. THERE is very little local distress here, except from masons' labourers and quarrymen. All our manufactories, such as iron foundries, potteries, coal pits, sawmills, dock, and harbours, are at work, more or less.

2. (*a*) The provost and magistrates started a subscription list and a soup kitchen. The subscriptions have been large and liberal, and a great deal more than is required. Not more than 20 to 24 adult persons have applied for free dinners daily, from 16th instant (the day the soup kitchen was opened) up till to-day.

(*b*) From 20 to 24 adults and about 300 school children are supplied daily with bread and soup.

3. There is no register kept, nor is a register required here. We have always about eight or ten men who scarcely ever work any. It is this class who get the dinners, but none are refused who call at the dining hall.

4. Had the fresh weather continued for a few days longer, every man in this parish would have been at work if he chose to do so. I may say that the School Board have given free dinners every winter for the past six years to children of poor parents to the extent of 250.

PARISH OF CARRIDEN, COUNTY OF LINLITHGOW.

Population (1891), 2,453. Assessable Rental (1893–94), £10,351.

Letter from *James Dodds*, Inspector of Poor, 25th February 1895.

1. THIS parish being mostly of the mining industry, the trade being fairly busy. The severe weather has had little effect upon the people.

2. There being no exceptional distress, there has been nothing done.

3. None.

PARISH OF DALMENY, COUNTY OF LINLITHGOW.

Population, (1891), 2,112. Assessable Rental (1893–94), £36,856.

Letter from *David Mason*, Inspector of Poor, 23rd February 1895.

1. NONE.

2. No necessity for anything being done.

3. No such register has been kept.

4. None.

PARISH OF ECCLESMACHAN, COUNTY OF LINLITHGOW.

Population (1891), 506. Assessable Rental (1893–94), £7,344.

Letter from *A. Cochrane*, Inspector of Poor, 26th February 1895.

1. THERE is no distress in this district caused by the weather.

2. There is nothing required to be done.

3. None.

4. This parish being an agricultural one, there is no distress caused by the weather, as the people are employed mostly by farmers.

PARISH OF KIRKLISTON, COUNTY OF LINLITHGOW.

Population (1891), 3,777. Assessable Rental (1893–94), £28,273.

Letter from *Thomas Scott*, Inspector of Poor, 23rd February 1895.

1. THERE is no exceptional distress in this parish. The bulk of the working population are either shale miners or agricultural labourers, and the severe weather has not affected them. There are a few masons' and other labourers who, I daresay, are pinched enough.

2. A gentleman in the Newbridge District instructed the village schoolmaster to relieve any cases of distress that he heard of, and there was only one that he felt it his duty to relieve.

3. No unemployed register.

4. The Parochial Board would not hesitate to relieve any cases of distress.

PARISH OF LINLITHGOW, COUNTY OF LINLITHGOW.

Population (1891), 7,520. Assessable Rental (1893-94), £37,850.

Letter from *Alexander Dougal*, Inspector of Poor, 25th February 1895.

1. To severe weather.

2. Nothing by public authorities except by employment of men to assist municipal officials during the severe weather. A committee consisting of the clergy and other public men (of which I myself am a member) meets every Monday morning, who distributed tickets for goods value 2*s.* 6*d.* to about 40 families, besides an amount of coals distributed at expense of private enterprise.

3. No.

4. No. I may state that I consider the distressed are well looked after in this district. A concert is to be given to-night, the funds of which are to be devoted by above-mentioned committee.

PARISH OF LIVINGSTON, COUNTY OF LINLITHGOW.

Population (1891), 1,616. Assessable Rental (1893–94), £11,948.

Letter from *William Forsyth*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in this district.

2. No need for anything to be done.

3. No.

4. None.

PARISH OF QUEENSFERRY, COUNTY OF LINLITHGOW.

Population (1891), 768. Assessable Rental (1893-94), £1,828.

Letter from *George H. Reid*, Inspector of Poor, 23rd February 1895.

1. THE distress in this parish, though exceptional, is not extreme, and is entirely due to the severe weather.

2. Measures have not been considered necessary till this week, when means have been raised by subscriptions. The Town Council have voted a sum of money, and the Parochial Board have also voted a sum to be drawn on if required.

3. Not so far as I am aware.

4. None but the means in use, and the counselling of thrift in future among the working classes.

PARISH OF TORPHICHEN, COUNTY OF LINLITHGOW.

Population (1891), 1,724. Assessable Rental (1893–94), £9,520.

Letter from *William Bruce*, Inspector of Poor, 25th February 1895.

1. ANY exceptional distress is well met by private charity.

2. (*a.*) No extra agencies necessary.
(*b.*) None.

3. No register kept, all well employed.

PARISH OF UPHALL, COUNTY OF LINLITHGOW.

Population (1891), 8,653. Assessable Rental (1893–94), £51,769.

Letter from *W. L. Brown*, Inspector of Poor, 23rd February 1895.

1. No. The oil works in this parish and district are in full operation, as also the pits connected therewith, so that the distress felt in other quarters is not making itself known here. The only difference is a slight increase in the number of applicants of the vagrant class, caused by the severe weather.

2. Nothing.

3. No.

4. No.

PARISH OF WHITBURN, COUNTY OF LINLITHGOW.

Population (1891), 5,782. Assessable Rental (1893–94), £18,191.

Letter from *D. J. Mitchell*, Inspector of Poor, 25th February 1895.

1. NONE except some 30 men idle, who usually work at a freestone quarry.

2. A private subscription list has been issued to assist the quarrymen.

3. No.

4. None. The number of men thrown idle is so few that voluntary aid by subscription will be quite sufficient till the frost gives way.

PARISH OF ARDCLACH, COUNTY OF NAIRN.

Population (1891), 942. Assessable Rental (1893–94), £5,515.

Letter from *Thomas Simpson*, Inspector of Poor, 26th February 1895.

1. THERE is no distress in this parish. All the labourers in the parish are employed at farm and estate work both winter and summer, and during the late severe weather have never been out of employment.

3. No.

4. None.

PARISH OF AULDEARN, COUNTY OF NAIRN.

Population (1891), 1,315. Assessable Rental (1893–94), £8,042.

Letter from *A. J. Mackintosh*, Inspector of Poor, 25th February 1895.

1. YES, tradesmen (such as masons and carpenters), and labourers out of employment for last two months owing to the severe weather.

2. (*a.*) Small quantities of coal and meal distributed by voluntary agencies.

3. No.

4. With a continuance of present severe weather further supplies of provisions will be required.

PARISH OF CAWDOR, COUNTY OF NAIRN.

Population (1891), 1,009. Assessable Rental (1893–94), £5,529.

Letter from *John Joss*, Inspector of Poor, 27th February 1895.

1. A LITTLE, by length of time of severe weather.
2. Something by individuals privately.
3. No.
4. Weather better; hoped at an end.

PARISH OF NAIRN, COUNTY OF NAIRN.

Population (1891), 5,250. Assessable Rental (1893–94), £15,516.

Letter from *Wm. Malcolm*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the district. The distress is in consequence of the duration of the severe weather.
2. A soup distribution daily and a distribution of meal and bread. Nearly 200 were relieved daily during the week ending 16th February.
3. No.
4. None.

PARISH OF BIRSAY AND HARRAY, COUNTY OF ORKNEY.

Population (1891), 2,259. Assessable Rental (1893–94), £3,580.

Letter from *Thomas Brown*, Inspector of Poor, 26th February 1895.

1. I BELIEVE there are a few cases of hardship owing to the want of means of a livelihood, occasioned through want of employment. This appears to be due partly to circumstances peculiar to the district, and also to some extent on account of the weather.
2. (*a*) Nothing in particular is being done to meet the distress (which I do not think is very exceptional) by the public authorities or voluntary agencies. Parochial relief for a time has been given in two or three cases whose right thereto is perhaps doubtful (apart from their necessitous circumstances through want of employment or otherwise). Some help may be given now and again by some denomination, which so far as is known to your subscriber is but rare. Neighbours considerately give some help to the most needy.

   (*b*) Not known.
3. There is no unemployed register kept.
4. One or more voluntary agencies or charitable organisations in a parish or county might be able to do some good if formed, in procuring funds and giving help to the needful, and probably in devising some means for the better employment of the unemployed.

PARISH OF CROSS AND BURNESS, COUNTY OF ORKNEY.

Population (1891), 1,585. Assessable Rental (1893–94), £3,844.

Letter from *William Muir*, Inspector of Poor, 28th February 1895.

1. THERE is no distress, exceptional or otherwise, in the district. There is, and always have been, cases of a struggle for an existence, but nothing approaching "distress."
2. (*a.*) Nothing.

   (*b.*) Nil.
3. No.
4. No.

PARISH OF NORTH RONALDSHAY, COUNTY OF ORKNEY.

Population (1891), ——. Assessable Rental (1893–94), £—— (included in Cross and Burness).

Letter from *Peter Thomson*, Sub-Inspector of Poor, 5th February 1895.

1. No.
2. No necessity.
3. No.
4. None.

PARISH OF EDAY, COUNTY OF ORKNEY.

Population (1891), 705. Gross Rental (1893-94), £1,505. Parish unassessed.

Letter from *James Tulloch*, Inspector of Poor, 2nd March 1895.

1. THERE is no actual distress here, as most of the poor people have small patches of land which (in most cases) yield them some bread as yet. The principal complaint is that when an occasional fine day comes there are no fish to be caught, as the inshore ground is completely destroyed by illegal trawling. If this matter is not looked into by the Government our fishermen will suffer very much, and the ultimate consequence will be starvation or pauperism.

2. (*a*) Nothing has yet been done although public authorities have brought the matter under the notice of the Fishery Board as well as other headquarters.

(*b*) None relieved.

3. No such register kept.

4. If the Secretary for Scotland could give a small grant to be expended in making some necessary roads, it would give employment to those who are most urgently in need. A little more land to crofting fishermen would be of very great value, as it would grow them more bread.

PARISH OF EVIE AND RENDALL, COUNTY OF ORKNEY.

Population (1891), 1,233. Assessable Rental (1893–94), £2,807.

Letter from *James Scarth*, Inspector of Poor, 25th February 1895.

1. THERE is none.

2. (*a*) Nothing.

(*b*) None ; only the usual paupers.

3. No.

4. None, as we have none.

PARISH OF FIRTH, COUNTY OF ORKNEY.

Population (1891), 731. Assessable Rental (1893–94), £1,301.

Letter from *William Sinclair*, Inspector of Poor, 27th February 1895.

1. No exceptional distress in the district.

3. No unemployed register maintained.

PARISH OF HOLM, COUNTY OF ORKNEY.

Population (1891), 950. Assessable Rental (1893–94), £1,851.

Letter from *James Sinclair*, Inspector of Poor, 26th February 1895.

1. No. The principal industry in this parish is farming, with the exception of a few fishermen, and there does not seem to be any unusual distress.

PARISH OF HOY AND GRAIMSAY, COUNTY OF ORKNEY.

Population (1891), 537. Gross Rental (1893-94), £811 ; parish unassessed.

Letter from *R. H. Sinclair*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish ; they all seem to be fairly well to do as far as I am aware.

PARISH OF KIRKWALL AND ST. OLA, COUNTY OF ORKNEY.

Population (1891), 4,755. Assessable Rental (1893–94), £13,289.

Letter from *John Guthrie*, Inspector of Poor, 27th February 1895.

1. NOTHING beyond the ordinary hardships attendant in winter seasons in this locality.

2. Any known cases of distress relieved by charitable trusts, Ecclesiastical Charity Funds, or private charity. No means of ascertaining number of cases.

3. No register kept.

4. No.

PARISH OF LADY, COUNTY OF ORKNEY.

Population (1891), 845. Assessable Rental (1893–94), £2,646.

Letter from *Wm. Muir*, Inspector of Poor, 28th February 1895.

1. THERE is no case of distress in the district. There is, and always have been cases of a struggle for existence, but not bordering on distress.

2. (*a*) Nothing.
(*b*) Nil.

3. No.

4. No.

PARISH OF ORPHIR, COUNTY OF ORKNEY.

Population (1891), 1,001. Assessable Rental (1893-94), £2,152.

Letter from *William Inkster*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish, due either to circumstances peculiar to the locality or to the severe weather.

2. (*a*) There is nothing being done, because there is no distress.
(*b*) There were none relieved on Saturday, 16th February.

3. There is no unemployed register maintained, because unnecessary.

4. No.

PARISH OF PAPA WESTRAY, COUNTY OF ORKNEY.

Population (1891), 337. Assessable Rental (1893–94), £857.

Letter from *John Hourston*, Inspector of Poor, 6th March 1895.

1. NONE whatever.

2. Nothing needed and nothing done.

3. No.

PARISH OF SOUTH RONALDSHAY, COUNTY OF ORKNEY.

Population (1891), 3,059. Assessable Rental (1893–94), £4,410.

Letter from *H. N. Mackenzie*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish, other than what usually follows severe wintry weather in crofting and fishing districts.

2. No special effort has been made by the parochial authorities, to relieve distress. A voluntary destitution committee, has, owing to the severe weather, been distributing a small sum to the most needful cases.

3. No register is kept.

PARISH OF ROUSAY AND EGILSHAY, COUNTY OF ORKNEY.

Population (1891), 988. Assessable Rental (1893–94), £3,098.

Letter from *James G. Craigie*, Inspector of Poor, 25th February 1895.

1. I CANNOT say that there is exceptional distress in this parish. There is no doubt that those who depend on out-door labour for their earnings have been much affected by the late very severe weather, but there has been no application for relief as yet owing to such circumstances.

2. (*a*) Nothing.
(*b*) None ; no applications for such relief.

Note. I may say that the labourers here, being on the whole an honest class, are usually able to get "credit" from their merchants during times they are unable to secure work, and this I believe is a great reason why distress is often not made apparent.

3. No.

4. No.

PARISH OF ST. ANDREWS AND DEERNESS, COUNTY OF ORKNEY.

Population (1891), 1,607. Assessable Rental (1893–94), £3,883.

Letter from *Archibald Spence*, Inspector of Poor, 27th February 1895.

1. No distress.
2. Nothing required to be done.
3. No such register kept.
4. No.

PARISH OF ST. ANDREWS (DEERNESS DISTRICT), COUNTY OF ORKNEY.

Population (1891), ——. Assessable Rental (1892–93), £—— (included in St. Andrews and Deerness).

1. NONE.
2. Nothing requires to be done.
3. No.
4. None.

PARISH OF SANDWICK, COUNTY OF ORKNEY.

Population (1891), 1,109. Assessable Rental (1893–94), £2,494.

Letter from *William Smith*, Inspector of Poor, 25th February 1895.

1. IN this parish the people are principally engaged in agricultural work and consequently are not so readily thrown out of employment as those following other pursuits.
2. (*a*) Casual relief by parochial board, in the shape of allowance for coals, &c.
   (*b*) None.
3. No.
4. For the Highlands and Islands of Scotland (country districts) Government grants for making roads, footpaths, &c., would not only provide work for the unemployed, but be of material benefit to the localities.

PARISH OF SHAPINSAY, COUNTY OF ORKNEY.

Population (1891), 903. Assessable Rental (1893–94), £1,920.

Letter from *Robert Paterson*, Inspector of Poor, 26th February 1895.

1. No.
3. No.
4. No.

PARISH OF STENNESS, COUNTY OF ORKNEY.

Population (1891), 594. Assessable Rental (1893–94), £1,450.

Letter from *William Clouston*, Inspector of Poor, 5th March 1895.

1. NOT known in this locality.
2. The poor or non-paupers in this parish have their houses free ; they keep some hens, and have peat or coals for fire given to them ; in times of exceptional distress they receive casual relief.
3. No able-bodied persons are unemployed in this district ; any old persons are generally supported by their friends or relatives ; if not, they are supported as shown in No. 2.
4. *See* the above.

PARISH OF STROMNESS, COUNTY OF ORKNEY.

Population (1891), 2,333. Assessable Rental (1893–94), £4,616.

Letter from *W. M. Corston*, Inspector of Poor, 26th February 1895.

1. WHILST there is considerable poverty in the district there cannot be said to be exceptional distress, and the very severe weather for some time past has pressed heavily on infirm poor, chiefly females, who have no profitable employment.

2. A considerable number of gratuities from various quarters have been distributed amongst the most necessitous, but it has not been reckoned necessary to do anything else meantime. A sum of 12*l.* 10*s.* from the Orkney Destitution Relief Society was received and distributed last week. There is no daily relief administered, nor is it thought needful at present.

3. No.

PARISH OF STRONSAY, COUNTY OF ORKNEY.

Population (1891), 1,309. Assessable Rental (1893–94), £3,596.

Letter from *Robert Miller*, Inspector of Poor, 1st March 1895.

THERE is no exceptional distress in the parish.

PARISH OF WALLS AND FLOTTA, COUNTY OF ORKNEY.

Population (1891), 1,505. Gross Rental (1893–94), £2,488. Parish unassessed.

Letter from *Robert Malcolmson*, Inspector of Poor, 27th February 1895.

1. No.

2. None.

3. No.

4. There is no exceptional distress in this district, but the circumstances of our crofter fishermen would be benefited if a pier was built at which steamers could call and take their fish direct to Aberdeen; I may add also that the eggs sold by them would give a better price if they reached the market quickly.

PARISH OF WALLS &c., (FLOTTA DISTRICT), COUNTY OF ORKNEY.

Population (1891), ——. Assessable Rental (1893–94), £ ——(included in Walls).

Letter from *William Hay*, Inspector of Poor, 25th February 1895.

Population (1891), 676. Assessable Rental (1893-94), £9,678.

Letter from *Archibald Henderson*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in the district.

2. As there is no necessity, there is nothing done.

3. No; not required.

4. No.

PARISH OF DRUMELZIER, COUNTY OF PEEBLES.

Population (1891), 187. Assessable Rental (1893–94), £3,225.

Letter from *John Scott*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish.

PARISH OF EDDLESTON, COUNTY OF PEEBLES.

Population (1891), 571. Assessable Rental (1893–94), £10,207.

Letter from *Charles Gillespie*, Inspector of Poor, 28th February 1895.

1. No exceptional distress in district. Parties are almost all dependent on agriculture, and, of course, in receipt of wages during winter.

2. Every winter coals are distributed to the needy from a fund collected by the minister of the parish.

PARISH OF INNERLEITHEN, COUNTY OF PEEBLES.

Population (1891), 4,161. Assessable Rental (1893-94), £15,852.

Letter from *H. A. Imrie*, Inspector of Poor, 25th February 1895.

1. YES, among labourers and outdoor workers; due to the severe weather; especially those in the burgh of Innerleithen. I know of no case in the landward portion of the parish.

2. The Burgh Commissioners of Innerleithen have taken steps to relieve those cases in the burgh. Nothing required for the landward portion of the parish as far as I know.

PARISH OF KIRKURD, COUNTY OF PEEBLES.

Population (1891), 265. Gross Rental (1893–94), £3,094. Parish unassessed.

Letter from *James Runciman*, Inspector of Poor, 25th February 1895.

1. No distress in this parish.

3. None required.

PARISH OF WEST LINTON, COUNTY OF PEEBLES.

Population (1891), 1,005. Assessable Rental (1893–94), £11,900.

Letter from *Robert Sanderson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in the district. A goodly number of masons, slaters, and labourers, say 15 to 20, are idle from severity of the weather.

2. Nothing is being done by public authorities or by voluntary agencies.

3. No register is kept.

4. None at present.

PARISH OF LYNE, COUNTY OF PEEBLES.

Population (1891), 104. Gross Rental (1893–94), £1,755. Parish unasssessed.

Letter from *William Forrest*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

1. No.

3. No.

PARISH OF PEEBLES, COUNTY OF PEEBLES.

Population (1891), 5,261. Assessable Rental (1893–94), £26,463.

Letter from *William Whitie*, Inspector of Poor, 25th February 1895.

1. DISTRESS does exist to a certain extent in the town, which is to be attributed to dull trade in our mills, but principally to the prolonged and severe storm.

2. The Kirk Session have distributed 250 tons of coal, and are relieving 12 families with small sums weekly. The Town Council intimated that they would give the unemployed work at stone-breaking. Consequently, 29 have been kept at that work. A soup kitchen has been opened, whereby 90 families are supplied thrice a week with sufficient soup, bread, and meat; the Ladies' Benevolent Society and the Dorcas Society are actively at work.

3. The population of the town being over four thousand only, it is not considered necessary to keep a register of the unemployed, as the various agencies at work are being kept well posted up as to needful and deserving cases.

4. All deserving cases are being attended to here. With the view of getting more correctly at the amount of philanthropic work done by the various agencies, I would suggest that these societies should meet and discuss cases, and co-operate together in order to prevent overlapping of charities. I have come across cases where families have been supplied from three different sources.

PARISH OF SKIRLING, COUNTY OF PEEBLES.

Population (1891), 216. Gross Rental (1893–94), £3,060. Parish unassessed.

Letter from *Thomas Young*, Inspector of Poor, 23rd February 1895.

1. NONE in the parish.

PARISH OF TWEEDSMUIR, COUNTY OF PEEBLES.

Population (1891), 207. Gross Rental (1893–94), £5,870. Parish unassessed.

Letter from *John Yellowlees*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. (*a*) Nothing.

(*b*) None.

3. No.

4. None.

PARISH OF ABERDALGIE, COUNTY OF PERTH.

Population (1891), 280. Assessable Rental (1893–94), £4,142.

Letter from *John Pollock*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. The district is a rural one, and the population consists largely of farmers and their servants, and of the labourers on Dupplin Estate.

3. No.

2. (*a*) *See* No. 1.

(*b*) *See* No. 1.

4. None, as no pressing distress exists.

PARISH OF ABERFOYLE, COUNTY OF PERTH.

Population (1891), 1,023. Assessable Rental (1893–94), £17,273.

Letter from *John McIntyre*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in Aberfoyle at present. Centainly a few men have been prevented from following their usual avocations owing to the severe weather; but at the slate quarries, where the greater number of the men here are employed, these have had steady work all through the winter. The snow, fortunately, has not fallen to any great depth at any time.

2. There being no exceptional distress to cope with, the Public Authorities have not felt it incumbent on them to do anything. However, Aberfoyle has always been fortunate in having a number of generous people, who are ever ready to assist when distress exists. The Duchess of Montrose and the Hon. Wm. Campbell, of London, and a native of this parish, annually assist the poor of the parish with clothing, food, coal, &c. A great deal is always done by others, including work party in connection with Church of Scotland Young Women's Guild.

3. No.

4. Were there any exceptional distress here I am quite certain money could be raised by public subscription, and the best way of distributing it among necessitous cases would be by giving money orders for a certain sum to be presented to any of the grocers in the district.

PARISH OF ABERNETHY, COUNTY OF PERTH.

Population (1891), 1,550. Assessable Rental (1893–94), £11,750.

Letter from *James Bennett*, Inspector of Poor, 25th February 1895.

1. NONE, except say about a couple of dozen of single women and elderly men, who got their livelihood at hand-loom weaving, which has nearly failed during the past year—at any rate, I see them going about idle, and hear them grumbling about not being able to get a web. This is a village which depends mainly on salmon fishing; most of the men went out on the 11th, but there are still some not able to get out owing to the freezing of the rivers Tay and Earn.

2. Nil.

3. Nil.

4. Nil.

PARISH OF ABERNYTE, COUNTY OF PERTH.

Population (1891), 263. Gross Rental (1893–94), £2,483. Parish unassessed.

Letter from *Alexander Tweedie*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nothing needed.

3. No.

4. No.

PARISH OF ALYTH, COUNTY OF PERTH.

Population (1891), 3,453. Assessable Rental (1893–94), £22,071.

Letter from *James Smart*, Inspector of Poor, 28th February 1895.

1. THE distress here is owing to the long continuance of severe weather.

2. (*a*) The Police Commissioners, the Parochial Board, and a few others, including the clergyman of the town, formed themselves into a relief committee, and provided work for those who turned up at 2*s*. per day.
(*b*) The average number was 36 daily, mostly labourers, masons, and slaters; have made no complaint, and did not turn up at the bellman's call for the unemployed.

3. A sum of 21*l*. 4*s*. 2*d*. has been paid over to the workmen to 16th February. The Police Commissioners granted 6*l*., and the balance was got up by subscription. Twenty pounds has also been distributed in sums of 2*s*. 6*d*. and 5*s*. to families in necessitous circumstances. During the winter some 20*l*. worth of coals have been distributed throughout the town, and 20*l*. in clothing and coals to deserving poor over 60 years of age.

4. I understand that the Police Commissioners, through their clerk Mr. Reid, recommended that the Government should give a grant at once to relieve the existing distress. This certainly is commendable; at the same time, I consider that a sum equal to that given by Government should be raised in the various localities, as the public are generally benefited by the work done by the unemployed.

PARISH OF ARNGASK, COUNTY OF PERTH.

Population (1891), 564. Assessable Rental (1893-94), £5,779.

Letter from *John Wilson*, Inspector of Poor, 25th February 1895.

1. THERE has been little exceptional distress in this parish.

2. Private charity, by means of the distribution of coals, clothing, &c., has been quite sufficient to meet every necessitous case.

3. No.

4. No.

PARISH OF AUCHTERARDER, COUNTY OF PERTH.

Population (1891), 3,494. Assessable Rental (1893–94), £16,707.

Letter from *Donald Treasurer*, Inspector of Poor, 9th March 1895.

1. THERE is no great distress in this district; the protracted severe storm; all outdoor labour was suspended for about nine weeks; previous to the severe weather manufactory of cloth was dull.

2. Nothing done by the authorities. Private parties have made gifts of coal and other articles of food.

3. No register.

4. No.

PARISH OF AUCHTERGAVEN, COUNTY OF PERTH.

Population (1891), 2,081. Assessable Rental (1893–94), £11,573.

Letter from *Donald Cumming*, Inspector of Poor, 25th February 1895.

1. No; there is no distress. Some outdoor tradesmen—masons, slaters, &c., and their labourers—have been off work for seven or eight weeks, also fewer male or female hands have been required for farm work since December; but all that has now passed away, and work will be plentiful. Public works here linen, and in Stanley cotton, have been fully employed all winter. All outdoor industries now begin.

2. Nothing done nor required beyond the annual distribution of coal or money to the aged poor (who are not on the roll of paupers) by the Kirk Session.

3. No. There has been even fewer passing tramps than in former winters, being induced to remain about towns where soup kitchens are at work; but fine weather now setting in, will cause an exodus of the usual wanderers to a wider range and former pastures.

4. No; I have only had two genuine applications for relief since December, both of them from very aged people, 77 and 84 years, neither of them in the least affected by want of employment, although suffering from weather influences.

PARISH OF BALQUHIDDER, COUNTY OF PERTH.

Population (1891), 612. Assessable Rental (1893–94), £9,337.

Letter from *P. Ferguson*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.

2. Nil.

3. Nil.

4. None.

PARISH OF BENDOCHY, COUNTY OF PERTH.

Population (1891), 529. Assessable Rental (1893–94), £8,595.

Letter from *W. T. Anderson*, Inspector of Poor, 25th February 1895.

1. I AM not aware of a single case of exceptional distress in this parish at present. The workpeople are engaged to the farmers for meal, and milk, and money. Even were there one or two cases of persons or families being ill off, they would have no difficulty in being helped.

2. There are neither public nor private agencies at work here; these not being necessary. No single case of urgent distress has come to my knowledge.

3. We have no unemployed register.

4. I shall look sharply about and inquire also regarding what I might consider likely cases of hardship in any part of the parish; and if any arise I will apply to the Kirk Session, who have a small fund at their disposal.

PARISH OF BLACKFORD, COUNTY OF PERTH.

Population (1891), 1,557. Assessable Rental (1893–94), £15,992.

Letter from *John Stewart*, Inspector of Poor, 25th February 1895.

1. THERE are some cases of distress among those depending on out-door employment. This is due to the severe weather.

2. There have been coals and provisions distributed by voluntary agencies.

3. No unemployed register maintained; only a list of the most necessitous was made out when goods, &c., were distributed.

4. Should the severe weather continue much longer, other subscriptions will require to be raised for further distribution.

PARISH OF BLAIR ATHOLL, COUNTY OF PERTH.

Population (1891), 1,808. Assessable Rental (1893-94), £27,434.

Letter from *James Stewart*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

4. None.

PARISH OF BLAIRGOWRIE, COUNTY OF PERTH.

Population (1891), 4,739. Assessable Rental (1893–94), £26,326.

Letter from *Alexander J. R. Neilson*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district worth mentioning. A number, of course, are out of employment due to the severe weather, but they are not in excess of those of former winters. There have been fewer applications for relief this winter than last, and in no case has an application been made through want of employment.

2. Public authorities have employed a few men clearing the streets of snow. A soup kitchen has been in operation for some time, the daily average supplied with soup for the week ending 16th February was 160. There have been extra supplies of coal distributed about the town by private parties, and from church funds.

3. No.

4. Now that the present storm has broken up, employment can be had at stone-breaking, trenching ground, and about the saw mills and woods.

PARISH OF CALLANDER, COUNTY OF PERTH.

Population (1891), 2,279. Assessable Rental (1893–94), £23,404.

Letter from *James Macdonald*, Inspector of Poor, 25th February 1895.

1. THERE is a considerable amount of poverty among the working classes, due entirely to want of work on account of the storm.

2. Various voluntary agencies have in all raised a sum of about 80*l*. There has been no special weekly allowance paid, but coals and money are being distributed as required.

3. No.

4. There does not appear to be the least danger of any person here being allowed to want any of the necessaries of life. In fact, I question if ever the poor were as well attended to as they have been this winter.

PARISH OF CAPUTH, COUNTY OF PERTH.

Population (1891), 1,179. Assessable Rental (1893–94), £9,397.

Letter from *Robert Miller*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district.

2. Nothing has been done to meet any distress in this district by public authorities; but the Kirk Session of the Established Church has funds at its disposal out of which the deserving necessitous poor in the parish have been, as usual, temporarily relieved and supplied with fuel, warm clothing, and blankets. No special relief was granted during the week ended Saturday the 16th February.

3. No unemployed register is maintained in this parish.

4. As I do not consider that such distress exists in this parish, I have no suggestions to make.

PARISH OF CARGILL, COUNTY OF PERTH.

Population (1891), 1,318. Assessable Rental (1893–94), £12,399.

Letter from *Alexander Fergusson*, Inspector of Poor, 27th February 1895.

1. THERE are no exceptional cases of distress in this district.

2. Nothing required to be done.

3. No.

4. None.

PARISH OF CLUNIE, COUNTY OF PERTH.

Population (1891), 574. Assessable Rental (1893–94), £6,586.

Letter from *William Robertson*, Inspector of Poor, 26th February 1895.

1. NONE.

2. Nothing.

4. I beg to suggest that people that are willing to work should be encouraged to live in country parishes. In this part of Scotland labourers cannot be got to work the land.

PARISH OF COLLACE, COUNTY OF PERTH.

Population (1891), 419. Assessable Rental (1893–94), £3,292.

Letter from *George H. Dale*, Inspector of Poor, 26th February 1895.

1. THERE is no very exceptional distress in this district. The severe weather, no doubt, has prevented a few from pursuing their usual avocations.

2. Nothing necessary.

3. No unemployed register.

4. No.

PARISH OF COMRIE, COUNTY OF PERTH.

Population (1891), 1,591. Assessable Rental (1893–94), £15,911.

Letter from *P. Brough*, Inspector of Poor, 25th February 1895.

1. THERE has been less distress in this parish this winter than formerly, as labour has been abundant, and little or no snow in the strath to interfere with labour.

2. In this parish there is annually distributed over 100*l.* from various sources to meet the wants of necessitous cases, which are carefully seen to.

3. No unemployed register kept, but such cases are readily known.

4. I cannot recommend any change on existing management.

PARISH OF COUPAR ANGUS, COUNTY OF PERTH.

Population (1891), 2,760. Assessable Rental (1893-94), £14,200.

Letter from *T. B. Farquharson*, Inspector of Poor, 25th February 1895.

1. YES; entirely due to the severity of the weather of the past eight weeks.

2. (*a*) A soup kitchen was started on the 9th February, and is being kept up by voluntary subscriptions, managed by a committee of gentlemen belonging to the parish.
(*b*) The average daily number relieved during the week ended the 16th February was 125 (rations of bread and soup, and sometimes butcher meat).

3. No.

4. If a grant were given from Government, say equal to the amount of voluntary subscriptions, it would, I think, give an impetus to those charitably inclined. (In our case the soup kitchen must be kept going until the frost disappears, and until workmen commence to receive wages again.)

PARISH OF CRIEFF, COUNTY OF PERTH.

Population (1891), 5,303. Assessable Rental (1893-94), £31,760.

Letter from *D. Kippen*, Inspector of Poor, 25th February 1895.

1. YES. Caused by the severe weather.

2. Work is given to the unemployed. Daily average, 49. An average of about 100 loaves are distributed gratis daily. An average of about 71 are supplied with soup and rolls.

3. There is no register kept. All belonging to the town who ask for work get it.

4. The distress is so satisfactorily relieved that I cannot suggest anything better. The whole money required is raised by subscriptions, and many individuals privately give considerable sums in money and kind.

PARISH OF DRON, COUNTY OF PERTH.

Population (1891), 298. Assessable Rental (1893-94), £3,730.

Letter from *John Sprunt*, Inspector of Poor, 23rd February 1895.

1. No exceptional distress.
2. Nil.
3. No.
4. No

PARISH OF DULL, COUNTY OF PERTH.

Population (1891), 2,462. Assessable Rental (1893-94), £16,958.

Letter from *Robert M'Laren*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. The long spell of severe weather has no doubt been severely felt by many families who depended on outside labour, but the "credit system" practised has enabled them to tide it over till work begins again.

2. The public authorities other than the Parochial Board have done nothing; but a soup kitchen and private charity provided all that was required.

3. Not required as yet.

4. None required.

PARISH OF DUNBARNEY, COUNTY OF PERTH.

Population (1891), 829. Assessable Rental (1893-94), £7,276.

Letter from *James Deas*, jun., Inspector of Poor, 25th February 1895.

1. No exceptional distress. The severe weather is the main if not the only cause. Masons and out-door agricultural servants are about the only classes affected, and even amongst them there are no cases calling for urgent assistance.

2. The various churches and several private parties have now and again distributed coals, clothing and various provisions to the more needful cases. One of the ministers told me lately that he had more money in hand to distribute than he could get away.

3. No.

4. None. (My opinion is that the poor of this parish are very well looked after.)

PARISH OF DUNBLANE, COUNTY OF PERTH.

Population (1891), 3,633. Assessable Rental (1893-94), £24,853.

Letter from *Robert Cameron*, Inspector of Poor, 25th February 1895.

1. YES, there is exceptional distress; about 50 families out of work owing to the severity of the weather.

2. Nothing by public authorities. A soup kitchen has been going for five or six weeks; 120 rations of soup and bread distributed every second day; on Saturday an extra supply distributed. This is a voluntary agency, and the churches are doing a little extra in dispensing money, food, and clothing; 100 tons of coals also distributed.

3. No register.

4. The distress is being met in the manner stated, and it is believed to be sufficient.

PARISH OF DUNKELD AND DOWALLY, COUNTY OF PERTH.

Population (1891), 1,074. Assessable Rental (1893–94), £5,730.

Letter from *William Cuthbert*, Inspector of Poor, 25th February 1895.

1. THERE is not any exceptional distress in the district. There was a number of the labouring class idle through the severe weather, but the most of them have resumed work or will be able to do so in a few days.

2. (*a.*) There is a number of ladies in the district who have distributed food, coals, and clothing voluntarily. (*b.*) There was no account kept of the number relieved.

3. No use for any register of unemployed being kept in this district.

4. I cannot offer any suggestions; as the district is mostly agricultural there is never any serious distress.

PARISH OF LITTLE DUNKELD, COUNTY OF PERTH.

Population (1891), 2,108. Assessable Rental (1893–94), £20,526.

Letter from *J. A. Harris*, Inspector of Poor, 28th February 1895.

1. No exceptional distress. For some time, owing to severe weather, the majority of the working class have been idle.

2. Nothing considered necessary to be done by public authorities in this parish; no one is known to suffer. On the Atholl and Marthly estates wood is obtained free in the forests, and much of it has been taken during the storm.

3. No.

4. No.

PARISH OF DUNNING, COUNTY OF PERTH.

Population (1891), 1,345. Assessable Rental (1893–94), £12,317.

Letter from *William Henderson*, Inspector of Poor, 25th February 1895.

1. THERE is a certain amount of distress in this district which is mainly caused by the severe weather, the people being mostly dependent on farm labour for their means of existence.

2. The Dunning Benevolent Society have made grants of coals, clothing, and food, in addition to their usual distribution, and the Curling Club have distributed loaves.

3. No register is maintained.

4. I am of opinion that this distress is only temporary, and if the weather was more favourable nearly all would get to work again.

PARISH OF ERROL, COUNTY OF PERTH.

Population (1891), 2,158. Assessable Rental (1893–94), £18,831.

Letter from *John Pearson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress. Labourers have not been so regularly employed as if it had been an open winter; there are certain kinds of work which must be done, whatever the weather is. Labourers' work in this parish is as follows, viz.: The salmon fishing closes in August, harvest follows immediately, then potatoes lifting; in the end of December, reed cutting commences (and must be done), this continues till the end of January; in the beginning of February salmon fishing commences, and continues till August. Farmers are busy during hard weather in getting dung carted to the fields, and require the assistance of labourers.

2. Mr. Dalgleish, the chairman of the Parochial Board, thinking that some of the villagers might be a little straitened in their circumstances, got a list of all who were not working, and within a few days every one got half a ton of coals laid down free of charge. Mr. Clarke, vice-chairman of the Board, has for many years, during 12 weeks in December, January, and February, given weekly a four-pound loaf to those in the village who were reported in need of it.

3. No.

4. No.

PARISH OF FORGANDENNY, COUNTY OF PERTH.

Population (1891), 575. Assessable Rental (1893-94), £7,375.

Letter from *Thomas Moffatt*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish. The great majority of inhabitants are ploughmen, who are engaged by the year.

3. No.

PARISH OF FORTEVIOT, COUNTY OF PERTH.

Population (1891), 538. Assessable Rental (1893–94), £7,669.

Letter from *William Sprunt*, Inspector of Poor, 26th February 1895.

1. I HAVE heard of no exceptional distress ; the people are engaged in agricultural occupations, and have had, and are having, constant employment.

2. No agencies have been employed, as none have been necessary.

PARISH OF FORTINGALL, COUNTY OF PERTH.

Population (1891), 1,610. Assessable Rental (1893–94), £20,970.

Letter from *Robert Fisher*, Inspector of Poor, 25th February 1895.

1. No distress in the district.

2. Nothing.

3. No.

No.

PARISH OF FOWLIS WESTER, COUNTY OF PERTH.

Population (1891), 968. Assessable Rental (1893–94), £12,632.

Letter from *J. R. Martin*, Inspector of Poor, 26th February 1895.

1. BEING a wholly agricultural district, there is not much exceptional distress, if any. Three or four masons have been idle since new year, owing to weather, but they are well-doing and above taking relief.

2. (*a.*) Nothing.
(*b.*) None.

3. No.

4. None.

PARISH OF GASK, COUNTY OF PERTH.

Population (1891), 361. Assessable Rental (1893–94), £4,641.

Letter from *Henry Robertson*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nil.

3. Nil.

4. Nil.

PARISH OF GLENDEVON, COUNTY OF PERTH.

Population (1891), 141. Gross Rental (1893-94), £5,586. Parish unassessed.

Letter from *W. N. Russell*, Inspector of Poor, 25th February 1895.

1. No special distress.
2. Nothing. This is a purely pastoral district, and the sheep have been the only sufferers thus far.
3. We have no unemployed, no loafers; no need of any register.
4. No.

PARISH OF INCHTURE, COUNTY OF PERTH.

Population (1891), 624. Assessable Rental (1893-94), £7,912.

Letter from *John S. Small*, Inspector of Poor, 25th February 1895.

1. No exceptional distress.
2. Nothing required to be done by public authorities or by voluntary agencies.
3. No register maintained, not required.
4. No.

PARISH OF KENMORE, COUNTY OF PERTH.

Population (1891), 1,401. Assessable Rental (1893-94), £10,010.

Letter from *Robert M'Laren*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish, though the prolonged and severe snow and frost caused considerable inconvenience and hardship in consequence of the roads being blocked, and the difficulty of getting supplies.

2. Nothing has been done by any public authority except by the Parochial Board, Kirk Sessions, and private charity, but the Marquess and Marchioness of Breadalbane have, as usual, distributed liberal supplies of food, fuel and clothing among all the necessitous throughout the parish, which is part of the Breadalbane Estate.

3. No.

4. None required.

PARISH OF KILLIN, COUNTY OF PERTH.

Population (1891), 2,402. Assessable Rental (1893-94), £14,328.

Letter from *Peter Stewart*, Inspector of Poor, 25th February 1895.

1. THERE are no cases of exceptional distress in this district.
2. There are no agencies, and no application has been made to the public authorities.
3. No.
4. None.

PARISH OF KILMADOCK, COUNTY OF PERTH.

Population (1891), 2,760. Assessable Rental (1893-94), £20,980.

Letter from *William Gray*, Inspector of Poor, 25th February 1895.

1. No.

PARISH OF KILSPINDIE, COUNTY OF PERTH.

Population (1891), 630. Assessable Rental (1893–94), £5,105.

Letter from *George Nish*, Inspector of Poor, 25th February 1895.

1. No exceptional distress. The parish being agricultural, ploughmen have their wages and perquisites.

2. Nothing required.

3. No.

4. No.

PARISH OF KINCARDINE, COUNTY OF PERTH.

Population (1891), 1,277. Assessable Rental (1893–94), £13,379.

Letter from *Alex. Sands*, Inspector of Poor, 25th February 1895.

1. THIS is wholly an agricultural district, and they are few (if willing) who did not find something to do during the severe weather.

2. The poor and deserving poor had a liberal supply of fire, &c. by voluntary aid, and nothing was required to be done by public authorities.

3. No.

4. None requisite.

PARISH OF KINCLAVEN, COUNTY OF PERTH.

Population (1891), 613. Assessable Rental (1893–94), £8,006.

Letter from *John Foster*, Inspector of Poor, 25th February 1895.

1. THERE is no distress. The severe weather has not affected the circumstances or condition of the inhabitants.

PARISH OF KINFAUNS, COUNTY OF PERTH.

Population (1891), 562. Assessable Rental (1893–94), £9,784.

Letter from *John H Stewart*, Inspector of Poor, 26th February 1895.

1. THERE is not. I do not think there has been during the present winter a single family whose circumstances could properly be described as distressing.

2. (*a*) Nil.
(*b*) Nil.

3. No. There is not at the present moment a man in the parish out of employment.

PARISH OF KINLOCH, COUNTY OF PERTH.

Population (1891), 192. Gross Rental (1893–4), £3,306. Parish unassessed.

Letter from *John Arnott*, Inspector of Poor, 27th February 1895.

1. So far as I am aware there is no exceptional distress in this parish, which is entirely rural and agricultural.

PARISH OF KINNAIRD, COUNTY OF PERTH.

Population (1891), 228. Assessable Rental (1893–94), £2,521.

Letter from *Alexander Duncan*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish.

2. There is nothing necessary to be done by public authorities or voluntary agencies.

3. No.

PARISH OF KINNOULL, COUNTY OF PERTH.

Population (1891), 3,730. Assessable Rental (1893–94), £17,605.

Letter from *Robert Robertson*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this parish due to either of the above causes.
2. In the absence of exceptional distress, the need for action by public or private agencies is not required.
3. No.
4. No.

PARISH OF KIRKMICHAEL, COUNTY OF PERTH.

Population (1891), 935. Gross Rental (1893–94), £18,654. Parish unassessed.

Letter from *Alex. Morrison*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress complained of as yet within this parish. Working families who are out-door labourers are able to get credit for a time, but no one, that the inspector of poor is aware of, is in actual want.
2. Nothing as yet.
3. No.
4. No.

PARISH OF LECROPT, COUNTY OF PERTH.

Population (1891), 273. Gross Rental (1893–94), £3,530. Parish unassessed.

Letter from *John Wilson*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish.

PARISH OF LETHENDY, COUNTY OF PERTH.

Population (1891), 151. Gross Rental (1893-94), £2,352. Parish unassessed.

Letter from *John Arnott*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish so far as I know. The parish is purely agricultural, and the population sparse. Farm service is for long terms.

PARISH OF LOGIERAIT, COUNTY OF PERTH.

Population (1991), 1,773. Assessable Rental (1893–94), £17,420.

Letter from *James McIntosh*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district. There was only one application for relief during the last three months, the applicant being an old man of 82 years of age, and his wife is in her 81st year ; immediate relief was granted. The Duke of Atholl, the principal proprietor in the parish, employed a number of men who were kept on, working, clearing ice, &c., for curlers during the storm.
2. Nothing.
3. No.
4. No.

PARISH OF LONGFORGAN, COUNTY OF PERTH.

Population (1891), 1,779. Assessable Value (1893-94), £15,738.

Letter from *R. K. Christie*, Inspector of Poor, 28th February 1895.

1. No. There are virtually no able-bodied persons out of work.

2. The aged and frail poor are being assisted by the kindness of the well-to-do members of the community. Coals, money, and victuals are being supplied to them.

3. No.

4. The means specified above are fully overtaking present necessities. There is no call for the authorities to take any action.

PARISH OF MADERTY, COUNTY OF PERTH.

Population (1891), 483. Assessable Rental (1893-94), £7,330.

Letter from *William Forbes*, Inspector of Poor, 25th February 1895.

1. THERE is no distress, although a few quarrymen are irregular in work owing to severe weather.

2. (*a*) Nothing.
(*b*) None.

3. No register.

PARISH OF MEIGLE, COUNTY OF PERTH.

Population (1891), 660. Assessable Rental (1893-94), £9,688.

Letter from *John Butter*, Inspector of Poor, 25th February 1895.

1. YES, to a small extent. This being an agricultural district outworkers on farms have suffered for want of work for 10 weeks, owing to the severe weather.

2. Nothing by the public authorities. Curlers of the district have several times distributed coals amongst the most necessitous.

3. No.

4. No.

PARISH OF METHVEN, COUNTY OF PERTH.

Population (1891), 1,747. Assessable Rental (1893-94), £11,110.

Letter from *Robert Moir*, Inspector of Poor, 26th February 1895.

1. THERE is more distress than usual here, owing to the severe and lengthened storm. The population of this district depends mainly on agricultural or out-door work, which has been at a standstill for about eight weeks.

2. Nothing has been done by any public authority, but a good deal by private effort. For the last three weeks Colonel Smythe, of Methven, has been giving employment (burning brushwood, &c.) to all idle men in the parish who were willing to work for 2*s.* daily. About 20 were employed in this way.

3. No.

4. In this parish there are a considerable number of roads not on the list of public highways, which might with advantage be kept in repair by the new parish council. In connection with this a good deal of stonebreaking might be provided for those out of employment during the winter months by a little foresight on the part of the parish council.

PARISH OF MONEYDIE, COUNTY OF PERTH.

Population (1891), 251. Assessable Rental (1893-94), £3,325.

Letter from *A. I. Stewart*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress. The Kirk Session of the parish (of which I am a member) have funds, left recently by legacy, for people in distress in the parish, and we cannot get any one to take relief.

2. Nothing.

3. No.

4. No.

PARISH OF MONZIEVAIRD AND STROWAN, COUNTY OF PERTH.

Population (1891), 593. Assessable Rental (1893–94), £9,756.

Letter from *Alexander Hill*, Inspector of Poor, 25th February 1895.

1. NONE.

2. None.

3. No.

4. The population of the parish consists principally of estate workers, the remainder farm servants, all of whom being monthly or six-monthly engagements, have been receiving regular pay.

PARISH OF MONZIE, COUNTY OF PERTH.

Population (1891), 501. Assessable Rental (1893–94), £5,489.

Letter from *William Murray*, Inspector of Poor, 26th February 1895.

1. NONE.

3. No.

4. None, as the population is entirely agricultural within the parish.

PARISH OF MOULIN, COUNTY OF PERTH.

Population (1891), 2,381. Assessable Rental (1893–94), £24,951.

Letter from *James Robertson*, Inspector of Poor, 25th February 1895.

1. No.

3. Not required.

4. No.

PARISH of MUCKART, COUNTY OF PERTH.

Population (1891), 542. Assessable Rental (1893–94), £5,174.

Letter from *Henry Sinclair*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish.

2. Nothing requires to be done beyond giving a few carts of coals, which has been done by one of the proprietors, J. J. Mowbray, Esq., of Naemoor.

3. No.

4. None.

PARISH OF MUTHILL, COUNTY OF PERTH.

Population (1891), 2,123. Assessable Rental (1893–94), £19,456.

Letter from *William Miller*, Inspector of Poor, 23rd February 1895.

1. No.

2. Nothing required to be done.

3. Not required.

4. No.

PARISH OF PERTH, COUNTY OF PERTH.

Population (1891), 26,744. Assessable Rental (1893–94), £129,030.

Letter from *Robert Stewart*, Inspector of Poor, 25th February 1895.

1. YES. Wholly attributable to the severe weather.

2. (*a*) The Police Commissioners have instituted relief works. Three-fourths of those employed are tradesmen and their labourers, and farm labourers. The committee of the co-operative society have voted 100*l.* for the relief of the unemployed, and 100*l.* was subscribed at a public meeting of citizens held on 23rd instant.

(*b*) Police Commissioners at stone-breaking; average number employed, 79.
Police Commissioners at street cleaning; average number employed, 7.
Perth Co-operative Society; average number relieved daily, 22.
Society for Improving Condition of the Poor; average number relieved daily, 21.

3. No register kept, with the exception of registers of men employed by the Police Commissioners on relief works.

4. I have no suggestions to make, for the reason that I believe the destitution to be fully met by the agencies above-mentioned. The Society for the Improvement of the Condition of the Poor is prepared to meet any demand which can possibly be made upon it. Church organisations are dealing with the poor of their congregations, and various other charity associations relieve distress, wherever it is known to exist. The parochial board have also been liberal in their dealing, so that, as far as known to me, there is no case of destitution which has not been relieved. I believe the city of Perth to be well prepared to meet any exceptional distress from whatever cause.

PARISH OF PORT OF MONTEITH, COUNTY OF PERTH.

Population (1891), 1,092. Assessable Rental (1893–94), £11,077.

Letter from *Alexander Cross*, Inspector of Poor, 4th March 1895.

1. THERE has been no exceptional distress in the parish so far as known. The parish is purely agricultural, with the exception of the village of Gartmore; a large number of the labourers work on the railway, and work was regular.

2. No necessity for any agencies.

3. None necessary.

PARISH OF RATTRAY, COUNTY OF PERTH.

Population (1891), 2,667. Assessable Rental (1893–94), £10,716.

Letter from *Patrick J. Butchart*, Inspector of Poor, 25th February 1895.

1. ANY exceptional distress that exists is due to the severity of the weather. Short time has had its effect, but only to a limited extent. From 1st December 1894 to 16th February 1895, there have been fewer applications for relief than for the corresponding period a year ago, and by far the largest proportion of such are those admittedly belonging to other parishes, proportion 14 to 9. There are in this, as in other parishes, a number of men who will not work, whose sole occupation is poaching, and otherwise living by their wits. These persons, of course, are the first to feel the pinch.

2. A soup kitchen has been in operation for some time. The daily average of persons relieved by this agency for the week ending 16th February was 65. The committee of the coal fund, kept up by voluntary contributions, have given a second supply of coal this winter to those out of employment principally.

3. No.

4. Stone-breaking in sheltered places or partially under cover. Local improvements.

PARISH OF REDGORTON, COUNTY OF PERTH.

Population (1891), 1,369. Assessable Rental (1893–94), £9,122.

Letter from *John Watson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district, apart from the results of the severe and protracted storm, which laid idle several out-door labourers, who had no permanent work, and these have not been so straitened as to necessitate their making application for relief, in many cases having families employed in the works, which through the enterprise and energy on the part of the proprietors were kept running with very little interruption through the storm.

2. Nothing; as no cases demanding relief were made to the authorities.

3. No register kept.

4. No; as no particular cases came under the notice of the board purely from want of employment. Any increase of applications for relief made were entirely from the tramp class, who are ever ready to lay hold on anything in the shape of an excuse for making application. In every case I offered the poorhouse, which in some cases was not taken advantage of.

PARISH OF RHYND, COUNTY OF PERTH.

Population (1891), 270. Assessable Rental (1893–94), £4,987.

Letter from *John M'Leish*, Inspector of Poor, 26th February 1895.

1. THIS parish being purely agricultural, and the farm servants being engaged by the year, there are none strictly speaking unemployed, and consequently little or no distress.

2. *See* above.

3. No.

4. No.

PARISH OF ST. MADOES, COUNTY OF PERTH.

Population (1891), 420. Assessable Rental (1893-94), £6,265.

Letter from *John Leitham*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF ST. MARTINS, COUNTY OF PERTH.

Population (1891), 871. Assessable Rental (1893–94), £7,563.

Letter from *A. T. Paterson*, Inspector of Poor, 25th February 1895.

1. THERE have been no cases of exceptional distress in the parish, as far as I have been able to ascertain; and I have had not a single application for casual relief during the continued severe weather.

2. The churches have been causing small quantities of coal to be distributed amongst the deserving poor of their respective congregations.

3. No.

PARISH OF SCONE, COUNTY OF PERTH.

Population (1891), 2,150. Assessable Rental (1893–94), £11,646.

Letter from *B. M'Kenzie*, Inspector of Poor, 6th March 1895.

1. No.

2. None.

3. Not required.

4 None.

PARISH OF TIBBERMORE, COUNTY OF PERTH.

Population (1891), 1,692. Assessable Rental (1893–94), £14,428.

Letter from *George Hill*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish, it being chiefly an agricultural one.

2. No distress from want of employment in this parish. None have applied for relief to me.

3. No.

4. None existing, so far as I know.

PARISH OF TRINITY GASK, COUNTY OF PERTH.

Population (1891), 386. Assessable Rental (1893–94), £5,127.

Letter from *Alexander Murray*, Inspector of Poor, 25th February 1895.

1. THERE is no distress from want of employment in this district.

3. No.

PARISH OF WEEM, COUNTY OF PERTH.

Population (1891), 437. Assessable Rental (1893–94), £4,480.

Letter from *John Cameron*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish, and there has not been a single application for relief.

3. No.

4. No.

PARISH OF ABBEY, COUNTY OF RENFREW.

Population (1891), 42,887. Assessable Rental (1893–94), £158,725.

Letter from *J. M. Campbell*, Inspector of Poor, 25th February 1895.

1. THERE is exceptional distress at present in this district. It is wholly due to the severe weather, and is confined to persons employed at out-door work. In-door employment in the district is generally good.

2. (*a*) The Municipal Authority of Paisley is providing work in the cleansing department and town quarry for unemployed men. Wage given by the former at rate of 3*d.* per hour; by the latter, 1*s.* 6*d.* per yard for stone-breaking, and 1*s.* 3*d.* minimum per diem. Two soup kitchens in operation at the Abbey and burgh poor-houses; cost met out of voluntary subscriptions. Soup kitchen also at Johnstone; cost met in same way.

(*b*) Average daily number employed by cleansing department 59, for week ending 16th February. Average daily number employed by town's quarry, 61; commenced 18th February, week ending 23rd February. Paisley soup kitchens commenced 14th February; average daily portions to 16th February, 843. Johnstone soup kitchens, average daily for week (16th February), 350. Paisley, up to 16th February, 350 portions of coal, 2 cwt. each distributed. Coals also given in Johnstone, all met by voluntary subscription. In Paisley, on 23rd February, 437 heads of families supplied with soup tickets = 1,698 portions. To-day (25th February) 395 heads of families = 1,594 portions.

3. There is no regular register of unemployed. The burgh police, Paisley, enter in an application book list of all classes, males and females, who have applied since 13th February. Up till the 16th instant, 357 names are entered, and up till this date (25th February), 550. This does not include dependents, nor single men, who reside in common lodging-houses.

4. The Relief Committee of this Board, at a meeting held this evening, agreed that this query should be answered to the effect "that in seasons of exceptional distress Municipal Authorities should be empowered to deal with the unemployed in preference to the Parish Authorities."

PARISH OF CATHCART, COUNTY OF RENFREW.

Population (1891), 16,509. Assessable Rental (1893–94), £100,795.

Letter from *John Grozier*, Inspector of Poor, 27th February 1895.

1. No exceptional distress in the district.

2. This parish is partly within the boundaries of the City of Glasgow, and the authorities of Glasgow are attending to the unemployed within the city. Please see return of the Glasgow authorities.

3. No special register kept.

4. Only three able-bodied men have applied to the Inspector of Poor of Cathcart during the whole winter, and they received a little pecuniary relief or orders for provisions not exceeding for the three, 35*s.* These three are now at work. I do not feel myself competent to make any suggestions, as I have had very little experience of the cases of the unemployed.

PARISH OF EAGLESHAM, COUNTY OF RENFREW.

Population (1891), 1,207. Assessable Rental (1893–94), £14,627.

Letter from *William Browning*, Inspector of Poor, 26th February 1895.

1. SUCH distress as has existed since New Year is entirely due to the severity of the weather, and has affected the usual tradesmen, and those engaged as agricultural labourers.

2. (*a*) Within the last six weeks the feuars' managers voted 10*l.* or 11*l.* to be distributed among the most necessitous. A small legacy of 10*l.* was also apportioned among the most deserving. The landlord of the estate (Mr. Allan Gilmour, Junior) has also within the last three weeks forwarded 35*l.* to be spent in food, and fire, and clothing. At New Year, 50 carts of coal were distributed throughout the village—sum raised by subscriptions throughout the parish.

(*b*) This charity has not been organised in such a way as to tell what might be the average daily number, perhaps 12.

3. No such register maintained. All cases are well known in such a small village.

4. *See* 2 (*a*.). With the milder weather the distress is practically over.

Parish of Eastwood, County of Renfrew.

Population (1891), 16,042. Assessable Rental (1893–94), £61,016.

Letter from *D. Barrowman*, Inspector of Poor, 25th February 1895.

1. There has been exceptional distress in the district, wholly due to the severe weather.

2. At a meeting of the Town Council of Pollokshaws, and representatives from the Parochial Board of Eastwood held on 13th February, it was agreed to start a "soup kitchen," and to give groceries and coals, besides soup, &c., to those in distress, the cost to be met by an appeal to the public for subscriptions. It was also agreed to give employment to as many as possible. These resolutions were immediately put into practice. On the 15th and 16th about 200 (including dependants) were supplied with bread and soup, coals and groceries, and gradually this number has increased until, on the 22nd and 23rd instant, about 700 (including dependants) were supplied with soup and bread, &c.

3. Only since the starting of the above-mentioned relief arrangements. Employment has been given by the committee to about 40 men, and they have been paid at the rate of 3*d.* per hour, with soup and bread for themselves and families, and coals. The work would not have been done but for the purpose of finding employment. The labour done has not been value for the cost.

4. Parochial Boards or the new Parish Councils should at least have a discretionary power to grant relief to able-bodied men who are out of employment. For exceptional distress such as we have had this year, caused by the severe weather, while Parish Councils might be given power to relieve it, I question very much whether the unemployed would fare as well as they are doing now, at least in this district under the voluntary system of relief described. No compulsory system of public relief to the able-bodied should be inaugurated unless some means are provided for a labour test, and Municipal Authorities are better able to provide such labour than any other Public Authority I know.

P.S. The above has not been submitted to my Board If you wish an expression of opinion in answer to Query 4 from the Board, I can submit the question to a meeting on Thursday first, provided I hear from you before then.

Parish of Erskine, County of Renfrew.

Population (1891), 1,691. Assessable Rental (1893–94), £16,111.

Letter from *J. Balfour Robertson*, Inspector of Poor, 26th February 1895.

1. No. Any distress is due to the severe weather.

2. (1.) The Parochial Board, *pro tempore*, increased the weekly aliment of several of the resident poor. (2.) Granted coals, clothing, in some few instances. (3.) Private parties have relieved in other cases, the daily number of which I have no means of ascertaining.

3. Not so far as known to me.

4. What has been already done appears to me to be sufficient in the meantime.

Parish of Greenock, County of Renfrew.

Population (1891), 66,247. Assessable Rental (1893–94), £300,439.

Letter from *John S. Deas*, Inspector of Poor, 25th February 1895.

1. There are not many cases of exceptional distress in this district at present, and what do exist are due to the ate very severe weather affecting those persons who are usually employed at out-door work.

2. The Municipal Authorities have given employment to 23 men at stone-breaking, giving each 2*s.* per day, and 61 men at cleaning the snow from the streets at 2*s.* per day each. The charitable society, acting through police, are relieving about 80 cases with food, &c., and the Parochial Authorities are relieving those which properly fall within their province.

3. There is no unemployed register maintained at present, as, speaking generally, there is no occasion for it.

4. There is no great amount of exceptional distress in this parish at present, and what really does exist can readily be met by the local agencies presently in operation. I have no special suggestions to make ; all the authorities in town are working harmoniously together.

PARISH OF HOUSTON, COUNTY OF RENFREW.

Population (1891), 1,946. Assessable Rental (1893–94), £11,620.

Letter from *John Dalziel*, Inspector of Poor, 1st March 1895.

1. EXCEPTIONAL distress has existed in this district during January and February, but purely owing to the severe weather. Number of unemployed about 110.

2. (*a*) *Houston and Crosslee Districts.*—By Lady Anne and Mr. A. A. Speirs, soup kitchen twice weekly supplying rations of soup and bread to destitute, and employment found for 25 unemployed, at 3*s.* per day. By Mr. C. Bine Renshaw, M.P., cheque for 10*l.* to supply provisions to destitute families. By Mrs. C. Bine Renshaw and others, coals, clothing, and rabbits.

Bridge of Weir District.—By Mrs. A. M. Brown, soup kitchen. By unemployed relief committee, provisions, coals, &c., to the extent of 70*l.* collected by voluntary contributions.

(*b*) Relieved in Houston and Crosslee by soup kitchen, &c.	- - - -	36 cases.
Relieved by employment found for one unemployed in each family	- - -	25 „
Relieved by relief committee in Bridge of Weir, and by soup kitchen	-	42 „
Total	- - -	103 „

3. No register is kept apart from the relief lists.

4. As the wants of the district have been amply met by private means, and milder weather has now set in, I do not consider any further steps necessary.

PARISH OF INCHINNAN, COUNTY OF RENFREW.

Population (1891), 567. Assessable Rental (1893–94), £5,604.

Letter from *J. C. Crawford*, Inspector of Poor, 25th February 1895.

1. NONE.

3. No.

PARISH OF INVERKIP (INVERKIP DISTRICT), COUNTY OF RENFREW.

Population (1891), 6,541. Assessable Rental (1893–94), £44,133.

Letter from *John Campbell*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district, though the long continuance of frost has kept about two dozen persons from being employed since beginning of year; most of them are unmarried, some of them not very provident, and these will not be a bit the worse for any little pinching they have felt, if it teaches them to take better care of their money in future. There are three or four families who cannot have been well off during the last two months, but as there were no applications for help it must be assumed that they had sufficient credit to enable them to pull through.

2. (*a*) Nothing by the public authorities. A lady in the neighbourhood made an arrangement with the village baker to supply any person who appeared necessitous with a meal of bread and butter, tea or cocoa.

(*b*) Sixty-six persons, all strangers and tramps, were supplied under this arrangement from 13th till 25th February instant, an average of fully six each day. The shopkeeper tells me that in her opinion a great many served were undeserving.

4. Now that the frost seems to be disappearing the above conditions will pass away, as almost all these persons have work to begin to. A little money relief to the families referred to is all that I could suggest to help them out of debt. At the same time, and to the best of my knowledge and belief, I think every one will manage to pull through without extraneous aid.

PARISH OF INVERKIP (GOUROCK DISTRICT), COUNTY OF RENFREW.

Population (1891), ——. Assessable Rental (1893–94), £.——. (Included in Inverkip.)

Letter from *John Macmillan*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF KILBARCHAN, COUNTY OF RENFREW.

Population (1891), 7,111. Assessable Rental (1893–94), £31,230.

Letter from *John Shaw*, Inspector of Poor, 25th February 1895.

1. THERE is a little exceptional distress, almost entirely owing to the severe weather.

2. The public authorities have not been called upon to do anything, but a voluntary relief committee has been giving assistance in coal, food, and money. During the week ended 16th February the committee distributed upwards of 50 tons of coal, and about 30*l.* in food and money; about 100 households were relieved. Now that the weather is changed it is not expected that any further exceptional relief will be required in the meantime.

3. We have lists of those who get relief, with the amount granted to each, but not what could be called an unemployed register.

4. Any distress that has arisen here has been promptly, and I think effectually, met by private charity, and meantime no other agency is required.

PARISH OF KILMALCOLM, COUNTY OF RENFREW.

Population (1891), 3,649. Assessable Rental (1893–94), £32,102.

Letter from *Robert Knox*, Inspector of Poor, 25th February 1895.

1. Two classes of working men, chiefly masons and labourers, have been suffering from exceptional distress, and this distress has been due to the severity of the weather.

2. (*a*) The distress has been relieved by voluntary agency.

(*b*) Prior to 16th February the agency has not been accurately ascertained, but since that date the Saturday Evening Entertainments Society have contributed 7*l.* 10*s.*; the United Presbyterian Church have collected 6*l.*

3. No register kept.

4. There is nothing to report as peculiar in the pauper class, and should any action be taken in respect of the classes I have named above, I would suggest that all means be employed to keep up the spirit of independence.

PARISH OF LOCHWINNOCH, COUNTY OF RENFREW.

Population (1891), 3,477. Assessable Rental (1893–94), £23,127.

Letter from *James Kerr*, Inspector of Poor, 26th February 1895.

1. THERE is exceptional distress in the district, owing to—

1st. The fall of a chair factory, blown down by a storm on 22nd December.

2nd. The severe weather interfering with out-door labour.

2. Voluntary agencies have met the distress—

1st. By a fund raised under the auspices of the Member for the county, and managed by a local committee. The necessities of sufferers from the fall of the chair factory are amply provided for, 39 of whom were relieved during the week ended 16th instant.

2nd. Ten pounds are in hands of a gentleman deputed by the donor to relieve those impoverished by the severe weather.

I understand this sum is to be distributed by tickets for provisions to about 40 families and individuals on 26th instant.

3. There has been no systematic register of unemployed started as yet.

PARISH OF MEARNS, COUNTY OF RENFREW.

Population (1891), 3,426. Assessable Rental (1893–94), £21,025.

Letter from *James Wright*, Inspector of Poor, 23rd February 1895.

1. No.

PARISH OF NEILSTON, COUNTY OF RENFREW.

Population (1891), 11,374. Assessable Rental (1893-94), £43,068.

Letter from *Archibald Mackenzie*, Inspector of Poor, 25th February 1895.

1. PARTLY due to the stoppage of a public work and partly to the long-continued frost. A fund has been started for the relief of the poor, and is being administered by a committee of the town council of Barrhead, along with a committee of the subscribers. The parochial board, at the statutory meeting on the 11th instant, gave me discretionary power to relieve all necessitous cases of the unemployed.

2. Soup kitchens have been instituted in two districts of the parish, and are largely taken advantage of. The enclosed is a statement of the distribution, and arrangements are being entered into for the distribution of grocers' lines, &c. The different churches and private individuals have given coals and money to the poor. In Barrhead 150*l.* has been subscribed by the ratepayers, and the co-operative society distributed 100*l.* in money, and are giving four dozen of loaves daily to the soup kitchens and a quantity of beef and bones.

BARRHEAD SOUP KITCHENS.

Statement of Distribution.

	Good Templars'.	Dovecothall.	Good Templars'.	Dovecothall.	Good Templars'.	Dovecothall.
	Callers.		Supplies.		Loaves of Bread.	
Wednesday, 13th February - -	64	78	130	120	66	34
Thursday, 14th ditto - -	56	73	209	144	30	48
Friday, 15th ditto - -	75	140	244	160	120	58
Saturday, 16th ditto - -	65	63	263	163	114	72
Sunday, 17th ditto - -	65	63	259	163	108	72
Monday, 18th ditto - -	66	60	277	165	136	73
Tuesday, 19th ditto - -	79	62	267	151	140	72
Wednesday, 20th ditto - -	60	69	285	170	149	70

3. There is no unemployed register maintained, but a complete list of needful persons has been made for the guidance of the committee, and seems to work very well.

4. No further suggestion. We have no employment in the parish to give men out of work, and cannot very well make work for them during this severe frost.

PARISH OF PAISLEY, COUNTY OF RENFREW.

Population (1891), 41,082. Assessable Rental (1893–94), £128,035.

Letter from *Robert Rowand*, Inspector of Poor, 25th February 1895.

1. THERE is considerable exceptional distress in this district and parish. It is almost wholly due to the unusual severity of the weather. All trades not affected by the weather are fairly busy.

2. The public authorities are actively relieving all cases of distress, and in this they are successful, no known case of real destitution being left unrelieved. Private subscriptions are flowing in freely, which will meet all expenditure. Average daily number of men employed by the municipal authorities cleaning streets and breaking stones, 60; average daily number employed in stick factory under charity association, 35. Soup kitchen at Burgh Poorhouse gave out rations, consisting of 1 lb. bread, 4 oz. meal, and 1 pint of soup, to an average daily number of 116 families, representing 463 individuals. Coal, in quantities of 2 cwt, were distributed to 350 families. Cases of hidden distress have also been sought out and assistance given in small sums of money, and lines for provisions.

3. The names of applicants are taken down in a book at the police office. Tickets for the soup kitchen are issued to the families, and work is provided for a number of the men. Many of the men offered work do not turn up to begin work.

4. No special suggestions. The efforts of the public authorities are largely supplemented by many private benevolent agencies distributing clothing, food, and coal.
A private agency is also giving a hot dinner daily to all school children in poor circumstances.

PARISH OF PORT GLASGOW, COUNTY OF RENFREW.

Population (1891), 11,973. Assessable Rental (1893-94), £38,314.

Letter from *Henry Nixon*, Inspector of Poor, 25th February 1895.

1. DISTRESS. There has been reduced earnings and hardship among the shipbuilding artisans and labourers, due to want of employment peculiar to that special branch of business. Among the poor not engaged in shipbuilding there is no special distress. Previous to the severe weather there was less illness than usual, and the death rate of 1894 was below the average.

2. The town council provided relief works and employed 60 men daily. They further organised a relief fund and a medical aid scheme. Central rooms were opened at the town hall. Applications for relief were taken at the police station, opened first time 16 February 1895; 36 cases applied with 131 dependants, making 167 individuals relieved on that day. Any one in distress was invited to make his case known, and it would be attended to and relieved.

3. No.

4. Steps have been taken to meet any distress which may arise. The parochial board have no suggestions to make.

PARISH OF RENFREW, COUNTY OF RENFREW.

Population (1891), 9,338. Assessable Rental (1893–94), £34,911.

Letter from *John R. Parker*, Inspector of Poor, 26th February 1895.

1. THERE has been some distress, but only on account of the unprecedented severity of the cold. Trade prospects were good at the new year; but since that out-door work has been suspended. Now it is being resumed, however.

2. (*a.*) The local police, under Superintendent Deans, are finding out urgent cases and supplying groceries and coals; voluntary subscriptions have come in freely, about 110*l.* having been received in response to the magistrates' appeal. It is under consideration to supply boots and clothing to ragged children. About 165 school children are getting hot dinners from the fund.

(*b.*) Cannot say, as it only commenced about 16th.

3. There is none; applications for parochial relief are at the normal rate.

Newspaper Extract of 23rd February.

The prolonged spell of hard weather has made itself felt more or less amongst all classes. Probably it was under similar circumstances that Sam Weller significantly remarked, "It is splendid weather for them as is well wrapped up," but the majority of even such persons as can afford substantial wraps would, I think, prefer a little milder weather and a slight change of garment. It is, however, the poor who most keenly feel the pinch. Outside work has been at a standstill for several weeks back, and latterly the severity of the weather has even threatened to interfere with indoor labour—notably in shipbuilding and kindred trades. The result is that many of the classes who can least afford a holiday are idle not from choice nor from want of work, but because of unfavourable weather conditions. Poverty—"honest poverty"—and destitution are keener and their victims more numerous than is usual in our midst; and it is, therefore, with pleasure that I note the action of the provost and magistrates in making a timeous appeal, and the ready and liberal response which the public have given. I only hope that those in a position to give will think on how much remains to be done; and, to get an idea of this, I would advise them to visit the children's dinner table, so ably superintended by Chief Constable Deans.

Relieving the Distress.—In the end of last week, the provost and magistrates issued an appeal for subscriptions wherewith to relieve the distress existing in the burgh in consequence of the severity of the weather. On Monday, donations began to pour in to the office of the Burgh Chamberlain, and already Mr. M'Laren reports receipt of a considerable sum. On Monday a soup kitchen was opened under the superintendence of Chief Constable Deans and with the patronage of the provost, magistrates, and town council. Each day during the week a warm dinner has been served to each of over 150 school children, while necessitous adults have had a meal supplied to them at their homes. Besides this, numerous small sums of money, as well as supplies of provisions and coal, have been distributed.

The local relief fund amounted to over 30*l.* within two days, and is now about 70*l.*, which is satisfactory. One gentleman (whom I might name, did I think it necessary) guaranteed to defray all expenses connected with the soup kitchen, if it were necessary; but, in my opinion, it is better that such relief should be provided by the members of the community. It shows a better public spirit.

4. The establishment of relief test works in all industrial localities during dull times, or almost every year, can alone prevent imposture, and would be most useful to parochial boards.

PARISH OF ALNESS, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,039. Assessable Rental (1893–94), £6,513.

Letter from *Alexander Campbell*, Inspector of Poor, 25th February 1895.

1. DAILY labourers are somewhat pressed for money owing to the long snow-storm, but are not destitute.

2. Nothing by parochial board, but there are several local gentlemen who have distributed coals, and the Dorcas Society have supplied clothing and groceries. At the Alness School soup kitchen soup is given free five days a week to those in necessity, and a local committee distributed the funds made at a concert.

3. No.

4. Now that the thaw has set in there is abundance of employment in the parish. By giving grants in future to be disbursed at the discretion of the parish council, necessitous cases of destitution could be relieved.

PARISH OF APPLECROSS, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,786. Assessable Rental (1893–94), £4,384.

Letter from *Donald Mackenzie*, Inspector of Poor, 26th February 1895.

1. YES; it is entirely due to circumstances peculiar to the locality. Those of the people that have crofts (that is, small pieces of land) are not in distress.

2. Nothing is being done, either by Public Authorities or voluntary agencies, to meet the distress; and none has been relieved during the period in question.

3. No; all the resident labouring population of the parish are unemployed.

4. That the authorities concerned would employ the labourers in constructing public roads, of which this extensive parish is almost destitute, or other public works, seems to me the best manner of relieving the unemployed of this parish, as this would benefit them in several ways.

PARISH OF AVOCH, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,817. Assessable Rental (1893–94), £4,849.

Letter from *R. J. Gillanders*, Inspector of Poor, 25th February 1895.

1. YES; partly due to severe weather, but chiefly due to circumstances peculiar to the locality, and to the fact of the fishermen being unable to go to sea regularly for want of suitable harbour accommodation.

2. Voluntary agencies in the way of money, soup kitchens, and relief works. Almost 90 families.

3. No.

4. A Government grant to assist in erection of a suitable harbour would be invaluable to assist the fishing population to prosecute their calling more regularly.

PARISH OF BARVAS, COUNTY OF ROSS AND CROMARTY.

Population (1891), 6,494. Assessable Rental (1893–94), £2,612.

Letter from *H. McL. Ross*, Inspector of Poor, 28th February 1895.

1. THERE is no exceptional distress further than that peculiar to the locality, intensified by the late severe weather.

2. The Parochial Board has been able to relieve any distress in the parish. Applicants for relief not much in excess of last year.

3. No.

4. Late severe weather caused crofters to give large quantities of their crops to feed their stock, and they would require some aid for seed.

PARISH OF CONTIN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,436. Assessable Rental (1893–94), £19,961.

Letter from *George Maclennan*, Inspector of Poor, 26th February 1895.

1. No.

PARISH OF CROMARTY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,007. Assessable Rental (1893–94), £5,897

Letter from *A. MacKay*, Inspector of Poor, 26th February 1895.

1. NONE.

3. No.

PARISH OF DINGWALL, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,576. Assessable Rental (1893–94), £12,316.

Letter from *A. Munro*, Inspector of Poor, 25th February 1895.

1. YES, entirely due to the severe weather.

2. No special call for relief was made to the Parochial Board. The Town Council and other private parties gave gratuitous relief.

3. No, so far as known to me.

4. The weather having now become milder the unemployed will soon get work to do.

PARISH OF EDDERTON, COUNTY OF ROSS AND CROMARTY.

Population (1891), 642. Assessable Rental (1893–94), £5,161.

Letter from *John Ross*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in district.

2. Nothing required to be done.

3. No.

4. As there is to be a change shortly in the present system of Poor Law management, of which I have had 38 years' experience in this parish, I would not be inclined to make any suggestion at present.

PARISH OF FEARN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,900. Assessable Rental (1893–94), £7,658.

Letter from *John Ross*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in district.

2. Nothing required to be done.

3. No.

4. As there is to be a change shortly in the management of the Poor Law, I would not be inclined to make any suggestion at present. I have had 37 years' experience of the present system of Poor Law management in this parish.

PARISH OF FODDERTY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,897. Assessable Rental (1893–94), £14,134.

Letter from *Alexander MacDonald*, Inspector of Poor, 28th February 1895.

1. No.

2. None.

3. No.

4. No.

PARISH OF GAIRLOCH, COUNTY OF ROSS AND CROMARTY.

Population (1891), 4,181. Assessable Rental (1893–94), £11,384.

Letter from *J. Macintosh*, Inspector of Poor, 27th February 1895.

1. No.

2. Nothing, their being no distress.

3. No. *See* No. 1.

4. No suggestion to make.

PARISH OF GLENSHIEL, COUNTY OF ROSS AND CROMARTY.

Population (1891), 394. Assessable Rental (1893–94), £3,523.

Letter from *J. M. Nicolson*, Inspector of Poor, 26th February 1895.

1. THERE does not appear to be any exceptional distress in this parish.

2. No action has been taken by Public Authorities or by voluntary agencies. None relieved on 16th February 1895.

3. No.

PARISH OF KILLEARNAN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 951. Assessable Rental (1893–94), £4,566.

Letter from *George Maclennan*, Inspector of Poor, 26th February 1895.

1. No.

PARISH OF KILMUIR EASTER, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,924. Assessable Rental (1893–94), £5,304.

Letter from Pro. *Donald Mackay*, Inspector of Poor, 6th March 1895.

1. THERE is no exceptional distress in this parish further than that caused by the severe weather.

2. The Parochial Board have increased the paupers' allowances. A concert, realising about 20*l.*, was held, and the parish minister, out of the Kirk Session funds, gave other 20*l.*, which sums (40*l.*) were distributed among the unemployed and poor, giving each person an average of 12*s.*

3. This is not required in so small a population, where every one is well-known to the Public Authorities and carefully looked after.

4. No.

PARISH OF KILTEARN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,301. Assessable Rental (1893–94), £9,214.

Letter from *Thomas Urquhart*, Inspector of Poor, 27th February 1895.

1. THE storm has prevented all out-door work, on which the villagers entirely depend, for nearly eight weeks. The class that suffers most are the industrious poor, who have too much self-respect to take parish relief, and whose occupation is put an end to by the severe weather.

2. The people are very generous to each other, and the neighbouring proprietors have given over 20*l.* worth of coal and meal, and one keeps up a soup kitchen.

3. No.

4. The Government should give a grant for relief of taxes, or a grant to enable Parish Councils to employ men during severe weather on roads other than county roads.

PARISH OF KINCARDINE, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,417. Assessable Rental (1893–94), £12,257.

Letter from *David Ross*, Inspector of Poor, 25th February 1895.

1. YES, a little, amongst the ordinary poor and casual labourers. This is partly due to the severe winter, entirely so with regard to paupers, and partly due to a scarcity of labour even when the weather is favourable, as proprietors of recent years expend next to nothing by way of improvements to their estates. This being a centre of Land Leagueism may account for the facts.

2. There are no voluntary agencies. Private charity is, no doubt, dispensed, and the Inspector of Poor has always authority to afford casual relief wherever he satisfies himself of the existence of real need.

3. No register of unemployed kept.

4. The parish is very badly off for highways, and public grants in aid of new roads would be considered a great boon, both as aiding towards improving the parish and affording labour to such as need it.

PARISH OF KINTAIL, COUNTY OF ROSS AND CROMARTY.

Population (1891), 588. Assessable Rental (1893–94), £5,179.

Letter from *J. M. Nicolson*, Inspector of Poor, 26th February 1895.

1. THERE does not appear to be exceptional distress in this parish.

2. No movement has been made by Public Authorities or by voluntary agencies. No unemployed person relieved on the 16th February 1895, other than the ordinary paupers.

3. No.

PARISH OF KNOCKBAIN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,667. Assessable Rental (1893–94), £6,829.

Letter from *R. J. Gillanders*, Inspector of Poor, 28th February 1895.

1. No.

2. Nothing required.

3. No.

4. No.

PARISH OF LOCHALSH, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,868. Assessable Rental (1893–94), £5,330.

Letter from *J. M. Nicolson*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this parish, although there are a few hundreds additional labourers in the district employed at the Highland Railway extension to Kyleakin. The most of these men were continuously employed, as the work was carried on during the winter, notwithstanding the severity of the weather.

2. No action was taken either by Public Authorities or voluntary agencies. None were relieved on 16th February 1895.

3. No.

PARISH OF LOCHBROOM, COUNTY OF ROSS AND CROMARTY.

Population (1891), 3,910. Assessable Rental (1893–94), £12,696.

Letter from *John Munro*, Inspector of Poor, 26th February 1895.

1. No exceptional distress.

2. Not called on to meet any distress.

3. No; not necessary.

4. No exceptional distress exists.

PARISH OF LOCHCARRON, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,642. Assessable Rental (1893–94), £9,052.

Letter from *Alexander Campbell*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

PARISH OF LOCHS, COUNTY OF ROSS AND CROMARTY.

Population (1891), 4,676. Assessable Rental (1893–94), £3,288.

Letter from *A. Mc. L. Ross*, Inspector of Poor, 28th February 1895.

1. THERE is no exceptional distress further than that peculiar to the locality, intensified by the late severe weather.

2. The Parochial Board has been able to relieve any distress in the parish. Applicants for relief not much in excess of last year.

3. No.

4. A grant for roads much required in the parish, where in a considerable portion of it there are no public roads, and would give employment to many suffering from want of work. The parish has not participated in any of the Government grants received by other parishes in the island less necessitous. Also some aid for potato and corn seed.

PARISH OF LOGIE EASTER, COUNTY OF ROSS AND CROMARTY.

Population (1891), 870. Assessable Rental (1893–94), £4,587.

Letter from *Alex. Wills*, Inspector of Poor, 25th February 1895.

1. THERE is no case of exceptional distress in this parish. The population consists chiefly of crofters and farm servants, who are all in a position to tide over a severe winter. No village in the parish.

2. Individual charity has, in all cases of distress or hardship, been sufficient here.

3. No register kept.

4. None required for this parish.

PARISH OF NIGG, COUNTY OF ROSS AND CROMARTY.

Population (1891), 930. Assessable Rental (1893–94), £5,111.

Letter from *John Ross*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in district.

2. Nothing required to be done.

3. No.

4. As there is to be a change shortly in the management of the Poor Law, I would not be inclined to make any suggestion at present. I have had in this parish 31 years' experience of the present system of Poor Law management.

PARISH OF RESOLIS, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,339. Assessable Rental (1893–94), £4,627.

Letter from *R. J. Gillanders*, Inspector of Poor, 28th February 1895.

1. NONE.

2. Nothing required.

3. No.

4. No.

PARISH OF ROSEMARKIE, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,343. Assessable Rental (1893–94), £6,759.

Letter from *R. J. Gillanders*, Inspector of Poor, 27th February 1895.

1. To a certain extent. Due to the severe weather.

2. Voluntary agencies. Money. About 30 families participated.

3. No.

PARISH OF ROSSKEEN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 3,480. Assessable Rental (1893-94), £12,494.

Letter from *Alex. Wills*, Inspector of Poor, 25th February 1895.

1. THERE may be a few individual cases of distress, but not to any great extent, and those which do exist are entirely owing to the protracted severity of the weather.

2. Voluntary agencies are at work in this parish throughout the year, and these are quite sufficient to meet all cases of distress. In severe weather coals, meal, and other necessaries are supplied to the poor and unemployed. I consider the poor and unemployed in this parish are well provided for.

3. No such register is kept, so far as I am aware.

4. I am of opinion that voluntary agencies do not make sufficient investigation into each case. The distribution is generally entrusted to ladies, who are too frequently imposed upon.

PARISH OF STORNOWAY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 11,799. Assessable Rental (1893-94), £17,714.

Letter from *J. F. Macfarlane*, Inspector of Poor, 26th February 1895.

1. THERE is no exceptional distress in this district, *i.e.*, in this parish, at present.

2. (*b*) None.

3. No.

PARISH OF TAIN, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,818. Assessable Rental (1893–94), £10,982.

Letter from *John Ross*, Inspector of Poor, 25th February 1895.

1. THE town clerk gives a statement of what has been done in the burghal portion of this parish. In the landward portion of the parish there has been no exceptional distress. In the burgh the Town Council took the matter in hand.

2. There was nothing done by the Parochial Board, as there were no calls made on them.

3. No.

4. I have no suggestions to make at present.

PARISH OF TARBAT, COUNTY OF ROSS AND CROMARTY.

Population (1891), 1,703. Assessable Rental (1893–94), £5,826.

Letter from *John Ross*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district that has come under my observation.

2. There was nothing required to be done in regard to unemployed persons.

3. No.

4. As there is to be a change shortly in the management of the Poor Law, I would not be inclined to make any suggestion at present. I have had in this parish 37 years' experience of the present system of Poor Law management.

PARISH OF UIG, COUNTY OF ROSS AND CROMARTY.

Population (1891), 4,621. Assessable Rental (1893–94), £5,386.

Letter from *James Macrae*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this district. A few cases, such occurring annually at this time of the year, due to circumstances peculiar to the locality, not to severe weather, are relieved casually.

2. Nothing is being done by public authorities or voluntary agencies, but cases that may occur are relieved casually by the Parochial Board. Two cases of nine dependants casually relieved during the week.

3. No.

4. I would suggest giving employment in finishing the footpaths to the public schools as the most suitable at present. It is probable that the severe frost lately has severely damaged the potato seed, and I am afraid that this may be very serious.

PARISH OF URQUHART, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,328. Assessable Rental (1893–94), £9,150.

Letter from *Alexander MacDonald*, Inspector of Poor, 26th February 1895.

No.

2. None.

3. No.

4. No exceptional distress.

PARISH OF URRAY, COUNTY OF ROSS AND CROMARTY.

Population (1891), 2,283. Assessable Rental (1893–94), £12,538.

Letter from *George MacLennan*, Inspector of Poor, 26th February 1895.

1. No

PARISH OF ANCRUM, COUNTY OF ROXBURGH.

Population (1891), 1,241. Assessable Rental (1893–94), £10,645.

Letter from *Alexander G. Catto*, Inspector of Poor, 26th February 1895.

1. No. General labourers have been thrown idle for the past eight weeks by the severe weather, but have all been able to get along without requiring relief from the public.

2. None.

3. No.

PARISH OF BEDRULE, COUNTY OF ROXBURGH.

Population (1891), 246. Assessable Rental (1893–94), £3,433.

Letter from *R. W. Ritchie*, Inspector of Poor, 25th February 1895.

1. No. This parish is wholly agricultural, and the population consists almost entirely of farm servants. Consequently there is no exceptional distress at this time.

3. No.

PARISH OF BOWDEN, COUNTY OF ROXBURGH.

Population (1891), 694. Assessable Rental (1893–94), £5,482.

Letter from *John Dodds*, Inspector of Poor, 27th February 1895.

1. YES; due to both causes.

2. Nothing by the public authorities. Voluntary agencies have supplied coals. The Kirk Session are expending 12*l.* on coals and grants of money to 24 individual families.

3. No.

4. People would work, but they cannot owing to the weather, and as the times are hard on the farmers and lairds, by bad market and increased rates, &c., they employ very few *orra* hands. A grant from Government would be welcome.

PARISH OF CASTLETON, COUNTY OF ROXBURGH.

Population (1891), 2,023. Assessable Rental (1893–94), £22,641.

Letter from *Jno. Brown*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress.

3. No.

4. None.

PARISH OF CAVERS, COUNTY OF ROXBURGH.

Population (1891), 1,497. Assessable Rental (1893–94), £19,185.

Letter from *G. Moodie*, Inspector of Poor, 28th February 1895.

1. I HAVE been making inquiries, and have heard of no exceptional distress in the parish. I have had no applications for parochial relief since November last.

3. No.

PARISH OF CRAILING, COUNTY OF ROXBURGH.

Population (1891), 600. Assessable Rental (1893–94), £6,610.

Letter from *George Fargie*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

4. In this parish the people are all employed regularly on the various farms, hence the severe weather has thrown no one out of work.

PARISH OF ECKFORD, COUNTY OF ROXBURGH.

Population (1891), 757. Assessable Rental (1893–94), £8,708.

Letter from *William Young*, Inspector of Poor, 25th February 1895.

1. THERE is no known case of exceptional distress in this parish, the population almost wholly being engaged in agricultural pursuits. Wages are paid as usual, and the people are consequently in no need of outside aid.

PARISH OF EDNAM, COUNTY OF ROXBURGH.

Population (1891), 581. Assessable Rental (1893–94), £6,140.

Letter from *David Pringle*, Inspector of Poor, 25th February 1895.

1. THERE is no distress in this district. The people are engaged in farm work, and as they have yearly engagements, with a good upstanding wage, bad times do not affect them. All the paupers belonging to this parish are non-resident.

PARISH OF HAWICK, COUNTY OF ROXBURGH.

Population (1891), 14,348. Assessable Rental (1893–94), £46,030.

Letter from *John Rule*, Inspector of Poor, 25th February 1895.

1. DISTRESS exceptional; is due partly to dull trade and mainly to severe weather.

2. The

2. The town council have raised a fund by voluntary subscriptions, church collections, amateur concerts, &c., to meet the distress. The magistrates are distributing tickets for coals, bread, and other provisions, to from 150 to 200 families weekly, and they have started a soup kitchen which is open daily.

3. An unemployed register has been opened and contains the names of about 150 able-bodied men. These have been provided with work, as far as possible, in street cleaning, stone-breaking, and top-dressing the town's farm.

4. No.

PARISH OF HOBKIRK, COUNTY OF ROXBURGH.

Population (1891), 631. Assessable Rental (1893–94), £8,663.

Letter from *Thomas Culbertson*, Inspector of Poor, 25th February 1895.

1. A FEW labouring men have been unemployed during the recent severe weather, but as they are almost entirely young unmarried men who live with relatives, there is no distress at all.

2. There have been no applications for relief.

3. No.

PARISH OF HOWNAM, COUNTY OF ROXBURGH.

Population (1891), 223. Assessable Rental (1893–94), £5,263.

Letter from *James Cuthbert*, Inspector of Poor, 25th February 1895.

1. No. Not amongst the people, except in one case, perhaps, where a labouring man has wrought only one or two days since new year. The sheep are being well cared for. Rabbits and other lower animals have suffered greatly, but are also being hand fed in many cases.

2. Nothing, as far as I know.

3. No.

4. None.

PARISH OF JEDBURGH, COUNTY OF ROXBURGH.

Population (1891), 4,814. Assessable Rental (1893–94), £27,980.

Letter from *Thomas Smail*, Inspector of Poor, 25th February 1895.

1. THERE is a good deal of distress, but it is entirely due to the severe weather we are at present experiencing.

2. (*a*) The Provost and Magistrates Relief Fund; soup kitchen daily; both voluntary subscriptions.
(*b*) Provost and Magistrates, six tickets for provisions of the value of 5*s*. each; soup kitchen, 160.

3. No.

4. A thaw.

PARISH OF KELSO, COUNTY OF ROXBURGH.

Population (1891), 4,730. Assessable Rental (1893–94), £24,745.

Letter from *George A. Thomson*, Inspector of Poor, 25th February 1895.

1. THE distress here is entirely due to want of employment in consequence of the severe weather.

2. (*a*) A committee, which was organized in 1878, for relief of the unemployed, is distributing aid to necessitous cases, besides co-operating with the Burgh Commissioners Cleaning Committee by contributing towards expenses of giving work on the streets to some of the unemployed men.
(*b*) The average daily number relieved was 20.

3. No register.

4. No.

PARISH OF KIRKTON, COUNTY OF ROXBURGH.

Population (1891), 320. Assessable Rental (1893–94), £3,900.

Letter from *John Turnbull*, Inspector of Poor, 25th February 1895.

1. No. Rural parish workers engaged by year.
2. Nil.
3. No.
4. No.

PARISH OF LILLIESLEAF, COUNTY OF ROXBURGH.

Population (1891), 649. Assessable Rental (1893–94), £5,822.

Letter from *James W. Mackay*, Inspector of Poor, 25th February 1895.

1. YES, as regards agricultural labourers and masons, who have been idle during the last eight weeks owing to the severe weather. This enforced idleness is not unusual, though rather longer continued this winter.
2. (*a*) Some coals and firewood have been given by private individuals voluntarily, nothing by public authorities.
   (*b*) No relief given during week ended Saturday, 16th February.
3. No.
4. No.

PARISH OF LINTON, COUNTY OF ROXBURGH.

Population (1891), 468. Assessable Rental (1893–94), £5,489.

Letter from *J. Cook*, Inspector of Poor, 25th February 1895.

1. No.
3. No
4. No.

PARISH OF MAKERSTOUN, COUNTY OF ROXBURGH.

Population (1891), 401. Assessable Rental (1893–94), £4,493

Letter from *F. T. Galloway*, Inspector of Poor, 25th February 1895.

1. No distress.
2. Nothing done.
3. No unemployed register maintained.
4. No suggestions to make.

PARISH OF MAXTON, COUNTY OF ROXBURGH.

Population (1891), 473. Assessable Rental (1893–94), £6,000.

Letter from *Thomas Boyd*, Inspector of Poor, 24th February 1895.

1. No. There are four or five families in the parish who no doubt feel the long continuance of bad weather. I was told on Saturday, by an employer of two of the above men, that he was giving their families food and coal.

2. Nothing is being done in the parish by public authorities. The four or five families referred to above (No. 1) being the only necessitous cases in the parish, there does not seem to be any necessity for anything further being done, at least, at present.

3. No.

4. No. The parish is purely agricultural, and the agricultural labourer does not feel the bad weather so far as wages are concerned.

PARISH OF MELROSE, COUNTY OF ROXBURGH.

Population (1891), 4,882. Assessable Rental (1893-94), £32,401.

Letter from *Thomas Ballantyne*, Inspector of Poor, 25th February 1895.

1. ALMOST wholly due to severity of weather.

2. (*a*) Liberal subscriptions (all voluntary).
(*b*) Probably about 50 families in various districts.

3. No.

4. No.

PARISH OF MINTO, COUNTY OF ROXBURGH.

Population (1891), 430. Assessable Rental (1893-94), £5,392.

Letter from *Alexander Harvey*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this parish, so far as I have been able to ascertain. There are one or two general labourers out of employment owing to the severe weather.

2. (*a*) Nothing special is being done by public authorities or by voluntary agencies.
(*b*) None.

3. No.

4. No.

PARISH OF MOREBATTLE, COUNTY OF ROXBURGH.

Population (1891), 846. Assessable Rental (1893-94), £9,393.

Letter from *James Henderson*, Inspector of Poor, 25th February 1895.

1. DRAINERS, dykers, and masons, have of course been out of work during the prolonged frost, but no "distress" has been heard of.

2. Private or church charity as yet easily meets whatever approach to distress has occurred.

3. No.

4. *See* answer to (2).

PARISH OF OXNAN, COUNTY OF ROXBURGH.

Population (1891), 684. Assessable Rental (1893-94), £8,761.

Letter from *John D. Little*, Inspector of Poor, 25th February 1895.

1. POPULATION all engaged in agricultural work and resident in farm cottages. There has been no exceptional distress in this parish.

PARISH OF ROBERTON, COUNTY OF ROXBURGH.

Population (1891), 455. Assessable Rental (1893-94), £7,769.

Letter from *Thomas Wilson*, Inspector of Poor, 26th February 1895.

1. No exceptional distress.

PARISH OF ROXBURGH, COUNTY OF ROXBURGH.

Population (1891), 954. Assessable Rental (1893–94), £11,017.

Letter from *Robert Bell*, Inspector of Poor, 16th February 1895.

1. THERE is no distress in this parish at this time.

3. None.

4. This parish is entirely agricultural so there is scarcely any unemployed.

PARISH OF ST. BOSWELL'S, COUNTY OF ROXBURGH.

Population (1891), 962. Assessable Rental (1893–94), £7,512.

Letter from *Thomas Lawrie*, Inspector of Poor, 25th February 1895.

1. ABOUT 12 men were thrown idle owing to the severe weather, masons, slaters, and labourers. There was only one case of destitution, due to his own habits. His wants were supplied from a small fund in the hands of the heritors.

2. (*a*) Two or three of the above number received help from the above-named fund.
(*b*) One, as above.

3. No.

4. No.

PARISH OF SMAILHOLM, COUNTY OF ROXBURGH.

Population (1891), 340. Assessable Rental (1893–94), £4,369.

Letter from *John Brown*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district at the present time. The parish is entirely agricultural and the great majority of the people are hired to the farmers, and wages are therefore upstanding.

2. Nothing.

3. No register.

PARISH OF SOUTHDEAN, COUNTY OF ROXBURGH.

Population (1891), 672. Assessable Rental (1893–94), £8,401.

Letter from *Alexander C. Milne*, Inspector of Poor, 26th February 1895.

1. DISTRESS is non-existent.

3. No unemployed register.

PARISH OF SPROUSTON, COUNTY OF ROXBURGH.

Population (1891), 1,006. Assessable Rental (1893–94), £10,080.

Letter from *George A. Thomson*, Inspector of Poor, 25th February 1895.

1. I HAVE not heard of any exceptional distress here.

PARISH OF STITCHEL, COUNTY OF ROXBURGH.

Population (1891), 314. Assessable Rental (1893–94), £3,209.

Letter from *William Smith*, Inspector of Poor, 25th February 1895.

1. NONE.

2. Nothing.

3. No.

4. None.

PARISH OF WILTON, COUNTY OF ROXBURGH.

Population (1891), 6,375. Assessable Rental (1893–94), £22,529.

Letter from *James Shiel*, Inspector of Poor, 25th February 1895.

1. THERE is some distress in that part of the parish situated within the burgh of Hawick. None in the landward part, which contains 938 inhabitants. The distress in the burghal portion is principally due to the severity of the weather, and amongst the thriftless portion of the population.

2. The magistrates of Hawick have raised a fund from private subscriptions and concerts, and are supplying the unemployed with soup, provisions, and coals—soup daily, provisions and coals weekly. As they are dispensing the charity themselves, I do not know the daily number relieved. Miss Wilson, of Wilton Manse, has also opened a soup kitchen, and is supplying 30 families with soup and bread daily.

3. I do not know.

4. I think when seasonable weather returns the distress will disappear, except perhaps amongst a few factory operatives out of employment.

PARISH OF YETHOLM, COUNTY OF ROXBURGH.

Population (1891), 884. Assessable Rental (1893–94), £5,296.

Letter from *G. Mather*, Inspector of Poor, 26th February 1895.

1. No exceptional distress ; but there has been a steadily diminishing population, owing to a steady lessening in the amount of labour to be got on farms. There is not much work to be got on these farms, as farmers have been gradually cutting down the amount of work given to any who are not regular servants. These also have been cut down in number.

PARISH OF ASHKIRK, COUNTY OF SELKIRK.

Population (1891), 479. Assessable Rental (1893–94), £5,579.

Letter from *Archibald M. Dunlop*, Inspector of Poor, 25th February 1895.

1. No.

3. No unemployed.

PARISH OF ETTRICK, COUNTY OF SELKIRK.

Population (1891), 414. Assessable Rental (1893–94), £9,449.

Letter from *Andrew M'Laren*, Inspector of Poor, 25th February 1895.

1. No cases of distress.

PARISH OF GALASHIELS, COUNTY OF SELKIRK.

Population (1891), 17,941. Assessable Rental (1893–94), £54,852.

Letter from *John R. Skinner*, Inspector of Poor, 26th February 1895.

1. YES. It is due both to the dulness of trade in all the factories, and to the severe cold frosty weather.

2. (*a*) The Parochial Board some years ago secured a site for new offices, and with the view of giving some work to the unemployed began removing the soil thereof on 4th instant, paying men 2*s.* per day. The work has been accomplished at a cost of 57*l.* 11*s.* 4*d.* The corporation of the burgh has been employing from 30 to 40 men daily, at 2*s.* to 3*s.* per day, removing snow, &c. from the streets. A soup kitchen has been opened for poor children. A committee has been formed to collect subscriptions, and to distribute groceries and coals to the unemployed. A concert last week raised a sum of 100*l.*

(*b*) The Parochial Board employed on an average 17 men during the week ended 16th instant.

3. There is no register kept of the unemployed, further than the list of applicants seeking assistance from the unemployed fund.

4. The Parochial Board have no difficulty in coping with the slightly increased demands on them.

PARISH OF KIRKHOPE, COUNTY OF SELKIRK.

Population (1891), 500. Assessable Rental (1893–94), £6,042

Letter from *Thomas Elliot*, Inspector of Poor, 27th February 1895.

1. NONE.

PARISH OF SELKIRK, COUNTY OF SELKIRK.

Population (1881), 7,298. Assessable Rental (1893–94), £31,200.

Letter from *James Dobson*, Inspector of Poor, 25th February 1895.

1. A NUMBER of out-door workers are thrown idle. Due to severe weather.

2. An average of 20 men (married) have been employed by voluntary agencies at 2*s*. daily and dinner. A soup kitchen has been started, giving dinners every day to at least 200 men, women, and children.

4. Nothing but what is already being done by voluntary efforts. The funds in hand are expected to last till the weather improves.

PARISH OF YARROW, COUNTY OF SELKIRK.

Population (1891), 638. Assessable Rental (1893–94), £14,831.

Letter from *William Bell*, Inspector of Poor, 25th February 1895.

1. NONE.

3. No.

PARISH OF YARROW, MEGGET DISTRICT, COUNTY OF SELKIRK.

Population (1891), ———. Assessable Rental (1893–94), £—— —— (included in Yarrow).

Letter from *James Shaw*, Inspector of Poor, 28th February 1895.

1. No.

3. No.

PARISH OF AIRTH, COUNTY OF STIRLING.

Population (1891), 1,325. Assessable Rental (1893–94), £9,723.

Letter from *Alexander Bow*, Inspector of Poor, 25th February 1895.

1. No.

2. (*a*) Nothing.
(*b*) None.

3. No.

4. There is no distress in this district. The working class seem to be in fairly comfortable circumstances

---

PARISH OF BALDERNOCK, COUNTY OF STIRLING.

Population (1891), 553. Assessable Rental (1893–94), £5,757.

Letter from *John Gibson*, Inspector of Poor, 26th February 1895.

1. NOT to any great extent is there exceptional distress here. The parish is purely agricultural, and a majority of the labourers are engaged from term to term. For day labourers there is always a slack time in winter, when they

they are only partially employed. The severe weather has prolonged this period of slackness. From this cause no application for relief has been made to me as Inspector of Poor.

2. There is no organised system of relief. The Kirk Session first, and a gentleman of the parish later, caused coal to be distributed amongst the most necessitous; and a load of meal, won by a rink of curlers, was similarly distributed.

3. No.

4. I do not consider the distress here so great as to call for action by the public authorities.

Parish of Balfron, County of Stirling.

Population (1891), 1,203. Assessable Rental (1893-94), £6,933.

Letter from *John Henry*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing.

3. No.

Parish of Bothkennar, County of Stirling.

Population (1891), 4,134. Assessable Rental (1893–94), £20,305.

Letter from *William Campbell*, Inspector of Poor, 26th February 1895.

1. There has been a larger number of unemployed, and for a longer period, this year than usual in Grangemouth, where at this season there is always a slackness of work among dock labourers and those who depend on the shipping for employment. I have, however, had no applications for parochial relief in consequence of distress in this district, nor from the landward part of the parish either, where the miners are fairly well employed.

2. In Grangemouth there is a fund subscribed by merchants in the port for coals to the poor, which has been more largely drawn upon this year, and cases of distress have been searched out by ladies and others, and lines for groceries given where required. The churches also have been busy in works of charity. The curlers also have contributed, I learn, about 12*l.*, so that what has been done here has been by voluntary agencies. The distress is principally, almost entirely, in the Falkirk portion of Grangemouth.

3. No register of the unemployed is kept. Only a list of the persons and families relieved.

4. The employment of agencies such as indicated above, with, where applied for, a little casual relief, would be sufficient to tide over such distress in this parish.

Parish of Buchanan, County of Stirling.

Population (1891), 658. Assessable Rental (1893–94), £8,776.

Letter from *John Dunlop*, Inspector of Poor, 26th February 1895.

1. No distress.

2. Nothing.

3. None.

Parish of Campsie, County of Stirling.

Population (1891), 5,338. Assessable Rental (1893–94), £24,095.

Letter from *J. Stewart*, Inspector of Poor, 25th February 1895.

1. No.

2. Nothing done yet. A local voluntary committee is at present inquiring as to the condition of the poor, and any unemployed in the district.

3. No.

4. There is no distress here calling for any special effort.

PARISH OF DENNY, COUNTY OF STIRLING.

Population (1891), 6,373. Assessable Rental (1893-94), £23,963.

Letter from *Alexander Stark*, Inspector of Poor, 25th February 1895.

1. ALTHOUGH a large number of out-workers have been for some time idle on account of the severity of the weather, I am not aware of any exceptional distress in this parish.

2. The School Board have, by voluntary subscriptions, been enabled to give about 200 children of the poorer classes their dinner daily for a week or two past.

3. No.

4. *See* query No. 1.

PARISH OF DRYMEN, COUNTY OF STIRLING.

Population (1891), 1,512. Assessable Rental (1893-94), £28,636.

Letter from *William Melrose*, Inspector of Poor, 25th February 1895.

1. NONE; except a few quarrymen, who have been unemployed for the last seven weeks on account of the weather.

2. The Duke of Montrose threw open a wood in which there was a good deal of blown timber. A few took the firewood, but there were none specially relieved.

3. No

PARISH OF DUNIPACE, COUNTY OF STIRLING.

Population (1891), 1,716. Assessable Rental (1893-94), £8,779.

Letter from *John Letham*, Inspector of Poor, 23rd February 1895.

1. NOT that I am aware of. There have been coals and clothing given to the poor people here, mostly widows, through the Simpson Trust Fund, interest of 500*l.*, left to the Kirk Session of Dunipace.

2. None, except from local charity.

3. No.

4. Pits and paper mills are fairly busy here, so that the severe weather has not been so much felt as in many localities.

PARISH OF FALKIRK, COUNTY OF STIRLING.

Population (1891), 30,731. Assessable Rental (1893-94), £100,478.

Letter from *J. Beeby*, Inspector of Poor, 27th February 1895.

1. YES; owing to the severe weather.

2. A soup kitchen has been established by voluntary agencies. Average number supplied with soup and bread, 124 daily. The town council employ able-bodied men at stone-breaking; the average daily number who take advantage of this is 30.

3. No.

4. I have no suggestions to make. The severe weather seems breaking up, and work will be plentiful here for all who desire to work.

PARISH OF FINTRY, COUNTY OF STIRLING.

Population (1891), 357. Assessable Rental (1893-94), £4,300.

Letter from *George May*, Inspector of Poor, 25th February 1895.

1. OUR community is entirely agricultural, and, owing to the protracted storm, out-door work is almost entirely stopped, and in consequence a good many families are idle; but there is no exceptional distress.

2. Fintry

2. Fintry Kirk Session have distributed to 19 of the most necessitous families 12*l.* in money and food and clothing, in amounts varying from 20*s.* to 7*s.* 6*d.*; and to each of 13 families 12 cwt. of coal.
A soup kitchen (voluntary agency) supplies soup to eight persons twice a week.

3. No.

4. The County Council ought to provide stone-breaking, and might very well have quantities of stone quarried against the winter. This would be in no sense charity, as the breaking is done at so much per yard, and the poorest breaker might earn, say, 2*s.* or 1*s.* 6*d.* every day during a storm like this.

Parish of Gargunnock, County of Stirling.

Population (1891), 674. Assessable Rental (1893–94), £6,987.

Letter from *William Jamieson*, Inspector of Poor, 25th February 1895.

1. None.

2. Nothing.

3. No.

4. No distress to relieve.

Parish of Killearn, County of Stirling.

Population (1891), 1,182. Gross Rental (1893–94), £17,934. Parish unassessed.

Letter from *John Henry*, Inspector of Poor, 25th January 1895.

1. No.

2. Nothing.

3. No.

Parish of Kilsyth, County of Stirling.

Population (1891), 7,424. Assessable Rental (1893-94), £30,585.

Letter from *Archibald Chalmers*, Inspector of Poor, 26th February 1895.

1. None to the knowledge of this Board.

3. There is no register maintained in the district.

Parish of Kippen, County of Stirling.

Population (1891), 1,486. Assessable Rental (1893–94), £10,509.

Letter from *Alexander Croft*, Inspector of Poor, 4th March 1895.

1. No exceptional distress has been known in this parish. In the village of Kippen a few masons and their labourers were idle owing to the severe frost, but so far as known they have been able to get along. In the village of Buchlyvie none have shown any signs of being so very ill off, and the other parts of the parish are purely agricultural.

2. No special agencies necessary.

3. None necessary.

Parish of Larbert, County of Stirling.

Population (1891), 8,340. Assessable Rental (1893–94), £23,383.

Letter from *Alexander Smith*, Inspector of Poor, 25th February 1895.

1. There is no exceptional distess in the district.

PARISH OF LOGIE, COUNTY OF STIRLING.

Population (1891), 4,252. Assessable Rental (1893–94), £26,880.

Letter from *Alexander Morrison*, Jun., Inspector of Poor, 25th February 1895.

1. THERE is practically no distress in the district on account of the weather, or on any other account. The population consists mostly of people who reside in this locality on account of the climate, and there is in consequence at all times a very low ratio of pauperism. The working classes are engaged principally in two public works in which the employment is perfectly regular. In the landward part of the parish the population is almost wholly agricultural.

2. The proceeds of two ice carnivals have been devoted to supplying the few poor people in the district with coals and supplies of provisions.

3. No.

4. No.

PARISH OF MUIRAVONSIDE, COUNTY OF STIRLING.

Population (1891), 3,671. Assessable Rental (1893–94), £20,499.

Letter from *John Eccles*, Inspector of Poor, 25th February 1895.

1. No. On the 16th of this month I purposely went through the parish to find out if there were any cases of distress on account of the severe weather, but found no case of destitution on account of such, and nothing has come to my knowledge that I could attribute to the weather since then.

2. Nothing.

3. No.

4. No.

PARISH OF POLMONT, COUNTY OF STIRLING.

Population (1891), 4,949. Assessable Rental (1893–94), £24,936.

Letter from *John Gentles*, Inspector of Poor, 1st March 1895.

1. VERY little, so far as I can make out. A few canal boatmen may be hard pressed through stoppage of work from the severe frost. No complaints have been made, nor any special applications received.

2. An endeavour is being made through the minister of the parish to reach any necessitous case and relieve same.

3. No.

4. No. Distress limited and temporary. Will disappear now that thaw has set in.

PARISH OF ST. NINIAN'S, COUNTY OF STIRLING.

Population (1891), 9,571. Assessable Rental (1893–94), £54,716.

Letter from *Samuel Reid*, Inspector of Poor, 25th February 1895.

1. No.

2. Some relief in money and kind has been given to people out of work in consequence of the severe weather, but no systematic plan of distribution has been adopted either by public authority or voluntary agency. Funds altogether from private subscribers.

3. No.

4. Where such distress exists a register of cases should be kept, and every one of them thoroughly inquired into.

PARISH OF SLAMANNAN, COUNTY OF STIRLING.

Population (1891), 6,731. Assessable Rental (1893–94), £20,214.

Letter from *John Burt*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district at present. This district, being purely a mining one, the severe weather which has prevailed has not impeded work.

2. It has not been considered necessary to initiate agencies for relief, as work is being secured, as in ordinary circumstances, by the population.

3. No unemployed register has been maintained.

4. No exceptional distress exists in this parish ; the average number of days per week worked by the miners at present being about four days.

PARISH OF STIRLING, COUNTY OF STIRLING.

Population (1891), 14,170. Assessable Rental (1893-94), £60,811.

Letter from *John Paterson*, Inspector of Poor, 25th February 1895.

1. YES ; chiefly owing to the severe weather.

2. (*a*) The Stirling Soup Kitchen Association has made the following distributions : 1st (ordinary), meals at free table ; 2nd, soup to use at home ; 3rd (special), supplies of provisions, for which Town Council contributed 5*l*.

(*b*) Three hundred and forty-seven. *N.B.*—During week ending 23rd February over 200*l*. has been raised by subscriptions and entertainments. This is now being distributed under the supervision of Municipal Ward Committees and the Provost.

3. No.

4. For occasional distress the arrangements above-mentioned work very well.

PARISH OF STRATHBLANE, COUNTY OF STIRLING.

Population (1891), 1,671. Assessable Rental (1893-94), £15,281.

Letter from *Peter Marshall*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress.

2. Nothing.

3. No.

4. No.

PARISH OF ASSYNT, COUNTY OF SUTHERLAND.

Population (1891), 2,551. Assessable Rental (1893–94), £5,422.

Letter from *John Mackay*, Inspector of Poor, 1st March 1895.

1. FROM the situation and resources of the parish there is almost each year more or less distress amongst the fishermen cotters and thriftless crofters at this time of year, aggravated this year by the severe weather.

2. Nothing ; no resources.

3. No.

4. A light railway from near Invershin on the Highland line to Lochinver would give work, and also enable the fishermen to prosecute their calling with success. Such a railway would benefit the fishing population of Scotland as well as the populous towns in the kingdom.

PARISH OF CLYNE, COUNTY OF SUTHERLAND.

Population (1891), 1,713. Assessable Rental (1893-94), £6,847.

Letter from *M. F. Myron*, Inspector of Poor, 26th February 1895.

1. No.

3. No.

4. No.

PARISH OF CREICH, COUNTY OF SUTHERLAND.

Population (1891), 2,013. Assessable Rental (1893–94), £10,117.

Letter from *David Ross*, Inspector of Poor, 25th February 1895.

1. IT would be somewhat exaggerating to say that there is exceptional distress in this parish, where crofting is the main occupation. Those entirely dependent on day labour, and the ordinary out-door poor, have had undoubtedly a somewhat severe strain, owing entirely to the severe weather.

2. A special meeting of the Parochial Board was convened on the 23rd instant, with a view to instruct the Inspector of Poor as to the course to follow with regard to any extraordinary claims for relief. Supplies of coals have been distributed, and the Inspector has authority to use his own discretion wherever real necessity exists.

3. No register kept of unemployed.

4. None. Now that the severe storm is over there is little danger now, during this season, of any exceptional distress, even though it must be admitted that labour is somewhat scarce.

PARISH OF DORNOCH, COUNTY OF SUTHERLAND.

Population (1891), 2,331. Assessable Rental (1893–94), £7,569.

Letter from *J. Sutherland*, Inspector of Poor, 26th February 1895.

1. NO exceptional distress.

2. Nothing is being done by the public authorities—not necessary.

3. No.

4. No.

PARISH OF DURNESS, COUNTY OF SUTHERLAND.

Population (1891), 960. Assessable Rental (1893–94), £4,698.

Letter from *Robert Sutherland*, Inspector of Poor, 26th February 1895.

1. NONE.

2. None.

3. None.

4. None.

PARISH OF EDDRACHILLIS, COUNTY OF SUTHERLAND.

Population (1891), 1,409. Assessable Rental (1893–94), £4,581.

Letter from *A. R. Cowie*, Inspector of Poor, 25th February 1895.

1. THERE is little or no exceptional distress in the district. The people do not much depend on public employment, but on the produce of their crofts and the produce of the sea. The severe weather of this season has affected their sea earnings by preventing their reaching the south markets.

2. Nothing has been done either by public authorities or other agencies.

3. No.

4. Where such distress exists, especially in large towns, work should be provided, and paid either by the nation or municipalities, the work to be improving congested areas and sanitation, and providing better dwellings for the labouring classes.

PARISH OF FARR, COUNTY OF SUTHERLAND.

Population (1891), 2,750. Assessable Rental (1893–94), £11,454.

Letter from *J. M'Dougall*, Inspector of Poor, 26th February 1895.

1. NONE, so far as known to me.

2. All applications for relief are attended to by the Parochial Board. There were only three new applications during the last three months.

3. No; not found necessary.

4. There being no exceptional distress, I have no suggestions to make on the subject.

PARISH OF GOLSPIE, COUNTY OF SUTHERLAND.

Population (1891), 1,451. Assessable Rental (1893–94), £7,868.

Letter from *John Murray*, Inspector of Poor, 6th March 1895.

1. NO. During January and the greater part of February several workmen were out of employment owing to the severe weather, but now that the weather has improved they have resumed work; there has been no marked distress, and in no case was it necessary to make application for parochial aid.

2. Although there has been no marked distress, the Duke of Sutherland, while giving employment to many has kindly caused meal and fuel to be distributed amongst the most necessitous poor of the parish.

3. No.

4. None.

PARISH OF KILDONAN, COUNTY OF SUTHERLAND.

Population (1891), 1,828. Assessable Rental (1893–94), £14,209.

Letter from *James Campbell*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district. There may be some cases of temporary hardship consequent on the severe weather.

2. There has been no action taken by any public authority, further than to watch anxiously the condition of the people. There are two bequests in the parish, and amounting in the aggregate to about 53*l.*, which have been distributed on the poor, not paupers, since this stormy weather begun. I have been consulted on more than one occasion since 1st January, and I was glad to give the names of poor, not paupers, who were in consequence relieved.

3. There is no unemployed register. I know the circumstances of every one in the parish.

4. There is no actual distress in the parish, but should any occur it can be met by private charity. I know of funds to meet urgent cases, and available.

PARISH OF LAIRG, COUNTY OF SUTHERLAND.

Population (1891), 1,169. Assessable Rental (1893–94), £6,861.

PARISH OF KIRKINNER, COUNTY OF WIGTOWN.

Population (1891), 1,455. Assessable Rental (1893–94), £14,636.

Letter from *James Christison*, Inspector of Poor, 25th February 1895.

1. DUE to severe weather.
2. (*a*) Soup has been given daily to persons in want.
   (*b*) About 25 families. Meal and bread has been given through private charity.
3. No.
4. No. Possibly by private charity.

PARISH OF KIRKMAIDEN, COUNTY OF WIGTOWN.

Population (1891), 2,192. Assessable Rental (1893–94), £13,085.

Letter from *Quintin Cochrane*, Inspector of Poor, 26th February 1895.

1. No. Clearing away the snow on the roads is affording employment to whatever unemployed there are But there is no unusual distress.

3. No.

4. No.

PARISH OF KIRKCOWAN, COUNTY OF WIGTON.

Population (1891), 1,263. Assessable Rental (1893–94), £8,252.

Letter from *James McWilliam*, Inspector of Poor, 26th February 1895.

1. No exceptional cases of distress. The two woollen manufactories here are fully employed, and have been all the winter. During the severe weather the labouring class were employed cleaning the snow from the public roads.

2. The landed proprietors and others interested in the parish (through the parish minister) are very mindful in giving donations towards the relief of any necessitous cases during the winter months. There are also coal and clothing clubs, which are beneficial to the working classes. A soup kitchen has been started for the benefit of the school children and the deserving poor.

3. No.

4. No. All is being done that seems absolutely necessary.

PARISH OF LESWALT, COUNTY OF WIGTOWN.

Population (1891), 2,320. Assessable Rental (1893-94), £11,395.

Letter from *R. H. Bradford*, Inspector of Poor, 26th February 1895.

1. In the burghal part of this parish there is no exceptional distress owing to weather. The few labourers and tradesmen idle do not appear to avail themselves of the means of employment open to them. During the time the snow was on the streets, the Town Council afforded an opportunity for workmen to clear same, and it was a matter of surprise how few availed themselves of the offer. The landward part of the parish was not affected by the weather or want of work, and no applications for relief could be attributed to any distress in district.

2. Beyond the Town Council providing work cleaning streets of snow, &c., in the burgh, no work was provided. A soup kitchen was started by a local gentleman, but the ordinary poor of the town availed themselves only. Already tradesmen are resuming work, and, if the thaw continues, in less than a week all classes will be fully employed, as there is plenty of work in the district.

3. No.

4. None. Being strictly dependent on agriculture, this district is not affected so seriously for want of trade as manufacturing districts.

PARISH OF NEW LUCE, COUNTY OF WIGTOWN.

Population (1891), 588. Assessable Rental (1893–94), £7,928.

Letter from *Robert C. Lupton*, Inspector of Poor, 25th February 1895.

1. All the labouring classes in the parish were out of employment for several weeks before the late severe snowstorm. Since that date they got employment in clearing snow off the line of railway, and several are still employed in assisting to clear the public roads. If the severe weather continues I fear a number will be in distress.

2. (*a*) I understand some of the more necessitous cases were relieved by private charity, dispensed by the clergymen of the place from funds at their disposal. No applications have been made, as yet, to the Parochial Board for relief.
(*b*) Unable to supply number required.

3. No.

4. As the funds available (referred to above) are possibly exhausted, and as it would be difficult to get voluntary agencies set agoing, I consider it would be advisable to empower the Parochial Board to make a few advances, if required, using a separate register and pay roll for such cases.

PARISH OF OLD LUCE, COUNTY OF WIGTOWN.

Population (1891), 2,517. Assessable Rental (1893-94), £18,142.

Letter from *James Nish*, Inspector of Poor, 26th February 1895.

1. No. What little we had was owing to the severe weather.

2. (*a*) Nothing is being done by public authorities. Our curlers gave those with large families a supply of meal and groceries.
(*b*) About ten daily.

3. No.

PARISH OF MOCHRUM, COUNTY OF WIGTOWN.

Population (1891), 2,166. Assessable Rental (1893-94), £13,265.

Letter from *Peter Galloway*, Inspector of Poor, 27th February 1895.

1. No distress in this parish. The poor have been well cared for by donations from natives, of coal, clothing, and food. The labouring classes have been employed in clearing the public roads of the snow-blocks.

2. Nothing.

3. No register kept.

PARISH OF PENNINGHAME, COUNTY OF WIGTOWN.

Population (1891), 3,593. Assessable Rental (1893-94), £21,740.

Letter from *J. Johnston*, Inspector of Poor, 25th February 1895.

1. SEVERE weather only.

2. One able-bodied man's sick wife relieved because weather prevented his finding employment. She had lately come out of prison. A committee, composed of the Town Commissioners and voluntary agencies, have given relief in food tickets to an average of 56 persons, giving 2*s.* each, weekly, in groceries, meal, &c., for past three weeks of severe weather, and is continued this week.

During last two weeks about 25 men have been employed by the Town Council clearing snow from the streets, &c., at 2*s.* a day. This work had been publicly offered to all who chose to accept it.

3. No.

4. None additional.

PARISH OF PORTPATRICK, COUNTY OF WIGTOWN.

Population (1891), 1,219. Assessable Rental (1893-94), £6,314.

Letter from *Alexander Rankin*, Inspector of Poor, 25th February 1895.

1. No exceptional distress in the district.

PARISH OF SORBIE, COUNTY OF WIGTOWN.

Population (1891), 1,563. Assessable Rental (1893-94), £12,820.

Letter from *John Fingland*, Inspector of Poor, 25th February 1895.

1. No.

3. No.

4. No.

PARISH OF STONEYKIRK, COUNTY OF WIGTOWN.

Population (1891), 2,703. Assessable Rental (1893–94), £18,261.

Letter from *John McCaig*, Inspector of Poor, 25th February 1895.

1. As most of the labouring class are farm servants under yearly engagements (or half-yearly) there is no exceptional distress in this district.

2. Nil.

3. No unemployed register is maintained.

4. Nil.

PARISH OF STRANRAER, COUNTY OF WIGTOWN.

Population (1891), 3,158. Assessable Rental (1893–94), £13,115.

Letter from *George D. Baillie*, Inspector of Poor, 25th February 1895.

1. No, but—(1.) The hurricane on 22nd December destroyed most of the fishing boats, and about 150*l.* of private subscriptions have been collected to restore the damage.
(2.) The severe frost has thrown masons, plasterers, and labourers idle for several weeks.

2. (1.) A soup kitchen was started on the 16th instant, and twice a week about 60 families are supplied. About 20*l.* of private subscriptions have been collected.
(2.) A considerable number of labourers (otherwise idle) have been employed to clear the railway, and the town streets of snow. More men could have been employed if they had been willing to work.

3. No.

4. The distress has been fully met without parochial aid.

PARISH OF WHITHORN, COUNTY OF WIGTOWN.

Population (1891), 2,574. Assessable Rental (1893–94), £15,096.

Letter from *A. MacVea*, Inspector of Poor, 25th February 1895.

1. THERE is no exceptional distress in this district, although owing to the late snow-storm a few people could not get working in the fields.

2. A number of gentlemen formed themselves into a committee, and have voluntarily been giving bread, tea, sugar, &c., and a few blankets to the poor; coals, as is customary at this season, have also been sold at a cheap rate to the poor.

3. No.

4. Immediately after the snow-storm, all the men who were willing to work were employed clearing away the snow at 3*s.* a day. The people who felt it most were women who have children, but no husbands, and who have to work in the fields. To such I gave a few pounds as casual relief; if a little could be given to assist the latter class it would be very acceptable, seeing they are not paupers.

PARISH OF WIGTOWN, COUNTY OF WIGTOWN.

Population (1891), 1,911. Assessable Rental (1893–94), £11,017

Letter from *William Mackie*, Inspector of Poor, 25th February 1895.

1. VERY little exceptional distress. There are no public works, and the severe weather has been felt by the agricultural day labourer only, and that only when the frost was severe.

2. Since the heavy fall of snow on the 5th and 6th February, every available male labourer has been employed clearing the snow-block from streets, roads, and railway. The Town Council has spent 42*l.* on this work, and about as much more would be spent by other authorities in the immediate district.
About 80 tons of coals have been distributed by public subscription, the Kirk Session, and Parochial Board.

3. No register.

4. Milder weather has set in, and farm labour is being resumed. A number are back to work to-day. Applications for casual relief have been unusually few this winter.

PARISH OF BRESSAY, COUNTY OF ZETLAND.

Population (1891), 802. Assessable Rental (1893–94), £887.

Letter from *George Wilson, M.A.*, Inspector of Poor, 27th February 1895.

1. THERE is not, in my opinion, any exceptional distress in this parish. The majority of the people earn their livelihood from the sea, and the severe weather has had no appreciable effect upon earnings. The summer of 1894 was very favourable in Zetland, and there is less distress than in previous years—*e.g.*, that of 1892.

PARISH OF DELTING, COUNTY OF ZETLAND.

Population (1891), 1,512. Assessable Rental (1893–94), £1,421.

Letter from *Robert Robertson*, Inspector of Poor, 2nd March 1895.

1. THE unusually severe weather, with snow-storms now for more than two months, is, of course, felt to be a hardship by all, and has caused some loss of outlying animals; but there is no exceptional distress in this parish, and no applications more than usual for parochial relief.

2. None.

3. No unemployed register.

4. No.

PARISH OF DUNROSSNESS, COUNTY OF ZETLAND.

Population (1891), 3,752. Assessable Rental (1893–94), £2,840.

Letter from *M. Goudie*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in this parish, so far as I know; I have not even heard of a single individual in it who is at any loss for the means of subsistence.

2. Nothing such necessary, as yet.

3. No.

4. None in present circumstances.

PARISH OF FETLAR, COUNTY OF ZETLAND.

Population (1891), 363. Assessable Rental (1893–94), £544.

Letter from *George Garster*, Inspector of Poor, 2nd March 1895.

1. As yet, there is no exceptional distress in this district.

2. As there is no exceptional distress there is nothing being done by the public authorities, &c. None relieved.

3. None.

4. As no exceptional distress exists at present I have no suggestions to make.

PARISH OF LERWICK, COUNTY OF ZETLAND.

Population (1891), 5,757. Assessable Rental (1893–94), £11,750.

Letter from *James Innes*, Inspector of Poor, 27th February 1895.

1. THERE is little or no exceptional distress prevailing in this district at present. There are very few of the labouring class in this district, the great majority of the people being sailors and fishermen; and although a great many of them are in very poor circumstances, the severe weather has not to any extent prevented them from prosecuting their ordinary calling.

2. (*a*) There being no exceptional distress prevailing nothing has or is being done by public authorities or other agencies.
(*b*) Nil.

3. No unemployed register maintained.

4. Although the greater portion of the community are in very poor circumstances, there does not appear to be any exceptional distress at present. I have, therefore, no suggestions to offer.

PARISH OF NESTING (NESTING DISTRICT), COUNTY OF ZETLAND.

Population (1891), 2,589. Assessable Rental (1893–94), £1,694.

Letter from *John Spence*, Inspector of Poor, 1st March 1895.

1. I DO not consider that there is at present exceptional distress in this district. No doubt persons entirely dependent on fishing are feeling the severe weather, and crofters are short of fodder. The people are dependent for their support during winter on the returns of the preceding harvest of the land and sea. The fishings of 1894 were fairly good, and the crops were above the average. Hence the majority of the people are self-supporting as yet. Many will, however, be pressed for seed on account of the demand on fodder.

2. No application has as yet been made for relief by able-bodied persons. Crofters and fishermen can, as a rule, get credit from local dealers for a season.

3. No. There is no regular employment in this parish. The people are all crofters and fishermen, or sailors, and the females knit Shetland hosiery. Persons who have none of these employments must be idle. The want of some regular land work is the cause of much of the poverty of these islands.

4. Any relief that may be forthcoming might, to the greatest advantage, be given in the form of a special grant for the construction of footpaths and bridges, chiefly with the view of promoting school attendance in rural districts.

PARISH OF NESTING (LUNNASTING DISTRICT), COUNTY OF ZETLAND.

Population (1891), ——. Assessable Rental (1893–94), £——— (Included in Nesting).

Letter from *William Pottinger*, Inspector of Poor, 4th March 1895.

1. THERE is no exceptional distress in this district.

2. (*a*) Nil.
(*b*) Nil.

3. No.

4. While there is no exceptional distress in the district the want of some remunerative employment in the district is very seriously felt. If the Government would give a free grant of money for road construction, it would be a great boon to the district.

PARISH OF NESTING (WHALSAY DISTRICT), COUNTY OF ZETLAND.

Population (1891), ——. Assessable Rental (1893–94), £——— (Included in Nesting).

Letter from *John Irvine*, Inspector of Poor, 1st March 1895.

1. NONE.
2. *See* No. 1.
3. *See* No. 1.
4. *See* No. 1.

PARISH OF NORTH MAVINE, COUNTY OF ZETLAND.

Population (1891), 2,197. Assessable Rental (1893–94), £1,502.

Letter from *James Bruce*, Inspector of Poor, 28th February 1895.

1. As far as I am aware, there are no exceptional cases of distress in this parish.

3. None.

PARISH OF SANDSTING, COUNTY OF ZETLAND.

Population (1891), 2,562. Assessable Rental (1893–94), £1,689.

Letter from *P. Thomson*, Inspector of Poor, 28th February 1895.

1. THIS is a crofter and fishing district; only a small proportion of labourers. Owing to the long-continued severe weather many must have suffered, and sought advances from employers and shops.

2. Nothing done by public authorities or by voluntary agencies, as yet.

3. No register is kept. Applications not encouraged.

4. I have no suggestions, and I am not inclined to make any without the authority of the Parochial Board.

PARISH OF TINGWALL, COUNTY OF ZETLAND.

Population (1891), 2,329. Assessable Rental (1893–94), £3,504.

Letter from *Charles C. Beatton*, Inspector of Poor, 2nd March 1895.

1. No exceptional distress.

2. Nothing publicly as yet; but private gentlemen may be helping needful cases.

3. No.

4. If money could be had, no doubt some public employments might be engaged in which would confer a benefit to parties who might be in need.

PARISH OF UNST, COUNTY OF ZETLAND.

Population (1891), 2,280. Assessable Rental (1893–94), £2,858.

Letter from *D. T. White*, Inspector of Poor, 1st March 1895.

1. THERE is none. The parish has not been in such good circumstances for many years; both fishings and crops having proved exceptionally good during past year.

PARISH OF WALLS AND SANDNESS, COUNTY OF ZETLAND.

Population (1891), 2,057. Assessable Rental (1893–94), £1,228.

Letter from *James Laurenson*, Inspector of Poor, 1st March 1895.

1. No exceptional distress.

2. Nothing extra done by any agency, for there is no call for it.

3. No such register kept.

4. No suggestions to make.

PARISH OF YELL, COUNTY OF ZETLAND.

Population (1891), 2,511. Assessable Rental (1893–94), £2,353.

Letter from *J. W. Barclay*, Inspector of Poor, 27th February 1895.

1. THERE is no exceptional distress in the district.

APPENDIX, No. 33.

PAPER handed in by the *Chairman.*

DISTRESS IN ENGLAND AND WALES,

IN THE

MONTH OF FEBRUARY 1895,

AS SHOWN BY THE RETURNS MADE BY MAYORS AND CHAIRMEN OF DISTRICT COUNCILS.

In the table opposite will be found a summary of the answers to the Circular Letter addressed to the mayors of towns, and chairmen of district councils (*vide* First Report, page iii), in so far as they relate to the existence and nature of the distress in England and Wales in the early part of the year 1895. Out of a total population for England and Wales of 29,002,525 (1891 census), replies were received from districts representing 26,591,394 persons, or 91 per cent. of the whole. These various districts have been classified as follows:—

1. Metropolitan areas under vestries and district boards;

2. County boroughs (which are, by statute, administrative counties of themselves);

3. Non-county boroughs (*i.e.*, all municipal boroughs which are not county boroughs);

4. Urban-districts (not being municipal boroughs);

5. Rural districts;

and, with their populations, have been tabulated in accordance with the reports received, as under:—

(*A.*) No exceptional* distress.

(*B.*) Some distress due to weather, but not exceptional (*i.e.*, such that the ordinary means of relief were sufficient to meet it).

(*C.*) Exceptional distress ascribed to the severity of the weather (implying that extra pressure has been put upon existing relief works, or that others have been called into existence).

(*D.*) Distress chiefly owing to bad trade.

(*E.*) Distress of which bad trade and the severe weather are equal causes.

---

* Note that "exceptional" is an indefinite and not a scientific term, so that there was, in a few cases, some doubt as to the exact division to which certain of the answers properly belonged. But it was generally possible to come to a decision as to the character of the distress, after consideration of the replies made to the other questions contained in the Local Government Board's letter; and it is believed that the relations between the various columns will be found to be fairly accurate.

TABLE showing the Nature of the Distress reported as existing in *England* and *Wales* in February 1895; with the Number of Districts making Returns, and the Population and Percentages of Population of those Districts.

Nature of Distress Reported.	By Metropolitan Parishes and Districts.	By County Boroughs.	By Non-County Boroughs.	By Urban Districts.	By Rural Districts.	Total.

Total Percentage	100 %	100 %	100 %	100 %	100 %	100 %

GENERAL SUMMARY AND CONCLUSIONS.

General Summary of Table.

The sum of the figures in the first two lines, headed "No exceptional distress" and "Some distress due to weather, but not exceptional," may be taken as representative of the population not suffering unusual distress. The figures in the third line represent those affected by bad weather. And the sum of the figures in the last two lines represent the population suffering from bad trade, or bad trade and bad weather combined. On this basis we find that, out of 1,574 replies received from districts representing 26,591,394 persons, there was at the time, in 920 localities with 10,291,600 persons, no exceptional distress; that in 475 localities, with a population of 11,792,527 persons, there was exceptional distress, due solely to the severity of the winter; and that in 179 localities, with a population of 4,507,267, there was, apart from want of employment due to weather, an exceptional lack of work in consequence of slackness of trade, depression of agriculture, or particular local or industrial causes.

Conclusions.

The significance of these figures can be most clearly traced in the table of percentages (Table III.), and the conclusions to be drawn therefrom appear to be :—

1. That there existed in the early part of 1895 considerable exceptional distress, reported as chiefly due to the unusually severe weather; since 44 per cent. of the total population making returns made this complaint.

2. That the distress due to the weather was far more apparent in the metropolis and county and non-county boroughs than in urban or rural districts, and that, generally speaking, towns suffered more severely than country districts.

*3. That there was but little distress owing to commercial depression.

Reason for absence of Distress in Country Districts.

With regard to the second point mentioned, it is one of the most curious features of these tables that the town districts seem to have suffered so much more acutely from the exceptional weather than the agricultural, although it would naturally be supposed that the work of the agricultural labourers would have been to a greater extent interfered with by the prolonged frost than that of the mechanic and artisan, who are for the most part dwellers in towns. Thus, if we compare the two upper lines (in Table III.) with the three lower, we find that there was no great distress reported by the metropolitan vestries and district boards in districts representing 27 per cent. of the population, and exceptional distress in districts containing 73 per cent. While in the rural districts, following the same principle, we find no distress in those representing 69 per cent. of the rural population, and exceptional distress only in those with 31 per cent.

In one case, at least, special attention is called to the difference between town and country. It is reported from
p. 241. the rural parishes of the Blandford district that "there have been no indications of unusual distress. In the town of Blandford, however, the distress has been exceptionally great."

The explanation of this may, perhaps, be found in some of the answers to the other questions in the letter sent out by the Local Government Board, from which the following excerpts are made :—

p. 320. "The great decrease in the population of rural parishes has largely reduced the number of labourers dependent on such occasional work as drainage, &c., and the inhabitants of the villages are now little more than sufficient for the regular work of farmers,—horsekeeping, shepherding, and attendance on cattle."

pp. 241. 296. 298. 367. pp. 184. 245. 432. Again: "Farmers do not discharge their hands in severe weather, as townsmen are compelled to do," and in many places "the agricultural population are paid upstanding wages, so that the weather would not affect those engaged on farms."

pp. 228. 338. 412. In other districts the possession of allotments was of great assistance, as from this cause there was "a good supply of corn, potatoes, and bacon in many homes," and "very few men having allotments of one acre came up for relief. In the few cases of men with allotments asking for relief, their distress has been due to their thriftlessness and drunken habits."

The Character of Distress to be met.

Here and there the replies give an insight into the character of the distress to be dealt with; *e.g.*, from Greenwich it is reported, that "there is a chronic class of men in our district, and no doubt throughout London, who suffer from want of employment and who are deserving of aid, and it is the great problem how to help such men. They seem to consist of—

(1) Men who, through some physical defect, are not of full efficiency, and who naturally fall behind in the competition with more effective men.

(2) Old Army and Navy men, who have families, and not having any trade they are effective at, cannot secure sufficient work to keep their families.

(3) Men who through sickness or other temporary cause have lost their employment, and find it difficult to win their way back to the ranks of the fully employed.

There is, however, a class as large, or perhaps larger, who are mere loafers, who will do no more work than is necessary to keep them going, and spend their ingenuity in dodges to secure a living without work. These are the men who are most likely to secure the pay when extra men are taken on by the local bodies, and who when employed trust to secure the pay for as little work as possible."

p. 261. But, notwithstanding, "there is a certain percentage of the population in almost every place which, poor at all times, experiences especial hardship during exceptionally severe weather."

Of

* A further analysis is given in the next table of the trades and localities reporting commercial depression.

Of the opinions expressed and the various remedies suggested for the relief of distress from want of employment, the following may be taken as samples :— SUGGESTED REMEDIES.

"Private benevolence may be relied upon at all times to meet distress through severe weather. With regard to the normal unemployed, the town councils should have powers conferred on them to deal with such cases as may appear to them to be purely local in character, to require only temporary assistance, and where it is not desirable that such temporary assistance should be rendered by the boards of guardians. The larger question of finding work for the unemployed is a national question to be dealt with by the Government." pp. 258. 456.

With regard to the creation of work for the unemployed it is further proposed that— THE CREATION OF WORK.

"Municipal authorities should be empowered to levy a small tax upon ground rents, to provide a fund applicable only to permanent public improvements; and that Government should grant loans free of interest in aid of relief works during periods of exceptional distress." pp. 266. 279.

While for the better distribution of existing work some suggest that, where circumstances will permit,— pp. 278. 323.

"Roads and footpaths should be made and improved during the winter months, instead of during that period of the year when employment is general, and a good deal of overtime is worked in order to cope with the demand."

And other suggestions for this purpose are :—

"The afforestation of waste lands, the embankment of rivers, and reclamation of marsh lands." pp. 305. 380.

"The formation of a labour home in each union centre, where all persons purporting to be seeking work should be sent, and where work of various kinds should be found suited to the applicants, without the stigma of the casual ward. All persons not availing themselves of this opportunity to be treated vigorously as rogues and vagabonds." p. 430.

"Local authorities should have power to establish labour works as a kind of test-house without pauperisation. Every district should have a properly organised voluntary agency for the relief of distress, which, whenever necessity arises, would prevent the overlapping of agencies, and thus the abuse of charity. Boards of guardians should have power to grant sums of money to approved voluntary agencies for the relief of distress." p. 308.

Closely connected with the creation of work is the request from many places of a "greater celerity on the part of the Local Government Board in the approval of local loans, especially in times of distress." pp. 69. 76. 77. 85. 259. 280. 284. 404. 457.

Further suggestions as to the means of raising money or granting relief are :— OTHER REMEDIES SUGGESTED.

A moderate duty on corn and foreign manufactured goods.	p. 296.
Payment from the poor rate of the increased cost of employing the unemployed.	p. 437.
A change of Government.	p. 309.
The sale of food at or even below cost price in times of exceptional distress.	p. 310.
Free grants of money by Local Government Board, or by loans at a very low rate of interest.	p. 313.
Extension of out-relief to able-bodied in times of exceptional distress.	pp. 116. 132. 192. 357.
Prevention of improvident marriages.	p. 361.
Government grants in aid of distressed persons in proportion to the distress.	pp. 65, 66. 70. 101. 123. 138. 151. 372.
The removal of the cause of unemployment, *i.e.*, excessive drinking.	pp. 61. 148. 150. 177.
Emigration.	pp. 77. 129. 213.
The formation of clubs against hard times and old age.	pp. 78. 79.
A more general application of the Allotments Act.	p. 85.
The removal, in times of exceptional distress, of the condition of disfranchisement consequent on receipt of relief from the guardians.	pp. 63. 101. 131. 135. 161. 190. 209. 210. 341. 360. 402. 407. 457. 462.
Old age pensions.	p. 129.
Government assistance in aid of those who wish to take up small holdings.	p. 196.

With regard to the difficulties attendant on giving relief, and to methods by which relief should be distributed or works instituted, the following are among the principal recommendations :— RECOMMENDATIONS AS TO THE DISTRIBUTION OF RELIEF, AND THE ATTENDANT DIFFICULTIES.

"In any time of exceptional distress there is always plenty of help forthcoming. The chief difficulty is in getting at the deserving cases. The experience of the past winter seems to point to the conclusion that the larger the scale on which any charitable scheme is undertaken the greater the proportion of waste. In a small town all cases of urgent need are pretty sure to be reached by private charity, and, from any point of view, the less display made about works of relief the better." p. 405.

"The district council had under consideration the finding of employment, but it was almost impossible to get men to do the work required, or to give them such work as they would be willing to undertake." p. 460.

"The admirable spirit of the men engaged in watch and ribbon factories at Coventry creates a difficulty, inasmuch as public efforts made at such a time as the present to reach the most deserving cases of distress are too apt to fail in their object, and to be intercepted by those who trade on charity." p. 257.

"May I urge that the Local Government Board should forbear to issue, at any rate to rural districts, circulars on the subject of exceptional distress such as those of 1886-92-93-95, which suggest impossible schemes and ineffectual remedies, and only serve to raise expectations in the minds of the unemployed and unemployable which cannot be realised?" pp. 290. 321.

"The frost is three feet in the ground, which makes work according to the circular impossible." pp. 280. 294.

p. 250. "Relief should be given from a central agency after careful investigation."

p. 139. 267. "There should be a permanent relief committee in every town; and district visitors appointed t administer relief."

p. 268. "Preference was given to married men or men who were supporting families. Each man applying fo work had to produce a note from his late employer stating that he had been working in that district (to avoi an influx from the country round). And further inquiries were made into each case, and the workman wa dismissed if his answers were found to be incorrect."

p. 276. "A house-to-house visitation to ascertain the extent of distress, and then an appeal for subscription was very successful."

p. 308. "The relief of distress should be left in the hands of men who are known, and who also know the peopl Each organisation should work within a certain radius. Upon each application the name and address of th applicant should be registered and extent of relief defined. Men engaged in this work should mee periodically and compare notes."

pp. 108. 119. 164. 358. 370. 400. 423. 439. 443. "Voluntary agencies form the best means of meeting exceptional distress."

The best remedy of all was to be found in the cessation of the frost, and in many of the returns which wer made after the thaw had commenced it is pleasant to read that—

pp. 417. 419. 422. 424. 433. 439. 443. 446. 456. 457. 458. 459. "Now that the frost is over there is no distress; in fact, it is difficult to get men to do all the work th there is."

TRADE DISTRESS IN ENGLAND AND WALES (FEBRUARY 1895).

FURTHER ANALYSIS OF TRADE DISTRESS.

A FURTHER analysis is here presented of those places which complained of distress owing to want of employme in particular industries.

In the first instance the localities are stated alphabetically, with their character, their population, and the tra distress from which they are suffering.

In the second place these same localities are re-stated by groups of trades.

For the purpose of the second arrangement, the different trades have been grouped into four main divisions; the first two of which severe weather is in the main the disturbing element, while, in the last two, depression of tra (specified or unspecified) is chiefly responsible for the prevailing want of employment.

Thus, in the first division have been included all those industries which are especially liable to disturbance continued frost, such as—

1. Building and other out-door trades (unspecified).
2. Brick and cement works.
3. Quarries.
4. Canal traffic.
5. Market gardens.

In the second, those which, although affected by frost, suffer also from trade depression, such as—

1. Shipbuilding.
2. Agriculture.
3. Fisheries.

In the third, those whose suffering was almost entirely due to depression of trade, such as—

1. Tin plate works.
2. Iron and steel works.
3. Pottery and glass works.
4. Chemical works.
5. Textile and clothing factories.
6. Collieries.
7. Sundry small industries.

And, finally, in the fourth division will be found complaints from various localities of distress brought on depression in trade (unspecified), or by some such accidental cause as the recent completion of large works, and consequent presence of a surplus body of labour which could find no immediate outlet.

LIST of Places with Trade Depression, in Alphabetical Order.

Reference to page of Second Report.	Name of Place.	Character. †	Population (1891).	Nature of Trade Depression.
376	Abercorn (Monmouth)	Urban	10,464	Depression of trade.
386	Abersychan (Monmouth)	ditto	15,296	Stoppage of local ironworks.
*258	Aldeburgh (E. Suffolk)	Non-County	2,159	Distress among men in building trades, and poverty among fishermen.
81	Altrincham (Cheshire)	Urban	12,440	Distress among men in building trades.
64	Appleby	Non-County	1,776	Distress among out-door workers (unspecified).
64	Ashton-under-Lyne	ditto	—	Distress among men in building trades.
147	Aspull (Lancashire)	Urban	8,952	Bad trade.
182	Atherstone (Warwick)	Rural	14,076	Hat manufacture depressed.
268	Atherton (Lancashire)	Urban	15,833	Long depression in coal mining industry.
410	Auckland (Durham)	Rural	62,893	Stoppage of collieries.
141	Audley (Stafford)	Urban	12,631	Inundation of Diglate Colliery.
418	Aylesbury (Buckingham)	ditto	8,680	Distress among men in building trades.
400	Aylesbury (Buckingham)	Rural	16,906	Agricultural depression.
83	Bala (Merioneth)	Urban	1,622	Distress among men in building trades.
65	Barnsley	Non-County	35,427	ditto ditto.
394	Barrow-in-Furness	County	51,712	Depression of iron and steel trade.
*83	Barton-upon-Humber (Lincoln)	Urban	5,226	Distress among men in building and cement works.
258	Batley (York, W.R.)	Non-County	28,719	Out-door workers (unspecified).
317	Bedford	Rural	24,269	Completion of railway.
183	Belper	ditto	23,173	Out-door workers (unspecified).
269	Bilston (Stafford)	Urban	23,453	Bad trade.
269	Bingley (Yorkshire)	ditto	10,023	Spinning and wool combing.
59	Blackburn	County	120,064	Cotton trade depressed.
150	Bollington (Chester)	Urban	3,913	Stoppage of cotton factory.
84	Bowdon (Cheshire)	ditto	2,792	Distress among men in building trades.
458	Bradford (Wiltshire)	Rural	5,408	Employment in woollen cloth restricted.
151	Brierfield (Lancashire)	Urban	5,888	Depression in cotton trade.
151	Brierley Hill (Stafford)	ditto	11,847	Bad state of trade.
335	Bromley (Kent)	Rural	26,862	Extensive works completed.
446	Bromsgrove (Worcester)	Urban	5,072	Wrought nail trade failing.
219	Buckfastleigh (Devon)	ditto	2,646	Distress among men in building trades.
205	Burnley	County	87,016	ditto ditto.
66	Bury St. Edmunds	Non-County	16,630	ditto ditto.
153	Calverley (Yorkshire)	Urban	2,525	Falling demand for labour in manufacture of woollen cloth.
291	Cannock (Stafford)	Rural	15,387	Distress among men in building trades.
211	Carlisle (Cumberland)	Non-County	39,176	ditto ditto.
405	Carmarthen	ditto	10,264	Tin plate and tin works partially stopped.
113	Castle Donington (Derby)	Rural	6,393	Basket-making slack.
85	Castleford (Yorkshire)	Urban	14,143	Glass-bottle works closed, pits working short time.
366	Caxton and Arrington (Cambridge and Huntingdon).	Rural	8,506	Agricultural depression.
67	Chelmsford	Non-County	11,003	Distress among men in building trades.

Note * are mentioned in the table of classification by trades more than once.
† For explanation of terms used under this heading, *vide* p. 802.

268	Atherton (Lancashire)	ditto	15,833	Long depression in coal-mining industry.
275	Holywell	ditto	3,018	Stoppage of lead mines and collieries.
300	Stoke-upon-Trent (Stafford)	Rural	5,122	Coal mines—depressed state of trade.
333	Pemberton (Lancashire)	Urban	18,400	Mining industry depressed.
379	Tynemouth (Northumberland)	Rural	23,678	Scarcity of work at Shire Moor Colliery.
397	Frome (Somerset)	ditto	13,233	Depression in coal trade.
401	Spennymoor (Durham)	Urban	6,041	Dull trade (coal miners).
403	Kiveton Park	Rural	6,761	Colliery (seam) closed.
410	Auckland (Durham)	ditto	62,893	Stoppage of collieries.
441	Stanley (Durham)	Urban	7,614	Coal trade bad.
465	Emley (York)	ditto	1,406	Want of trade at collieries.
463	Hawarden (Flint)	Rural	15,802	Large colliery about to stop.

NAMES of Places with Trade Depression, grouped by Trades—*continued.*

Reference to page of Second Report.	NAME OF PLACE.	Character.	Population (1891)	Nature of Trade Depression.
	DIVISION III.—*continued.*			
	SUNDRY INDUSTRIES.			
113	Castle Donington (Derby)	Rural	6,393	Basket making slack.
63	Walsall	County	71,789	Staple trade of saddlery depressed.
140	Luton (Bedford)	Non-County	30,006	Dulness in straw goods last autumn.
182	Atherstone (Warwick)	Rural	14,076	Hat manufacture depressed.
330	Yeovil (Somerset)	Non-County	9,648	Glove making depressed.
344	Worcester	County	42,908	Depression in porcelain and glove making.
358	Yeovil (Somerset)	Rural	18,783	Glove making depressed; stone quarrying affected by weather.
446	Bromsgrove (Worcester)	Urban	5,072	Wrought nail trade failing.
	DIVISION IV.			
	BAD TRADE (unspecified).			
103	Rowley Regis (Stafford)	Urban	30,791	Bad trade; works closed.
135	Droitwich (Worcester)	Non-County	4,021	Depression in trade.
147	Aspull (Lancashire)	Urban	8,952	Bad trade.
151	Brierley Hill (Stafford)	ditto	11,847	Bad state of trade.
155	Coseley (Stafford)	ditto	21,899	Great depression of trade.
175	Stapleton (Gloucester)	ditto	14,589	Depression of general trade in Bristol.
269	Bilston (Stafford)	ditto	23,453	Bad trade.
302	Whitchurch (Southampton)	Rural	5,655	Want of employment.
376	Abercarne (Monmouth)	Urban	10,464	Depression of trade.
437	Ipswich	County	57,360	Slack trade.
437	Wigan	ditto	55,013	General slackness of trade.
257	Nottingham	ditto	213,877	Depression in trade; influx of men seeking work on new railway.
	COMPLETION OF WORKS.			
67	Chichester	Non-County	7,838	Completion of drainage works, and men discharged.
145	Wrexham (Denbigh)	ditto	12,552	Completion of railway.
317	Bedford	Rural	24,269	- ditto - ditto.
335	Bromley (Kent)	ditto	26,862	Extension works completed.
	SPECIAL CAUSES.			
300	Staines (Surrey)	Rural	17,733	Heavy floods in November last.
458	New Windsor	Non-County	12,327	- - ditto - - ditto.

SHORT SUMMARY of foregoing TABLES.

There were thus complaints of distress, as follows:—

Building and out-door (unspecified) trade	From	110	districts
Brick and cement works	„	4	„
Stone quarries	„	7	„
Canal traffic	„	3	„
Market gardens	„	3	„
		127	

Division I.

Shipbuilding	From	5	districts
Agriculture	„	17	„
Fisheries	„	6	„
		28	

Division II.

Tin plate works	From	12	districts
Iron and steel works	„	15	„
Pottery and glass works	„	6	„
Chemical works	„	10	„
Textile and clothing factories	„	16	„
Collieries	„	16	„
Sundry small industries	„	8	„
		83	

Division III.

Bad trade (unspecified)	From	12	districts
Completion of works	„	4	„
Special causes	„	2	„
		18	

Division IV.

USIONS.

There does not, then, appear from the above to be any evidence of widespread trade depression.

Of those industries which complain of distress caused directly by the severity of the weather the building trade forms the most conspicuous example. In this case suffering is general, and is not confined to any particular district in England. Opposed to this, in the sense that the men employed belong chiefly to one district and are engaged in an industry that is not directly affected by the weather, is the tin plate trade of Wales. This is the most strongly marked instance of local trade distress, affecting a great number of workers.

Turning to the other trades mentioned, there is the usual complaint of depression of agriculture, which contrasts strangely with the absence of distress in country districts spoken of above. The absence of any general complaint from the large cotton towns is also noticeable. But, beyond these few points there does not seem to be anything in the above tables that calls for especial remark.

ANALYSIS OF INDEX.

LIST of the PRINCIPAL HEADINGS in the following INDEX, with the pages at which they may be found.

PAGE

ABBEY MILLS (RELIEF WORKS) - - - - 823

AGRICULTURE:

1. *Agricultural Employment as affected by the severe weather and by the general depression of Agriculture* - - - 824

Women and Children - - - - 993

INDEX.

[*N.B.*—In this Index the Figures following the Names of the Witnesses, and those in the Analysis of Evidence of each Witness, refer to the Questions in the Evidence: the figures following *App.* (*2nd Rep.*) and *App.* (*3rd Rep.*) refer to the Pages in the Appendices; and the Numerals following *1st Rep.*, *2nd Rep.*, and *3rd Rep.*, to the Pages in the several Reports and the Proceedings of the Committee.]

A.

ABBEY (*RENFREW*). Letter from the Inspector of Poor for this parish, dated 25th February 1895, stating that there is exceptional distress among out-door workers, wholly due to the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 767.

ABBEY MILLS (*RELIEF WORKS*):

Special reference to the Abbey Mills scheme as a precedent to be considered in connection with work for the unemployed, *Benn* 3110–3112. 3165——Excellent work obtained from the men employed at Abbey Mills, witness strongly advocating payment of the current rate of wages in connection with similar schemes, *ib.* 3165.

Acceptance by the Mansion House Committee (for the relief of the unemployed) of the offer made by the London County Council of about thirty acres of waste land at Abbey Mills, at a rent fixed upon the basis of out-of-pocket expenditure, in order to provide an efficient test of work for the casual element, *Smart* 11199——Information as to the mode of procedure and management of the work at Abbey Mills, the men, when taken on, receiving a work ticket, with the rules printed on the back (copy of which is handed in); object of the scheme to provide for the permanent re-instatement of the men in some kind of work, *ib.* 11202-11205. 11362, 11363.

Explanation that out of the 372 applicants who were entered on the case papers in the first year, 224 finished their period of test work, the test period being fourteen days, at the end of which time the men came before the Committee and presented their schemes for settlement, either for migration, emigration, or in some other way, *Smart* 11206–11210——Financial details in connection with the scheme, the total expenditure amounting the first year to 1,315*l.* 1*s.* 1*d.*, of which 142*l.* represented the cost of management; no profit under the scheme, except that derived by a poor neighbourhood from the land being let out at reasonable charges to working men, *ib.* 11239–11244. 11364–11375.

Decision of the Mansion House Committee, in January 1894, to repeat the scheme of the previous year, waterside labour being greatly depressed and a large number of people out of work; improvement of the scheme by extending the area, removing the restriction as to the men being engaged in waterside labour, and reducing the age from sixty-four to fifty-five, *Smart* 11245–11247——Satisfaction of the London County Council valuer with the work done at Abbey Mills; description of an average day's work accomplished with a staff of forty-one men, *ib.* 11276–11280.

Total cost of 780*l.* incurred in 1895, only those cases being taken in hand that afforded a reasonable hope of re-instatement; extension of the time of working to three months, the works having been closed in the first week of June, *Smart* 11296–11299——Utility of the scheme as an experiment in dealing with the unemployed; witness is not aware of any attempt that has succeeded so well and worked so safely in spite of the smallness of the returns, *ib.* 11300–11304.

Abercarn (*Monmouth*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 376.

Aberdare (*Glamorgan*). Limited extent of distress in the Aberdare Urban District; sufficiency of a voluntary relief fund, *App.* (*2nd Rep.*) 330.

Aberdeen. Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 566——Information supplied by the Inspector of Poor respecting the amount of distress and the steps taken for its relief, *ib.* 612.

Reports, 1895—*continued.*

Abergavenny (*Monmouth*). Considerable amount of distress in the Abergavenny Urban District in February 1895; relief given by voluntary agencies, some additional employment having been provided by the District Council, *App.* (*2nd Rep.*) 267.

Abersychan (*Monmouth*). Very acute character of the local distress through the stoppage of ironworks; employment provided by the District Council, as well as by voluntary agencies, *App.* (*2nd Rep.*) 385.

Abertillery (*Monmouth*). Existence of much distress in the Abertillery Urban District in February 1895; voluntary relief given whilst the Council were preparing means of employment, *App.* (*2nd Rep.*) 267.

Aberystwith. Absence of exceptional distress in March, *App.* (*2nd Rep.*) 428.

Abingdon (*Berks*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief; an unemployed register not kept, *App.* (*2nd Rep.*) 64.

Able-bodied Poor. Definition of the term "able-bodied" for poor law purposes; limit of age usually applied, *Sir H. Owen* 651-655——Relief to able-bodied male persons on the ground of want of employment conditional under the Out-door Regulation Order of December 1852, on either the acceptance of an order of admission to the workhouse or the performance of an adequate task of work as a labour test; exceptions to this rule, *Vallance* 11534.

See also *Boards of Guardians. Farm and Labour Colonies. Labour Test. Migration of Labour. Out-door Relief. Poor Law System. Tramps and Vagrants.*

Accrington (*Lancaster*). Consideration of complaints on the part of Accrington as to the undue delay of the central Board in dealing with applications for sanction of loans for certain works; unavoidable delay in many of these cases, whilst in others very prompt action is taken, *Sir H. Owen* 675–689.

Letter from the town clerk, dated 1st March, explanatory of the amount of distress; relief by voluntary agencies, *App.* (*2nd Rep.*) 368, 369.

Acton (*Middlesex*). Amount of distress previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 418.

Afforestation. Suggestion that the State might promote afforestation profitably as a means of employment, *Alden* 2057–2063— Further advocacy of employment in afforestation, as upon the Crown lands, *ib.* 2172–2175. 2303, 2304. 2332–2334. 2449–2456.

Agricultural Training Homes. See *Colonisation. Farm and Labour Colonies. Hadleigh Farm Colony. Whitechapel.*

AGRICULTURE:

1. *Agricultural Employment as Affected by the Severe Weather and by the General Depression of Agriculture.*
2. *Migration of Agricultural Labourers to the Towns; Suggestions hereon for Improved Methods of Cultivation and for the Retention of Labour on the Land.*
3. *Wages and Social Condition of Labourers.*

1. *Agricultural Employment as Affected by the Severe Weather and by the General Depression of Agriculture:*

Information as to the general state of agricultural employment during the period from last autumn till the middle of January (before the frost); irregularity of such employment chiefly in the corn-growing and arable districts, though for certain reasons it was more continuous than usual until the frost set in, *Smith* 4655-4658. 4668—— Stoppage of agricultural employment severely felt in certain counties during the frost, whilst there has been a gradual increase of employment since the thaw, *ib.* 4658–4667.

Information on the foregoing subject obtained chiefly through Mr. Wilson Fox, as agricultural correspondent, *Smith* 4650–4665——Statement respecting the sources of information upon which the reports of Mr. Wilson Fox are founded; conclusion from these reports that until the recent frost agricultural employment was fairly continuous, *ib.* 4888–4898.

Probability that the lack of employment in agricultural districts is mainly due to the low price of produce and to the difficulty in getting land; doubt as to over-production being one of the causes, *Dodd* 7800–7810.

Communications from local authorities respecting the amount of distress through agricultural depression, *App.* (*2nd Rep.*) 57 *et seq.*

Memorandum

Reports, 1895—*continued.*

AGRICULTURE—continued.

1. *Agricultural Employment as Affected by the Severe Weather, &c.*—continued.

Memorandum prepared by Mr. Wilson Fox respecting the employment of enginemen and thatchers in 1894–95; *App.* (*2nd Rep.*) 512, 513.

Lists of places, seventeen in number, making complaint with special reference to distress through agricultural depression, *App.* (*3rd Rep.*) 807–812. 816. 820.

2. *Migration of Agricultural Labourers to the Towns; Suggestions hereon for Improved Methods of Cultivation and for the Retention of Labour on the Land:*

Probability of there being some method by which a greater population than at present can be employed upon the land; decided objection, however, to the State introducing protection in order to try and bolster up a failing industry, *Mackay* 5398–5411. 5428 *et seq.*; 5758–5761——Possibility of some scheme being devised by which the agricultural labourer could be prevented from coming into the towns, *Cox* 6471–6476.

Experience of witness that one of the chief causes of want of employment in the towns is the rural exodus from the villages; statistics showing that the decrease in the village population began in 1873 and is getting worse every year, *Tuckwell* 6948–6951. 6989 *et seq.*; 7217–7229——Argument that the exodus from the villages is due to the farmers throughout England continuing obsolete methods of farming with a diminished number of hands, and to the increasing discontent of the labourer with his condition, *ib.* 6952 *et seq.*; 7010–7022. 7141 *et seq.*; 7420–7423. 7442–7449.

Desirability of establishing agricultural technical schools or training colleges to teach improved methods of cultivating land, and of the educational endowments being re-converted to the use of *pauperes scholares*, for whom they were bequeathed, *Tuckwell* 7157–7159. 7165–7170.

Recommendation that the influx of agricultural labourers and others into the towns should be checked by the provision of allotments, proper cottages, and small holdings; disposition of witness to place confidence in, and responsibility upon, the parish councils in these matters, *Dodd* 7589–7592. 7636–7638. 7669–7674. 7805–7810.

Strong comment upon the decay of agricultural industry and upon the steady immigration of rural labourers into the towns, where labour is already far in excess of the demand; great aggravation thereby of the growing difficulties of the labour problem *Mather* 8975——Unnatural character of the accumulation of rural labour in the manufacturing districts, this resulting (in witness' view) from the imperfect development of agricultural industries, *ib.*

Contract between the highly-organised condition of the manufacturing industries and the undeveloped and declining condition of agriculture, *Mather* 8975——Enormous import of farm products from abroad, whilst land at home is lying unproductive and labour is languishing in the absence of a proper system of hand tillage in lieu of big farms and grain crops, *ib.* 8975. 8987–8992.

Argument in further support of the proposition that, in contrast with manufactures agriculture in this country has not been conducted with proper enterprise and skill, that the growing of grain crops cannot be continued profitably, that hand tillage should be more extensively employed, and more valuable and profitable products cultivated, *Mather* 9110–9126——Reiteration of the view that a large quantity of land is now cultivated for crops which could not possibly yield a profit, which land may be made to pay, *ib.* 9139–9143. 9165–9171.

Proposition that small settlements be established with State aid, not only in connection with training colonies, as proposed by witness, but irrespectively thereof, as a means of retaining rural labour upon the land, and of bringing it into more profitable cultivation, *Mather* 9373–9402.

Consideration of the question of the people of England being unable to grow food at a profit, *Lansbury* 10460–10468.

3. *Wages and Social Condition of Labourers:*

Necessity of a labouring man with a wife and four growing children having at least 21*s.* a week in order to live with any decency or comfort; estimate that the average wage of agricultural labourers in England, after making every allowance, is not more than 15*s.* per week, *Tuckwell* 6954, 6955. 7112 *et seq.*——Liability of the agricultural labourer to be turned out of his cottage if he complains of his surroundings, or votes against the will of his employer, *ib.* 6955. 7153–7156. 7248–7272.

Utter hopelessness of the position of the agricultural labourer in England, there being no chance of an increase on his 10*s.*, 12*s.*, or 14*s.* wages per week, and the end being the workhouse, *Tuckwell* 6955. 7415–7419——Comparison of the agricultural systems of France and England, the French peasant being comfortable, independent, and full of hope and happiness, while the English peasant is degraded, underpaid, servile, and despairing, *ib.* 6979, 6980. 7037–7042. 7065–7073. 7086–7088. 7171 *et seq.*

Reports, 1895 – *continued.*

AGRICULTURE—continued.

3. *Wages and Social Condition of Labourers*—continued.

General statement that agricultural wages have not risen during the last ten years, *Tuckwell* 7115–7119——Table handed in showing how the estimate of 21*s.*, the minimum sum per week on which a labourer with a wife and four children can live, is made up; witness has no experience of such a family living decently and comfortably on 14*s.* per week, *ib.* 7190-7216.

Airdrie (*Lanark*). Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 567.

Alcester and Feckenham (*Warwick and Worcester*). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 365.

Alden, Percy, M.A. (Analysis of his Evidence.)—Several capacities in which witness has become conversant with the West Ham district; reference more especially to the prominent part taken by him in the recent census of the borough with reference to the number of unemployed, 1976–1980——Constitution of the local committee by whom the census was carried out, it having been completed about the 20th January, after a house to house visitation over nearly the whole of the borough, 1980–1983. 1922. 1997–1999.

Result of the census that it showed about 10,140 workers out of employment in the borough, including about 1,000 women; very large proportion in the southern part of the borough, 1982–1999——Difficulty in arriving at any fairly accurate estimate of the number of casual labourers, 1993–1996——Enormous increase during the frost in the foregoing numbers, 2000.

Particulars as to the several trades and the different classes of workmen chiefly affected by the severe weather and by depression of business; reference especially to the Thames Shipbuilding Company, the Docks, agriculture, &c., 2001–2022——Inadequacy of the poor law machinery for coping with the destitution and distress, as in Canning Town; over-crowded state of the workhouse and the stone yards, 2023, 2024——Large class of unemployed whom the poor law system does not touch, who are prepared to work but to whom pauperism and disfranchisement are repugnant, 2024–2029.

Suggestion that the poor law restrictions be modified during severe winters, and that relief be afforded on certain conditions but without disfranchisement, 2030, 2031——Exception taken to the present labour tests as too obnoxious, 2031, 2032.

Grounds for the contention that when distress is exceptional the State should assist the local authorities by subsidies, and should exercise supervision over works promoted by the latter for the unemployed, such as farm colonies in Essex, 2033–2045——Suggestions for a labour register of the unemployed, as well as for a system of State subsidies in aid of local relief works, 2034, 2035——Reference to statistics as showing that an enormous proportion of the working population of West Ham have migrated from other districts; large immigration of agricultural labourers, 2045–2056. 2099.

Suggestion that the State might promote afforestation, profitably, as a means of employment, 2057–2063——Proposed employment also upon the reclamation of slob-lands and of waste lands, 2064, 2065——Satisfactory result of the employment of some men of the "casual" class upon a farm colony at Hadleigh; belief that about half of these never returned to West Ham as applicants for relief, 2066–2080——Advantage of work on farms colonies in the case of men who are physically weak, 2077.

Grounds upon which witness differed from the proposal of Mr. Hills to employ men upon relief works at a much lower wage than the trades union rate of wages, 2081–2097——Much better work and value to be obtained by paying at the usual rate, 2087——Check upon abuse by not employing labourers for a full day or for the whole week, when a minimum rate of wages, or about 6*d.* an hour, is paid, 2088–2097.

Large increase of employment in different trades in West Ham when the severe weather comes to an end, this not equally applying to the class of agricultural labourers, 2098–2105——Expediency of the guardians being empowered to give relief in exceptional weather, without disfranchisement, 2106——Difficulties of adequate poor relief in West Ham on exceptional occasions, so that witness submits there should be a State grant available for the district and for other places labouring under similar difficulties, 2107–2112.

[Second Examination.]—Explanation that the whole of the 10,000 persons reported as unemployed were not absolutely destitute; inclusion in this total of many young persons down to sixteen years, 2113–2131——Fairly thrifty character of the working classes in the district, so that many have savings to fall back upon in times of distress, 2132–2135.

Unsatisfactory operation of the poor law system in West Ham, the labour-test in the

Reports, 1895—*continued.*

Alden, Percy, M.A. (Analysis of his Evidence)—*continued.*

the stoneyard being objectionable and demoralising, whilst it could not be efficiently used on account of the great number of applicants, 2136–2143. 2314–2316——Advantage of employment for the more respectable men (who cannot find work) not only on farm colonies, as at Hadleigh Farm, but upon industries in connection therewith, though not in competition with the open market; claim to employment in these cases without pauperism being entailed, 2144–2156. 2235–2240. 2311–2313.

Consideration of, and reply to, objections to the proposal that the men for whom work is to be found by the State should be paid the union rate of wages, 6*d.* or 6½*d.* an hour, 2157–2168. 2192–2199. 2372–2403. 2424–2441——Belief that subsidies from the State in aid of employment on reproductive relief works and on land, with proper classification and supervision, would have a most beneficial effect in enabling the men to keep themselves, and that in time such works might be self-supporting, 2169–2171. 2235–2269. 2297–2313. 2413–2421. 2450–2456——Suggestions in further support of employment in afforestation, as upon the Crown lands, 2172–2175. 2303, 2304. 2332–2334. 2449–2456.

Advantage if guardians had power to give relief without disfranchisement, and if they were empowered to acquire land for employment thereon, in lieu of the stoneyard test, 2178–2181. 2453——Explanations with further reference to the proposed system of farm colonies, with workshops, &c., and in reply to objections on the subject, 2182–2191. 2235–2269. 2287–2295.

Number of men in the West Ham district out of work in winter, irrespectively of severe weather, and also in the summer, relatively to the total population, 2200–2217——Relief at the stoneyard partly in money and partly in kind, 2218–2220——Considerable proportion of the men out of work who have votes, and who have objected to go to the stoneyard, because of losing them, 2221–2228.

Argument as to the responsibility of the State with reference to work for the unemployed, 2229–2234. 2305–2309. 2449–2451——Consideration of experiments in Paris and elsewhere in the finding of work for the unemployed, the results not being satisfactory because the conditions and their administration were wrong; expediency of further experiments on an improved system, 2241–2269. 2287–2313.

Intimate experience of witness with the Canning Town district for more than four years, during the whole of which there has been a surplus population in the labour market of West Ham, 2270–2274——Benefit from the increased employment at the Beckton Gasworks in winter, there being then a slackness at the docks, 2275–2279.

Entire inability of the Corporation or of voluntary agencies to provide works for the unemployed, save for a very small proportion of them, 2280. 2296–2299——Special importance of permanent measures for the employment of casuals, from whom the loafing class are largely recruited, 2281–2286——Conclusion as to the importance of some steps being taken to prevent the influx of men in search of casual employment, this class being very largely in excess as compared with the work to be had at the docks, &c., 2317–2327——Value of employment on land as a means of restoring the health of men who are temporarily weak; desire of many to get back on to the land, 2328–2331.

Difficulty in suggesting any scheme for providing sufficient work in such exceptional winters as the present, 2335, 2336——Further approval of a suspension of the rule as to disfranchisement, 2336–2341. 2410–2412.

Examination in the further reference to the total number out of employment in West Ham, in winter and in summer, and the several classes of which composed, 2344–2371——Value of a register of the unemployed from month to month, 2352——Grounds for concluding that the number of unemployed will gradually increase and that a system of permanent State employment will prove necessary, to be administered under careful restrictions, and the unemployed to be registered and classified, 2352 *et seq.*

Probability that many of the unemployed if put upon the land would not produce such good results as regular labourers, though witness submits that the former should be paid at the ordinary rate, 2362–2378. 2388–2403——Operation of loan societies in the East End, the men being thus helped in winter, 2404–2409.

Expected willingness of local authorities to contribute in co-operation with an Imperial fund for the unemployed, 2442–2445——Opinion that the fund should be administered by the municipal authority, and that they might be called upon to contribute as much as the State, 2457 2464——Approval of a proposal that the fund be used only for the deserving poor, and that disqualification of the recipients should not result, 2464–2467.

Dissent from the view that a State fund would have any demoralising tendency, 2468, 2469——Expediency of half the required amount being found by the State instead of the whole amount being provided by local rate and voluntary agencies, 2470–2476.

Statement to the effect that the distress in West Ham is more amongst the general

Reports, 1895—*continued.*

Alden, Percy, M.A. (Analysis of his Evidence)—*continued.*

labouring class than amongst skilled men, 2477–2488. 2501–2512——Extent to which the unemployed are members of trades unions and receive out-of-work money, 2482–2484. 2501–2509——Beneficial results anticipated if the guardians had power to acquire land and to use it as a test instead of the stone-yard; difficulty, however, in severe frosts, 2489-2495.

Conditions and restrictions to be imposed in connection with applications for employment provided by means of a State fund, 2496–2500——Employment of women at West Ham chiefly in the jam works and india-rubber works, 2510–2512——Decreased employment in the ship-building trade and causes thereof, 2513–2523.

Effect of the rate of wages in London in causing an influx of labour, 2524, 2525——Rate of payment in money and in kind to out-relief at West Ham, 2526, 2527——Partial effect of the dockers' strike upon the charge made by the dock companies in their system of employment, 2529, 2530.

Aldershot. Local explanations in February as to the amount of distress in this urban district and the remedial measures adopted, *App.* (*2nd Rep.*) 216.

Alfreton (*Derby*). Absence of exceptional distress from want of employment, *App.* (*2nd Rep.*) 460.

Aliens (*Immigration*). Suggestion whether some measures might not be adopted for checking the immigration of aliens, many of them of the pauper class; prejudicial effect of these immigrants in Glasgow, *Hunter* 8293–8298——Explanation as regards foreign immigrants, and, on the other hand, the still large emigration from this country, that witness does not object to the former class if able-bodied and not impoverished on arrival, *ib.* 8459–8473. 8489.——*See* also *Jews* (*East End*).

Alloa (*Clackmannan*). Statements as to the amount of distress in this parish and the means adopted for its alleviation, *App.* (*3rd Rep.*) 567. 662.

ALLOTMENTS:

Grounds for concluding that an extended application of the Allotments Act would largely meet the distress from non-employment in agricultural districts, and would check migration from such districts into West Ham and into the towns generally in search of work, *Keir-Hardie* 1136-1141. 1159–1168. 1231–1233.

Particulars of an attempt made by witness in a very poor village in Warwickshire to improve the condition of the labourer by means of allotments; success of the experiment, the yield of the land in 1888 being about forty-two bushels of wheat per acre, the average throughout the country being twenty-eight, *Tuckwell* 6959 *et seq.*; 7023 *et seq.*; 7229–7244——Explanation that there are two reasons why allotment land bears so much more than farmers' land, namely: that the former is much better cultivated than the latter, the labourer having no labour bill to pay, and that the labourer grows for consumption whilst the farmer grows for sale, *ib.* 6962–6965.

Statement that when witness left Warwickshire his successor repudiated the allotment scheme; inability of witness to lease any of the land for the purpose of building cottages without the bishop's consent, which was refused, *Tuckwell* 6966–6970. 7138–7140. 7401–7467.

Evidence as to the facility of conversion of allotments into small holdings and as to the extreme importance of the latter, *Tuckwell* 6970 *et seq.*——Great success of Lord Tollemache's pasture allotments at Pockforton, the labourers all having money in the savings banks while the result to Lord Tollemache is that he gets 2½ per cent. on his outlay, and the pick of the finest labourers in the country, *ib.* 6974–6977.

Dissatisfaction with recent legislation in regard to allotments, as the labourer cannot get as much land as he wants at a fair rent, nor have perpetual tenure of it as long as his rent is paid, *Tuckwell* 6978. 7470 *et seq.*——Admission that witness' ideal allottee would have to work on an average eighty-one hours per week, including the work done for the farmer and on the allotment; contention, however, that he would be a gainer morally and physically, *ib.* 7028 *et seq.*; 7134-7137.

View of witness that if the allotment holders, by growing larger quantities of stuff than they consumed, displaced the produce grown by the farmers there would be no serious difficulty, but rather a national gain; probability of the allottee being able to prevent any reduction of his wages, *Tuckwell* 7089–7096. 7163, 7164——Object of witness' proposals in regard to allotments and small holdings to bring the people back from the towns to the country; necessity of some lapse of time for the operation of the legislative changes, *ib.* 7120–7130. 7161, 7162. 7277–7280. 7339 *et seq.*

Conclusion that it would be better for the agricultural labourers' cottages to be separate, with the gardens or allotments adjacent to them, than for the cottages to be crowded together on the allotments, *Tuckwell* 7138–7140——Advisability of providing allotments by private effort wherever possible, as that course is much better and cheaper

Reports, 1895—*continued.*

ALLOTMENTS—continued.

cheaper than resorting to legislative machinery, *ib.* 7244——Desirability of anything like a competitive rent being avoided; idea of witness that the land to be allotted should be valued and then let by the municipality at an economic rent, *ib.* 7281 *et seq.*

Contention that a tenant under witness' system would be much better off than a tenant under an ordinary landlord, the rent payable by the former being somewhat less than that payable by the latter during the first forty years, and considerably less after the landowner is paid out, *Tuckwell* 7332 *et seq.*; 7430-7436——Explanation that under witness' scheme the labourer who had become a farmer by his own exertions would be allowed to have as many allotments as he could work, sub-letting being most rigidly prevented, *ib.* 7449–7455.

Attitude of the Charity Commissioners rather opposed to allotments, the powers given them under the Allotments Act of 1882 to exempt land from that Act being largely exercised, *Dodd* 7519–7523.

Attention drawn to the fact that the guardians by virtue of the early statutes of this century, which are still in force, although regarded as obsolete, can acquire any amount of land and let it out in allotments under the rules of the Local Government Board; copy of a petition from labourers, for the issue of such rules, handed in, *Dodd* 7543 *et seq.*; 7613–7627. 7654, 7655.

Letter from the Rev. C. L. E. Parker in reply to certain statements in the evidence of Mr. Tuckwell, *App.* (*3rd Rep.*) 546——Letter from Mr. Tuckwell dissenting from certain explanations by Mr. Parker as regards the Stockton Allotments, *ib.*

Alnwick (*Northumberland*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 288.

Alton (*Hants*). Letter from the clerk to the town council, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 81——Absence of exceptional distress in the rural district of Alton in February, *ib.* 316.

Altrincham (*Chester*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 81.

AMOUNT AND CAUSES OF DISTRESS:

Circular letter from the Local Government Board (issued at the request of the Chairman of the Select Committee) to the mayors of towns and the chairmen of district councils, dated 19th February, requesting information as to the amount and cause of local distress, the steps being taken to meet the distress, the keeping of a register and the results shown thereby, and inviting suggestions on the subject, *1st Rep. p.* 1.

View of the Board previously to the severe weather that the conditions generally as regards the prevalence of distress were more favourable than at the corresponding period of last year; tendency, however, to an increase in some districts towards the end of January, *Sir H. Owen* 2.

Circular issued by the Board on 24th January to the guardians of the several metropolitan unions and of ninety-three provincial unions, requesting information as to the extent and character of the distress during the winter of 1894–95 as compared with recent years, and the arrangements contemplated by the guardians on the subject; details as to the replies received, *Sir H. Owen* 2 *et seq.*——Conclusion that the foregoing information as to the condition of the unemployed and the amount of relief and of distress in the different unions is based upon the reports of the relieving officers, and that there has been no methodical or systematic inquiry by the latter or by the guardians on the subject, *ib.* 142–145.

Circular sent by the Central Board to the thirteen Inspectors of Districts asking for information as regards distress among able-bodied men; varying character of the reports in reply respecting agricultural labourers and others, *Sir H. Owen* 201–209.

Further explanation with reference to the circular of the 24th January and the general tenor of the replies as regards the question of increased pauperism, *Sir H. Owen* 316–320——Reliable character of the information supplied by the guardians as to the number of applications for relief and the amount of pauperism, this not applying to their replies as to the extent of distress among non-applicants for relief, *ib.* 376–382.

Total of 540 replies now received in response to the circular issued at the request of the Committee, *Sir H. Owen* 549–551——Inference from the returns submitted by witness that through the almost entire stoppage of work in certain districts and the depression of industries there is extensive destitution among the classes who have not applied for relief, *ib.* 658, 659.

Reports, 1895—*continued.*

Amount and Causes of Distress—continued.

Data submitted in detail in support of the conclusion that outside the official view of the situation (as represented by Sir Hugh Owen), there is a very large amount of distress and destitution of which the present Committee should take cognisance, *Keir-Hardie* 700 *et seq.*——Establishment of an unemployed committee in almost every industrial centre throughout the country, comprising, among other representatives, delegates from various trades unions, *ib.* 700–702. 718–723——Circular recently sent by witness to these committees, requesting information as to the extent and character of the distress and the local action taken, and inviting suggestions as to the remedial measures to be adopted by the locality or by the nation, *ib.* 700——Instances of distress at Sheffield, Liverpool, Glasgow, and various other towns, through want of employment, *ib.* 867–875.

Detailed statement respecting six different causes which may give rise to lack of employment and to increase of distress, *C. Booth* 10519. 10532. 10710–10712.

Summary of the replies received to the circular letter addressed to the mayors of towns and the chairmen of district councils as to the nature and extent of the prevailing distress and the steps taken to meet the distress, 1*st Rep.* iii——Replies received from 596 localties, representing a population of 6,797,231, to the effect that there is no exceptional distress, *ib.*——Replies from 454 localities, representing a population of 10,381,607, to the effect that there is no exceptional distress due solely to the severity of the winter, *ib.*

Conclusions of the Committee as to the existence of grave distress among the working classes throughout the country, owing largely to the severity of the winter, there being also in many places a want of employment which will remain in force after milder weather has opened the outdoor trades, 1*st Rep.* iv.

Copy of circular letter from the Local Government Board to the several Inspectors in England and Wales, dated 13th February 1895, requesting information as to the extent of destitution amongst able-bodied men in the several districts, the exceptional measures, if any, taken by the guardians, the relief provided by charitable funds, &c., *App.* (2*nd Rep.*) 20——Reports in reply to the foregoing from the several inspectors submitting information in detail, *ib.* 21–56.

Circular letter from the Local Government Board to the various vestries and rural and urban district authorities generally, issued at the request of the Select Committee, dated 19th February 1895, requesting information as to the extent and cause of any exceptional distress, the steps adopted by public authorities or voluntary agencies, the average daily relief in the week ended 16th February, &c., *App.* (2*nd Rep.*) 57——Replies from the various local authorities in England and Wales submitting information in response to the foregoing, *ib.* 57-470——Replies from local authorities throughout Scotland, *App.* (3*rd Rep.*) 565 *et seq.*

Table showing the nature of the distress reported as existing in England and Wales in February 1895, with the number of districts making returns, and the population and percentages of population of such districts, *App.* (3*rd Rep.*) 803——Summary of returns showing the extent to which distress is reported as due to severe weather, bad trade, &c., *ib.*

Lists of places with trade depression showing in each case the cause of local distress, *App.* (3*rd Rep.*) 807-819——Summary of the foregoing, showing the number of complaints under different heads, *ib.* 820.

Summary by the Committee of the replies received in answer to the letter addressed to the mayors of towns and chairmen of district councils in England and Wales, 3*rd Rep.* iii—— Absence of exceptional distress in 920 localities, representing a population of 10,291,600 persons, *ib.*——Existence of exceptional distress in 475 localities, with a population of 11,792,527 persons, due solely to the severity of the winter, *ib.*

Exceptional want of employment in 179 localities, with a population of 4,507,267, owing to slackness of trade, depression of agriculture, or to particular local or industrial causes, 3*rd Rep.* iii.

Australia. Institution of many municipal works in Australia for the purpose of relief, resulting in great congestion in the towns, *Mackay* 5803.

Austria. Statement showing the number of workpeople employed in certain industries in each of the years 1883-91; *App.* (*3rd Rep.*) 509.

Aves, Ernest. (Analysis of his Evidence.)—Witness has made a special study of the building trades in London in connection with some of Mr. Charles Booth's work, the result of which has been published, 10874. 10943 *et seq.*——Information obtained by him respecting the building trades by means of circulars sent round to a very large number of *employés* and representatives of various trade interests, and by interviews with individual *employés*, 10875. 10944–10949.

Composite nature of the building trade group, disturbing influences, such as severe weather, affecting the various sections in a different degree, 10876–10880——Distinction drawn between work on new buildings and work, in the way of repairs and renewals, on existing buildings, employment on the latter being more protected from the weather and more subject to special social and economic influences, 10881–10883. 10950–10954——Work in the special trade of shop-fitting fairly continuous throughout the year, a certain amount of export trade tending to equalise it; slight increase of employment in this branch in the winter when the shops are being fitted up for the summer season, 10881–10883.

Average of 9½*d.* per hour as the union rate of wages for almost every branch of the skilled building trades, the chief exceptions being the masons employed on granite and the plumbers, earning 10½*d.*, the masons employed as fixers, earning 10¼*d.* and the 8½*d.* rate for painters; statement that the same rates are paid on the whole,

Reports, 1895—*continued.*

Aves, Ernest. (Analysis of his Evidence)—*continued.*

whole, in most of the main branches, to non-union men, 10884–10888. 10955–10962. 10968–10972——Division of the labourers into three main classes; particulars hereon, 10889–10891.

Evidence to the effect that the labourers in the first and second classes are paid 7*d.* per hour, and those in the third class 6½*d.* per hour; probability that a builder's labourer's wages average about 23*s.* 3*d.* per week for the whole year, 10892. 10962–10967——Statement that the labourers most subject to the influence of the weather are the excavators, who cannot work when the ground is frozen, and those least subject to the effects of the weather are the scaffolders, 10893–10895.

Opinion that on the whole the excavators are the worst off, their earnings being very uncertain, 10896, 10897——No doubt that a very large majority of the labourers in the building trades were born in the country, 10898.

Belief that a very large proportion of the bricklayers, carpenters, plasterers, joiners, and masons were not only born, but received their initial training, in the country and came up in the first instance to some good job in London; tendency of the result of the special inquiries made by Mr. Llewellyn Smith to confirm this belief, 10898–10906. 10983–10986——Statement that the exact number of hours per week worked by the labourers varies with the season, being longer in summer than in winter, but that according to the agreement of 1892 it averages out for the whole year at just about forty-eight hours per week, 10907–10910.

Irregularity of employment in the building trade, due to the weather, accentuated by the constant shifting of the men from one employer to another, which is very largely due to the contract system, the men often being taken on for the individual job, 10911 *et seq.*; 10999 *et seq.*——Common practice of employers who send men to do odd jobs in private houses to have a permanent staff, thus ensuring more continuous work to the men; desirability of this practice being more widely adopted, 10917–10920.

Conclusion that the introduction of machinery has not displaced any considerable number of workmen in any branch of the skilled building trades; opinion that the introduction of new processes and new materials has had a more important disturbing influence in the trade than machinery, 10921 *et seq.*——Complaint of the labourers that they are displaced by the hoister in the Scotch steam derrick; view of witness, however, that although a certain number may be displaced, the effect of the introduction of machinery is rather to change the character of the labourer's work than to eliminate him, 10921 *et seq.*

Evidence to the effect that men who may be out of work do not easily fall back upon alternative employments, the skilled men keeping, as a rule, exclusively to their own trade; doubt as to there being much for them to fall back upon, except in the case of painters, many of whom are not painters proper but do all kinds of work during the year, 10927–10929.

Opinion that a certain amount of the cessation of work during inclement weather is not always due to absolute necessity, but rather to the convenience of the employer, 10930–10932. 10991–10998.

Possibility of the practice of putting work out to be done at a particular time of the year when the trade is normally slack being carried out to a much greater extent than it is at present; admission that this plan would, while giving more continuity of work to the skilled men, tend to make the more necessitous cases still harder, 10932–10936. 10987 *et seq.*; 11000–11004——Certainty that the building trade has been fairly prosperous in London during the last five years; opinion that no very special case has been made out for any change or particular remedy in that trade, 10937–10944. 10973 *et seq.*

Axbridge (*Somerset*). Small amount of distress; sufficiency of voluntary relief, *App.* (2*nd Rep.*) 353.

Axminster (*Devon*). Absence of exceptional distress in this rural district in February, *App.* (2*nd Rep.*) 316.

Aylesbury (*Bucks*). Distress due to the severe weather; relief through voluntary agencies, *App.* (2*nd Rep.*) 402.

Ayr. Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (3*rd Rep.*) 570——Information supplied by the Inspector of Poor as to the extent and character of the local distress and the remedial measures adopted, *ib.* 637.

B.

Bacup Municipal Borough (*Lancaster*). Explanations in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 133.

Baildon (*York*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 82.

Bakewell (*Derby*). Amount of distress previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 410.

Baking Trade (*Scotland*). Varying hours in the baking trade in Glasgow and the west of Scotland, an eight hours' day being needed in this trade, *Hunter* 8397–8399. 8550–8559.

Bala (*Merioneth*). Letter from Mr. D. Jones, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 83.

Banbury (*Oxford*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Information from the locality respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 64.

Barking (*Essex*). Local explanations in February as to the amount of distress in this urban district and the remedial measures adopted, *App.* (*2nd Rep.*) 217.

Barnes (*Surrey*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 382.

Barnet (*Hertford*). Letter from the clerk of the Barnet Urban District, dated 25th February 1895, respecting the amount of local distress and the relief provided, *App.* (*2nd Rep.*) 312.

Barnsley (*York*). Letter received by the Local Government Board from the Barnsley Union on 5th February, there being no exceptional distress at that period, *Sir H. Owen* 9.

Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 65——Absence of necessity for any special measures of relief in the rural district of Barnsley, *ib.* 442.

Barnstaple (*Devon*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 317——Amount of distress in Barnstaple Municipal Borough previously to 23rd March; relief provided, *ib.* 415.

Barony (*Glasgow and Lanark*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 730–732——Letters in January 1895 from several assistant Inspectors of Poor submitting particulars for their respective districts, *ib.* 730–732.

Barrow-in-Furness (*Lancaster*). Letter from the Barrow-in-Furness Union on 7th February; absence of any material increase of relief during the winter months, the distress not being exceptional, *Sir H. Owen* 9–11.

Limited amount of distress in this district; relief through voluntary agencies, *App.* (*2nd Rep.*) 394.

Barrow-on-Soar (*Leicester*). Amount of distress in this district; character of the relief given, *App.* (*2nd Rep.*) 183.

Barry Urban District (*Glamorgan*). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep.*) 268.

Barton (*Lincoln*). Result of the inquiry in the case of the Barton-upon-Irwell Union, that up to the 6th February there was no exceptional distress in consequence of the severity of the weather, *Sir A. Owen* 12.

Letter from Mr. H. R. Dix, dated Barton-upon-Humber, 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 83.

Basford Rural District (*Nottingham and Derby*). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 443.

Reports, 1895—*continued.*

Basingstoke (*Hants*). Official explanations in February as to the amount of distress in the municipal borough and the remedial measures adopted, *App.* (*2nd Rep.*) 210——Absence of exceptional distress in Basingstoke Rural District in February, *ib.* 317.

Bath (*Somerset*). Letter from Bath Union on 31st January to the effect that there was no exceptional distress at that date, *Sir H. Owen* 12.

Particulars supplied by the town clerk, in letter dated 20th February 1895, respecting the amount of distress in the county borough from want of employment, the relief afforded by public authorities and voluntary agencies respectively, &c., *App.* (*2nd Rep.*) 58, 59.

Absence of exceptional distress in Bath Rural District in March, *App.* (*2nd Rep.*) 428.

Bathgate (*Linlithgow*). Statement as to there being no exceptional distress in this parish, *App.* (*3rd Rep.*) 742.

Batley (*York*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 258, 259.

BATTERSEA:

Report from relieving officers in Battersea as to the number of applications for relief and the distress through want of employment in the building and other trades, though not followed by applications for relief, *Sir H. Owen* 136, 137.

As surveyor to the parish of St. Mary, Battersea, witness submits explanations in detail respecting the distress in the parish from want of employment in different industries, the measures adopted by the vestry, and the expenditure incurred in relieving the distress, *Pilditch* 5020 *et seq.*

Expenditure of between 600*l.* and 700*l.* in the winter of 1890, and again in 1891, in clearing the roads from snow; less severe weather in 1892, when the expenditure was under 300*l.*; *Pilditch* 5022–5024——Various kinds of employment provided in the winter of 1892-93, the total cost having been between 6,000*l.* and 7,000*l.*; large number of men employed, *ib.* 5024, 5025——Very severe weather in 1893-94, a vast amount of work having been provided in the winter months entailing an expenditure of nearly 14,000*l.*; *ib.* 5024–5030.

Practice in the parish to arrange in advance for works to be done late in the year or during the winter, *Pilditch* 5029, 5031, 5032. 5039, 5040——Expenditure of nearly 5,500*l.* up to the present time (26th March) upon works carried on during the past winter; provision of 10,000*l.* or 12,000*l.* for works in the next winter, *ib.* 5029–5033. 5046-5054.

Direct employment given by the vestry, instead of resorting to contract labour, overtime being abolished, so as to employ the greatest possible number of men, *Pilditch* 5041–5045——Large expenditure since 1890 in local improvements and works of various kinds, witness submitting that much benefit is conferred upon genuine unemployed men (apart from "loafers"), that the works are efficiently carried out, and that many men are enabled to tide through the severe weather who would otherwise apply for poor relief, *ib.* 5046 *et seq.*

Better character of men obtainable for the works in winter than in summer; these men not caring to work with the "loafer" class, *Pilditch* 5057–5060. 5066 5071. 5081–5086. 5154——Better work obtained from the men by the vestry than is obtained from those who work under the poor law, *ib.* 5074–5086.

Denial that it is a disadvantage that men should look forward for work known to be provided for them in the winter, though it is necessary to take precautions against abuse and to restrict employment to those residing in Battersea, *Pilditch* 5090 *et seq.* ——Limited extent to which employment can be provided for all who apply for it; less pressure if other parishes made equal provision, *ib.* 5103–5110. 5134-5137. 5138-5154——Low rates in Battersea, the system of work for the unemployed not increasing them, *ib.* 5120–5126.

Large employment of male workers as compared with females, *Pilditch* 5127 5130 ——Minority of the vestry opposed to the system in question, *ib.* 5131–5133—— Difficulty in providing extensive work year by year, whilst the creation of work is studiously avoided, *ib.* 5138. 5150.

Official communication as to the amount of distress in the parish; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 201.

Battle (*Sussex*). Absence of exceptional distress in the Battle Urban District, *App.* (*2nd Rep.*) 84——Similar statement as regards the rural district in February, *ib.* 289.

Beckenham (*Kent*). Particulars supplied by Mr. F. Stevens, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 149.

Reports, 1895—*continued.*

Bedford. Statement showing the action taken or proposed to be taken as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Letter respecting the extent of the local distress in the municipal borough and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 65 ——Limited extent of distress in the rural district in February; voluntary agencies at work, *ib.* 317.

Beet-root. Conclusion that beet-root may be grown in this country, and its saccharine properties developed as successfully as abroad, *Mather* 9125, 9126.

Belgium. Visit of witness to the Belgian labour colonies in 1880, his report having been based upon a short inspection, and upon information supplied by the director, *Willink* 8796, 8797——Total of three of these colonies, which are in the nature of penal institutions for able-bodied vagabonds above the age of fourteen, and for some other vagrants or mendicants, the several communes paying so much per head per day, as fixed yearly by Government, *ib.* 8798–8811.

Admission of some inmates who come voluntarily, whilst the same vagrants are sent there again and again, *Willink* 8806. 8812. 8116——Extremely good discipline enforced, the inmates working much better than in the Dutch beggar colonies, *ib.* 8814–8816.

Statement showing the number of workpeople employed in certain industries in the several years, 1880–92; *App.* (*3rd Rep.*) 509.

Details supplied by Mr. Moore respecting the penal and voluntary farm colonies in Belgium, *App.* 529, 530.

Bell, James. (Analysis of his Evidence.)—Witness, who is Lord Provost of Glasgow, submits a written statement respecting relief works in the City, and the steps taken generally for dealing with distress, 7811–7815.

About seven periods of distress in Glasgow since 1848, there having been no undue distress this year from want of employment till the exceptionally severe weather set in, 7815–7817. 7835–7838——Institution, about the end of January, of relief works under the Corporation, with a labour test; expenditure of 4,854*l.* the men being paid 1*s.* a day, with three meals, the material resulting from their labour representing only 1,894*l.*; 7818–7828. 7833, 7834. 8010–8015——Receipt from the citizens of about 11,000*l.* in money and food; liberal expenditure in the distribution of soup and bread, about 5,000*l.* of this fund being still in hand, 7818, 7819. 7831, 7832. 7845. 7849. 7921. 8022.

Discontinuance of the labour test, with a daily wage, on the 2nd March, piecework having been substituted (with two meals a day), by which a man could earn 7*s.* in three or four days with ordinary diligence; great reduction thereupon in the number of applicants for work, 7822. 7828. 7839–7844——Very little distress among skilled artisans or in the building and other trades, apart from the actual labourers, 7835–7838. 7874–7876. 7973–7976——Agitation among the men against piecework, followed by a strike of very short duration, 7840.

Various kinds of work stopped by the severe frost; great increase also in the death-rate, 7845. 8023–8025——Very successful utilisation of the police in connection with the distribution of the excessively liberal benefactions of the citizens; several other checks before distribution, 7845–7849. 7922. 7927–7934. 8016–8022——Belief as to the very limited extent to which the distribution of relief had any injurious or degrading effect upon the recipients, 7850, 7851.

Statement as to there having been no room for the employment of those in distress in street-cleaning or other municipal work, 7852, 7853——Information respecting two farms held by the Corporation, the city refuse being disposed of thereon, and the larger farm being made productive and greatly increased in value; permanent employment of only thirty-two men on the two farms, 7854–7864. 7871. 7991–8009. 8072——Explanation as to the Clyde Trustees depositing the river dredging in the sea instead of reclaiming riverside land with it; undue cost in the latter case, 7865–7871.

Grounds for strongly objecting to a system of farm colonies as a means of employment in times of distress; main objection that very little employment could be usefully provided thereby, 7872–7876. 7882. 7958–7962—— Frequent instances of bricklayers going to America where they earn very high wages, and returning to Glasgow in the winter time, 7875. 7935–7937——Contention that neither the Government nor the local authorities should be responsible for the provision of work for the maintenance of persons out of employment, 7877–7891.

Several very acute periods of distress in Glasgow, the action of the municipal authorities combined with the liberality of the citizens having sufficed to meet the pressure; difficulty probably in small towns, 7877–7879. 7882. 7952, 7953. 7973–7990 ——Doubt as to any better return from other modes of employment than from stone-breaking, 7885–7887.

Reports, 1895—*continued.*

Bell, James. (Analysis of his Evidence)—*continued.*

Great facility given, on the score of humanity, to applications for relief during the exceptional frost, though, as a rule, certain tests are doubtless necessary, such as piecework, 7896–7906——Savings in the masons' trade and other trades in Glasgow against times of distress, the applicants for work being mainly from the class of labourers, 7907–7920.

Reference to the Citizens' Relief Fund as not having entailed any charge upon the rates, 7921, 7922. 7966, 7967——Objection to payment at the trades union rate of wages, save by piecework, 7923–7926——Very few agricultural labourers who availed themselves of the relief works, 7938–7940.

Large expenditure of the Corporation in buildings and public works; decided objection to employment upon these being postponed till the winter in the interests of the unemployed, 7940–7947——Reiteration of the view that in no instance should State aid be given to the unemployed, either directly or by means of works; unanimous opinion of the members of the Glasgow Corporation to the same effect, 7948–7958. 7977–7982. 8028.

Information respecting the Common Good Fund of Glasgow, which is administered by the Corporation, the income being 40,000*l.* a year, and the capital being zealously preserved, 7964–7972. 8026, 8027——Explanation that in contending that local or municipal authorities, as at Glasgow, should not be responsible for finding work for the unemployed witness does not refer to the Poor Law authorities and is not well conversant with their powers in the matter, 7977–7990. 8052, 8053. 8065, 8066.

Examination as to the responsibility assumed by the Corporation in authorising expenditure on relief works or stoneyards, irrespectively of any claim upon the rates for recouping the cost, 8029–8053——Non-objection to a small rate being levied in small towns for the relief of exceptional distress, where no other funds are available, 8053–8057.

Important effect of the exceptionally severe weather upon the death rate, irrespectively of insufficiency of food through dearth of employment, 8058–8064——Limited disadvantage of the men less capable physically, under the piecework system, inasmuch as they received meals so long as they were employed, 8067–8071.

Bell, James (*Lord Provost of Glasgow*). Information in detail in Paper submitted by Mr. Bell respecting distress in Glasgow and its relief; full elucidation of the views of Mr. Bell upon the general question of relief works, or public works, for the unemployed, *App.* (*3rd Rep.*) 514–521.

Benn, John Williams (Member of the Committee). (Analysis of his Evidence.)—Proposition that practical effect be given to certain clauses in Circulars of the Local Government Board since 1886 as the best mode of dealing with exceptional distress in the Metropolis through want of employment; reference especially to the Circular of 1892 and to the suggestions therein as regards special works for the unemployed, 3081, 3082.

Inability of many parishes to adopt the recommendations in the Circular of 1892 by reason of their poverty and high rates, some districts, as in the East-end, becoming gradually poorer whilst others seem to be getting richer, 3082–3106——Illustrations purporting to show that in spite of the Equalisation of Rates Act the poorer parishes are still unfairly burdened, 3083–3105. 3196–3209.

Contrast between the total rates in the parishes of Bow and St. James's, Westminster, before and since the Equalisation of Rates Act, the rating in the former still being the highest in London, and in the latter the lowest, 3089–3093——Explanation in connection with the rates in St. Olave's, these having advanced from 5*s.* 10*d.* to 6*s.* 4*d.* since the equalisation, 3094–3099. 3105——Reduced rates in Islington since the equalisation, this parish being very very efficiently managed, 3100–3104.

Evidence in explanation and support of the conclusion that the unemployed difficulty in London might be largely met if the Common Poor Fund were available, through the guardians, in aid of works to be instituted by the local authorities in times of exceptional distress, 3106 *et seq.*

Very unsatisfactory attitude of the local authorities towards the Circular of 1892; 3106——Importance of co-operation between the guardians and local authorities and between different parishes in the provision of works, 3106. 3239. 3266–3269——Suggestion as to districts going in some instances outside their own area in order to provide the required works, 3106. 3266-3269.

Summary of conditions which might be enforced, to the satisfaction of the Local Government Board, before any district obtains special aid; contemplated aid per head when there is a certain per-centage of unemployed, 3106. 3157–3179. 3265——Information as to the constitution and working of the Common Poor Fund, the several services thrown upon the fund, and the expenditure under different heads of service, 3108–3110. 3130-3138. 3143–3146——Belief that in most cases the parishes could provide sufficient work

Reports, 1895—*continued.*

Benn, John Williams (Member of the Committee.) (Analysis of his Evidence)—*contd.*

work in street-cleaning, &c., without going outside their own area, 3110——Concurrence in the suggestion of Mr. John Burns that the stoneyard should be placed under the local authority, 3110.

Statement showing that outside the Metropolis, but within the County of London, there are large areas of land, as at Plumstead, Hackney, Wandsworth, Poplar, and elsewhere, suitable for cultivation or reclamation, upon which men out of work could be usefully, if not profitably, employed in time of distress, 3110-3125. 3266–3277—— Extensive employment to be provided under some well-considered scheme for the reclamation of Thames foreshore, 3110. 3275–3277.

Explanations respecting the experiment carried on by Mr. McDougall upon some land in the Isle of Dogs, the street sweepings of London having been utilised with excellent results, 3110. 3117–3120. 3126–3129. 3147–3153——Special reference to the Abbey Mills scheme as a precedent to be considered in connection with work for the unemployed, 3110-3112. 3165.

Large expenditure charged upon the Common Poor Fund in respect of indoor relief; belief that much of this would be saved if there were an appropriation from the fund for relief works when there is exceptional depression, and that a very small increase in the amount per head levied for the fund would suffice, 3132–3138. 3252-3263—— Great credit due to the Poplar district for the practical steps taken in order to deal with the unemployed difficulty; liberal action of Mr. Hills in the matter, 3138.

Difficulties in the poorer parishes undertaking the necessary street cleaning and other required works unless they be aided from the Common Fund, 3139, 3140. 3155—— Suggestion that there be some official supervision in order to secure that the action in the various districts as regards expenditure from the Common Poor Fund is uniform, 3141, 3142——Conclusion as to the necessity of certain tests or conditions, and of inquiries being applied to all applicants for work provided by the local authorities with aid from the Common Poor Fund; opinion that men on strike should not be entitled to such work, 3142. 3157–3164. 3168–3172. 3179. 3239. 3246, 3247.

Expediency of the money required being taken from the Common Poor Fund rather than from Imperial sources, 3154–3156. 3220——Opinion that the current rate of wages for the work should be paid, rather than a reduced rate; limitations to be applied, however, as to the number of days' work to be given weekly, and the number of hours per day, 3165–3176. 3210, 3211. 3264——Great improbability of any such failure of the scheme of work advocated by witness as in the case of the Paris scheme, 3179–3187.

Insufficiency of the funds received by localities under the Equalisation of Rates Acts as a means of providing the required works in the poorer districts, 3192–3195 ——Sufficiency of the present Poor Law machinery for dealing with "loafers" and others who refuse to go upon relief works, 3209*. 3248–3251——Objection to some voluntary contribution from the locality being a condition of aid from the Common Poor Fund, 3212–3214.

Opinion that the scheme advocated by witness should rest upon the assumption that London, as a county, is responsible for dealing with the difficulty in question, and should be fully empowered to do so, without resort to State aid; facility in putting the scheme in operation, 3214–3227. 3239–3245——Explanation that witness is not prepared to offer suggestions as to any scheme for the entire country, though he would favour the principle of a county contribution, 3216–3220. 3240–3245.

Grounds for justifying resort to a Poor Law fund for the money required in poor districts for relief works which cannot be regarded as ordinary improvement works; expediency of the Common Poor Fund being availed of rather than the fund provided by the Equalisation of Rates Act, 3228–3238. 3252–3263.

Benwell and Fenham (Northumberland). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep.*) 269.

Bequests (Unemployed). Opinion that property left for the employment of the unemployed should not be transferred to education; two instances in which property has been so transferred, the probability being that there are several others, *Dodd* 7489–7503. 7742-7749.——*See* also *Charity Commission.*

Berkshire. Information supplied in Report by Inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 30, 31.

Bermondsey. Particulars supplied by the vestry clerk, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 120.——*See* also *Saint Olave's Union.*

Reports, 1895 – *continued.*

Bethnal Green. Explanation of the delay on the part of the Bethnal Green Board in supplying information in response to the circular of 24th January, *Sir H. Owen* 72–74.

Letter respecting the amount of distress in this parish; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 201–203.

Return handed in by Sir Hugh Owen showing for each of the years 1884-85 to 1893–94 the number of indoor and outdoor paupers respectively, and the cost of in-maintenance and outdoor relief, *App.* (*3rd Rep.*) 524–533.

Beverley (*York*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 112.

Bexley (*Kent*). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep.*) 269.

Bicester (*Oxford*). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 372.

Bideford (*Devon*). Statement explaining that there is no exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 353.

Biggleswade Rural District (*Bedford*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 429.

Billericay Rural District (*Essex*). Special measures of relief not necessary in this district, *App.* (*2nd Rep.*) 467.

Billesdon (*Leicester*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 289.

Bilston (*Stafford*). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep.*) 269.

Bingley (*York*). Amount and cause of the distress in this district in February; measures of relief adopted, *App.* (*2nd Rep.*) 269.

Birkenhead. Official explanations in February as to the extent of the distress in the county borough, and the remedial measures adopted, *App.* (*2nd Rep.*) 205.

Birmingham. Letter received from Birmingham on 29th January to the effect that the applications for relief up to that date were about the same as usual, *Sir H. Owen*, 12.

Letter from the mayor, dated 25th February 1895, submitting particulars as supplied by the various relief organizations in the city respecting the extent and character of the local distress and the different measures taken for relieving the same, *App.* (*2nd Rep.*) 306–309.

Bishops Auckland (*Durham*). Distress in this district through the severe weather; relief through voluntary agencies, *App.* (*2nd Rep.*) 360.

Blaby Rural District (*Leicester*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 353, 354.

Blackburn. Letter from Blackburn, on 11th February, to the effect that there was a great increase of poverty and destitution as compared with several recent years, and that, should the severe weather continue, exceptional measures would probably be necessary, *Sir H. Owen* 12.

Information supplied in Report by Inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 37.

Particulars supplied by the town clerk, in letter dated 20th February 1895, respecting the amount of local distress in the county borough from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 59.

Absence of exceptional distress in the rural district in February, *App.* (*2nd Rep.*) 289.

Blackpool (*Lancaster*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 259.

Blackwell (*Derby*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 429.

Blaenavon. Amount of distress in this district previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 439.

Blandford (*Dorset*). Exceptionally great distress in the town of Blandford in February; remedial measures adopted, *App.* (*2nd Rep.*) 241.

Blantyre,

Reports, 1895—*continued.*

Blantyre (*Lanark*). Absence of exceptional distress in this parish, *App.* (*3rd Rep.*) 732.

Blast Furnaces. Statement showing in the case of the blast furnace men the injurious effect upon employment through the strike in the coal trade from July to November 1893; *Smith* 4621–4630.

Blean (*Kent*). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 372.

Boards of Guardians:

Belief that boards of guardians already have sufficient powers for giving adequate relief in times of distress, *Sir H. Owen* 298, 299——Duty of the guardians to give relief to any destitute person in the parish, *ib.* 340-343.

Further statement as to the ample powers of boards of guardians, and as to their responsibility, for the relief of destitution when application is made, *Sir H. Owen* 373-375. 384, 385. 388. 397. 421——Grounds for objecting to the guardians taking the initiative and seeking out destitution (as by means of a house-to-house visitation) in order to relieve it without application being made; expected denial by many destitute persons that they needed relief, *ib.* 385–387——Expediency of its still resting with the guardians to decide as to the mode of relief of destitution, *ib.* 548.

Conclusion further expressed that the present powers of the guardians and the regulations in force if exercised promptly and efficiently, are sufficient to meet any exceptional distress now existing, *Sir H. Owen* 656, 657.

Experience of witness that the various boards of guardians do voluntarily co-operate with the charitable organisations of their districts in regard to administering relief to the unemployed, *Mackay* 5498–5515.

Absence of necessity for giving boards of guardians any extension of power for dealing with distress, their present powers being sufficient to deal with positive destitution, *Martineau* 6857–6859. 6928.

Submission by witness of a copy of a Circular which he printed and issued to boards of guardians in rural districts, calling attention to the many ways in which they could provide for the unemployed, *Dodd* 7571–7573——Recommendation that boards of guardians should be allowed to provide useful employment for the unemployed where they think fit and to take land for that purpose, if necessary; power of the guardians to take land under the existing law, subject to the rules of the Local Government Board, *ib.* 7678 *et seq.*; 7728–7741. 7750 *et seq.*

Copy of petition (handed in by Mr. Dodd) to the President of the Local Government Board requesting the Board to issue rules and regulations enabling boards of guardians to hire land for the employment of the unemployed, and to let land for allotments to labourers, *App.* (*3rd Rep.*) 534.

Paper submitted by Sir Hugh Owen explanatory in detail of the powers and duties of guardians and of their officers as to relief, *App.* (*3rd Rep.*) 557-562——Explanations in connection with the several provisions under different Acts as regards the employment of the poor by boards of guardians for wages, *ib.* 561.

Reference by the Committee to the apparent uncertainty among some guardians as to the exact nature of their powers in relation to the relief of distress, *3rd Rep.* iv——Attention called to the statement received from the Local Government Board setting forth in full the powers of boards of guardians for different purposes, *ib.*——Existence of statutory powers under which boards of guardians might set poor persons to work at wages, though such powers cannot be used until rules are made by the Local Government Board, *ib.*

Recommendation by the Committee that the Local Government Board should consider the application of such powers and make rules for the use of boards of guardians in relation thereto, *3rd Rep.* iv.

See also *Farm and Labour Colonies. Labour Test. Land, &c. Local Government Board. Out-door Relief. Pauperism. Poor Law System. Tramps and Vagrants. Workhouses.*

Board of Trade. See *Labour Department.*

Bolton (*Lancaster*). Particulars supplied by Mr. W. Nicholson, in letter dated 21st February 1895, respecting the amount of distress in Bolton County Borough from want of employment; the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 126——Exceptional distress in the rural district in February through the severity of the weather; relief given by voluntary agencies, *ib.* 241.

Bonhill (*Dumbarton*). Statement as to the amount of distress in this parish and the means adopted for its alleviation, *App.* (*3rd Rep.*) 663.

Bonsall (*Derby*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 150.

Reports, 1895—*continued.*

Boot and Shoe Trade. Reference to the boot and shoe trade as affording good employment in January and February, though in some districts short time is still worked, as the bespoke trade is slack, *Smith* 4676——Increased fluctuation since the introduction of machinery in the number of people employed in the trade, *ib.* 4732.

Booth, Bramwell. (Analysis of his Evidence.)—Witness attends on behalf of the Salvation Army, in which he holds the position of chief of the staff, 9819, 9820.

Evidence to the effect that until 1890 the Salvation Army had been conducting a strictly religious work amongst the poor of this and other countries, but that in that year General Booth published a book explaining his special plan for the relief of the unemployed, 9821, 9822. 9829 *et seq.*——Division of the unemployed, roughly, into three classes, the first comprising the efficient workers of good character who were occasionally thrown out of employment from various causes; the second consisting of those who were sinking down and were getting into a state bordering on destitution; and the third, made up chiefly of the homeless, the idle, the vicious, and the criminal, 9823, 9824. 9935 *et seq.*; 10020 *et seq.*

Conclusion of General Booth that there are only three methods of remedying the evils arising from want of employment, namely, to make more work, to more equally distribute existing work, or to reduce the number of workers by removing some of them to some other part of the world, the last being the most promising plan, 9824 *et seq.*; 10022–10043.

Plan of the General to establish large numbers of the unemployed upon suitable land in the colonies in a manner which would ensure their being happy and thriving colonists; this plan has not yet been carried out owing, principally, to want of money, 9828 *et seq.*; 9967–9971. 10128–10142.

Information respecting the city colony operations of the Salvation Army, which were instituted in order to give immediate help to the workless man; schedule of the various shelters for homeless men and women, handed in, 9832 *et seq.*——Advantage of the shelters in affording an opportunity of coming into contact with and advising the individual sufferers, and of classifying them, 9836——Employment of between 1,300 and 1,400 men and women in the city colony, the majority of them being engaged in dealing with the waste material that is collected from house to house, 9836, 9837.

Particulars as to the time the men stay in the labour factories; 20 per cent. remaining for less than a month, half of whom are thoroughly idle, worthless fellows, who will not work, and 11 per cent. working their way up until they become gangers over the other men, 9839.

Payment of the men in the labour factories by means of tickets, having a money value according to the amount of work done; signature by the men entering the labour colony of a copy of the regulations, which are similar to those for the farm colony, 9840, 9841——Success of the homes for fallen women instituted in connection with the city colony, about 1,500 women being received annually, 75 per cent. of whom are permanently and satisfactorily reclaimed, 9841.

Encouraging results of the special methods of dealing with purely criminal men, who are treated separately, but on much the same principles as ordinary workless men; belief that 86 per cent. of them are earning an honest living two years after leaving the home for criminals, 9841 *et seq.*——Statement that money grants, instead of food, are made to married men who come to the city colony, and that the amount given them is just sufficient to keep them from the workhouse and despair, 9842, 9843.

Estimate that about 8 per cent. of the men received into the criminal home last year belonged to the professional classes, 30 per cent. to the commercial classes, 30 per cent. were skilled mechanics, and 32 per cent. unskilled workers, 9844——Average stay of the criminals in the home about six months or a little more; practice of the Salvation Army to find these men situations, telling their history to the employers, and to keep touch with them, 9845, 9846.

Evidence to the effect that after a man has been trained and disciplined a little in the city colony he is transferred to the farm colony, to be fitted for transplantation across the sea, 9847 *et seq.*——Information respecting the Salvation Army farm colony at Hadleigh, which is, first, a farm colony, and, secondly, an industrial colony; consisting of about 1,800 acres of land with about 1,000 acres of water; statement that about 1,270 acres are actually in occupation, and that the "saltings" are reclaimable, 9847 *et seq.*; 9944 *et seq.*

Evidence to the effect that, in addition to the ordinary farming operations, dairying, and market gardening, several industries are carried on in the colony, the men being taught to make boots and shoes, &c.; erection of buildings by the army both inside and outside the colony, 9853, 9854. 10011–10019——Number of men in the Hadleigh colony, 298, of whom 242 are colonists, the remainder being paid employés, officials, &c.;

Reports, 1895—*continued.*

Booth, Bramwell. (Analysis of his Evidence)—*continued.*

&c.; estimate that about 60 per cent. of the men were unskilled workers, 30 per cent. mechanics, and 10 per cent. from the educated professional and commercial classes, 9854–9858. 9957 *et seq.*; 9981–9990. 10061–10066.

Present distribution of the men in the colony as follows: 235 engaged in agriculture, fifty-two in industries, including making bricks and building, and eleven in managing the colony, a few of the colonists and officers being married, 9858——Arrangement made by the army with two London boards of guardians to receive 110 paupers at 5*s.* per week per man, the workhouses being too full; total incapacity for work of 22 per cent. of these paupers, 74 per cent. of the remainder working satisfactorily on the farm, 9858–9862. 9959–9961. 9991 *et seq.*

Statement that 41 per cent. of the paupers are still with the army, and give reasonable promise of becoming decent working men again, and that 16 per cent. have obtained situations outside; refusal of 21 per cent. to work, never having done any work and never intending to do any, 9862. 10001–10004——Recommendation that incorrigible idlers and loafers should be legislated for immediately, and that they should be transferred to a settlement where they would either have to work or starve; no serious difficulty in deciding whether a man is a worthless loafer or not, 9862. 9927, 9928. 10044–10060.

General conduct of the men received into the Hadleigh colony satisfactory, 80 per cent. of them being willing to work; explanation that the colony is open to all three classes of the unemployed as described by witness, and that the men are rapidly improving, 9862–9866. 10005, 10006——Conclusion, after careful investigation, that only 34 per cent. of the men in the colony were brought to poverty through drunkenness, the cause more often being misfortune, bad health, accidents, &c., 9866. 10020 *et seq.*

Probability that operations over the sea will be commenced before the end of the year, negotiations being now in progress with one of the Colonial Governments in regard to the acquisition of a site for the oversea colony, 9866——Claim that General Booth's scheme has already done a great deal of good, but that when the oversea colony is in working order the supreme object of the whole enterprise will be attained, and the workless man will have been removed from where there is no work to a place where he can support himself; advantages of the scheme, 9866.

Explanation that the scheme deals with families as well as individuals, no solution of the unemployed question being thought worth considering unless it ultimately proposes to transfer the man who has a family, 9866, 9867——Opinion that there is a reasonable chance of recouping the money spent on the men beyond the sea under the scheme, and a great part of what is spent on them this side, but not the money spent in transferring them, 9868.

Suggestion that municipal authorities, boards of guardians, and other local authorities, should be empowered to pay the cost of shipping prospective paupers across the sea; non-objection to reasonable conditions being imposed, nor to the amount being limited to 10*l.* for a family, 9868–9874. 9922–9926. 9972–9980. 10007–10010. 10024 *et seq.*——No doubt that some attempts at colonisation have been failures, while some, on a comprehensive scale, have been conspicuous successes, 9873–9877.

Principle on which the city colony was founded, that the main cost of the undertaking must be provided by the persons benefited, and any margin supplied by the public must be such as can be regarded as a reasonable economic investment, this being the very opposite of the poor law system, 9877. 9939–9941——Financial statement in regard to the city colony, the expenditure last year amounting to 73,000*l.*, and the receipts, either in labour or money, to 70,000*l.*, so that all that was required from a benevolent public for sheltering and receiving thousands of persons in the labour factories, &c., was only 3,000*l.*, 9877–9811. 10083 *et seq.*

Experience of witness that the sheltering and feeding of the unemployed pays for itself virtually, but that the temporary employment of men and women results in a loss; attention drawn to the fact, however, that a large proportion of the persons temporarily employed are thereby restored to work and livelihood, 9810. 10083 *et seq.*——Details of the expenditure upon the farm colony, the total in the last balance sheet amounting to about 94,000*l.*, of which 39,000*l.* was for the land; property to the value of about 13,000*l.* now in possession of tenants will ultimately come into use for the farm colony, 9880–9882.

Payment of the men on the farm colony by ticket, as in the case of the city colony, the total average cost of a colonist all round being about 11*s.* per week, and the average time the men stay on the colony about one year and two weeks, 9882, 9883. 10067 *et seq.*——Dismissal of about 10 per cent. of the men received on the farm for incorrigible idleness and drunkenness, the practice being to discharge a man on his getting drunk the third time, 9883–9891.

Reports, 1895—*continued.*

Booth, Bramwell. (Analysis of his Evidence)—*continued.*

Assertion, with reference to the statement that the Hadleigh colony was a financial success so long as the work on it was confined to land cultivation and reclamation, that the loss in the industrial section was almost entirely on the brickfields, which no doubt will pay also when proper kilns are provided, 9892–9895——Belief that the total loss on the farm colony since its commencement is about 10,000*l.*, or a little more ; explanation that as credit was not taken for improvements the charge for rent was not included, one being set against the other, 9896, 9897. 10072–10082.

Great improvement of the Hadleigh estate since it was taken over by General Booth, the land planted with fruit being fully worth 100*l.* per acre ; original cost of the whole estate, taking land and water together, about 13*l.* 5*s.* per acre on the average, 9897–9910. 9942 *et seq.*——Grounds for the opinion that the Hadleigh scheme is based upon sound principles, the chief being that it enables the men on it to earn sufficient to support themselves, and also benefits the working classes by relieving the overcrowded market, 9911.

Denial of the accusation that there has been any underselling in the wood-chopping and match-making business of the city colony ; explanation that the match-making business was simply taken up to benefit the match-box makers, who are generally women and children, and has not been very successful, financially, 9911–9913. 10110–10127——Assertion generally that there has been no underselling on the farm colony, but only ordinary competition ; contention that the colony has not displaced any growers around Southend, 9913–9922.

Booth, Charles. (Analysis of his Evidence.)—Is editor of a work called "Life and Labour of the People;" has devoted much time and labour to the question of the condition of the working classes, 10518. 10624, 10625. 10639–10642.

Detailed statement respecting six different causes which may give rise to lack of employment, 10519. 10532, 10710–10712 ——Belief that by very careful use of statistics it may be possible to ascertain the times at which the necessitous unemployed are more than usually numerous ; suggestion that the best test would be the total volume of trade, 10520. 10555–10561. 10643–10649. 10717–10719——Reference to the excellent work in connection with the above done by the Labour Department of the Board of Trade, 10520, 10521.

Opinion that improved organisation of the management of industries will produce greater regularity of employment, although it will tend immediately against the employed ; instances quoted in the building trade and in the dockyards, 10522–10531. 10606-10611——Explanation as to the effect of strikes on the community, 10532. 10612–10614. 10695——Tendency of changes in industrial processes to throw men out of employment, 10532. 10615, 10616. 10650, 10651.

Belief that the continuance of depression is mainly due to lack of enterprise ; possibility that a large public undertaking, such as light railways, might encourage private enterprise, 10533–10539. 10687–10691——Opinion that enterprise depends greatly upon Governmental action, 10534. 107103-10716——Suggestion that a general extension of municipal enterprise might relieve future distress, 10539. 10582–10589. 10724——Three additional suggestions made by witness for the relief of future distress, 10542. 10782-10785.

Objection of witness to attempt to manufacture work for the present temporarily unemployed ; belief that the only sure cure is prudence, 10542. 10602–10605. 10619, 10620. 10631–10638. 10720–10723. 10777–10781——Detailed explanation of a suggestion made by witness in regard to the relief of future distress, viz., the public organisation of incompetent labour by means of the establishment of industrial homes for the inefficient unemployed, 10543–10554. 10590–10601. 10658, 10659. 10663-10674.

Attention called to the employment of prisoners on certain industries ; opinion that there is no objection provided they do the work for Government use only, 10549–10554 ——Probability that the larger number of the unemployed have only themselves to thank for their irregular employment, 10562–10573——Information as to the average age at which a good worker fails to get his highest value, 10574–10581.

Desirability of leaving loafers to be dealt with by the Poor Law ; witness has no means of telling the number of people of this class, 10621-10623. 10742–10769—— Information respecting the analysis, covering over 900,000 people, made by witness when preparing "Life and Labour of the People," 10624–10642.

Examination as to the decrease in the rural population owing to the men going to the towns ; grounds for believing that men leave the country to take places in towns generally by direct invitation, 10652–10657. 10698-10709——Question respecting the advisability of establishing industrial homes in the country for the cultivation of land ; belief that the experiment would prove costly, 10660–10662.

Attention of witness called to the great lack of industry in the East End caused by the importation of various goods from foreign countries, 10675–10686——Belief that early

Reports, 1895—*continued.*

Booth, Charles. (Analysis of his Evidence)—*continued.*

early marriages in the East End are not the cause of much destitution and poverty, 10692-10694——Discussion as to whether an expenditure of taxation for municipal enterprise will not, by increasing the value of the land, tend to keep the people down, 10724-10741.

Objection of witness to indiscriminate charity for the relief of loafers, 10764–10766——Examination as to the advantages of employments for home wants as compared with those in connection with goods for export, 10770-10776.

Bootle (*County Borough*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 60.

Boston Municipal Borough. Letter from this borough in February 1895 respecting the extent and character of the local distress, and the employment and relief provided, *App.* (*2nd Rep.*) 133.

Bothwell (*Lanark*). Absence of exceptional distress in this parish, *App.* (*3rd Rep.*) 733.

Bourne (*Kesteven*). Exceptional distress in this rural district in February through the severity of the weather; relief given by voluntary agencies, *App.* (*2nd Rep.*) 241.

Bournemouth (*Hants*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 259, 260.

Bradfield Union (*Berks*):

Total of thirty parishes in Bradfield Union, the population, about 18,000, being chiefly engaged in agriculture and scattered throughout the union in small villages, *Willink* 8586–8593——Several resident landowners, some of them being large proprietors, *ib.* 8594.

Information respecting the rate of wages, these varying from 10*s.* to 15*s.* a week; advantage in labourers (as on Mr. Benyon's property) being provided with cottages at 1*s.* or 1*s.* 6*d.* a week, *Willink* 8595-8601. 8605, 8606——Wages of stonemasons and plasterers at the rate of about 36*s.* 8*d.* a week, bricklayers' labourers getting about 18*s.* 6*d.*, *ib.* 8602–8604.

Statistics as to the great decrease of both out-door and in-door relief in Bradfield Union and of the expenditure thereon since 1871, though the population has increased; explanation more especially as to the very limited extent to which, and the conditions under which out-door relief is now given, *Willink* 8607–8664.

Particulars respecting the system of giving relief on loan whether out-door or in-door, this being done with the cognisance of the Local Government Board, and there being legal power to recover the amount from the parties liable if they come into possession of funds, *Willink* 8626–8664.

Information respecting the workhouse infirmary, staff employed, employment on the land, treatment of children, &c., *Willink* 8665-8673——Explanation as to the treatment of tramps and their employment in pounding stones; large diminution in their number since 1890, *ib.* 8674–8691——Absence of exceptional distress in the union during the past winter, whilst the landlords gave as much extra employment as possible, *ib.* 8692–8699.

Further information respecting the system of out-door relief in Bradfield Union, the class of persons relieved, and the varying amount given under different conditions, *Willink* 8888–8895——Constitution of the board adverted to in connection with the policy pursued as regards out-door relief; large majority in favour of the present practice, *ib.* 8896–8899.

Further explanation that in Bradfield Union relief is granted by way of loan, the loans, however, being for the most part unrecovered, *Willink* 8963-8971——Question considered whether the Bradfield guardians are acting in accordance with certain instructions issued by the Central Board to the effect that when relief is lent the loans should in due time be duly recovered, *ib.* 8967–8973.

Table showing the number of tramps (men, women, and children) admitted to the tramp wards during the first week of each month in the years 1883–95; *App.* (*3rd Rep.*) 522.

Paper (handed in by Mr. Willink) explanatory of the wages paid in agricultural, building, and other branches, *App.* (*3rd Rep.*) 523.

Bradford (*York*). Letter from Bradford, received on 6th February, to the effect that distress of an acute and exceptional character was prevalent, the amount of relief and of pauperism having largely increased as compared with corresponding periods in previous years; special measures adopted for providing employment, *Sir H. Owen* 12.

Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 37 41-45——Letter from the town clerk in February explanatory of the extent and causes of the local distress, and showing the measures of relief provided, *ib.* 341.

Reports, 1895—*continued.*

Braintree (*Essex*). Exceptional distress in this rural district in February through the severity of the weather; relief given by voluntary agencies, *App.* (*2nd Rep.*) 242.

Brampton (*Cumberland*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 365.

Brechin (*Forfar*). Extent of the distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 699.

Brecknock (*Rural District*). Amount and character of the distress in this rural district in February; remedial steps taken for its relief, *App.* (*2nd App.*) 290.

Brecon. Extent and nature of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 260.

Brentford (*Middlesex*). Cessation of exceptional distress by 14th March, *App.* (*2nd Rep.*) 401.

Bridge Rural District (*Kent*). Absence of exceptional distress from want of employment, *App.* (*2nd Rep.*) 454.

Bridgnorth (*Salop*). Official explanation in February as to the amount of distress in the municipal borough and the remedial measures adopted, *App.* (*2nd Rep.*) 211——Very little want of employment in the rural district during the severe weather. *ib.* 429.

Bridgwater (*Somerset*). Exceptional distress in the municipal borough in February; employment and relief provided, *App.* (*2nd Rep.*) 211——Absence of necessity for any special measures of relief in the rural district of Bridgwater, *ib.* 429.

Brierley Hill (*Stafford*). Explanation in February 1895 respecting the extent and character of the local distress, and the relief provided, *App.* (*2nd Rep.*) 151.

Brighouse (*York*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 260.

Brighton. Letter from Brighton on 31st January showing that there was no exceptional amount of distress at that date, *Sir H. Owen* 12.

Considerable distress at the end of February; several modes of employment and relief, *App.* (*2nd Rep.*) 368.

Bristol. Result of the reply to the Local Government Board from Bristol on 28th January, that there has been a considerable increase of non-employment and of relief, *Sir H. Owen* 12.

Letter from the Mayor of Bristol in February as to the extent and cause of the exceptional distress in the county borough, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 256.

Brixham, Lower (*Devon*). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep*) 277.

Brixworth (*Northampton*). Absence of exceptional distress in this rural district in February, *App.* (*2nd. Rep.*) 290.

Bromley (*Kent*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 335——Normal distress in the district through insufficient employment for unskilled labourers; suggestions by Mr. W. H. Bosanquet on the score of relief and of work, and in favour of an extensive scheme of State-aided emigration, *ib.* 361——Suggestion also by Mr. Bosanquet that the stigma of pauperism be removed in cases of unavoidable unemployment and of resort to relief works, *ib.*

Bromsgrove (*Worcester*). Explanation in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 152——Sufficiency of voluntary agencies during the severe weather, *ib.* 410——Absence of exceptional distress in North Bromsgrove district in March, *ib.* 446.

Bromyard Rural District (*Hereford*). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 430.

Broughton (*Lincoln*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 152.

Brownhills (*Stafford*). Local explanations in February as to the amount of distress in this urban district and the remedial measures adopted, *App.* (*2nd Rep.*) 219.

Brussels. Belief as to the labour register at Brussels not having been a success, *Smith* 4700, 4701.

Buckfastleigh (*Devon*). Limited exceptional distress in this district, *App.* (*2nd Rep.*) 219.

Reports, 1895—*continued.*

Buckinghamshire. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 30, 31.

Building Trade:

Small cyclical fluctuation in the building trade, it being less than the seasonal fluctuation, *Smith* 4587. 4595; *3rd Rep., p.* 52.

Information obtained by witness respecting the building trades by means of circulars sent round to a very large number of employés and representatives of various trade interests, and by interviews with individual employés, *Aves* 10875. 10944–10949.

Composite nature of the building trade group, disturbing influences, such as severe weather, affecting the various sections in a different degree, *Aves* 10876–10880—— Distinction drawn between work on new buildings and work, in the way of repairs and renewals, on existing buildings, employment on the latter being more protected from the weather, and more subject to special social and economic influences, *ib.* 10881–10883. 10950–10954.

Average of 9½*d.* per hour as the union rate of wages for almost every branch of the skilled building trades, the chief exceptions being the masons employed on granite and the plumbers, earning 10½*d.*, the masons employed as fixers, earning 10¼*d.*, and the 8½*d.* rate for painters; the same rates are paid on the whole, in most of the main branches, to non-union men, *Aves* 10884–10888. 10955–10902. 10968. 10972.

Division of the labourers into three main classes, the first including the scaffolders, the hoisters, and the timber men; the second, the house-breakers, who are, to a considerable extent, interchangeable with those in the first class; and the third, consisting of the various labourers attached to the skilled sections, together with the excavators, *Aves* 10889–10891——Evidence to the effect that the labourers in the first and second classes are paid 7*d.* per hour, and those in the third class 6½*d.* per hour; probability that a builder's labourer's wages average about 23*s.* 3*d.* per week for the whole year, *ib.* 10892. 10962–10967.

Statement that the labourers most subject to the influence of the weather are the excavators, who cannot work where the ground is frozen, and those least subject to the effects of the weather are the scaffolders, *Aves* 10893–10895——Opinion that on the whole the excavators are the worst off, their earnings being very uncertain; probability that a man working the greater part of his time as an excavator will be a less valuable man than one working in any other branch, *ib.* 10896, 10897.

No doubt that a very large majority of the labourers in the building trades were born in the country, *Aves* 10898——Belief that a very large proportion of the bricklayers, carpenters, plasterers, joiners, and masons were not only born but received their initial training in the country, and came up to a good job in London; tendency of the result of the special inquiries made by Mr. Llewellyn Smith to confirm this belief, *ib.* 10898–10900. 10983–10986.

Statement that the exact number of hours per week worked by the labourers varies with the season, being longer in summer than in winter, but that, according to the agreement of 1892, it averages out for the whole year about forty-eight hours per week, *Aves* 10907–10910—— Irregularity of employment in the building trade, due to the weather, accentuated by the constant shifting of the men from one employer to another, which is very largely due to the contract system, the men often being taken on for the individual job, *ib.* 10911 *et seq.*; 10999 *et seq.*

Common practice of employers who send men to do odd jobs in private houses to have a permanent staff, thus ensuring more continuous work to the men; desirability of this practice being more widely adopted, *Aves* 10917–10920——Conclusion that the introduction of machinery has not displaced any considerable number of workmen in any branch of the skilled building trades; opinion that the introduction of new processes and new materials has had a more important disturbing influence than machinery, *ib.* 10921 *et seq.*——Complaint of the labourers that they are displaced by the hoister in the Scotch steam derrick; view of witness, however, that although a certain number may be displaced the effect of the introduction of machinery is rather to change the character of the labourer's work than to eliminate him, *ib.* 10921 *et seq.*

Evidence to the effect that men who may be out of work do not easily fall back upon alternative employments, the skilled men keeping, as a rule, exclusively to their own trade; doubt as to there being much for them to fall back upon, except in the case of painters, many of whom are not painters proper, but do all kinds of work during the year, *Aves* 10927–10929——Probability that a certain amount of the cessation of work during inclement weather is not always due to absolute necessity, but rather to the convenience of the employer, *ib.* 10930–10932. 10991–10998.

Possibility of the practice of putting work out to be done at a particular time of year, when the trade is normally slack, being carried out to a much greater extent than it is at present; admission that this plan would, while giving more continuity of

Reports, 1895 – *continued.*

BUILDING TRADE—continued.

work to the skilled men, tend to make the more necessitous cases still harder, *Aves* 10932–10936. 10987 *et seq.*; 11000–11004——Certainly that the building trade has been fairly prosperous in London during the last five years; opinion that no very special case has been made out for any change or particular remedy in that trade, *ib.* 10937–10944. 10973 *et seq.*

Information supplied by local authorities in England and Wales as to the extent and character of the distress in the building and other out-door trades, *App.* (*2nd Rep.*) 57 *et seq.*

Chart showing the monthly variations in the percentage of unemployment in the building trade, on the average of the years 1888–94, *3rd Rep., p.* 52.

Lists of places making complaint with special reference to distress in the building and other out-door trades, *App.* (*3rd Rep.*) 807-815——Complaints from 110 districts as regards distress in the building and out-door trades, *ib.* 820.

Reference to the building trade as the most conspicuous example of distress caused directly by the severity of the weather, *App.* (*3rd Rep.*) 820.

See also *Battersea. Camberwell. Wandsworth and Clapham Union.*

Builth (*Brecknock*). Exceptional distress in this district in February 1895, due to the severity of the weather; means of relief adopted, *App.* (*2nd Rep.*) 270.

Burnley. Letter from Burnley, received on 5th February, to the effect that the distress was not of an exceptional character, *Sir H. Owen* 12.

Official explanations in February as to the extent of the distress in the county borough, and the remedial measures adopted, *App.* (*2nd Rep.*) 205, 206.

Burslem (*Stafford*). Extent and character of the distress in the municipal borough in February; relief measures applied, *App.* (*2nd Rep.*) 260.

Burton-upon-Trent. Result of the reply from Burton-upon-Trent, received by the Local Government Board on 15th February, that there had not been any material increase of applications for relief, and that temporary help was being given through voluntary agency, *Sir H. Owen* 12.

Explanation in February 1895, respecting the extent and character of the local distress, and the relief provided; sufficiency of voluntary agencies, *App.* (*2nd Rep.*) 134.

Bury (*Lancashire*). Absence of exceptional distress in this district; employment provided and relief given, *App.* (*2nd Rep.*) 126, 127. 354.

Bury St. Edmunds (*Suffolk*). Letter from the Bury Union, on 16th February, to the effect that the distress was not exceptional, and that special arrangements were not likely to be required, *Sir H. Owen* 12.

Official communication respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 66.

C.

CAMBERWELL:

Reply received by the Local Government Board from the Camberwell Guardians on 9th February, showing that there has recently been an enormous increase of relief to the able-bodied class, chiefly to those in the building trades, and explaining the action taken in respect of out-door relief and the provision of employment, *Sir H. Owen* 75–89——Excessive increase of relief in Camberwell through the severe weather, *ib.* 226, 227. 235, 236.

Total of 4,342 acres as the area of the parish, the estimated population being 254,503, and the rateable value 1,063,234*l.*; comparatively few large houses, *Tagg* 3280–3286——Total rate of 4*s.* 1*d.* levied by the guardians, the actual poor-rate for 1894–95 being 2*s.* 3*d.*, and the vestry rates 1*s.* 8*d.*, *ib.* 3287–3290. 3543–3545——Absence of any exceptional distress in Camberwell save through the frost, *ib.* 3291, 3292. 3535, 3536.

Expenditure by the vestry of 1,546*l* on relief works between the 31st January, and the 27th February, each man getting about two days' work in the week, and being paid at the rate of 5*d.* per hour for eight hours a day, *Tagg* 3294–3311. 3333–3340——Employment mainly on road sweeping and snow sweeping, *ib.* 3297, 3298——Total of nearly 2,000 men on the register for work, from 200 to 250 having been employed daily; way in which the register was kept and work apportioned, *ib.* 3300–3311. 3325–3327. 3361–3365. 3372, 3373. 3587-3591.

Information respecting the labour exchange started in Camberwell by the vestry in 1892; discontinuance thereof as it was decided to be illegal to expend money upon it out

Reports, 1895—*continued.*

CAMBERWELL—continued.

out of the rates, *Tagg* 3312–3324. 3551–3553. 3585, 3586——Full employment in the gas works and factories in the parish during the winter, the men out of work through the frost being engaged chiefly in the building and sanitary trades ; large proportion of "general labourers," *ib.* 3328–3332. 3387, 3388. 3400–3407. 3430–3438——Communications between the vestry of Camberwell and the guardians during the recent distress, the latter supplying the names of persons specially in need of work, *ib.* 3343. 3345. 3347–3350.

Reference to the suggestions in the circular letter of the Local Government Board as impracticable, so far as Camberwell is concerned, *Tagg* 3350. 3395–3399. 3581–3584 ——Several resolutions passed by Camberwell Vestry asking for increased powers from Government, but without specifying what they should be ; subsequent disapproval of a resolution passed by the conference of the vestry and guardians, *ib.* 3351–3360. 3531–3534.

Probable employment of many outsiders, attracted by the two days' pay weekly ; difficulty in preventing this influx, though certain inquiries were made, *Tagg* 3361–3366. 3522–3530. 3546–3550——Varying amount of work given by the men in return for the pay ; very deserving character of large numbers of those employed, whilst many had undergone much privation and could not do heavy work, *ib.* 3367–3373. 3400–3423——Difficulty in the distribution of charitable relief in Camberwell ; expediency of some test in the matter, *ib.* 3369, 3370. 3601–3605.

Increased out-relief in the parish (mainly in food) during the distress ; probable employment on the relief works of some of those whose families were receiving out-relief, *Tagg* 3374–3386. 3416–3420. 3517–3521——Great difficulty in Camberwell in providing the kinds of work best suited for those out of employment, sweeping the streets and clearing away the snow being the only available work in severe winters, *ib.* 3395–3400. 3430–3438. 3537–3542. 3592–3595——Large numbers out of employment who did not apply for out-relief or for work so long as they had any savings to fall back upon, *ib.* 3401–3407. 3430, 3431——Rate of payment by the vestry on relief work as compared with the ordinary wages of the men when not out of employment, *ib.* 3432–3438. 3452–3457.

Explanation of the grounds upon which Camberwell (as a poor and populous parish) receives a grant of about 5½*d.* in the £. 1 under the Equalisation of Rates Act, whilst Saint Olave's parish has to contribute to the fund under the Act ; population and rateable value taken into consideration in each case, *Tagg* 3458–3477. 3492–3500. 3556–3568——Receipt by Camberwell of about 23,000*l.* under the Equalisation of Rates Act, *ib.* 3493.

Further explanations as to the mode of selection of the men employed on the relief works, those who proved undeserving having been excluded, *Tagg* 3501–3511—— Increase of pauperism and of distress in Camberwell, many of the poorer working classes being attracted by the low rents though not employed in the parish, *ib.* 3512–3516.

Information with further reference to the action of Camberwell Vestry in the distribution of work of different kinds, with special reference to the provision of labour for the unemployed in severe winters, *Tagg* 3606–3613. 3650–3661——Explanation as to the vestry not having taken action in the promotion of a labour colony as a means of providing work for the unemployed, *ib.* 3619–3649.

Particulars supplied by Mr. W. Wallace, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies respectively, &c., *App.* (2*nd Rep.*) 57.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (3*rd Rep.*) 524–533.

Camborne (*Cornwall*). Extent of distress in this urban district in February 1895, and means of relief provided, *App.* (2*nd Rep.*) 313.

Cambridge. Absence of any material increase in the applications for relief at Cambridge up to 14th February ; employment given by the town council at fair wages by opening a stone-yard, *Sir H. Owen* 12.

Letter from the mayor as to the amount of distress in the municipal borough and the relief provided, *App.* (2*nd Rep.*) 310.

Cambuslang (*Lanark*). Amount of distress in this parish through the severe weather ; relief measures adopted, *App.* (3*rd Rep.*) 733.

Cambusnethan (*Lanark*). Letter from the town clerk respecting the amount of distress and the relief measures applied, *App.* (3*rd Rep.*) 733.

Campbeltown (*Argyll*). Information supplied by the Inspector of Poor as to the extent and character of the local distress, and the steps taken for its relief, *App.* (3*rd Rep.*) 630.

Reports, 1895—*continued.*

Canning Town. Inadequacy of the Poor Law machinery for coping with the destitution and distress, as in Canning Town; over-crowded state of the workhouse and the stone-yards, *Alden* 2023, 2024——Intimate experience of witness with the Canning Town district for more than four years, during which there has been a surplus population in the labour market of West Ham, *ib.* 2270–2274——Benefit from the increased employment at the Beckton Gas Works in winter, there being then a slackness at the docks, *ib.* 2275–2279.——*See* also *West Ham.*

Cannock (*Stafford*). Extent and character of the distress in this rural district in February; remedial steps taken for its relief, *App.* (*2nd Rep.*) 291.

Cardiff. Information supplied by the Cardiff Board as to the out-door and in-door relief at different periods; steps taken for opening a labour yard for able-bodied applicants, *Sir H. Owen* 12——Amount and cause of the distress in the district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 460.

Cardross (*Dumbarton*). Statement as to the amount of distress in this parish, and the means adopted for its alleviation, *App.* (*3rd Rep.*) 663.

Carlisle. Official explanations in February as to the amount of distress in the municipal borough, and the remedial measures adopted, *App.* (*2nd Rep.*) 211——Temporary character of the exceptional distress in the Carlisle rural district in February, *ib.* 335.

Carmarthen. Absence of exceptional distress in Carmarthen rural district at the end of February, *App.* (*2nd Rep.*) 365——Amount of distress in Carmarthen municipal borough previously to 22nd March; relief provided, *ib.* 405.

Carnarvon (*Municipal Borough*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 66.

Carshalton (*Surrey*). Exceptional distress in this urban district in February, due to the severity of the weather; measures of relief provided, *App.* (*2nd Rep.*) 271.

Carters (*Scotland*). Illustration in the case of carters throughout Scotland of the great advantage of a reduction in the hours of labour, *Hunter* 8573–8577.

Castleford (*York*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 193.

Information from the locality respecting the extent of the distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 85.

Castle Ward (*Northumberland*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 317.

Casual Paupers. Special importance of permanent measures for the employment of "casuals," from whom the loafing class are largely recruited, *Alden* 2281–2286——Attention drawn to the unsatisfactory and sometimes illegal manner in which casual paupers are relieved, *Dodd* 7594 *et seq.*; 7702–7704——Suggestions as regards casual labourers, who work only a day now and then, being taken in charge by the Poor Law authorities, *Motion* 8207–8210.——*See* also *Tramps and Vagrants.*

Cathcart (*Renfrew*). Absence of exceptional distress in this parish, *App.* (*3rd Rep.*) 767.

Causes of Distress. See *Amount and Causes of Distress.*

Caxton and Arrington Rural District (*Cambridge and Huntingdon*). Sufficiency of voluntary modes of relief in this district, *App.* (*2nd Rep.*) 366.

Census of Unemployed. Suggestion on the part of Wandsworth and Clapham that a census be taken of the unemployed, *Sir H. Owen* 135——Desire expressed by the Guardians of Lincoln and of several other places that a census of the unemployed throughout the country should speedily be obtained, *ib.* 152. 157.

Reference to the census taken in West Ham as not having led to any action on the part of the District Council; way in which the census was compiled, *Hilleary* 1523–1529. 1576–1581.

See also *Number and Classification of Unemployed.*

Central Relief Fund. Unsatisfactory operation of a central relief fund if only availed of in some localities, *Hilleary* 1948, 1949.

Chadderton (*Lancaster*). Absence of exceptional distress, *App.* (*2nd Rep.*) 331.

Chapel-en-le-Frith (*Derby*). Amount of distress in this district; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 184.

Reports, 1895—*continued*.

Chard (*Somerset*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 66. 185.

Charitable Relief (*Charity Organisation Society*):

Very general operation of special relief committees in the centres of industry; large sums subscribed, *Keir-Hardie* 737——More harm than good through a system of indiscriminate alms-giving, whether by doles of money or of food; illustration in West Ham, *Hills* 2568–2570——Great advantage on the other hand of charitable aid properly administered, and with careful safeguards against abuse; reference hereon to the very valuable operation of the Charity Organisation Society, *ib.* 2570–2572.

Efficient means of investigation, on the system of the Charity Organisation Society, as regards the charitable part of the scheme proposed by witness, *Hills* 2573——Importance of a clear distinction between charitable relief (for which nothing is given back) and employment for wages paid, *ib.* 2592. 2615——Concurrence in the view that indiscriminate charity in the East-end of London and in West Ham is very injurious and demoralising, *ib.* 2681–2689.

Main object of the Charity Organisation Society in St. George's-in-the-East to make the people more self-reliant; opinion that although the system may appear to be harsh it ultimately, and perhaps rapidly, lessens the sufferings of the poor, *Mackay* 5436 *et seq.*; 5640 *et seq.*; 5680 *et seq.*; 5727 *et seq.*——Absence of necessity for organising an efficient charity committee in every local area throughout England; decided objection to the proposal to establish an almoner of charitable relief in each district as being unnecessary, and an incentive to pauperising, *ib.* 5466 *et seq.*

Explanation that the Charity Organisation Society helps any person when out of work who can show that he has seriously tried to make some provision for himself in time of sickness, *Mackay* 5560–5573. 5586 *et seq.*; 5766-5768——Success of the society in St. George's due to the fact that every case is personally investigated, *ib.* 5582–5584——Denial of the suggestion that the effect of the system in St. George's is to retain the self-supporting people, and to drive the residuum from the district, *ib.* 5621-5631.

View of witness that the Charity Organisation Society would not be doing its duty if it were not, to a certain extent, unpopular with the working classes of the East-end of London, *Mackay* 5675 *et seq.*——Contention that those applicants who refuse the Society's conditions do not go into the workhouse, but get along somehow on their own resources; statement hereon, that although some of the London workhouses were extremely overcrowded this winter, St. George's Workhouse was not among the number, *ib.* 5681–5698. 5762–5765——Conclusion that the principle and practice of inquiry before relief is the main cause of the lack of appreciation of the Society; kinder feeling towards the Society on the part of the better class of working people, *ib.* 5786-5788.

Strong objections of men in Glasgow to being subjected to the investigations of the Charity Organisation Society, *Hunter* 8316——Objection to indiscriminate charity for the relief of loafers, *C. Booth* 10764-10766.

Information from each locality in England and Wales, in response to inquiry by the Local Government Board, as to the steps taken by charitable or voluntary agencies for relieving the distress, *App.* (*2nd Rep.*) 20 *et seq.*——Similar information from localities throughout Scotland, *App.* (*3rd Rep.*) 565 *et seq.*

See also *Church Army. Glasgow. Liverpool. Mansion House Committee. Pontypool. Salvation Army. St. George's-in-the-East. Scotland. West Ham. Whitechapel.*

Charity Commission. Inability of the Charity Commissioners, as a general rule, to re-transfer to charitable purposes money that has once been taken for educational purposes, the only case in which a re-transfer can be made being one in which the *cy-près* doctrine is applicable, *Dodd* 7501–7503——Statement that since powers of diversion were given to the Charity Commissioners, property, giving an income of about 20,000*l.* a-year has been diverted from charity to education; contention that money so diverted and not actually used should be restored, *ib.* 7505–7510.

View of witness that no charity lands should be sold, as the provision of allotments would be a relief to the unemployed; large amount of money in the hands of the Charity Commissioners that might be usefully invested in land for allotments, *Dodd* 7511. 7527. 7645–7648——Sanction by the Charity Commissioners of the sale of charity lands to the value of eight millions sterling since 1853 on the grounds of bad management by the trustees and the supposed policy of the law of mortmain; opinion that neither of these grounds is solid, and that further sales should be prevented, *ib.* 7511 *et seq.*; 7628-7633. 7639-7648. 7660–7662.

Partial remedy for mismanagement of land by trustees provided by the Parish Councils Act; fear, however, that the Charity Commissioners may rather minimise this remedy, as they encourage co-optative rather than representative trustees, *Dodd* 7513–7517——Recommendation that the Commissioners should be brought under Parliamentary control, and that more publicity should be given to their proposed schemes; suggestion that all draft schemes should contain on the face of them a short *précis* of the original trusts of the charity, *ib.* 7524-7531.

Reports, 1895—*continued.*

Charts (*Fluctuation of Employment*). Several charts, submitted by Mr. H. Llewellyn Smith, explanatory of the seasonal and cyclical fluctuations in employment in the several years 1887-94; 3*rd Rep. p.* 52.

Chatham. Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (2*nd Rep.*) 380, 381.

Chelmsford (*Essex*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 67.

Chelsea. Letter from Chelsea, on 4th February, to the effect that the distress in the district is not of an exceptional character, and that no special arrangements are contemplated by the guardians, *Sir H. Owen* 90.

Information dated 27th February respecting the amount of distress in the parish and the action of the vestry in the matter, *App.* (2*nd Rep.*) 340——Closing of the Labour Bureau from the 25th March, *ib.* 391.

Return handed in by Sir Hugh Owen showing for each of the years 1884-85 to 1893-94 the number of indoor and outdoor paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (3*rd Rep.*) 524–533.

Cheltenham. Letter from the mayor in February explanatory of the extent and character of the local distress and showing the measures of relief provided, *App.* (2*nd Rep.*) 345.

Chertsey (*Surrey*). Local information as to the amount of distress in Chertsey rural district in February, and as to the remedial measures adopted, *App.* (2*nd Rep.*) 243—— Amount of distress in the urban district in February; relief provided, *ib.* 347.

Chesham (*Bucks*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 86.

Cheshunt (*Hertford*). Explanation in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (2*nd Rep.*) 154.

Chester. Letter from the Town Clerk in February explanatory of the extent and causes of the local distress, and showing the measures of relief provided, *App.* (2*nd Rep.*) 341——Absence of exceptional distress in the rural district in February, *ib.* 318.

Chesterfield (*Derby*). Explanations in February 1895 respecting the extent and character of the local distress and the relief provided, *App.* (2*nd Rep.*) 134.

Chesterfield (*York*). Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (2*nd Rep.*) 51, 52.

Chester-le-Street (*Durham*). Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (2*nd Rep.*) 243.

Chesterton (*Cambridge*). Exceptional distress in this urban district in February due to the severity of the weather; measure of relief provided, *App.* (2*nd Rep.*) 271.

Chichester. Letter from the mayor of Chichester, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (2*nd Rep.*) 67.

Chipping Norton (*Oxford*). Sufficiency of voluntary agencies during the severe weather, *App.* (2*nd Rep.*) 411.

Chipping Sodbury (*Gloucester*). Amount of distress in this district in February; remedial measures adopted, *App.* (2*nd Rep.*) 336.

Chipping Wycombe (*Bucks*). Absence of exceptional distress in March, *App.* (2*nd Rep.*) 456, 457.

Chorley (*Lancaster*). Official explanations in February as to the amount of distress in the municipal borough, and the remedial measures adopted, *App.* (2*nd Rep.*) 212.

Chorlton Union (*Lancaster*). Letter from Chorlton Union, on 28th January, to the effect that there had been no material increase of distress, *Sir H. Owen* 19.

Christchurch (*Hants*). Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (2*nd Rep.*) 243.

Church Army:

Description of the small labour homes established by the Church Army in various necessitous centres, with the object of creating the idea of home-life and domestic happiness; explanation that in these homes charity is reduced to a minimum, *Hunt* 10147, 10148. 10154–10156. 10165. 10174, 10175, 10191, 10192. 10301——Practice

to

Reports, 1895—*continued.*

Church Army—continued.

to place before each applicant a real work test, usually the making and bundling of firewood, in order to discover his ability and inclination, *Hunt* 10149–10152——Information as to the regulations enforced in the homes; the men are at work for eight or nine hours daily, *ib.* 10157–10159. 10205, 10206. 10297–10299.

Examination regarding the wages paid; rule to give the men as far as possible the unionist rate of wages, out of which they have to pay 6*s.* per week for board and lodging, *Hunt* 10161, 10162. 10236–10296. 10363, 10364——Practice to provide help for sixteen weeks, after which period twelve months must elapse before another application from the same person can be entertained, *ib.* 10162. 10200–10202. 10309–10311——Means taken to assist men in getting employment, *ib.* 10163–10165.

Explanation as to the evangelistic branch of the work; there is no interference with the particular form of any man's religion, *Hunt* 10166–10168——Statistics respecting the working expenses of the homes; usual practice for the vicar of a parish to pay the rent, rates, and taxes, and the superintending officer's salary, *ib.* 10169, 10170. 10281–10285——Statement that the money received from the Poor Law guardians for the support of the first 1,250 people sent by them worked out at about six-sevenths of a penny per day, *ib.* 10170. 10304–10308. 10391–10394.

Evidence respecting the small lodging homes where a man by a certain payment can obtain a night's lodging, *Hunt* 10171, 10172——Opinion that the very cheap lodgings and free shelters have helped to solidify and settle the army of loafers, *ib,* 10172–10174.

Details as to the success attending the co-operation of the Church Army and the guardians of the poor; letter hereon dated January 1892 from the chairman of the Paddington Board of Guardians, *Hunt* 10176–10180. 10301–10303. 10320–10328——Explanation that all the homes of the Church Army will accommodate 500 men and that 2,000 pass through annually, *ib.* 10193–10198.

Belief that 50 per cent. of the men who have been in the homes obtain a fresh start in life, *Hunt* 10199. 10203, 10204. 10312–10319. 10356–10362. 10383–10386——Examination as to the manner in which the homes assist the employment of the truly necessitous; belief that the homes by receiving the delinquent unemployed increase the value of the labour of the real unemployed, *ib.* 10217–10234. 10340–10345.

Question as to whether the inquiries made respecting applicants by the Church Army resemble in any way those made by the Charity Organisation Society; statement hereon that careful inquiry is made, but that inconsistencies and falsifications do not prove deterrent to applicants receiving assistance, *Hunt* 10377–10382. 10387–10390.

Cleator Moor (*Cumberland*). Exceptional distress in this district; steps taken by the local authorities for its relief, as well as by voluntary agencies, *App.* (*2nd Rep.*) 362.

Clerkenwell. Letter from the chairman of the vestry, dated 25th March 1895, submitting information as to the employment given by the vestry during January, February and March, *App.* (*2nd Rep.*) 436.

Clevedon (*Somerset*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 155.

Clitheroe (*Lancaster*). Extent and character of the distress in the Municipal Borough and in the rural district in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 260, 261. 291.

Clutton (*Somerset*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 354.

Clydebank (*Dumbarton*). Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 574.

Reports, 1895—*continued.*

Coal Strikes. Information as to the extremely disastrous effect of the Scotch coal strike of 1894, and of coal strikes generally, not only as regards the colliers themselves, but in throwing out of employment great numbers of workers in the steel and iron trades, *Hunter* 8298–8302. 8400–8404. 8540–8542.

Cockermouth (*Cumberland*). Information respecting the extent of the local distress in the urban district, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 86——Sufficiency of voluntary agencies during the severe weather in the rural district, *ib.* 411.

Colchester (*Essex*). Amount of distress in Colchester municipal borough previously to 1st March; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 369.

Collieries and Quarries. Explanation as regards coal mines being open for so many days in the week that it is difficult to supply information as to the number of days for which the miners individually were at work, *Smith* 4762–4768. 4907–4916——Great variation in the provision made in different colliery districts as regards unemployed benefit, *ib.* 4810–4813——Statistics and explanations respecting the range of unemployed benefit given by mining unions in Northumberland and Durham in different years, *ib.* 4731.

Effect of mining royalties in interfering with competition with foreign manufacturers of steel and iron and in thus augmenting the unemployed, *Hunter* 8284, 8285. 8474–8481.

Lists of places making complaint with reference to distress through stoppage of collieries, quarries, &c., *App.* (*3rd Rep.*) 807–812. 815. 818——Complaints from seven districts in the case of stone quarries and from sixteen districts in the case of collieries, *ib.* 820.

See also *Pontypool.*

Colne Urban District (*Lancaster*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 87.

Colonisation (*Scheme of General Booth*). Conclusion of General Booth that there are only three methods for remedying the evils arising from want of employment, namely, to make more work, to more equally distribute existing work, or to reduce the number of workers by removing some of them to some other part of the world, the last being the most promising plan, *B. Booth* 9824 *et seq.*; 10022–10043.

Plan of the General to establish large numbers of the unemployed upon suitable land in the Colonies in a manner which would ensure their being happy and thriving colonists; this plan has not yet been carried out, owing principally to want of money, *B. Booth* 9828 *et seq.*; 9967–9971. 10128–10142——Probability that operations over the sea will be commenced before the end of the year, negotiations being now in progress with one of the Colonial Governments in regard to the acquisition of a site for the over-sea colony, *ib.* 9866.

Claim that General Booth's scheme has already done a great deal of good, but that when the over-sea colony is in working order the supreme object of the whole enterprise will be obtained, and the workless man will have been removed from where there is no work to a place where he can support himself; important advantages of the scheme, *B. Booth* 9866.

Explanation that the scheme deals with families as well as individuals, no solution of the unemployed question being thought worth considering unless it ultimately proposes to transfer the man who has a family, *B. Booth* 9866, 9867——Opinion that there is a reasonable chance of recouping the money spent on the men beyond the sea, under the scheme, and a great part of what is spent on them this side, but not the money spent in transferring them, *ib.* 9868.

Suggestion that municipal authorities, boards of guardians, and other local authorities should be empowered to pay the costs of shipping prospective paupers across the sea; reasonable conditions contemplated, *B. Booth* 9868–9874. 9922–9926. 9972–9980. 10007–10010. 10024 *et seq.*——Admitted failure of some attempts at colonisation, while some on a comprehensive scale have been conspicuous successes, *ib.* 9873–9877.

Coventry. Instance at Coventry of the transfer of workpeople from one trade to another of an entirely different character, *Smith* 4931–4934.

Letter from the Mayor of Coventry in February 1895 as to the extent and cause of the exceptional distress in the county borough, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 256, 257.

Cowpen Urban District (*Northumberland*). Amount of distress in this district previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 420.

Cox, George H. (Analysis of his Evidence.)—Witness is a citizen of Liverpool, taking an interest in philanthropic enterprises; was honorary secretary to a Commission of Inquiry into the causes of want of employment in Liverpool, 6176–6179. 6485, 6486.

Division of the unemployed into two classes by the Commission of Inquiry in Liverpool, namely: Class A., consisting of those steady and capable men and women who would do work if they could get it, and Class B., consisting of those who from one cause or another cannot or will not do work of an average standard in quality and quantity, 6177 *et seq.*; 6277-6279 ——Enumeration of the causes of want of work on the part of Class A., the principal being the general depression in trade and the attraction to Liverpool, from various motives, of a large number of strangers, who often permanently displace the residential workers, 6183–6185. 6254–6258. 6348 *et seq.*; 6448–6451. 6601–6604.

Statement that the most important remedy suggested to the Commission to improve the condition of Class A. was a better organisation of labour in seasonal trades with a view to making it more permanent, 6186 *et seq.*; 6441–6443——Explanation as to the labour clearing-house scheme, recommended in the report of the Commission, under which an association would guarantee continuous employment to a certain number of men at something less than the standard rate of wage, and supply them as required to employers at the standard rate, 6189 *et seq.*; 6247–6253. 6302–6315. 6373 *et seq.*; 6463–6470. 6543 *et seq.*

Preference of some of the employers and men for the existing system, the former because they get the pick of the best men, and the latter, especially the young and active, because it enables them to earn large amounts of money which they can enjoy during slack periods, 6194. 6226 *et seq.*——Sufferings of the elderly and weaker men, many steady and fairly capable porters not earning on an average more than 13 *s.* per week, 6194, 6195. 6427–6436.

Opinion that the actual distress arising from want of employment in the skilled trades is minimised by the out-of-work allowances provided by the trade unions, 6196. 6259, 6260——View of witness that, while trade unions are entitled to demand a fair share of the profits of industry for their members, it is desirable that they should adopt more elastic ways of dealing with capitalists; tendency of their action at present to swell the ranks of the unemployed, 6196 *et seq.*; 6261 *et seq.*

Suggestion that trade unions should enter into contracts with capitalists, selling the labour of their members at so much per week, or allow their individual members to so contract, the agreement to be subject to compulsory arbitration, 6197–6199. 6391–6398. 6518——Approval of boards of conciliation and arbitration for the settlement of trade disputes, 6198, 6199.

Chief causes of want of employment among Class B. are ill-health, intemperance, restlessness, hereditary incapacity, overwhelming misfortune, &c., one of the most powerful factors in the problem being injudicious and indiscriminate charity, 6200,

Reports, 1895—*continued.*

Cox, George H. (Analysis of his Evidence)—*continued.*

6201. 6487 *et seq.*; 6522–6525——Recommendation that the vast amount of child-life which is running to waste in Class B. should be dealt with and turned to some useful purpose, the boys being trained as seamen and the girls as domestic servants, 6201–6205. 6280–6283. 6335–6340. 6480–6484. 6627–6634.

Grounds for the opinion that for respectable men and women, who, through natural weakness, are unable to do work of an average quality, but who could do a limited quantity if superintended, a labour farm or colony would give better physical, moral, and financial results than the present Poor Law system, 6206 *et seq.*; 6288–6295. 6399–6426. 6508–6514. 6595 *et seq.*——Desirability of a modification of the trades unions' rules so as to permit the elderly or more weakly members to earn what they could at a lower rate than that for those in full vigour; belief that such a modification would largely mitigate the suffering entailed by want of employment, 6208, 6209. 6307–6315. 6465, 6466. 6526–6532.

Recommendation that the idle, dissolute, and criminal members of Class B. should be left to the sharp remedies of the Poor Law and the criminal law; statement hereon that the Statutes against vagabondage do not appear to be regularly enforced, 6212–6214. 6607–6610. 6616——Advisability of the Government encouraging and directing the better organisation of capital and labour, the settlement of disputes, and the institution of remedies for existing evils; decided objection, however, to the Government granting pecuniary aid in connection with these objects to local authorities, 6215, 6216. 6326–6334. 6444–6447. 6505. 6588–6594.

Approval of the German plan for ascertaining the actual state of the deserving poor, whereby each member of a committee takes charge of a small section of a town, and is made responsible for a thorough knowledge of every person or family in it, 6217, 6218——Enlistment of the services of the police by the public authorities in Liverpool when dealing with the distress during the past winter; sympathy of the Corporation for the unemployed, 6219, 6220. 6584–6587.

Evidence to the effect that a proposal to form a strong permanent committee to deal with distress due to want of employment was debated by the Liverpool Town Council, but that, unfortunately, nothing was done in the matter, 6221–6225. 6284–6287. 6316–6325. 6341, 6342. 6495–6507——High rate of wages paid to unskilled workmen in Liverpool, the result being that the men have to work at high pressure to enable their employers to recoup themselves; displacement of industries due, to a certain extent, to the trades unions requiring such high wages, 6261 *et seq.*; 6296–6301. 6343–6372. 6377 *et seq.*; 6437–6440. 6452–6462. 6571–6583.

Opinion that it is the overtime coming immediately on top of the daytime that uses the dock labourers up so quickly in Liverpool; absence of necessity for the men to work such long hours, 6452–6462. 6515. 6532–6556——Possibility of some scheme being devised by which the agricultural labourer could be prevented from coming into the towns, 6471–6476.

Belief that the Charity Organisation Society or the Central Relief Society has done a great deal of very excellent work in Liverpool, 6477–6479——Considerable success of the Liverpool guardians in their endeavours to move girls to mill districts; great difficulty, however, in inducing the people to go, 6516, 6517.

Decrease in the cost of the various necessaries of life in 1894, as compared with 1874; 6520, 6521——Statement that there is a great deal of favouritism in engaging the men in the docks at Liverpool; general impression among the men that they must give a certain proportion of their wages to the ganger or master-porter who employs them, 6564–6570.

Concurrence in the suggestion that the unemployed exist because wealth is badly distributed and labour is intermittently employed; doubt, however, as to the disappearance of the unemployed problem in Liverpool if the total work were averaged out and regulated, 6615–6623.

Cranbrook Rural District (*Kent*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 114.

Crediton (*Devon*). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 366.

Dewey, William Francis. (Analysis of his Evidence.)—Witness, who is Vestry Clerk of Islington, explains that the parish is the most populous in the United Kingdom, the present population being estimated at 323,853, whilst the rateable value is 1,717,571*l.*; very little vacant space for increase of houses, 3662–3672. 3677, 3678. 3833, 3834. 3847–3849——Total rates of 5*s.* 8½*d.* in the pound, including poor and county rates, and vestry and school board rates, &c., 3673, 3674——Receipt of about 10,000*l.* half-yearly under the Equalisation of Rates Acts on the score of population, 3675, 3676. 3831–3834.

Large proportion of the residents in the parish who are engaged in the building trades and in connection with the tramways; small rateable value of the great bulk of the houses, 3679-3683. 3841-3843. 3850–3857——Particulars respecting the operation of the labour bureau established at the beginning of last year; fair success thereof as regards the employment thereby, whilst there has been no surcharge as regards the expenses, 3684–3693. 3709. 3864–3866.

Belief that during the late winter there has been no abnormal distress or want of employment in Islington, save during the four weeks of frost, 3694. 3717. 3727–3732. 3753–3758. 3792–3798——Employment given to an average number of 904 additional street sweepers daily during ten days in February, the expenditure being about 1,500*l.*, and the rate of pay 4*d.* an hour; discontinuance of employment when there was no longer any snow to sweep, 3695–3721. 3772. 3858–3869——Very moderate increase of out-door relief given during the severe weather, there having been no unusual pressure, 3722–3732. 3753–3758. 3829–3846.

Grounds for the conclusion that the circular of the Local Government Board as to the several modes of employment to be resorted to during severe winters is not only useless but misleading, 3733–3748——Mischievous effect of the circular in inducing persons to believe that the local authorities are almost bound to provide relief works, 3733. 3762, 3763. 3806–3813——Proposition that it is undesirable to create useless work for the sake of employing the unemployed (out of the rates), inasmuch as this would interfere with regular employment; exception as regards street sweeping, 3746–3752. 3762, 3763.

Result of witness' extensive experience that he considers the question of disfranchisement has practically no effect in preventing applications for out-relief, 3759–3761. 3799–3805——Denial that pressure on the part of the Local Government Board was needed in order to stimulate vestries and district boards to do what was feasible in the matter of the unemployed, 3762–3771——Limited extent to which the Vestry of Islington would be likely to postpone till the winter months, when employment is slack, any work which could more profitably and effectually be done in the summer, 3772–3791. 3814–3818. 3826–3828.

Payment of the extra men employed during the frost at a reduced rate, so as not to interfere with employment at the ordinary rate, 3819–3825——Strong deprecation of the vestry being a large employer of casual labour on unnecessary work for the sake of giving relief; injury thereby to the smaller and poorer ratepayers, 3814–3818. 3827–3843.

Dewsbury (*York*). Particulars supplied by the town clerk, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 69.

Disfranchisement (*Poor Relief*). See *Franchise.*

Dissolution of Parliament. Inability of the Committee, owing to the sudden Dissolution of Parliament, to do more than present an incomplete Report on the evidence they have had before them, *3rd Rep.* iii-v.

Distribution of Work. Question well worth investigation whether there might not be more equable distribution of work throughout the year so as to lessen the fluctuation of employment, *Smith* 4755–4759——Conclusion that parishes generally might arrange in advance the work to be executed when there is a pressure for employment, *Pilditch* 5039, 5040.

Concurrence in the suggestion that work done by public bodies should be so distributed that the greatest possible number of men should be employed without overtime, *Martineau* 6941–6946——Feeling of witness that it would be an advantage if public

Reports, 1895—*continued.*

Distribution of Work—continued.

public bodies so organised and distributed their actual public work over the whole year as to meet the exigencies of the unemployed, *Dodd* 7786-7788.

See also *Local Authorities.*

Dock Labour (*London*). Particulars respecting the monthly oscillations of dock labour in London due to various causes in 1893 and 1894, and in January and February 1895; increased percentage of employment in November and December of each year through the great wool sales in those months, *Smith* 4608–4621——Chart showing fluctuations in daily number of dock labourers employed by the London and India Docks Joint Committee in 1893, 1894, and part of 1895, *ib.* 4618, 4619; *App.* (3*rd Rep.*) 534.

Illustration in the case of dock labour of the tendency to a reduced employment of the less efficient men, *Smith* 4648–4653——Instance of the more permanent employment of a certain number, whilst the casual men find it very difficult to get any work, *ib.* 4735–4739.

Statement as to the large number of dock labourers in Poplar out of employment, *Lansbury* 10408——Belief that the ordinary wages of a casual docker average about 13*s.* per week taking the year round, while the amount paid by the Mansion House Committee was 22*s.* per week, *Smith* 11282–11289.

See also *Mansion House Committee.* *St. Olave's Union.* *West Ham.*

Dock Strike (*London*). Partial effect of the dockers' strike upon the change made by the dock companies in their system of employment, *Alden* 2529, 2530.

Docking (*Norfolk*). Absence of exceptional distress at the end of February, *App.* (2*nd Rep.*) 372.

Dodd, John Theodore. (Analysis of his Evidence.)—Witness has been for many years standing counsel to the Allotment Association of Birmingham, and is at present councillor for the West Ward in the city of Oxford; has written several works connected with local government and parish law, 7484-7486.

View of witness that the difficulty arising from want of employment can be met either by drastic changes in the social organisation, or by means of a large number of small reforms and improvements; preference for the latter course, 7487, 7488——Possibility of obtaining many of the reforms recommended without recourse to an Act of Parliament, while others are merely extensions of principles that have already been accepted by the Legislature, 7487.

Opinion that property left for the employment of the unemployed should not be transferred to education; two instances in which property has been so transferred, the probability being that there are several others, 7489-7503. 7742–7749——Inability of the Charity Commissioners as a general rule to re-transfer to charitable purposes money that has once been taken for educational purposes, the only case in which a re-transfer can be made being one in which the *cy-près* doctrine is applicable, 7501-7503.

Desirability of expanding or reinstating the practice of apprenticeship, or some other method of teaching a definite trade; disapproval of property left for apprenticeship being transferred to middle-class or secondary education, 7504, 7505——Statement that, since powers of diversion were given to the Charity Commissioners, property giving an income of about 20,000*l.* a year has been diverted from charity to education; contention that money so diverted and not actually used should be restored, 7505–7510.

View of witness that no charity lands should be sold, as the provision of allotments would be a relief to the unemployed; large amount of money in the hands of the Charity Commissioners that might be usefully invested in land for allotments, 7511. 7527. 7645–7648——Sanction of the Charity Commissioners of the sale of charity lands to the value of eight millions sterling since 1853, on the grounds of bad management by the trustees and the supposed policy of the law of mortmain; opinion that neither of these grounds is solid, and that further sales should be prevented, 7511 *et seq.*; 7628-7633. 7639–7648. 7660-7662.

Partial remedy for mismanagement of land by trustees provided by the Parish Councils Act; fear, however, that the Charity Commissioners may rather minimise this remedy, as they encourage co-optative rather than representative trustees, 7513–7517——Attitude of the Charity Commissioners rather opposed to allotments, the powers given them under the Allotments Act of 1882 to exempt land from that Act being largely exercised, 7519-7523.

Recommendation that the Charity Commissioners should be brought under Parliamentary control, and that more publicity should be given to their proposed schemes; suggestion that all draft schemes should contain on the face of them a short *précis* of the original trusts of the charity, 7524–7531——Opinion that the result of the

Dodd, John Theodore. (Analysis of his Evidence)—*continued.*

the public inquiries under the Endowed Schools Act should depend more upon the evidence, 7524–7527.

Evidence in support of the contention that the useful employment of the poor is the true principle of the Poor Law, and that the useless picking of oakum and the profitless breakage of stones are equally pernicious, 7532 *et seq.*——Recommendation that boards of guardians should be allowed to try and give useful employment to the unemployed where they think fit, and to take land for that purpose if necessary; power of the guardians to take land under the existing law, subject to the rules of the Local Government Board, 7537 *et seq.*; 7678 *et seq.*; 7728-7741. 7750 *et seq.*

Doubt as to whether the receipt of reasonable wages by the unemployed for agricultural labour done for the guardians would, as a matter of law, disfranchise them, 7537, 7538. 7544–7546. 7675. 7751, 7752——Attention drawn to the fact that the guardians, by virtue of the early statutes of this century, which are still in force, although regarded as obsolete, can acquire any amount of land and let it out in allotments under the rules of the Local Government Board; copy of a petition from labourers, for the issue of such rules, handed in, 7543 *et seq.*; 7613–7627. 7654, 7655.

Contention that the Local Government Board ought to be fully acquainted with the statutes which it has to administer, and that it should have issued rules, when they were urgently applied for, for the guidance of guardians in giving useful employment to the poor, 7546 *et seq.*——Suggestion that regulations should be issued under the Poor Law Act of 1603 for the useful employment of the unemployed and the disposal of produce; desirability of the produce being so disposed of as not to conflict with the outside market, 7561–7568. 7623–7627. 7750 *et seq.*

Advisability of the Local Government Board giving the guardians power, by way of experiment, to found labour colonies, or works of a like character; opinion that the initial expenses of such works should be chargeable in London on the Common Poor Fund, 7568–7570. 7634 *et seq.*; 7694-7697. 7760–7777. 7805——View of witness that the circulars issued by the Local Government Board have been very useful, but that in future different circulars should be issued to different authorities, clearly explaining their several duties and powers, 7571. 7676, 7677. 7778–7785.

Submission by witness of a copy of a circular which he printed and issued to boards of guardians in rural districts calling attention to the many ways in which they could provide for the unemployed, 7571–7573——Suggestion that the Local Government Board might encourage the local authorities to provide useful work by reducing the interest on loans and extending the time for repayment, 7574–7578. 7789–7791.

Opinion that, while there should be some control by the central authority, the town councils should be allowed to carry out their own affairs in their own way; also, that the powers given to parish councils should be given to all urban councils who ask for them, 7578–7584. 7663–7668. 7792–7799——Proposal that an Act of Parliament should be passed providing a simple uniform method for the compulsory purchase of land by local bodies for all public purposes, similar to that under the Parish Councils Act, 7584, 7585. 7678–7690. 7719–7727.

Suggestion that urban landowners should be taxed in aid of local burdens, 7585–7587. 7734-7739——Contention that the fact that there is no extra pressure on the Poor Law does not in the least prove that there is no exceptional distress, many men being supported by trade unions and private charity, 7588.

Recommendation that the influx of agricultural labourers and others into the towns should be checked by the provision of allotments, proper cottages, and small holdings; disposition of witness to place confidence in, and responsibility upon, the parish councils in these matters, 7589-7592. 7636–7638. 7669-7674. 7805–7810——Suggestion that the guardians be empowered to give temporary outdoor relief, if they have not the power already to do so, and that the prohibitory suggestions made by the Local Government Board in a circular of 1871 should be rescinded, 7593, 7594.

Necessity of a more efficient inspection of workhouses if the temporarily unemployed are to be treated by indoor relief, 7593, 7594——Attention drawn to the unsatisfactory and sometimes illegal manner in which casual paupers are relieved, 7594 *et seq.*; 7702-7704.

Instances of the way in which the Local Government Board have rather sharpened the Poor Law against the poor, and discouraged out-relief to an excessive degree, 7597–7599. 7656–7659. 7698–7701——Unintentional discouragement of thrift among the poor by the Local Government Board; necessity of modifying the Poor Law circulars, many of which are very old, 7597–7602.

Recommendation that the powers of the Board of Trade as to the alteration of the hours of labour should be extended to omnibuses, trams, and mines, 7603, 7604——Suggestion that more power should be given to municipalities and that they should be allowed to hold land whenever they purchase it, instead of having to sell it within a certain time, as at present, 7604–7610.

Reports, 1895—*continued.*

Dodd, John Theodore. (Analysis of his Evidence)—*continued.*

Desirability of all Crown lands being retained, it being especially objectionable to sell foreshores, 7611, 7612. 7649–7654——Submission by witness of copies of resolutions passed by the conference on the unemployed and other bodies in regard to acquiring land under the old statutes, 7613.

Concurrence in the suggestion that the local authorities, as well as the boards of guardians, should have the power of providing work for the unemployed, 7705–7708——Opinion that the resuscitation of the powers given under the Act of the 43rd Elizabeth should allow the guardians to give both temporary and permanent relief, 7709 *et seq.*

Feeling of witness that it would be an advantage if public bodies so organised and distributed their actual public work over the whole year as to meet the exigencies of the unemployed, 7786–7788——Probability that the lack of employment in agricultural districts is due to the low price of produce and to the difficulty in getting land; doubt as to over-production being one of the causes, 7800–7810.

Dolgelley (Monmouth). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 451.

Doncaster. Extent and character of the distress in the municipal borough in February; relief measures adopted, *App.* (*2nd Rep.*) 261——Absence of exceptional distress in Doncaster rural district in February, *ib.* 319.

Dorchester. Explanations in February 1895 respecting the extent and character of the distress in the urban district and the employment and relief provided, *App.* (*2nd Rep.*) 135 —— Limited amount of distress in the rural district, *ib.* 187.

Dorking. Local explanations in February as to the amount of distress in Dorking urban district and the remedial measures adopted, *App.* (*2nd Rep.*) 221, 222 —— Absence of exceptional distress in the rural district in February, *ib.* 319.

Dorsetshire. Information supplied in report by inspector as to the amount of local distress, the remedies provided &c., *App.* (*2nd Rep.*) 27, 28.

Dover. Absence of exceptional distress in Dover rural district or in the municipal borough, *App.* (*2nd Rep.*) 187. 214.

Draft Reports. Draft (Interim) Report, as proposed by the Chairman of the Committee, *1st Rep.* x–xii——Adoption thereof, subject to some amendments, *ib.* xii–xvi.

Draft Second Report, as proposed by the Chairman, adopted without amendment, *2nd Rep.* 3.

Decision of the Committee (by the casting vote of the Chairman) in favour of a Draft Report being prepared by the Chairman on certain lines, *3rd Rep.* xiii, xiv.

Copy of Draft Third Report, as proposed by the Chairman, *3rd Rep.* xiv, xv—— Adoption of the foregoing, subject to some amendments, *ib.* xvi, xvii.

Drayton (Salop). Particulars supplied by the chairman and by the clerk of the rural district council as to the amount of distress in February, and the remedial measures adopted, *App.* (*2nd Rep.*) 355, 356. 366.

Driffield (York). Local information as to the amount of distress in this rural district in February, and as to the remedies provided, *App.* (*2nd Rep.*) 244.

Droitwich (Worcester). Amount of distress in this rural district in February; steps taken for its relief, *App.* (*2nd Rep.*) 244.

Droxford (Hants). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 366.

Duddington (Edinburgh). Amount of distress in this parish, through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 677.

Dudley County Borough. Exceptional distress due to several causes; relief through voluntary agencies, *App.* (*2nd Rep.*) 394.

Dulverton (Somerset and Devon). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 292.

Dumbarton. Letter from the town clerk respecting the amount of distress in the burgh of Dumbarton and the relief measures adopted, *App.* (*3rd Rep*) 579——Amount of distress in the parish of Dumbarton; means adopted for its alleviation, *ib.* 663, 664.

Dumfermline (Fife). Information supplied by the town clerk respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 580——

Reports, 1895—*continued.*

Dumfermline (*Fife*)—continued.

Amount of distress in the parish, through the severe weather; remedies provided, *App.* (*3rd Rep.*) 690.

Dumfries. Particulars respecting the amount of distress in the burgh of Dumfries, and the steps taken by the local authorities, *App.* (*3rd Rep.*) 579——Extent and nature of the distress in the parish; steps taken for its relief, *ib.* 668.

Dundee. Letter from the town clerk of Dundee respecting the amount of distress and the relief measures adopted by the town council, *App.* (*3rd Rep.*) 580——Amount of distress in the parish of Dundee Combination, through the severe weather; measures adopted for its relief, *ib.* 700.

Dundonald (*Ayr*). Information supplied by the inspector of the poor as to the extent and character of the local distress, and the steps taken by the local authorities, *App.* (*3rd Rep.*) 640.

Dunmow (*Essex*). Very little distress in this district, *App.* (*2nd Rep.*) 392.

Durham. Explanations in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 136.

Dursley (*Gloucester*). Extent and character of the distress in this rural district in February; remedial steps taken for the relief thereof, *App.* (*2nd Rep.*) 293.

Dutch Labour Colonies. See *Holland.*

E.

Ealing (*Middlesex*). Local explanations in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (*2nd Rep.*) 222.

Early Marriages (*East End of London*). Belief that early marriages are not the cause of much destitution and poverty, *C. Booth* 10692–10694.

Easington (*Durham*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 293.

Easingwold (*York*). Non-existence of exceptional distress through the severe weather, *App.* (*2nd Rep.*) 294.

East Barnet (*Hertford*). Exceptional distress in the urban district in February, due to the severity of the weather; measure of relief provided, *App.* (*2nd Rep.*) 272.

East Dereham (*Norfolk*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 89.

East End (*London*). See *Early Marriages. Metropolis. Poplar. Saint George's-in-the-East. Saint Olave's Union. West Ham. Whitechapel.*

East Ham (*Essex*). Explanations in February 1895, respecting the extent and character of the local distress, and the employment and relief provided, *App.* (*2nd Rep.*) 157.

East Retford (*Notts*). Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 383.

East Stonehouse (*Devon*). Local explanations in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (*2nd Rep.*) 222.

Eastbourne. Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Particulars supplied by the mayor, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 69.

Eastern Counties. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 23——Particulars supplied by clerks to guardians throughout the eastern district, *ib.* 24, 25.

Eastwood (*Renfrew*). Amount of distress in this parish, through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 768.

Ebbw Vale. Employment provided by the district council; relief also from voluntary agencies, *App.* (*2nd Rep.*) 447.

Eccles (*Lancaster*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 70.

Eccleshall (*York*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 158.

Reports, 1895—*continued.*

Edinburgh. Letter from the town clerk respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 581, 582.——Amount of distress in the parish of Edinburgh through the severe weather; steps taken for its relief, *ib.* 677.

Edmonton (*Middlesex*). Extent of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 370.

Edwards, W. H. (Analysis of his Evidence.)—Witness, who is mayor of Swansea, was chairman of the central fund for the relief of distress during the recent severe weather, 4296. 4320.

Population of 100,000 in Swansea, there being now about 5,800 unemployed and 13,000 half-timers (inclusive of women and children), chiefly in the tin-plate trade, 4297–4307. 4390–4414——Explanations in detail respecting the depression in the tin-plate industry and the steel-plate industry, mainly through American competition, witness submitting that the only way to prevent the stoppage of works and to retain the trade in this country is by the men consenting to a reduction in the rate of wages, 4308–4319. 4332. 4340; 4373 *et seq.* 4467–4525.

Particulars respecting the constitution and operation of the voluntary relief committee, a register of unemployed having been opened and relief given in food, 4320–4329. 4458–4461——Employment given by the corporation in sweeping the streets and cleaning away the snow, 4330, 4331.

Proposition as to the Militia being called out, in localities where distress exists, at any time of the year, 4341–4348. 4463–4466——Advantage if the unemployed were put to work in the construction of light railways in the neighbourhood of Swansea, 4349–4361. 4442–4444.

Statement as to the Poor Law guardians at Swansea having done nothing to relieve the able-bodied unemployed, they not having been aware at the time that they had power to give relief partly in money and partly in kind, 4362–4372. 4445. 4462——Approval, conditionally, of the removal of disfranchisement as a consequence of the acceptance of relief, 4446. 4450–4457.

Egham (*Surrey*). Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 244, 245.

Eight Hours Day. Great importance attached to an eight-hours day; belief that not only would many more men thus be employed, but that wages would be increased rather than reduced, *Hunter* 8303–8308. 8357. 8490–8493. 8547–8562——The tide is setting in very strongly in favour of an eight hours day all round, *ib.* 8304.

Grounds for the conclusion that a general eight hours day would not give any permanent relief for the want of employment in the manufacturing districts, *Mather* 8975. 9061–9063——Full day's work obtained by witness upon the eight hours principle, as carried out at his works, *ib.* 8975. 9061–9063.

Experience that the introduction of the eight hours day has been the means of finding work for more men, *Thorne* 10799–10801——Suggestion that an international conference reducing the hours of labour to eight per day would be productive of relief, *ib.* 10831–10834.

Elgin. Amount of distress in this parish, through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 683.

Emigration. See *Colonisation. Mansion House Committee. Wanstead Flats.*

Employment, Want of (*Remedial Measures*). See *the Headings generally throughout the Index.*

Endowed Schools Act. Opinion that the result of the public inquiries under the Endowed Schools Act should depend more upon the evidence, *Dodd* 7524–7527.

Engineering Trades. Inclusion of machine makers, tool makers, press workers and founders, pattern makers, steel melters, and others in the engineering trades, *Smith* 4631–4634——Information, based on the "Vacant Book" of the Amalgamated Engineers, as to the numerical distribution of loss of time or want of employment among the members of the society; conclusion that there is an increasing tendency to the displacement of the less efficient and less skilful workmen, and to concentrate full employment on a smaller number, *ib.* 4635–4654.

Lower proportion of unemployed in January and February, on an average of the years 1887–93, than in the autumn months, *Smith* 4778–4784.

Chart showing the variations in the percentage of unemployment in the engineering and shipbuilding trades at the end of each month (mean of years 1888–94), *3rd Rep. p.* 52.

See also *Shipbuilding and Engineering Trades. Trade Depression. Trade Unions.*

Epsom Rural District. Absence of exceptional distress in March, *App.* (*2nd Rep.*) 459.

Equalisation of Rates (*London*) *Act.* See *Camberwell. Islington. Metropolis. St. Olave's Union.*

Reports, 1895—*continued.*

Erith (*Kent*). Statement as to there being no exceptional distress in this district, *App.* (*2nd Rep.*) 332.

Essex. Large numbers out of work in villages in Essex, *Keir-Hardie* 802.

Eton Rural District. Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 451.

Evesham (*Worcester*). Particulars supplied by the Mayor, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 70.

Exceptional Distress. See *the Headings generally throughout the Index.*

Exchequer Contribution Account. Suggestion that a portion of the Exchequer Contribution Account should be utilised in meeting cases of exceptional distress, *Phillips* 6678, 6679. 6751–6758.—— *See* also *State Aid.*

Exeter. Local information, under date 23rd March, as to the distress during the frost, and the remedial measures adopted, *App.* (*2nd Rep.*) 414.

Exmouth. Statement showing the action taken, or proposed to be taken, as regards the provision of work, or of relief for the unemployed, *Sir H. Owen* 181.

Local explanations in February as to the amount of distress in this urban district, and the relief provided, *App.* (*2nd Rep.*) 223.

Exports. Advance in manufacturing industries in many foreign countries, the exports from England to certain countries falling off in consequence, *Smith* 4847–4852—— Examination as to the advantages of employments for home wants as compared with employment in connection with goods for export, *C. Booth* 10770–10776.

Extent of Distress. See *the Headings generally throughout the Index.*

F.

Falkirk (*Stirling*). Letter from the town clerk of Stirling respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 583——Amount of distress in Stirling parish through the severe weather; steps taken for its relief, *ib.* 788.

Falmouth (*Municipal Borough*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 70.

Fareham (*Hants*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Particulars supplied by Mr. J. Sandy, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, and the relief afforded by public authorities and voluntary agencies, *App.* (*2nd Rep.*) 89, 90.

Farm and Labour Colonies:

I. *Scheme of Farm Colonies proposed by Mr. Mather:*
   1. Explanations and Advocacy on General Grounds.
   2. Two Classes of Colonies, for Temporary and Permanent Employment, respectively.
   3. Supply of Labour through the Poor Law Unions.
   4. System of State Loans for the Provision of Land and Buildings; Adequacy of the Security.
   5. Administration and Detailed Management.
   6. Cultivation, Produce, Auxiliary Employments, &c.
   7. Financial Considerations and Results.
   8. Paper submitted by Mr. Mather containing Explanations in Detail.

III. *Particulars in connection with the Labour Colony or Relief Works at Wanstead Flats, and the Action of the West Ham Unemployed Committee, with Suggestions as regards Labour Colonies generally.*

IV. *Proposal by Mr. Hunt on the subject of Small Labour Colonies or Homes.*

V. *Suggestions by Mr. Lansbury for the Grouping of Metropolitan Unions for the Acquisition of Land for Employment.*

VI. *Action taken by the Whitechapel Board of Guardians.*

VII. *Conflicting Evidence upon the Question, generally, of Farm Colonies for the Unemployed.*

Reports, 1895—*continued.*

FARM AND LABOUR COLONIES—continued.

I. *Scheme of Farm Colonies proposed by Mr. Mather:*

1. Explanations and Advocacy on general grounds:

Preliminary statement with reference to witness' scheme of farm colonies, showing the close relationship between the questions of agricultural employment and manufacturing employment, *Mather* 8975——Explanation that benevolence and philanthropy have no part in the scheme; nor is it left to the initiative of speculative investors, *ib.* ——Great improvement anticipated in agriculture under witness' scheme jointly with a large increase of employment, *ib.*

Special importance attached to the scheme as not being intended for the pauper class or the depraved or drunken, but as providing free-will temporary employment for those who really want to work for a livelihood, rather than accept Poor Law relief or apply for help from charities, *Mather* 8986. 8999.

Reference to letters received by witness in approval of his draft scheme from Professor Sheldon, Professor Knight, and several other eminent agricultural authorities, *Mather* 9006-9009.

Prospect under witness' scheme of the whole of the unfertile land of the country being gradually brought under cultivation, and of the scheme being taken up eventually by landowners in their own interests, *Mather* 9042–9050——Importance and value of the scheme in preventing rural labour from drifting into the towns, *ib.* 9198. 9358. 9374.

Indirect intention and effect of the scheme that agricultural labour will be improved and increased, the main object, however, being entirely practical as a means of giving employment and relieving distress, *Mather* 9207–9216.

2. Two Classes of Colonies, for Temporary and Permanent Employment, respectively:

Proposition that farm colonies be of two classes, affording employment of a temporary character and of a permanent character, respectively, *Mather* 8975—— Expediency of Part I. and Part II. of witness' scheme being separately dealt with by the Committee, as either part can be carried out independently of the other, *ib.* 9005, 9006.

Broad distinction drawn between the farm settlements in connection with the training colonies and those to be created for direct acquisition by agriculturists; stipulation as to the necessity of some capital in the latter case, *Mather* 9380–9391.

3. Supply of Labour through the Poor Law Unions:

Distinct feature of witness' scheme of farm colonies that it involves the employment of a selected class of unemployed superior to the pauper class or casual workers, *Mather* 8975——Explanation that the proposed training colony should in the first instance be occupied by the respectable and well-conducted working classes, temporarily unemployed but desirous of work, *ib.* 8976–8982——Statement as to the conditions under which the Poor Law authorities might send men of the unemployed class to work on the proposed training colonies, it being stipulated that they must remain for at least a month, *ib.* 8985. 8999, 9000.

Little, if any, difficulty apprehended in respect of the local employment of men sent to a distance from their homes and families, *Mather* 9001——Expectation that a large number of the men sent to the colonies, through the displacement of industries on which previously employed, would eventually obtain a permanent footing upon the farm settlements, *ib.* 9022, 9023. 9041——Belief that only a small proportion of men temporarily unemployed would be excluded from witness' scheme by reason of physical incapacity, *ib.* 9083.

Supply of men for each colony by the unions which contribute to its maintenance, though men from other unions might also be received on payment being made, *Mather* 9092–9095——Necessity of each man applying to his own union for admission to the colony, *ib.* 9096.

Arrangements for always maintaining skilled labour on the cultivated portion of each colony, the fluctuation of the supply on the uncultivated land not entailing injurious results, *Mather* 9096-9098——Consideration of objections as regards the large areas or colonies necessary for supplying employment to the numerous unemployed in large towns in times of exceptional distress, *ib.* 9146–9160.

Facility in selecting well-conducted men for the colonies, this being done by the local Poor Law authorities, but not involving any taint of pauperism, *Mather* 9176–9179——Intention that the more necessitous cases would first be dealt with, there being no legal claim to employment, *ib.* 9264–9269——Admission that the labour upon the uncultivated portion of each colony would probably be intermittent and irregular; due allowance made for stoppage of work in bad weather, *ib.* 9272-9279. 9315–9321.

Consideration of the question whether difficulties would not probably arise in obtaining

Reports, 1895—*continued.*

FARM AND LABOUR COLONIES—continued.

I. *Scheme of Farm Colonies proposed by Mr. Mather*—continued.

3. Supply of Labour through the Poor Law Unions—*continued.*

obtaining from the uncultivated land the extra labour required at harvest time upon the cultivated land; fallacy of the idea that the uncultivated land might at times be without any men upon it, *Mather* 9280–9292. 9357——Intention that men shall be sent to the colonies not only from the unions acting in combination, but if there be room for more labour from outside unions having unemployed men on hand, *ib.* 9333–9335.

4. System of State Loans for the Provision of Land and Buildings; adequacy of the Security:

Argument in justification of the proposition that the state shall take the initial steps, as for the common weal, provided that the security for its capital or loans be reasonably guaranteed against loss, *Mather* 8975——Conclusion that if necessary any deficiency incurred by the State in respect of its invested capital might well be made good by the Poor Law authorities in view of the benefits conferred upon the destitute class, *ib.*

Statement as to the proposed purchase of the land by the State, in the first instance; or, it might be leased in perpetuity, *Mather* 9078-9082——Necessary initiation of each colony by local Poor Law bodies, before the State advances the money for the purchase of the land, due investigation being made before any advance, *ib.* 9090, 9091.

Very favourable opportunity now presented for the acquisition of land at an average of about 10*l.* per acre, as in Essex, and for the application thereto of hand tillage out of the redundant supply of labour in the towns so as to bring it into profitable cultivation, *Mather* 9139–9143. 9165–9171. 9190. 9293–9332. 9361–9364. 9402——Contention that the money advanced by the State under witness' scheme would be a fair investment, though there might be no return from the colonies for the first five years, *ib.* 9183–9188. 9214. 9236–9240. 9346–9350.

Consideration of calculations as to the enormous capital as well as the immense area required if many thousand men suddenly come under witness' scheme; tentative character of the experiment in the first instance, it being proposed to begin with only six colonies at a cost of about 120,000*l.* loaned by the State, *Mather* 9189–9200. 9214, 9215——Entire dissent from the view that 9*l.*, or even 10*l.*, per acre is an excessive value to be derived from the land, *ib.* 9201–9203. 9361–9364. 9402.

Summary of the financial arrangements for starting and working the scheme, no return being expected from the training colonies (or uncultivated land) for the first five years; ample security to the State in the increased value of the land, *Mather* 9335–9350. 9359, 9360.

Re-iteration of the contention that the State could not possibly be a loser, nor the security for the loans be insufficient, even though the uncultivated land were deprived of labour for a considerable time through revival of trade and demand for employment therein, *Mather* 9351–9357. 9401, 9402.

Further explanations in support of witness' scheme of farm settlements, the initiative to be taken voluntarily by the county council, and loans to be obtained from the State for the purchase of the land or the provision of buildings; expected concert on the part of landowners, *Mather* 9373–9402——Conclusion that the State would have ample security for advances for buildings or for purchase of the land; or the county council might share in the liability, *ib.* 9374. 9392–9401——Further grounds submitted in justification of State loans, *ib.* 9401, 9402.

5. Administration and Detailed Management:

Grounds upon which it is proposed that the establishment and control of the farm colonies shall vest in the county councils, there being also the co-operation of the State and of the Poor Law authorities, *Mather* 8975——Contemplated control of the land by a committee of the county councils, the direct management being in the hands of a skilled agriculturist and practical farmer, *ib.* 8982——Conclusion that arrangements can easily be adopted for preventing the herding of the men together on the barrack system; provision contemplated for some families in the colonies, *ib.* 9002–9004.

Examination in defence of the proposition that the expenses of the scheme should be provided by the Poor Law authorities, whilst the administration and management should rest with the county council; or there might be a combination of the former authorities to undertake the management, *Mather* 9085–9089.

Further explanation that, though it is proposed to vest the supervision in the county council, this is not essential, and the Poor Law authorities might combine to form a management committee, *Mather* 9235. 9241–9243. 9344, 9345——Degree of control and supervision to be exercised by the State through the Local Government Board, *ib.* 9347–9350.

Co-operative element in working the farm settlements, so that there would be every prospect of success, *Mather* 9374——Probability that landowners would readily co-operate

FARM AND LABOUR COLONIES—continued.

I. *Scheme of Farm Colonies proposed by Mr. Mather*—continued.

5. Administration and Detailed Management—*continued.*

co-operate in promoting small farm settlements on witness' plan, so that the initiative of the county council might not be necessary, *Mather* 9374–9376. 9401.

6. Cultivation, Produce, Auxiliary Employments, &c.:

Proposal that each farm shall consist partly of cultivated and partly of uncultivated land, the unskilled labour being employed upon the latter; sustenance of the whole colony out of the produce of the former, *Mather* 8982–8984——Intention that the training colonies shall mainly supply products requiring more or less of hand-labour after production, and which are now imported from abroad, such as flax, seeds, straw-plaiting, &c.; very extensive auxiliary employment thereby, *ib.* 8987–8994——Intention that the men who go to the training colonies should be employed from month to month, after which, when acquainted with farming occupations, they might go abroad to an English colony, or might take up settlements created out of the training colonies, *ib.* 8999, 9000.

Suggestions as to the large amount of auxiliary work which may be provided in the cottages and homes of the workers, in connection with the products of each training colony, *Mather* 8992-8994——Important feature of witness' scheme that portion of each colony or farm shall consist of uncultivated or half-cultivated land, for the employment of unskilled men: belief that there would be no difficulty in finding such farms, *ib.* 9033-9041——Much better results anticipated from the land being under skilled managers than under the present class of farmers, *ib.* 9043–9051.

Considerations as to the extent to which unskilled men, employed for a month or so, could be usefully engaged on certain auxiliary industries, *Mather* 9052–9054——Doubt as to the colonies labouring under any practical disadvantage if they did not compete with local produce, but only with imported products, *ib.* 9055–9060.

Explanation that certain work required, as regards each colony, should be executed by the occupants, but that it is not proposed to compete with village industries outside, *Mather* 9100–9108——Several kinds of work now done in the homes of the people, such as ornamental iron work, art weaving, &c., which might be carried on in the colonies, *ib.* 9109——Intention that hand tillage should be largely employed in potato cultivation, but that horse labour would also be probably used, *ib.* 9307–9314

Calculation that the men in the training colonies would be employed on auxiliary industries for from forty to sixty days in the year; sufficient qualifications available for the purpose, *Mather* 9315–9332——Explanation that there would be fixity of tenure on the farm settlements, and that these holdings would be obtainable, not only by men who have passed through a training colony, but by agriculturists from outside, *ib.* 9367–9374.

7. Financial Considerations and Results:

Belief that, with the aid of auxiliary industries, labour on the training colonies might be made self-supporting, and that the initial capital expenditure would probably be met by the increased value of the land through hand tillage, *Mather* 8993–8998——Examination to the effect that the Poor Law authorities should not only take the initiative in sending men to the proposed colonies, but should be liable for any pecuniary deficit in working, whilst the administration should rest entirely with the county council, or, the guardians might take part in the management, *ib.* 9010–9021.

Explanation in connection with the proposal that the family of each man sent to a training colony shall receive 4*s.* a week from the guardians, it being contended that the man will earn by his labour, not only the cost of his own maintenance, but probably something in reduction of the guardians' payments, *Mather* 9072–9077——Mode of appropriation of any profits from the scheme, the managing authority having nothing to do with profit or loss, *ib.* 9084-9086.

Discussion upon the grounds for witness' assertion that under his scheme of training colonies men unaccustomed to ordinary farm work would be able to earn their maintenance and, after a time, more than their maintenance, *Mather* 9127 *et seq.*——Extent and character of the permanent employment to be afforded by the cultivated portion of each colony in the form of farm settlements; contention as to the profitable and self-supporting character of the latter, *ib.* 9161–9171.

Explanations in reply to certain objections raised with respect to the proposed contribution by the men (whilst employed on the colonies) of 4*s.* a week for the maintenance of their families; that is, out of piecework earnings on the land, *Mather* 9172–9175——More economical and efficient arrangements as regards labour on the colonies than are feasible on ordinary farms for the production of flax, &c., at a profit, *ib.* 9180–9182. 9204–9206.

Concurrence in the proposition that the obstacles which hinder the successful cultivation of land should at once be removed, irrespectively of the adoption of witness'

Reports, 1895—*continued.*

Farm and Labour Colonies—continued.

I. *Scheme of Farm Colonies proposed by Mr. Mather*—continued.

7. Financial Considerations and Results—*continued.*

scheme of farm colonies, *Mather* 9217–9219——Doubt whether the removal of all the rates and taxes on land would be effectual in bringing about profitable farming, *ib.* 9220.

Success anticipated for the training colonies in as far as they would be profitable to those occupied on the farm even if they did not pay in a financial sense, *Mather* 9221–9223——Indirect rather than direct effect of the training colonies in relieving the rates, as they would not touch the existing class or number of in-door or out-door paupers, *ib.* 9224–9234.

Information with further reference to the proposals as to the earnings and maintenance of the colonists, and as to their contributing 4*s.* a week to the support of their families; computed earnings (including piecework) equal to 16*s.* 6*d.* a week, provided the men work very hard, *Mather* 9244–9263——Expediency of the unmarried men contributing something out of their earnings to the general well-being of the colony, *ib.* 9270, 9271.

Examination as to witness' grounds for the conclusion that arable dairying may be worked at a profit in connection with witness' scheme, certain products now imported being also cultivated, *Mather* 9293-9331——Maximum deficit calculated at 1*s.* 3*d.* per head per week, which is far less than the allowance to the man out of the rates, *ib.* 9335. 9342—— Successful competition anticipated on the part of the farm settlements with small owners on the Continent who now send produce to this country, *ib.* 9365–9372.

8. Paper submitted by Mr. Mather containing Explanations in Detail:

Communication from Mr. Mather, dated 15th March 1895, together with draft scheme for providing work for the unemployed, firstly, by means of farm training colonies, and secondly, by means of small farm settlements; summary of proposals under each head of scheme, *App.* (*3rd Rep.*) 535–542.

II. *Explanations by Mr. Willink and Mr. Moore respecting Labour Colonies on the Continent; Conclusions upon the Question of their adoption in this Country:*

Visit paid by witness to the Dutch labour colonies in 1888, and to the Belgian colonies in 1890, the results of his inquiries having been published in separate Reports which were subsequently submitted to, and generally confirmed by the local authorities in Holland and Belgium, *Willink* 8735–8740.

Information respecting the origination of the Dutch free colonies, which were founded in 1818, the area under cultivation since 1821 consisting of about 4,000 acres; three different classes received, there being about 1,800 persons altogether, *Willink* 8741-8749——Explanation of the financial arrangements in the free colonies; reference especially to the practice as to the reception of families on payment by each district of 140*l.* per family, *ib.* 8742–8749.

Foundation of the first beggar colony in Holland in 1820, these colonies comprising in 1888 about 3,500 persons; several classes received, one class being able-bodied persons convicted of begging, there being also a class of old soldiers and orphans, *Willink* 8750–8754——Financial difficulties of the two sets of colonies for many years past owing largely to the inefficient labour on the beggar colonies, and the heavy cost, *ib.* 8750. 8755, 8756. 8851–8859.

Extracts from report by Count Arrivabene, who inspected the Dutch colonies in 1829, and from report by Sir John MacNeill, who visited them about thirty years later; unsatisfactory conclusions arrived at as to the working of the colonies, and the bad financial results, *Willink* 8755–8760——Original intention to make both the free and the beggar colonies agricultural, whereas the labour coming mainly from towns was found to be unsuitable, so that manufactures, schools, and model farms were established, entailing great expense, *ib.* 8759–8761. 8820. 8830–8843.

Summary of the leading changes and improvements which have been made as regards the Dutch free colonies since 1859; conclusion as to the very limited extent to which the system deals with the question of poverty in Holland, though the administration is now very efficient, *Willink* 8760–8772. 8844. 8862. 8867–8870——Limited opportunities of witness for observing the working of the beggar colonies; several respects in which they have not been a success, whilst they have been very costly, and are now a considerable burden on the State, *ib.* 8773–8780. 8784, 8785. 8792. 8856–8861. 8874–8881.

Opinion that neither the system of the free colonies nor of the beggar colonies is applicable to this country; similar view of the director of the free colonies, *Willink* 8779. 8817–8820. 8844–8866——Belief that as regards competition with outside producers the free colonies are not looked upon as any grievance; competition of the beggar colonies as regards manufactured articles, *ib.* 8781-8783.

Several

Reports, 1895—*continued.*

Farm and Labour Colonies—continued.

II. *Explanations by Mr. Willink and Mr. Moore respecting Labour Colonies on the Continent, &c.*—continued.

Several causes which have led to the greater success of the free colonies than of the beggar colonies, though even in the former case the colonists seem unable to save anything, *Willink* 8786–8791. 8856——Compulsory constitution of the beggar colonies, beggars being now rarely seen about the streets, *ib.* 8793, 8794. 8905–8207.

Explanations in detail respecting the Belgian labour colonies, three in number, these being in the nature of penal institutions for able-bodied vagrants and for mendicants; cost borne by the several communes, *Willink* 8798–8816.

Statement to the effect that the free and beggar colonies in Holland would hardly have been started if a poor law, or workhouse system, were in force there as in this country, *Willink* 8824–8829——Examination as to the poor land used for the Dutch colonies, and the small yield in comparison with the superior land and the larger yield in England, *ib.* 8830–8843.

Admission that in some respects the Dutch free colonies, as philanthropic institutions, have worked usefully, though neither this system nor that of the beggar colonies would answer in this country, *Willink* 8844-8882——Belief that the beggar colonies are conducted on total abstinence principles, *ib.* 8883–8887.

Examination with further reference to the operation of beggar colonies in Holland, and the extent to which they dispose of the whole class of tramps and beggars in the country in the absence of a poor law system, *Willink* 8900–8934——Statement as to the amount of accommodation in the Dutch penal colonies, the number of beggars and vagrants sent to them, and the duration of their stay, *ib.* 8915–8928.

Paper submitted containing sundry details in connection with penal and voluntary farm colonies in Germany, Holland, Belgium, Switzerland, and France, *Moore* 9410, 9411; *3rd Rep.* pp. 332–336.

Detailed information, supplied by Mr. Moore, respecting the penal colony at Veenhuisan, in Holland, *3rd Rep.* p. 333; also, respecting the settlement of small holders at Frederiksoord, *3rd Rep.* pp. 335, 336.

Deduction by witness of four conclusions from his examination of voluntary farm colonies in Germany, the first being that no colony can be used for the accommodation of both vagrants and the unemployed working classes; confirmation of this view by the Belgian experience, *Moore* 9532, 9533. 9547. 9689–9692——Second conclusion that, where a man unaccustomed to agricultural work has to be employed on a farm the proper course is to employ him upon the reclamation of uncultivated land, *ib.* 9534–9536. 9693–9698.

Conclusion that a willing worker employed upon the reclamation of uncultivated land can give such value as will more than provide for his maintenance, *Moore* 9537——Further conclusion that, side by side with the uncultivated land, there ought to be some land of a better quality, otherwise there will be no produce to maintain the men on that particular colony, *ib.* 9538.

Explanation that the sudden stoppage of the reclamation of a piece of waste land, through the men engaged on it happily finding their own natural work again, would have no financial effect, except, perhaps, in somewhat increasing the cost of supervision on account of the work being extended over a longer period, *Moore* 9539–9543.

Opinion generally that the system of voluntary labour colonies might be adopted with advantage in England in view of the favourable conditions that could now be obtained, *Moore* 9544, 9545——Agreement of witness with Mr. Willink's opinion in regard to the failure of the Veenhuisan colony, *ib.* 9545, 9546. 9718.

Material difference between the scheme of Mr. Mather and the principles upon which the Continental colonies are based, the nearest approach being the French colony; there is no necessity, however, for relying upon Continental experience, *Moore* 9552, 9553——Doubt as to a colony of single men necessarily involving any more degradation; desirability, however, of there being married men and women on a colony, as proposed in Mr. Mather's scheme, *ib.* 9639–9643. 9714–9717.

Possibility that it would be more profitable, though somewhat difficult, to give an average of 40,000*l.* a year to the Essex farmers to employ a certain proportion of the men out of work, than to have a separate colony for the submerged tenth alone, *Moore* 9646-9649——Usefulness of labour colonies on the voluntary system in offering a man a very easy medium of getting back to his regular employment again; necessity, however, of keeping the colony for the respectable members of the working class and of approving each man before admission, *ib.* 9650–9657. 9689–9692. 9719–9729. 9791 *et seq.*

Opinion that labour colonies could, under good management, be so directed as to prevent the products entering into competition with the free labour outside; recommendation that only such crops should be grown for sale as would not compete with the

Reports, 1895—*continued.*

FARM AND LABOUR COLONIES—continued.

II. *Explanations by Mr. Willink and Mr. Moore respecting Labour Colonies on the Continent, &c.*—continued.

home products, *Moore* 9658–9682——Possibility of unskilled labour in labour colonies successfully competing with skilled labour without protection, in view of the fact that the colonies can employ the most improved systems, machinery, &c., *ib.* 9683–9685.

Conclusion that there would doubtless be some difficulty in dealing with a number of labourers in the country during a prolonged frost; belief, however, that the suggestions made in Clauses 22 to 26 of Mr. Mather's scheme would partly meet the case, *Moore* 9805, 9806.

III. *Particulars in connection with the Labour Colony or Relief Works at Wanstead Flats, and the action of the West Ham Unemployed Committee, with Suggestions as regards Labour Colonies generally:*

Institution by the West Ham Relief Committee last year of works upon about 180 acres of land at Wanstead Flats, men in want of work having been employed six hours daily for four days a week, at 4*d.* an hour, *Hills* 2533, 2534——Eventual carrying out of the works on Wanstead Flats by the Relief Committee (without aid from the Town Council), employment having been given to from 120 to 180 men, *ib.* 2536.

Explanations in detail respecting the conditions and system of payment under which the men have been employed, the character of the work, the supervision exercised, and the financial results; success claimed notwithstanding that there was an organised trades union obstruction to the payment of 4*d.* instead of 6*d.* an hour, *Hills* 2536–2566——Arrangements as regards food for the men, so that they show much physical improvement, *ib.* 2557.

Invitation to the present Committee to visit the relief works on Wanstead Flats, so that they may see for themselves the practical working of the system of employment, *Hills* 2568.

Very satisfactory results of the experiments in West Ham not only as regards the improved condition of those employed by the Relief Committee but as regards their future employment elsewhere, *Hills* 2574. 2580. 2778–2790. 2798–2800——Shelter and food provided for the men at a very small charge, *ib.* 2574. 2582-2584.

Simple character of the work (chiefly digging) contemplated under the proposed national scheme; condition to be enforced, as at West Ham, that a certain minimum of labour must be performed, *Hills* 2574-2580. 2647, 2648——Arrangements for supervision at Wanstead Flats; maximum of 186 employed at any time, *ib.* 2770–2773——Facility in applying the test of residence in connection with employment, *ib.* 2774–2777.

Grounds for the contention that the experiment at Wanstead Flats proves that the men earned, in kind, an equivalent of 1*s.* 6*d.* or 2*s.* a day, and that their labour did not entail any loss whatever, *Mather* 9024–9032.

Experience of witness in regard to the Wanstead Flats and Abbey Mills experiments that sober and steady unemployed men do resort to labour colonies when out of work, at all events as a temporary means of maintenance; doubt, however, as to their breaking up their homes to go to such colonies, *Moore* 9624–9638. 9795–9801.

Proposal of the West Ham Unemployed Committee that the whole country should be divided into districts. and that each district should have a farm or colony to deal with the unemployed and be responsible to Government for its management, so that the unemployed could produce food for themselves, for the institutions supported by the rates, and for the army and navy, *Morton* 11022 *et seq.*; 11049 *et seq.*; 11071–11076. 11102-11110. 11128–11143.

Condemnation of the work done on Wanstead Flats under Mr. Hills' scheme as useless and in no way remunerative, elevating, or productive; no doubt that it was done at a lower price than if it had been put out under contract, but not so low as the rate at which the borough council could have done it, *Morton* 11064–11069. 11144–11149.

Information respecting the men employed in the levelling and digging operations on Wanstead Flats, most of whom were country-born, the number, which averaged about 100, having risen to 180 at the busiest time; statement that the work paid better after the gangs were reduced from twenty-five men to ten, as the superintendence was better, *Mansell* 11433–11450. 11478 *et seq.*

Evidence to the effect that on the conclusion of the work on the Flats most of the intelligent and willing workmen were provided with situations in the Thames Ironworks and other works; belief, however, that a few of the men who had served their time at a trade and were "past forty" are still out of work, *Mansell* 11451–14461.

Willingness of the majority of the men employed to do the work allotted them, those who were not quite fit, physically, doing their best; care taken to make the gangs as equal

Reports, 1895—*continued.*

Farm and Labour Colonies—continued.

III. *Particulars in connection with the Labour Colony or Relief Works at Wanstead Flats, &c.*—continued.

equal as possible, *Mansell* 11462–11466——Statement that the rate of pay was 4*d.* per hour with 1*s.* per rod for double digging, the amount earned by each gang beyond the 4*d.* per hour being given at the end of the week as a bonus, *ib.* 11467–11470. 11490.

Uncertainty as to whether the Wanstead experiment can be considered a paying transaction from a business point of view; no doubt that if witness had not had to take all comers, but could have picked his men, he could have made it pay, *Mansell* 11471 *et seq.*——Opinion that in addition to the absolute relief given at the moment the Wanstead Flats operations cured some of the men and made them more permanent workers, *ib.* 11491–11501.

Suggestion that continuous land cultivation should be found for those employed, the men being mostly able and willing to work; desire of some of them to go back into the country again if they could find work there, *Mansell* 11502–11531.

IV. *Proposals by Mr. Hunt on the subject of Small Labour Colonies or Homes:*

Proposition that it is desirable to start small labour colonies for the unmarried, and to provide small holdings for married people on the land, *Hunt* 10182. 10346–10354. 10367, 10368——Explanations as to the degree of experience of witness in regard to farm colonies, *ib.* 10183. 10207–10216. 10256–10269. 10369–10371.

Offer made by witness, on the part of the Church Army, of two or more of the labour homes, together with a large farm, in order that experiments might be made on a small scale, a sum not exceeding 8½*d.* per day to be paid for each man sent; necessity for all experiments to be exhaustively investigated and recorded by impartial experts of the Labour Department, *Hunt* 10190. 10253–10255.

V. *Suggestions by Mr. Lansbury for the grouping of Metropolitan Unions for the acquisition of Land for Employment:*

Evidence in explanation and support of the suggestion that the President of the Local Government Board should exercise his power and group the unions of London in one district so as to hire land where the unemployed could raise food for their own sustenance, and manufacture their boots, clothes, &c., *Lansbury* 10408. 10415–10438. 10459. 10469–10473. 10484–10488——Discussion as to the distribution of cost if the unions of London were grouped in one district in connection with the foregoing proposition, *ib.* 10474–10483.

Question considered as to the mode in which the money should be raised to support the proposed farm colony; opinion that an Imperial grant should be allowed either by means of a graduated income tax or a tax on landlords, *Lansbury* 10489–10496.

VI. *Action taken by the Whitechapel Board of Guardians:*

Consideration given by the Whitechapel Board of Guardians to the question of the unemployed upon the land, several conferences of metropolitan guardians having been held on the subject; conclusion that any scheme of agricultural training homes or colonies must be carried out by some other body than the Poor Law authorities, *Vallance* 11542–11546.

Report of the committee of guardians appointed in January 1888 to consider certain proposals of the Rev. S. A. Barrett for training able-bodied men in country pursuits by means of the Poor Law, *App.* (*3rd Rep.*) 548, 549.

Draft Report submitted at a meeting of the agricultural training homes committee of the guardians held on 13th June 1895, with reference to the question of agricultural training homes for the unemployed, *App.* (*3rd Rep.*) 552–554.

Report of committee of guardians, adopted by the board at meeting on 3rd October 1893, respecting the proposed "English Land Colonisation Scheme," *App.* (*3rd Rep.*) 554, 555.

Report of the general purposes committee submitted to the guardians on 9th April 1895; conclusions and suggestions therein on the subject of training farms and of employment on the land, *App.* (*3rd Rep.*) 555, 556.

VII. *Conflicting Evidence upon the Question generally of Farm Colonies for the Unemployed:*

Practical obstacles to the beneficial working of schemes under control of the Poor Law Guardians, for employment on land in times of distress; adverse views of the Local Government Board on the subject, *Sir H. Owen* 400–405. 485–490.

Opinion that some 25 per cent. of the men out of work in West Ham could be employed on land in Essex, *Hilleary* 1653–1659.

Explanations with reference to the proposed system of farm colonies with workshops, &c., and in reply to objections on the subject, *Alden* 2077. 2182–2191. 2235–2269,

Reports, 1895—*continued.*

Farm and Labour Colonies—continued.

VII. *Conflicting Evidence upon the Question, generally, of Farm Colonies for the Unemployed*—continued.

2287–2295——Value of employment on land as a means of restoring the health of men who are temporaly weak; desire of many to get back to employment on to the land, *Alden* 2077. 2328-2331.

Advantage of employment for the more respectable men (who cannot find work) not only on farm colonies, as at Hadleigh, but upon industries in connection herewith, though not in competition with the open market; employment in these cases without pauperism being entailed, *Alden* 2144–2156. 2235–2240. 2311-2313——Probability that many of the unemployed if put upon the land would not produce such good results as regular labourers, though witness submits that the former should be paid at the ordinary rate, *ib.* 2362–2378. 2388–2403.

Examination with reference to the question of labour colonies, as in Germany, Holland, and other foreign countries, as well as on a limited scale in England; several obstacles to their satisfactory operation, *Smith* 4724, 4725. 4760, 4761. 4967–5011.

Disapproval of the proposal to establish farm colonies in order to relieve the distress due to want of employment as it would be a continuous financial failure; objections, moreover, on several other grounds, *Mackay* 5364–5366.

Grounds for the opinion that for respectable men and women, who, through natural weakness, are unable to do work of an average quality, but who could do a limited quantity, if superintended, a labour farm or colony would give better physical, moral, and financial results than the present Poor Law system, *Cox* 6206 *et seq.*; 6288–6295. 6399–6426. 6508–6514. 6595 *et seq.*

Approval of farm colonies as a medium for bringing thepeople back to the land, if worked concurrently with witness' scheme of allotments, *Tuckwell* 7131–7133.

Suggestion that regulations should be issued under the Poor Law Act of 1603 for the useful employment of the unemployed and the disposal of produce; desirability of the produce being so disposed of as not to conflict with the outside market, *Dodd* 7561–7568. 7623–7627. 7750 *et seq.*——Advisability of the Local Government Board empowering the guardians by way of experiment, to found labour colonies, or works of a like character; opinion that the initial expenses of such works should be chargeable in London on the Common Poor Fund, *ib.* 7568–7570. 7634 *et seq.*; 7694–7697. 7760–7777. 7805.

Grounds for strongly objecting to a system of farm colonies as a means of employment in times of distress; main objection that very little employment could be usefully provided thereby, *Bell* 7872–7876. 7882. 7958–7962.

Contemplated provision of work, shelter, and food on farm colonies when there is exceptional distress; expediency of the land being adjacent to the poorhouses, *Motion* 8148. 8158–8163. 8216–8236. 8252–8255.

Approval of some experiments in the way of farm colonies or of penal colonies for the idle and lazy class, though witness has not any strong opinion in their favour, *Hunter* 8311–8315. 8385–8392. 8565–8567.

Conclusions as to the unfitness of the unemployed in towns for labour and farm colonies, *Willink* 8728-8734——Contention that State labour farms in this country are not expedient, and would probably be failures, private enterprise in this direction being more likely to succeed, *ib.* 8820–8823. 8865, 8866.

Question considered as to the advisability of establishing industrial homes in the country for the cultivation of land; belief that the experiment would prove costly, *C. Booth* 10660–10662.

Disapproval of farm colonies and the allotment system; expediency of the land being cultivated by men who should make it their regular avocation, and who should be paid a decent wage, *Thorne* 10835–10840. 10864–10873.

Contention that the establishment of national farms would relieve the congestion and competition in industrial centres, the labouring section in all the large industrial concerns being composed chiefly of farm workers who, in consequence of this, being strong and robust, are more keenly sought after than the town men, *Marston* 11023 *et seq.*; 11192, 11193.

Evidence in support of the conclusion that the proposed national farms could produce the necessaries of life in this country cheaper than can be done on the Continent, provided the present restrictions upon the agricultural community were removed; opinion that farms have gone out of cultivation because the scientific side of farming is not studied, the object now being to get as much as possible out of the land

at

Reports, 1895—*continued.*

Farm and Labour Colonies—continued.

VII. *Conflicting Evidence upon the Question, generally, of Farm Colonies for the Unemployed*—continued.

at the cheapest possible cost, *Morton* 11024–11028. 11111–11119. 11156–11181. 11184–11191.

Farnham (*Surrey and Hants*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 234.

Farnworth Urban District (*Lancaster*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 90.

Faversham (*Municipal Borough*). Extent of the distress in this borough; measures adopted for its relief, *App.* (*2nd Rep.*) 71.

Felling Urban District (*Durham*). Amount of distress in this district; remedial measures adopted, *App.* (*2nd Rep.*) 91.

Female Labour. See *Women and Children.*

Fenton, Edward Pitts. (Analysis of his Evidence.)—As clerk to the Union of St. Olave's witness explains that the union comprises Bermondsey, Rotherhithe, and other parishes, part of the borough of Southwark, 2801–2803.

Considerable distress in these districts during the winter, through want of employment, so that the guardians decided on the opening of a stone-yard, on the 7th January, work being offered therein at certain rates of wages, 2804 *et seq.*——Distress mainly due to depression in the leather and tanning trades and the want of work at the river-side and the docks; belief that the number of unemployed from these causes is increasing yearly, 2806–2808. 2812–2830.

Information as to the conditions under which the stone-yard is in operation, the restrictions as to admission, the amount of work required to be done, and the rate of payment in money and in kind, the total representing 3*s.* 6*d.* per man per day, 2832 *et seq.*——Limit of residence not imposed for few days, so that there was a large influx from outside districts; steps taken for the removal of this difficulty, witness having previously closed the stone-yard on his own responsibility till some remedies could be adopted, 2833–2836. 2871–2873. 2919–2923. 2966–2968.

Varying number of days in the week for which different classes may work in the stone-yard, 2838, 2839. 2931, 2932——Very large increase of staff in connection with the stone-yard and with the great increase of out-door relief, 2846–2857. 2948–2250. 3037–3042——Particulars as to the numbers relieved through the stone-yard and the total cost, the numbers in one day having reached 1,759; comparison with the number of out-door poor in previous winters, 2858–2870. 2901–2909. 2914–2918. 2957–2959——Statistics of the annual cost of out-door relief in the union since 1873; very large increase since 1884, whilst the numbers have been practically the same, the policy of the board of guardians having then been changed in favour of more liberal relief, 2879–2894. 2910–2913. 2969–2974. 3010–3020.

Amount of the rates in Bermondsey and other parishes in the union: poor rate of 2*s.* 10*d.* in Bermondsey (the total rate being 7*s.*) and of about 2*s.* in the other parishes, 2895–2900. 3006——Recent decision of the guardians that men residing in common lodging-houses shall be eligible for admission to the stone-yard, whereas these may not be genuine residents, 2924–2929.

Letter from the Local Government Board on 8th January as to the conditions on which approval is given to the opening of the stone-yard, 2930–2932——Difficulty in obtaining a fair day's work in return for the wages paid, even from those who are really capable and able-bodied, a large proportion of whom shirk the labour as much as possible, in spite of the increased staff and supervision, 2933–2940. 2950. 2955, 2956. 3028–3040. 3046–3054, 3061——Information as to the cost of the granite obtained for the stone-yard, the large increase therein, and the unprofitable results of the system, 2941–2947. 2960–2963. 3021–3027.

Other sources of employment resorted to in St. Olave's besides work in the stone-yard; special employment provided also by the vestries of Bermondsey and Rotherhithe, 2953, 2954. 2991–2997. 3002–3005——Objectionable results from the payment of so much as 3*s.* 6*d.* a day in the stone-yard: demoralising effects of the

Reports, 1895—*continued.*

Fenton, Edward Pitts. (Analysis of his Evidence)—*continued.*

system, 2975–2985. 2991–3001. 3046–3054——Opinion as to the sufficiency of the present powers of the guardians and local authorities to deal with exceptional distress, 2986–2997. 3062–3069.

Tendency to increased want of employment when manufactories and places of business are removed, as in making the approaches to the Tower Bridge, 3007–3009 ——Improvement if work in the stone-yard were placed entirely under the vestry and the surveyor, and were transferred from the workhouse officials, 3043–3061—— Objection to disfranchisement being removed as a condition of relief in exceptional times, 3070–3076.

[Second Examination.]—Explanation that it is necessary to get the sanction of the Local Government Board before a stone-yard can be opened, 6174, 6175.

Fenton (Stafford). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 362.

Forfar. Letter from the town clerk respecting the amount of distress in the burgh of Forfar and the relief measures adopted, *App.* (*3rd Rep.*) 583——Amount of distress in the parish, through the severe weather; steps taken for its relief, *ib.* 702.

France. Strong contrast between the happy and comfortable condition of the French agricultural labourer and the wretched and despairing condition of the agricultural labourer in England, *Tuckwell* 6979, 6980. 7037 *et seq.*——Admission that there are very high protective duties in France on certain produce, and that these duties are an important factor in the comparison of the French and English agricultural systems, *ib.* 7173–7179——No doubt that the French peasant and his family can live on very much less than the amount required for an English peasant and his family, *ib.* 7180–7189.

Detailed information supplied by Mr. Moore respecting the voluntary farm colony recently established at La Chalmelle, about seventy miles from Paris, *3rd Rep. pp.* 334, 335.

Entire success of the French experiment, which conformed to the idea suggested by witness as most likely to produce a good result, *Moore* 9549–9551. 9628–9632. 9699 *et seq.*

Statement showing the number of workpeople employed in certain industries in 1886 and in 1891; *App.* (*3rd Rep.*) 508.

Reports, 1895—*continued.*

FRANCHISE:

1. *Evidence in favour of the Removal of Disfranchisements in Times of Distress as a condition of Relief under the Poor Law.*
2. *Evidence to a Contrary Purport.*
3. *Conclusions of the Committee.*

1. *Evidence in favour of the Removal of Disfranchisement in Times of Distress as a condition of Relief under the Poor Law:*

Great reluctance of unemployed respectable working men, even when in great distress, to apply for relief, in view of their disfranchisement; suggestion hereon, *Keir-Hardie* 737–740——Obligation upon guardians to relieve distress, whilst they have no power to find employment and to make payment to workers without disfranchising and pauperising them, *Hilleary* 1265–1267. 1285–1288. 1300–1306. 1327–1332——Objections on the score of disfranchisement to the operation of the labour test, *ib.* 1285–1293.

Concurrence to some extent in the view that in times of exceptional distress the guardians should be free to give relief in any form, and to open soup kitchens, without disfranchisement being involved; probability, however, that this would largely increase applications for relief, *Hilleary* 1418–1430. 1443–1450——Deterrent effect of disfranchisement and the stigma of pauperism further adverted to, *ib.* 1906–1908.

Expediency of the guardians being empowered to give relief in exceptional weather without disfranchisement, *Alden* 2106. 2178–2181——Considerable proportion of the men out of work in West Ham who have votes, and who have objected to go to the stoneyard because of losing them, *ib.* 2221–2228——Further approval of a suspension of the rule as to disfranchisement, *ib.* 2336–2341. 2410–2412.

Objection of large numbers of men to receive poor relief as disqualifying them for the franchise; grounds for this conclusion, *Tagg* 3385. 3387, 3388. 3439–3447. 3554, 3555. 3598–3600——Doubt as to the expediency of loss of franchise being consequential upon receipt of out-door relief, *Griffith* 4204–4210.

Approval, conditionally, of the removal of disfranchisement as a consequence of the acceptance of relief, *Edwards* 4446. 4450–4457——Resolution passed by witness' board adverse to disfranchisement, *Henderson* 5266. 5917, 5918.

Approval of the proposal that persons in receipt of relief should not lose the Parliamentary Vote, so far as infirmary relief is concerned, *Martineau* 6920, 6921——Doubt whether the receipt of reasonable wages by the unemployed for agricultural labour done for the guardians would as a matter of law, disfranchise them, *Dodd* 7537, 7538. 7544–7546. 7675. 7751, 7752——Undesirability of taking people who have been relieved by the parish off the register, *Lansbury* 10408–10413.

View of witness that any man or woman outside the workhouse should be allowed to vote, *Thorne* 10846–10851——Opinion that those people who are compelled to seek Poor Law relief are not themselves responsible in any case for their misfortune, and ought not therefore to be deprived of their right to vote, *Morton* 11029–11037. 11097–11101.

2. *Evidence to a Contrary Purport:*

Extent to which disability or disfranchisement should still continue where the Poor Law comes in, *Hills* 2592. 2795–2797——Strong objection to removing disqualification on the temporary receipt of out-door relief, or otherwise modifying the strictness of the regulations on the subject, *ib.* 2658–2662. 2795–2797.

Objection to disfranchisement being removed as a condition of relief in exceptional times, *Fenton* 3070–3076——Result of witness' extensive experience that he considers the question of disfranchisement has practically no effect in preventing applications for out-relief, *Dewey* 3759–3761. 3799–3805.

Approval of the policy which prevents the exercise of political right by paupers; witness is not aware of any complaint by the poor on losing their vote, *Mackay* 5663–5668——Explanation that a man taken into the infirmary and staying there would be disfranchised, *ib.* 5768–5773——Self-evident proposition with regard to disfranchising persons who apply for relief that the condition of paupers ought to be less eligible than that of the independent labourer, *ib.* 5812, 5813.

Approval by witness, as a Poor Law guardian, of the disfranchisement of men who accept relief, although personally he disagrees with it, *Milligan* 5910–5916——Limited extent to which the liability to disfranchisement deters from applications for relief, *Hunter* 8318, 8319——View of witness that there should be a broad distinction between a confirmed pauper and a man who is driven to seek relief, so as to disfranchise the former and preserve to the latter his right to vote, *Smart* 11328–11331.

FRANCHISE—continued.

3. *Conclusions of the Committee:*

Various complaints made to the Committee as to the effect of the existing law which deprives of his franchise rights any recipient of poor law relief, 3*rd Rep.* v—— Conclusion that this provision may have a salutary effect as a check upon ordinary Poor Law claims and may thus foster independence of character and prevent unnecessary burden falling on the rates, *ib.*

Contemplated discrimination in cases of exceptional distress between the deserving man forced to become dependent upon public and the ordinary claimant for parish relief, 3*rd Rep.* v——Opinion that it would be both humane and wise to exempt the former class from the disability as regards the franchise, whether local or Parliamentary, *ib.*

Fraserburgh (*Aberdeen*). Information supplied by the Inspector of the Poor as to the extent and character of the local distress and the remedial measures adopted, *App.* (3*rd Rep.*) 618.

Freebridge Lynn Rural District (*Norfolk*). Limited amount of distress in this district; relief by means of voluntary agencies, *App.* (2*nd Rep.*) 336.

Friendly Societies. Provision made by a few Friendly Societies for their members in the form of unemployed benefit, *Smith* 4681.——*See* also *Trade Unions.*

Frome (*Somerset*). Very little distress in the Frome rural district, *App.* (2*nd Rep.*) 397.

Frost. See *Weather* (*Stoppage of Employment*).

Fulham Union. Statement on the part of Fulham Union, dated 4th February, that the distress among the poor is not greater than usual at this season of the year, and that there has been no undue pressure by offering the workhouse; exceptional arrangements not contemplated, *Sir H. Owen* 90.

Letter from the vestry clerk, dated 23rd March 1895, respecting the distress and want of employment up to that date and the measures of relief provided, *App.* (2*nd Rep.*) 413.

Return handed in by Sir Hugh Owen showing, for each of the years 1884–85 to 1893–94, the number of indoor and outdoor paupers, respectively, and the cost of in-maintenance and outdoor relief, *App.* (3*rd Rep.*) 524–533.

G.

Gainsborough (*Lincoln and Nottingham*). Information respecting the extent of the distress in Gainsborough Urban District and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 91——Similar information respecting Gainsborough Union, *ib.* 115.

Galashiels (*Selkirk*). Letter from the town clerk respecting the amount of distress in the burgh and the relief measures adopted, *App.* (3*rd Rep.*) 584, 585——Amount of distress in Galashiels parish, through the severe weather; measures taken for its relief, *ib.* 785.

Garstang (*Lancaster*). Absence of exceptional distress in this rural district in February, *App.* (2*nd Rep.*) 319.

Garston (*Lancaster*). Local explanations in February as to the amount of distress in this urban district and the remedial measures adopted, *App.* (2*nd Rep.*) 224.

Gas Works (*Poplar District*). Displacement of men from the gas works owing to the introduction of a machine called a "Sloper," *Lansbury* 10408.

Gateshead. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (2*nd Rep.*) 22——Amount and cause of the distress in the county borough; steps taken for its relief by the local authorities and by voluntary agencies, *ib.* 394, 395.

Germany. Movement in Germany for a revision of the labour registries, they having failed to a large extent, *Smith* 4709–4711.

Approval of the German plan for ascertaining the actual state of the deserving poor, whereby each member of a committee takes charge of a small section of a town and is made responsible for a thorough knowledge of every person or family in it, *Cox* 6217, 6218.

Explanation relative to the system of labour colonies in Germany and the severe penalties attached to vagrancy, &c., *Motion* 8164, 8165. 8216–8221——Information in detail, as supplied by Mr. Moore, respecting voluntary farm labour colonies in Germany, 3*rd Rep. pp.* 332, 333. 336—— Also, respecting certain forced labour colonies near Berlin, *ib.* 333—— Also, respecting a home colony settlement near Bremerhaven, *ib.* 336.

Reports, 1895—*continued.*

Germany—continued.

Statement showing the number of workpeople employed in the mining and metal industries in each of the years 1883–92, *App.* (*3rd Rep.*) 508——Number of persons employed in the textile industries in 1892, *ib.*

Gillingham (*Kent*). Local explanations in February as to the amount of distress in this urban district and the remedial measures adopted, *App.* (*2nd Rep.*) 224.

Glanford Brigg (*Lincoln*). Sufficiency of voluntary modes of relief, *App.* (*2nd Rep.*) 374.

GLASGOW:

1. *Number and Class of Unemployed; Extent and Character of the Distress.*
2. *Action of the Corporation; Provision and Administration of Relief Works.*
3. *Liberal Help provided by the Citizens; How administered.*
4. *Trade Unions.*
5. *Common Good Fund.*
6. *Employment on Corporation Farms.*
7. *Question of Reclamation of Foreshore.*
8. *Immigration from Outside Districts.*
9. *Model Lodging Houses.*
10. *Paper submitted by the Lord Provost containing Explanations in detail on various points.*
11. *Information supplied by the Town Clerk and by the Inspector of Poor.*

1. *Number and Class of Unemployed; Extent and Character of the Distress:*

Very large number of unemployed in Glasgow and of destitute families, *Keir-Hardie* 723–728——Estimate of 5,000 destitute families and of 8,000 unemployed, this being an understatement, *ib.*

About seven periods of distress in Glasgow since 1848, there having been no undue distress this year from want of employment till the exceptionally severe weather set in, about the end of January, *Bell* 7815–7817. 7835–7838——Very little distress among skilled artisans, as in the building and other trades, apart from the actual labourers, *ib.* 7835–7838. 7874–7876. 7973-7976——Agitation among the men against piecework followed by a strike of very short duration, *ib.* 7840.

Various kinds of work stopped by the severe frost; great increase also in the death rate, *Bell* 7845. 8023–8025——Frequent instances of bricklayers going to America, where they earn very high wages, and returning to Glasgow in the winter-time, *ib.* 7875, 7876. 7935–7937——Savings in the masons' trade and other trades in Glasgow against times of distress, the applicants for work being mainly from the class of labourers, *ib.* 7907–7920——Very few agricultural labourers who availed themselves of the relief works, *ib.* 7938–7940.

Important effect of the exceptionally severe weather upon the death rate, irrespectively of insufficiency of food, through dearth of employment, *Bell* 8058–8064.

Statistics submitted as to the population and area of barony parish, and as to the comparative pauperism in February 1885 and February 1895; large increase of lunacy, *Motion* 8079–8090. 8175–8193. 8246–8249——Absence of any unusual distress in Glasgow during the past winter till the exceptionally severe frost set in; frequent instances of unemployment through the fault of the men themselves, as through indulgence in drink over-night, *ib.* 8102–8107. 8196——Very close and full collection of rates in Barony parish throughout the period of distress, *ib.* 8168.

Data for the conclusion that the distress in the parish was felt chiefly among the class verging upon pauperism, *Motion* 8169, 8170——Very bad and worthless class of men who availed themselves of the shelter organised by the Charity Organisation Society, *ib.* 8171-8173——Large proportion of out-door as compared with in-door paupers, *ib.* 8177, 8178. 8246-8249——Considerable number of weakly or infirm persons, without friends, who should be permanently in the poorhouse infirmary, *ib.* 8179–8185.

Great number of painters, masons, and others engaged in the seasonal trades, who were thrown out of employment by the severe weather; comparatively few of these who applied for relief, as they supported themselves as long as possible on their own resources, *Hunter* 8269–8272——Vast numbers of idle men before the severe weather set in, there being still many trades in which the unemployed are numerous, there being a superfluity of labour in Glasgow; dissent from the Lord Provost's evidence on this point, *ib.* 8269. 8272–8284. 8393. 8400–8410. 8415–8458.

Repugnance of the working classes in Glasgow to apply to the parochial authorities for relief, *Hunter* 8316-8318——Bulk of the distress and of the want of employment among labourers, the number being swelled by the thriftless and idle *ib.*, 8347-8356.

Belief that during the distress there were many more than 10,000 out of employment, *Hunter* 8351–8353——Exception taken to a certain statement as to tippling at night frequently leading to an increase of unemployment, *ib.* 8394–8396.

Reports, 1895—*continued.*

GLASGOW—continued.

1. *Number and Class of Unemployed, &c.*—continued.

Considerable depression and want of employment in the Glasgow shipbuilding and engineering trades, this having been accentuated by the coal strike, *Hunter* 8400–8410——Enormous development of Glasgow within the last fifty years, the sources of employment having greatly increased, *ib.* 8494–8501——Conclusion that the working classes could make a better use of their earnings by saving more, though this is not feasible to the extent contemplated by the Lord Provost, *ib.* 8529–8533.

2. *Action of the Corporation; Provision and Administration of Relief Works.*

Institution of relief works under the corporation, with a labour test; expenditure of 4,854*l.*, the men being paid 1*s.* a day with three meals, the material resulting from their labour representing only 1,894*l.*, *Bell* 7833, 7834. 8010–8015——Discontinuance of the test, with a daily wage, on the 2nd March, piecework having been substituted (with two meals a day), by which a man could earn 7*s.* in three or four days with ordinary diligence; great reduction thereupon in the number of applicants for work, *ib.* 7822. 7828. 7839–7844.

Statement as to there having been no room for the employment of those in distress in street-cleaning or other municipal work, *Bell* 7852, 7853——Several very acute periods of distress in Glasgow, the action of the municipal authorities, combined with the liberality of the citizens, having sufficed to meet the pressure; difficulty probably in small towns, *ib.* 7877–7879. 7882. 7952, 7953. 7973–7990.

Great facility given, on the score of humanity, to applications for relief during the exceptional frost, though as a rule certain tests are doubtless necessary, such as piecework, *Bell* 7896–7906——Large expenditure of the corporation in buildings and public works; decided objection to employment upon these being postponed till the winter in the interests of the unemployed, *ib.* 7940–7947.

Examination as to the responsibility assumed by the corporation in authorising expenditure on relief works or stone yards, irrespectively of any claim upon the rates for recouping the cost, *Bell* 8029–8053——Limited disadvantage of the men less capable physically, under the piecework system, inasmuch as they received meals so long as they were employed, *ib.* 8067–8071.

Application of out-door relief not only to those unable to work but to those who are partially able to work, *Motion* 8175, 8176——Suggestions made by witness to the Lord Provost during the recent distress for ascertaining what classes of persons were chiefly employed on the relief works; nothing has been done in this direction, *ib.* 8180–8183.

Valuable relief distributed during the recent distress under the plan of employment adopted by the municipality, though there were thousands of unemployed who did not apply for this mode of relief, *Hunter* 8521–8528. 8563, 8564.

3. *Liberal Help provided by the Citizens; How administered:*

Admission that at Glasgow much has been done by relief committees and by the corporation in aid of the distress, *Keir-Hardie* 877–889. 1144, 1145——Subscription of nearly 10,000*l.* by the citizens, *ib.* 878, 879.

Receipt from the citizens of about 11,000*l.* in money and food; liberal expenditure in the distribution of soup and bread, about 5,000*l.* of this fund being still in hand, *Bell* 7818, 7819. 7831, 7832. 7845. 7849. 7921. 8022; *App.* (*3rd Rep.*) 519–521——Witness had to restrain people from sending money, *Bell* 7818–7849. 7922.

Very successful utilisation of the police in connection with the distribution of the excessively liberal benefactions of the citizens; several other checks before distribution, *Bell* 7845–7849. 7922. 7927, 7928–7934. 8016–8022——Belief as to the very limited extent to which the distribution of relief had any injurious or degrading effect upon the recipients, *ib.* 7850, 7851——Reference to the Citizens' Relief Fund as not having entailed any charge upon the rates, *ib.* 7921, 7922. 7966, 7967.

Very slight inquiry or investigation before relief was given when the pressure was at its height, there having doubtless been much abuse; numerous "loafers" relieved, *Motion* 8108–8115——Large sums raised in Glasgow for the relief of the unemployed on former occasions of severe distress; complaints in 1862 as to most of the unemployed being loafers, *ib.* 8137–8139.

Very large number of meals provided out of monies collected by the management of the Gaiety and Scotia theatres, *Hunter* 8266–8269.

4. *Trade Unions:*

Statement showing the large sums paid during the recent distress in Glasgow by different trade unions by way of aliment allowance; this largely accounts for the unemployed not applying for more relief from the Lord Provost's Fund, *Hunter* 8263–8266——Rule of the trade unions in Glasgow as to the payment of "idle benefit," whereas

Reports, 1895—*continued.*

GLASGOW—continued.

4. *Trade Unions*—continued.

whereas the ordinary labourers have no such resource in time of distress, *Hunter* 8329–8336——Numerous trade unions represented on the Glasgow Trades Council, there being also two labourers' unions connected with the Council, *ib.* 8343–8346——Continued payment of idle aliment to trade unionists, irrespectively of the weather, there being a surplus of labour and a legalised eight hours day being needed, *ib.* 8534-8539. 8547–8562.

Partial extent to which the unemployed benefit given by trade unions in Glasgow meets the whole amount of the distress; doubt as to the actual contribution by the men for such benefit, *Hunter* 8365–8376.

5. *Common Good Fund:*

Information respecting the Common Good Fund of Glasgow, which is administered by the corporation, the income being 40,000*l.* a year and the capital being jealously preserved, *Bell* 7964–7972. 8026, 8027.

6. *Employment on Corporation Farms:*

Information respecting two farms held by the corporation, city refuse being disposed of thereon, and the larger farm being made productive and greatly increased in value; permanent employment of only thirty-two men on the two farms, *Bell* 7854–7864. 7871. 7991–8009. 8072.

7. *Question of Reclamation of Foreshore:*

Explanation as to the Clyde trustees depositing the river dredging in the sea instead of reclaiming riverside lands with it; undue cost in the latter case, *Bell* 7865–7871.

8. *Immigration from Outside Districts:*

Statement showing the great number of discharged prisoners who find their way into Glasgow, *Motion* 8130-8136. 8197, 8198.

Examination with reference to the large immigration from the Highlands and other parts of Scotland into Glasgow, as well as from Ireland; various occupations of these men adverted to in connection with the question of their being usefully employed on the land, *Hunter* 8415–8458. 8502–8520. 8543–8546.

9. *Model Lodging Houses:*

Exceedingly pernicious and immoral operation of the model lodging houses in Glasgow as evidenced by the admissions to the poorhouse, *Motion* 8115–8129. 8204–8206.

10. *Paper submitted by the Lord Provost containing Explanations in detail on various Points:*

Statement by the Lord Provost of Glasgow, dated 2nd May 1895, respecting the amount and causes of local distress, the provision of relief works, the trades and occupations of unemployed men, the expenditure in connection with relief, &c., *App.* (*3rd Rep.*) 514–521.

Information respecting the amount of distress and the expenditure in relief in previous years as well as in 1895, *App.* (*3rd Rep.*) 515, 516.

Particulars respecting the Citizens' Relief Fund, 1895, and its administration, *App.* (*3rd Rep.*) 519–521.

11. *Information supplied by the Town Clerk and by the Inspector of Poor:*

Letter from the town clerk depute, dated 27th February 1895, respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 586.

Communication from the inspector of poor as to the amount of distress in Glasgow parish through the severe weather, and the steps taken for its relief, *App.* (*3rd Rep.*) 736, 737.

Glossop (*Derby*). Explanations in February 1895, respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 136.

Gloucester (*County Borough*). Official explanations in February as to the extent of the distress in the county borough and the remedial measures adopted, *App.* (*2nd Rep.*) 207.

Gloucestershire. Information supplied in report by inspector as to the amount of local distress, the relief measures adopted, &c., *App.* (*2nd Rep.*) 26, 27.

Glyn Colliery (*South Wales*). See *Pontypool.*

Reports, 1895—*continued.*

Godalming (*Surrey*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 261, 262.

Godstone (*Surrey*). Amount of distress in this district in February; steps taken for its relief, *App.* (*2nd Rep.*) 337.

Golcar (*York*). Sufficiency of voluntary modes of relief in this district, *App.* (*2nd Rep.*) 363.

Goole (*York*). Amount of distress previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 421.

Gorton (*Lancaster*). Explanations in February 1895 respecting the extent and character of the local distress and the provision of employment and relief, *App.* (*2nd Rep.*) 160.

Gosport and Alverstoke Urban District (*Hants*). Amount of distress previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 421.

Govan (*Lanark*). Letter from the town clerk respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 586——Amount of distress in Govan combination parish, through the severe weather; steps taken for its relief, *ib.* 737.

Government Grants. See *State Aid.*

Grantham (*Lincoln*). Official explanations in February as to the amount of distress in the municipal borough, and the remedial measures adopted, *App.* (*2nd Rep.*) 212——Absence of exceptional distress in the rural district in February, *ib.* 294.

Gravesend (*Municipal Borough*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 71, 72.

Grays (*Essex*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 196.

Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 347–349.

Explanation in connection with the unemployed register and its inoperative character, *App.* (*2nd Rep.*) 386.

Great Harwood Urban District (*Lancaster*). Information respecting the extent of the local distress, and the proceedings taken with a view to employment and relief, *App.* (*2nd Rep.*) 92.

Greenock. Letter from the town clerk respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 587——Amount of distress in Greenock parish through the severe weather; steps taken for its relief, *ib.* 768.

Greenwich. Large increase of distress and of relief in Greenwich previously, chiefly through able-bodied men being out of employment through the severe weather, *Sir H. Owen*, 90, 240.

Letter dated 23rd March 1895, to the effect that exceptional distress was due only to the severe frost; extent of want of employment still existing, this being of a chronic character, *App.* (*2nd Rep.*) 414.

Return handed by Sir Hugh Owen, showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and out-door relief, *App.* (*3rd Rep.*) 524–533.

Griffith, Rev. E. T. C. (Analysis of his Evidence.)—Is vicar of Trevethin, which includes the town of Pontypool, and is chairman of the local relief committee which has been working for the last two winters, 3870–3874.

Estimated population of 16,000 in the district represented by witness, its area being about three miles long by one mile broad, 3875, 3876——Information respecting the dearth of employment in the district borough, the closing of certain tin works and iron sheet works, and of the Glyn Colliery at different periods since the strike in August and September 1893; loss of employment by at least 1,350 men, some 200 being employed intermittently at the Town Forges works, 3877–3904. 3914, 3915. 4005–4007. 4041, 4042. 4101–4106.

Formation of the relief committee in January 1894, about 300*l.* having been collected and the committee having worked for about twelve weeks, relief having been given in kind, 3905–3908. 3914, 3915——Employment offered by the local board during the winter of 1894 upon stone-breaking at 1*s.* 3*d.* per yard, or about 2*s.* 6*d.* a day; unfitness of this class of work for the class of men out of employment, 3909–3913. 3973–3987. 4055–4060.

Reports, 1895—*continued.*

Griffith, Rev. E. T. C. (Analysis of his Evidence)—*continued.*

Relief committee again formed in January 1895, upon the closing of the Pontnewynydd Iron Sheet Works, whereby 400 men were suddenly thrown out of employment; committee also formed in the Pontypool district, the two committees having been subsequently amalgamated, with witness as chairman, 3916–3920. 4040–4042——Collection of about 500*l.*, mainly from shopkeepers, about 100*l.* of which is yet in hand, relief having been given in a daily distribution of bread and a bi-weekly distribution of soup; coals also given by colliery owners, 3921–3927. 4035. 4067–4075.

Large and influential character of the relief committee; careful inquiry in every case before help is given, 3926. 4030–4034. 4040——Total of about 1,800 persons (including women and children) relieved daily by the committee during the distress; estimate that about 1,000 men were absolutely without employment, only between 200 and 300 of whom were affected by the frost, 3928–3933. 4061–4066. 4154, 4155.

Very poor prospect of a revival of the tin-plate trade in the Pontypool district, though there is now some intermittent employment at one of the works; odd jobs of various kinds upon which some of the men have obtained employment, 3934–3938. 3948. 3953–3963——Improbability of the Glyn Colliery being soon reopened, 3938–3941.

Grounds upon which witness submits that the case of Pontypool is one which has a strong claim to outside aid in the form of a Government grant, the local voluntary resources having been already greatly strained in order to keep the people from starvation and no other funds being available to meet the want of employment, 3942–3964. 3990–4004. 4008–4037. 4050–4054.

Doubt as to much help having been given by the local trades unions, 3955–3957. 4151–4153. 4239, 4240——Improved system of distribution of bread and soup, at the homes of the people, during the present distress, as compared with the practice in the previous winter, 3965–3972——Unfitness of tin-plate workers and of miners not only for stone-breaking but for agricultural employment, 3973–3989. 4156–4163. 4251–4254——Statement to the effect that the board of guardians have taken no active part in relieving the distress, whilst the urban district council have co-operated in every way; reference hereon to the amount of the local rates, the poor rate having slightly increased, 3990–4004. 4012–4034. 4174–4193. 4258, 4259.

Good earnings of the tin-plate workers when in full work, many having saved money, and benefit clubs being largely used by them, 4043–4049. 4122–4128—— Advocacy of State aid, in view of the exceptional acuteness of the distress and want of employment, rather than of an increase of rates, or a further resort to voluntary help; dissent from the view that a Government grant might tend to pauperise the recipients, 4050–4054. 4067–4071. 4139–4144. 4241–4250. 4255–4269——Liberal contribution by owners of works and collieries, whilst the men have helped each other with great generosity, 4068–4071. 4129–4133. 4231–4240.

Further information respecting the great depression in the Pontypool tin-plate industry, and in the local collieries, in connection with the question of the future employment of the workpeople, and of their migration to other districts in search of work, 4076–4109. 4134–4138. 4150. 4164–4173. 4211–4213——More acute distress recently in Pontypool than witness has ever known elsewhere; widespread destitution outside the operations of the voluntary relief committee, 4110–4112. 4117–4121. 4150. 4261——Severe distress in Merthyr in 1875 through the coal strike; large voluntary fund raised on that occasion, 4145–4149.

Further statement as to the guardians not having relieved the able-bodied unemployed, voluntary assistance having been a necessity; expediency of an extension of powers in this direction, 4194–4197. 4259–4263. 4270–4278——Reference to the cottage rents in the district, many of them being unpaid, 4198–4203. 4289. 4292.

Doubt as to the expediency of loss of franchise being consequential upon receipt of outdoor relief, 4204–4210——Probable benefit to Pontypool if the cost of indoor relief were paid generally out of imperial funds, 4214, 4215.

Explanation as regards the closing of one colliery at Pontypool, whilst another is only partially at work; question of royalty rents adverted to hereon, 4216–4230. 4279–4284. 4293–4295——Liberal help received by the relief committee from the local landowners, 4285–4291.

Grimsby. Letter from the town clerk, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 60.

Ground Rents. Consideration of a suggestion that the increase of ground values, without any expenditure by the owners, might be diverted for the benefit of the community at large, *Tagg* 3572–3580.

Guardians. See *Boards of Guardians.*

Reports, 1895—*continued.*

Guildford (*Surrey*). Explanation in February 1895, respecting the extent and character of the distress in the municipal borough, and the employment and relief provided, *App.* (*2nd Rep.*) 137——Absence of exceptional distress in the rural district at the end of February, *ib.* 367.

Guiltcross Rural District (*Norfolk*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep*). 115, 116.

H.

Habitual Paupers. Decided opinion that the present time is opportune for the Legislature to deal sternly with the habitual pauper, who uses the workhouse as a legal means of avoiding the necessity for self-maintenance by work; recommendation that justices should have the power of sending such men to some place where they should be kept to useful labour for three months, *Vallance* 11551. 11576–11591.

Hackney. Statement from Hackney, on 4th February, to the effect that there has been no material increase of distress, *Sir H. Owen* 90.

Letter from the vestry clerk, dated 5th March 1895, as to the exceptional distress in the parish, the causes thereof, and the relief measures in operation, *App.* (*2nd Rep.*) 385.

Further letter, dated 9th March, respecting the employment provided, together with suggestions for an amended system of relief, *App.* (*2nd Rep.*) 396.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 and 1893–94 the number of indoor and outdoor paupers, respectively, and the cost of in-maintenance and of outdoor relief, *App.* (*3rd Rep.*) 524–533.

Hadleigh Farm Colony (*Salvation Army*):

1. *Number and Class of Men Employed at the Colony; their Capacity for Work and for Improvement.*
2. *Operations carried on, System of Management, &c.*
3. *Payments to the Men, and Cost of Administration generally; Annual Financial Results.*

1. *Number and Class of Men Employed at the Colony; their Capacity for Work and for Improvement:*

Satisfactory result of the employment of some men of the "casual" class (West Ham) upon the farm colony at Hadleigh (Essex); belief that about half of these men returned to West Ham as applicants for relief, *Alden* 2066–2080.

Great variation in the class of men put upon the Hadleigh colony, most of them having passed some time in the Salvation Army shelters; the best and most willing workers were the Army Reserve men, who had been drifting about London without any occupation, *Moore* 9558 *et seq.*

Evidence to the effect that all the men who come to the colony have, more or less, lost their characters, and that the colony was established for saving souls, not for reclaiming the land; claim of the Salvation Army to have reclaimed a large proportion of the 1,600 men that have passed through the colony, *Moore* 9590–9592.

Number of men in the colony 298, of whom 242 are colonists, the remainder being paid *employés*, officials, &c.; estimate that about 60 per cent of the men were unskilled workers, 30 per cent. mechanics, and 10 per cent. from the educated professional and commercial classes, *B. Booth* 9854–9858. 9957 *et seq.*; 9981–9990. 10061–10066.

Present distribution of the men in the colony as follows:—235 engaged in agriculture, 52 in industries, including making bricks and building, and 11 in managing the colony, a few of the colonists and officers being married, *B. Booth* 9858.

Arrangement made by the Army with the London Boards of Guardians to receive 110 paupers at *5s.* per week per man, the workhouses being too full; total incapacity for work of 22 per cent. of these paupers, 74 per cent. of the remainder working satisfactorily on the farm, *B. Booth* 9858–9862. 9959–9961. 9991 *et seq.*

Statement that 41 per cent. of the paupers are still with the army and give reasonable promise of becoming decent working men again, and that 16 per cent. have obtained situations outside; refusal of 21 per cent. to work, never having done any work and never intending to do any, *B. Booth* 9862. 10001–10004.

General conduct of the men received into the Hadleigh colony satisfactory, 80 per cent. of them being willing to work; explanation that the colony is open to all three classes of the unemployed, as described by witness, and that the men are rapidly improving, *B. Booth* 9862–9866. 10005, 10006——Conclusion, after careful investigation, that only 34 per cent. of the men were brought to poverty through drunkenness, the cause more often being misfortune, bad health, accidents, &c., *ib.* 9866. 10020 *et seq.*

Return showing the number of men passed through the Hadleigh colony, and with what results, up to 30th September 1894, *App.* (*3rd Rep.*) 544, 545.

Information

Reports, 1895—*continued.*

Hadleigh Farm Colony (Salvation Army)—continued.

2. *Operations carried on, System of Management, &c.*

Information with reference to certain experiments in the form of labour colonies, more especially as regards the Salvation Army Colony at Hadleigh, *Smith* 4760, 4761. 4967–5011.

Explanations respecting the Hadleigh colony, in connection with which witness was professionally engaged in 1891, having been largely instrumental in laying out the system on which it was worked during the first year, *Moore* 9554 *et seq.*

Dissatisfaction of the men with the requirement that they shall work in the gravel pit on arrival, 30 out of the first 160 leaving on this account; great difficulty in dealing with men of education, *Moore* 9558 *et seq.*

Experience gained from the colony chiefly useful on account of the detailed evidence it affords as to the ability of unskilled men when directed in the early stages of the work; no doubt that the whole expenditure on the land improvement work was of a profitable character and that the labour was cheaper than ordinary labour, *Moore* 9593–9597. 9754–9787. 9815–9818.

Certainty that in some cases men arriving at the colony without any knowledge of the cultivation of the soil became, after a certain time, capable of cultivating an allotment; desirability of the Salvation Army trying the allotment experiment on a larger scale, *Moore* 9598–9606——Opinion that the first work that should have been undertaken at the colony was the reclamation of the marsh land, which, when reclaimed later on, yielded an extraordinary crop of wheat, *ib.* 9600. 9784–9791. 9804.

Statement that witness strongly objected to the Salvation Army building dwelling-houses, farm buildings, &c., outside their colony; certainty that some 30 or 40 market gardeners have been thrown out of work owing to the competition of the army in the limited market of Southend, *Moore* 9615–9623.

Explanation that the farm colony at Hadleigh, is, first, a farm colony, and secondly, an industrial colony, consisting of about 1,800 acres of land with about 1,000 acres of water; statement that about 1,270 acres are actually in occupation and that the "saltings" are reclaimable, *B. Booth* 9847 *et seq.*; 9944 *et seq.*

Evidence to the effect that in addition to the ordinary farming operations, dairying and market gardening, several industries are carried on in the colony, the men being taught to make boots and shoes, &c.; erection of buildings by the army both inside and outside the colony, *B. Booth* 9853, 9854. 10011–10019.

Payment of the men on the farm colony by ticket, as in the case of the city colony; average time the men stay at the colony being about one year and two weeks, *B. Booth* 9882, 9883. 10067 *et seq.*

Dismissal of about 10 per cent. of the men received on the farm for incorrigible idleness and drunkenness, the practice being to discharge a man on his getting drunk the third time, *B. Booth* 9883–9891.

Grounds for the opinion that the Hadleigh scheme is based upon sound principles, the chief being that it enables the men on it to earn sufficient to support themselves, and also benefits the working classes by relieving the overcrowded market, *B. Booth* 9911——Assertion generally that there has been no underselling on the colony, but only ordinary competition; contention that the colony has not displaced any growers around Southend, *ib.* 9913–9922.

3. *Payments to the Men, and Cost of Administration generally; Annual Financial Results:*

Publication of the first balance sheet of the Hadleigh colony at the end of 1891, showing a profit of 53*l.* on the first year's working, or an expenditure of 6,819*l.*, disregarding the charge for interest on capital; non-inclusion of the general costs of administration in this expenditure, *Moore* 9555 *et seq.*; 9730–9753.

Failure of the attempt to convert the whole colony into a workshop for manufacturing goods for the market, the balance sheets for 1892 and 1893 showing deficiencies; profit of 532*l.* made by the colony on farming work in 1894, when the men had been put back on the land again, *Moore* 9575–9583. 9802, 9803.

Capital of the colony last year 94,000*l.*, and total acreage of about 1,150 acres in possession, a few farms not being worked by the Salvation Army; present number of men employed about 300, *Moore* 9584 *et seq.*; 9644, 9645.

Explanation that witness left Hadleigh, because an elaborate expenditure out of the Darkest England Fund was contemplated, on buildings, brickworks, a railway, the organising of industries of which he disapproved, and because there was no competent agricultural expert in control of the agricultural work of the colony, *Moore* 9605–9611.

Reports, 1895—*continued.*

Hadleigh Farm Colony (*Salvation Army*)—continued.

3. *Payments to the Men, and Cost of Administration generally; Annual Financial Results*—continued.

Attention drawn to the fact that although last year a profit of 532*l.* was made in the farming department, there was an admitted loss of about 1,700*l.* in the industrial department, in addition to the cost of administration, *Moore* 9612–9614.

Explanation that the estimate of 4,900*l.* for the current expenses of the cultivated land was calculated for ordinary crops, and includes the cost of horses and of honest labour, *Moore* 9807–9814.

Details of the expenditure upon the farm colony, the total in the last balance sheet amounting to about 94,000*l.*, of which 39,700*l.* was for the land; property to the value of about 13,000*l.*, now in the possession of tenants, will ultimately come into use for the farm colony, *B. Booth* 9880–9882.

Assertion, with reference to the statement that the Hadleigh colony was a financial success so long as the work on it was confined to land cultivation and reclamation, that the loss in the industrial section was almost entirely in the brickfield, which no doubt will pay when proper kilns are provided, *B. Booth* 9892–9895.

Belief that the total loss on the colony since its commencement is about 10,000*l.*, or a little more; explanation that as credit was not taken for improvements, the charge for rent was not included, one being set off against the other, *B. Booth* 9896, 9897. 10072–10082.

Great improvement of the Hadleigh estate since it was taken over by General Booth, the land planted with fruit being fully worth 100*l.* per acre; original cost of the whole estate, taking land and water together, about 13*l.* 5*s.* per acre on the average, *B. Booth* 9897-9910. 9942 *et seq.*

Statement showing the loss on the colony in 1894, the average number of colonists at work, the distribution of the colonists, and the average loss per week per man, *App.* (3*rd Rep.*) 544.

Halifax. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (2*nd Rep.*) 39, 40. 46——Limited distress in the rural district; modes of employment provided, *ib.* 116.

Ham (*Surrey*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (2*nd. Rep.*) 382, 383.

Hamilton (*Lanark*). Letter from the town clerk of Hamilton respecting the amount of distress in the burgh and the relief measures adopted, *App.* (3*rd. Rep.*) 587——Letter from the Inspector of Poor respecting the amount of distress in the parish through the severe weather, and the measures adopted for its relief, *ib.* 737.

Hammersmith. Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 187-189.

Hampstead. Letter from Hampstead, dated 14th February, showing that the guardians do not anticipate any difficulty in meeting the distress, and that the vestry are co-operating with them in finding work, *Sir H. Owen* 90.

Official statement as to the amount of distress in the parish; character of the employment provided and of the relief given, *App.* (2*nd. Rep.*) 204.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 to 1893–94 the number of indoor and outdoor paupers respectively, and the cost of in-maintenance and of outdoor relief, *App.* (3*rd. Rep.*) 524–533.

Hanley (*Stafford*). Particulars supplied by the mayor, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (2*nd Rep.*) 128.

Handsworth (*Stafford*). Local explanations in February, as to the amount of distress in this urban district and the remedial measures adopted, *App.* (2*nd Rep.*) 225.

Handsworth (*York*). Distress in this district due to the severe weather; means of relief provided, *App.* (2*nd Rep.*) 395.

Harrogate. Explanation in February 1895, respecting the extent and character of the local distress, and the employment and relief provided, *App.* (2*nd Rep.*) 137.

Hartismere (*Suffolk*). Absence of exceptional distress in this rural district in February, *App.* (2*nd Rep.*) 357.

Hartlepool. Explanations in February respecting the extent and character of the distress, and the measures of employment and relief, *App.* (2*nd Rep.*) 137.

Reports, 1895—*continued.*

Harwich. Information respecting the local distress and the steps taken for its relief, *App.* (*2nd Rep.*) 137.

Haslingden (*Lancaster*). Extent and character of the distress in this municipal borough in February 1895 ; relief measures adopted, *App.* (*2nd Rep.*) 262.

Hastings (*Sussex*). Particulars respecting the amount and cause of distress in the county borough in February and the steps taken by the local authorities, *App.* (*2nd Rep.*) 359——Amount and cause of the distress in the rural district; steps taken for its relief by the local authorities and by voluntary agencies, *ib.* 390, 391.

Haverfordwest (*Pembroke*). Explanations in February 1895, respecting the extent and character of the local distress and the employment and relief provided, *2nd Rep.*, *p.* 138.

Hawarden Rural District (*Flint*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 463, 464.

Hawick (*Roxburgh*). Letter from the town clerk of Hawick respecting the amount of distress in the burgh and the relief measures adopted, *App.* (*3rd Rep.*) 588——Amount of distress in the parish through the severe weather; measures provided for its relief, *ib.* 780, 781.

Haydock Urban District (*Lancaster*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 92.

Hebburn (*Durham*). Amount of distress in this district in February ; remedial measures adopted, *App.* (*2nd Rep.*) 349.

Hebden Bridge Urban District (*York*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 93.

Hemel Hempstead (*Hertford*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 295.

Henderson, Alfred Nicol. (Analysis of his Evidence.)—Witness is clerk to the guardians of the Wandsworth and Clapham Union, 5155.

Evidence to the effect that the Wandsworth and Clapham Union comprises 11,454 acres, with a population of 332,542, and is the largest in the metropolis ; division of the union into six parishes, of which Battersea and Wandsworth contain a large number of the working class, the remainder being more residential, 5156–5160——Details as to the rateable value of the union, which has been just about doubled in the last twenty years, and is now 1,962,355*l.* ; variation of the rates in the various parishes, 5161–5165.

Inclusion of various rates under the heading of poor rate, the actual amount spent in connection with the poor not being more than one-third of the whole rate ; great difference in the constitution of the poor rate inside and outside the metropolis, 5166 *et seq.*——Statistics showing that the actual money required for the maintenance of the poor in the Wandsworth and Clapham Union has increased in a greater ratio than the valuation, 5169 *et seq.* ; 5235–5240.

Result of a committee of inquiry into the out-relief in 1894 that some of the relieving officers were dismissed for malversation, new rules made, and the whole district reconstituted, 5180–5190. 5237–5240——Decrease in the out-relief this year until the very severe weather set in, when the number in the stoneyard increased very much ; permission given for the men to work six instead of four days per week in the stoneyard this year because of the acute distress during the frost, 5187–5200. 5241 *et seq.* ; 5273–5275. 5311–5324.

Particulars of the relief given to the men working in the stoneyard, the weekly value going up to a maximum of 15*s.* 2*d.*, with a double allowance of bread on Saturday, for a man with a wife and more than six children, 5200–5215. 5293–5310——Statement that the inquiry into the genuineness of the circumstances alleged by the applicants for relief was as thorough as possible, considering the large number of applications, 5206–5215. 5272.

Average quantity of stones broken in the stoneyard this year two to three hundredweight per man per day, while the allotted task is eight hundredweight ; understanding, however, that the men work according to the best of their physical ability, 5216–5220——Analysis of the trades of the men working in the stoneyard in 1894, the majority of the men being labourers, 5221–5226. 5276–5278.

Statement that in no single case was an applicant who came within the rules refused work by the guardians ; belief, however, that the greater number of people in distress did not apply for relief, 5227–5234. 5268–5271. 5281–5292——Resolution passed by the guardians of the Wandsworth and Clapham Union expressing the opinion that the

Reports, 1895—*continued.*

Henderson, Alfred Nicol. (Analysis of his Evidence)—*continued.*

Government should at once consider the question of starting some scheme to meet the difficulty of want of employment otherwise than by opening stoneyards, which are calculated to pauperise and demoralise the poor, 5243-5267. 5303-5310. 5325.

Henley-on-Thames (*Municipal Borough*). Extent of the local distress; remedial measures adopted, *App.* (*2nd Rep.*) 72.

Hereford. Official explanations in February as to the amount of distress in the municipal borough and the remedial measures adopted, *App.* (*2nd Rep.*) 213——Amount of distress in the rural district; steps taken by the local authorities and by the voluntary agencies, *ib.* 367.

Heston and Isleworth (*Middlesex*). Exceptional distress in this urban district in February due to the severity of the weather; measures of relief provided, *App.* (*2nd Rep.*) 273–275.

Hexham Urban District (*Northumberland*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 93.

Heywood (*Lancaster*). Character and extent of the local distress in this district; remedial measures adopted, *App.* (*2nd Rep.*) 72.

Hilleary, Frederic Edward, LL.D. (Analysis of his Evidence.)—Long experience of witness as clerk to the guardians of West Ham Union; he is also town clerk, 1235–1239.

Seven parishes comprised in the union; acreage and population of each, 1240, 1241——Extent to which the several parishes are rural or urban, the want of employment and the distress existing chiefly in West Ham and Leyton parishes, 1242, 1243——Total of about 55,000*l.* as the amount of relief in the union last year, the rateable value being 1,627,485*l.* and the poor rate being 1*s.* 1*d.*; 1244–1248. 1655, 1656.

Particulars respecting the amount of outdoor relief in the winter months in recent years, and in February 1895; also the total number of persons relieved at different periods 1249–1264——Obligation upon guardians to relieve distress, whilst they have no power to find employment and to make payment to workers without disfranchising and pauperising them, 1265–1267. 1285–1288. 1300–1306. 1327–1332——Conditions of the Local Government Board, subject to which the West Ham guardians sent twenty-seven men last year to do farm work under the English Colonisation Society, the society being paid 5*s.* a week for each man; advantage if similar arrangements could be carried out on a large scale without entailing disqualifications, 1268-1283. 1333–1339. 1365. 1706–1709.

Explanation respecting the action taken in West Ham Union with a view to the provision of employment, there having been several deputations from the unemployed, followed by an interview with the Local Government Board; legal difficulties in the matter, 1284–1289. 1327–1332. 1694–1696——Eventual withdrawal of the council from Mr. Hills' scheme, to which that gentlemen contributed 1,000*l.*; 1285. 1510–1522.

Objections, on the score of disfranchisement, to the operation of the labour test, 1285–1293——Great facility to the guardians in dealing with distress if employment and relief could be given without disqualifications being entailed, 1287–1293. 1366–1372.

Petition presented to Parliament on the part of the Corporation of West Ham; submission therein that the duty of finding employment for able-bodied persons out of work should be undertaken by the State, neither the council nor the guardians having any machinery for dealing with the evil, 1294–1306. 1379, 1380——Grounds for complaint as to the circular of the Central Board having implied that the corporation could start relief works, 1296. 1300–1302. 1549. 1570–1572.

Steps taken last year by the council, jointly with a voluntary committee, for giving employment on certain works, 1307——Further reference to the scheme of employment promoted by Mr. Hills, at a low rate of wage, and objected to on that ground, though it was eventually carried out by a local committee, 1307, 1308. 1469–1480. 1510–1522.

Summary of the employment given in January and February on relief works, showing the numbers employed and the cost incurred, 1308, 1309——Report of the borough engineer for 1893–94, containing particulars as to the relief works during the year, the wages paid for works on Wanstead Flats, for the laying out of recreation grounds, &c.; conclusion expressing that national rather than local treatment is required, 1310–1315——Information respecting the various callings of the unemployed, the main proportion being returned as labourers, 1316–1326.

View

Reports, 1895—*continued.*

Hilleary, Frederic Edward, LL.D. (Analysis of his Evidence)—*continued.*

View of the West Ham Council (and of witness) that the State should either undertake the duty of finding work for the unemployed, or should throw the duty upon the council or the guardians, and prescribe how it is to be done, 1340–1347. 1403. 1406. 1416, 1417. 1451–1455. 1542–1551. 1570–1572. 1672, 1673. 1725–1729——Probability that a great many of the unemployed have been deterred from applying for relief on account of the pauperising effect, 1348–1353.

Considerable increase, through the frost, in the number employed in the labour yard as compared with previous years, the number, however, being now (26th February) on the decline; limited influx of unemployed from other districts, 1354–1364. 1381–1391. 1802–1808——Sufficient poor-rate available for the relief of distress in the district if pauperism with its disqualifications did not deter applications, 1366–1372. 1431–1443. 1492, 1493.

Information with reference to the poor rate (1*s.* 1*d.*), the School Board rate and other rates in West Ham, the total being about 8*s.* in the £., witness explaining that each additional penny of poor rate in the union would bring in nearly 7,000*l.*, which would be a much larger sum than a share of a Government Grant, 1368–1372. 1411–1415. 1431–1443. 1481–1493. 1606–1611. 1787–1790——Benefit to the union from the Equalisation of Rates Bill if the union were within the area, 1373–1375. 1617–1620——Enormous and rapid increase of the working class population of the union; chief occupations and industries in which employed, 1376–1378. 1392–1400. 1494–1500. 1596–1603.

Examination to the effect that distress and want of employment are not exceptional in West Ham as compared with other parts of the metropolis, though it is submitted that the State could interfere, and would provide relief works, 1381–1405. 1451–1455.——Concurrence to some extent in the view that in times of exceptional distress the guardians should be free to give relief in any form, and to open soup kitchens, without disfranchisement being involved; probability, however, that this would largely increase applications for relief, 1418–1430. 1443–1450.

Suggestions as to the class of works which Government might promote for the unemployed, and as to the removal of able-bodied men from one part of the country to another, 1451–1455. 1556–1563——Payment of 6*d.* an hour to the men employed in the West Ham Union; tendency of this rate to prevent men seeking regular employment, 1456–1468.

Probability that the stigma of pauperism is more operative than disfranchisement in preventing applications for relief, 1502–1509. 1660–1663——Reference to the census taken in West Ham as not having led to any action on the part of the Council; way in which the census was compiled, 1523–1529. 1576–1581——Circumstance of the Petition to Parliament not having been read over to the Council; general approval, however, by the members, 1530–1541. 1582–1595.

Belief that not many persons in West Ham are summoned for non-payment of rates, 1552–1555——Large amount of work soon to be had, so that the unemployed difficulty will gradually settle down for the present, a grant from the State not being necessary, 1563–1569. 1612–1614. 1621–1625. 1665–1667. 1674–1684. 1710. 1736–1738——Approval of some distinction as regards relief between those who are quite destitute and those who receive an allowance from their trades union, 1626–1635.

Expediency of a relaxation of the present legal restrictions upon relief in times of exceptional distress, 1641–1648——Recurring character of the want of employment in West Ham in the winter months whenever the weather is severe, 1649–1652. 1731–1735——Opinion that some 25 per cent. of the men out of work could be employed on land in Essex, 1653–1659——Facility with which the union can raise money at 3 per cent. or less, 1664.

Demand of the unemployed in West Ham for work at a fair rate of pay, their objection being to the stone-yard as a test of relief, 1668–1671——Reference to oakum-picking, wood-chopping, and stone-breaking as the three kinds of test work by which the guardians are able to deal with the distress of the able-bodied, 1685–1693. 1724, 1725——Difficulties in the way of certain joint arrangements between the guardians and the corporation, whereby the latter might aid as regards work for the unemployed, so as to obviate the application of the labour test by the former, 1694–1705. 1725–1727.

Information as to the numbers relieved in October and November last, and in March and April, before and since the severe weather, 1711–1712——Small number of skilled workmen permanently unemployed in the union, those out of work being chiefly labourers, 1713–1722.

Belief that no steps are taken in West Ham to prevent men going on relief works who are earning money in the docks for two or three days in the week, 1739–1746——Examination as to the increase or decrease of employment of various kinds, as in the sugar industry, gas works, docks, &c., 1747–1778. 1812——Limited extent to which there

Reports, 1895—*continued.*

Hilleary, Frederic Edward, LL.D. (Analysis of his Evidence)—*continued.*

there has been any official action as regards migration of labour or employment on useful works in time of depression, 1779–1786.

Outdoor relief freely given in the union, the guardians, however, having no difficulty in dealing with all the cases that come before them, 1796–1801. 1818–1820——Comparatively few casuals and tramps, 1802–1808——View of the guardians that the severe weather mainly accounts for the excessive applications for relief in West Ham as elsewhere, 1809–1811.

Doubt as to any benefit resulting from conferences and concerted action between the various agencies in the locality, such as the guardians, town council, school board, trades unions, friendly societies, &c., 1812–1817.

[Second Examination.]—Explanation that the poor-rate throughout the West Ham Union may be taken at from 1*s.* 2*d.* to 1*s.* 3*d.* in the £., whilst in some metropolitan parishes it is half as much again, 1821–1830——Loan obtained last year by the town council for relief works at Wanstead Flats and for other works; lapse of time before sanction was obtained from the Local Government Board, 1831–1841——Aggregate of about 450,000*l.* as the indebtedness of the council for public works, the rateable value on which raised being about 1,000,000*l.*; 1842–1851.

Belief that an inspector from the Central Board has not suggested that under certain circumstances relief should be taken by the relieving officers to the men's homes, 1852–1860——Further statement as to the extent of work available for the able-bodied when the weather improves, witness submitting that meanwhile those still unemployed and destitute through stress of weather might have their rents and rates paid for them and be provided with food, if a State grant be obtained, 1861–1877. 1885, 1886.

Large and increasing proportion of outdoor relief in West Ham, steps being taken to increase the workhouse accommodation, the house being over full, 1878–1882. 1958–1966——Expediency of a labour test for "loafers," and for all who will not work if they can avoid it; facility in this respect when there is more workhouse accommodation, 1881–1884. 1958–1967——Statement as to no action having been taken respecting any scheme of annual relief works, employment upon the land or roads not being feasible during hard frost; views of Mr. Will Thorne on this point, 1887–1905. 1944–1947——Deterrent effect of disfranchisement and the stigma of pauperism further adverted to, 1906–1908.

Further evidence as to the misapprehension created by the circular of the Local Government Board respecting the duties of town councils and other local authorities with reference to distress, witness repeating that Parliament should clearly lay down what is to be done, but objecting to the town council as the body to provide work for the unemployed, 1909–1917.

Conclusion as to the necessity of retaining the stone-yard test, 1921. 1950, 1951——Employment of the able-bodied men on wood-chopping and oakum-picking; degree of competition in the former case with outside employment, 1922. 1927–1942——Important difference if labour in the stone-yard were under the borough surveyor without entailing pauperism, 1923–1926.

Unsatisfactory operation of a central relief fund if only availed of in some localities, 1948, 1949——Decrease rather than increase of relief in West Ham in December and January 1894–95, until the severe weather set in, as compared with the same period in 1893–94; 1955–1957—— Varying practice, according to the stress of destitution, as to the application of the labour test, efficient inquiry being made by the relieving officers as to the circumstances of the applicants for relief, 1968–1973.

Explanation that the school-rate for last year was 1*s.* 11*d.* in the £., 1974, 1975.

Hilleary, F. E., LL.D. Bill, submitted by Dr. Hilleary, to provide for the economical administration of relief, *App.* (*3rd Rep.*) 497, 498.

Hills, A. F., M.A. (Analysis of his Evidence.)—Considerable experience of witness in connection with relief works in West Ham; he is chairman of the Thames Shipbuilding Company, and he represents the local relief committee, 2531–2533.

Constitution of the relief committee two years ago, partly of the town council and partly of the subscribers to a public charitable fund, the latter having provided about 1,000*l.* and the council agreed to find a similar sum, 2533, 2534——Institution by the committee last year of works upon about 180 acres of land at Wanstead Flats, men in want of work having been employed six hours daily, for four days a week, at 4*d.* an hour, 2533, 2534——Work carried on in Poplar under the same conditions as in West Ham, 2534.

Result of the foregoing experiment that in West Ham, and still more in Poplar, the work cost a great deal more than it would have done under ordinary conditions, 2534——Amended system proposed to the council, based upon piece work, with a minimum wage; approval thereof by the council in the first instance, whilst on the interference of Mr. Will Thorne (secretary of a local trade union) this approval was rescinded, 2535, 2536.

Hills, A. F., M.A. (Analysis of his Evidence)—*continued.*

Eventual carrying out of the works on Wanstead Flats by the Relief Committee (without aid from the Town Council), employment having been given to from 120 to 180 men, 2536——Explanations in detail respecting the conditions and system of payment under which the men have been employed, the character of the work, the supervision exercised, and the financial results: success claimed notwithstanding that there was an organised trades union obstruction to the payment of 4*d.* instead of 6*d.* an hour, 2536–2566——Arrangements as regards food for the men, so that they show much physical improvement, 2557.

Authority given to witness by the West Ham Relief Committee to submit a scheme (now in the printer's hands) for dealing with the unemployed throughout the country, 2566.

[Second Examination.] Invitation to the present Committee to visit the relief works on Wanstead Flats, so that they may see for themselves the practical working of the system of employment, 2568——Conclusion that any State grant in aid of the unemployed would be objectionable and useless in the present season, there being no machinery ready for its administration and for the organisation of the necessary works, 2568. 2590, 2591. 2602–2614.

Explanation that the provisions of the scheme advocated by witness for the whole country have been hastily embodied in the draft Bill circulated among the members of the Committee, some revision being necessary, 2568——Grounds for justifying the proposition that the State, the local authority, and the individual (or charitable public) should co-operate in providing the money required for a system of works as a means of solving the problem of the unemployed question, 2568 *et seq.*

More harm than good through a system of indiscriminate almsgiving, whether by doles of money or of food; illustration in West Ham, 2568–2570—— Great advantage on the other hand of charitable aid properly administered and with careful safeguards against abuse; reference hereon to the very valuable operation of the Charity Organisation Society, 2570–2572.

Division of the poor and unemployed into two main classes, the worthy and the unworthy, these being again subdivisible into the competent and the incompetent, 2570——Proposed maintenance of the present Poor Law machinery, together with the existing disqualifications, as regards the incompetent unworthy poor, 2570. 2767–2769. 2795. 2797—— Suggestion that the able-bodied unworthy poor might be dealt with by a county machinery who might provide labour colonies where the men must work as a condition of their being fed, 2570.

Main objects of the proposed Bill to deal with the worthy poor, whether competent or incompetent, 2570——Proposal that the incompetent worthy poor be dealt with by joint committees of the Poor Law authorities and of charitable subscribers, the State contributing to the expense, 2572–2574.

Primary importance of the question of the able-bodied worthy poor who are willing to work, but for whom there is no employment, 2572—— Suggestion that this class be relieved by means of employment to be provided by a joint committee for each district, comprising the local authority and subscribers to charitable funds, 2572—— Proposal that the State shall contribute an amount equal to the aggregate subscriptions of the local authority and of charitable subscribers, but not exceeding 1*l.* per cent. of the population of the district, 2572, 2573—— Expediency of the administration being entirely local, 2572–2574.

Efficient means of investigation, on the system of the Charity Organisation Society, as regards the charitable part of the proposed scheme, 2573——Very careful administration required as regards relief works, this being a novel experiment on a national scale, and presenting many difficulties, 2573.

Evidence in explanation and support of the proposal that no person shall be employed on relief works for more than six days of six hours each in any week or at a rate of wages exceeding two-thirds of the current rate in the district, 2573, 2574. 2765, 2766—— Suggestions as to the work being pieced at market rates and measured up, and as to the way in which any profits are to be dealt with; facility in fixing the rates, 2573–2576——Important advantages claimed for the system of piecing the work, with a minimum wage, an incentive being thus given to industry, without introducing overtime, 2573, 2574.

Very satisfactory results of the experiments in West Ham not only as regards the improved condition of those employed by the Relief Committee but as regards their future employment elsewhere, 2574–2580. 2778–2790, 2798–2800——Shelter and food provided for the men at a very small charge, 2574. 2582-2584——Simple character of the work (principally digging) contemplated under the proposed national scheme; condition to be enforced, as at West Ham, that a certain minimum of labour must be performed, 2574–2580. 2647, 2648.

Reports, 1895—*continued.*

Hills, A. F., M.A. (Analysis of his Evidence)—*continued.*

Facility of conveying men to and from work near the metropolis by means of cheap trains, greatly to their moral and physical benefit from employment in the open air, 2580. 2651, 2652——Instances of the great abuse through able-bodied men cadging and begging about the streets instead of working for a living even at a reduced rate of wages, 2580, 2581.

Belief that the example set by West Ham at Wanstead Flats could be made applicable generally, witness being prepared to organise (at his own expense) the whole country by the end of November if the scheme advocated by him be sanctioned by Parliament, 2585–2589——Importance of a clear distinction between charitable relief (for which nothing is given back) and employment for wages paid, 2592–2615.

Convenience in the administration of the works being under the Borough Council or other local authority, whilst the charitable relief should come under the Poor Law authorities; official staff available in the former case, 2592. 2698——Little if any out-door relief if the proposed scheme be adopted, the rates being greatly lightened, 2592, 2593——Extent to which disability or disfranchisement should still continue when the Poor Law comes in, 2592. 2795-2797.

Checks upon maladministration of the joint fund by the local authority; contemplated power in the State to withhold contributions if not satisfied with the local administration, 2594–2598——Estimate of from 500,000*l.* to 800,000*l.* as the annual contribution by the State; belief that the present State advance of 2,500,000*l.* might be saved, 2598, 2599.

Decided objection to payment on the works at the full rate of wages for only three days a week, instead of at a reduced rate for the six days; ample opportunity of the men in the latter case to look out for other employment, 2616–2624——Further explanation as to the division of work and of profits among the men, 2625–2630——Statement to the effect that the fund available for any particular district would not be confined to the amount raised in such district, but might be supplemented out of the county or central fund, 2631–2646.

Importance of the principle of getting money's worth in work for the money paid, those not willing to work being eliminated from the scheme, 2650–2652——Approval of only two-thirds, or about 2*d.* an hour, being paid in agricultural districts where wages are very low, 2653-2657——Strong objection to removing disqualification on the temporary receipt of out-door relief, or otherwise modifying the strictness of the regulations on the subject, 2658–2662. 2795–2797.

Great advantage of the scheme as insuring that competent men may always obtain work and wages without resorting to the Poor Law for relief; nor would it lead to any lower wages in the summer, 2663-2666——Conclusion that the poor rates would be decreased by the scheme rather than increased, 2667, 2668——Main difficulty as regards unskilled labourers, it being proposed to acquire land for their employment and to convey them thereto and back again from the towns, 2669-2675.

Difficulty in at once discriminating between a worthy and an unworthy applicant for relief with a view to the former not being put under disqualification, 2676–2680——Concurrence in the view that indiscriminate charity in the East-end of London and in West Ham is very injurious and demoralising, 2681-2689——Demand for really good men in the shipbuilding business, competent workmen finding regular employment, 2690-2697.

Objection to large numbers of workmen being sent from a distance and located for any length of time upon such work as an extensive reclamation scheme, 2699, 2700——Varying rate of wages in different localities and industries it being proposed by witness that the rate under his scheme shall be about one-third less than the normal rate, 2701–2710——Necessity of falling back on the existing machinery in any district where there are no voluntary subscribers, 2711, 2712. 2763, 2764.

Further approval of employment being offered only on condition that the men who can work must work for their food and living, 2713–2717——Justification of the State being asked to provide funds to be administered by local authorities, 2718–2722——Denial that there would be competition with ordinary industrial employment, the reduced payment to be offered not inducing men to give up regular work if they can get it, 2725-2727. 2749-2752.

Very large amount of work which may be provided round the metropolis and throughout the country in the form of digging, trenching, planting potatoes, &c.; belief that market gardeners and others would not be injuriously affected on the score of competition, 2728-2748——Instance in the case of St. Pancras of the unnecessarily large expense now thrown upon the rates in order to find employment, 2745-2747.

Contention that the State is to some extent responsible as regards work for the unemployed and that the local authorities could never work the proposed scheme without the help of the State, 2753–2762——Arrangements for supervision at Wanstead Flats;

Reports, 1895—*continued.*

Hills, A. F., M.A. (Analysis of his Evidence)—*continued*

Flats; maximum of 186 employed at any time, 2770–2773——Facility in applying the test of residence in connection with employment at Wanstead, 2774–2777.

Value of the scheme as a means of promoting regularity of employment and preventing deterioration of workmen, 2778-2790 ——Doubt as to any further powers being necessary in respect of the acquisition of land by the guardians or local authority, 2791–2794.

Hinckley (*Leicester*). Distress at Hinckley due to the severe weather; means of relief provided, *App.* (*2nd Rep.*) 395——Absence of exceptional distress in the rural district in February, *ib.* 320.

Highworth and Swindon Rural District (*Wilts*). No exceptional distress in this district in March, *App.* (*2nd Rep.*) 431.

Hindley (*Lancaster*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 422.

Holborn. Summary of reports of relieving officers in Holborn testifying generally to the absence of any material increase of relief, Sir *H. Owen* 90, 91.

Absence of exceptional distress at the end of February, *App.* (*2nd Rep.*) 375.

Return showing for each of the years 1884–85 to 1893-94 the number of indoor and outdoor paupers respectively, and the cost of in-maintenance and of outdoor relief, *App.* (*3rd Rep.*) 524–533.

Holland (*Dutch Labour Colonies*):

Visit paid by witness to the Dutch labour colonies in 1888 and to the Belgian colonies in 1890, the results of his inquiries having been published in separate reports, which were subsequently submitted to and generally confirmed by the local authorities in Holland and Belgium, *Willink* 8735-8740.

Information respecting the origination of the Dutch free colonies, which were founded in 1818, the area under cultivation since 1821 consisting of about 4,000 acres; three different classes received, there being about 1,800 persons altogether, *Willink* 8741–8749 —— Explanation of the financial arrangements in the free colonies; reference especially to the practice as to the reception of families on payment by each district of 140*l.* per family, *ib.* 8742–8749.

Foundation of the first beggar colony in Holland in 1820, these colonies comprising in 1888 about 3,500 persons; several classes received, one class being able-bodied persons convicted of begging, there being also a class of old soldiers and of orphans, *Willink* 8750–8754 —— Financial difficulties of the two sets of colonies for many years past owing largely to the inefficient labour on the beggar colonies and the heavy cost, *ib.* 8750. 8755, 8756. 8851–8859.

Extracts from report by Count Arrivabene, who inspected the Dutch colonies in 1829, and from report by Sir John MacNeill, who visited them about thirty years later; unsatisfactory conclusions arrived at as to the working of the colonies and the bad financial results, *Willink* 8755–8760.

Original intention to make both the free and the beggar colonies agricultural, whereas the labour coming mainly from towns was found to be unsuitable, so that manufactures, schools, and model farms were established entailing great expense, *Willink* 8759–8761. 8820. 8830–8843.

Summary of the leading changes and improvements which have been made as regards the Dutch free colonies since 1859; conclusion as to the very limited extent to which the system deals with the question of poverty in Holland, though the administration is now very efficient, *Willink* 8760–8772. 8844. 8862. 8867–8870.

Limited opportunities of witness for observing the working of the beggar colonies; several respects in which they have not been a success, whilst they have been very costly, and are now a considerable burden on the State, *Willink* 8773–8780. 8784, 8785. 8792. 8856-8861. 8874–8881.

Opinion that neither the system of the free colonies or of the beggar colonies is applicable to this country; similar view of the director of the free colonies, *Willink* 8779. 8817-8820. 8844-8866—— Belief that as regards competition with outside producers the free colonies are not looked upon as any grievance; competition of the beggar colonies as regards manufactured articles, *ib.* 8781–8783.

Several causes which have led to the greater success of the free colonies than of the beggar colonies, though even in the former case the colonists seem unable to save anything, *Willink* 8786–8791. 8856——Compulsory constitution of the beggar colonies, beggars being now rarely seen about the streets, *ib.* 8793, 8794. 8905–8907.

Statement to the effect that the free and beggar colonies in Holland would hardly have been started if a Poor Law or workhouse system were in force there as in this

Reports, 1895—*continued.*

Holland (*Dutch Labour Colonies*)—continued.

country, *Willink* 8824–8829——Examination as to the poor land used for the Dutch colonies, and the small yield in comparison with the superior land, and the larger yield in England, *ib.* 8830–8843.

Admission that in some respects the Dutch free colonies, as philanthropic institutions, have worked usefully, though neither this system nor that of the beggar colonies would answer in this country, *Willink* 8844-8882——Belief that the beggar colonies are conducted on total abstinence principles, *ib.* 8883–8887.

Examination with further reference to the operation of beggar colonies in Holland, and the extent to which they dispose of the whole class of tramps and beggars in the country, in the absence of a poor law system, *Willink* 8900–8934—— Statement as to the amount of accommodation in the penal colonies, the number of beggars and vagrants sent to them, and the duration of their stay, *ib.* 8915–8928——System of relief in Holland through the clergy, the funds coming from charitable and voluntary sources, *ib.* 8929–8934.

Detailed information, supplied by Mr. Moore, respecting the penal colony at Veenhuiran, in Holland, *3rd Rep. p.* 333——Also, respecting the settlement of small holders at Fredericksoord, *ib.* 335, 336.

Agreement of witness with Mr. Willink in regard to the failure of the Veenhuisan colony, *Moore* 9545, 9546. 9718.

Home Industries (*Auxiliary Employment*). See *Farm and Labour Colonies. Hadleigh Farm Colony.*

Horfield (*Gloucester*). Information as to the amount and cause of the distress in this urban district in February 1895, and as to the measures of relief provided, *App.* (*2nd Rep.*) 275.

Horncastle (*Lincoln*). Absence of exceptional distress in the rural district, no special steps having been deemed necessary by the local authorities, *App.* (*2nd Rep.*) 247—— Amount of distress in this urban district in February; remedial measures adopted, *ib.* 349.

Hornsey, South, Urban District (*Middlesex*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 426.

Horwich (*Lancaster*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 198.

Hours of Labour. Recommendation that the powers of the Board of Trade as to the alteration of the hours of labour should be extended to omnibuses, trams, and mines, *Dodd* 7603, 7604——Evidence in favour of an eight hours day; several advantages anticipated, *Hunter* 8303–8308. 8357. 8490-8493. 8547–8562; *Thorne* 10799–10801. 10831–10834——Further advocacy of reduced hours of labour as of primary importance in decreasing the number of the unemployed, *Hunter* 8548–8562. 8573–8583.

Adverse conclusions of witness upon the question of an eight hours day, *Mather* 8975. 9061-9063——Strong approval generally of shorter hours of labour on the score of health and of recreation, *ib.* 8975——View of witness that every man, whether on a labour colony or not, ought to have the right to work as long as he wishes, *Moore* 9686-9688.

See also *Eight Hours Day. Overtime.*

Hoxne Rural District (*Suffolk*). Character of the distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 374.

Hoylake and West Kirby (*Chester*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 94.

Hoyland (*York*). Letter from the mayor in February explanatory of the extent and character of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 349.

Hucknall Torkard (*Nottingham*). Exceptional distress in this urban district in February, due to the severity of the weather; measures of relief provided, *App.* (*2nd Rep.*) 276.

Huddersfield. Information supplied by the town clerk in February 1895, as to the amount and cause of the distress in the county borough, and as to the remedies applied, *App.* (*2nd Rep.*) 257.

Hull. Information received by the Local Government Board, on 6th February, as to the amount of distress in Kingston-upon-Hull, and the arrangements adopted for meeting the destitution, *Sir H. Owen* 23.

Letter from the mayor of Hull, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 61.

Reports, 1895—*continued.*

Hungary. Statement showing the number of persons employed in mining, smelting, and salt works in each of the years 1882–92, *App.* (*3rd Rep.*) 510.

Hunt, Rev. W. H. (Analysis of his Evidence.)—Is secretary of the Social Department of the Church Army, the branch dealing with the procuring of work for the unemployed, 10143–10145. 10365–10367.

Proposition that any method dealing with the problem of the unemployed should aim at securing for every man self-respect and self-help, 10146——Description of the small labour homes established by the Church Army in various necessitous centres, with the object of creating the idea of home life and domestic happiness; explanation that in these homes charity is reduced to a minimum, 10147, 10148. 10154–10156. 10165. 10174, 10175. 10191, 10192. 10301——Practice to place before each applicant a real work test, usually the making and bundling of firewood, in order to discover ability and inclination, 10149–10152.

Desirability of enforcing more stringent laws against begging; instance showing the evils of indiscriminate charity, 10153, 10154. 10335–10339——Information as to the regulations enforced in the Church Army homes; the men are at work for eight or nine hours daily, 10157–10159. 10205, 10206. 10297–10299.

Examination regarding the wages paid; rule to give the men as far as possible the unionist rate of wages, out of which they have to pay six shillings per week for board and lodging, 10161, 10162. 10286–10296. 10363, 10364——Practice to provide help for sixteen weeks, after which period twelve months must elapse before another application from the same person can be entertained, 10162. 10200–10202. 10309–10311——Evidence respecting the means taken to assist men in getting employment, 10163–10165.

Explanation as to the evangelistic branch of the work; there is no interference with the particular form of any man's religion, 10166–10168——Statistics respecting the working expenses of the homes; usual practice for the vicar of a parish to pay the rent, rates, and taxes, and the superintending officer's salary, 10169, 10170. 10281–10285——Statement that the money received from the poor law guardians for the support of the first 1,250 people sent by them worked out at about six-sevenths of a penny per day, 10170. 10304–10308. 10391–10394.

Evidence respecting the small lodging homes where a man, by a certain payment, can obtain a night's lodging, 10171, 10172——Opinion that the very cheap lodgings and free shelters have helped to solidify and settle the army of loafers, 10172–10174.

Details as to the success attending the co-operation of the Church Army and the guardians of the poor; letter hereon, dated January 1892, from the chairman of the Paddington Board of Guardians, 10176–10180. 10301–10303. 10320–10328——Experience to the effect that the inmates of workhouses should be classified, and each class provided with a different home, 10179. 10270 10274——Disapproval of the system of keeping men in the workhouse who are able and willing to work, 10179. 10275.

Grounds for the opinion that men who could work, but will not, should be dealt with by law, 10179. 10225–10240. 10276–10280. 10329–10334——Three remedies suggested by witness as a means of providing work for the unemployed, 10181, 10182. 10241–10246——Suggestion that it is desirable to start small labour colonies for the unmarried, and to provide small holdings for married people on the land, 10182. 14346–10354. 10367, 10368——Statement as to the slight experience of witness in regard to farm colonies, 10183. 10207–10216. 10256–10269. 10369–10371.

Suggestion that a Minister of Labour should be appointed and a National Labour Bureau arranged, 10184–10188. 10247–10252. 10373–10376——Necessity for dealing first with the delinquent unemployed, 10189. 10354——Offer made by witness of two or more of the labour homes, together with a large farm, in order that experiments might be made on a small scale, a sum not exceeding 8½*d.* per day to be paid for each man sent; necessity for all experiments to be exhaustively investigated and recorded by impartial experts of the Labour Department, 10190. 10253–10255.

Statement that all the homes of the Church Army will accommodate 500 men, and that 2,000 pass through annually, 10193–10198——Belief that 50 per cent. of the men who have been in the homes obtain a fresh start in life, 10199. 10203, 10204. 10312–10319. 10356–10362. 10383–10386——Examination as to the manner in which the homes assist the employment of the truly necessitous; belief that the homes by receiving the delinquent unemployed increase the value of the labour of the real unemployed, 10217–10234. 10340–10345.

Probability that an enactment against overtime work would prove beneficial, 10243–10245——Question as to whether the inquiries made respecting applicants by the Church Army resemble in any way those made by the Charity Organisation Society; statement that careful inquiry is made, but that inconsistencies and falsifications do not prove deterrent to applicants receiving assistance, 10377–10382. 10387–10390.

Attention called to the small amount required by the Salvation Army from the charitable public, in order to make up the deficiency on their shelters, homes, &c.; explanation that they pay no wages but adopt the truck system, 10395–10400.

Reports, 1895—*continued.*

Hunter, A. J. (Analysis of his Evidence.)—Experience of witness for fifteen years as secretary of the Glasgow Trades Council; he is also a member of the Town Council, and was for upwards of twenty years secretary of the Co-operative Bakers' Society, 8260-8262.

Statement showing the large sums paid during the recent distress in Glasgow by different trade unions by way of aliment allowance, this largely accounting for the unemployed not applying for more relief from the Lord Provost's fund, 8263–8266——Very large number of meals provided out of monies collected by the management of the Gaiety and Scotia theatres, 8266-8269.

Great number of painters, masons, and others, engaged in the seasonal trades, who were thrown out of employment by the severe weather; comparatively few of these who applied for relief, as they supported themselves as long as possible on their own resources, 8269–8272——Exception taken to the term "loafers": limited number of these in Glasgow, the working men deeply resenting the evidence of Mr. Motion as to this class being very numerous, 8269. 8319–8322. 8333.

Vast numbers of idle men before the severe weather set in, there being still many trades in which the unemployed are numerous, there being a superfluity of labour in Glasgow; dissent from the Lord Provost's evidence on this point, 8269. 8272–8284. 8393. 8400–8410. 8415-8458——Impracticability of labourers saving much, if anything, out of their precarious earnings, 8272. 8332-8836——Effect of mining royalties in interference with competition with foreign manufacturers of steel and iron, and in thus augmenting the unemployed, 8284, 8285. 8474–8481.

Evidence in support of the proposition that large numbers of the unemployed might be absorbed in the cultivation of unreclaimed and cultivable land, and that the extensive influx of rural labour into the towns would thus be beneficially checked, 8287-8292. 8482-8488. 8502-8520. 8543–8546 8567–8572——Suggestion whether some measures might not be adopted for checking the immigration of aliens, many of them of the pauper class; prejudicial effect of these immigrants in Glasgow, 8293–8298.

Information as to the extremely disastrous effect of the Scotch coal strike of 1894, and of coal strikes generally, not only as regards the colliers themselves, but in throwing out of employment great numbers of workers in the steel and iron trades, 8298–8302. 8400–8404. 8540-8542——Strong feeling of witness and of numerous other representatives of the men that these strikes should never be allowed to take place at all, and that preventive steps should promptly be taken, as by the present Select Committee, for the appointment of a Board of Conciliation, 8301, 8302.

Great importance attached to an eight hours day; belief that not only would many more men thus be employed, but that wages would be increased rather than reduced, 8303–8308. 8357. 8490-8493. 8547-8562——Considerable value to be derived from complete and accurate statistics of the number of the unemployed; suggestion that this information might be obtained through the school boards and other bodies, 8308–8311——Approval of some experiments in the way of farm colonies, or of penal colonies for the idle and lazy class, though witness has not any strong opinion in their favour, 8311-8315. 8385-8392. 8565-8567.

Repugnance of the working classes to apply to the parochial authorities for relief, 8316–8318——Strong objections of the men to being subjected to the investigations of the Charity Organisation Society, 8316——Limited extent to which the liability to disfranchisement deters from applications for relief, 8318, 8319——Conclusion that not only in Glasgow but in most other Scotch towns sufficient funds can be raised locally for feeding the people in times of distress from want of employment, but that the proper course is to remove, if possible, the causes of the distress, 8323-8328. 8358-8364.

Rule of the trade unions in Glasgow as to the payment of "idle benefit," whereas the ordinary labourers have no such resource in time of distress, 8329-8336——Low wages in the rural districts in Scotland, in addition to want of employment; inaccuracy of a statement that in some localities ploughmen receive 22*s.* a week, with a house, 8337-8342.

Numerous trade unions represented on the Glasgow Trades Council, there being also two labourers' unions connected with the Council, 8343–8346——Bulk of the distress and of the want of employment among labourers, the number being swelled by the thriftless and idle, 8347–8356——Belief that during the distress there were many more than 10,000 out of employment, 8351-8353.

Partial extent to which the unemployed benefit given by trade unions in Glasgow meets the whole amount of the distress; doubt as to the actual contribution by the men for such benefit, 8365–8376——Powerlessness of the unions to solve the difficulty; question hereon whether it is not expedient for the State to facilitate a general system of weekly contributions to an unemployed benefit fund, 8377-8384.

Exception taken to a statement by Mr. Motion as to tippling at night frequently leading to an increase of unemployment, 8394–8396——Varying hours in the baking trade

Reports, 1895—*continued.*

Hunter, A. J. (Analysis of his Evidence)—*continued.*

trade in Glasgow and the West of Scotland, an eight hours day being needed in this trade, 8397-8399. 8550-8559——Considerable depression and want of employment in the Glasgow shipbuilding and engineering trades, this having been accentuated by the coal strike, 8400-8410——Approval of useful works for the unemployed, but not in the form of penal colonies, 8411-8414.

Examination with reference to the large immigration from the Highlands and other parts of Scotland into Glasgow, as well as from Ireland; various occupations of these men adverted to in connection with the question of their being usefully employed on the land, 8415-8458. 8502-8520. 8543-8546——Explanation as regards foreign immigrants, and, on the other hand, the still larger emigration from this country, that witness does not object to the former if able-bodied and not impoverished on arrival, 8459-8473. 8489.

Enormous development of Glasgow within the last fifty years, the sources of employment having greatly increased, 8494-8501——Valuable relief distributed during the recent distress under the plan of employment adopted by the Municipality, though there were thousands of unemployed who did not apply for this mode of relief, 8521-8528. 8563, 8564.

Conclusion that the working classes could make a better use of their own earnings by saving more, though this is not feasible to the extent contemplated by the Lord Provost, 8529-8533——Continued payment of idle aliment to trade unionists, irrespectively of the weather, there being a surplus of labour, and a legalised eight hours day being needed, 8534-8539. 8547-8562.

Further advocacy of reduced hours of labour as of primary importance in decreasing the number of the unemployed, 8548-8562. 8573-8583——Illustration in the case of carters throughout Scotland of the great advantage of a reduction in the hours of labour, 8573-8577——Great advantage of an abolition of overtime in the engineering and other trades, 8578-8583.

Huntingdon. Absence of exceptional distress in the Huntingdon urban district, *App.* (*2nd Rep.*) 215——Absence of exceptional distress in the rural district in February, *ib.* 320.

Hurst Union District (*Lancaster*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 94.

Hyde (*Chester*). Character and extent of the distress; steps taken by the local authorities, *App.* (*2nd Rep.*) 73.

Hythe (*Kent*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 73.

I.

Ilford (*Essex*). Local explanations in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (*2nd Rep.*) 226.

Ilfracombe. Exceptional distress in the urban district in February, due to the severity of the weather; measures of relief provided, *App.* (*2nd Rep.*) 276.

Ilkeston (*Derby*). Letter from the Mayor in February, explanatory of the extent and character of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 345, 346.

Ilkley (*York*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 163.

Immigration. See *Aliens. Jews* (*Metropolis*).

Imports. Monthly statements before the Board of Trade as to the amount of various dutiable articles retained for consumption, *Smith* 4730——Reference to a certain table as showing that the decrease of imports since 1889 has been less in London than in other parts, *ib.* 4730, 4731——Conclusion that the years in which employment is at its best are, as a rule, the maximum years of imports and exports, *ib.* 4821-4825.

Statement on the subject of the great lack of industry in the east end of London, caused by the importation of various goods from foreign countries, *C. Booth* 10675-10686.

Attention drawn, at one of the meetings of the unemployed, to the danger, in case of war, of this country being starved into submission; necessity of the Government taking up the land question even from that standpoint alone, *Morton* 11028.

Table submitted by Mr. Llewellyn Smith showing the value of the imports of foreign and colonial merchandise into the Port of London and at other ports of the United Kingdom, in each of the years 1889-93, *App* (*3rd Rep.*) 499——Table of above imports in which the figures in each column for 1889 are represented by 1,000, *ib.*

Ince-in-Makerfield (*Lancaster*). Amount of distress in this district in March; relief provided, *App.* (*2nd Rep.*) 404.

Industrial Homes. Detailed explanations in support of suggestions made by witness for the relief of future distress; advocacy of the public organisation of incompetent labour by means of the establishment of industrial homes for the inefficient unemployed, *C. Booth* 10543–10554. 10590–10601. 10658, 10659. 10663–10674.

See also *Farm and Labour Colonies.* *Hadleigh Farm Colony.*

Industries (*Generally*). Proposition that there should be collective ownership by the State of all industries, each industry being guided by the best men in it under the control of the central body of the country, the supervisors to be selected by the workers, *Morton* 11079–11097.

Inspectors (*Local Government Board*). See *Local Government Board.* *Out-door Relief.*

Interim Report. Grounds for urging (25th February) that an interim Report be promptly made by the Committtee, sufficient data being soon available, and delay being most prejudicial, *Keir-Hardie* 1175–1185.

Draft (Interim) Report, as proposed by the Chairman of the Committee (11th March), *First Rep.* x–xii——Adoption of the foregoing, subject to some amendment, *ib.* xii–xvi.

Inveresk (*Edinburgh*). Statement as to the amount of distress in this parish and the means adopted for its alleviation, *App.* (*3rd Rep.*) 678.

Inverness. Letter from the town clerk of Inverness respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 589, 590——Amount of distress in Inverness parish, through the severe weather; relief measures adopted, *ib.* 716.

Ipswich. Amount of distress in Ipswich County Borough previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 437.

Ireland. Letter from Mr. John Morley, dated 21st March 1895, explaining that the distress in Ireland has been mainly due to a partial failure of the potato crop, and that this has been specially dealt with by money obtained from Parliament for the purpose, *3rd Rep. p.* 242——View of Mr. Morley that no statistics could be collected in Ireland at the present time which would be of assistance to the Select Committee, *ib.*

Inability of the Committee to consider the special circumstances of Ireland, *3rd Rep.* v.

Iron and Steel Works. Chart showing the fluctuations in the estimated proportionate number of workpeople employed in pig-iron manufacture during each month from July 1893 to January 1895; *3rd Rep.* p. 52.

List of places, fifteen in number, making complaints respecting distress through stoppage of iron and steel works, *App.* (*3rd Rep.*) 807–812. 817.

Isle of Axholme (*Lincoln*). Sufficiency of voluntary relief for meeting the distress in the Isle of Axholme rural district, *App.* (*2nd Rep.*) 295

Isle of Thanet. Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 295.

Isle of Wight. Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 247.

Islington. Statement from Islington on 2nd February to the effect that there has been no exceptional distress in the parish, *Sir H. Owen* 90–92.

Reduced rates in Islington since the Equalisation of Rates Act, this parish being very efficiently managed, *Benn* 3100–3104.

Explanation that the parish of Islington is the most populous in the United Kingdom, the present population being estimated at 323,853, whilst the rateable value is 1,717,571*l.*; very little vacant space for increase of houses, *Dewey* 3662–3672. 3677, 3678. 3833, 3834. 3847–3849——Total rates of 5*s.* 8½*d.* in the pound, including poor and county rates, and vestry and school board rates, &c., *ib.* 3673, 3674.

Receipt of about 10,000*l.* half-yearly under the Equalisation of Rates Act, on the score of population, *Dewey* 3675, 3676. 3831–3834——Large proportion of the residents in the parish who are engaged in the building trades and in connection with the railways; small rateable value of the great bulk of the houses, *ib.* 3679–3683. 3841–3843. 3850–3857.

Particulars respecting the operation of the labour bureau established at the beginning of last year; fair success thereof as regards the employment thereby, whilst there has been no surcharge in respect of the expenses, *Dewey* 3684–3693. 3709. 3864–3866——Belief that during the late winter there has been no abnormal distress or want of employment in Islington save during the four weeks of frost, *ib.* 3694. 3717.

Reports, 1895—*continued.*

Islington—continued.

3727–3732. 3753–3758. 3792–3798——Employment given to an average number of 904 additional street sweepers daily during ten days in February, the expenditure being about 1,500*l.*, and the rate of pay 4*d.* an hour; discontinuance of employment when there was no longer any snow to sweep, *Dewey* 3695–3721. 3772. 3858–3969.

Very moderate increase of out-door relief given during the severe weather, there having been no unusual pressure, *Dewey* 3722–3732. 3753–3758. 3829–3846——Limited extent to which the vestry of Islington would be likely to postpone till the winter months, when employment is slack, any work which could more profitably and effectually be done in the summer, *ib.* 3772–3791. 3814–3818. 3826–3828.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (3*rd Rep.*) 524–533.

Italy. Recent establishment of a Chamber of Labour in Italy, *Smith* 4717.

Statement showing the number of workpeople employed in certain branches of industry in each of the years 1881-91; *App.* (3*rd Rep.*) 510.

J.

Jarrow (*Durham*). Amount and cause of distress in Jarrow Municipal Borough; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (2*nd Rep.*) 403.

Jews (*Metropolis*). Increasing number of Jews resorting to the Poor Law, the Jewish Board of Guardians experiencing more and more difficulty in dealing with the poor in the absence of a workhouse test; fear of the Board that if they established a workhouse for Jews a larger number than ever would be attracted from Russia and Poland, *Vallance* 11552–11556.

K.

Keighley (*York*). Explanations in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (2*nd Rep.*) 138, 139.

Keir-Hardie, James (Member of the Committee). (Analysis of his Evidence.)—Data submitted in detail in support of the conclusion that outside the official view of the situation (as represented by Sir Hugh Owen), there is a very large amount of distress and destitution of which the present Committee should take cognisance, 700 *et seq.*

Establishment of an unemployed committee in almost every industrial centre throughout the country, comprising, among other representatives, delegates from various trades unions, 700–702. 718–723——Circular recently sent by witness to these committees requesting information as to the extent and character of the distress and the local action taken, and inviting suggestions as to the remedial measures to be adopted by the locality or by the nation, 700.

Illustration in the case of Leeds of the much greater distress according to witness' information than according to that supplied by Sir Hugh Owen; examination hereon as to the precise data for witness' conclusions in this instance, the lowest estimate (as supplied to witness) of the absolutely destitute being 10,000; 703–723——Very large number of unemployed in Glasgow and of destitute families, 723–728——Evidence as to the great distress in Liverpool, it being computed that there are 50,000 labourers out of employment, 728–734.

Reference to a recent census of the unemployed in West Ham as showing that 6,176 persons were casually employed and 10,131 out of work, 736——Crowded state of the workhouse in West Ham, the guardians being unable to deal with the distress, 736, 737——Great reluctance of unemployed respectable working men, even when in great distress, to apply for relief, in view of their disfranchisement; suggestion hereon, 737. 740——Very general operation of special relief committees in the centres of industry; large sums subscribed, 737——Conclusion that much increase of mortality has resulted from the destitution, 737, 738——Apprehended continuance of a great amount of distress irrespectively of severe weather, 738.

Urgency of the present crisis so that local relief works would not avail by reason of the delay in their establishment, 738——Proposition that an interim Report should recommend that the Treasury should at once contribute, up to an aggregate of 100,000*l.*, an amount equal to that raised in each locality; that is for expenditure in charitable relief and in useful relief works, 738 *et seq.*——Suggestion that, as regards the proposed contributions, a residential test be prescribed and that recipients of parochial relief be excluded, 740. 791.

Reports, 1895—*continued.*

Keir-Hardie, James (Member of the Committee). (Analysis of his Evidence)—*continued.*

Explanation that the foregoing proposal is intended purely as a temporary expedient for the relief of existing starvation and should be followed up by permanent remedies to be recommended in the final Report of the Committee, 740–744——Contemplated combined action on the part of the unemployed for the breaking down of the present system of poor relief, if the Committee cannot recommend some temporary scheme for the prevention of starvation, 746, 747.

Examination as to the tests and precautions which ought to be adopted in order to deal with excessive applications to the Treasury from any locality, and to prevent abuse in the administration of the funds by the special local committees; suggested limits with reference to population, &c., 748 *et seq.*——Consideration of difficulties raised as to the sufficiency of a Treasury grant of only 100,000*l.*, in view of the immense number of the unemployed; admitted probability that further and much larger amounts may be necessary, 748 *et seq.*

Questions considered as to the very large number of unemployed in West Ham (and in populous districts generally), in connection with the degree of relief to be afforded under witness' scheme, and the number of meals which could be provided, 777 *et seq.* ——Expediency of greater expedition on the part of the Local Government Board in dealing with local applications for loans for works, 836——Contemplated expenditure of the first Treasury grant of 100,000*l.* and the corresponding local contributions, mainly in food; expected sufficiency thereof up to the end of March, 837–844.

[Second Examination.]—Further explanations respecting the great destitution at Leeds, witness submitting that the charitable relief now given, by means of local committees, cannot be relied upon after the severe weather, and that there has been great distress throughout the winter, 845-866. 876. 893, 894——Instances of much distress at Sheffield, Liverpool, Glasgow, and various other towns through want of employment, 867–875——Admission that at Glasgow much has been done by relief committees and by the Corporation in aid of the distress, 877-889. 1144, 1145.

Summary of replies received by witness as to the special local causes which account for depression in trade, various causes irrespective of bad weather being frequently assigned, 890–895——Necessity of immediate relief, not only for those out of work through the frost, but for the large numbers who are unemployed through the general depression in trade, witness estimating the total from all causes at more than five millions, including the men's families, 895–913——Estimate of 1,750,000 out of employment from the frost, 895–897——Large increase in the estimate of 10,000 out of employment in West Ham, if those affected by the frost and their families be added, 898–910.

Examination as to the cost of one or two meals daily for the aggregate number of unemployed, witness admitting that a Treasury grant of 100,000*l.* or 200,000*l.* would not go very far, but that relief would also be given by trades unions and charitable associations, and that some casual employment would be obtained, 914 *et seq.*

Advocacy of a State grant not only as preventing disfranchisement, but as a remedy against the demoralising effect of work in the stone-yard, 941-945. 1228–1230—— Consideration of the extent to which the number of the unemployed in West Ham, as in the building trade, and in work at the docks and on the river, was influenced by the frost, at the time the census was taken; form of census paper handed in, 946–962. 1031–1034——Very rare application for relief by members of trades unions and friendly societies, 959–966.

Inability of the guardians and corporation of West Ham, aided by trades unions and friendly societies, to meet the present severe distress; witness further advocates temporary State help for this and other localities who can prove their need of it, 967 *et seq.* ——Extent of employment provided in West Ham on works as well as in the stone-yard; employment also by means of a sum of 1,000*l.*, given by Mr. Hills, which the town council eventually declined to accept, 983–986. 991–1006. 1087–1092——Very high rates in West Ham, all that is possible being already done, 987, 988.

Explanation that witness proposes not a loan from the State but a free grant, 1009–1011——Further statement as to the delay in connection with local applications for loans and in obtaining the sanction of the Local Government Board, 1012–1018—— Dissent from the view that the proposed State aid, in the case of West Ham, would cause an influx of unemployed from other districts; check by means of a residential test, 1020-1037. 1141.

Exceptional distress in West Ham, not only through some decaying industries, but through the agricultural depression in Essex, 1031–1033——Duty of the State to aid in providing work for the unemployed, if out of work through no fault of their own, 1040. 1150. 1217–1221——Suggestions as to the constitution of the local committees for the administration of a grant from the State; approval of this resting with the guardians alone if there be no disfranchisement, 1041–1052. 1224-1227.

Denial that the guardians and local authorities of West Ham are able to successfully

Reports, 1895—*continued.*

Keir-Hardie, James (Member of the Committee). (Analysis of his Evidence)—*continued.*

fully cope with severe distress, and to relieve all the unemployed from year to year, though some districts may be in a position to do so, 1053-1058. 1134-1136——Dissent from the view that dissatisfaction to other districts and demoralisation in West Ham would result from the proposed State aid in the latter case, 1059-1065.

Necessity of a very careful sifting out and of a residential test in the administration of the proposed scheme; accurate accounts desirable, 1066-1083. 1141. 1224, 1225——Approval of a suggestion that two equal amounts be provided locally, by voluntary contributions and by the rates, and that a third contribution be added by the Treasury, 1073-1078.

Great boon to respectable working men, when in temporary distress, if they could obtain relief by means of a loan to be repaid in more prosperous times, 1084-1086——Evidence to the effect that local committees in providing relief works for the unemployed should pay them the full rate of wages instead of only two-thirds, 1087-1129——Approval of relief being largely given in kind, 1130-1133.

Local inability to find sufficient work for the unemployed in the large centres of industry, 1134, 1135——Grounds for concluding that an extended application of the Allotments Act would largely meet the distress from non-employment in agricultural districts, and would check migration from such districts into West Ham and into the towns in search of work, 1136-1141. 1159-1168. 1231-1233.

Probability that some of the larger towns in Scotland would make application under a system of free grants, though local efforts have generally been sufficient in Scotch towns, 1142-1149——Explanation that witness does not contemplate any permanent system of State aid for the unemployed, though he advocates such aid in order to provide work on exceptional occasions, 1150-1158.

Extent of the personal experience of witness and character of the inquiries upon which he bases his proposal for a Treasury grant, in order to provide work when there is exceptional distress, 1169-1175——Grounds for urging that an interim Report be promptly made by the Committee, sufficient data being soon available and delay being most prejudicial, 1175-1185.

Further information as to the basis of witness' estimate (a very rough one) of 1,750,000 of unemployed persons in the United Kingdom, through the frost; estimate of about 1,000,000 permanently out of work throughout the summer, 1186-1204. 1234——Extent to which West Ham may be regarded as a typical case as regards local claim to a share of a Treasury grant; reference hereon to the case of Glasgow and other towns in Scotland, 1205-1222——Belief that local effort would be promoted, rather than checked, by a system of Treasury grants when there is exceptional distress, 1222, 1223.

Kendal (*Westmoreland*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 73.

Kennington. Letter from the vestry clerk, dated 25th February 1895, containing explanations respecting the amount and character of the local distress, and the remedial measures adopted by the local authorities, *App.* (*2nd Rep.*) 325.

Kensington. Increase of relief given in Kensington in the recent winter months as compared with the same months in the two previous years; considerable distress also among those not applying for relief, *Sir H. Owen* 93.

Return handed in by Sir Hugh Owen, showing for each of the years 1884-85 to to 1893-94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524. 533.

Kent. Particulars supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 52, 53.

Kettering Urban District (*Northampton*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 94, 95.

Keynsham (*Somerset*). Exceptional distress in this rural district in February through the severity of the weather; relief given by voluntary agencies, *App.* (*2nd Rep.*) 247.

Kidderminster. Letter from the mayor, in February, explanatory of the extent and character of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 328.

Kilmarnock (*Ayr*). Letter from the town clerk of Kilmarnock respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 591——Information supplied by the inspector of the poor as to the extent and character of the local distress, and the remedial measures adopted, *ib.* 642.

King's Lynn (*Norfolk*). Official explanations in February as to the amount of distress in the municipal borough and the relief measures provided, *App.* (*2nd Rep.*) 213.

King's Norton (*Worcester*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 357.

Kingston-on-Thames. Explanations in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 139.

Kingswinford (*Stafford*). Considerable distress in this district; relief through voluntary agencies, *App.* (*2nd Rep.*) 374.

Kinning Park (*Lanark*). Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 593.

Kirkby Lonsdale (*Westmorland*). Absence of exceptional distress in this district; extent to which want of employment prevails, *App.* (*2nd Rep.*) 95.

Kirkcaldy (*Fife*). Communication from the town clerk of Kirkcaldy respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 593.

Kirkintilloch (*Dumbarton*). Statement as to the amount of distress in this parish and the means adopted for its alleviation, *App.* (*3rd Rep.*) 665.

L.

Labour Bureaux. Opinion that a labour exchange might answer if applied to the whole of London, *Tagg* 3586.

Explanations and statistics relative to the operation of labour bureaux in this country, some of these being managed by local authorities and some by voluntary agencies, *Smith* 4696–4698——Apprehension in some quarters lest labour bureaux should operate in neutralising strikes and trade disputes, *ib.* 4718–4722.

Evidence to the effect that labour bureaux if unpopular, as interfering with trade disputes, would not be of much use as registries, whilst in any case their usefulness in time of general depression would be very limited, *Smith* 4857–4874——Doubt as to labour bureaux having been largely established on the initiation of trades unions; advantage in their being in the hands of the local authorities, *ib.* 5012–5015.

Satisfactory working of the labour bureau in Battersea, through which the unemployed are taken on to work, *Pilditch* 5034–5038——Result of the inquiries made by the vestry of St. George's that labour bureaux are of no use, *Mackay* 5810. 5865, 5866.

See also *Camberwell. Islington. Minister of Labour. Paris.*

Labour Colonies and Homes. See *Belgium. Church Army. Farm and Labour Colonies. Germany. Hadleigh Farm Colony. Holland. Land* (*Acquisition by Boards of Guardians*). *Relief Works. St. Olave's Union. West Ham. Whitechapel.*

Labour Department (*Board of Trade*). Information obtainable from the Labour Department of the Board of Trade as to want of employment, irrespective of poor relief, *Sir H. Owen* 383.

Several sources from which information is obtained by the Labour Department as to the state of employment throughout the country, the result being published monthly in the "Labour Gazette," firstly, as to the condition of employment in particular districts, and secondly, in particular trades, *Smith* 4529–4533.

Explanation that the statistics of the Labour Department deal only with the state of employment as distinct from the state of distress, the latter coming under the scope of the Local Government Board, *Smith* 4534, 4535.

Excellent work done by the Labour Department of the Board of Trade, *C. Booth* 10520, 10521.

See also *Charts, &c. Minister of Labour.*

Labour Test (*Stone-yard, &c.*):

Practice as to labour in stone-breaking, wood-chopping, &c., being imposed as a test of destitution; difficulties in finding suitable employment, *Sir H. Owen* 216–222——Obstacle to any remunerative return from stone-breaking, *ib.* 349, 350. 354.

Non-interference by the Central Borrd with the guardians as to the rate paid for work in labour test yards; reference hereon to the case of Leicester, *Sir H. Owen* 530–535. 545, 546——Claim of destitute men to relief through the stone-yards, though they may not have parted with their furniture. *ib.* 536, 537.

Inducement to improvidence if, on the occurrence of frost, applicants could be relieved by local authorities without any labour test, *Sir H. Owen* 580–587——Beneficial check through the out-door relief regulation Order and the modified workhouse

Labour Test (*Stone-yard, &c.*)—continued.

house test, though some abuse may arise in the operation of the labour yard system, *Sir H. Owen* 588–600. 648–651——Advantages of the workhouse test in the interest of the ratepayers, whilst it operates as an incentive to self-reliance, *ib.* 598–605.

Reference to oakum-picking, wood-chopping, and stone-breaking as the three kinds of test work by which the guardians are able to deal with the distress of the able-bodied, *Hilleary* 1685–1693. 1724, 1725——Expediency of a labour test in West Ham for "loafers," and for all who will not work if they can avoid it; facility in this respect when there is more workhouse accommodation, *ib.* 1881–1884. 1958-1967——Important difference if labour in the stone-yard were under the borough surveyors, as in the case of West Ham, without entailing pauperism, *ib.* 1923–1926.

Exception taken to the present labour tests as too obnoxious, *Alden* 2031, 2032——Improvement if work in the stone-yard in St. Olave's were placed entirely under the vestry and the surveyor, and were transferred from the workhouse officials, *Fenton* 3043–3061——Concurrence in suggestion of Mr. John Burns that the stone-yard should be placed under the local authority, *Benn* 3110.

Disapproval of the stone-yard test, as there is no reformatory action in it, the same men coming back to the stone-yard year after year, *Mackay* 5780–5785. 5815–5818——Objection to the stone-yard work on the ground that it is costly, and that it is demoralising to the better class of men who are subjected to it, *Mulligan* 5892 *et seq.*; 5901–5903——Suggestion that there should be a central stone-yard to supply all London with stones for mending roads, and that a fair day's wage should be given for a fair day's work, thus removing the stigma of relief and pauperism, *ib.* 5894–5904. 5909.

Experience of witness that the stone-yard work is very demoralising to the men, and a very great deterrent to their getting work, *Shand* 6147–6153——Explanation that it is necessary to get the sanction of the Local Government Board before a stone-yard can be opened, *Fenton* 6174, 6175.

Evidence in support of the contention that the useful employment of the poor is the true principle of the Poor Law, and that the useless picking of oakum and the profitless breakage of stones are equally pernicious, *Dodd* 7532 *et seq.*——Doubt as to any better return from other modes of employment than from stone-breaking, *Bell* 7885–7887.

Necessary resort to a labour test if the workhouse accommodation be insufficient, *Willink* 8706, 8707——Approval also of the workhouse test in towns, with a labour test, and out-door relief under certain conditions, *ib.* 8714–8726.

Orders of the Poor Law Board and Local Government Board upon the subject of out-door relief to the able-bodied, and the tests to be applied, *App.* (*2nd Rep.*) 7–12.

Views of the several inspectors upon the question of modification of the regulations respecting out-door relief; disapproval generally of any alteration, *App.* (*2nd Rep.*) 20–56.

See also *Out-door Relief. Pauperism. Poplar. St. Olave's Union*, 3. *Tramps and Vagrants. Wandsworth and Clapham Union*, 3. *West Ham. Whitechapel.*

Lambeth. Large increase of relief in Lambeth as compared with previous winters, there being also more distress than usual among those not applying for relief, *Sir H. Owen* 93.

Letter from the vestry clerk, dated 28th March 1895, to the effect that the local distress was not exceptional save during the frost; considerable employment given by the vestry, *App.* (*2nd Rep.*) 456.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533——Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 5455.

Lancaster. Sufficiency of voluntary agencies for the relief of the distress in Lancaster Municipal Borough, *App.* (*2nd Rep.*) 139——Sufficiency, also, of voluntary agencies in the rural district during the severe weather, *ib.* 443.

Land (*Acquisition by Boards of Guardians and by Municipalities*):

Explanations upon the question of land being hired by guardians in order to give employment; action of the central board in such cases, *Sir H. Owen* 288–297——Reference to certain legislative provisions as having remained on the statute book since the Act of Elizabeth in 1601, under which guardians may provide land for employment, subject to the approval of the central board; probable requirement of Parliamentary sanction before any enforcement of these provisions, *ib.* 397–399.

Reports, 1895—*continued.*

LAND (ACQUISITION BY BOARDS OF GUARDIANS, &c.)—continued.

Information respecting a recent movement on the part of certain metropolitan unions in favour of legalised facilities for acquiring land and providing workshops as a means of employment, with a view to poor relief being obviated; view of witness' board adverse to proposed scheme, *Sir H. Owen* 400–405.

Examination to the effect that guardians apply work as a test and not for wages; question hereon whether under certain Acts of William IV. and George III. the central board might not make orders sanctioning the acquisition of land by guardians to be worked for wages by destitute persons, *Sir H. Owen* 457–481. 488, 489——Discretion to be exercised by the central board as to the distance from the parish at which land might be acquired, *ib.* 482–487.

Advantage not only if guardians had power to give relief without disfranchisement but if they were empowered to acquire land for employment thereon, in lieu of the stone-yard test, *Alden* 2106. 2178–2181. 2453.——Beneficial results anticipated in West Ham if the guardians had power to acquire land and to use it as a test instead of the stone-yard; difficulty, however, in severe frosts, *ib.* 2489–2495——Doubt as to any further powers being necessary in respect of the acquisition of land by the guardians or local authority, *Hills* 2791–2794.

Suggestion that the municipal authority should be the proprietor of the land and let it to the men on conditions of perpetual tenure, fair rent, free sale, and as much land as the men want, *Tuckwell* 7061–7064. 7281 *et seq.*——Considerable doubt as to its being an easy matter to purchase small quantities of land at a reasonable price in or near villages, *ib.* 7081–7085.

Suggestion that more power should be given to municipalities, and that they should be allowed to hold land whenever they purchase it, instead of having to sell it within a certain time, as at present, *Dodd* 7604–7610——Proposal that an Act of Parliament should be passed providing a simple uniform method for the compulsory purchase of land by local bodies for all public purposes, similar to that under the Parish Councils Act, *ib.* 7584, 7585. 7678–7690. 7719–7727——Submission of copies of resolutions passed by the conference on the unemployed and by other bodies in regard to acquiring land under the old statutes, *ib.* 7613.

Conclusion that the last word cannot have been spoken upon the question of the unemployed so long as any large quantity of land remains out of cultivation, *Vallance* 11551.

Report of the committee of guardians of the Whitechapel Union appointed in January 1888 to consider certain proposals of the Rev. S. A. Barrett for the acquisition of land and for training able-bodied men in country pursuits by means of the Poor Law, *App.* (*3rd Rep.*) 548, 549.

Report of committee appointed at a meeting of metropolitan Poor Law guardians on 23rd July 1888 to inquire into the practicability of applying the surplus labour of the metropolis to the unproductive land at home and in the colonies, and the desirability of carrying out a scheme for this purpose under the direction of the Poor Law, *App.* (*3rd Rep.*) 549–552.

Draft report submitted at a meeting of the Agricultural Training Homes Committee of the guardians of Whitechapel on 13th June 1893, with reference to the question of acquiring land and of establishing agricultural homes for the unemployed, *App.* (*2nd Rep.*) 552–554.

Report of committee of guardians of Whitechapel Union, adopted by the board in October 1893, respecting the proposed English land colonisation scheme, *App.* (*3rd Rep.*) 554, 555.

Conclusions and suggestions by the general purposes committee of the guardians of Whitechapel on the subject of the acquisition of, and employment upon, land, *App.* (*3rd Rep.*) 555, 556.

See also *Abbey Mills. Agriculture. Allotments. Boards of Guardians. Farm and Labour Colonies. Relief Works. Wanstead Flats. West Ham. Whitechapel.*

Land Nationalisation. Conviction that land nationalisation would be absolutely just, ethically, as the community has the right to redistribute the land; contention that the landowners ought to think themselves overpaid with forty years' fair rent, *Tuckwell* 7110, 7111. 7356 *et seq.*; 7396–7400. 7477–7483——Proposal that all land that is at present individual property shall become State property and be revalued, *ib.* 7408–7414.

Decided opinion that the only permanent solution of the unemployed difficulty is to bring the land and the people together again, the State taking over the collective ownership of the land; contention that the inheritance of the people should be returned

to

Reports, 1895—*continued.*

Land Nationalisation—continued.

to the people without compensation to the landlords, *Morton* 11041, 11042. 11049 *et seq.*; 11077 *et seq.*; 11120–11127. 11150–11156.

Land Tenure. Decided opinion that the present system of land tenure, apart from its effects on agriculture, is detrimental to the interests of the community; no doubt that the system increases the land values for the proprietors at the expense of those who create the increased value, *Tuckwell* 7097–7104.

Landowners. Suggestion that urban landowners should be taxed in aid of local burdens, *Dodd* 7585–7587. 7734–7739.

Langley Farm (*Labourers from Whitechapel Union*). Information respecting six men sent by the Whitechapel guardians to a small farm at Langley, started by Mr. Hazell, for the relief of the unemployed, five of whom reached the farm and obtained satisfactory reports, two of them emigrating to New Zealand; explanation that no more men were sent to the farm because there were only eight men who were suitable and willing to go, and of these seven took their discharge, *Vallance* 11546–11548. 11561–11567.

Langport (*Somerset*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 191.

Lansbury, George. (Analysis of his Evidence.)—Has been a member of the Poplar Board of Guardians for two years, 10401.

Experience to the effect that distress in Poplar is not merely a question of seasons, although in the winter it becomes more acute, 10401, 10402. 10414——Information in regard to the great distress of last February; particulars as to the ages of the 1,939 men who worked in the stone-yards during the six weeks they were opened, 10402–10404——Statement showing that by the opening of the stone-yards the union has spent 2,720*l.*, on which there will be no return whatever, 10404.

Reference to the crowded state of the workhouse, which, at the present time, has 125 inmates over the statutory number, 10404–10408——Co-operation of the guardians with the Board of Works during the winter to relieve the distress; experience that at the depôts men fought to obtain tickets to go to work, 10408.

Evidence respecting the large number of youths from eighteen to twenty-one who are out of work in Poplar, 10408. 10447, 10448——Difficulty in obtaining employment experienced by men whose ages range from thirty to sixty, 10408——Displacement of men from the gasworks owing to the introduction of machinery, 10408——Statement as to the large number of dock labourers out of employment, 10408.

Reference to the large number of widows to whom out-door relief is given, 10408——Opinion that the question of the unemployed cannot be dealt with without a complete reorganization of our industrial system, 10408. 10453–10458. 10497. 10510. 10513–10517.

Suggestion that the President of the Local Government Board should exercise his power and group the unions of London in one district, so as to hire land where the unemployed could raise food for their own sustenance and manufacture their boots, clothes, &c., 10408. 10415–10438. 10459. 10469–10473. 10484–10488.

Undesirability of taking off the register people who have been relieved by the parish, 10408–10413——Disapproval of out-door relief; opinion that men should be relieved by useful work being provided for them, 10413——Examination as to whether the failure of the large expenditure to meet the wants of the unemployed does not raise a distrust of the principle on which relief is administered, 10439. 10449–10453.

Contention that the Poor Law Union of Poplar is not supporting a higher average of paupers than is the case in other adjoining unions, 10439–10446——Consideration of the question of the people of England being unable to grow food at a profit, 10460–10468.

Discussion as to the distribution of cost if the unions of London were grouped in one district, as proposed by witness with a view to employment on land, 10474–10483——Question as to how the money should be raised to support the proposed farm colony; opinion that an Imperial grant should be allowed either by a graduated income-tax or a tax on landlords, 10489–10496——Necessity that any scheme for the unemployed should be dealt with nationally if it is to be successful, 10495. 10498–10512.

Lasswade (*Edinburgh*). Amount of distress in this parish, through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 679.

Launceston (*Cornwall and Devon*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 470.

Reports, 1895—*continued.*

Leamington. Letter from the mayor in February, explanatory of the extent and character of the local distress and showing the measures and relief provided, *App.* (*2nd Rep.*) 328, 329.

Lee (*Kent*). Limited distress in the Lee District; extra employment provided, *App.* (*2nd Rep.*) 340.

Leeds. Letter from the clerk of the Leeds Union, received on 2nd February, submitting details as to the amount of distress, it not being deemed necessary to make any exceptional arrangements, *Sir H. Owen* 25.

Illustration in the case of Leeds of the much greater distress according to witness' information than according to that supplied by Sir Hugh Owen; examination hereon as to the precise data for witness' conclusions in this instance, the lowest estimate (as supplied to witness) of the absolutely destitute being 10,000, *Keir-Hardie* 703–723.

Further explanations respecting the great destitution at Leeds, witness submitting that charitable relief now given by means of local committees cannot be relied upon after the severe weather, and that there has been great distress throughout the winter, *Keir-Hardie* 845–866. 893, 894. 876.

Information supplied to the Local Government Board in Report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 36–40. 43, 44. 47, 48.

Letter from the mayor on 26th February, explanatory of the extent and character of the local distress, and showing the measures of relief provided; further information to be supplied, *App.* (*2nd Rep.*) 325, 326.

Letter of 27th February, submitting additional information in detail, and showing the working of the labour bureau in each ward during certain periods in 1892–93, and in 1893-94, and in 1894–95; *App.* (*2nd Rep.*) 341–344.

Summary of expenditure by the Corporation, in wages, on the unemployed from 14th December 1892 to 20th February 1895; total of 28,189*l.*; *App.* (*2nd Rep.*) 344.

Leek Urban District (*Stafford*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 95.

Legislation (*Poor Relief*). Bill proposed by Mr. F. E. Hilleary for the economical administration of relief, *App.* (*3rd Rep.*) 497, 498.

Leicester. Details supplied in letter received from Leicester on 7th February as to the increase of distress and of relief, the number of shoe hands and hosiery hands out of employment, the aid given by the Leicester Trades Council; exceptional arrangements not contemplated by the guardians, *Sir H. Owen* 26–39.

Explanations with further reference to proceedings of the Leicester guardians as regards the modes of out-door relief, and to the action of the Local Government Board in the matter as to certain conditions being observed; denial that there has been undue delay on the part of the Board, *Sir H. Owen* 554–568.

Letter from the mayor, dated 21st February 1895, with respect to the amount and character of the distress in the county borough and the steps taken for its relief, *App.* (*2nd Rep.*) 128, 129.

Leighton (*Essex*) *Mutual Aid Society.* Particulars respecting the operation of the Leighton Mutual Labour Aid Society, *Smith* 4683–4685.

Leith. Letter from the town clerk of the Burgh respecting the amount of distress, and the relief measures adopted, *App.* (*3rd Rep.*) 596——Information in connection with the distress in the parishes of North Leith and South Leith, respectively, *ib.* 679.

Leominster (*Hereford.*) Absence of exceptional distress in the urban or the rural district, *App.* (*2nd Rep.*) 139. 295.

Lewes (*Sussex*). Distress in March due to the severe weather, *App.* (*2nd Rep.*) 401.

Lewisham. Material increase of applications for relief, both out-door and in-door, in Lewisham; employment provided in the labour yard, *Sir H. Owen* 93.

Considerable employment provided by the District Board during the severe weather; absence of exceptional distress on 25th March, *App.* (*2nd Rep.*) 436.

Return handed in by Sir Hugh Owen, showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Reports, 1895—*continued.*

Leyton (*Essex*). Amount of distress in this district previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 422.—*See* also *West Ham.*

Lichfield (*Stafford*). Absence of exceptional distress in the municipal borough; charitable relief provided, *App.* (*2nd Rep.*) 140—Sufficiency of voluntary modes of relief in the rural district, *ib.* 383.

"*Life and Labour of the People.*" Information respecting the analysis, covering over 900,000 people, made by witness when preparing "Life and Labour of the People," *C. Booth* 10624–10642.

Light Railways. Advantage if the unemployed were put to work in the construction of light railways in the neighbourhood of Swansea, *Edwards* 4349–4361. 4442–4444.

Lincoln County Borough. Amount of distress previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 444.

Linthwaite (*York*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 398, 399.

LIVERPOOL:

Letter from Liverpool, received by the Local Government Board on 4th February, showing that the applications for relief were not of an exceptional character, though many persons have been suffering great privations from want of employment, *Sir H. Owen* 40–42—Decrease rather than increase in the applications for relief in Toxteth Park (Liverpool); arrangements for offering employment to the able-bodied, *ib.* 58.

Evidence as to the great distress in Liverpool, it being computed that there are 50,000 labourers out of employment, *Keir-Hardie* 728–734.

Division of the unemployed into two classes by the Commission of Inquiry in Liverpool, namely: Class A., consisting of those steady and capable men and women who would do work if they could get it, and Class B., consisting of those who from one cause or another cannot or will not do work of an average standard in quality and quantity, *Cox* 6177 *et seq.*; 6277–6279.

Enumeration of the causes of want of work on the part of Class A., the principal being the general depression in trade, and the attraction to Liverpool, from various motives, of a large number of strangers, who often permanently displace the residential workers, *Cox* 6183–6185. 6254–6258. 6348 *et seq.*; 6448–6451. 6601–6604—Statement that the most important remedy suggested to the Commission to improve the condition of Class A., was a better organisation of labour in seasonal trades with a view to making it more permanent, *ib.* 6186 *et seq.*; 6441–6443.

Explanation as to the labour clearing-house scheme recommended in the Report of the Commission, under which an association would guarantee continuous employment to a certain number of men at something less than the standard rate, *Cox* 6189 *et seq.*; 6247–6253. 6302–6315. 6373 *et seq.*; 6463–6470. 6543 *et seq.*

Preference of some of the employers and men for the existing system, the former because they get the pick of the best men, and the latter, especially the young and active, because it enables them to earn large amounts of money which they can enjoy during slack periods, *Cox* 6194. 6226 *et seq.*—Sufferings of the elderly and weaker men, many steady and fairly capable porters not earning on an average more than 13*s.* per week, *ib.* 6194, 6195. 6427–6436.

Opinion that the actual distress arising from want of employment in the skilled trades is minimised by the out-of-work allowances provided by the trade unions, *Cox* 6196. 6259, 6260.

Recommendation that the vast amount of child-life which is running to waste in Class B. should be dealt with and turned to some useful purpose, the boys being trained as seamen and the girls as domestic servants, *Cox* 6201–6205. 6280–6283. 6335–6340. 6480–6484. 6627–6634.

Chief causes of want of employment among Class B. are ill-health, intemperance, restlessness, hereditary incapacity, overwhelming misfortune, &c., one of the most powerful factors in the problem being injudicious and indiscriminate charity, *Cox* 6200, 6201. 6487 *et seq.*; 6522–6525.

Enlistment of the services of the police by the public authorities in Liverpool when dealing with the distress during the past winter; sympathy of the Corporation for the unemployed, *Cox* 6219, 6220. 6584–6587.

Evidence to the effect that a proposal to form a strong permanent committee to deal with distress due to want of employment was debated by the Liverpool Town Council, but that unfortunately nothing was done in the matter, *Cox* 6221–6225. 6284–6287. 6316–6325. 6341, 6342. 6495–6507.

Reports, 1895—*continued.*

LIVERPOOL—continued.

High rate of wages paid to unskilled workmen in Liverpool, the result being that the men have to work at high pressure to enable their employers to recoup themselves; displacement of industries due to a certain extent to the trades unions requiring such high wages, *Cox* 6261 *et seq.*; 6296–6301. 6343–6372. 6377 *et seq.*; 6437–6446. 6452–6462. 6571–6583——Opinion that it is the overtime coming immediately on top of the daytime that uses the dock labourers up so quickly in Liverpool; absence of necessity for the men to work such long hours, *ib.* 6452–6462. 6515. 6532–6556.

Belief that the Charity Organisation Society or the Central Relief Society has done a great deal of very excellent work in Liverpool, *Cox* 6477–6479——Considerable success of the Liverpool guardians in their endeavours to move girls to better districts; great difficulty, however, in inducing the people to go, *ib.* 6516, 6517.

Statement that there is a great deal of favoritism in engaging the men in the docks at Liverpool; general impression among the men that they must give a certain proportion of their wages to the ganger master porter who employs them, *Cox* 6564–6570.

Agreement with the suggestion that the unemployed exist because wealth is badly distributed and labour is intermittently employed; doubt, however, as to the disappearance of the unemployed problem in Liverpool if the total work were averaged and regulated, *Cox* 6615–6623.

Information supplied in report by Poor Law inspector as to the amount of local distress the remedial measures adopted, &c., *App.* (*2nd Rep.*) 54, 55.

Particulars supplied by the Lord Mayor, in letter dated 21st February 1895, respecting the amount of local distress from want of employment and the relief provided by the local authorities and by voluntary agencies, respectively, *App.* (*2nd Rep.*) 129.

Liversedge (*York*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 423.

Llandilofawr (*Carmarthen*). Statement that there is no exceptional distress from want of employment, *App.* (*2nd Rep.*) 454.

Llandovery (*Carmarthen and Brecknock*). Absence of exceptional distress in this rural district in March, *App.* (*2nd Rep.*) 432.

Llandudno Urban District (*Carnarvon*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 96.

Llanelly (*Carmarthen*). Very little distress in the rural district of Llanelly in February, *App.* (*2nd Rep.*) 320——Amount of distress in the urban district in February; remedial measures adopted, *ib.* 350.

Llangyfelach (*Glamorgan*). Amount of distress in this rural district in February; relief measures provided, *App.* (*2nd Rep.*) 337.

"*Loafers.*" Sufficiency of the present Poor Law machinery for dealing with "loafers" and others who refuse to go upon relief works, *Benn* 3209.* 3248–3251——Stringent measures suggested for the suppression of the loafing class and of vagrancy and begging, as by committal to institutions where they can be kept steadily at work; penal treatment advocated in dealing with this class, as at Glasgow, where they are numerous, *Nathan* 8151–8157. 8244, 8245——Subsidised labour of these people in competition with honest labour, *ib.* 8152, 8153.

Exception taken to the term "loafers"; limited number of these in Glasgow, the working men deeply resenting the evidence of Mr. Nathan as to this class being very numerous, *Hunter* 8269. 8319–8322. 8333.

See also *Casual Paupers. Labour Test. Penal Treatment. Tramps and Vagrants.*

Loan Societies. Great boon to respectable working men, when in temporary distress, if they could obtain relief by means of a loan, to be repaid in more prosperous times, *Keir-Hardie* 1084–1086——Operation of loan societies in the East-end of London, the men being thus helped in winter, *Alden* 2404–2409.

Paper handed in by Mr. Llewellyn Smith containing summary of return relating to loan societies for the year ended 31st December 1892; increase as compared with previous year, *App.* (*3rd Rep.*) 501.

Loans (*Relief Works*). Rule of the Central Board as to holding a local inquiry before sanctioning loans for work in order to give employment, *Sir H. Owen* 249——Varying periods allowed for the repayment of loans, according to the class of work, *ib.* 250.

Explanation of the action of the Central Board as regards works loans and the precautions taken when their sanction is applied for; condition that the works must be of

Reports, 1895—*continued.*

Loans (*Relief Works*)—continued.

of a substantial and permanent character, though their cost may sometimes be excessive in times of distress through the unskilled labour employed, *Sir H. Owen* 619–631. 639–641.

Expediency of greater expedition on the part of the Local Government Board in dealing with local applications for loans for works, *Keir-Hardie* 836——Further statement as to the delay in connection with local applications for loans and in obtaining the sanction of the Local Government Board, *ib.* 1012–1018.

Suggestion that the Local Government Board might encourage the local authorities to provide useful work by reducing the interest on loans and extending the time for repayment, *Dodd* 7574-7578. 7789–7791.

Official explanations with regard to the arrangements and regulations of the Central Board in reference to the sanction of loans; steps taken to provide against undue delay, *App.* (*3rd Rep.*) 561, 562.

Local Authorities:

Quotation of several of the replies received to the Circular of the Local Government Board of 11th February 1895, showing the action taken or proposed to be taken by the various local bodies as regards the provision of employment, with particulars as to the extent and character of the distress in each locality, *Sir H. Owen* 181–200.

Suggestion on the subject of employment (in times of distress) by the municipal authorities in cleansing the streets, road-making, &c.; sufficient statutory powers for this purpose, *Sir H. Owen* 300–310.

Consideration of the course to be adopted as regards printing for the use of the Committee condensed information from the replies to the Circular issued at their request to the different local authorities; suggestions on the subject, *Sir H. Owen* 361–369.

Entire discretion in local authorities as to the provision of works for the unemployed, *Sir H. Owen* 388——Conclusion that work undertaken by local authorities should be of a necessary or useful character, *ib.* 543, 544.

Opinion that, while there should be some control by the central authority, the town councils should be allowed to carry out their own affairs in their own way; also, that the powers given to parish councils should be given to all urban councils who ask for them, *Dodd* 7578–7584. 7663–7668. 7792–7799——Concurrence in the suggestion that the local authorities as well as the boards of guardians should have the power of providing work for the unemployed, *ib.* 7705–7708.

Explanation that in contending that local or municipal authorities (as at Glasgow) should not be responsible for finding work for the unemployed, witness does not refer to the Poor Law authorities, and is not well conversant with their powers in the matter, *Bell* 7977-7990. 8052, 8053. 8065, 8066.

Suggestion that a general extension of municipal enterprise might relieve future distress, *C. Booth* 10539. 10582–10589. 10724——Discussion as to whether an expenditure of taxation for municipal enterprise will not, by increasing the value of the land, tend to keep the people down, *ib.* 10724–10741.

Communications from the various local authorities in response to the inquiry whether they have any suggestions to make for relieving the distress, *App.* (*2nd Rep.*) 57 *et seq.*; *App.* (*3rd Rep.*) 565 *et seq.*

Letters from various local authorities showing whether in each locality any register of unemployed is kept, *App.* (*2nd Rep.*) 57 *et seq.*; *App.* (*3rd Rep.*) 565 *et seq.*

Paper (handed in by Sir Hugh Owen) containing detailed explanations respecting constructive and other works in the execution of which labour may be employed by the various local authorities, *App.* (*3rd Rep.*) 563, 564.

Conclusion of the Committee that, with a view to continuity of employment, orders for indoor repair work and for new work, where feasible, should be given out by public bodies with reference to what are now the slack months (generally January and February), in so far as this course is consistent with efficiency of execution and with reasonable economy, *3rd Rep.* v.

Local Government Board:

Circular issued by the Local Government Board on 11th February, to vestries and district boards in the metropolis, and to town councils and district councils generally, suggesting three different classes of work for the unemployed and making several recommendations on the subject, *Sir H. Owen* 175–180.

Reports, 1895—*continued.*

Local Government Board—continued.

Limitation of the jurisdiction of the Local Government Board to England and Wales, its inquiries not having extended to Scotland or Ireland, *Sir H. Owen* 370–372. 384, 385.

Explanation that any opinions expressed by witness in reply to questions of the Committee have been given in his individual capacity, and not as representing his Department, *Sir H. Owen* 699.

Contention that the Local Government Board ought to be fully acquainted with the statutes which it has to administer, and that it should have issued rules, when they were urgently applied for, for the guidance of guardians in giving useful employment to the poor, *Dodd* 7546 *et seq.*——Instances of the way in which the Local Government Board have rather sharpened the Poor Law against the poor, and discouraged out-relief to an excessive degree, *ib.* 7597–7599. 7656–7659. 7698–7701.

View of witness that the circulars issued by the Local Government Board have been very useful, but that in future different circulars should be issued to different authorities, clearly explaining their several duties and powers, *Dodd* 7571. 7676, 7677. 7778–7785.

Very full information in the reports furnished to the Committee by the Board, as obtained from the Poor Law Inspectors throughout the country, 1*st Rep.* iii.

Circular letter of 13th February 1895 to the several Inspectors requesting information as to the extent of local destitution amongst able-bodied men, the means adopted for dealing with the same, and whether any modification is desirable as regards the rules respecting out-door relief, *App.* (2*nd Rep.*) 20——List of Inspectors for the several counties of England, *ib.*

Replies from the several Inspectors, in response to the foregoing circular; detailed information therein, with suggestions on certain points, *App.* (2*nd Rep.*) 20–56.

Paper submitted by Sir Hugh Owen, explanatory in detail of the powers and duties of guardians, and of their officers as to relief, *App.* (3*rd Rep.*) 557–562.

Reports, 1895—*continued.*

Luxembourg. Explanation respecting a system of labour registration in the Grand Duchy of Luxembourg, through the medium of the post office, *Smith* 4699.

Lymington (Hants). Information respecting the distress in Lymington rural district in February, *App.* (*2nd Rep.*) 296——Exceptional distress in the Municipal Borough through the prolonged frost; relief provided, *ib.* 359.

M.

Macclesfield. Letter from the mayor of Macclesfield, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 74——Distress in the rural district due entirely to the severe weather, *ib.* 290.

Machinery. Increased number of unemployed through the increasing use of machinery, *Alden* 2322, 2323 2382——Effect of increased introduction of machinery, as in the printing and book trades, in causing increased displacement of manual labour, *Smith* 4750–4755——Doubt whether on the whole employment is lessened by the increasing introduction of machinery, *ib.* 4815–4818.

Conclusion that the effect of the introduction of machinery into any trade, although at first it displaces a certain amount of labour, is ultimately to increase the number of persons employed in the trade, *Mackay* 5357–5362.

Belief that the rapid introduction of machinery, the benefits of which are all absorbed by capitalists, is the main cause of the scarcity of employment; particulars respecting several new developments in machinery now in use in the gas, coal, and other industries, *Thorne* 10810–10830. 10852–10856.

Mackay, Thomas. (Analysis of his Evidence).—Witness has been for many years one of the Honorary Secretaries of the Charity Organisation Society in St. George's-in-the-East, 5326.

Detailed explanation of the exceptional system pursued by the Charity Organisation Society, in co-operation with the Poor Law in St. George's-in-the-East (where there is no labour yard), for the relief of the unemployed, 5327 *et seq.*——Statement that of the twenty applicants who came to the Society for relief during the last three months, three were relieved unconditionally, being clubmen, eight accepted the Society's conditions, and went into the workhouse, and nine refused the conditions, 5329–5342.

Arguments in support of the contention that in a union where out-relief is freely given the first resource of a poor person in any crisis is the rates, but that in a union where no out-relief is given the man himself is responsible for the maintenance of himself and family, and there is comparatively little pressure upon the public authority during a crisis, 5343 *et seq.*——Submission by witness of tables illustrating the variation in the amount of pauperism in strict and lax unions, and showing the reduction of pauperism brought about by the system pursued in the Tower Hamlets Unions, 5345–5353.

Concurrence in the view that persons who are reduced to want through the decay of their trade must be maintained by the Poor Law and charity; necessity, however, in such cases, of safeguards that will prevent them from being congested in the same place and looking out for work where it cannot be found, 5354 *et seq.*——Decided opinion that to start relief works for wages in cases of destitution due to decay of trade only tends to aggravate the congestion and to do more harm than good; citation of the relief works at Nottingham in support of this opinion, 5354–5362. 5367–5374.

Conclusion that labour can, and does to a large extent, avoid a falling market, it having largely gone away from agriculture and become distributed among a great variety of other employments; importance of increasing the mobility of labour as much as possible, 5354 *et seq.*——Belief that the effect of the introduction of machinery into a trade, although at first it displaces a certain amount of labour, is ultimately to increase the number of persons employed in the trade, 5357–5362.

Disapproval of the proposal to establish farm colonies in order to relieve the distress due to want of employment as it would be a continuous financial failure; objections, moreover, on several other grounds, 5364–5366.

[Second Examination.]—Evidence to the effect that the reason why so few of the unemployed applied to the Charity Organisation Society in St. George's during the recent frost was because of the large amount of charitable relief given throughout the parish; belief that where there is extra depression there will be extra charity, 5375–5378. 5518–5541. 5608 *et seq.*; 5643–5647. 5765——Doubt as to the practicability of profitably employing the unemployed in reclaiming the land on the low parts of the river Thames near London; adherence of witness to his opinion that putting the unemployed upon the land for the purpose of giving them relief would be a failure, 5379 *et seq.*; 5574–5581.

Possibility of there being some method by which a greater population than at present can be employed upon the land; decided objection, however, to the State introducing

Mackay, Thomas. (Analysis of his Evidence)—*continued.*

protection in order to try and bolster up a failing industry, 5398–5411. 5428 *et seq.*; 5758–5761——Deliberate opinion of all competent authorities on the subject, including the Poor Law Commission of 1834, that out-door relief is an evil in itself; contention hereon that there are only two means of coping with the difficulties due to want of employment, namely, the more perfect administration of the Poor Law and the extension throughout the country of charity organisation societies, 5412–5427. 5631 *et seq.*; 5725 *et seq.*

View of witness that while it is perfectly easy to start as many relief works as can be paid for, and by so doing getting a large number of paupers, the crux of the matter is to get these paupers back into the ranks of industry again, 5419–5427——Certainty that if every authority in London were to make it known that a certain sum of money had been set aside to spend upon relief works in winter many people would depend upon that prospect, and so aggravate the conditions of distress, 5432 *et seq.*

Main object of the Charity Organisation Society in St. George's to make the people more self-reliant; opinion that although the system may appear to be harsh, it ultimately, and perhaps rapidly, lessens the sufferings of the poor, 5436 *et seq.*; 5640 *et seq.*; 5680 *et seq.*; 5727 *et seq.*

No doubt that if it were known that men in seasonal trades would be relieved when they had no work the tendency would be to decrease the wages in those trades; contention that the most humane treatment is to continue as rigidly as may be the system laid down in the Report of the Poor Law Commission of 1834; 5444–5455. 5754–5757——Opinion that the circular from the Local Government Board has in some places re-introduced the bad state of things that existed before 1834; dangerous fallacy of the idea that because the condition of the working classes has considerably improved the law may be relaxed, 5444–5455.

Physical unfitness and utter incapacity of large numbers of the unemployed in the East End of London for working on the land in farming and market-garden operations, 5456–5465. 5544–5548——Absence of necessity for organising an efficient charity committee in every local area throughout England; decided objection to the proposal to establish an almoner of charitable relief in each district, as being unnecessary and an incentive to pauperism, 5466 *et seq.*

Experience of witness that the various boards of guardians do voluntarily co-operate with the charitable organisations of their districts in regard to administering relief to the unemployed, 5498–5515——No doubt that the recent severe frost increased the sufferings of the poor more than usual this year, 5516, 5517.

Argument that trade unions, by trying to set up a monopoly of employment for people belonging to the unions, do not always promote their own interests; opinion that they ought to allow labour to flow more easily, 5549–5559——Explanation that witness' society helps any person, when out of work, who can show that he has seriously tried to make some provision for himself in time of sickness, 5560–5573. 5586 *et seq.*

Success of the Charity Organisation Society in St. George's due to the fact that every case is personally investigated, 5582–5584——Decided opinion that all administration of out-door relief should be in private hands, and that those guardians who possess the power of giving out-door relief should use their discretion and refuse to give it, 5589–5607. 5716 *et seq.*; 5736–5753.

Inclination of witness to think that there are fewer sporadic relief works in St. George's-in-the-East than elsewhere, 5616–5620——Denial of the suggestion that the effect of witness' system in St. George's is to retain the self-supporting people and to drive the residuum from the district, 5621–5631.

Disapproval, on principle, of any question of employing unemployed labour being allowed to influence the vestry in carrying out their duties as to re-paving streets and remedying sanitary defects, 5647–5661——Grounds of objection to the suggestion that the wealthy might help the poor by placing money at the disposal of the local authority to be administered in relief works; contention that the want of economical employment should not be concealed, 5661, 5662.

Approval of the policy which prevents the exercise of political right by paupers; witness is not aware of any complaint by the poor on losing their vote, 5663–5668——Opinion that the comparison made by witness between Whitechapel and other districts in regard to the effect of out-relief on pauperism still stands good, notwithstanding the enormous increase in the relief given by the Jewish Board of Guardians in Whitechapel, 5669–5674.

View of witness that the Charity Organisation Society would not be doing its duty if it were not to a certain extent unpopular with the working classes of the East End of London, 5675 *et seq.*——Contention that those applicants who refuse the society's conditions do not go into the workhouse, but get along somehow on their own resources; statement that although some of the London workhouses were extremely overcrowded this

Reports, 1895—*continued.*

Mackay, Thomas. (Analysis of his Evidence)—*continued.*

this winter, St. George's Workhouse was not among the number, 5681–5698. 5762–5765.

Possibility that the deaths from starvation in St. George's amount to about one-tenth of the total for London, although the population is only one-eightieth of the whole population; particulars of a case where out-relief was applied for at St. George's Union and refused, 5699–5705——Doubt as to the refusal of out-relief throwing a very heavy burden on the poorest part of the community, 5706–5712.

Tendency of the rigid administration of the Poor Law as regards out-relief to make the men disposed to demand higher wages in depressed times, 5713–5715——Undue facilities given by the public authorities, as by means of shelters, for people to go upon tramp; demoralising effect of encouraging the poor to be dependent on the rates and upon other people, 5718–5724.

[Third Examination.]—Explanation with reference to former evidence (Question 5564), as regards assistance to men in receipt of out-of-work relief, 5766–5768——Explanation that a man taken into the infirmary and staying there would be disfranchised, 5768–5773.

Statement that as co-operative farming in England has not been very successful, it has not extended much, 5774–5779——Disapproval of the stoneyard test, as there is no reformatory action in it, the same men coming back to the stoneyard year after year, 5780–5785. 5815–5818.

No doubt that the principle and practice of inquiry before relief is the main cause of the lack of appreciation of the Charity Organisation Society; kinder feeling towards the society on the part of the better class of working people, 5786-5788——Evidence to the effect that while the strict unions have restricted out-relief, they have initiated the policy of improved schools and infirmaries, 5789.

Opinion that greater facilities for poor relief do undoubtedly prompt more numerous applications for it, and cause people to rely upon it, 5790. 5825–5831. 5843–5861——Grounds for the conclusion that there is no connection between the death-rate and the administration of out-door relief; absolute worthlessness of starvation cases for statistical purposes, 5791–5794. 5862–5864.

Disagreement with the statement that the poor have been largely forced into the workhouses; inaccuracy of Dr. Hunter's figures so far as St. George's Union is concerned, 5795–5798——View of witness that there should be only one Poor Law authority, and that it would be a mistake to have the vestries giving relief as well as the Poor Law guardians, 5799–5802. 5819 *et seq.*

Institution of many municipal works in Australia for the purpose of relief, these resulting in great congestion in the towns, 5803——Difficulty as regards State aid to a declining trade in that the State would neither know the exact psychological moment to step in with its special aid, nor when to stop it, 5804 *et seq.*

Belief that no workman with any self-respect will work in the relief works and labour yards, which are very largely monopolised by loafers, 5807–5810. 5866-5868. ——Result of the inquiries made by the Vestry of St. George's that labour bureaux are of no use, 5810. 5865, 5866.

Opinion that it would be an extremely dangerous experiment to extend the common poor fund so as to cover the whole system of relief in London, 5811——Self-evident proposition, with regard to disfranchising persons who apply for relief, that the condition of paupers ought to be less eligible than that of the independent labourer, 5812, 5813.

Doubt as to the strict unions, while saving their own position, driving people into the lax unions and vitiating the comparison between the two systems, 5814——Contention that the poor in St. George's-in-the-East are more independent than they were fifteen years ago, and that on the whole there is less poverty there, 5832–5838.

Non-realisation sufficiently by either trade unionists or the Legislature of the necessity of allowing a free market to distribute labour and capital, 5838–5842—— Opposition of witness to any form of municipal relief work to meet the "unemployed" difficulty, except work which arises in the natural development of the industry of the country, 5869–5881.

Maidenhead. Official explanations in February as to the amount of distress in the municipal borough and the remedial measures adopted, *App.* (*2nd Rep.*) 214.

Maidstone. Information respecting the extent of the local distress in Maidstone municipal borough and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 74——Local information as to the amount of distress in the Maidstone rural district in February and as to the remedial measures adopted, *ib.* 248.

Reports, 1895—*continued.*

Maldon (*Essex*). Extent and character of the distress in the Municipal Borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 263.

Malling (*Kent*). Amount of distress in this district; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 192.

Manchester. Reply received fram Manchester, in response to Circular from the Local Government Board on 7th February to the effect that no exceptional poor relief had been granted; considerable distress among persons who had not applied for relief, *Sir H. Owen* 43 — Official explanations in February as to the extent of the distress in the county borough and the remedial measures adopted, *App.* (*2nd Rep.*) 207-209.

Mansell, Thomas. (Analysis of his Evidence.)—Witness was foreman of the relief works carried out under a committee on Wanstead Flats, 11431, 11432.

Information respecting the men employed in the levelling and digging operations on Wanstead Flats, most of whom were country-born, the number, which averaged about 100, having risen to 180 at the busiest time; statement that the work paid better after the gangs were reduced from twenty-five men to ten men, as the superintendence was better, 11433–11450. 11478 *et seq.*——Evidence to the effect that on the conclusion of the work on the Flats most of the intelligent and willing workmen were provided with situations in the Thames Ironworks and elsewhere; belief, however, that a few of the men, who had served their time at a trade and were "past forty," are still out of work, 11451–11461.

Willingness of the majority of the men employed to do the work allotted them, those who were not quite fit for the work, physically, doing their best; care taken to make the gangs as equal as possible, 11462–11466——Statement that the minimum rate of pay was 4*d.* per hour, with 1*s.* per rod for double digging, the amount earned by each gang beyond the 4*d.* per hour being given at the end of the week as a bonus, 11467–11470. 11490.

Uncertainty as to whether the Wanstead experiment can be considered a paying transaction from a business point of view; no doubt that if witness had not had to take all comers, but could have picked his men, he could have made it pay, 11471 *et seq.*——Opinion that in addition to the absolute relief given at the moment the Wanstead operations cured some of the men and made them more permanent workers, 11491–11501.

Suggestion that continuous land cultivation should be found for the unemployed, the men being mostly able and willing to work; desire of some of them to go back into the country again if they could find work there, 11502–11531.

Mansfield (*Nottingham*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 74.

Mansion House Committee on the Unemployed:

Brief outline of the origin and continuation of the scheme carried out by the Mansion House Committee, which was specially formed in 1893 to deal with the dock labour question, *Smart* 11197 *et seq.*——Production by witness of a form upon which the case of the applicant for help was taken down, a necessary condition being that the man must have been at the least a waterside labourer; thorough inquiry, including visitation of the home, made into each case before help was granted, *ib.* 11199–11201.

Details in connection with the Abbey Mills scheme, thirty acres of waste land having been used as an official test of work for the casual class, *Smart* 11199. 11202 *et seq.*——Particulars of the 372 applicants for help, 228 of them having been born in London, and only two in the country; conclusion that the country-born man gets a good position when he comes to London and pushes out a town man, *ib.* 11211–11216. 11400 *et seq.*

Statistics showing that 189 of the applicants were or had been members of trade societies; confirmation of the well-known fact that casual docking is resorted to by every kind of worker who happens to be thrown out of his own employment, *Smart* 11217–11226——Evidence to the effect that 158 out of the 372 applicants stated that they were or had been members of a club or benefit society, seventy of them having run out, *ib.* 11223.

Admission that the committee failed so far as their main purpose was concerned, one-third of the total number of cases receiving no permanent assistance after they had been dealt with; attainment, however, of the subsidiary object of giving relief work to the unemployed, *Smart* 11227–11229.

Detailed information as to the position of the men who had been helped by the committee, the sixteen who emigrated to Canada doing well, as a rule, and only a very small proportion of those who remained in this country having to apply subsequently for relief; decided opinion that a large proportion of those settled in one way or another have been permanently assisted by the committee work, *Smart* 11230-11238.

Statement

Reports, 1895—*continued.*

Mansion House Committee on the Unemployed—continued.

Statement that, in 1894, 141 cases were entertained out of 414 applications, and that stronger confirmation was obtained of the fact that the kind of poverty dealt with is largely a town product; certainty that many men were deterred from applying by the stringent methods of inquiry and by objection to emigration, *Smart* 11247 *et seq.*; 11400–11430.

Information respecting the 141 cases dealt with in 1894, sixteen of which, representing 115 persons in all, were sent to Canada, the number of those which failed to receive any benefit from the committee being 92; comparatively small proportion permanently helped in that year, *Smart* 11255–11270.

Approximate cost of the scheme in 1894, 1,102 *l.* 19 *s.* 1½ *d.*, a larger number of cases being emigrated at less cost than in the previous year, emigration offices having assisted from their own funds; variation of the period of work from a fortnight to two months, *Smart* 11271–11275——Enumeration of the difficulties with which the committee were confronted in dealing with the applicants for help; brief statement of certain facts and principles which appear to be demonstrated by the work of the committee, *ib.* 11280, 11281.

Explanation that the committee did not intend to do anything last winter, but recommenced in response to urgent appeals from various quarters; particulars of the 85 cases entertained, the men being set to work at Lower Sydenham to convert brickfields into allotments, *Smart*, 11290–11296. 11376–11381.

See also *Abbey Mills.*

Mansion House Relief Fund (1886-87). Disposal by witness in out-door relief of 2,000 *l.* from the Mansion House Relief Fund in 1886-87; fear that it did as much harm as good, *Martineau* 6827, 6828.

Manufactures (*Trade Depression*). See *Trade Depression.*

Margam Urban District (*Glamorgan*). Explanations in February 1895 respecting the extent and character of the local distress through the stoppage of tinplate works, *App.* (*2nd Rep.*) 165.

Margate. Distress due to the severe weather; sufficiency of voluntary agency for its relief, *App.* (*2nd Rep.*) 360.

Market Bosworth (*Leicester*). Explanations in February as to the amount of distress in the Rural District and the relief provided, *App.* (*2nd Rep.*) 320, 321.

Martineau, Henry. (Analysis of his Evidence.)—Witness has had a large and varied experience of the poor of the East-end of London, having for many years acted as justice of the peace and guardian of the poor; enumeration of the various responsible positions which he has held, 6798-6814.

Opinion that the poor of St. George's-in-the-East did not suffer more than usual this winter until the frost came, when the exceptional distress was due to the exceptional severity of the weather, 6815, 6816 ---Belief that the ways and means of relieving those in distress in St. George's were sufficient, help having been given by the Charity Organisation Society and by both the Church of England and dissenting clergy, 6817–6820.

View of witness that out-door relief would have had very little effect in St. George's, and might have done harm; reduction in pauperism in the district since out-door relief was given up, 6821 *et seq.*——Doubt as to any real starvation cases occurring in the parish; personal inquiries of witness as to whether the children in the board school have had breakfast before they come to school, 6823. 6896–6899.

Increase of frugality and independence in St. George's since the cessation of out-door relief; certainty that there is as much or more poverty in Bethnal Green, where out-door relief is given, 6824–6826. 6847, 6848. 6876. *et seq.*——Disposal by witness in out-door relief of 2,000*l.* from the Mansion House Relief Fund in 1886-87; fear that it did as much harm as good, 6827, 6828.

Opinion that out-door relief should never be given in St. George's, all forms of relief works being mistaken methods of helping the poor; disposition of witness to rely on the Charity Organisation Society and the local charities, to meet exceptional distress, 6828–6836. 6860 *et seq.*; 6885–6893. 6922–6932.——Arrears of rent due to the East End Dwellings Company scarcely larger this winter than they have been in previous winters, 6837–6840.

Strong disapproval of any proposal that the Metropolitan Common Poor Fund, or any other public subventions should be extended to out-door relief; probability that East London gets a little too much charity, 6841–6846. 6866–6875.——Desirability of making the poor more independent, thrifty, and careful, and of discouraging early marriages, 6849–6852. 6880–6884.

Reports, 1895—*continued.*

Martineau, Henry. (Analysis of his Evidence)—*continued.*

Advisability of improving the status and pay of the working man as much as possible, of bringing the children up to some skilled work, and of not allowing them to shirk their schools as they do now, 6849–6851. 6894–6919. 6933-6940.——Belief that the poor have not sufferred on account of the refusal to excuse their rates, 6853–6856.

Absence of necessity for giving boards of guardians any extension of power for dealing with distress, their present powers being sufficient to deal with positive destitution, 6857-6859. 6928.——Approval of the proposal that persons in receipt of relief should not lose the Parliamentary vote, so far as infirmary relief is concerned, 6920, 6921.——Concurrence in the suggestion that work done by public bodies should be so distributed that the greatest possible number of men would be employed, without overtime, 6941–6946.

Marylebone. Increased applications for relief in Marylebone, much distress being also reported among non-applicants, *Sir H. Owen* 93.

Letter from the vestry clerk, dated 5th March, as to the additional distress in the district and the employment given by the vestry, *App.* (*2nd Rep.*) 388.

Return handed in by Sir Hugh Owen showing for each of the years 1884-85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Maryport (*Cumberland*). Information as to the amount and cause of the distress in the Maryport urban district in February 1895 and as to the measures of relief provided, *App.* (*2nd Rep.*) 278, 279.

Mather, William (Member of the Committee). (Analysis of his Evidence.)—Preliminary statement with reference to witness' scheme of farm colonies, showing the close relationship between the questions of agricultural employment and manufacturing employment, 8975——Proposition that farm colonies be of two classes, affording employment of a temporary character and of a permanent character respectively, 8975.

Review of the general conditions of employment in the staple manufacturing industries of this country showing that there are several causes, not preventible, which render such employment of an exceedingly fluctuating and changeable character, there being an increasing tendency to the displacement and curtailment of labour, 8975.

Mischievous operation of the system by which, when industrious and well-conducted artizans are thrown out of employment (as by the introduction of improved machinery), they live for a time in enforced idleness upon their savings and upon the help received from friendly societies and trade unions, 8975.

Displacement of labour in the manufacturing districts not only through the increased use of machinery but through many men not readily adapting themselves to new methods of work, as well as through changes of fashion in the world's garments, 8975——Reference to Bradford and Coventry in illustration of the large loss of employment through discontinuance of special manufactures; value of farm colonies in such cases, 8975. 9001.

Strong comment upon the decay of agricultural industry and upon the steady immigration of rural labourers into the towns, where labour is already far in excess of the demand; great aggravation thereby of the growing difficulties of the labour problem, 8975.

Grounds for the conclusion that a general eight hours' day would not give any permanent relief for the want of employment in the manufacturing districts, 8975. 9061–9063——Full day's work obtained by witness upon the eight hours principle, as carried out at his works, 8975. 9061–9063——Strong approval generally of shorter hours of labour on the score of health and of recreation 8975.

Unnatural character of the accumulation of rural labour in the manufacturing districts, this resulting (in witness' view) from the imperfect development of the agricultural industries, 8975——Contrast between the highly organised condition of the manufacturing industries and the undeveloped and declining condition of agriculture, 8975.

Distinct feature of witness' scheme of farm colonies that it involves the employment of a selected class of unemployed superior to the pauper class or casual workers, 8975——Explanation that benevolence and philanthropy have no part in the scheme; nor is it left to the initiative of speculative investors, 8975.

Argument in justification of the proposition that the State shall take the initial steps, as for the common weal, provided that the security for its capital or loans be reasonably guaranteed against loss, 8975.

Immense expenditure by Poor Law Authorities out of the rates in support of the poor and destitute, which would indirectly be reduced under the operation of witness' scheme,

Reports, 1895—*continued.*

Mather, William (Member of the Committee). (Analysis of his Evidence)—*continued.*

scheme, 8975. 8995——Conclusion that, if necessary, any deficiency incurred by the State in respect of its invested capital might well be made good by the Poor Law authorities in view of the benefits conferred upon the destitute class, 8975.

Grounds upon which it is proposed that the establishment and control of the farm colonies shall vest in the county councils, there being also the co-operation of the State and of the Poor Law authorities, 8975——Great improvement anticipated in agriculture under witness' scheme jointly with a large increase of employment, 8975——Enormous import of farm products from abroad, whilst land at home is lying unproductive and labour is languishing in the absence of a proper system of land tillage in lieu of big farms and grain crops, 8975. 8987–8992.

Explanation that the proposed farm training colony should in the first instance be occupied by the respectable and well-conducted working classes, temporarily unemployed, but desirous of work, 8976–8982——Contemplated control of the land by a committee of the county council, the direct management being in the hands of a skilled agriculturist and practical farmer, 8982——Proposal that each farm shall consist partly of cultivated and partly of uncultivated land, the unskilled labour being employed upon the latter; sustenance of the whole colony out of the produce of the former, 8982–8984.

Statement as to the conditions under which the Poor Law authorities might send men of the unemployed class to work on the proposed training colonies, it being stipulated that they must remain for at least a month, 8985. 8999, 9000——Special importance attached to the scheme as not being intended for the pauper class or the depraved or drunken, but as providing free-will temporary employment for those who really want to work for a livelihood, rather than accept Poor Law relief or apply for help from charities, 8986. 8999.

Intention that the training colonies shall mainly supply products requiring more or less of hand labour after production, and which are now imported from abroad, such as flax, seeds, straw-plaiting, &c.; very extensive auxiliary employment thereby, 8987–8994——Suggestions as to the large amount of auxiliary work which may be provided in the cottages and homes of the workers in connection with the products of each training colony, 8992–8994.

Belief that with the aid of auxiliary industries, labour on the training colonies might be made self-supporting, and that the initial capital expenditure would probably be met by the increased value of the land through hand tillage, 8993–8998——Intention that the men who go to the training colonies should be employed from month to month, after which, when acquainted with farming occupations, they might go abroad to an English colony or might take up settlements created out of the training colonies, 8999, 9000.

Little, if any, difficulty apprehended in respect of the local employment of men sent to a distance from their homes and families, 9001——Conclusion that arrangements can easily be adopted for preventing the herding of the men together on the barrack system; provision contemplated for some families on the colonies, 9002–9004.

Expediency of Part I. and Part II. of witness' scheme being separately dealt with by the Committee, as either Part can be carried out independently of the other, 9005, 9006——Reference to letters received by witness in approval of his draft scheme from Professor Sheldon, Professor Wright, and several other eminent agricultural authorities, 9006–9009.

Examination to the effect that the Poor Law authorities should not only take the initiative in sending men to the proposed colonies, but should be liable for any pecuniary deficit in working whilst the administration should rest entirely with the county council, or the guardians might take part in the management, 9010–9021——Expectation that a large number of the men sent to the colonies, through the displacement of industries on which previously employed, would eventually obtain a permanent footing upon the farm settlements, 9022, 9023. 9041.

Grounds for the contention that the experiment at Wanstead Flats proves that the sum earned in kind, an equivalent of 1*s.* 6*d.* or 2*s.* a day, and that their labour did not entail any loss whatever, 9024–9032——Important feature of witness' scheme, that portion of each colony or farm shall consist of uncultivated or half cultivated land, for the employment of unskilled men; belief that there would be no difficulty in finding such farms, 9033–9041.

Prospect, under witness' scheme, of the whole of the unfertile land of the country being gradually brought under cultivation, and of the scheme being taken up eventually by landowners in their own interests, 9042–9050——Much better results anticipated from the land being under skilled managers, than under the present class of farmers, 9043–9051.

Considerations as to the extent to which unskilled men, employed for a month or so could

Reports, 1895—*continued.*

Mather, William (Member of the Committee). (Analysis of his Evidence)—*continued.*

could be usefully engaged on certain auxiliary industries, 9052–9054——Doubt as to the colonies labouring under any practical disadvantage if they did not compete with local produce, but only with imported products, 9055-9060.

Adoption by witness of a minimum wage (as well as an eight hours' day); statement hereon as to men not being often thrown out of work because of age, and the competition of younger men, 9061–9069——Limited sense in which employment of an increased number of men would result from an abolition of overtime, 9070, 9071.

Explanation in connection with the proposal that the family of each man sent to a training colony shall receive 4*s.* a week from the guardians, it being contended that the man will earn by his own labour not only the cost of his own maintenance, but, probably, something in reduction of the guardians' payments, 9072–9077——Statement as to the proposed purchase of the land by the State, in the first instance, or, it might be leased in perpetuity, 9078–9082.

Belief that only a small proportion of men temporarily employed would be excluded from witness' scheme by reason of physical incapacity, 9083——Mode of appropriation of any profits from the scheme, the managing authority having nothing to do with profit or loss, 9084–9086.

Examination in further defence of the proposition that the expenses of the scheme should be provided by the Poor Law authorities, whilst the administration and management should rest with the County Council; or, there might be a combination of the former authorities to undertake the management, 9085–9089——Necessary initiation of each colony by local Poor Law bodies, before the State advances the money for the purchase of the land, due investigation being made before any advance, 9090, 9091.

Supply of men for each colony by the unions which contribute to its maintenance, though men from other unions might also be received on payment being made 9092–9095——Necessity of each man applying to his own union for admission to the colony, 9096——Arrangements for always maintaining skilled labour on the cultivated portion of each colony, the fluctuation of the supply on the uncultivated land not entailing injurious results, 9096–9098.

Explanation that certain work required as regards each colony, such as tailoring, boot-making, building repairs, &c., should be executed by the occupants, but that it is not proposed to compete with village industries outside, 9100–9108——Several kinds of work now done in the homes of the people, such as ornamental iron work, art weaving, &c., which might be carried on in the colonies, 9109.

Argument in further support of the proposition that, in contrast with manufactures, agriculture in this country has not been conducted with proper enterprise and skill, that the growing of grain crops cannot be continued profitably, that hand tillage should be more extensively employed, and more valuable and profitable products cultivated, 9110–9126——Reference especially to flax as admitting of extensive and profitable cultivation, though for special reasons the cultivation in Ireland has been largely given up, 9118-9124——Conclusion that beet-root may be grown in this country and its saccharine properties developed as successfully as abroad, 9125, 9126.

[Second Examination.]—Discussion upon the grounds for witness' assertion that under his scheme of training colonies men unaccustomed to ordinary farm work would be able to earn their maintenance and, after a time, more than their maintenance, 9127 *et seq.*——Reiteration of the view that a large quantity of land is now cultivated for crops which could not possibly yield a profit, which land may be made to pay, 9139–9143. 9165–9171——Illustration, in Essex, of the profit derivable from dairy-farming, 9143. 9294-9301.

Very favourable opportunity now presented for the acquisition of land at an average of about 10*l.* an acre, as in Essex, and for the application thereto of hand tillage out of the redundant supply of labour in the towns, so as to bring it into profitable cultivation, 9139-9143. 9165–9171. 9190. 9293–9332. 9361–9364. 9402——Further evidence respecting the changes of industries and the displacement of skilled labour in the cases of Bradford and Coventry, in connection with the question of employment of a portion of such labour on farm colonies, 9144-9156.

Consideration of objections as regards the large areas or colonies necessary for supplying employment to the numerous unemployed in large towns, in times of exceptional distress, 9146–9160——Extent and character of the permanent employment to be afforded by the cultivated portion of each colony in the form of farm settlements; contention as to the profitable and self-supporting character of the latter, 9161–9171.

Explanations in reply to certain objections raised with respect to the proposed contribution by the men (whilst employed on the colonies) of 4*s.* a week for the maintenance of their families; that is, out of piecework earnings on the land, 9172–9175——Facility in selecting well-conducted men for the colonies, this being done by the local Poor Law authorities but not involving any taint of pauperism, 9176–9179——More economical and efficient arrangements as regards labour on the colonies than are feasible

Reports, 1895—*continued.*

Mather, William (Member of the Committee). (Analysis of his Evidence)—*continued.*

feasible on ordinary farms for the production of flax, &c., at a profit, 9180-9182. 9204-9206.

Contention that the money advanced by the State under witness' scheme would be a fair investment, though there might be no return from the colonies for the first five years, 9183-9188. 9214. 9236-9240. 9346-9350 ——Consideration of calculations as to the enormous capital as well as the immense area required if many thousand men suddenly came under witness' scheme; tentative character of the experiment in the first instance, it being proposed to begin with only six colonies at a cost of about 120,000*l.* loaned by the State, 9189-9200, 9214, 9215——Importance of the scheme as retarding the displacement of labour from the land, 9198.

Entire dissent from the view that 9*l.*, or even 10*l.*, per acre is an excessive value to be derived from the land, 9201-9203——Indirect intention and effect of the scheme that agricultural labour will be improved and increased, the main object, however, being entirely practicable as a means of giving employment and relieving distress, 9207-9216.

Concurrence in the proposition that the obstacles which hinder the successful cultivation of land should at once be removed, irrespectively of the adoption of witness' scheme, 9217-9219 ——Doubt whether the removal of all the rates and taxes on land would be effectual in bringing about profitable farming, 9220.

Success anticipated for the training colonies in so far as they would be profitable to those occupied on the farms, though they might not pay in a financial sense, 9221-9223 ——Indirect rather than direct effect of the training colonies in relieving the rates, as they would not touch the existing class or number of in-door or out-door paupers, 9224-9234.

Further explanation that though it is proposed to vest the supervision in the county council this is not essential, and the poor law authorities might combine to form a management committee, 9235. 9241-9243. 9344, 9345——Information with further reference to the proposals as to the earnings and maintenance of the colonists, and as to their contributing 4*s.* a week to the support of their families; computed earnings (including piece-work) equal to 16*s.* 6*d.* a week, provided the men work very hard, 9244-9263.

Intention that the more necessitous cases would first be dealt with, there being no legal claim to employment, 9264-9269——Expediency of the unmarried men contributing something out of their earnings to the general well-being of the colony, 9270, 9271.

Admission that the labour upon the uncultivated portion of each colony would probably be intermittent and irregular; due allowance made for stoppage of work in bad weather, 9272-9279. 9315-9321——Consideration of the question whether difficulties would not probably arise in obtaining from the uncultivated land the extra labour required at harvest-time upon the cultivated land; fallacy of the idea that the uncultivated land might at times be without any men upon it, 9280-9292. 9357.

Examination as to witness' grounds for the conclusion that arable dairying may be worked at a profit in connection with witness' scheme, certain products now imported being also cultivated, 9293-9331——Explanation that hand tillage is to be largely employed in potato cultivation, but that horse labour would also be probably used, 9307-9314.

Calculation that the men on the training colonies would be employed on auxiliary industries for from forty to sixty days in the year; sufficient qualifications available for the purpose, 9315-9332——Intention that men shall be sent to the colonies, not only from the unions acting in combination, but, if there be room for more labour, from outside unions having unemployed men on hand, 9333-9335.

Summary of the financial arrangements for starting and working the scheme, no return being expected from the training colonies (or uncultivated land) for the first five years; ample security to the State in the increased value of the land, 9335-9350. 9359, 9360——Maximum deficit calculated at 1*s.* 3*d.* per head per week, which is far less than the allowance to the man out of the rates, 9335. 9342——Degree of control and supervision to be exercised by the State, through the Local Government Board, 9347-9350.

Reiteration of the contention that the State could not possibly be a loser, nor the security for the loans be insufficient, even though the uncultivated land were deprived of labour for a considerable time through revival of trade and demand for employment therein, 9351-9357——Value of the scheme in preventing rural labour from drifting into the towns, 9358. 9374——Sufficiency of an estimate of 10*l.* an acre for the purchase of the required land, 9361-9364. 9403——Successful competition anticipated on the part of the farm settlements with small owners on the Continent who now send produce to this country, 9365-9372.

Explanation that there would be fixity of tenure on the farm settlements, and that these holdings would be obtainable, not only by men who have passed through a training

Mather, William (Member of the Committee). (Analysis of his Evidence)—*continued.*

colony, but by agriculturists from outside, 9367–9374——Proposition that small settlements be established with State aid, not only in connection with training colonies, but irrespectively thereof, as a means of retaining rural labour upon the land, and of bringing it into more profitable cultivation, 9373–9402.

Explanations in further support of witness' scheme of farm settlements, the initiative to be taken, voluntarily, by the county council and loans to be obtained from the State for the purchase of the land or the provision of buildings; expected concert on the part of landowners, 9373–9402——Contention that the State would have ample security for advances for buildings or for purchase of the land; or the County Council might share in the liability, 9374. 9392–9401——Co-operative element in working the farm settlements, so that there would be every prospect of success, 9374.

Probability that landowners would readily co-operate in promoting small farm settlements on witness' plan, so that the initative of the county council might not be necessary, 9374–9376. 9401——Broad distinction drawn between the farm settlements in connection with the training colonies and those to be created for direct acquisition by agriculturists; stipulation as to the necessity of some capital in the latter case, 9380–9391.

Advocacy of the proposed scheme of State loans for a national system of small farm settlements, in the interests of increased agricultural employment and improved cultivation, rather than of State loans at low interest to landowners for improvements in drainage, buildings, &c., 9401, 9402.

Mather, W. (Member of the House). Paper handed in by Mr. Mather, explanatory (in detail) of his scheme, under the separate heads of Farm Training Colonies and Small Farm Settlements, *App.* (*3rd Rep.*) 535–542.

Special thanks of the Committee due to Mr. Mather for his explanations respecting the proposed institution of farm colonies, *3rd Rep.* iv.

Melbourn Rural District (*Cambridge and Essex*). Absence of distress in this district from want of employment, *App.* (*2nd Rep.*) 451.

Melford Rural District (*Suffolk*). Considerable distress during the severe weather; also, through the depression in agriculture, *App.* (*2nd Rep.*) 464.

Melton Mowbray (*Lincoln*). Exceptional distress in this rural district in February through the severity of the weather; relief given by voluntary agencies, *App.* (*2nd Rep.*) 249.

Merthyr Tydfil. Severe distress in Merthyr in 1875 through the coal strike; large voluntary fund raised on that occasion, *Griffith* 4145–4149.

Amount and cause of the distress in this district during the late winter; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 398.

METROPOLIS:

1. *Returns and Statistics as to Pauperism and Relief.*
2. *Operation of the Equalisation of Rates Act and the Common Poor Fund.*
3. *Increase of Distress during the past Winter; great variation between different Parishes and Districts in the Charge for Relief.*
4. *Growing want of Employment in the East End.*
5. *Proposals by Mr. Benn; Scheme for utilising the Common Poor Fund in connection with Relief Works.*
6. *Incidence of the Cost of Out-door Relief.*
7. *Amended System proposed as regards Labour Colonies, &c.*
8. *Recommendation by the Committee respecting the Cost of Employment by the Sanitary Authorities.*

1. *Returns and Statistics as to Pauperism and Relief:*

Issue of Local Government Board Circular of 24th January to the thirty unions in the metropolis, replies having been received from twenty-five; summary of the information received, *Sir H. Owen* 60–63. 90–98——Reference to the returns for the metropolis for the several weeks in January (except the first), and for the first week in February, as showing an increasing amount of relief in comparison with previous years; very large numbers relieved in the first week in February, *ib.* 170–174. 223–247.

Statistics in detail respecting pauperism in the metropolis, with reference to population, in each of the years 1857–95; *App.* (*2nd Rep.*) 14, 15.

Return respecting the number of paupers on the last day of the fifth week of January 1895, and the total of corresponding week in 1894; *App.* (*2nd Rep.*) 16——Similar return for the last day of the first week of February 1895, and total of corresponding week in 1894, *ib.* 18, 19.

Statement

Reports, 1895—*continued.*

METROPOLIS—continued.

1. *Returns and Statistics as to Pauperism and Relief*—continued.

Statement showing the sums received and paid in respect of the Metropolitan Common Poor Fund, the Indoor Pauper Grant, and the London (Equalisation of Rates) Act, 1894, Equalisation Fund, *App.* (*2nd Rep.*) 471.

Paper handed in by Sir Hugh Owen containing details for each district and union or parish respecting the number of indoor and outdoor paupers, respectively, and the cost of in-maintenance and of outdoor relief in each of the years 1884–85 to 1893–94; *App.* (*3rd Rep.*) 524–533.

Table showing the extent of distress reported as existing in metropolitan parishes and districts in February 1895, and the causes to which due, *App.* (*3rd Rep.*) 803.

2. *Operation of the Equalisation of Rates Act and the Common Poor Fund:*

Very large contributions under the Equalisation of Rates Act in lightening the charge upon the poorer parishes for street cleaning, &c., *Sir H. Owen* 425. 430–435. 438——Information respecting the objects and operation of the Common Poor Fund, the various items charged upon it; objections to outdoor relief being a charge upon the fund, *ib.* 426–439. 516–529——Large sums contributed by the richer parishes in aid of the poorer; that is, under the Equalisation Fund and the Common Fund, *ib.* 427. 430–439.

Statement showing the sums received and paid in respect of the Metropolitan Common Poor Fund, the Indoor Pauper Grant, and the Equalisation Fund, *1st Rep., p.* 57.

Information as to the constitution and working of the Common Poor Fund, the several services thrown upon the fund, and the expenditure under different heads of service, *Benn* 3108–3110. 3130–3138. 3143–3146——Insufficiency of the funds received by localities under the Equalisation of Rates Act as a means of providing the required works in the poorer districts, *ib.* 3192–3195.

Limited extent to which the receipts under the Equalisation of Rates Act have been devoted to finding employment; relief of the local rates out of the amount received, *Tag* 3614–3618.

Opinion that it would be an extremely dangerous experiment to extend the Common Poor Fund so as to cover the whole system of relief, *Mackay* 5811——Strong disapproval of the Common Poor Fund being extended to out-relief, *Martineau* 6841-6846. 6866-6875.

Statement showing for each union in the metropolis the sums received and paid in respect of the Metropolitan Common Poor Fund for the year 1892–93, the Labour Pauper Grant for the year 1893–94, and the London (Equalisation of Rates) Act, 1894, for the year 1894–95, *App.* (*2nd Rep.*) 47.

3. *Increase of Distress during the past Winter; great variation between different Parishes and Districts in the Charge for Relief:*

Great variation in the per-centage of increased relief in the first week of February in the several metropolitan districts, five in number, *Sir H. Owen* 223–226——Question considered whether certain districts in London are not getting gradually poorer, and other districts gradually richer, as indicated by the returns of pauperism in each case, *ib.* 416-420——Increasing charge for the poor, this being largely due to the indoor poor; return to be submitted hereon, *ib.* 663–670.

Examination to the effect that distress and want of employment are not exceptional in West Ham as compared with other parts of the metropolis, witness submitting that the State could interfere and could provide relief works, *Hilleary* 1381–1405. 1451–1455.

Inability of many parishes to adopt the recommendations in the circular of 1892 by reason of their poverty and high rates, some districts, as in the East-end, becoming gradually poorer, whilst others seem to be getting richer, *Benn* 3082–3106——Illustrations purporting to show that in spite of the Equalisation of Rates Act the poorer parishes are still unfairly burdened, *ib.* 3083–3105. 3196–3209——Contrast between the total rates in the parishes of Bow and St. James's, Westminster, before and since the Equalisation of Rates Act, the rating in the former still being the highest in London, and in the latter the lowest, *ib.* 3089–3093.

Physical unfitness and utter incapacity of large numbers of the unemployed in the East-end of London for working on the land in farming and market garden operations, *Mackay* 5456-5465. 5544–5548——No doubt that the recent severe frost increased the sufferings of the poor more than usual this year, *ib.* 5516, 5517——Doubt as to the strict unions, while saving their own position, driving people into the lax unions and vitiating the comparison between the two systems, *ib.* 5814.

4. *Growing want of Employment in the East End:*

Impossibility of old men, however efficient, respectable, and sober they may be, getting any work in the East End, the competition there being so keen; statement

METROPOLIS—continued.

4. *Growing want of Employment in the East End*—continued.

that even engineers, clerks, and men from all classes of the skilled trades are flocking to the ranks of the labourers, *Morton* 11024.

5. *Proposals by Mr. Benn; Scheme for Utilising the Common Poor Fund in connection with Relief Works:*

Proposition that practical effect be given to certain clauses in circulars of the Local Government Board since 1886 as the best mode of dealing with exceptional distress in the metropolis through want of employment; reference especially to the circular of 1892, and to the suggestions therein as regards special works for the unemployed, *Benn* 3081, 3082.

Evidence in explanation and support of the conclusion that the unemployed difficulty in London might be largely met if the Common Poor Fund were available, through the guardians, in aid of works to be instituted by the local authorities in times of exceptional distress, *Benn* 3106 *et seq.*——Very unsatisfactory attitude of the local authorities towards the circular of 1892, *ib.* 3106.

Importance of co-operation between the guardians and local authorities, and between different parishes in the provision of works, *Benn* 3106. 3239. 3266-3269——Suggestion as to districts going in some instances outside their own area in order to provide the required works, *ib.* 3106. 3266–3269.

Summary of conditions which might be enforced, to the satisfaction of the Local Government Board, before any district obtains special aid; contemplated aid per head when there is a certain percentage of unemployed, *Benn* 3106. 3157–3179. 3265——Belief that in most cases the parishes could provide sufficient work in street-clearing, &c., without going outside their own area, *ib.* 3110.

Large expenditure charged upon the Common Poor Fund in respect of indoor relief; belief that much of this would be saved if there were an appropriation from the fund for relief works when there is exceptional depression, and that a very small increase in the amount per head levied for the fund would suffice, *Benn* 3132–3138. 3252–3263——Difficulties in the poorer parishes undertaking the necessary street-cleaning and other required works unless they be aided from the Common Fund, *ib.* 3139, 3140. 3155.

Suggestion that there be some official supervision in order to secure that the action in the various districts as regards expenditure from the Common Poor Fund is uniform, *Benn* 3141, 3142——Expediency of the money required being taken from the fund rather than from Imperial sources, *ib.* 3154-3156. 3220.

Opinion that the current rate of wages for the work should be paid rather than a reduced rate; limitations to be applied, however, as to the number of days' work to be given weekly, and the number of hours per day, *Benn* 3165–3179. 3210, 3211. 3264——Great improbability of any such failure of the scheme of work advocated by witness, as in the case of the Paris scheme, *ib.* 3179–3187——Objection to some voluntary contribution from the locality being a condition of aid from the Common Poor Fund, *ib.* 3212–3214.

Opinion that the scheme advocated by witness should rest upon the assumption that London, as a county, is responsible for dealing with the difficulty in question, and should be fully empowered to do so, without resort to State aid; facility in putting the scheme in operation, *Benn* 3214–3227. 3239–3245.

Grounds for justifying resort to a Poor Law fund for the money required in poor districts for relief works which cannot be regarded as ordinary improvement works; expediency of the Common Poor Fund being availed of rather than the fund provided by the Equalisation of Rates Act, *Benn* 3228–3238. 3252–3263.

6. *Incidence of the Cost of Out door Relief:*

Strong disapproval of the cost of out-door relief being spread equally over the whole metropolis, *Sir H. Owen* 426.

7. *Amended System proposed as regards Labour Colonies, &c.:*

Conference of metropolitan vestries and guardians convened by Camberwell in 1893, when a resolution was passed that the London County Council should apply for further powers for dealing with the unemployed, and for establishing labour colonies, &c., *Tagg* 3344. 3346. 3359, 3360. 3596, 3597. 3627. 3646–3648.

Contention that the cost of relief works should be charged to the whole of London; hardship upon Camberwell in having to provide work for many men who live in the parish, but are employed in various other parishes, *Tagg* 3389–3394. 3421, 3422. 3424–3429. 3478–3492.

Conclusion

Reports, 1895—*continued.*

METROPOLIS—continued.

8. *Recommendation by the Committee respecting the Cost of Employment by the Sanitary Authorities:*

Conclusion of the Committee that the guardians of any metropolitan union should be empowered, with the sanction of the London County Council, to agree with any sanitary authority within their union that, in consideration of the latter employing such number of persons, and during such period as may be agreed upon, the guardians will make a contribution to the sanitary authority of an amount not exceeding one-half of the cost incurred in the employment of such persons, such contribution to be a charge on the Metropolitan Common Poor Fund, *3rd Rep.* v.

Middlesbrough. Particulars supplied by the mayor, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 129, 130.

Middlesex. Information supplied in report by Inspectors as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 30–32.

Middleton (*Lancaster*). Official explanation in February as to the amount of distress in the municipal borough and the steps taken for its relief, *App.* (*2nd Rep.*) 214.

Migration of Labour. Effect of enhanced rates of labour payments in London districts in inducing immigration from urban and rural districts generally, *Sir H. Owen* 632–638; *Alden* 2524, 2525.

Information with reference to the migration of agricultural labour to the towns, *Smith* 4899–4906——Conclusion that labour can and does, to a large extent, avoid a falling market, it having largely gone away from agriculture and become distributed among a great variety of other employments; importance of increasing the mobility of labour as much as possible, *Mackay* 5354 *et seq.*——Non-realisation sufficiently by either trade unionists or the Legislature of the necessity of allowing a free market as regards the distribution of labour and capital, *ib.* 5838–5842.

Certainty that the able-bodied members of the village community have invariably been the first to go to the towns, *Tuckwell* 6951——Opinion that nothing less than a gradual and merciful extinction of landlordism and the nationalisation of the land will arrest the depopulation of the rural districts; necessity of making the villages attractive as well as lucrative, *ib.* 6981–6988. 7097 *et seq.*; 7273–7276. 7456–7462.

Doubt as to there being any individual repugnance on the part of labourers to village and agricultural life; belief that they would stay in the country if life were possible there, *Tuckwell* 6999–7009——Opinion that if witness' proposals as to allotments, &c., were taken *en bloc* they would begin at once to reverse the migration from the country to the towns, *ib.* 7395.

Examination as to the decrease in the rural population owing to the men going to the towns; grounds for believing that, to a large extent, men leave the country in order to take places in towns by direct invitation, *C. Booth* 10652–10757. 10698–10709.

See also *Agriculture. Allotments. Farm and Labour Colonies. Glasgow*, 8. *West Ham.*

Mile End Old Town. Detailed information supplied from Mile End Old Town as to the excessive privation and misery through want of employment; several suggestions on the subject by a committee of the guardians, *Sir H. Owen* 93–98——Extensive privation in Mile End Old Town in February, though the applications for relief had not largely increased by that time, *ib.* 337, 338.

Official statement as to the amount and cause of the distress; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 445.

Return showing for each of the years 1884–85 to 1893-94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Militia. Proposition as to the Militia being called out, at any time of the year, in localities where distress exists, *Edwards* 4341–4348. 4463–4466.

Milligan, Duncan, F.R.A.S. (Analysis of his Evidence.)—Witness is chairman of the Wandsworth and Clapham Union Board of Guardians, 5882.

Reports, 1895—*continued.*

Milligan, Duncan, F.R.A.S. (Analysis of his Evidence)—*continued.*

Evidence to the effect that the relief operations of the board of guardians are not restricted to the poor people who apply for relief, but that all known deserving cases are relieved either by the board or by charity societies with which the guardians are in touch, 5883–5886. 5895–5900.

View of witness that it is not his duty to go outside his board and seek out cases of poverty; statement that the work involved in doing so would be too great, as he already deals with something like 6,000 cases of distress per year, 5884–5887.

Explanation that the resolution of the board calling upon the Government to find means of employment for the unemployed, and condemning the stone-yard system, was passed by twelve to ten; belief that the whole of the guardians agreed to the latter part of the resolution, 5888–5891——Objection to the stone-yard work on the ground that it is costly, and that it is demoralising to the better class of men who are subjected to it, 5892 *et seq.*; 5901–5903.

Suggestion that there should be a central stone-yard to supply all London with stones for mending roads, and that a fair day's wage should be given for a fair day's work, thus removing the stigma of poor relief, 5894. 5904–5909——Approval by witness, as a Poor Law guardian, of the disfranchisement of men who accept relief, although personally he disagrees with it, 5910-5916.

Mines and Miners. See *Collieries and Quarries.*

Minister of Labour. Suggestion that a Minister of Labour should be appointed, and a national labour bureau arranged, *Hunt* 10184–10188. 10247–10252. 10373–10376.

Mirfield (*York*). Sufficiency of voluntary modes of relief in this district, *App.* (*2nd Rep.*) 363.

Mitford and Launditch (*Norfolk*). Amount of local distress; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 193.

Monifieth (*Forfar*). Information respecting the distress in this parish, through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 706.

Monmouthshire. Report by Inspector as to the amount of local distress, and the steps taken for its relief, *App.* (*2nd Rep.*) 32.——*See* also *Pontypool. Tin Plate Trade.*

Montrose (*Forfar*). Letter from the town clerk of Montrose respecting the amount of distress in the burgh, and the relief measures adopted, *App.* (*3rd Rep.*) 600.——Amount of distress in Montrose parish, through the severe weather; steps taken for its relief, *ib.* 706.

Moore, Harold Edward. (Analysis of his Evidence.)—Witness, who is a fellow of the Surveyors' Institute, and of the Royal Horticultural Society, has had considerable experience in connection with agriculture, and has studied the working of convict farm colonies and free labour colonies on the Continent as well as in England, 9403–9411.

Paper submitted, containing sundry details in connection with penal and voluntary colonies in Germany, Holland, Belgium, Switzerland, and France, 9410, 9411.

[Second Examination.]—Deduction by witness of four conclusions from his examination of voluntary farm colonies in Germany, the first being that no colony can be used for the accommodation of both vagrants and the unemployed working classes; confirmation of this view by the Belgian experience, 9532, 9533. 9547. 9689–9692——Second conclusion that where a man unaccustomed to agricultural work has to be employed on a farm the proper course is to employ him upon the reclamation of uncultivated land, 9534-9536. 9693–9698.

Third conclusion that a willing worker employed upon the reclamation of uncultivated land can give such value as will more than provide for his maintenance, 9537——Fourth conclusion that side by side with the uncultivated land there ought to be some land of a better quality, otherwise there will be no produce to maintain the men on that particular colony, 9538.

Explanation that the sudden stoppage of the reclamation of a piece of waste land, through the men engaged on it happily finding their own natural work again, would have no financial effect, except perhaps in somewhat increasing the cost of supervision, on account of the work being extended over a longer period, 9539-9543——Opinion that the system of voluntary labour colonies might be adopted with advantage in England, in view of the favourable conditions that could now be obtained in this country, 9544, 9545.

Reports, 1895—*continued.*

Moore, Harold Edward. (Analysis of his Evidence)—*continued.*

Concurrence with Mr. Willink in regard to the cause of failure of the Veenhuisan colony (Holland), 9545, 9546. 9718—Belief that the Swiss colony referred to in witness' paper was founded upon the only principles likely to be satisfactory in the case of colonies, 9548. 9699 *et seq.*

Entire success of the French experiment, which conformed to the ideas suggested by witness as most likely to produce a good result, 9549–9551. 9628–9632. 9692 *et seq.*——Material difference between the scheme before the Committee and the principles upon which the Continental colonies are based, the nearest approach being the French colony; there is no necessity, however, for relying upon Continental experience, 9552, 9553.

Information respecting the Salvation Army colony at Hadleigh, in connection with which witness was professionally engaged in 1891, having been largely instrumental in laying out the system on which it was worked during the first year, 9554 *et seq.*——Publication of the first balance sheet of the Hadleigh colony at the end of 1891, showing a profit of 53*l.* on the first year's working, on an expenditure of 6,819*l.*, disregarding the charge for interest on capital; non-inclusion of the general costs of administration in this expenditure, 9555 *et seq.*; 9730–9753.

Great variation in the class of men put upon the colony, most of them having passed some time in the Salvation Army shelters; the best and most willing workers were the Army Reserve men, who had been drifting about London without any occupation, 9558 *et seq.*——Dissatisfaction of the men with the requirement that they shall work in the gravel pit on arrival, thirty out of the first 160 leaving on this account; great difficulty in dealing with men of education, 9558 *et seq.*

Failure of the attempt to convert the whole colony into a workshop for manufacturing goods for the market, the balance sheets for 1892 and 1893 showing deficiencies; profit of 532*l.* made by the colony on farming work in 1894, when the men had been put back on to the land again, 9575–9583. 9802, 9803——Capital of the colony last year 94,000*l.*, on a total acreage of about 1,150 acres in possession, and a few farms not worked by the Salvation Army; present number of men employed about 300; 9584 *et seq.*; 9644, 9645

Evidence to the effect that all the men who come to the colony have, more or less, lost their characters, and that the colony was established for saving souls, not for reclaiming the land; claim of the Salvation Army to have reclaimed a large proportion of the 1,600 men that have passed through the colony, 9590–9592——Experience gained from Hadleigh colony chiefly useful on account of the detailed evidence it affords as to the ability of unskilled men when directed in the early stages of the work; no doubt that the whole expenditure on the land improvement work was of a profitable character, and that the labour was cheaper than ordinary labour, 9593–9597. 9754–9787. 9815–9818.

Certainty that, in some cases, men arriving at the colony without any knowledge of the cultivation of the soil become, after a certain time, capable of cultivating an allotment; desirability of the Salvation Army trying the allotment experiment on a larger scale, 9598–9606——Opinion that the first work that should have been undertaken at the colony was the reclamation of the marsh land, which, when reclaimed later on, yielded an extraordinarily good crop of wheat, 9600. 9784–9791. 9804.

Explanation that witness left Hadleigh colony because an elaborate expenditure out of the Darkest England Fund was contemplated on buildings, brickworks, a railway, organising industries, &c., of which he disapproved, and because there was no competent agricultural expert in control of the agricultural work of the colony, 9605–9611——Attention drawn to the fact that although last year a profit of 532*l.* was made in the farming department, there was an admitted loss of about 1,700*l.* in the industrial department, in addition to the cost of administration, 9612–9614.

Statement that witness strongly objected to the Salvation Army building dwelling-houses, farm buildings, &c., outside the Hadleigh colony; certainty that some thirty or forty market gardeners have been thrown out of work owing to the competition of the Army in the limited market of Southend, 9615–9623.

Experience of witness in regard to the Wanstead Flats and Abbey Mills experiments that sober and steady unemployed men do resort to the labour colonies when out of work, at all events as a temporary means of maintenance; doubt, however, as to their breaking up their homes to go to such colonies, 9624–9638. 9795–9801.

Doubt as to a colony of single men necessarily involving any moral degradation; desirability, however, of there being married men and women on a colony, as proposed in Mr. Mather's scheme, 9639–9643. 9714–9717——Possibility that it would be more profitable, though somewhat difficult, to give an average of 40,000*l.* a year to the Essex farmers to employ a certain portion of the men out of work, than to have a separate colony for the submerged tenth alone, 9646–9649.

Reports, 1895—*continued.*

Moore, Harold Edward. (Analysis of his Evidence)—*continued.*

Usefulness of labour colonies on the voluntary system in offering a man a very easy medium of getting back to his regular employment again; necessity, however, of keeping the colony for the respectable members of the working class, and of approving each man before admission, 9650–9657. 9689–9692. 9719–9729. 9791 *et seq.*——Opinion that labour colonies could, under good management, be so directed as to prevent the products entering into competition with the free labour outside; recommendation that only such crops should be grown for sale as would not compete with the home products, 9658–9682.

Possibility of unskilled labour in labour colonies successfully competing with skilled labour without protection, in view of the fact that the colonies can employ the most improved systems, machinery, &c., 9683-9685——View of witness that every man, whether on a labour colony or not, ought to have the right to work as long as he wishes, 9686–9688.

Statement to the effect that it is perfectly possible to build a cottage suitable for eight acres for 140*l.*, and the outbuildings for 30*l.*, 9705-9713——No doubt that there would be some difficulty in dealing with a number of labourers in the country during a prolonged frost; belief, however, that the suggestions made in Clauses 22 to 26 of Mr. Mather's scheme would partly meet the case, 9805, 9806.

Explanation that the estimate of 4,900*l.* for the current expenses of the cultivated land, as at Hadleigh, was calculated for ordinary crops, and includes the cost of horses and of harvest labour, 9807-9814.

Morley, The Right Honourable John. Letter from Mr. Morley, dated 21st March 1895, with reference to the distress in Ireland, and the non-production of statistics on the subject, 3*rd Rep. p.* 242.

Morley (*York*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (2*nd Rep.*) 462.

Mortality. Conclusion that much increase of mortality has resulted from the destitution; reference hereon to the large increase of the death rate in Glasgow, *Keir-Hardie* 737, 738.——*See* also *Death Rate.*

Morton, James. (Analysis of his Evidence.)—Witness is Chairman of the Unemployed Executive Committee of West Ham, which has been in existence since last November; he represents the views of the unemployed in West Ham, 11005–11007. 11043–11048. 11070. 11182–11186.

Evidence to the effect that the Poor Law guardians did all they could for the unemployed in West Ham during the winter, and were prevented from doing more by the Local Government Board; opinion, however, that the work carried out did not touch the fringe of the unemployed question, 11008–11018——Unanimous opinion of a meeting of the unemployed that, in view of the large number of people starving, the Government ought to insist upon all the land now lying idle being brought into cultivation, or else depute various bodies to take possession of it and cultivate it, 11018 *et seq.*

Willingness of some 20 to 30 per cent. of the unemployed to go back to the land, even under present conditions, if it were possible to get work in the country, 11021 *et seq.*——Proposal of the Unemployed Committee that the whole country should be divided into districts and that each district should have a farm or colony to deal with the unemployed and be responsible to Government for its management, so that the unemployed could produce food for themselves, for the institutions supported by the rates, and for the Army and Navy, 11022 *et seq.*; 11049 *et seq.*; 11071–11076. 11102–11110. 11128–11143.

Certainty that the establishment of national farms would relieve the congestion and competition in industrial centres, the labouring section in all the large industrial concerns being composed chiefly of farm workers, who, in consequence of their being strong and robust, are more keenly sought after than the town men, 11023 *et seq.*; 11192, 11193——Impossibility of old men, however efficient, respectable, and sober they may be, getting any work in the East End, the competition there being so keen; statement that even engineers, clerks, and men from all classes of the skilled trades are flocking to the ranks of the labourers, 11024.

Upwards of 10,000 unemployed altogether in West Ham, according to the census taken by trades council of the borough, 11024. 11028——Unreliability of the statistics as to the unemployed given by the Poor Law guardians, as a large number of the respectable working class would rather suffer than apply to the guardians for relief, 11024.

Evidence in support of the contention that the proposed national farms could produce the necessaries of life in this country cheaper than can be done on the Continent, provided the present restrictions upon the agricultural community were removed; opinion

Reports, 1895—*continued.*

Morton, James. (Analysis of his Evidence)—*continued.*

opinion that farms have gone out of cultivation because the scientific side of farming is not studied, the object now being to get as much as possible out of the land at the cheapest possible rate, 11024–11028. 11111–11119. 11156–11181. 11184–11191.——Attention drawn at one of the meetings of the unemployed to the danger, in case of war, of this country being starved into submission; necessity of the Government taking up the land question even from that standpoint alone, 11028.

Opinion that those people who are compelled to seek Poor Law relief are not themselves responsible, in any case, for their misfortune, and ought not therefore to be deprived of their right to vote, 11029–11037. 11097–11101——Desirability of amending the Poor Law of Scotland, under which no relief is given to able-bodied persons, and people have to inflict some wound upon themselves to get it; disapproval of the Poor Law system altogether, 11038–11040.

Decided opinion that the only permanent solution of the unemployed difficulty is to bring the land and the people together again, the State taking over the collective ownership of the land; contention that the inheritance of the people should be returned to the people, without compensation to the landlords, 11041, 11042. 11049 *et seq.*; 11077 *et seq.*; 11120–11127. 11150–11156.

Condemnation of the work done on Wanstead Flats under Mr. Hill's scheme as useless and in no way remunerative, elevating, or productive; no doubt that it was done at a lower price than if it had been put out under contract, but not so low as the rate at which the borough council could have done it, 11064–11069. 11144–11149.

View of witness that there should be collective ownership by the State of all industries, each industry being guided by the best men in it under the control of the central body of the country, the supervisors to be selected by the workers, 11079–11097.

Mossley (*Lancaster*). Letter from the town clerk, in February, explanatory of the extent and causes of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 346.

Motherwell (*Lanark*). Information supplied by the town clerk of Motherwell respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 600.

Motion, James Russell. (Analysis of his Evidence.)—Considerable official experience of witness in Barony parish, Glasgow, he having been collector of poor rates and being now inspector of poor and clerk of the parish council, 8073-8078.

Statistics submitted as to the population and area of Barony parish, and as to the comparative pauperism in February 1885 and February 1895; large increase of lunacy, 8079–8090. 8175–8193. 8246–8249——Different provisions and conditions as to out-door and in-door relief in Scotland as compared with England; practically, destitution is the test of admission on the in-door roll or out-door roll in Scotland, 8093–8101. 8175-8190.

Absence of any unusual distress in Glasgow during the past winter till the exceptionally severe frost set in; frequent instances of unemployment through the fault of the men themselves, drunk over-night being often the cause of idleness, 8102–8107. 8196——Very slight inquiry or investigation before relief was given when the pressure was at its height, there having doubtless been much abuse; numerous "loafers" relieved, 8108–8115——Exceedingly pernicious and immoral operation of the model lodging-houses in Glasgow, as evidenced by the admissions to the poor-house, 8115-8129. 8204–8206.

Statement showing the great number of discharged prisoners who find their way into Glasgow, 8130–8136. 8197, 8198——Large sums raised in Glasgow for the relief of the unemployed on former occasions of severe distress; complaints in 1862 as to most of the unemployed being "loafers," 8137–8139——Suggestions made by witness to the Lord Provost, during the recent distress, for ascertaining what classes of persons were chiefly employed on the relief works; nothing has been done in this direction, 8140–8143.

Absence of obligation upon the Scotch Poor Law authorities to provide employment for those in distress, destitution being the test of relief, 8144–8146——Grounds for the conclusion that the question of dealing with the able-bodied or unemployed poor in large parishes in Scotland should be under the control of the Poor Law authorities, the parish councils taking the initiative by applying to the Local Government Board for authority and directions as regards exceptional relief, 8147-8151. 8237-8243. 8250, 8251. 8256-8259——Contemplated provision of work, shelter and food on farm colonies when there is exceptional distress; expediency of the land being adjacent to the poor-houses, 8148. 8158–8163. 8216–8236. 8252–8255.

Stringent measures suggested for the suppression of vagrancy and begging, as by committal

Motion, James Russell. (Analysis of his Evidence)—*continued.*

committal of tramps and vagrants of the loafing class, who are numerous at Glasgow, to institutions where they can be kept steadily at work, 8151–8157. 8244, 8245——Explanation relative to the system of labour colonies in Germany, and the severe penalties attached to vagrancy, &c., 8161–8163. 8216–8221——Opinion that the respectable unemployed in Scotland would not feel degraded by employment on relief works; assistance given privately to many of these during the distress, 8164–8167. 8199–8203.

Very close and full collection of the rates in Barony parish throughout the period of distress, 8168——Data for the conclusion that the distress in the parish was felt chiefly among the class verging upon pauperism, 8169, 8170——Very bad and worthless class of men who availed themselves of the shelter organised by the Charity Organisation Society, 8171–8173.

Application of out-door relief not only to those unable to work but to those who are partially able to work, 8175, 8176——Large proportion of out-door as compared with in-door paupers, 8177, 8178. 8246–8249——Considerable number of weakly or infirm persons, without friends, who should be permanently in the poorhouse-infirmary, 8179–8185——Reference to the increase of lunacy as mainly due to drink and heredity, 8191–8195.

Suggestions as regards casual labourers, who work only a day now and then, being taken in charge by the Poor Law authorities, 8207–8210——Several causes of the destitution which prevails in some parts of Scotland, drunkenness being one cause and early and indiscriminate marriages another, 8211–8215.

Mountain Ash Urban District (*Glamorgan*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 448, 449.

Municipal Authorities. See *Local Authorities.*

Municipal Franchise. Strong feeling on the part of witness that persons who receive Poor Law relief should not be allowed to vote for Poor Law guardians, *Vallance* 11595, 11596.

Mutford and Lothingland Rural District (*Suffolk*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 432.

N.

Nantwich (*Chester*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 338.

Nanty glo and Blaina Urban District (*Monmouth*). Explanation in 1895 respecting the extent and character of the local distress and the employment and relief provided; reference to the stoppage of tinplate works in the district, *App.* (*2nd Rep.*) 167.

Neath (*Glamorgan*). Limited distress in the rural district; character of the employment to be provided, *App.* (*2nd Rep.*) 195——Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *ib.* 263.

Neilston (*Renfrew*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 771.

Nelson Municipal Borough (*Lancaster*). Explanation, in February 1895, respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 141.

New Forest Rural District. Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 321.

New Monkland (*Lanark*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 739.

New Zealand. Operation of the Labour Department in New Zealand in finding places for the unemployed, as in making roads through the bush, *Smith* 4711–4713——System of co-operative contracts upon which the unemployed in New Zealand are engaged to work on railways and roads; arrangement as to the rate of wages, according to piece-work, *ib.* 4725–4727.

Newbury (*Berks*). Distress due to the severe weather; means of relief provided, *App.* (*2nd Rep.*) 395.

Reports, 1895—*continued.*

Newcastle-under-Lyme (*Stafford*). Explanation in February 1895 respecting the extent and character of the local distress and the employment and relief provided, *App.* (*2nd Rep.*) 141.

Newcastle-on-Tyne. Letter from the guardians of Newcastle-on-Tyne on 16th February to the effect that the distress is of a temporary character, and will largely disappear when the weather improves, *Sir H. Owen* 148, 149.

Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 22.

Official explanations in February as to the extent of the distress in the county borough and the relief measures provided, *App.* (*2nd Rep.*) 209.

Newent Rural District (*Gloucester and Worcester*). Amount and cause of distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 451.

Newport (*Isle of Wight*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App* (*2nd Rep.*) 263.

Newport (*Monmouth*). Increased applications for relief in Newport (Monmouth), though the guardians do not anticipate any difficulty in meeting the destitution which may arise, *Sir H. Owen* 44.

Letter from the Mayor in February explanatory of the extent and character of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 344.

Newport Pagnell (*Bucks*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 321.

Newton Abbot (*Devon*). Amount of distress in this district; character of the relief given, *App.* (*2nd Rep.*) 194.

Newtown and Lanidloes Rural District (*Montgomery*). Information respecting the distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 338.

North Leith (*Edinburgh*). Amount of distress in this parish through the severe weather; steps taken for its relief, *App.* (*3rd Rep.*) 679.

Northampton County Borough. Explanations in February 1895, respecting the extent and character of the local distress, and the employment and relief provided, *App.* (*2nd Rep.*) 130.

Northleach (*Gloucester*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 298.

Northwich (*Chester*). Information respecting the extent of the distress in the urban district, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 100——Limited amount of distress in Northwich Rural District in February, *ib.* 298.

Norway. Statement showing the number of workpeople employed in certain industries in each of the years 1875, 1879, 1885, and 1890, *App.* (*3rd Rep.*) 511.

Norwich. Increased relief in Norwich in January 1895, as compared with previous years, though it is not contemplated that exceptional arrangements will be necessary, *Sir H. Owen* 45.

Letter from the Mayor of Norwich dated 23rd February 1895, respecting the extent and cause of exceptional distress in the county borough and the remedial measures provided, *App.* (*2nd Rep.*) 257.

Nottingham. Letter received from Nottingham on 16th February showing the amount of relief given at different periods, the extent to which want of employment exists, and the steps taken for limiting the amount of out-door relief and for closing the labour yards, *Sir H. Owen* 46.

Doubt as to the extent to which men formerly engaged in textile fabrics at Nottingham have since been employed in working in brass and iron, *Smith* 4772–4775.

Information supplied in report by Inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 55, 56.

Letter from the Mayor of Nottingham dated 23rd February 1895, respecting the extent and cause of the exceptional distress in the county borough, and the means of relief provided, *App.* (*2nd Rep.*) 257, 258.

Reports, 1895—*continued.*

Number and Classification of Unemployed:

Necessity of immediate relief not only for those out of work through the frost but for the large numbers who are unemployed through the general depresssion in trade, witness estimating the total from all causes at more that five millions, including the men's families, *Keir-Hardie* 895–913.

Minimum of about 2 per cent. of unemployed at the best of times, exclusive of sickness and strikes, *Smith* 4585–4594——Tendency in trades generally to a concentration of unemployment among a smaller number of employés of the less steady and skilful class, *ib.* 4733–4735. 4740. 4875–4880. 4927-4930——Inability of witness to supply statistics as to the total number of the working classes in the United Kingdom, *ib.* 4785–4789.

Statement as to certain returns, showing the per-centage of unemployed dating only from 1887, in which year the average per-centage was higher than in 1894, *Smith* 4829–4834——Doubt as to the per-centage of unemployed being greater among non-unionists than unionists, *ib.* 4923–4926——Result of certain statistics as showing that there is a residuum of men constantly out of work, *ib.* 5018, 5019.

Considerable value to be derived from complete and accurate statistics of the number of the unemployed; suggestion that this information might be obtained through the school boards and other bodies, *Hunter* 8308–8311.

Division of the unemployed in the past winter, roughly, into three classes; the first, comprising the efficient workers of good character who were occasionally thrown out of employment from various causes; the second, consisting of those who were sinking down, and were getting into a state bordering on destitution; and the third, made up chiefly of the homeless, the idle, the vicious, and the criminal, *B. Booth* 9823, 9824. 9935 *et seq.* 10020 *et seq.*

Belief that by very careful use of statistics it may be possible to ascertain the times at which the necessitous unemployed are more than usually numerous: suggestion that the best test would be the total volume of trade, *C. Booth* 10520. 10555. 10561. 10643–10649. 10717–10719——Probability that the larger number of the unemployed have only themselves to thank for their irregular employment, *ib.* 10562–10573.

Grounds for the opinion that there are quite one million of people out of work in different parts of the country at the present time (14th June), *Thorne* 10794–10798——Belief that independently of the frost there were more unemployed in the past winter than in previous winters; great and increasing dearth of employment among general labourers, *ib.* 10795–10798.

Unreliability of the statistics as to the unemployed given by the Poor Law Guardians, as a large number of the respectable working class would rather suffer than apply to the guardians for relief, *Morton* 11024.

Statements by the various local bodies in reply to inquiry whether an unemployed register is kept, and with what result, *App.* (*2nd Rep.*) 57 *et seq.*; *App.* (*3rd Rep.*) 565 *et seq.*

Table, submitted by Mr. Llewellyn Smith, showing the per-centage number of members of the trade societies in the United Kingdom, rendering Returns to the Board of Trade who were returned as unemployed at the close of each month in the years 1888 to 1894. inclusive, *App.* (*3rd Rep.*) 547.

See also *Agriculture. Amount and Causes of Distress. Census of Unemployed. Dock Labour. Glasgow. Liverpool. Metropolis. Tin-plate Trade. Trade Depression. Trade Unions. Weather. West Ham. Whitechapel.*

Nuneaton and Chilvers Coton Urban District (*Warwick*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 100.

O.

Ogmore and Garw (*Glamorgan*). Absence of exceptional distress in March, *App.* (*2nd Rep.*) 441.

Ohio (*United States*). Information respecting the public employment offices in different towns in the State of Ohio; situations found chiefly for women, *Smith* 4714–4716.

Old Kilpatrick (*Dumbarton*). Statement as to the amount of distress in this parish and the means adopted for its alleviation, *App.* (*3rd Rep.*) 665.

Old Machar (*Aberdeen*). Information supplied by the Inspector of the Poor as to the extent and character of the local distress and the remedial measures adopted, *App.* (*3rd Rep.*) 623.

Old Monkland (*Lanark*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 739, 740.

Reports, 1895—*continued.*

Oldbury (*Worcester*). Information respecting the distress in this district and the steps taken for its relief by the local authorities and by voluntary agencies, *App.* (2*nd Rep.*) 441.

Oldham. Absence of any material increase of applications for relief at Oldham, the distress among non-applicants not being exceptional, *Sir H. Owen* 47.

Particulars supplied by the town clerk in February 1895 respecting the distress in the county borough and the remedies applied, *App.* (2*nd Rep.*) 258.

Ormskirk (*Lancaster*). Absence of exceptional distress at the end of February, *App.* (2*nd Rep.*) 375.

Orsett (*Essex*). Amount of distress in this rural district in February; remedial measures adopted, *App.* (2*nd Rep.*) 338.

Ossett (*York*). Absence of necessity for any special measures of relief in this district, *App.* (2*nd Rep.*) 438.

Oswestry (*Salop*). Sufficiency of voluntary modes of relief, *App.* (2*nd Rep.*) 375.

Ottery St. Mary (*Devon*). Particulars supplied by Rev. G. M. L. Reade, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (2*nd Rep.*) 101.

Oundle Rural District (*Northampton and Huntingdon*). Absence of necessity for any special measures of relief in this district, *App.* (2*nd Rep.*) 444.

Out-door Trades and Occupations. See *Agriculture. Building Trade. Glasgow. Liverpool. Metropolis. St. Olave's Union. West Ham.*

OUT-DOOR RELIEF:

1. *Orders and Regulations of the Poor Law Board and Local Government Board, with Official Explanations as to the Powers of Boards of Guardians.*
2. *Views of the several Inspectors upon the Question of Modification of the existing Regulations.*
3. *Conclusions and Suggestions generally as to the Administration and Operation of Out-door Relief.*

1. *Orders and Regulations of the Poor Law Board and Local Government Board, with Official Explanations as to the Powers of Boards of Guardians:*

Explanation of certain provisions of the Poor Law Amendment Act of 1834, under which the Local Government Board are authorised to issue orders respecting out-door relief to the able-bodied, *Sir H. Owen* 210——Summary of the regulations as regards able-bodied out-door relief under the Out-door Relief Regulation Order of December 1852, and under the Out-door Relief Prohibitory Order and Labour Test Order, *ib.* 211–215.

Explanations upon the question of the legality of out-door relief to destitute able-bodied persons, witness submitting that a labour test should be provided, *Sir H. Owen* 440–458——Occasional relaxation by the Central Board of the restrictions as to out-door relief to able-bodied men, *ib.* 538–540.

Necessity of out-door relief to the able-bodied being half in kind, such as food and fuel, and half in money; that is, unless alteration be sanctioned by the Board, *Sir H. Owen* 560, 561. 570. 594, 595. 690——Non-interference by the Board as to the actual amount of out-door relief, *ib.* 560–562. 569–575. 690–694.

Orders of the Poor Law Board, dated 21st December 1844 and 14th December 1852, laying down revised regulations on the subject of out-door relief; also, lists of unions and of parishes to which such Orders apply, *App.* (2*nd Rep.*) 7–12.

Circular letter from the Poor Law Board, dated 14th December 1852, respecting the administration of relief to the out-door poor; Order issued on the subject, *App.* (2*nd Rep.*) 7, 8.

Order issued by the Poor Law Board, dated 21st December 1844, on the subject of out-door relief to able-bodied; list of unions to which this Order applied, *App.* 9–12.

Paper submitted by Sir Hugh Owen explanatory in detail of the powers of guardians and officials as to out-door relief, *App.* (3*rd Rep.*) 557–562.

Provisions of the Out-door Relief Regulation Order of 14th December 1852, and of the Out-door Relief Prohibitory Order, as still in force in the metropolis, and in many provincial unions, *App.* (3*rd Rep.*) 558–560.

Administration of relief in numerous agricultural districts and in towns with a small population under the Out-door Relief Prohibitory Order, *App.* (3*rd Rep.*) 559——

Reports, 1895—*continued.*

OUT-DOOR RELIEF—continued.

1. *Orders and Regulations of the Poor Law Board, &c.*—continued.

Provisions of the Out-door Labour Test Order, *App.* (*3rd Rep.*) 560——Full powers in the guardians as to out-relief to aged poor, *ib.* 560.

Provisions and regulations as to relief on loan and its recovery, *App.* (*3rd Rep.*) 560, 561.

Necessary approval by the Local Government Board in certain cases before application of the labour test, *App.* (*3rd Rep.*) 560.

2. *Views of the several Inspectors upon the Question of Modification of the existing Regulations:*

Letters explanatory of the views of the several Inspectors (Local Government Board) upon the question whether there should be any temporary modifications of the regulations of the Board with regard to out-door relief in the case of able-bodied men out of work; disapproval generally of any alteration, *App.* (*2nd Rep.*) 20 *et seq.*

3. *Conclusions and Suggestions generally as to the Administration and Operation of Out-door Relief:*

Approval of relief being largely given in kind, *Keir-Hardie* 1130–1133——Little, if any, out-door relief if the proposed scheme of State-aided relief works proposed by witness be adopted, the rates being greatly lightened thereby, *Hills* 2592, 2593.

Arguments in support of the contention that in a union where out-relief is freely given the first resource of a poor person in any crisis is the rates, but that in a union where no out-relief is given the man himself is responsible for the maintenance of himself and family, and there is comparatively little pressure upon the public authority during a crisis, *Mackay* 5343 *et seq.*

Submission by witness of tables illustrating the variation in the amount of pauperism in strict and lax unions, and showing the reduction of pauperism brought about by the system pursued in the Tower Hamlets Union, *Mackay* 5345–5353.

Concurrence of opinion among all competent authorities upon the subject, including the Poor Law Commission of 1834, that out-door relief is an evil in itself, *Mackay* 5412 *et seq.*——Decided opinion that all administration of out-door relief should be in private hands, and that those guardians who possess the power of giving out-door relief should use their discretion and refuse to give it, *ib.* 5589–5607. 5716 *et seq.*; 5736–5753.

Doubt as to the refusal of out-relief throwing a very heavy burden on the poorish part of the community, *Mackay* 5706–5712——Evidence to the effect that while the strict unions have restricted out-relief, they have initiated the policy of improved schools and infirmaries, *ib.* 5789.

Argument as to the desirability of guardians having the power to distribute out-door relief to a greater extent than at present, and to relieve persons without putting them to the test and humiliation of stone-breaking, *Phillips* 6677 *et seq.*

Suggestion that the guardians be empowered to give temporary out-door relief, if they have not the power already to do so, and that the prohibitory suggestions made by the Local Government Board in a circular of 1871 be rescinded, *Dodd* 7593, 7594——Grounds for the opinion that the resuscitation of the powers given under the Act of the 43rd Elizabeth should allow the guardians to give both temporary and permanent relief, *ib.* 7709 *et seq.*

Very salutary repugnance of the lower classes to in-door relief, witness strongly objecting to any relaxation as regards out-door relief, *Willink* 8715–8726.

Disapproval generally of out-door relief; opinion that in times of distress men should be relieved by useful work being provided for them, *Lansbury* 10413.

See also *Battersea. Boards of Guardians. Camberwell. Death-rate. Franchise. Labour Test. Pauperism. Relief Works. St. George's-in-the-East. St. Olave's Union. Scotland. West Ham. Whitechapel.*

Overtime (*Hours of Labour*). Obstacles to any statistics of overtime, *Smith* 5016——Result of experience at Liverpool that overtime in the case of dock labourers is very objectionable, *Cox* 6452–6462. 6515. 6532–6556.

Great advantage of an abolition of overtime in the engineering and other trades, *Hunter* 8578–8583——Limited sense in which employment of an increased number of men would result from an abolition of overtime, *Mather* 9070, 9071.

Probability that an enactment against overtime work would prove beneficial, *Hunt* 10243–10245——Opposition of witness to overtime work except on occasions of great pressure, *Thorne* 10857–10863.

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence).—Experience of witness at the Local Government Board since 1876, he having been Secretary since 1882 ; 1.

View of the Board previously to the severe weather that the conditions generally as regards the prevalence of distress were more favourable than at the corresponding period of last year; tendency, however, to an increase of distress in some districts towards the end of January, 2.

Circular issued by the Board, on 24th January, to the guardians of the several metropolitan unions and of ninety-three provincial unions requesting information as to the extent and character of the distress during the winter of 1894–95, as compared with recent years, and the arrangements contemplated by the guardians on the subject, 2–6——Replies received from seventy provincial boards ; general purport of these, in about fifty cases, that there was no material increase of distress, and that the guardians did not anticipate any difficulty in dealing with the destitution, 6 *et seq.*

Reply received, on 6th February, from the Ashton-under-Lyne Union ; prejudicial effect of the severe weather as regards out-door workers, though the guardians do not anticipate that any exceptional arrangements for dealing with the distress will be necessary, 9——Letter received from the Barnsley Union on 5th February, there being no exceptional distress at that period, 9.

Reply from the Barrow-in-Furness Union on 7th February ; absence of any material increase of relief during the winter months, the distress not being exceptional, 9–11——Result of the inquiry in the case of the Barton-upon-Irwell Union that up to the 6th February there was no exceptional distress in consequence of the severity of the weather, 12.

Letter from Bath Union, on 31st January, that there was no exceptional distress at that date, 12——Reply received from Birmingham, on the 29th January, to the effect that the applications for relief up to that date were about the same as usual, 12——Result of the reply from Blackburn, on 11th February, that there was a great increase of poverty and destitution as compared with several recent years, and that, should the severe weather continue, exceptional measures would probably be necessary, 12.

Reply from Bradford, received on 6th February, to the effect that distress of an acute and exceptional character was prevalent, the amount of relief and of pauperism having largely increased as compared with corresponding periods in previous years ; special measures adopted for providing employment, 12——Reply from Brighton, on 31st January, showing that there was no exceptional amount of distress, 12.

Result of the reply from Bristol, on 28th January, that there has been a considerable increase of non-employment and of relief, 12——Letter from Burnley, received on 5th February, to the effect that the distress was not of an exceptional character, 12.

Result of the reply from Burton-upon-Trent, received on 15th February, that there had not been any material increase of applications for relief, and that temporary help was being given through voluntary agency, 12——Reply from the Bury Union, on 16th February, that the distress was not exceptional, and that special arrangements were not likely to be required, 12.

Absence of any material increase in the applications for relief at Cambridge up to 14th February ; employment given by the town council at fair wages by opening a stone-yard, 12——Information supplied by the Cardiff Board as to the out-door and in-door relief at different periods ; steps taken for opening a labour yard for able-bodied applicants, 12.

Reference to the foregoing cases (taken in alphabetical order) as fair samples of the whole of the provincial replies received by the Local Government Board, 13, 14——Large centres of population comprised in the ninety unions to which circulars have been sent, 15, 16.

Reply from Charlton Union, Lancashire, on 28th January, to the effect that there had been no material increase of distress, 19——Detailed information supplied by Croydon Union as to the applications for relief in the several districts ; temporary employment given to able-bodied men in the stone-yard, 20.

Letter from Darlington, on 16th February, respecting the distress in the union and the employment given in the stone-yards, 21——Information received on 6th February as to the amount of distress in Kingston-upon-Hull, and the arrangements adopted for meeting the destitution, 23.

Slight increase at Great Yarmouth in the number of applications for relief ; work proposed for the able-bodied cases, 24——Letter from the clerk of the Leeds Union, received on 2nd February, submitting details as to the amount of distress, it not being deemed necessary to make any exceptional arrangements, 25.

Details supplied in letter received from Leicester, on 7th February, as to the increase of distress and of relief, the number of shoe hands and hosiery hands out of employment, the aid given by the Leicester Trades Council ; exceptional arrangements not contemplated by the guardians, 26–39.

Letter from Liverpool, received on 4th February, showing that the applications for

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence)—*continued.*

relief were not of an exceptional character, though many persons have been suffering great privations from want of employment, 40–42.

Reply received from Manchester, on 7th February, to the effect that no exceptional poor relief had been granted; considerable distress among persons who had not applied for relief, 43.

Increased applications for relief in Newport (Monmouth), though the guardians do not anticipate any difficulty in meeting the destitution which may arise, 44——Increased relief in Norwich, in January 1895, as compared with previous years, though it is not contemplated that exceptional arrangements will be necessary, 45.

Letter received from Nottingham, on 16th February, showing the amount of relief given at different periods, the extent to which want of employment exists, and the steps taken for limiting the amount of out-door relief, and for closing the labour yards, 46.

Absence of any material increase of applications for relief at Oldham, the distress among non-applicants not being exceptional, 47——Reply similar to the foregoing received from Pontypridd, 48——Very large increase of relief at Stockport for some time previously to the end of January, 51, 52.

Report received from Swansea, on 15th February, testifying to a very large increase of destitution and relief, and the prevalence of distress among those who do not apply for relief; steps taken for providing employment, 53–57——Decrease rather than increase in the applications for relief in Toxteth Park (Liverpool); arrangements for offering employment to the able-bodied, 58.

Issue of the circular of 24th January to the thirty unions in the metropolis, replies having been received from twenty-five, 60-63——Issue of a further circular by the Local Government Board (on the day the Select Committee was appointed) to their Inspectors in the thirteen provincial districts, asking for immediate information on several points; reports received in reply, 64–69.

Explanation of the delay on the part of the Bethnal Green Board in supplying information in response to the circular of 24th January, 72-74——Reply received from the Camberwell guardians, on 9th February, showing that there has recently been an enormous increase of relief to the able-bodied class, chiefly to those in the building trades, and explaining the action taken in respect of out-door relief and the provision of employment, 75–89.

Letter from Chelsea, on 4th February, to the effect that the distress in the district is not of an exceptional character, and that no special arrangements are contemplated by the guardians, 90.

Statement on the part of Fulham Union, dated 4th February, that the distress among the poor is not greater than usual at this season of the year, and that there has been no undue pressure by offering the workhouse; exceptional arrangements not contemplated, 90.

Satisfactory reply from St. George's-in-the-East, on 6th February, virtual discontinuance of out-door relief in this parish, 90——Absence of any exceptional distress during the recent winter months in St. Giles-in-the-Fields and St. George, Bloomsbury, 90.

Large increase of distress and of relief in Greenwich, previously to 15th February, chiefly through able-bodied men being out of employment, 90——Statement from Hackney, on 4th February, to the effect that there has been no material increase of distress, 90.

Letter from Hampstead, dated 14th February, showing that the guardians do not anticipate any difficulty in meeting the destitution, and that the vestry are co-operating with them in finding work, 90——Summary of reports of relieving officers in Holborn, testifying generally to the absence of any material increase of relief, 90, 91.

Statement from Islington, on 2nd February, to the effect that there has been no exceptional distress in the parish, 90–92——Increased relief given in Kensington in the recent winter months as compared with the same months in the two previous years; considerable distress also among those not applying for relief, 93.

Large increase of relief in Lambeth, as compared with previous winters, there being also more distress than usual among those not applying for relief, 93——Material increase of applications for relief, both out-door and in-door, in Lewisham; employment provided in the labour yard, 93.

Increased applications in Marylebone, much distress being also reported among non-applicants, 93——Detailed information supplied from Mile End Old Town as to the excessive privation and misery through want of employment; several suggestions on the subject by a committee of the guardians, 93–98.

Letter from St. Olave's, dated 1st February, together with reports from relieving officers

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence)—*continued.*

officers, as to the extent and causes of local distress; very much larger increase of applications since that date than in any other union in London, 100–108——Information as to the operation of a stone-yard in St. Olave's, the pay being at the rate of 6*d.* an hour, exclusive, after a time, of men from outside parishes, 104–128.

Statement, dated 8th February, as regards Paddington, there being no exceptional increase of relief; suggestions by the guardians upon the subject of the able-bodied unemployed, 128.

Considerable difficulty in St. Pancras through the numerous applications for help on the part of the unemployed; co-operation with other boards of guardians in order to urge Government to take steps to deal with the unemployed question, 128–130.

Growing difficulty in Poplar as regards employment, though up to 15th February the applications for relief were less than in previous years, 130——Absence of exceptional distress in Shoreditch and Hoxton up to 1st February, 130–132.

Information supplied by Stepney as to the amount of relief in the winter months for the last four years; considerable distress at present among the working classes who have not applied for relief, 132–135.

Facility of dealing with the distress in the Strand Union without exceptional arrangements; increasing applications from persons not settled in the union, 135——Suggestion on the part of Wandsworth and Clapham that a census be taken of the unemployed, 136.

Reports from relieving officers in Battersea as to the number of applications for relief, and the distress through want of employment in the building and other trades, though not followed by applications for relief, 136, 137.

Absence of exeptional distress in Putney, 137——Decrease rather than increase of relief in Streatham, 137–139——Very slight increase of relief in Tooting, 139.

Considerable distress reported from Wandsworth, largely through stoppage of employment in the building trade, 139, 140——Non-increase of relief and distress in Westminster, 141.

Statistics supplied from Whitechapel as to the increase of relief and the extent to which due to want of employment through the severity of the weather; reference especially to the number of able-bodied in the workhouse, 141——Normal amount of relief and of distress in Woolwich Union, 141.

Conclusion that the foregoing information as to the condition of the unemployed and the amount of relief and of distress in the different unions is based upon the reports of the relieving officers, and that there has been no methodical or systematic inquiry by the latter or by the guardians on the subject, 142–145.

[Second Examination.]—Letter from the guardians of Newcastle-on-Tyne on 16th February to the effect that the distress is of a temporary character and will largely disappear when the weather improves, 148, 149——Desire expressed by the guardians of Lincoln and of several other places that a census of the unemployed throughout the country should speedily be obtained, 152. 157.

Explanations in connection with statistics of the amount of pauperism in England and Wales and in the metropolis, respectively, in December and in January last as compared with the same months in previous years, 161–174——Reference to the returns for the metropolis for the several weeks in January (except the first), and for the first week in February as showing an increasing amount of relief in comparison with previous years; very large numbers relieved in the first week of February, 170-174. 223–247.

Circular issued by the Local Government Board on 11th February to vestries and district boards in the metropolis, and to town councils and district councils generally, suggesting three different classes of work for the unemployed, and making several recommendations on the subject, 175–180——Quotation of several of the replies received to the foregoing circular, showing the action taken or proposed to be taken by the various local bodies as regards the provision of employment, 181–200.

Circular sent by the Central Board to the thirteen Inspectors of districts, asking for information as regards distress among able-bodied men; varying character of the reports in reply respecting agricultural labourers and others, 201–209.

Explanation of certain provisions of the Poor Law Amendment Act of 1884 under which the Local Government Board are authorised to issue orders respecting out-door relief to the able-bodied, 210——Summary of the regulations as regards able-bodied out-door relief under the Out-door Relief Regulation Order of December 1852, and under the Out-door Relief Prohibitory Order and Labour Test Order, 211–215——Practice as to labour in stone-breaking, wood chopping, &c., being imposed as a test of destitution; difficulties in finding suitable employment, 216-222.

Great variation in the per-centage of increased relief in the first week of February, in the several metropolitan districts, five in number, 223–226——Abnormal increase in

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence)—*continued.*

St. Olave's Union, careful inquiry being now made into all cases; special causes to which the distress is owing, 226–234. 237–245. 344–348——Excessive increase in Camberwell, 226, 227. 235, 236——Very large increase also in Greenwich, 210.

Large mitigation of distress anticipated when the frost goes, though this does not equally apply to all districts, 248——Rule of the central board as to holding a local inquiry before sanctioning loans for work in order to give employment, 249——Varying periods allowed for the repayment of loans, according to the class of work, 250.

Relative number of in-door poor and out-door poor in England and Wales and in the metropolis, respectively, at different periods, the in-door poor showing a large increase, and the out-door a much larger decrease, 251–261——Impression that England has, relatively, less pauperism than Scotland, though there is no out-door relief in the latter country, 263–267.

Means of arriving at an average of the number of times during the year for which relief is given to the same persons, 268–271——Obligation upon the guardians to be guided by the test of destitution as a condition of relief; opinion adverse to the removal of this limitation, 272–277. 298, 299.

Satisfactory co-operation in some instances between charitable associations and boards of guardians so as to prevent the stigma of pauperism, 278–284——Reference to an application from West Ham for some aid from the Local Government Board, to be handed over to the Corporation, 285.

Absence of any proposals for opening workshops, 286, 287——Explanations upon the question of land being hired by guardians in order to give employment; action of the central board in such cases, 288–297——Belief that guardians already have sufficient powers for giving adequate relief, 298, 299.

Suggestions on the subject of employment (in times of distress) by the municipal authorities in cleansing the streets, road making, &c.; sufficient statutory powers for this purpose, 300–310——Decided objection to Imperial grants in aid of municipal expenditure on employment works in times of distress, 311–315.

Further explanation with reference to the Circular of 24th January, and the general tenour of the replies as regards the question of increased pauperism, 316–320——Increasing distress and want of employment in Poplar by the middle of February, 321–326.

Considerable distress in St. George's-in-the-East, though up to a recent date there was no material increase in the applications for relief; beneficial operation of some charity agencies, 327–336——Extensive privation in Mile End Old Town early in February, though the applications for relief had not largely increased, 337, 338.

Several causes of the distress in Stepney, 339——Duty of the guardians to give relief to any destitute person in the parish, 340–343——Difficulty as to any remunerative return from stone breaking, 349, 350. 354.

Careful inquiry by relieving officers with reference to applications for relief, 351–353——Reference to the report from Auckland Union as not alluding to any large number of unemployed men who were kept off the rates by receiving 10*s.* a week from their trades union, 357–359.

[Third Examination.]—Consideration of the course to be adopted as regards printing for the use of the Committee condensed information from the replies to the Circular issued at their request to the different local authorities; suggestions on the subject, 361–369——Limitation of the jurisdiction of witness' Board to England and Wales, its inquiries not having extended to Scotland or Ireland, 370–372. 384, 385.

Further statement as to the ample powers of the guardians, and as to their responsibility for the relief of destitution when application is made, 373–375. 384, 385. 388. 397. 421——Case of St. Olave's Union further adverted to in connection with the employment and rate of payment given for a time to outsiders, the increase of relief being very startling, 374, 375. 406. 410.

Reliable character of the information supplied by the guardians as to the number of applications for relief and the amount of pauperism, this not applying to their replies as to the extent of distress among non-applicants for relief, 376–389——Information obtainable from the Labour Department of the Board of Trade as to want of employment, irrespective of poor relief, 383.

Grounds for objecting to the guardians taking the initiative and seeking out destitution (as by means of a house-to-house visitation), in order to relieve it without application being made; expected denial by many destitute persons that they needed relief, 385–387——Entire discretion in local authorities as to the provision of works for the unemployed, 388.

Conclusions adverse to its being the duty of any public department to provide work for the unemployed in times of distress, so as to save them from applying for poor relief, 389–396——Explanation that certain provisions have remained on the Statute book since the Act of Elizabeth in 1601, under which guardians may provide land for employment

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence)—*continued.*

employment, subject to the approval of the Central Board; probable requirement of Parliamentary sanction before any enforcement of these provisions, 397–399.

Information respecting a recent movement on the part of certain metropolitan unions in favour of legalised facilities for acquiring land and providing workshops as a means of employment with a view to poor relief being obviated; view of witness' Board adverse to the proposed scheme, 400–405.

Different practice respecting out-door relief in St. George's-in-the-East as compared with St. Olave's and Camberwell; strict administration of the poor law in the former union, charitable organisations being also in operation, 406–415——Question considered whether certain districts in London are not getting gradually poorer and other districts gradually richer, as indicated by the returns of pauperism in each case, 416–420.

Explanation of the circumstances and conditions under which the Local Government Board have favoured co-operation between the guardians and the sanitary authorities as regards work for the deserving unemployed; benefits anticipated in some cases, 422–425. 491–515.

Very large contributions under the Equalisation of Rates Bill in lightening the charge upon the poorer parishes for street cleaning, &c., 425. 430–435. 438——Strong disapproval of the cost of out-door relief being spread over the whole metropolis, 426.

Information respecting the objects and operation of the common poor fund, the various items charged upon it, and the checks upon extravagance; objections to out-door relief being a charge upon the fund, 426–439. 516–529——Large sums contributed by the richer parishes in aid of the poorer; that is, under the equalisation fund and the common fund, 427. 430–439.

Explanations upon the questions of the legality of out-door relief to destitute able-bodied persons, witness submitting that a labour test should be provided, 440–458——Examination to the effect that guardians apply work as a test and not for wages; question hereon whether under certain Acts of William IV. and George III. the Central Board might not make orders sanctioning the acquisition of land by guardians to be worked for wages by destitute persons, 457–481. 488, 489.

Discretion to be exercised by the Board as to the distance from the parish at which land might be acquired, 482–487——Practical obstacles to the beneficial working of schemes for employment on land in times of distress, 485–490.

Amount of the poor rate in Poplar and other East End parishes adverted to in connection with the question of employment on sanitary and other useful works, 493–515——Non-interference by the Central Board with the guardians as to the rate paid for work in labour-test yards; reference hereon to the case of Leicester, 530–535. 545, 546.

Claim of destitute men to relief through the stoneyards, though they may not have parted with their furniture, 536, 537——Occasional relaxation by the Central Board of the restrictions as to out-door relief to able-bodied men, 538–540.

Individual view of witness (not as representing his Department) adverse to any Imperial grant in aid of the unemployed, 541, 542. 547, 548——Conclusion that work undertaken by local authorities should be of a necessary or useful character, 543, 544——Expediency of its still resting with the guardians to decide as to the mode of relief of destitution, 548.

[Fourth Examination.] Total of 540 replies now received in response to the circular issued at the request of the Committee, 549–551——Explanations with further reference to proceedings of the Leicester guardians, as regards the modes of out-door relief, and to the action of the Local Government Board in the matter as to certain conditions being observed; denial that there has been undue delay on the part of the Board, 554–568.

Necessity of out-door relief to the able-bodied being half in kind, such as food and fuel, and half in money; that is, unless alteration be sanctioned by the Board, 560, 561. 570. 594, 595. 690——Non-interference by the Board as to the actual amount of out-door relief, 560–562. 569–575. 690–694.

Inducement to improvidence if, on the occurrence of frosts, applicants could be relieved by local authorities without any labour test, 580–587——Beneficial check through the Out-door Relief Regulation Order and the modified workhouse test, though some abuse may arise in the operation of the labour-yard system, 588–600. 648–651.

Advantages of the workhouse test in the interest of the ratepayers, whilst it operates as an incentive to self-reliance, 598–605——Reference to the returns of pauperism as not being an absolute test of the extent of destitution amongst the class who always endeavour to avoid applying for relief, 606–611.

Reports, 1895—*continued.*

Owen, Sir Hugh, K.C.B. (Analysis of his Evidence)—*continued.*

Consideration of the extent to which the labour recently employed upon relief works by the local authorities has been inefficient and costly; instances at Glasgow, Cardiff, and Swansea, 612–618.

Explanation of the action of the Central Board as regards works loans, and the precautions taken when their sanction is applied for; condition that the works must be of a substantial and permanent character, though their cost may sometimes be excessive in times of distress, through the unskilled labour employed, 619–631. 639–641.

Effect of enhanced rates of labour payments in London districts in inducing immigration from urban and rural districts generally, 632–638——Degree of inquiry before men are employed on local relief works, 642–645.

Objection to a dual authority for the administration of relief, 647——Definition of the term "able-bodied" for poor law purposes; limit of age usually applied, 651–655.

Conclusion that the present powers of the guardians and the regulations in force, if exercised promptly and efficiently, are sufficient to meet any exceptional distress now existing, 656, 657——Inference from the returns submitted by witness that through the almost entire stoppage of work in certain districts, and the depression of industries, there is extensive destitution among the classes who have not applied for relief, 658, 659.

Doubt whether any modifications can be made in the regulations of the Central Board as regards the unemployed without the risk of affecting the independence of the numerous class repugnant to accept relief, 660–662.

Increasing charge for the poor in London, this being largely due to the additional comforts given to the indoor poor; return to be submitted hereon, 663–670—— Very exceptional and strict administration of poor relief in St. George's-in-the-East; valuable co-operation on the part of charitable organisations, 671–674.

Consideration of complaints on the part of Accrington as to the undue delay of the Central Board in dealing with applications for sanction of loans for certain works; unavoidable delay in many of these cases, whilst in others very prompt action is taken, 675–689——Non-interference with the localities respecting the rate of wages paid in the case of loan works, 695–698.

Explanation that any opinions expressed by witness in reply to questions of the Committee have been given in his individual capacity, and not as representing his department, 699.

Oxford (*County Borough*). Official explanations, in February, as to the extent of the distress in the county borough and the remedial measures adopted, *App.* (*2nd Rep.*) 210.

Oxfordshire. Information supplied in report by Inspector as to the amount of local distress, and the steps taken for its relief, *App.* (*2nd Rep.*) 30, 31.

P.

Paddington. Statement, dated 8th February, as regards Paddington, there being no exceptional increase of relief; suggestion by the guardians upon the subject of the able-bodied unemployed, *Sir H. Owen*, 128.

Particulars supplied by the vestry clerk, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 57.

Return handed in by Sir Hugh Owen showing for each of the years 1884-85 to 1893-94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Paisley. Letter from the town clerk of Paisley respecting the amount of distress in the burgh and the relief measures adopted, *App.* (*3rd Rep.*) 603——Information as to the amount of distress in Paisley parish, through the severe weather, and the steps taken for its relief, *ib.* 771.

Paris. Information to be supplied respecting the Bureau de Travail of Paris, which has been closed, *Smith* 4702–4707.

Paper handed in by Mr. H. Llewellyn Smith containing particulars respecting the Paris Labour Exchange, *App.* (*3rd Rep.*) 500.

Parker, Rev. C. L. E. Letter from Mr. Parker, dated Stockton Rectory, 14th June 1895, submitting explanations in reply to certain statements by Mr. Tuckwell upon the allotments question, *App.* (*3rd Rep.*) 546.——*See* also *Allotments.*

Reports, 1895—*continued.*

Partick (*Lanark*). Letter from the town clerk of Partick Burgh respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 603.

PAUPERISM :

Explanations in connection with statistics of the amount of pauperism in England and Wales and in the metropolis, respectively, in December and in January last, as compared with the same months in previous years, *Sir H. Owen* 161–174.

Relative number of in-door poor and out-door poor in England and Wales and in the metropolis, respectively, at different periods, the in-door poor showing a large increase and the out-door a much larger decrease, *Sir H. Owen* 251–261——Means of arriving at an average of the number of times during the year for which relief is given to the same persons, *ib.* 268–271.

Obligation upon the guardians to be guided by the test of destitution as a condition of relief; opinion adverse to the removal of this limitation, *Sir H. Owen* 272–277. 298, 299—— Satisfactory co-operation in some instances between charitable institutions and boards of guardians so as to prevent the stigma of pauperism, *ib.* 278–284.

Reference to the returns of pauperism as not being an absolute test of the extent of destitution amongst the class who always endeavour to avoid applying for relief, *Sir H. Owen* 606–611.

Great facility to the guardians in dealing with distress if employment and relief could be given without disqualifications being entailed, *Hilleary* 1285–1293. 1366–1372 ——Probability that a great many of the unemployed, as in West Ham, have been deterred from applying for relief on account of the pauperising effect, *ib.* 1348–1353 ——Probability, moreover, that the stigma of pauperism is more operative than disfranchisement in preventing applications for relief, *ib.* 1502–1509. 1660–1663.

Opinion that greater facilities for poor relief do undoubtedly prompt more numerous applications for it and cause people to rely upon it, *Mackay* 5790. 5825–5831. 5843–5861.

Great reluctance on the part of the unemployed in the tinplate trade to apply for poor relief due, no doubt, to the fear of being deprived of the franchise and to the stigma of pauperism, *Phillips* 9464–9466.

Table showing for England and Wales the number of persons relieved on the corresponding days of January during the last thirty-nine years, together with the population of the country, and the number of paupers in every 1,000 of the population on the last day of the fifth week of the month in each year, *App.* (*2nd Rep.*) 13.

Table showing for the metropolis the number of persons relieved on corresponding days of January and February during the last thirty-nine years, together with the population, and the number of paupers in every 1,000 of the population on a certain day in January and February in each year, *App.* (*2nd. Rep.*) 14, 15.

Number of paupers in each district of the metropolis and in each union (exclusive of lunatics in asylums, and vagrants), on the last day of the fifth week of January 1895, and total of corresponding week in 1894, *App.* (*2nd Rep.*) 16, 17——Similar return for the last day of first week of February 1895 and the corresponding week in 1894, *ib.* 18, 19.

View of Mr. W. H. Bosanquet (Bromley) as to the expediency of the stigma of pauperism being removed from work provided by the guardians, *App.* (*2nd Rep.*) 361.

See also *Amount and Causes of Distress. Franchise. Labour Test. Metropolis. Out-door Relief. Poor Law System. Scotland.*

Pemberton (*Lancaster*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 333.

Pembroke Municipal Borough. Absence of exceptional distress in March, *App.* (*2nd Rep.*) 438.

Penal Treatment. Grounds for the opinion that men who can work but will not should be dealt with by law, *Hunt* 10179. 10235–10240. 10276–10280. 10329–10334—— Necessity for dealing first with the delinquent unemployed, *ib.* 10189. 10354.

See also *Labour Test. Loafers. Relief Works. Tramps and Vagrants.*

Penarth (*Glamorgan*). Explanations in February 1895 respecting the extent and character of the distress and the employment and relief provided, *App.* (*2nd Rep.*) 169.

Penrith (*Cumberland*). Absence of exceptional distress in Penrith Rural District, *App.* (*2nd Rep.*) 194——Letter from the mayor in February explanatory of the extent and character of the distress in the urban district, and showing the measures of relief provided, *ib.* 333.

Reports, 1895—*continued.*

Penzance Municipal Borough. Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 75.

Perth. Letter from the town clerk of the burgh respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 604——Amount of distress in the parish, through the severe weather; relief measures adopted, *ib.* 765.

Peterhead. Letter from the town clerk of Peterhead respecting the amount of distress and the relief measures provided, *App.* (*3rd Rep.*) 604.

Information supplied by the inspector of the poor as to the extent and character of the local distress and the remedial measures adopted, *App.* (*3rd Rep.*) 625.

Petersfield (*Sussex*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 339.

Pewsey Rural District (*Wilts*). Full employment provided in this union during the past winter, *App.* (*2nd Rep.*) 433.

Phillips, Edward James. (Analysis of his Evidence.)—Witness is a justice of the peace for the county of Monmouth, and chairman of the Pontypool Board of Guardians, 6635–6637. 6763.

Evidence to the effect that there are twenty-four parishes in the Pontypool Union, the total rateable value being 155,921*l.*, and the population, 39,791 in 1891; 6638–6640——Coal, tin, iron, and steel works the principal industries of the Pontypool district; large number of men employed at the locomotive establishment of the Great Western Railway Company at Pontypool-road, 6641.

Occurrence of distress at times in the union due generally to the stoppage of individual works; very severe distress in 1874, when there was a strike in the coal trade, 6642, 6643——Statement that in order to meet the distress in 1874 the guardians opened a stoneyard and had a great deal of stone cut and broken, which they found very difficult to dispose of afterwards; failure of the stoneyard financially, 6644–6647.

Great distress in the Pontypool district since the tinplate trade became disorganised, although the board of guardians have not had much difficulty in connection with it, 6648–6650. 6719–6730. 6786, 6787. 6793–6796——Particulars of the stoppage of the Glyn Colliery in 1894, which threw about 600 men out of work; absorption of nearly all these men in the other collieries of Monmouthshire and Glamorganshire, the old men only being left in the Pontypool district, 6651–6654. 6759–6786.

Institution in the early part of this year of three organisations, independent of the guardians, to cope with the distress caused by the stoppage of the Glyn Colliery and Pontymoile Tinworks, 6655 *et seq.*——Information respecting the Pontypool organisation, which was worked by a relief committee presided over by the vicar of Trevethin; table handed in, showing the number of people relieved by the committee from the 25th January until the 15th April 1895; 6656–6660.

Particulars as to the second organisation, which was at Pontnewyndd, where it established a soup kitchen on the 15th January, 6661–6663——No doubt that the men out of employment in the early part of this year obtained assistance from their friends and, in very many cases, disposed of their goods, rather than apply to the board of guardians; great reluctance on the part of both skilled and unskilled artizans to ask for relief, 6664. 6676. 6703–6708.

Promotion of the third organisation by the Undenominational Christian Mission, who have done a great deal of good in the way of charity, having given 100,000 meals at their different stations between August 1893 and December 1894; 6665, 6666. 6725–6728——Evidence to the effect that during the recent distress the urban district councils of Pontypool, Abersychan, and Panteg employed men to break stones and cinders at 1*s.* 6*d.* and 1*s.* 4*d.* per yard, respectively, some men breaking from five to nine yards, and one or two as many as twelve yards, in the week, 6667-6670.

Belief that, although some discretion was used in employing the men to break the stones and cinders, any men who applied were given work provided they belonged to the district, 6670——Explanation that at the commencement of the distress witness' board of guardians directed their two relieving officers to grant relief to persons applying for it, and that relief was given, without any test, in every case where it was found, on inquiry, that the man deserved it, 6672–6674.

Expenditure by the board of 4,399*l.* 8*s.* 6*d.* in out-relief in 1892–93; 4,719*l.* 1*s.* 4*d.* in 1893–94; and 5,056*l.* 7*s.* 7*d.* in 1894-95; 6675——Argument as to the desirability of the guardians having the power to distribute out-door relief to a greater extent than at present, and to relieve persons without putting them to the test and humiliation of stone-breaking, 6677 *et seq.*

Opinion that the municipal authorities should have charge of relief works that are started to meet exceptional distress, rather than the poor law authorities, as the former

Phillips, Edward James. (Analysis of his Evidence)—*continued.*

former have better means of disposing of the stone, &c., broken, and as the stigma of pauperism would not be felt so strongly by the men employed, 6678 *et seq.*; 6693–6702. 6731–6750. 6788–6790——View of witness that the Poor Law should be more elastic, so that persons who are not quite destitute could be helped by the guardians, as under the Scotch Poor Law; desirability of helping the thrifty man without taking him off the register, 6678 *et seq.*; 6708–6718. 6791, 6792.

Suggestion that a portion of the Exchequer Contribution Account should be utilised in meeting cases of exceptional distress, 6678, 6679. 6751–6758—— Statement that although there were twenty degrees of frost in January and February last, and the sufferings of the unemployed were very severe, not a single person from the Pontypool district was brought before the court for breaking the law, 6797.

Phillips, Thomas. (Analysis of his Evidence.)—Witness is secretary of the South Wales, Monmouth, and Gloucestershire Tinplate Workers' Union, 9412–9414.

Evidence to the effect that owing to the general depression in trade and to competition in America and on the Continent, the tinplate trade is in a very crippled condition, and the people have suffered severely from want of employment, 9415–9419. 9453–9457. 9497 *et seq.*——Statistics showing that there have been 6,550 persons, principally men, totally idle, and nearly 6,000 partially idle, since the beginning of 1893, in the tinplate trade in Glamorganshire, Carmarthenshire, Monmouthshire, and Gloucestershire, against a total of about 13,500 in full work during that time, 9420–9452. 9505–9511.

Belief that the present bad state of affairs was brought about by the price of tinplates having been forced up in the autumn of 1890 and in 1891 in anticipation of the Tariff Bill coming into operation in July 1891, the over-production at that time having caused the depression that has existed ever since, 9453 *et seq.*——Statement that hundreds of the unemployed tinplate workers in witness' district are quite destitute, those who owned houses having either sold or mortgaged them, and the thrifty having exhausted all their savings, 9458–9463. 9496.

Great reluctance on the part of the unemployed to apply for poor relief, due, no doubt, to the fear of being deprived of the franchise and to the stigma of pauperism, 9464–9466——Distribution of 10,000*l.* by witness' union among the unemployed tinworkers between December 1892 and December 1894; inability of the union to render the men any assistance this year, the funds having been exhausted, 9468–9472.

Decided opinion that some exceptional remedy ought to be found to meet the present extraordinary distress in the tin-plate trade, which is becoming more acute every week; approval of aid being given from the Exchequer, 9473-9476. 9488-9504. 9528–9531——Average rate of wages for a good tinplate worker, before the distress began, about 2*l.* per week; acceptance by the men of reductions of 12½ to 15 per cent. for the last seven or eight months, 9477–9484.

Institution of the stone-breaking test by the Poor Law authorities of Landore and Kidwelly, at which the men earned between 5*s.* 6*d.* and 6*s.* a week, doing their best, 9485-9487——Impossibility of the home workers competing with America, even if they worked for nothing, as there is a protective tariff of 5*s.* 2*d.* on every box of tin plates entering the United States, 9512–9527.

Piece-work. Opportunity chiefly in piece-work trades for reducing the amount of employment, instead of entirely displacing some of the employés, *Smith* 4769–4771.

Pilditch, John Thomas. (Analysis of his Evidence.)—As surveyor to the parish of St. Mary, Battersea, witness submits explanations in detail respecting the distress in the parish from want of employment in different industries, the measures adopted by the vestry, and the expenditure incurred in relieving the distress, 5020 *et seq.*

Expenditure of between 600*l.* and 700*l.* in the winter of 1890, and again in 1891, in clearing the roads from snow; less severe weather in 1892, when the expenditure was under 300 *l.*; 5022–5024——Various kinds of employment provided in the winter of 1892–93, the total cost having been between 6,000 *l.* and 7,000 *l.*; large number of men employed, 5024, 5025——Very severe weather in 1893–94, a vast amount of work having been provided in the winter months, entailing an expenditure of nearly 14,000 *l.*; 5025–5030.

Practice in witness' parish to arrange in advance for works to be done late in the year or during the winter, 5029. 5031, 5032. 5039, 5040——Expenditure of nearly 5,500 *l.*, up to the present time (26th March), upon works carried on during the past winter; provision of 10,000 *l.* or 12,000 *l.* for works in the next winter, 5029–5033. 5046–5054——Satisfactory working of the labour bureau through which the unemployed are taken on to work, 5034–5038——Conclusion that other parishes might equally arrange in advance the works to be executed when there is a pressure for employment, 5039, 5040.

Direct employment given by the vestry, instead of resorting to contract labour,

Reports, 1895—*continued.*

Pilditch, John Thomas. (Analysis of his Evidence)—*continued.*

overtime being abolished so as to employ the greatest possible number of men, 5041–5045——Large expenditure since 1890 in local improvements and works of various kinds, witness submitting that much benefit is conferred upon genuine unemployed men (apart from "loafers"), that the works are efficiently carried out, and that many men are enabled to tide through the severe weather who would otherwise apply for poor relief, 5046 *et seq.*——Better class of men obtainable for the works in winter than in summer, these men not caring to work with the "loafer" class, 5057-5060. 5066–5071. 5081–5086. 5151-5154.

Better work obtained from the men by the vestry than is obtained from those who work under the poor law, 5074–5086——Denial that it is a disadvantage that men should look forward for work known to be provided for them in the winter, though it is necessary to take precautions against abuse, and to restrict employment to those residing in Battersea, 5090 *et seq.*——Limited extent to which employment can be provided for all who apply for it; less pressure if other parishes made equal provision, 5103–5110. 5134–5137. 5138–5154.

Low rates in Battersea, the system of work for the unemployed not increasing them, 5120–5126——Large employment of male workers as compared with females, 5127–5130——Minority of the vestry opposed to the system in question, 5131-5133——Difficulty in providing extensive work year by year, whilst the creation of work is studiously avoided, 5138–5150.

Plomesgate Rural District (*Suffolk*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 322.

Plumstead (*Kent*). Amount of distress in this parish; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 204.

Plymouth. Amount and cause of distress in Plymouth County Borough; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 456, 457.

Plympton St. Mary (*Devon*). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 452.

Pocklington (*York*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 322.

Pollokshaws (*Renfrews*). Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 604.

Pontardawe (*Glamorgan*). Want of employment in this rural district through the stoppage of tin plate works; voluntary relief provided, *App.* (*2nd Rep.*) 459.

PONTYPOOL (MONMOUTH):

1. *Exceptional Distress, mainly through Depression in the Tin Plate Industry and in the Coal Trade.*
2. *Extensive Provision of Relief by Voluntary and Charitable Organisations.*
3. *Employment and Relief by the Local Boards or Urban District Councils, and by the Poor Law Guardians.*
4. *Claim to State Aid.*

1. *Exceptional Distress, mainly through Depression in the Tin Plate Industry and in the Coal Trade:*

Estimated population of 16,000 in the district represented by witness, its area being about three miles long by one broad, *Griffith* 3875, 3876——Information respecting the dearth of employment in the district through the closing of certain tin works and iron sheet works, and of the Glyn Colliery at different periods since the strike in August and September 1893; loss of employment by at least 1,350 men, some 200 being employed intermittently at the town forge works, *ib.* 3877–3904. 3914, 3915. 4005–4007. 4041, 4042. 4101–4106.

Total of about 1,800 persons (including women and children) relieved daily by the relief committee during the distress; estimate that 1,000 men were absolutely without employment, only between 200 and 300 of whom were affected by the frost, *Griffith* 3928–3933. 4061-4066. 4154, 4155.

Very poor prospect of a revival of the tin plate trade in the Pontypool district, though there is now some intermittent employment at one of the works; odd jobs of various kinds upon which some of the men have obtained employment, *Griffith* 3934–3938. 3948. 3953-3963——Improbability of the Glyn Colliery being soon re-opened, *ib.* 3938–3941.

Reports, 1895—*continued.*

PONTYPOOL (MONMOUTH)—continued.

1. *Exceptional Distress, mainly through Depression, &c.*—continued.

Further information respecting the great depression in the Pontypool tin-plate industry, and in the local collieries, in connection with the question of the future employment of the work-people and of their migration to other districts in search of work, *Griffith* 4076–4109. 4134–4138. 4150. 4164–4173. 4211–4213.

More acute distress recently in Pontypool than witness has ever known elsewhere; widespread distress outside the operations of the voluntary relief committee, *Griffith* 4110–4112. 4117–4121. 4150–4261.

Explanation as regards the closing of one colliery at Pontypool, whilst another is only partially at work; question of royalty rents adverted to hereon, *Griffith* 4216–4230. 4279–4284. 4293–4295.

Evidence to the effect that there are twenty-four parishes in the Pontypool Union, the total rateable value being 155,921*l.*, and the population 39,091 in 1891; *Phillips* 6638–6640 —— Coal, tin, iron, and steel works the principal industries of the Pontypool district; large number of men employed at the locomotive establishment of the Great Western Railway Company at Pontypool-road, *ib.* 6641.

Occurrence of distress at times in the union, due, generally, to the stoppage of individual works; very severe distress in 1874, when there was a strike in the coal trade, *Phillips* 6642, 6643——Great distress in the Pontypool district since the tin plate trade became disorganised, although the board of guardians have not had much difficulty in connection with it, *ib.* 6648–6650. 6719–6730. 6786, 6787. 6793–6796.

Particulars of the stoppage of the Glyn Colliery in 1894, which threw about 600 men out of work; absorption of nearly all these men in the other collieries of Monmouthshire and Glamorganshire, the old men only being left in the Pontypool district, *Phillips* 6651–6654. 6759–6786.

Conclusion that the men out of employment in the early part of this year obtained assistance from their friends, and in very many cases disposed of their goods rather than apply to the board of guardians; great reluctance on the part of both the skilled and unskilled artizans to ask for relief, *Phillips* 6664, 6676. 6703–6708.

Letter from Mr. W. Sandbrook, dated 28th February 1895, as to the great distress in the district through want of employment, *App.* (*2nd Rep.*) 372.

2. *Extensive Provision of Relief by Voluntary and Charitable Organisations:*

Formation of the local relief committee for the Pontypool district in January 1894, about 300*l.* having been collected and the committee having worked for about twelve weeks, relief having been given in kind, *Griffith* 3905–3908. 3914, 3915——Relief committee again formed in January 1895, upon the closing of the Pontnewynydd Iron Sheet Works, whereby 400 men were suddenly thrown out of employment; committee also formed in the Pontypool district, the two committees having been subsequently amalgamated with witness as chairman, *ib.* 3916–3920. 4040–4042.

Collection of about 500*l.* mainly from shopkeepers, about 100*l.* of which is yet in hand, relief having been given in a daily distribution of bread and a bi-weekly distribution of soup; coals also given by colliery owners, *Griffith* 3921–3927. 4035. 4067–4075——Large and influential character of the relief committee; careful inquiry in every case before help is given, *ib.* 3926. 4030–4034. 4040——Doubt as to much help having been given by the local trade unions, *ib.* 3955–3957. 4151–4153. 4239, 4240.

Improved system of distribution of bread and soup at the homes of the people, during the present distress, as compared with the practice in the previous winter, *Griffith* 3965–3972——Liberal help received by the relief committee from the local landowners, *ib.* 4285–4291.

Institution in the early part of this year of three organisations, independent of the guardians, to cope with the distress caused by the stoppage of the Glyn Colliery and the Pontymaile Tinworks, *Phillips* 6655 *et seq.*

Information respecting the Pontypool organisation, which was worked by a relief committee, presided over by the Vicar of Trevethin; Table handed in showing the number of people relieved by the committee from the 25th January until the 15th April 1895, *Phillips* 6656–6660.

Particulars as to the second organisation, which was at Pontnewynydd, where it established a soup kitchen on the 15th January, *Phillips* 6661–6663.

Promotion of the third organisation by the Undenominational Christian Mission who have done a great deal of good in the way of charity, having given 100,000 meals at their different stations between August 1873 and December 1894, *Phillips* 6665, 6666. 6725–6728.

Reports, 1895—*continued.*

Pontypool (*Monmouth*)—continued.

3. *Employment and Relief by the Local Boards or Urban District Councils and by the Poor Law Guardians:*

Employment offered by the local board during the winter of 1894 upon stone-breaking, at 1*s.* 3*d.* per yard, or about 2*s.* 6*d.* a day; unfitness of this class of work for the class out of employment, *Griffith* 3909–3913. 3973–3987. 4055–4060.

Statement to the effect that the board of guardians have taken no active part in relieving the distress, whilst the urban district council have co-operated in every way; reference hereon to the amount of the local rates, the poor rate having slightly increased, *Griffith* 3990–4004. 4012–4034. 4174–4193. 4258, 4259.

Further statement as to the guardians not having relieved the able-bodied unemployed, voluntary assistance having been a necessity; expediency of an extension of powers in the former direction, *Griffith* 4194–4197. 4259–4263. 4270–4278.

Explanation that in order to meet the distress in 1874 the guardians opened a stoneyard and had a great deal of stone cut and broken, which they found very difficult to dispose of afterwards; failure of the stoneyard financially, *Phillips* 6644–6647.

Evidence to the effect that during the recent distress the urban district councils of Pontypool, Abersychan, and Panteg employed men to break stones and cinders at 1*s.* 6*d.* and 1*s.* 4*d.* per yard, respectively, some men breaking from five to nine yards, and one or two as many as twelve yards, in the week, *Phillips* 6667–6670——Belief that although some discretion was used in employing the men to break the stones and cinders, any men who applied were given work provided they belonged to the district, *ib.* 6670.

Explanation that at the commencement of the distress the board of guardians directed their two relieving officers to grant relief to persons applying for it, and that relief was given, without any test, in every case where it was found, on inquiry, that the man deserved it, *Phillips* 6672–6674——Expenditure by the board of 4,399 *l.* 8 *s.* 6 *d.* in out-relief in 1892–3, 4,719 *l.* 1 *s.* 4 *d.* in 1893–4, and 5,056 *l.* 7 *s.* 7 *d.* in 1894-5, *ib.* 6675.

Summary in letter from the chairman of the urban district council of the measures taken for the relief of the distress, *App.* (*2nd Rep.*) 372.

4. *Claim to State Aid:*

Grounds upon which witness submits that the case of Pontypool is one which has a strong claim to outside aid in the form of a Government grant, the local voluntary resources having been already greatly strained in order to keep the people from starvation, and no other funds being available to meet the want of employment, *Griffith* 3942–3964. 3990–4004. 4008–4037. 4050–4054——Probable benefit to Pontypool if the cost of in-door relief were paid generally out of Imperial funds, *ib.* 4214, 4215.——*See* also *Tin-plate Trade.*

Pontypridd (*Glamorgan*). Reply received from Pontypridd (in response to circular from the Local Government Board), stating that there was no material increase of applications for relief, the distress among non-applicants not being exceptional, *Sir H. Owen* 48.

Explanations, in February 1895, respecting the extent and character of the local distress and the relief provided by voluntary agencies, *App.* (*2nd Rep.*) 170.

Poole (*Dorset*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App* (*2nd Rep.*) 75.

Poor Law System:

Explanations in detail respecting the orders and regulations of the central board, and the powers of boards of guardians as regards the relief of destitution, witness submitting that such powers are ample whenever applications are made for relief, *Sir H. Owen* 175 *et seq.*; 298, 299. 373 *et seq.*; 656, 657——Duty of the guardians to give relief to any destitute person who applies for it, *ib.* 340–343——Objection to a dual authority for the administration of poor relief, *ib.* 647.

Doubt whether any modifications can be made in the regulations of the central board as regards the unemployed, without the risk of affecting the independence of the numerous class repugnant to accept relief, *Sir H. Owen* 660–662.

Contemplated combined action on the part of the unemployed for the breaking down of the present system of poor relief, if the Committee cannot recommend some temporary scheme for the prevention of starvation, *Keir-Hardie* 746, 747——Expediency

Reports, 1895—*continued.*

Poor Law System—continued.

diency of a relaxation of the present legal restrictions upon relief in times of exceptional distress, *Hilleary* 1641–1648.

Large class of unemployed whom the Poor Law system does not touch, who are prepared to work, but to whom pauperism and disfranchisement are repugnant, *Alden* 2024–2029——Suggestion that the Poor Law restrictions be modified during severe winters, and that relief be afforded on certain conditions, but without disfranchisement, *ib.* 2030, 2031.

Division of the poor and unemployed into two main classes, the worthy and the unworthy, these being again sub-divisible into the competent and the incompetent, *Hills* 2570——Proposed maintenance of the present Poor Law machinery, together with the existing disqualifications as regards the incompetent, *ib.* 2570. 2767–2769. 2795. 2797——Opinion as to the sufficiency of the present powers of the guardians and local authorities to deal with exceptional distress, *Fenton* 2986–2997. 3062–3069.

Grounds for the contention that there are only two means of coping with the difficulties due to want of employment, namely: the more perfect administration of the Poor Law, and the extension throughout the country of charity organisation societies, *Mackay* 5412–5427. 5631 *et seq.*; 5725 *et seq.*——Conclusion that if it were known that men employed in seasonal trades would be relieved when they had no work the tendency would be to decrease the wages in those trades; contention that the most humane treatment is to continue as rigidly as may be the system laid down in the Report of the Poor Law Commission of 1834; *ib.* 5444–5455. 5754–5757.

View of witness that the Poor Law should be more elastic, so that persons who are not quite destitute could be helped by the guardians, as under the Scotch Poor Law; desirability of helping the thrifty man without taking him off the register, *Phillips* 6678 *et seq.*; 6708-6718. 6791, 6792——Contention that the fact that there is no extra pressure on the Poor Law does not in the least prove that there is no exceptional distress, many men being supported by trade unions and private charity, *Dodd* 7588.

Immense expenditure by Poor Law authorities out of the rates in support of the poor and destitute, which would indirectly be reduced under the operation of witness' scheme of farm colonies, *Mather* 8975–8995 —— Examination as to whether the failure of the large expenditure to meet the wants of the unemployed does not raise a distrust of the principle on which relief is administered, *Lansbury* 10439. 10449–10453.

Evidence as to the powers at present possessed by Poor Law authorities in dealing with cases of distress resulting from want of employment, derived from the Poor Law Amendment Act of 1834, London and other urban unions being regulated by the Out-door Relief Regulation Order of the 14th December 1852; *Vallance* 11533, 11534—— Sufficiency of the existing Poor Law wisely administered, in co-operation with organised charity, to meet ordinary recurrent or seasonal periods of distress, while exceptional cases can be dealt with by the Modified Workhouse Test Order, *ib.* 11551.

Paper submitted by Sir Hugh Owen explanatory in detail of the powers of Poor Law guardians and of their officers as to relief, *App.* (*3rd Rep.*) 557–562.

Explanations in connection with the several provisions under different Acts as regards the employment of the poor by boards of guardians for wages, *App.* (*3rd Rep.*) 561.

See also *Boards of Guardians. Franchise. Local Government Board. Labour Test. Metropolis. Out-door Relief. Pauperism. Scotland. West Ham.*

Poplar:

Growing difficulty in Poplar as regards employment, though up to 15th February the applications for relief were less than in previous years, *Sir H. Owen* 130—— Increasing distress and want of employment by the middle of February, *ib.* 321–326.

Amount of the poor rate in Poplar and other East-end parishes adverted to in connection with the question of employment on sanitary and other useful works, *Sir H. Owen* 493–515.

Relief works carried on last year in Poplar under the same conditions as in West Ham; conclusion from the experience then gained as to the necessity of separating assisted labour from labour in the ordinary channels, *Hills* 2534——Great credit due to the Poplar district for the practical steps taken in order to deal with the unemployed difficulty; liberal action of Mr. Hills in the matter, *Benn* 3138.

Experience to the effect that distress in Poplar is not merely a question of seasons, although in the winter it becomes more acute, *Lansbury* 10401. 10403. 10414—— Information in regard to the great distress of last February; particulars as to the ages of 1,939 men who worked in the stone-yards during the six weeks they were opened,

Reports, 1895—*continued.*

Poplar—continued.

Lansbury 10402–10404——Statement showing that by the opening of the stoneyards the union has spent 2,720*l.* on which there will be no return whatever, *ib.* 10404.

Reference to the crowded state of the workhouse, which, at the present time, has 125 inmates over the statutory number, *Lansbury* 10404–10408——Co-operation of the guardians with the Board of Works during the winter to relieve the distress; experience that at the depôts men fought to obtain tickets to go to work, *ib.* 10408.

Evidence respecting the large number of youths from eighteen to twenty-one who are out of work in Poplar, *Lansbury* 10408. 10447, 10448——Difficulty in obtaining employment in the case of men whose ages range from thirty to sixty, *ib.* 10408——Reference to the large number of widows to whom out-door relief is given, *ib.* 10408.

Contention that the poor law union of Poplar is not supporting a higher average of paupers than is the case in other adjoining unions, *Lansbury* 10439–10446.

Particulars supplied by Mr. Farnfield (clerk to the district board of works), in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 120–122.

Further information supplied by the clerk, dated 5th March 1895, as to the expenditure on extra labour up to 2nd March, and as to the operation of the labour yards, *App.* (*2nd Rep.*) 387, 388——Return of money expended, and of the number of men employed in snow removal and road sweeping in Poplar, Bow, and Bromley, up to 2nd March, *ib.* 387.

Return showing for each of the years 1884–85 to 1893–94, the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out door relief, *App.* (*3rd Rep.*) 524–533.

See also *Dock Labour. West Ham.*

Population and Pauperism. Table showing the number of persons relieved on the corresponding days of January in each of the years 1857–95, together with the population of the country, and the number of paupers in every 1,000 of the population on the last day of the fifth week of the month in each year, *App.* (*2nd Rep.*) 13.

Port Glasgow (*Renfrew*). Letter from the town clerk respecting the amount of distress in the burgh and the relief measures adopted, *App.* (*3rd Rep.*), 605——Amount of distress in Port Glasgow parish, through the severe weather; steps taken for its relief, *ib.* 771, 772.

Portland (*Dorset*). Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 333.

Portsmouth. Letter from the mayor of Portsmouth, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 61.

Preston (*Lancashire*). Absence of exceptional distress in Preston County Borough, *App.* (*2nd Rep.*) 61——Special measures of relief not necessary in the rural district of Preston, *ib.* 412.

Printing and Book Trade. Probable cause of the increased per-centage of unemployed in the printing book trade in July and August as compared with the period from October to December, *Smith* 4577–4580.

Chart submitted by Mr. Llewellyn Smith showing the seasonal and cyclical fluctuations of employment in the trade, *App.* (*3rd Rep.*), *p.* 52.

Prison Labour. Attention called to the employment of prisoners on certain industries; opinion that there is no objection provided they do the work for Government use only, *C. Booth* 10549–10554.

Private Enterprise. Belief that the continuance of depression is mainly due to lack of enterprise; possibility that a large public undertaking, such as light railways, might encourage private enterprise, *C. Booth* 10533–10539. 10687–10691——Opinion that enterprise depends greatly upon Governmental action, *ib.* 10534. 10713–10716.

Provincial Districts. Replies received from seventy provincial boards, in response to circular from the Local Government Board; general purport of these, in about fifty cases, that there was no material increase of distress, and that the guardians did not anticipate any difficulty in dealing with the distribution, *Sir H. Owen* 6 *et seq.*

Reference to special cases, taken in alphabetical order, as fair samples of the whole of the provincial replies received by the Local Government Board, *Sir H. Owen* 12–14 —— Large centres of population comprised in the ninety unions to which circulars have been sent, *ib.* 15, 16.

Issue of a further circular by the Local Government Board (on the day the Select Committee was appointed) to their Inspectors in the thirteen provincial districts, asking for immediate information on several points; reports received in reply, *Sir H. Owen* 64–69.

Reports, 1895—*continued.*

Provincial Districts—continued.

Communications from the several Inspectors submitting information respecting the distress in their respective districts, and the action taken by the guardians and local authorities, *App.* (*2nd Rep.*) 20–56.

Local replies from the various provincial boards to the circular of the Local Government Board, *App.* (*2nd Rep.*) 57 *et seq.*

Putney. Absence of exceptional distress in Putney, *Sir H. Owen*, 137.

Pwllheli Rural District (*Carnarvon*). Special measures of relief not necessary in this district, *App.* (*2nd Rep.*) 433.

R.

Ramsbottom (*Lancaster*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 364.

Rates. Non-objection to a small rate being levied in small towns for the relief of exceptional distress, where no other funds are available, *Bell* 8053–8057.

Rawtenstall (*Lancaster*). Letter from the mayor of Rawtenstall, dated 20 February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 76.

Reading. Letter from the town clerk, in February, explanatory of the extent and causes of the local distress and showing the measures of relief provided, *App.* (*2nd Rep.*) 326–328——Information as to the large additional employment during the frost in connection with the severe weather, *ib.* 380.

Re-appointment of Committee. Hope expressed by the Committee that in another Parliament the House will renew the inquiry in order that the Legislature may be guided to the adoption of some palliative for the evils to which many of the best and most industrious among the people are at present exposed, *3rd Rep.* v.

Reclamation Works. Proposed employment, in times of exceptional distress, upon the reclamation of slob-lands and of waste lands, *Alden* 2064, 2065——Objection to large numbers of workmen being sent from a distance and located for any length of time upon such work as an expensive reclamation scheme, *Hills* 2699, 2700.

Information as to the large areas of land at Plumstead, Hackney, Wandsworth, Poplar, and elsewhere, suitable for reclamation or cultivation, *Benn* 3110–3125. 3266–3277——Extensive employment to be provided, also, under some well-considered scheme, for the reclamation of Thames foreshore, *ib.* 3110. 3275–3277.

Explanations respecting the experiment carried on by Mr. McDougall upon some lands in the Isle of Dogs, the street sweepings of London having been utilised with excellent results, *Benn* 3110. 3117–3120. 3126–3129. 3147–3153——Considerable areas of flooded or marsh land, as in the case of the Isle of Dogs, Hackney Marshes, Thames foreshore, &c., which might be reclaimed and rendered fit for cultivation, *ib.* 3110.

Doubt as to the practicability of profitably employing the unemployed in reclaiming the land on the low parts of the River Thames near London; belief that putting the unemployed upon the land, for the purpose of giving them relief, would be a failure, *Mackay* 5379 *et seq.*; 5574–5581.

Evidence in support of rhe proposition that large numbers of the unemployed might be absorbed in the cultivation of unreclaimed and cultivable land, and that the extensive influx of rural labour into the towns would thus be beneficially checked, *Hunter* 8287–8292. 8482–8488. 8502–8520. 8543–8546. 8567–8572.

See also *Relief Works.*

Redruth (*Cornwall*). Amount of distress in the Redruth rural district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 195——Extent and character of the distress in the urban district in February; remedial measures adopted, *ib.* 352.

Register of Unemployed. Value of a register of the unemployed from month to month; suggestion that the local authorities should be compelled to keep a labour register of all the unemployed, and to send in monthly returns to the Local Government Board, *Alden* 2034, 2035. 2352.

Statements by the various boards of guardians and local authorities throughout England and Wales and Scotland upon the question whether an unemployed register

Reports, 1895—*continued.*

Register of Unemployed—continued.

is maintained, and with what results, *App.* (*2nd Rep.*) 57 *et seq.*; *App.* (*3rd Rep.*) 565 *et seq.*

See also *Labour Bureaux.*

Reigate (*Surrey*). Explanation, in February 1895, respecting the extent and character of the distress in the municipal borough, and the relief provided, *App.* (*2nd Rep.*) 142 ——Sufficiency of voluntary agencies in the rural district during the severe weather, *ib.* 433.

Relief Works:

1. *Experience hitherto in the provision of Relief Works for the Unemployed.*
2. *Scheme of Mr. Hills for a system of Relief Works or Labour Colonies throughout the United Kingdom, to be aided and subsidised by the State on certain conditions.*
3. *Rate of Payment of Men Employed on Relief Works.*
4. *Conclusions and Suggestions generally upon the Question of Relief Works for the Unemployed, and of Contributions by the State.*

1. *Experience hitherto in the provision of Relief Works for the Unemployed:*

Consideration of the extent to which the labour recently employed upon relief works by the local authorities has been inefficient and costly; instances at Glasgow, Cardiff, and Swansea, *Sir H. Owen* 612-618——Degree of inquiry before men are employed on local relief works, *ib.* 642-645.

Consideration of experiments in Paris and elsewhere in the finding of work for the unemployed, the results not being satisfactory, because the conditions and the administration were wrong; expediency of further experiments on an improved system, *Alden* 2241-2269. 2287-2313.

Action taken by ninety-six local authorities in Great Britain, in the winter of 1892-93, for providing work for the unemployed, *Smith* 4723——Reference to the steps taken in eleven important districts, in the winter of 1893-94, for the provision of relief works, *ib.*

Belief that no workman, with any self-respect, will work on the relief works or in labour yards, which are very largely monopolised by loafers, *Mackay* 5807-5810. 5866-5868.

Experience of witness, in regard to the Wanstead Flats and Abbey Mills experiments, that sober and steady unemployed men do resort to the labour colonies when out of work, at all events as a temporary means of maintenance; doubt, however, as to their breaking up their homes to go to such colonies, *Moore* 9624-9638. 9795-9801.

Communications from boards of guardians, district boards, and other local bodies in England and Wales and Scotland, as to the relief works in the several towns, burghs, parishes, &c., *App.* (*2nd Rep.*) 57 *et seq.*

2. *Scheme of Mr. Hills for a system of Relief Works or Labour Colonies throughout the United Kingdom, to be aided and subsidised by the State on certain conditions:*

Authority given to witness by the West Ham Relief Committee to submit a scheme (now in the printer's hands) for dealing with the unemployed throughout the country, *Hills* 2566——Explanation that the provisions of the scheme advocated by witness for the whole country have been hastily embodied in the draft Bill circulated among the members of the Committee, some revision being necessary, *ib.* 2568.

Grounds for justifying the proposition that the State, the local authority, and the individual (or charitable public) should co-operate in providing the money required for a system of works as a means of solving the problem of the unemployed question, *Hills* 2568 *et seq.*

Suggestion that the able-bodied unworthy poor might be dealt with by a county machinery, who might provide labour colonies where the men must work as a condition of their being fed, *Hills* 2570——Main objects of the proposed Bill to deal with the worthy poor, whether competent or incompetent, *ib.*

Primary importance of the question of the able-bodied worthy poor who are willing to work, but for whom there is no employment, *Hills* 2572——Suggestion that this class be relieved by means of employment to be provided by a joint committee for each district, comprising the local authority, and subscribers to charitable funds, *ib.*

Proposal that the State shall contribute an amount equal to the aggregate subscriptions of the local authority and of charitable subscribers, but not exceeding 1*l.* per cent. of the population of the district, *Hills* 2572, 2573.——Expediency of the administration being entirely local, *ib.* 2572-2574——Very careful administration required as regards relief works, this being a novel experiment on a national scale, and presenting many difficulties, *ib.* 2573.

Reports, 1895—*continued.*

RELIEF WORKS—continued.

2. *Scheme of Mr. Hills for a system of Relief Works, &c.*—continued.

Evidence in explanation and support of the proposal that no person should be employed on relief works for more than six days of six hours each in any week, or at a rate of wages exceeding two-thirds of the current rate in the district, *Hills* 2573, 2574. 2765, 2766——Suggestions as to the work being pieced at market rates and measured up, and as to the way in which any profits are to be dealt with; facility in fixing the rates, *ib.* 2573–2576.

Important advantages claimed for the system of piecing the work, with a minimum wage, an incentive being thus given to industry, without introducing overtime, *Hills* 2573, 2574——Simple character of the work (chiefly digging) contemplated under the proposed national scheme; condition to be enforced, as to West Ham, that a certain minimum of labour must be performed, *ib.* 2574–2580. 2647, 2648——Facility of conveying men to and from work near the metropolis by means of cheap trains, greatly to their moral and physical benefit from employment in the open air, *ib.* 2580. 2651, 2652.

Belief that the example set by West Ham and Wanstead Flats could be made applicable generally, witness being prepared to organise (at his own expense) the whole country by the end of November if the scheme advocated by him be sanctioned by Parliament, *Hills* 2585–2589.

Convenience of the administration oft he works being under the borough council, or, rather, local authority, whilst the charitable relief should come under the Poor Law authorities; official staff available in the former case, *Hills* 2592. 2698——Checks upon the maladministration of the joint fund by tho local authority; contemplated power in the State to withhold contributions if not satisfied with the local administration, *ib.* 2594–2598.

Estimate of from 500,000*l.* to 800,000*l.* as the annual contribution by the State; belief that the present State advance of 2,500,000*l.* might be saved, *Hills* 2598, 2599.

Decided objection to payment on the works at the full rate of wages for only three days a week, instead of at a reduced rate for the six days; ample opportunity of the men in the latter case to look out for other employment, *Hills* 2616–2624——Further explanation as to the division ol work and of profits among the men, *ib.* 2625–2630.

Statement to the effect that the fund available for any particular district would not be confined to the amount raised in such district, but might be supplemented out of the county or central fuud, *Hills* 2631-2646——Importance of the principle of getting money's worth in work for the money paid, those not willing to work being eliminated from the scheme, *ib.* 2650–2652——Approval of only two-thirds, or about 2*d.* an hour, being paid in agricultural districts where wages are very low, *ib.* 2653–2657.

Great advantage of the scheme as insuring that competent men may always obtain work and wages without resorting to the Poor Law for relief; nor would it lead to any lower wages in the summer, *Hills* 2663–2666——Conclusion that the poor rates would be decreased by the scheme, rather than increased, *ib*, 2667, 2668.

Difficulty in at once discriminating between a worthy and an unworthy applicant for relief, with a view to the former not being put under disqualification, *Hills* 2676–2680——Varying rate of wages in different localities and industries, it being proposed by witness that the rate under his scheme shall be about one-third less than the normal rate, *ib.* 2701–2710——Necessity of falling back on the existing machinery in auy district where there are no voluntary subscribers, *ib.* 2711, 2712. 2763, 2764.

Further approval of employment being offered on condition that the men who can work must work for their food and living, *Hills* 2713–2717——Denial that there would be competition with ordinary industrial employment. the reduced payment to be offered not inducing men to give up regular work if they can get it, *ib.* 2725–2727. 2749-2752.

Very large amount of work which may be provided round the metropolis and throughout the country in the form of digging, trenching, planting potatoes, &c.; belief that market gardeners and others would not be injuriously affected on the score of competition, *Hills* 2728–2748——Value of the scheme as a means of promoting regularity of employment and preventing deterioration of workmen, *ib.* 2778–2790.

3. *Rate of Payment of Men employed on Relief Works:*

Non-interference by the Local Government Board with the localities respecting the rate of wages paid in the case of loan works, *Sir H. Owen* 695–698.

Evidence to the effect that local committees in providing relief works for the unemployed should pay them the full rate of wages instead of only two-thirds, *Keir-Hardie* 1087–1129.

Reports, 1895—*continued.*

RELIEF WORKS—continued.

3. *Rate of Payment of Men employed on Relief Works*—continued.

Much better work and value to be obtained by paying at the union rate, *Alden* 2037——Check upon abuse by not employing labourers for a full day or for a whole week, when a minimum rate of wages, or about 6*d.* an hour, is paid, *ib.* 2088–2097——Consideration of and reply to objections to the proposal that the men for whom work is to be found by the State should be paid the union rate of wages, 6*d.* or 6½*d.* an hour, *ib.* 2157–2168. 2192–2199. 2372–2403. 2424–2441.

Payment of the extra men employed in Islington during the frost at a reduced rate so as not to interfere with employment at the ordinary rate, *Dewey* 3819–3825——Objection to payment at the trades union rate of wages, save by piecework, *Bell* 7923–7926.

4. *Conclusions and Suggestions generally upon the Question of Relief Works for the Unemployed, and of Contributions by the State:*

Urgency of the present crisis so that local relief works would not avail by reason of the delay in their establishment, *Keir-Hardie* 738——Expediency of State aid in the provision of work for those who are unemployed through no fault of their own, *ib.* 1040. 1150. 1217–1221——Local inability to find sufficient work for the unemployed in the large centres of industry, *ib.* 1134, 1135.

Suggestions as to the class of works which Government might promote for the unemployed, and as to the removal of able-bodied men from one part of the country to another, *Hilleary* 1451–1455. 1556-1563——Difficulty in suggesting any scheme for providing sufficient work in such exceptional winters as the present, *Alden* 2335, 2336.

Statement showing that outside the metropolis, but within the County of London, there are large areas of land, as at Plumstead, Hackney, Wandsworth, Poplar, and elsewhere, suitable for cultivation or reclamation upon which men out of work could be usefully, if not profitably, employed in time of distress, *Benn* 3110–3125. 3147–3153. 3266–3277——Explanation that witness is not prepared to offer suggestions as to any scheme for the entire country, though he would favour the principle of a county contribution, *ib.* 3216–3220. 3240–3245.

Inability of witness to suggest any permanent remedy as regards the question of the unemployed and the provision of relief works, *Tagy* 3569–3571.

Grounds for the conclusion that the circular of the Local Government Board as to the several modes of employment to be resorted to during severe winters is not only useless but misleading, *Dewey* 3733-3748——Mischievous effect of the circular in inducing persons to believe that the local authorities are almost bound to provide relief works, *ib.* 3733. 3762, 3763. 3806–3813.

Proposition that it is undesirable to create useless work for the sake of employing the unemployed (out of the rates), inasmuch as this would interfere with regular employment; exception as regards street sweeping, *Dewey* 3746–3752. 3762, 3763——Strong deprecation of the Islington Vestry being a large employer of casual labour on unnecessary work for the sake of giving relief; injury thereby to the smaller and poorer ratepayers, *ib.* 3814-3818. 3827–3843.

Decided opinion that to start relief works for wages in cases of destitution due to decay of trade only tends to aggravate the congestion and to do more harm than good; citation of the relief works at Nottingham in support of this opinion, *Mackay* 5354–5362. 5367–5374. 5419——View of witness that while it is perfectly easy to start as many relief works as can be paid for, and by so doing getting a large number of paupers, the crux of the matter is to get these paupers back into the ranks of industry again, *ib.* 5419-5427.

Conclusion that if every authority in London were to make it known that a certain sum of money had been set aside to spend upon relief works in winter, many people would depend upon that prospect, and so aggravate the conditions of distress, *Mackay* 5432, *et seq.*——Grounds of objection to the suggestion that the wealthy might help the poor by placing money at the disposal of the local authority to be administered in relief works; contention that the want of economical employment should not be concealed, *ib.* 5661, 5662——Opposition of witness to any form of municipal relief work to meet the "unemployed" difficulty, except work which arises in the natural development of the industry of the country, *ib.* 5869–5881.

Opinion that when relief work is provided it should be given by the sanitary authority or local board rather than by the board of guardians; objection to the guardians being called upon to deal with exceptional distress, *Shand* 6028–6032. 6142–6146.

Evidence in support of the conclusion that the municipal authorities should have charge of relief works that are started to meet exceptional distress, rather than the Poor Law authorities, as the former have better means of disposing of the stone, &c., broken,

Reports, 1895—*continued.*

RELIEF WORKS—continued.

4. *Conclusions and Suggestions generally upon the Question of Relief Works, &c.*—continued.

broken, and as the stigma of pauperism would not be felt so strongly by the men employed, *Phillips* 6693–6702. 6731–6750. 6788–6790.

Approval of useful works for the unemployed, but not in the form of penal colonies, *Hunter* 8411–8414——Grounds for objecting to relief works either in rural districts or in towns, *Willink* 8708–8713. 8727——Three remedies suggested by witness as a means of providing work for the unemployed, *Hunt* 10181, 10182. 10241–10246.

Relieving Officers. Careful inquiry by relieving officers with reference to applications for relief, *Sir H. Owen*, 351–353.

Paper submitted by Sir Hugh Owen, explanatory in detail of the powers of relieving officers, *App.* (3*rd Rep.*) 557–562.

See also *Out-door Relief.*

REMEDIAL MEASURES:

View of witness that the difficulty arising from want of employment can be met either by drastic changes in the social organisation, or by means of a large number of small reforms and improvements; preference for the latter course, *Dodd* 7487, 7488——Possibility of obtaining many of the reforms recommended without recourse to an Act of Parliament, while others are merely extensions of principles that have already been accepted by the Legislature, *ib.* 7487——Inability of the Committee to make any recommendations applicable to the present juncture or to adopt any plan which Parliament might be expected readily to accept, 1*st Rep.* iv.

Summary of the principal suggestions that have been submitted to the Committee; careful consideration required before any proposal can be adopted, further investigation being necessary, 1*st Rep.* iv, v.

Suggestions and explanations by the various local bodies throughout the United Kingdom, in reply to Circulars from the Central Authority, *App.* (2*nd Rep.*) 57 *et seq.*; *App* (3*rd Rep.*) 565 *et seq.*

Summary (in Paper submitted by the Chairman of the Committee) of remedies suggested for the relief of distress, as well as for the creation of work for the unemployed, *App.* (3*rd Rep.*) 805, 806.

Reference to the various schemes laid before the Committee by Mr. Hills, Mr. Mather, the Salvation Army, the Church Army, and others, all of them evincing great care and thought in elaboration as being unavoidably left without the full consideration they deserve; that is, through the sudden Dissolution of Parliament, 3*rd Rep.* v.

Suggested re-appointment of the Select Committee with a view to further inquiry and to the recommendation of some remedial measures for the relief of the deserving and industrious poor, 3*rd Rep.* v.

ST. GEORGE'S-IN-THE-EAST:

1. *Explanations respecting the Extent and Character of the Distress and the Action of the Poor Law Authorities as regards Out-door Relief, &c.; strict Administration in the Parish.*
2. *Information as to the Operations of the Charity Organisation Society; beneficial Results claimed.*

1. *Explanations respecting the extent and Character of the Distress and the Action of the Poor Law Authorities as regards Out-door Relief, &c.; strict Administration in the Parish:*

Satisfactory letter from St. George's-in-the-East on 6th February; virtual discontinuance of out-door relief in this parish, *Sir H. Owen* 90——Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *ib.* 200.

Considerable distress in St. George's-in-the-East, though up to a recent date there was no material increase in the applications for relief; beneficial operation of some charity agencies, *Sir H. Owen* 327–336——Different practice respecting out-door relief in St. George's-in-the-East, as compared with St. Olave's and Camberwell; strict administration of the poor law in the former union, charitable organisations being also in operation, *ib.* 406–415.

Very exceptional and strict administration of poor relief in St. George's-in-the-East, valuable co-operation on the part of charitable organisations, *Sir H. Owen* 671–674.

Conclusion that there are fewer sporadic relief works in St. George's-in-the-East than elsewhere, *Mackay* 5616–5620——Possibility that the deaths from starvation or privation in St. George's amount to about one-tenth of the total for London, although the population is only one-eightieth of the whole population; particulars of a case where out-relief was applied for at St. George's Union, and refused, *ib.* 5699–5705.

Disagreement with statement that the poor have been largely forced into the workhouses; inaccuracy of Dr. Hunter's figures, so far as St. George's Union is concerned *Mackay* 5795–5798——Contention that the poor in St. George's-in-the-East are more independent than they were fifteen years ago, and that on the whole there is less poverty there, *ib.* 5832–5838.

Belief that the poor of St. George's-in-the-East did not suffer more than usual this winter until the frost came, when the exceptional distress was due to the exceptional severity of the weather, *Martineau* 6815, 6816.

View of witness that out-door relief would have had very little effect in St. George's, and might have done harm; reduction in pauperism in the district since out-door relief was given up, *Martineau* 6821 *et seq.*——Doubt as to any real starvation cases occurring in the parish; personal inquiries of witness as to whether the children in the board school have had breakfast before they come to school, *ib.* 6823. 6896–6899.

Increase of frugality and independence in St. George's since the cessation of out-door relief; certainty that there is as much or more poverty in Bethnal Green, where out-door relief is given, *Martineau* 6824–6826. 6847, 6848. 6876 *et seq.*

Opinion that out-door relief should never be given in St. George's, all forms of relief works being mistaken methods of helping the poor; disposition of witness to rely on the Charity Organisation Society and the local charities to meet exceptional distress, *Martineau* 6828–6836. 6860, *et seq.*; 6885–6893. 6922–6932.

Arrears of rent due to the East End Dwellings Company scarcely larger this winter than they have been in previous winters, *Martineau* 6837–6840——Belief that the poor have not suffered on account of the refusal to excuse their rates, *ib.* 6853–6856.

Reports, 1895—*continued.*

ST. GEORGE'S-IN-THE-EAST—continued.

1. *Explanations respecting the Extent and Character of the Distress, &c.*—contd.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 to 1893 94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

2. *Information as to the Operations of the Charity Organisation Society; beneficial Results claimed:*

Detailed explanation of the exceptional system pursued by the Charity Organisation Society in co-operation with the Poor Law in St. George's-in-the-East (where there is no labour yard) for the relief of the unemployed, *Mackay* 5327 *et seq.*

Statement that, of the twenty applicants who came to the Society for relief during the last three months, three were relieved unconditionally, being clubmen, eight accepted the Society's conditions and went into the workhouse, and nine refused the conditions, *Mackay* 5329–5342.

Evidence to the effect that the reason why so few of the unemployed applied to the Society in St. George's during the recent frost was because of the large amount of charitable relief given throughout the parish; belief that where there is extra depression there will be extra charity, *Mackay* 5375–5378. 5518–5541. 5608 *et seq.*; 5643–5647. 5765.

Argument as to the beneficial operation of the Charity Organisation Society in the parish as tending to make the people more self-reliant, *Mackay* 5436 *et seq.*; 5640 *et seq.*

Conclusion that the ways and means of relieving those in distress in St. George's were sufficient, help having been given by the Charity Organisation Society and by both the Church of England and Dissenting clergy, *Martineau* 6817-6820.

St. George's (*Hanover Square*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 198, 199.

Letter from the vestry clerk, dated 25th February 1895, respecting the distress in the parish and the employment and relief works provided by the vestry, *App.* (*2nd Rep.*) 303.

Return showing for each of the years 1884–85 to 1893-94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524-533.

St. George Urban District (*Gloucester*). Amount of distress in this district previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 425.

St. Germans Rural District (*Cornwall*). Sufficiency of voluntary agencies in this district during the severe weather, *App.* (*2nd Rep.*) 452.

St. Giles-in-the-Fields and St. George, Bloomsbury. Absence of any exceptional distress during the recent winter months in the parishes of St. Giles-in the-Fields and St. George, Bloomsbury, *Sir H. Owen* 90——Statement showing the action taken, or proposed to be taken, in St. Giles parish as regards the provision of work or of relief for the unemployed, *ib.* 192—— Absence of exceptional distress in St. Giles; employment provided by the District Board of Works, *App.* (*2nd Rep.*) 123.

Return handed in by Sir Hugh Owen, showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

St. Helens (*Lancashire*). Particulars supplied by the town clerk, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies respectively, &c., *App.* (*2nd Rep.*) 130, 131.

St. Ives (*Cornwall*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 264.

St. James, Westminster. Letter from the vestry clerk, dated 25th February 1895, as to the extent of the distress in the parish and the relief provided by the vestry and by voluntary societies, *App.* (*2nd Rep.*) 304, 305.

St. Luke (*Middlesex*). Letter from the chairman of the vestry, dated 25th February 1895, as to the extent of distress in the parish and the employment provided by the vestry, *App.* (*2nd Rep.*) 305.

St. Margaret and St. John (*Westminster*). Limited amount of distress, save during the frost; employment provided by the local authorities, *App.* (*2nd Rep.*) 456.

Return

Reports, 1895—*continued.*

St. Margaret and St. John (Westminster)—continued.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (3*rd Rep.*) 524–533.

St. Martin-in-the-Fields. Considerable amount of employment given by the vestry during the severe weather; absence of exceptional distress, *App.* (2*nd Rep.*) 394.

St. Mary (Newington). Letter from the chairman of the vestry, dated 25th February 1895, relative to the steps taken by the vestry in order to provide employment for those in want of relief, *App.* (2*nd Rep.*) 305.

ST. OLAVE'S UNION (SOUTHWARK):

1. *Considerable Extent of St. Olave's Union.*
2. *Abnormal Increase of Poor Relief in St. Olave's as compared with other Metropolitan Unions; several Causes of the Local Distress and Want of Employment.*
3. *Stoneyard; Particulars as to its Administration, the Facilities as to Admission, Numbers Employed, Rate of Pay, and Total Cost.*
4. *Employment irrespective of the Stoneyard.*
5. *Workhouse Accommodation.*
6. *Rates.*
7. *Equalisation of Rates Act and Common Poor Fund.*
8. *Details respecting the Amount and Cost of Out-door and In-door Relief, respectively.*
9. *Lunacy.*
10. *Vagrants.*
11. *Regulations generally as regards the Administration of In-door and Out-door Relief.*

1. *Considerable Extent of St. Olave's Union:*

Explanation that the Union comprises five parishes, part of the Borough of Southwark; that is, St. John, Horselydown; St. Thomas, Southwark; St. Mary Magdalene, Bermondsey; St. Olave, Southwark; and St. Mary, Rotherhithe, *Fenton* 2802, 2803.

2. *Abnormal Increase of Poor Relief in St. Olave's as compared with other Metropolitan Unions; several Causes of the Local Distress and Want of Employment:*

Letter from St. Olave's, dated 1st February, together with reports from relieving officers, as to the extent and causes of local distress; very much larger increase of applications since that date than in any other Union in London, *Sir H. Owen* 100–108 ——Abnormal increase of relief in St. Olave's Union, careful inquiry being now made into all cases; special causes to which the distress is owing, *ib.* 226–234. 237–245. 344–348.

Distress mainly due to depression in the leather and tanning trades and the want of work at the riverside and the docks; belief that the number of unemployed from these causes is increasing yearly, *Fenton* 2806–2808. 2812–2830—— Tendency to increased want of employment where manufactories and places of business are removed, as in making the approaches to the Tower Bridge, *ib.* 3007–3009.

Letter from Mr. E. Bayley, dated 27th February 1895, to the effect that the local distress is temporary and occasioned mainly by the frost; relief provided by the district board and by voluntary agencies, *App.* (2*nd Rep.*) 340——Limited number of names on the unemployed register, *ib.*

Opinions as to the extent and cause of distress in the several districts of the union, *App.* (2*nd Rep.*) 472.

Return in reply to inquiries of Local Government Board as to the extent and causes of distress in the union and the remedial measures adopted, *App.* (2*nd Rep.*) 478.

3. *Stoneyard; Particulars as to its Administration, the Facilities as to Admission, Numbers Employed, Rate of Pay, and Total Cost:*

Information as to the operation of a stoneyard in St. Olave's, the pay being at the rate of 6*d.* an hour; exclusion, after a time, of men from outside parishes, *Sir H. Owen* 104–128.——Case of St. Olave's Union further adverted to in connection with the employment and rate of payment given for a time to outsiders, the increase of relief being very startling, *ib.* 374, 375. 406–410.

Considerable distress in the several districts in the Union during the winter, through want of employment, so that the guardians decided on the opening of a stoneyard, on 7th January, work being offered therein at certain rates of wages, *Fenton* 2804 *et seq.*

St. Olave's Union (*Southwark*)—continued.

3. *Stoneyard; Particulars as to its Administration, &c.*—continued.

——Information as to the conditions under which the stoneyard is in operation, the restrictions as to admission, the amount of work required to be done, and the rate of payment in money and in kind, the total representing 3*s.* 6*d.* per man per day, *Fenton* 2832 *et seq.*

Limit of residence not imposed for the first few days, so that there was a large influx from outside districts; steps taken for the removal of this difficulty, witness having previously closed the stoneyard on his own responsibility till some remedies could be adopted, *Fenton* 2833–2836. 2871–2873. 2919–2923. 2966–2968.

Varying number of days in the week for which different classes may work in the stoneyard, *Fenton* 2838, 2839. 2931, 2932——Very large increase of staff in connection with the stoneyard and with the great increase of out-door relief, *ib.* 2846–2857. 2948–2950. 3037–3042.

Particulars as to the numbers relieved through the stoneyard and the total cost, the numbers in one day having reached 1,759; comparison with the number of out-door poor in previous winters, *Fenton* 2858–2870. 2901–2909. 2914–2918. 2957–2959——Recent decision of the guardians that men residing in common lodging-houses should be eligible for admission to the stoneyard, whereas these may not be genuine residents, *ib.* 2924–2929——Letter from the Local Government Board, on 8th January, as to the conditions on which approval is given to the opening of the stoneyard, *ib.* 2930–2932.

Difficulty in obtaining a fair day's work in return for the wages paid, even from those who are really capable and able-bodied, a large proportion of whom shirk the labour as much as possible, in spite of the increased staff and supervision, *Fenton* 2933–2940. 2950. 2955, 2956. 3028–3040. 3046–3054. 3061.

Information as to the cost of the granite obtained for the stoneyard, the large increase therein, and the unprofitable results of the system, *Fenton* 2941–2947. 2960–2963. 3021–3027——Objectionable results from the payment of so much as 3*s.* 6*d.* a day in the stoneyard; demoralising effects of the system, *ib.* 2975–2985. 2998–3001. 3046–3054.

Particulars as to the opening of the stoneyard, which was decided upon somewhat hurriedly at the beginning of the year; details as to the rate of pay and the number of days per week for which different classes of men were allowed to work, *Shand* 5931 *et seq.*; 5967 *et seq.*; 6083–6115.

Submission by witness of a return showing the number of men employed in the stoneyard each day that it was open, the maximum being 1,759 on the 21st February; considerable increase also in the out-door relief given at the houses, *Shand* 5940 *et seq.*; 6051–6059.

Approval of a large system of out-door relief, if it be given judiciously and carefully; admission that the out-door relief in connection with the stoneyard was not altogether judiciously managed, although the intention was good, *Shand* 5246 *et seq.*; 6154-6173.

Estimate that every ton of stone broken in the stoneyard this year costs the union 7*l.*, the actual breaking costing 4*l.* 6*s.*, and the superintendence and material, &c., 2*l.* 14*s.* per ton, whereas 5*s.* would probably be a fair price for breaking a ton of stone under ordinary conditions; protest made by witness to every member of the board against the continuance of this expenditure, *Shand* 5989 *et seq.*; 6015–6018. 6033–6050. 6083–6115. 6125–6131.

Impossibility of so supervising the stonebreaking in the labour yard as to compel the men to do a fair day's work for a fair day's pay, there being such a great variety of men there; general disapproval of stoneyard relief work, *Shand* 6006–6014. 6077–6083. 6132 *et seq.*

Return of the number of men employed daily in the out-door labour yard in January and February 1895; total of 38,390; *App.* (2*nd Rep.*) 472.

Return of callings and occupations of men in the labour yard for the two weeks ended 20th February 1895; aggregate of 1,915; *App.* (2*nd Rep.*) 475——Total of 241 general labourers and of 977 waterside labourers, *ib.*

Return, dated 31st January 1895, as to inquiries made by relieving officers respecting men applying for orders for the labour yard, distinguishing between the several districts, *App.* (2*nd Rep.*) 478.

Regulations in force as to employment in the out-door labour yard, *App.* (2*nd Rep.*) 479.

Additional staff employed in consequence of the opening of the out-door labour yards; total of 87; *App.* (2*nd Rep.*) 491.

4. *Employment*

Reports, 1895—*continued.*

St. Olave's Union (Southwark)—continued.

4. *Employment irrespective of the Stoneyard:*

Other sources of employment resorted to in St. Olave's besides work in the stoneyard; special employment provided also by the vestries of Bermondsey and Rotherhithe, *Fenton* 2953, 2954. 2991-2997. 3002–3005.

Evidence to the effect that in order to lessen the distress during the winter the Bermondsey and Rotherhithe vestries employed a number of men in picking up the roads and on sewer work, *Shand* 6019–6025.

Number of men employed by the Bermondsey Vestry on the snowfalls from 13th January to 2nd February 1895; total of 2,089; *App.* (*2nd Rep.*) 491.

5. *Workhouse Accommodation:*

Explanation that steps have not been taken to increase the workhouse accommodation in St. Olave's, as it was thought that the Report of the Royal Commission on Aged Poor would recommend more out-door relief, and that no increased accommodation would be required, *Shand* 5926–5930.

Belief that the form headed "London Pauperism and Distress" is filled up regularly by the masters of the workhouses and transmitted to the Board of Trade, *Shand* 6060–6068.

Memorandum by the clerk respecting in-door accommodation, submitting details on various points in connection with the different workhouses, the cost involved, &c., *App.* (*2nd Rep.*) 499–508.

Particulars respecting the workhouses and infirmary, with details as to the expenditure on Parish-street workhouse, Tanner-street workhouse, and Rotherhithe workhouse, and upon the infirmary since 1874; *App.* (*2nd Rep.*) 502–508.

Reports by Mr. T. Barnes-Williams in December 1888 and July 1891, and by Mr. A. H. Newman on April 1889 and October 1891, upon the condition of Tanner-street workhouse, *App.* (*2nd Rep.*) 503, 504.

Statistics and calculations submitted by the clerk of the union upon the subject of new and improved workhouse accommodation in connection with the abandonment of Tanner-street workhouse, *App.* (*2nd Rep.*) 505–508.

Suggestions by the clerk on the subject of an improved classification, *App.* (*2nd Rep.*) 505.

6. *Rates:*

Amount of the rates in Bermondsey and other parishes in the union; poor rate of 2*s.* 10*d.* in Bermondsey (the total rate being 7*s.*) and of about 2*s.* in the other parishes, *Fenton* 2895–2900. 3006——Explanation in connection with the rates in St. Olave's, these having advanced from 5*s.* 10*d.* to 6*s.* 4*d.* since the equalisation, *Benn* 3094–3099. 3105.

Amount of poor rate and of general rate in the several districts of St. John, St. Olave, St. Thomas, Bermondsey, and Rotherhithe, in each year ended Lady-day 1891–95; *App.* (*2nd. Rep.*) 490.

7. *Equalisation of Rates Act and Common Poor Fund:*

Statement that the vestry of St. Olave's have to pay something like 1,000*l.* a year under the Equalisation of Rates Act (London), *Shand* 6069–6076.

Information as regards the loss from Metropolitan Common Poor Fund and grant from London County Council, *App.* (*2nd Rep.*) 502.

8. *Details respecting the Amount and Cost of Out-door and In-door Relief, respectively:*

Statistics of the annual cost of out-door relief in the union since 1873; very large increase since 1884, whilst the numbers have been practically the same, the policy of the board of guardians having then been changed in favour of more liberal relief, *Fenton* 2879–2894. 2910–2913. 2969–2974. 3010–3020——New development of policy on the part of the board some years ago, tending to a more extensive use of out-door relief, *Shand* 5922–5925.

Return of the number of out-door poor relieved in each week of the Michaelmas half-year of 1891, 1892, 1893, and 1894, together with the cost of relief, *App.* (*2nd Rep.*) 473——Similar return for the Lady-day half-year, *ib.*

Return of the number of in-door poor relieved in the Michaelmas half-year, 1891–94, and in the Lady-day half-year, 1892–95; *App.* (*2nd Rep.*) 474.

Total annual expenditure on out-relief for each year ending Lady-day 1873–94, and for the forty-six weeks ending Lady-day 1895; *App.* (*2nd Rep.*) 474. 484.

Return distinguishing between the number of not able-bodied, able-bodied, and children who received out-relief in Michaelmas and Lady-day half years since 1891; *App.* (*2nd Rep.*) 482–484.

Reports, 1895—*continued.*

St. Olave's Union (*Southwark*)—continued.

8. *Details respecting the Amount and Cost of Out-door and In-door Relief, respectively*—continued.

Number of in-door poor relieved in each half-year since Michaelmas half-year 1891, distinguishing between not able-bodied, able-bodied, and children, and showing the number of men and women, respectively, *App.* (*2nd Rep.*) 485–487.

Statement of the number of each class of indoor paupers relieved on 1st January in each of the years 1884–95; *App.* (*2nd Rep.*) 492, 493—— Similar particulars respecting indoor paupers on 1st July in each year, *ib.*

Statements of the number of each class of out-door paupers relieved on the 1st January and on the 1st July in each year from 1884 to 1895; *App.* (*2nd Rep.*) 494, 495.

Return submitted by Sir Hugh Owen showing for each of the years 1884–85 to 1893–94 the number of indoor and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

9. *Lunacy:*

Increase of lunacy in St. Olave's, the actual expenditure on pauper lunatics for the half-year to Michaelmas 1894 having been 5,375*l.*, and the estimated expenditure for the half-year to Michaelmas 1895 being 5,590*l.*; *Shand* 6116–6124.

10. *Vagrants:*

Return respecting vagrants relieved on the night of Friday in the years 1891 to 1894, and on Friday in each week from 4th January to 15th February 1895; *App.* (*2nd Rep.*) 477.

11. *Regulations generally as regards the Administration of In-door and Out-door Relief:*

Statement showing the out-door labour yard regulations, *App.* (*2nd Rep.*) 479.

Regulations for the administration of out-door relief generally, for the guidance of guardians and officers, *App.* (*2nd Rep.*) 496–498——Definition of the classes excluded from receiving out-door relief, *ib.* 496.

Information in detail as to regulations in force in connection with the administration of relief, classification of inmates, &c., *App.* (*2nd Rep.*) 499–508.

See also *Camberwell.*

St. Pancras. Considerable difficulty in St. Pancras through the numerous applications for help on the part of the unemployed; co-operation with other boards of guardians in order to urge Government to take steps to deal with the unemployed question, *Sir H. Owen* 128–130——Statement showing the action taken, or proposed to be taken, as regards the provision of work, or of relief for the unemployed, *ib.* 194.

Instance in the case of St. Pancras of the unnecessarily large expense now thrown upon the rates in order to find employment, *Hills* 2745–2747.

Particulars supplied by the vestry clerk, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 123, 124.

Return submitted by Sir Hugh Owen showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

St. Saviour's (*Southwark*). Amount of distress in this district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 204, 205.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

St. Thomas (*Devon*). Extent and character of the distress in this rural district in February; remedial steps taken for its relief, *App.* (*2nd Rep.*) 299.

St. Vigeans (*Forfar*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 708.

Sale (*Chester*). Local explanations in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (*2nd Rep.*) 231.

Salford. Letter from the Town Clerk of Salford, dated 25th February 1895, explanatory of the measures adopted for the relief of the local distress, *App.* (*2nd Rep.*) 309.

Salisbury. Amount and cause of distress; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 446.

Reports, 1895—*continued.*

SALVATION ARMY:

Evidence to the effect that until 1890 the Salvation Army had been conducting a strictly religious work amongst the poor of this and other countries, but that in that year General Booth published a book explaining his special plan for the relief of the unemployed, *B. Booth* 9821, 9822. 9929 *et seq.*

Information respecting the city colony operations of the Salvation Army, which were instituted in order to give immediate help to the workless man; schedule of the various shelters for homeless men and women handed in, *B. Booth* 9832 *et seq.*——Advantage of the shelters in affording an opportunity of coming into contact with and advising the individual sufferers, and of classifying them, *ib.* 9836.

Employment of between 1,300 and 1,400 men and women in the city colony, the majority of them being engaged in dealing with the waste material that is collected from house to house, *B. Booth* 9836, 9837——Particulars as to the time the men stay in the labour factories, 20 per cent. remaining for less than a month, half of whom are thoroughly idle, worthless fellows, who will not work, and 11 per cent. working their way up until they become gangers over the other men, *ib.* 9839.

Payment of the men in the labour factories by means of tickets, having a money value, according to the amount of work done; signature by the men entering the labour colony of a copy of the regulations, which are similar to those for the farm colony, *B. Booth* 9840, 9841.

Success of the homes for fallen women, instituted in connection with the city colony, about 1,500 women being received annually, 75 per cent. of whom are permanently and satisfactorily reclaimed, *B. Booth* 9841.

Encouraging results of the special methods of dealing with purely criminal men, who are treated separately, but on much the same principles as ordinary workless men; belief that 86 per cent. of them are earning an honest living two years after leaving the home for criminals, *B. Booth* 9841 *et seq.*

Statement that money grants, instead of food, are made to married men who come to the city colony, and that the amount given there is just sufficient to keep them from the workhouse and despair, *B. Booth* 9842, 9843.

Estimate that about 8 per cent. of the men received into the criminal home last year belonged to the professional classes, 30 per cent. to the commercial classes, 30 per cent. were skilled mechanics, and 32 per cent. unskilled workers, *B. Booth* 9844——Average stay of the criminals in the home about six months, or a little more; practice of the Salvation Army to find these men situations (telling their history to the employers), and to keep touch with them, *ib.* 9845, 9846.

Evidence to the effect that after a man has been trained and disciplined a little in the city colony he is transferred to the farm colony to be fitted for transplantation across the sea, *B. Booth* 9847 *et seq.*

Principle on which the city colony was founded that the main cost of the undertaking must be provided by the persons benefited, and any margin supplied by the public must be such as can be regarded as a reasonable economic investment, thus being the very opposite of the poor law system, *B. Booth* 9877. 9939–9941.

Financial statement in regard to the city colony, the expenditure last year amounting to 73,000*l.*, and the receipts, either in labour or money, to 70,000*l.*, so that all that was required from a benevolent public for sheltering and receiving thousands of persons in the labour factories was only 3,000*l.*, *B. Booth* 9877–9881. 10083 *et seq.*

Experience of witness that the sheltering and feeding of the unemployed pays for itself virtually, but that the temporary employment of men and women results in a loss; attention drawn to the fact, however, that a large proportion of the persons temporarily employed are thereby restored to work and livelihood, *B. Booth* 9880. 10083 *et seq.*

Denial of the accusation that there has been any under-selling in the wood-chopping and metal-making business of the city colony; explanation that the match-making business was simply taken up to benefit the matchbox-makers, who are generally women and children, and has not been very successful financially, *B. Booth* 9911–9913. 10110–10127.

Attention called to the small amount required by the Salvation Army from the charitable public in order to make up the deficiency of their shelters, homes, &c.; explanation that they pay no wages, but adopt the truck system, *Hunt* 10395–10400.

Schedule of the various shelters for homeless men and women, showing the extent and nature of the accommodation, the food supplied, and the character of men using the shelters, *App.* (*3rd Rep.*) 543.

Return of food and shelter section of the Darkest England Scheme for twelve months ended 30th November 1894; *App.* (*3rd Rep.*) 544.

Reports, 1895—*continued.*

Salvation Army—continued.

Analysis of the trades of 222 men working in connection with the Darkest England Scheme in February 1895; *App.* (*3rd Rep.*) 545.

See also *Colonisation. Hadleigh Farm Colony.*

Samford (*Suffolk*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 300.

Sanitary Authorities. Explanation of the circumstances and conditions under which the Local Government Board have favoured co-operation between the guardians and the sanitary authorities as regards work for the deserving unemployed; benefits anticipated in some cases, *Sir H. Owen* 422-425. 491-515.

See also *Local Authorities. Metropolis*, 8. *Vestries.*

Savings (*Working Classes*). Mischievous operation of the system by which, when industrious and well-conducted artizans are thrown out of employment (as by the introduction of improved machinery), they live for a time in enforced idleness upon their savings, and upon the help received from friendly societies and trade unions, *Mather* 8975.——*See* also *Wages.*

Scarborough. Explanation in February 1895 respecting the extent and character of the local distress, and the employment and relief provided, *App.* (*2nd Rep.*) 143.

Scotland:

Impression that England has, relatively, less pauperism than Scotland, though there is no out-door relief in the latter country, *Sir H. Owen* 263–267.

Official reports available for the Committee as to the state of the labour market and the extent of distress in all the centres of population in Scotland, *1st Rep. p.* 41.

Probability that some of the larger towns in Scotland would make application under a system of free grants, though local efforts have generally been sufficient in Scotch towns, *Keir-Hardie* 1142–1149.

Different provisions and conditions as to out-door and in-door relief in Scotland as compared with England; practically, destitution is the test of admission on the in-door roll or out-door roll in Scotland, *Motion* 8093–8101. 8175–8190——Absence of obligation upon the Scotch Poor Law authorities to provide employment for those in distress, destitution being the test of relief, *ib.* 8144–8146.

Grounds for the conclusion that the question of dealing with the able-bodied or unemployed poor in large parishes in Scotland should be under the control of the Poor Law authorities, the parish councils taking the initiative by applying to the Local Government Board for authority and directions as regards exceptional relief, *Motion* 8147-8151. 8237-8243. 8250, 8251. 8256–8259.

Opinion that the respectable unemployed in Scotland would not feel degraded by employment on relief works; assistance given privately to many of these during the distress, *Motion* 8164–8167. 8199–8203——Several causes of the destitution which prevails in some parts of Scotland, drunkenness being one cause, and early and indiscriminate marriages another, *ib.* 8211–8215.

Conclusion that, not only in Glasgow, but in most other Scotch towns, sufficient funds can be raised locally for feeding the people in times of distress from want of employment, but that the proper course is to remove, if possible, the causes of the distress, *Hunter* 8323–8328. 8358–8364 —— Low wages in the rural districts, in addition to want of employment; inaccuracy of a statement that in some localities ploughmen receive 22*s.* a week, with a house, *ib.* 8337–8342.

Desirability of amending the Poor Law of Scotland, under which no relief is given to able-bodied persons, and people have to inflict some wound upon themselves in order to obtain it; disapproval of the Poor Law system altogether, *Morton* 11038–11040.

Analysis of the returns, as received from 204 burghs, showing that in 140 no exceptional distress existed; total of 151 burghs in which relief measures were taken, *App.* (*3rd Rep.*) 503.

Summary of returns made by the inspectors of the poor, showing for each county the total number of parishes, the number in which there was no exceptional distress, the number in which there was distress due to different causes, and the number in which measures were taken to meet the distress, *App.* (*3rd Rep.*) 504.

Circular letter, dated 20th February 1895, addressed by the Local Government Board for Scotland to the local authorities throughout Scotland as to the extent and cause of local distress and the remedial measures adopted, *App.* (*3rd Rep.*) 565.

Letters received from town clerks (burghs), and from inspectors of poor (parishes), submitting explanations in reply to the foregoing, *App.* (*3rd Rep.*) 565 *et seq.*

Inability

Scotland—continued.

Inability of the Committee to consider the special circumstances of Scotland, 3*rd Rep.* v.

Self-help. Proposition that any method dealing with the problem of the unemployed should aim at securing for every man self-respect and self-help, *Hunt* 10146.

Settle Rural District (*York*). Absence of exceptional distress from want of employment, *App.* (2*nd Rep.*) 459.

Sevenoaks (*Kent*). Local explanations in February as to the amount of distress in the urban district and the remedial measures adopted, *App.* (2*nd Rep.*) 232——Sufficiency of voluntary agencies in the rural district during the severe weather, *ib.* 459.

Shaftesbury (*Dorset*). Absence of exceptional distress from want of employment in this rural district, *App.* (2*nd Rep.*) 455.

Shand, Augustus. (Analysis of his Evidence.)—Witness is chairman of the St. Olave's Board of Works; has been a member of the board between eight and nine years, 5919–5921.

New development of policy on the part of the board some years ago, tending to a more extensive use of out-door relief, 5922–5925——Explanation that steps have not been taken to increase the workhouse accommodation in St. Olave's, as it was thought that the Report of the Royal Commission on Aged Poor would recommend more out-door relief, and that no increased accommodation would be required, 5926–5930.

Particulars as to the opening of the stoneyard, which was decided upon somewhat hurriedly at the beginning of the year; details as to the rate of pay and the number of days per week for which men with various responsibilities were allowed to work, 5931 *et seq.*; 5967 *et seq.*; 6083–6115——Submission by witness of a Return showing the number of men employed in the stoneyard each day that it was open, the maximum being 1,759 on the 21st February; considerable increase also in the out-door relief given at the houses, 5940 *et seq.*; 6051–6059.

Approval of a large system of out-door relief, if it be given judiciously and carefully; admission that the out-door relief in connection with the stoneyard was not altogether judiciously managed, although the intention was good, 5946 *et seq.*; 6154–6173——Estimate that every ton of stone broken in the St. Olave's Union stoneyard this year cost the union 7*l.*, the actual breaking costing 4*l.* 6*s.*, and the superintendence, material, &c., 2*l.* 14*s.* per ton, whereas 5*s.* would probably be a fair price for breaking a ton of stone under ordinary conditions; protest made by witness to every member of the board against the continuance of this expenditure, 5989 *et seq.*; 6015–6018. 6033–6050. 6083–6115. 6125–6131.

Impossibility of so supervising the stone-breaking in the labour yard as to compel the men to do a fair day's work for a fair day's pay, there being such a great variety of men there; general disapproval of stoneyard relief work, 6006–6014. 6077–6083. 6132 *et seq.*——Evidence to the effect that in order to lessen the distress during the winter the Bermondsey and Rotherhithe Vestries employed a number of men in picking up the roads and on sewer work, 6019–6025.

Opinion that any relief work should be given by the sanitary authority or local board, rather than by the board of guardians; objection to the guardians being called upon to deal with exceptional distress, 6028–6032. 6142–6146——Belief that the form headed "London Pauperism and Distress" is filled up regularly by the masters of the workhouses, and transmitted to the Board of Trade, 6060–6068.

Statement that the vestry of St. Olave's have to pay something like 1,000*l.* a year under the Equalisation of Rates Act, 6069–6076——Increase of lunacy in St. Olave's, the actual expenditure on pauper lunatics for the half-year to Michaelmas 1894 having been 5,375*l.*, and the estimated expenditure for the half-year to Michaelmas 1895 being 5,590*l.*; 6116–6124——Experience of witness that the stoneyard work is very demoralising to the men and a very great deterrent to their getting honest work, 6147–6153.

Shardlow (*Derby and Nottingham*). Slight exceptional distress in this rural distress, *App.* (2*nd Rep.*) 466.

Sheffield. Information supplied in report by Inspector of poor as to the amount of local distress, the remedial measures adopted, &c., *App.* (2*nd Rep.*) 50——Letter from the town clerk, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *ib.* 62.

Shelters (*Metropolis*). See *Church Army. Salvation Army.*

Shepton Mallet. Absence of necessity for any special measures of relief in this district, *App.* (2*nd Rep.*) 412.

Shifnal (*Salop and Stafford*). Sufficiency of voluntary agencies in this rural district during the severe weather, *App.* (*2nd Rep.*) 460.

Shildon and East Thickley (*Durham*). Limited amount of distress in this district at the end of February, *App.* (*2nd Rep.*) 364.

Shipbuilding and Engineering Trades. Demand for really good men in the shipbuilding business in London, competent workmen finding regular employment, *Hills* 2690–2697.

Effect of cyclical fluctuations chiefly in the shipbuilding and engineering trades, *Smith* 4547, 4587——Small seasonal fluctuations in the shipbuilding and engineering trades, *ib.* 4580.

Chart explanatory of the seasonal and cyclical fluctuations, *3rd Rep. p. 52.*

Calculations based upon the variations in the amount per head paid by certain trade unions for unemployed benefit over a period of years; confirmation thereby of other figures as to the cyclical fluctuations in the shipbuilding and engineering trades, which were much worse in 1893 and 1894 than in 1889 and 1890, *Smith* 4596–4608 ——Reference to the statistics of fluctuation in the shipbuilding trade as obtained through the Board of Trade Inspectors, *ib.* 4730.

List of places making complaint with reference to distress through depression in the shipbuilding trade, *App.* (*3rd Rep.*) 807–812. 816——Complaints from five districts on this score, *ib.* 816. 820.

Lower proportion of unemployed in shipbuilding and engineering in January and February, on an average of the years 1887–93, than in the autumn months; improvement of late in the shipbuilding trade, *Smith* 4778-4784.

Shipley (*York*). Exceptional distress in this district; steps taken by the local authorities for its relief as well as by voluntary agencies, *App.* (*2nd Rep.*) 383.

Shirley and Freemantle (*Hants*). Amount of distress in this urban district previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 425.

Shop-fitting. Work in the special trade of shop-fitting fairly continuous throughout the year, a certain amount of export trade tending to equalise it; slight increase of employment in this branch in the winter when the shops are being fitted up for the summer season, *Aves* 10881–10883.

Shoreditch. Absence of exceptional distress in Shoreditch and Hoxton, *Sir H. Owen* 130–132——Exceptional distress existing in February, the vestry doing their utmost to provide employment, this being very inadequate, *App.* (*2nd Rep.*) 205.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Shotts (*Lanark*). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 740.

Shrewsbury. Letter from the mayor of Shrewsbury, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 76.

Skegness (*Lincoln*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 173.

Skilled Labour. Statistics obtainable to a certain extent through the trades unions as to the number of persons engaged in the skilled trades, *Smith* 4790–4797. 4808, 4809.

Skipton (*York*). Local information as to the amount of distress in the rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 250——Information as to the amount and cause of the distress in the urban district in February 1895, and as to the measure of relief provided, *ib.* 283.

Sleaford (*Lincoln*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 105.

Small Holdings (*Agriculture*). Conviction that the salvation of England in the future lies in small holdings, which may be made very profitable, while large holdings can never be made to pay; advantage of the allotment that it can be extended into the small holding, *Tuckwell* 6970 *et seq.*; 7043-7057. 7074 *et seq.*; 7442–7455. 7470–7476.

Attention drawn to the fact that there are numerous crops, for which there is a large demand, and which are being imported at great cost from France and Belgium, whilst they can be grown on small holdings in this country, *Tuckwell* 6971–6973. 7058–7060.

Opinion that the Small Holdings Act is even less likely to lead to the acquisition of small holdings by the agricultural community than the clauses in the recent Act, because

Reports, 1895—*continued.*

Small Holdings (*Agriculture*)—continued.

because of the extraordinary difficulty in getting land under the Act, *Tuckwell* 7079 *et seq.*; 7246, 7247——Difficulty anticipated as regards the purchase of small quantities of land at a reasonable price in or near villages, *ib.* 7081–7085.

See also *Allotments.*

Smart, Bolton. (Analysis of his Evidence.)—Witness is Honorary Secretary to the Mansion House Committee on the Unemployed; is also a Poor Law Guardian of Stepney, and a member of the Vestry of Ratcliffe, 11194–11196.

Brief outline of the origin and operation of the scheme carried out by the Mansion House Committee, which was specially formed in 1893 to deal with the dock labour question, 11197 *et seq.*

Acceptance by the committee of the offer made by the London County Council of about thirty acres of waste land at Abbey Mills, at a rent fixed upon the basis of out-of-pocket expenditure, in order to provide an efficient test of work for the casual element, 11199.

Production by witness of a form upon which the case of the applicant for help was taken down, a necessary condition being that the man must have been at the least a waterside labourer; thorough inquiry, including visitation of the home, made into each case before help was granted, 11199–11201——Information as to the mode of procedure and management of the works at Abbey Mills, the men when being taken on receiving a work ticket, with the rules printed on the back (copy of which is handed in); object of the scheme to provide for the permanent reinstatement of the men in some kind of work, 11202–11205. 11362, 11363.

Statement that out of the 372 applicants who were entered on the case papers in the first year 224 finished their period of test work; explanation that the test period was fourteen days, at the end of which time the men came before the committee and presented their schemes for settlement, either for migration, emigration, or in some other way, 11206–11210.

Particulars of the 372 applicants for help, 228 of them having been born in London and only two in the country; conclusion that the country-born man gets a good position when he comes to London and pushes out a town man, 11211–11216. 11400 *et seq.*

Statistics showing that 189 of the applicants were, or had been, members of trade societies; confirmation of the well-known fact that casual docking is resorted to by every kind of worker who happens to be thrown out of his own employment, 11217–11226——Evidence to the effect that 158 out of the 372 applicants stated that they were, or had been, members of a club or benefit society, seventy of them having run out, 11223.

Admission that the committee failed, so far as their main purpose was concerned, one-third of the total number of cases receiving no permanent assistance after they had been dealt with; attainment, however, of the subsidiary object of giving relief work to the unemployed, 11227–11229——Detailed information as to the position of the men who had been helped by the committee, the sixteen who emigrated to Canada doing well as a rule, and only a very small proportion of those who remained in this country having to apply subsequently for relief; decided opinion that a large proportion of those settled in one way or another have been permanently assisted by the committee's work, 11230–11238.

Financial details in connection with the Abbey Mills scheme, the total expenditure amounting the first year to 1,315*l.* 1*s.* 1*d.*, of which 142*l.* represented the cost of management; no profit under the scheme except that derived by a poor neighbourhood from the land being let out at reasonable charges to working men, 11239–11244. 11364–11375——Decision of the committee in January 1894 to repeat the scheme of the previous year, waterside labour being greatly depressed and a large number of people out of work; improvement of the scheme by extending the area, removing the restriction as to the men being engaged in waterside labour, and reducing the age from sixty-five to fifty-five, 11245–11247.

Statement that in 1894, 141 cases were entertained out of 414 applications, and that stronger confirmation was obtained of the fact that the kind of poverty dealt with is largely a town product; certainty that many men were deterred from applying by the stringent methods of inquiry, and an objection to emigration, 11247 *et seq.*; 11400–11430——Information respecting the 141 cases dealt with in 1894, sixteen of which, representing 115 persons in all, were sent to Canada, the number of those which failed to receive any benefit from the committee being ninety-two; comparatively small proportion permanently helped in that year, 11255–11270.

Approximate cost of the scheme in 1894, 1,102 *l.* 19 *s.* 1½ *d.*, a larger number of cases being emigrated at less cost than in the previous year, emigration offices having

Reports, 1895—*continued.*

Smart, Bolton. (Analysis of his Evidence)—*continued.*

assisted from their own funds; variation of the period of work from a fortnight to two months, 11271–11275——Satisfaction of the London County Council valuer with the work done at Abbey Mills; description of an average day's work accomplished with a staff of forty-one men, 11276-11280.

Enumeration of the difficulties with which the committee were confronted in dealing with the applicants for help; brief statement of certain facts and principles which appear to be demonstrated by the work of the committee, 11280, 11281——Belief that the ordinary wages of a casual docker average about 13*s.* per week taking the year round, while the amount paid by the committee was 22*s.* per week, 11282-11289.

Explanation that the committee did not intend to do anything last winter, but recommenced in response to urgent appeals from various quarters; particulars of the eighty-five cases entertained, the men being set to work at Lower Sydenham to convert brick fields into allotments, 11290–11296. 11376–11381——Total cost of the scheme, 780*l.* this year, only those cases being taken in hand that afforded a reasonable hope of re-instatement; extension of the time of working to three months, the works having been closed in the first week of June, 11296–11299.

Utility of the scheme of the committee as an experiment in dealing with the unemployed; witness is not aware of any attempt that has succeeded so well, and worked so safely, in spite of the smallness of the returns, 11300–11304——Impossibility of any voluntary committee dealing satisfactorily with the amelioration of relief; suggestion that in cases of necessity relief should be granted from the common poor fund, and administered by the vestries under the control of an elected body, 11305–11327. 11332–11354. 11382–11399.

View of witness that there should be a broad distinction between a confirmed pauper and a man who is driven to seek relief, so as to disfranchise the former and preserve to the latter his right to vote, 11328–11331.

Evidence to the effect that during the last five years pauperism has trebled in the Tower Hamlets, the increase being chiefly due to the influx of a very undesirable type of men through the opening of free shelters, and to the fact that some districts are getting poorer while others are getting richer, 11355-11361.

Smethwick Urban Distrtct (*Stafford*). Exceptional distress between January and March; relief through voluntary agencies, *App.* (*2nd Rep.*) 449, 450.

Smith, H. Llewellyn. (Analysis of his Evidence.)—Since the beginning of 1893 witness has had charge of the Labour Department of the Board of Trade, 4526, 4527.

Several sources from which information is obtained by the Labour Department as to the state of employment throughout the country, the results being published monthly in the "Labour Gazette," firstly as to the condition of employment in particular districts, and, secondly, in particular trades, 4529–4533——Explanation that the statistics of the Labour Department deal only with the state of employment as distinct from the state of distress, the latter coming under the scope of the Local Government Board, 4534, 4535.

Distinction drawn between the staple industries and the fluctuating industries, in connection with the want of employment; summary of trades or employments put under each class, and of the several causes of fluctuation, 4535–4549——Distinction between fluctuations due to the different seasons of the year, and those which may be termed periodical or cyclical oscillations, there being also the irregular fluctuations due to weather, 4547–4549——Effect of cyclical fluctuations chiefly in the shipbuilding and engineering trades, 4547–4587.

Class of fluctuations due to migration of work and of industry from one place to another, 4547——Fluctuation due also to changes of process or of fashion, 4547–4549——Further class of fluctuations through the influence of trade disputes on employment in allied trades, 4547——Reference to cyclical oscillations as by far the most serious kind of fluctuation, 4548.

Information respecting the mode of calculating the fluctuations in certain trades or employments, such as dock labour in London, blast-furnaces in the United Kingdom, mines, &c., there being actual returns and data available, 4550–4555——Calculation of the range of unemployment in the foregoing class of cases by the difference in any year between the minimum number employed and the maximum, as shown in the returns, 4553-4555.

Explanations with reference to a further mode of calculating the fluctuations in various trades by taking the percentage of unemployed members of trades unions giving unemployed benefit; extent to which this basis can be relied upon as an accurate index of changes in the labour market, 4556–4573.

Information

Reports, 1895—*continued.*

Smith, H. Llewellyn. (Analysis of his Evidence)—*continued.*

Information in elucidation of a certain table (compiled from the monthly returns received from trade unions), together with accompanying charts, showing for various trades the changes in the labour market, and the per-centages of unemployed, at different periods in the years 1887-94; 4567 *et seq.*

Reference to chart (*Third Rep. p.* 52) in illustration of seasonal changes, and showing the per-centages of employment at the end of each month, 4574-4581——Probable cause of the increased per-centage of unemployed in the printing and book trade in July and August, as compared with the period from October to December, 4577-4580——Small seasonal fluctuations in the shipbuilding and engineering trades, 4580.

Further chart referred to in illustration of the cyclical fluctuations, showing that 1889 and 1890 were the best years since 1887, whilst 1894 was somewhat better than 1893; 4581–4588—Small cyclical fluctuation in the building trade, it being less than the seasonal fluctuation, 4587. 4595——Minimum of about two per cent. of unemployed at the best of times, exclusive of sickness and strikes, 4585–4594.

Calculations based upon the variations in the amount per head paid by certain trade unions for unemployed benefit over a period of years; confirmation thereby of other figures as to the cyclical fluctuations in the shipbuilding and engineering trades, which were much worse in 1893 and 1894 than in 1889 and 1890; 4596-4608.

Particulars respecting the monthly oscillations of dock labour in London, due to various causes, in 1893 and 1894 and in January and February 1895; increased percentage of employment in November and December of each year through the great wool sales in those months, 4608-4621——Chart prepared by witness showing the actual daily fluctuations in the employment at several of the docks, 4618.

Statement showing in the case of the blast furnace men the injurious effect upon employment through the strike in the coal trade from July to November 1893; 4621–4630——Inclusion of machine makers, tool makers, brass workers and founders, pattern makers, steel melters, and others in the engineering trades, 4631–4634.

Information based on the "Vacant Book" of the Amalgamated Engineers as to the numerical distribution of loss of time or want of employment among the members of the society; conclusion that there is an increasing tendency to the displacement of the less efficient and less skilful workmen and to concentrate full employment on a smaller number, 4635–4654——Illustration in the case of dock labour of the tendency to a reduced employment of the less efficient men, 4648–4653.

Information as to the general state of agricultural employment during the period from last autumn till the middle of January (before the frost); irregularity of such employment chiefly in the corn-growing and arable districts, though for certain reasons it was more continuous than usual until the frost set in, 4655–4658. 4668——Stoppage of agricultural employment severely felt in certain counties during the frost, whilst there has been a gradual increase of employment since the thaw, 4658–4667——Information on the foregoing subject obtained chiefly through Mr. Wilson Fox, as agricultural correspondent, 4650–4665.

Explanations respecting the comparative state of employment in the coal-mining, shipbuilding and engineering, building, and other trades at the end of December 1894, and at the end of January and February 1895, as compared with the corresponding periods in the previous winter, 4669–4676——Reference to the boot and shoe trade as affording good employment in January and February, though in some districts short time is still worked and the bespoke trade is slack, 4676.

Difficulties in drawing any comparison between the state of distress, in connection with the want of employment, in the present and previous winters; explanations hereon respecting the condition of employment in the two periods as affected by the state of the weather, 4677, 4678——Increased distress when severe frost and want of employment come at the end of a prolonged period of depression in trade, 4677.

Summary of the several agencies which have been in operation for dealing with distress and unemployment, by far the most extensive agency being the insuring against want of employment through trade societies, 4680–4682——Provision made by a few friendly societies in the form of unemployed benefit, 4681.

Particulars respecting the operation of the Loughton (Essex) Mutual Labour Aid Society, 4683–4685——Information respecting the steps being taken in some of the Swiss cantons for the establishment of local schemes of insurance against want of work, 4690–4694.

Explanations and statistics relative to the operation of labour bureaux in this country, some of these being managed by local authorities, and some by voluntary agencies, 4696–4698——Information respecting a system of labour registration in the Grand Duchy of Luxembourg, through the medium of the Post Office, 4699——Belief as to the labour register at Brussels not having been a success, 4700, 4701——Infor-

Reports, 1895—*continued.*

Smith, H. Llewellyn. (Analyeis of his Evidence)—*continued.*

mation to be supplied respecting the Bureau de Travail of Paris, which has been closed, 4702–4707.

Movement in Germany for a revision of the labour registries, they having failed to a large extent, 4709–4711——Operation of the Labour Department in New Zealand in finding places for the unemployed, as in making roads through the bush, 4711–4713.

Information respecting the public employment offices in different towns in the State of Ohio; situations found chiefly for women, 4714–4716——Recent establishment of a Chamber of Labour in Italy, 4717——Apprehension in some quarters lest labour bureaux in this country should operate in neutralising strikes and trade disputes, 4718–4722.

Action taken by ninety-six local authorities in Great Britain in the winter of 1892–93 for providing work for the unemployed, 4723 ——Reference to the steps taken in eleven important districts in the winter of 1893–94 for the provision of relief works, 4723.

Pressure experienced by municipal authorities in Germany, Holland, and other countries as well as in England, as regards work for the unemployed, 4724—— Experiment in Amsterdam in providing employment in workshops; belief that it did not meet with much success, 4724, 4725.

Importance of the measures adopted in Massachusetts and other States for the provision of work, 4725 —— System of co-operative contracts upon which the unemployed in New Zealand are engaged to work on railways and roads; arrangement as to the rate of wages according to piecework, 4725–4727——Arrangement in Victoria as to employment on railways on the butty gang system; varying modes of payment, 4727, 4728.

[Second Examination.]—Reference to the statistics of fluctuations in the shipbuilding trade as obtained through the Board of Trade inspectors, 4730——Monthly statements before the Board of Trade as to the amount of various dutiable articles retained for consumption, 4730.

Table submitted showing that the decrease of imports since 1889 has been less in London than in other ports, 4730, 4731 —— Statistics and explanations respecting the range of unemployed benefit given by mining unions in Northumberland and Durham in different years, 4731——Paper submitted respecting the closing of the Paris Labour Exchange, 4731.

Increased fluctuation, since the introduction of machinery, in the number of people employed in the boot and shoe trade, 4732——Tendency in trades generally to a concentration of unemployment among a smaller number of employés of the less steady and skillful class, 4733–4735. 4740. 4875–4880. 4927–4930——Instance in the case of dock labourers of the more permanent employment of a certain number, whilst the casual men find it very difficult to get any employment, 4735–4739.

Statement as to the practice in some trade unions as regards out-of-work benefit being sometimes followed by superannuation, 4741–4747——Conclusion that cyclical fluctuations at varying intervals between periods of good trade and periods of bad trade will assuredly recur, 4748, 4749 —— Effect of increased introduction of machinery, as in the printing and book trades, in causing increased displacement of manual labour, 4750–4755.

Question well worth investigation whether there might not be more equable distribution of work throughout the year so as to lessen the fluctuation of employment, 4755–4759——Reference to certain experiments in the form of labour colonies; information more especially as regards the Salvation Army Colony at Hadleigh (Essex), 4760, 4761. 4967–5011.

Explanation as regards coal mines being open for so many days in the week that it is difficult to supply information as to the number of days for which the miners individually were at work, 4762–4768. 4907–4916——Opportunity chiefly in piecework trades for reducing the amount of employment instead of entirely displacing some of the employés, 4769–4771.

Doubt as to the extent to which men formerly engaged in textile fabrics at Nottingham have since been employed in working in brass and iron, 4772–4775——Lower proportion of unemployed in shipbuilding and engineering in January and February, on an average of the years 1887–93 than in the autumn months; improvement of late in the shipbuilding trade, 4778–4784.

Inability of witness to supply statistics as to the total number of the working classes in the United Kingdom, 4785–4789—— Statistics obtainable to a certain extent through the trades unions as to the number of persons engaged in the skilled trades, 4790–4797——Impression that non-union men are a larger proportion than union men, 4808, 4809. 4796.

Explanation

Reports, 1895—*continued.*

Smith, H. Llewellyn. (Analysis of his Evidence)—*continued.*

Explanation that witness is not prepared with any wages statistics in the engineering or other skilled trades; deductions to be allowed in years of depression, whilst on the other hand allowance should be made for overtime, 4798–4804 —— Great variation in the provision made in different colliery districts as regards unemployed benefit, 4810–4813——Doubt whether on the whole employment is lessened by the increasing introduction of machinery, 4815–4818.

Conclusion that the years in which employment is at its best are, as a rule, the maximum years of imports and exports, 4821–4825——Better position of organised than of unorganised labour in time of distress, in so far as the numbers of organised trades are mutually helpful to each other, 4826–4828.

Further statement as to certain returns showing the per-centage of unemployed dating only from 1887, in which year the average per-centage was higher than in 1894; 4829–4834——Belief that cycles of depression come round more frequently than in former years, but that the period of depression is shorter, 4835–4841. 4920—— Information to be supplied by witness as to the relative employment of female labour and male labour, and as to the displacement of women by boys and girls, 4842–4846. 4935–4942.

Advance in manufacturing industries in many countries, the exports from England to certain countries falling off in consequence, 4847–4852——Difficulty at present in explaining the causes which lead to the cycles of trade depression which occur all over the world, 4853–4856.

Evidence to effect that labour bureaux if unpopular, as interfering with trade disputes, would not be of much use as registries, whilst in any case their usefulness in time of general depression would be very limited, 4857–4874.

Consideration of the effect of trades unions as regards the unemployment of the less efficient men, witness fully recognising the great value of trade organisations in times of depression, 4875–4884. 4887.

Statement respecting the sources of information upon which the reports of Mr. Wilson Fox are founded; conclusion from these reports that until the recent frost agricultural employment was fairly continuous, 4888–4898 —— Information with further reference to the migration of agricultural labour to the towns, 4899–4906.

Great difficulty in estimating the comparative number of employés in stable trades and in fluctuating trades, 4921, 4922——Doubt as to the percentage of unemployed being greater among non-unionists than unionists, 4923–4926——Probability that the standard of efficiency is higher among unionists than non-unionists, 4927–4930.

Instance at Coventry of the transfer of workpeople from one trade to another of an entirely different character, 4931–4934——Exceptions taken to certain figures purporting to show a very large proportion of men out of employment for a considerable time during the winter of 1886–87; general and severe depression at this period, 4943–4957——Exceedingly large expenditure of the Amalgamated Society of Engineers for unemployed benefit, witness fully recognising in this connection the valuable operation of trades unions, 4958–4966.

Examination with further reference to the question of labour colonies, as in Germany, Holland, and other countries, as well as on a limited scale in England; obstacles to their satisfactory operation, 4967–5011——Doubt as to labour bureaux having been largely established on the initiative of trades unions; advantage in their being in the hands of the local authorities, 5012–5015.

Obstacles to any statistics of overtime, 5016——Respect in which unemployed benefit promotes the policy of trades unions as regards maintenance of the rate of wages, 5018——Result of certain statistics as showing that there is a residuum of men constantly out of work, 5018, 5019.

Solihull (Warwick). Sufficiency of voluntary modes of relief in this district, *App.* (*2nd Rep.*) 367.

Somersetshire. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 26–30.

South Leith (Edinburgh). Amount of distress in this parish through the severe weather; relief measures adopted, *App.* (*3rd Rep.*) 679.

South Molton (Devon and Somerset). Absence of exceptional distress in this rural district, *App.* (*2nd Rep.*) 434.

South Shields (Durham). Extent and character of the distress in the county borough; employment and relief provided, *App.* (*2nd Rep.*) 131——Absence of necessity for any special measures of relief in the rural district, *ib.* 434.

Reports, 1895—*continued.*

South Stoneham (*Hants*). Sufficiency of voluntary agencies in this rural district during the severe weather, *App.* (*2nd Rep.*) 434.

South Wales. See *Pontypool. Swansea. Tin-plate Trade.*

Southall-Norwood (*Middlesex*). Absence of exceptional distress in this urban district in February, *App.* (*2nd Rep.*) 284.

Southborough (*Kent*). Different kinds of employment provided in this rural district, the men working for six hours a day, at the rate of fourpence per hour, *App.* (*2nd Rep.*) 105.

Southend (*Essex*). Amount of distress previously to 22nd March; relief provided, *App.* (*2nd Rep.*) 406.

Southgate (*Middlesex*). Sufficiency of voluntary agencies for coping with the distress in this district in February 1895, *App.* (*2nd Rep.*) 284.

Southport (*Lancaster*). Amount of distress in this district; steps taken by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 381.

Southwick (*Durham*). Local explanations in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (*2nd Rep.*) 233.

Spalding (*Lincoln*). Absence of exceptional distress in the urban district of Spalding, *App.* (*2nd Rep.*) 106——Amount of distress in the rural district previously to 22nd March; relief provided, *ib.* 412.

Stafford. Extent of the distress in Stafford municipal borough previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 417——Absence of necessity for any special measures of relief in the rural district, *ib.* 455.

Staffordshire (*South*). Information supplied in report by Inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 26, 27.

Stalybridge (*Chester*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 216.

Stamford. Letter from the town clerk, in February, explanatory of the extent and causes of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 329.

Stapleton (*Gloucester*). Amount of distress in this district; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 175.

Starvation. See *Poor Law System. Relief Works. St. George's-in-the-East. State Aid. West Ham.*

State Aid (*Relief of Distress*):

1. *Scheme of Treasury Grants or State Aid advocated by Mr. Keir-Hardie; Safeguards against Abuse.*
2. *Scheme of State Aid advocated by Mr. Alden; Conditions to be Imposed.*
3. *Concurrence of other Witnesses in favour of State Aid.*
4. *Concurrence of Evidence adverse to any Grants by the State in Relief of Local Distress.*
5. *State Grants not necessary with reference to the recent Distress, through the Severe Weather, the Crisis having passed.*

1. *Scheme of Treasury Grants or State Aid advocated by Mr. Keir-Hardie; Safeguards against Abuse:*

Proposition that an interim Report should recommend that the Treasury should at once contribute up to an aggregate of 100,000*l.*, an amount equal to that raised in each locality; that is, for expenditure in charitable relief and in useful relief works, *Keir-Hardie* 738 *et seq.*——Suggestion that as regards the proposed contributions a residential test be prescribed, and that recipients of parochial relief be excluded, *ib.* 740. 791.

Explanation that the foregoing proposal is intended purely as a temporary expedient for the relief of existing starvation, and should be followed up by the permanent remedies to be recommended in the final Report of the Committee, *Keir-Hardie* 740–744.

Examination as to the tests and precautions which ought to be adopted in order to deal with excessive applications to the Treasury from any locality, and to prevent abuse in the administration of the funds by the special local committees; suggested limits with reference to population, &c., *Keir-Hardie* 748 *et seq.*

Consideration of difficulties raised as to the sufficiency of a Treasury grant of only 100,000*l.*, in view of the immense number of the unemployed; admitted probability that

Reports, 1895—*continued.*

STATE AID (*RELIEF OF DISTRESS*)—continued.

1. *Scheme of Treasury Grants or State Aid, &c.*—continued.

that further and much larger amounts may be necessary, *Keir-Hardie* 748 *et seq.*——Contemplated expenditure of the first Treasury grant of 100,000*l.*, and the corresponding local contributions, mainly in food; expected sufficiency thereof up to the end of March, *ib.* 837–844.

Examination as to the cost of one or two meals daily for the aggregate number of the unemployed, witness submitting that though a Treasury grant of 100,000*l.* or 200,000*l.* would not go very far, but that relief would also be given by trades unions and charitable associations, and that some casual employment would be obtained *Keir-Hardie* 914 *et seq.*

Advocacy of a State grant not only as preventing disfranchisement but as a remedy against the demoralising effect of work in the stone-yard *Keir-Hardie* 941–945. 1228–1230——Explanation that witness proposes not a loan from the State, but a free grant, *ib.* 1009–1011.

Dissent from the view that the proposed State aid in the case of West Ham would cause an influx of unemployed from other districts; check by means of a residential test, *Keir-Hardie* 1020–1037. 1141——Duty of the State to aid in providing work for the unemployed if out of work through no fault of their own, *ib.* 1040. 1150. 1217–1221.

Suggestions as to the constitution of the local committees for the administration of a grant from the State; approval of this resting with the guardians alone if there be no disfranchisement, *Keir-Hardie* 1041–1052. 1224–1227——Necessity of a very careful sifting out, and of a residential test in the administration of the proposed scheme; accurate accounts desirable, *ib.* 1066–1083. 1141. 1224, 1225.

Approval of a suggestion that two equal amounts be provided locally, by voluntary contributions and by the rates, and that a third contribution be added by the Treasury, *Keir-Hardie* 1073–1078——Explanation that witness does not contemplate any permanent system of State aid for the unemployed, though he advocates such aid in order to provide work on exceptional occasions, *ib.* 1150–1158.

Extent of the personal experience of witness, and character of the inquiries upon which he bases his proposals for a Treasury grant in order to provide work when there is exceptional distress, *Keir-Hardie* 1169–1175——Belief that local effort would be promoted, rather than checked, by a system of Treasury grants, when there is exceptional distress, *ib.* 1222, 1223.

2. *Scheme of State Aid advocated by Mr. Alden; Conditions to be Imposed:*

Grounds for the contention that when distress is exceptional the State should assist the local authorities by subsidies, and should exercise supervision over works promoted by the latter for the unemployed, such as farm colonies in Essex, *Alden* 2033–2045.

Belief that subsidies from the State in aid of employment on reproductive relief works and on land, with proper classification and supervision, would have a most beneficial effect in enabling the men to keep themselves, and that, in time, such works might be self-supporting, *Alden* 2169–2171. 2235–2269. 2297–2313. 2413–2421. 2450–2456——Argument as to the responsibility of the State with reference to work for the unemployed, *ib.* 2229–2234. 2305–2309. 2449–2451.

Grounds for concluding that the number of unemployed will gradually increase, and that a system of permanent State employment will prove necessary, to be administered under careful restrictions, and the unemployed to be registered and classified, *Alden* 2352 *et seq.*——Expected willingness of local authorities to contribute in co-operation with an Imperial fund for the unemployed, *ib.* 2442–2445.

Opinion that the fund should be administered by the municipal authority, and that they might be called upon to contribute as much as the State, *Alden* 2457–2464——Approval of a proposal that the fund be used only for the deserving poor, and that disqualification of the recipients should not result, *ib.* 2464–2467——Dissent from the view that a State fund would have any demoralising tendency, *ib.* 2468, 2469.

Expediency of half the required amount being found by the State instead of the whole amount being provided by local rate and voluntary agencies, *Alden* 2470–2476——Conditions and restrictions to be imposed in connection with applications for employment provided by means of a State fund, *ib.* 2496–2500.

3. *Concurrence of other Witnesses in favour of State Aid:*

Proposal that the incompetent worthy poor be dealt with by joint committees of the Poor Law authorities and of charitable subscribers, the State contributing to the expense, *Hills* 2572–2574——Justification of the State being asked to provide funds to be administered by local authorities, as under witness' scheme, *ib.* 2718–2722——Contention that the State is to some extent responsible as regards work for the unemployed

Reports, 1895—*continued.*

State Aid (Relief of Distress)—continued.

3. *Concurrence of other Witnesses in favour of State Aid*—continued.

ployed, and that the local authorities could never work the proposed scheme without the help of the State, *Hills* 2753–2762.

Advocacy of the proposed scheme of State loans for a national system of small farm settlements, in the interests of increased agricultural employment and improved cultivation, rather than of State loans at low interest to landowners for improvements in drainage, buildings, &c., *Mather* 9401, 9402.

Necessity that any scheme for the unemployed should be dealt with nationally if it is to be successful, *Lansbury* 10495. 10498–10512.

Objection to the question of the unemployed being dealt with either by the poor law or the municipal authorities; conclusion that it should be taken up by Government, *Thorne* 10841–10845.

4. *Concurrence of Evidence adverse to any Grants by the State in Relief of Local Distress:*

Decided objection to Imperial grants-in-aid of municipal expenditure on employment works in times of distress, *Sir H. Owen* 311–315——Conclusions adverse to its being the duty of any public Department to provide work for the unemployed in times of distress, so as to save them from applying for poor relief, *ib.* 389–396.

Further statement of the individual views of witness (not, necessarily, as representing his Department), adverse to any imperial grant-in-aid of the unemployed, *Sir H. Owen* 541, 542. 547, 548.

Difficulty as regards State aid to a declining trade in that the State would neither know the exact psychological moment to step in with its special aid, nor when to stop it, *Mackay* 5804 *et seq.*

Advisability of the Government encouraging and directing the better organisation of capital and labour, the settlement of disputes, and the institution of remedies for existing evils; decided objection, however, to the Government granting pecuniary aid in connection with these objects to local authorities, *Cox* 6215, 6216. 6326–6334. 6444–6447. 6505. 6588–6594.

Contention that neither the Government nor the local authorities should be responsible for the provision of work for the maintenance of persons out of employment, *Bell* 7877–7891——Re-iteration of the view that in no instance should State aid be given to the unemployed, either directly or by means of works; unanimous opinion of the members of the Glasgow Corporation to the same effect, *ib.* 7948–7958. 7977–7982. 8028.

5. *State Grants not necessary with reference to the recent Distress, through the Severe Weather, the Crisis having Passed.*

Large amount of work soon to be had, as in West Ham, so that the unemployed difficulty will gradually settle down for the present; a grant from the State not being necessary at the present time, *Hilleary* 1563–1569. 1612–1614. 1621–1625. 1665–1667. 1674–1684. 1710. 1736–1738.

Conclusion that any State grant-in-aid of the unemployed would be objectionable and useless in the present season, there being no machinery ready for its administration, and for the organisation of the necessary works, *Hills* 2568. 2590, 2591. 2602–2614.

See also *Exchequer Contribution Account. Farm and Labour Colonies*, I. 4. *Pontypool. Relief Works. St. Olave's Union. Tin-plate Trade. West Ham.*

Steeple Claydon (*Bucks*). Large proportion of men unemployed, *Keir-Hardie* 802.

Stepney. Information supplied by Stepney as to the amount of relief in the winter months for the last four years; considerable distress at present among the working classes who have not applied for relief, *Sir H. Owen* 132–135 —— Several causes of the distress in Stepney, *ib.* 339.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Steyning, West (*Sussex*). Sufficiency of voluntary modes of relief in this district, *App.* (*2nd Rep.*) 387.

Stirling. Letter from the town clerk of the burgh respecting the amount of distress, and the relief measures adopted, *App.* (*3rd Rep.*) 608——Amount of distress in the Parish of Stirling parish, through the severe weather; measures adopted for its relief, *ib.* 791.

Reports, 1895—*continued.*

Stockport. Very large increase of relief at Stockport for some time previously to the end of January, *Sir H. Owen* 51, 52.

Explanation in February 1895 respecting the extent and character of the distress in the county borough, and the employment and relief provided, *App.* (*2nd Rep.*) 131.

Stockton (*Warwick.*) See *Allotments.*

Stockton-on-Tees (*Durham*). Official explanations in February as to the amount of distress in the municipal borough and the remedial measures adopted, *App.* (*2nd Rep.*) 216.

Stoke Newington. Exceptional distress in February due to severe weather; sufficiency of the remedial measures adopted, *App.* (*2nd Rep.*) 256.

Stoke-upon-Trent. Extent and character of the distress in the municipal borough in February; relief measures adopted, *App.* (*2nd Rep.*) 265——Amount of distress from different causes in the rural district in February; relief works contemplated, *App.* (*2nd Rep.*) 300.

Stokesley (*York*). Sufficiency of voluntary agencies in the rural district during the severe weather, *App.* (*2nd Rep.*) 444.

Stone (*Stafford*). Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 251.

Stone-Yard (*Labour Test*). See *Labour Test. St. Olave's Union. Wandsworth and Clapham Union. West Ham. Whitechapel.*

Stornoway (*Cromarty*). Absence of exceptional distress in February, *App.* (*3rd Rep.*) 778.

Stourbridge (*Worcester*). Information respecting the extent of the distress in Stourbridge Urban District, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 106.

Stow Union (*Suffolk*). Information as to the amount of local distress, and the relief given to out-door paupers, *App.* (*2nd Rep.*) 464, 465.

Strand District. Facility of dealing with the distress in the Strand Union without exceptional arrangements; increasing applications from persons not settled in the union, *Sir H. Owen* 135.

Particulars supplied by Mr. W. Emden, in letter dated 21st February 1895, respecting the amount of distress in the Strand district from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 124-126.

Return showing for each of the years 1884–85 to 1893–94 the number of in-door and out-door paupers, respectively, and the cost of in-maintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

Stratford-upon-Avon. Letter from the town clerk in February explanatory of the extent and causes of the local distress, and showing the measures of relief provided, *App.* (*2nd Rep.*) 329——Absence of exceptional distress in the rural district at the end of February, *ib.* 384.

Streatham. Decrease rather than increase of relief in Streatham, *Sir H. Owen* 137–139.

Strikes. Conclusion as to the necessity of certain tests or conditions and of inquiries being applied to all applicants for work provided by the local authorities, and from the Common Poor Fund, witness considering that men on strike should not be entitled to such work, *Benn* 3142. 3157–3164. 3168–3172. 3179. 3239. 3246, 3247——Advantage of boards of conciliation and arbitration for the settlement of trade disputes, *Cox* 6198, 6199.

Strong feeling of witness and of numerous other representatives of the men that strikes (as in the Scotch coal trade) should never be allowed to take place at all, and that preventive steps should promptly be taken, as by the present Select Committee, for the appointment of a Board of Conciliation, *Hunter* 8301, 8302——Explanation as to the injurious effect of strikes on the community, *C. Booth* 10532. 10612–10614. 10695.

Stroud (*Gloucester.*) Information respecting the extent of the distress in Stroud Urban District, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 107——Amount of distress in the rural district in February; steps taken for its relief, *ib.* 252.

Sudbury (*Suffolk*). Extent and character of the distress in this municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 265.

Reports, 1895—*continued.*

Sunderland. Information supplied by the inspector of poor as to the extent of local distress, and the remedial measures adopted, *App.* (*2nd Rep.*) 22.

Letter from the mayor of Sunderland, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 62.

Surbiton. Absence of exceptional distress in this urban district in February, *App.* (*2nd Rep.*) 315.

Surrey. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 30, 31.

Sussex. Report from inspector as to the amount of distress, and the remedies applied, *App.* (*2nd Rep.*) 52, 53.

Sutton (*Surrey*). Amount of distress in this district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 175.

Sutton-in-Ashfield (*Notts*). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 426.

Sutton Coldfield (*Warwick*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 77.

Swadlincote (*Derby*). Steps taken by the district council to provide employment for those out of work, *App.* (*2nd Rep.*) 463.

Swaffham (*Norfolk*). Particulars supplied by Mr. H. Lee Warner, in letter dated 20th February 1895, respecting the amount of distress in the urban district from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 176——Amount of distress in the rural district; relief by means of private charity, *ib.* 339.

Swansea. Report received by the Local Government Board from Swansea, on 15th February; testifying to a very large increase of destitution and relief, and the prevalence of distress among those who do not apply for relief; steps taken for providing employment, *Sir H. Owen* 53–57.

Population of 100,000 in Swansea, there being now about 5,800 unemployed and 13,000 half-timers (inclusive of women and children), chiefly in the tin-plate trade, *W. H. Edwards* 4297–4307. 4390–4414.

Particulars respecting the constitution and operation of the Voluntary Relief Committee, a register of unemployed having been opened and relief given in food, *Edwards* 4320–4329. 4458–4461—— Employment given by the Corporation in sweeping the streets and clearing away the snow, *ib.* 4330, 4331.

Statement as to the Poor Law guardians at Swansea having done nothing to relieve the able-bodied unemployed, they not having been aware at the time that they had power to give relief partly in money and partly in kind, *Edwards* 4362–4372. 4445–4462.

Letter from the mayor of Swansea, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, *App.* (*2nd Rep.*) 63.

See also *Tin-plate Trade.*

Sweden. Statement showing the number of workpeople employed in certain industries in each of the years 1884–91; *App.* (*3rd Rep.*) 511.

Swindon (*Wilts*). Amount of distress in this district previously to 23rd March; relief provided, *App.* (*2nd Rep.*) 426.

Swinton and Pendlebury Urban District (*Lancaster*). Extent and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 397.

Switzerland. Details supplied by Mr. Moore respecting the voluntary farm colony recently established in Switzerland, *Third Rep. p.* 530.

Belief that the Swiss colony referred to in witness' paper was founded upon the only principles likely to be satisfactory in the case of colonies, *Moore* 9548. 9699 *et seq.*

Information respecting the steps being taken in some of the Swiss Cantons for the establishment of local schemes of insurance against want of work, *Smith* 4690–4694.

Statement showing the number of persons employed in certain industries in 1880 and in 1888; *App.* (*3rd Rep.*) 509.

T.

Tadcaster (*York*). Several portions of this rural district in which exceptional distress exists, as on 24th February, *App.* (*2nd Rep.*) 323.

Tagg, Charles William. (Analysis of his Evidence.)—Witness is clerk to the vestry of Camberwell, which is also the sanitary authority for the parish, 3278, 3279.

Total of 4,342 acres as the area of the parish, the estimated population being 254,503, and the rateable value 1,063,234*l.*; comparatively few large houses, 3280–3286——Total rate of 4*s.* 1*d.* levied by the guardians, the actual poor rate for 1894–95 being 2*s.* 3*d.*, and the vestry rates 1*s.* 8*d.*; 3287–3290. 3543–3545——Absence of any exceptional distress in Camberwell save through the frost, 3291, 3292. 3535, 3536.

Expenditure by the vestry of 1,546*l.* on relief works between the 31st Jan. and the 27th Feb., each man getting about two days' work in the week, and being paid at the rate of 5*d* per hour for eight hours a day, 3294–3311. 3333–3340——Employment mainly on road-sweeping and snow sweeping, 3297, 3298——Total of nearly 2,000 men on the register for work, from 200 to 250 having been employed daily; way in which the register was kept and work apportioned, 3300–3311. 3325–3327. 3361–3365. 3372, 3373. 3587–3591.

Information respecting the labour exchange started in Camberwell by the vestry in 1892; discontinuance thereof, as it was decided to be illegal to expend money upon it out of the rates, 3312–3324. 3551–3553. 3585, 3586——Full employment in the gas works and factories in the parish during the winter, the men out of work through the frost being engaged chiefly in the building and sanitary trades; large proportion of "general labourers," 3328–3332. 3387, 3388. 3400–3407. 3430–3438.

Communications between the vestry of Camberwell and the guardians during the recent distress, the latter supplying the names of persons specially in need of work, 3343. 3345. 3347–3350——Conference of metropolitan vestries and guardians convened by Camberwell in 1893, when a resolution was passed that the London County Council should apply for further powers for dealing with the unemployed, and for establishing labour colonies, &c., 3344. 3346. 3359, 3360. 3596, 3597. 3627. 3646–3648.

Reference to the suggestions in the Circular Letter of the Local Government Board as impracticable so far as Camberwell is concerned, 3350. 3395–3399. 3581–3584——Several resolutions passed by Camberwell vestry asking for increased powers from Government, but without specifying what they should be: subsequent disapproval of a resolution passed by the conference of the vestry and guardians, 3351–3360. 3531–3534.

Probable employment of many outsiders, attracted by the two days' pay weekly; difficulty in preventing this influx, though certain inquiries were made, 3361–3366. 3522–3530. 3546–3550——Varying amount of work given by the men in return for the pay: very deserving character of large numbers of those employed, whilst many had undergone much privation and could not do heavy work, 3367–3373. 3400–3423.

Difficulty in the distribution of charitable relief in Camberwell: expediency of some test in the matter, 3369, 3370. 3601–3605——Increased out-relief in the parish (mainly in food) during the distress: probable employment on the relief works of some of those whose families were receiving out-relief, 3374–3386. 3416–3420. 3517–3521.

Objection of large numbers of men to receive poor-relief as disqualifying them for the franchise; grounds for this conclusion, 3385–3387, 3388. 3439–3447. 3554, 3555. 3598–3600——Contention that the cost of relief works should be charged to the whole of London; hardship upon Camberwell in having to provide work for many men who live in the parish but are employed in various other parishes, 3389–3394. 3421, 3422. 3424–3429. 3478–3492.

Great difficulty in Camberwell parish in providing the kinds of work best suited for those out of employment, sweeping the streets and clearing away the snow being the only available work in severe winters, 3395–3400. 3430–3438. 3537–3542. 3592–3595——Large numbers out of employment who did not apply for out-relief or for work so long as they had any savings to fall back upon, 3401–3407. 3430, 3431——Rate of payment by the vestry on relief work as compared with the ordinary wages of the men when not out of employment, 3432–3438. 3452–3457.

Explanation of the grounds upon which Camberwell (as a poor and populous parish) receives a grant of about 5½*d.* in the pound under the Equalisation of Rates Act, whilst St. Olave's parish has to contribute to the fund under the Act; population and rateable value taken into consideration in each case, 3458–3477. 3492–3500. 3556–3568.

Reports, 1895—*continued.*

Tagg, Charles William. (Analysis of his Evidence)—*continued.*

Further explanations as to the mode of selection of the men employed on the relief works, those who proved undeserving having been excluded, 3501–3511——Increase of pauperism and of distress in Camberwell, many of the poorer working classes being attracted by the low rents, though not employed in the parish, 3512–3516.

Inability of witness to suggest any permanent remedy as regards the question of the unemployed, 3569–3571——Consideration of a suggestion that the increase of ground values, without any expenditure by the owners, might be diverted for the benefit of the community at large, 3572–3580.

Information with further reference to the action of Camberwell vestry in the distribution of work of different kinds, with special reference to the provision of labour for the unemployed in severe winters, 3606–3613. 3650–3661——Limited extent to which the receipts under the Equalisation of Rates Act have been devoted to finding employment; relief of the local rates out of the amount received, 3614–3618——Explanation as to the vestry not having taken action in the promotion of a labour colony as a means of providing work for the unemployed, 3619–3649.

Tamworth. Absence of necessity for any special measures of relief in this rural district, *App.* (*2nd Rep.*) 470.

Tarvin (*Chester*). Local information as to the amount of distress in this rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 253.

Taunton (*Somerset*). Extent and character of the distress in the municipal borough in February 1895; relief measures adopted, *App.* (*2nd Rep.*) 265——Plenty of work in Taunton, as on 26th February, *ib.* 329——Relief provided in the rural district by voluntary agencies, *ib.* 368.

Tavistock (*Devon*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 468.

Tenby (*Municipal Borough*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 77.

Tewkesbury (*Gloucester*). Exceptional distress in this municipal borough in February; relief provided, *App.* (*2nd Rep.*) 310.

Textile and Clothing Factories. List of places making complaint respecting distress and want of employment, through depression in textile and clothing factories, *App.* (*3rd Rep.*) 818.

Thames Foreshore. See *Reclamation Works.*

Thingoe (*Suffolk.*) Statement showing the action taken, or proposed to be taken, in the urban district, as regards the provision of work, or of relief for the unemployed, *Sir H. Owen* 181——Local information as to the amount of distress in the rural district in February, and as to the remedial measures adopted, *App.* (*2nd Rep.*) 254.

Thornbury (*Gloucester*). Exceptional distress consequent on the severe weather, this has been fully met by voluntary agencies and private charity, *App.* (*2nd Rep.*) 324.

Thorne, William. (Analysis of his Evidence.)—Is General Secretary of the National Union of Gas Workers and General Labourers of Great Britain and Ireland; has most knowledge of the neighbourhood of West Ham, 10786–10789.

Information respecting a census taken in the early part of the year in the borough of West Ham, with a view to finding the number of unemployed; the actual number of unemployed male workers was 9,431; 10790–10794——Grounds for the opinion that there are quite one million of people out of work in different parts of the country, 10794–10798.

Experience to the effect that the introduction of the eight hour day has been the means of finding work for more men, 10799–10801——Suggestion that an International Conference reducing the hours of labour to eight per day would be productive of relief, 10831–10834.

Detailed evidence respecting the relief works carried on in West Ham during the last three winters, 10802–10809——Statement respecting the 1,000*l.* contributed by Mr. Hills during the winter of 1893-94, and the restrictions attached thereto; reasons which led the town council to refuse the second contribution offered by the same gentleman in December 1894; 10803–10806.

Belief that the rapid introduction of machinery, the benefits of which are all absorbed by capitalists, is the main cause of the scarcity of employment; particulars respecting several new developments in machinery now in use in the gas, coal, and other industries, 10810–10830. 10852–10856.

Statement

Reports, 1895—*continued.*

Thorne, William. (Analysis of his Evidence)—*continued.*

Statement that the road scarifier in West Ham was dispensed with last winter, because it would have been the means of throwing a large number of men out of work, 10824, 10825——Disapproval of farm colonies, and the allotment system; desirability of land being cultivated by men who should make it their regular avocation, and who should be paid a decent wage, 10835–10840. 10864–10873.

Objection to the question of the unemployed being dealt with either by the Poor Law or the municipal authorities; conclusion that it should be taken up by Government, 10841–10845——View that any man or women outside the workhouse should be allowed to vote, 10846-10851——Opposition of witness to overtime work, except on occasions of great pressure, 10857-10863.

Thornhill (*York*). Amount of distress in this district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 176.

Thrapston Rural District (*Northampton and Huntingdon*). No exceptional distress in this district, *App.* (*2nd Rep.*) 339.

Thrift (*Working Classes*). Desirability of making the poor more independent, thrifty, and careful, and of discouraging early marriages, *Martineau* 6849–6852. 6880–6884——Unintentional discouragement of thrift among the poor by the Local Government Board; necessity of modifying the Poor Law circulars, many of which are very old, *Dodd* 7597–7602.

Ticehurst Rural District (*Sussex*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 444.

Tin-plate Trade (*Wales*):

Unfitness of tin-plate workers and of miners not only for stone-breaking but for agricultural employment, *Griffith* 3973–3989. 4156–4163. 4251–4254——Good earnings of the tin-plate workers when in full work, many having saved money, and benefit clubs being largely used by them, *ib.* 4043–4049. 4122–4128.

Advocacy of State aid, in view of the exceptional acuteness of the distress and want of employment, rather than of an increase of rates or a further resort to voluntary help; dissent from the view that a Government grant might tend to pauperise the recipients, *Griffith* 4050–4054. 4067-4071. 4139–4144. 4241–4250. 4255–4269.

Liberal contribution by owners of works and collieries, whilst the men have helped each other with great generosity, *Griffith* 4068–4071. 4129–4133. 4231–4240——Reference to the cottage rents in the district, many of them being unpaid, *ib.* 4198–4203. 4289. 4292.

Explanations in detail respecting the depression in the tin-plate industry and the steel-plate industry, mainly through American competition, witness submitting that the only way to retain the trade in this country is by the men consenting to a reduction in the rate of wages, *Edwards* 4308–4319. 4332–4340. 4373 *et seq.*; 4467–4527.

Evidence to the effect that owing to the general depression in trade and to competition in America and the Continent the tin-plate trade in South Wales, Monmouthshire, and Gloucestershire, is in a very crippled condition, and the people have suffered severely from want of employment, *Phillips* 9415–9419. 9453-9457. 9497 *et seq.*

Statistics showing that there have been 6,550 persons, principally men, totally idle, and nearly 6,000 partially idle, since the beginning of 1893 in the tin-plate trade in Glamorganshire, Carmarthenshire, Monmouthshire, and Gloucestershire, against a total of about 13,500 in full work during that time, *Phillips* 9420–9452. 9505–9511.

Belief that the present bad state of affairs was brought about by the price of tin plates having been forced up in the autumn of 1890, and in 1891, in anticipation of the Tariff Bill coming into operation in July 1891, the over-production at that time having caused the depression which has existed ever since, *Phillips* 9453 *et seq.*

Statement that hundreds of the unemployed tin-plate workers in witness' district are quite destitute, those who owned houses having either sold or mortgaged them and the thrifty having exhausted all their savings, *Phillips* 9458–9463. 9496.

Distribution of 10,000*l.* by witness' union amongst the unemployed tin-workers between December 1892 and December 1894; inability of the union to render the men any assistance this year, the funds having been exhausted, *Phillips* 9468-9472.

Decided opinion that some exceptional remedy ought to be found to meet the present extraordinary distress in the tin-plate trade, which is becoming more acute every week; approval of aid being given from the Exchequer, *Phillips* 9473–9476. 9488–9504. 9528–9531.

Average rate of wages for a good tin-plate worker, before the distress began, about 2*l.* per week; acceptance by the men of reductions of 12½ to 15 per cent. for the last seven or eight months, *Phillips* 9477–9484.

Reports, 1895—*continued.*

Tin-plate Trade (*Wales*)—continued.

Institution of the stone-breaking test by the Poor Law authorities of Landore and Kidwelly, at which the men earned between 5*s.* 6*d.* and 6*s.* a week, doing their best, *Phillips* 9485–9487.

Impossibility of the home-workers competing with America, even if they worked for nothing, as there is a protective tariff of 5*s.* 2*d.* on every box of tin-plates entering the United States, *Phillips* 9512–9527.

Lists of places, twelve in number, making complaint with reference to distress through depression in the tin-plate trade, *App.* (3*rd Rep.*) 807–812. 817.

Reference to the tin-plate trade of Wales as affording the most strongly marked instance of local trade distress, affecting a great number of workers, *App.* (3*rd Rep.*) 820.

See also *Pontypool. Swansea.*

Tipton (*Stafford*). Local explanation in February as to the amount of distress in this urban district, and the remedial measures adopted, *App.* (2*nd Rep.*) 234.

Tiverton (*Devon*). Statement showing the action taken, or proposed to be taken, as regards the provision of work, or of relief, for the unemployed, *Sir H Owen* 181.

Information respecting the extent of the distress in the urban district, and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 77—— Sufficiency of voluntary agencies in the rural district during the severe weather, *ib.* 466.

Todmorden (*York*). Local explanations in February as to the amount of distress in this urban district, and the relief measures provided, *App.* (2*nd Rep.*) 235.

Tonbridge. Extent and character of the distress in this rural district in February, remedial steps taken for its relief, *App.* (2*nd Rep.*) 300.

Tooting. Very slight increase of relief in Tooting, *Sir H. Owen* 139.

Torquay. Character of the distress in the municipal borough in February; relief measures adopted, *App.* (2*nd Rep.*) 266.

Torrington (*Devon*). Absence of exceptional distress in this rural district in February, *App.* (2*nd Rep.*) 301.

Totnes (*Devon*). Information respecting the extent of the local distress, and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 78.

Tottenham (*Middlesex*). Causes of exceptional distress in the urban district of Tottenham; employment provided by the local authorities, voluntary agencies being also in operation, *App.* (2*nd Rep.*) 285.

Towcester (*Northampton*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (2*nd Rep.*) 393.

Tower Hamlets. Evidence to the effect that during the last five years pauperisim has trebled in the Tower Hamlets, the increase being chiefly due to the influx of a very undesirable class through the opening of free shelters, and to the fact that some districts are getting poorer, while others are getting richer, *Smart* 11355–11361.

Town Councils. See *Local Authorities.*

Towns. Conclusion from the returns for England and Wales that, generally speaking, the towns suffered more severely than country districts, *App.* (3*rd Rep.*) 803, 804. 820.

Lists of towns with trade depression, showing in each case the cause or nature of the depression, *App.* (3*rd Rep.*) 807–819.

See also *Agriculture*, 2. *Farm and Labour Colonies. Glasgow. Leeds. Liverpool. Metropolis. Migration of Labour. Relief Works.*

Toxteth Park (*Liverpool*). Sufficiency of voluntary agencies during the severe weather, *App.* (2*nd Rep.*) 468.

Trade Depression:

1. *Statistics and Explanations as to the Fluctuations of Labour and of Unemployment, and as to the extent of Want of Employment in different Years.*
2. *Consideration of the Causes of Depression in Trade and of Labour Fluctuations, with Suggestions on the Subject.*

1. *Statistics and Explanations as to the Fluctuations of Labour and of Unemployment, and as to the extent of Want of Employment in different Years:*

Information respecting the mode of calculating the fluctuations in certain trades or employments, such as dock labour in London, blast furnaces in the United Kingdom, mines,

Reports, 1895—*continued.*

TRADE DEPRESSION—continued.

1. *Statistics and Explanations as to the Fluctuations of Labour, &c.*—continued.

mines, &c., there being actual returns and data available, *Smith* 4550–4555——Calculation of the range of unemployment in the foregoing class of cases by the difference in any year between the minimum number employed, and the maximum, as shown in the returns, *ib.* 4553–4555.

Explanations with reference to a further mode of calculating the fluctuations in various trades by taking the percentage of unemployed members of trades unions giving unemployed benefit; extent to which this basis can be relied upon as an accurate index of changes in the labour market, *Smith* 4556–4573.

Information in elucidation of a certain table table compiled from the monthly returns received from trade unions, together with accompanying charts, showing for various trades the changes in the labour market, and the percentages of unemployed at different periods in the years 1887–94; *Smith* 4567 *et seq.*

Paper and charts submitted by Mr. H. Llewellyn Smith explanatory of the variations in the percentage of unemployment of members of trades unions in the years 1888–94; 3*rd Rep.*, *p.* 52; *App.* (3*rd Rep.*) 547.

Reference to chart in illustration of seasonal changes, and showing the percentages of employment at the end of each month, *Smith* 4574–4581; 3*rd Rep.*, *p.* 52—— Further chart referred to in illustration of the cyclical fluctuations, showing that 1889 and 1890 were the best years since 1887, whilst 1894 was somewhat better than 1893, *Smith* 4581–4588; 3*rd Rep.*, *p.* 52.

Explanations respecting the comparative state of employment in the coal mining, shipbuilding, engineering, building, and other trades at the end of December 1894, and at the end of January and February 1895, as compared with the corresponding periods in the previous winter, *Smith* 4669–4676; 3*rd Rep.*, *p.* 52.

Conclusion that cyclical fluctuations at varying intervals between periods of good trade and periods of bad trade will assuredly recur, *Smith* 4748, 4749——Belief that cycles of depression come round more frequently than in former years, but that the period of depression is shorter, *ib.* 4835–4841. 4920.

Great difficulty in estimating the comparative number of employés in stable trades and in fluctuating trades, *Smith* 4921, 4922——Exceptions taken to certain figures purporting to show a very large proportion of men out of employment for a considerable time during the winter of 1886–87; general and severe depression at this period, *ib.* 4943–4957.

Information supplied from the various urban and rural districts, &c., in England and Wales, and from burghs and parishes in Scotland, as to the extent and character of the local depression and want of employment, *App.* (2*nd Rep.*) 57 *et seq.*; *App.* (3*rd Rep.*) 565 *et seq.*

Names of places in England and Wales with trade depression, grouped by trades, *App.* (3*rd Rep.*) 813–819——Conclusion generally from the returns (England and Wales) that there does not appear to be any evidence of widespread trade depression, *ib.* 820——Absence of any general complaint from the large cotton towns, *ib.*

2. *Consideration of the Causes of Depression in Trade and of Labour Fluctuations, with Suggestions on the Subject:*

Summary of replies received by witness as to the special local causes which account for depression in trade, various causes, irrespective of bad weather, being frequently assigned, *Keir-Hardie* 890–895.

Distinction drawn between the staple industries and the fluctuating industries in connection with the want of employment; summary of trades or employments put under each class and of the several causes of fluctuation, *Smith* 4535–4549.

Distinction between fluctuations due to the different seasons of the year, and those which may be termed periodical or cyclical oscillations, there being also the irregular fluctuations due to weather, *Smith* 4547–4549——Class of fluctuations due to migration of work and of industry from one place to another, *ib.* 4547——Fluctuation due also to changes of process or of fashion, *ib.* 4547–4549.

Further class of fluctuations through the influence of trade disputes on employment in allied trades, *Smith* 4547——Reference to cyclical oscillations as by far the most serious kind of fluctuation, *ib.* 4548——Increased distress when severe frost and want of employment come at the end of a prolonged period of depression in trade, *ib.* 4677.

Difficulty at present in explaining the causes which lead to the cycles of trade depression which occur all over the world, *Smith* 4853–4856.

Conclusion that persons who are reduced to want through the decay of their trade must be maintained by the Poor Law and charity; necessity, however, in such cases of safeguards that will prevent them from being congested in the same place, and looking out for work where it cannot be found, *Mackay* 5354 *et seq.*

Reports, 1895—*continued.*

TRADE DEPRESSION—continued.

2. *Consideration of the Causes of Depression in Trade, &c.*—continued.

Review of the general conditions of employment in the staple manufacturing industries of this country, showing that there are several causes, not preventable, which render such employment of an exceedingly fluctuating and changeable character, there being an increasing tendency to the displacement and curtailment of labour, *Mather* 8975.

Reference to Bradford and Coventry in illustration of the large loss of employment through discontinuance of special manufactures; value of farm colonies in such cases, *Mather* 8975. 9001——Displacement of labour in the manufacturing districts, not only through the increased use of machinery, but through many men not readily adapting themselves to new methods of work, as well as through changes of fashion in the world's garments, *ib.* 8975.

Further evidence respecting the changes of industries, and the displacement of skilled labour, in the cases of Bradford and Coventry, in connection with the question of employment of a portion of such labour on farm colonies, *Mather* 9144-9156.

Evidence in support of the conclusion that the question of the unemployed cannot be touched without a complete re-organisation of our industrial system, *Lansbury* 10408. 10453–10458. 10497. 10510. 10513–10517.

Grounds for the opinion that improved organisation of the management of industries will produce greater regularity of employment, although it will tend immediately against the employed; instances quoted in the building trade and in the dockyards, *C. Booth* 10522–10531. 10606–10611——Tendency of changes in industrial processes to throw men out of employment, *ib.* 10532. 10615, 10616. 10650, 10651.

Table showing the extent to which distress is reported as caused in England and Wales, in February 1895, by bad trade; conclusions thereupon, *App.* (*3rd Rep.*) 803, 804.

Lists of places with trade depression, specifying in each case the character of the industry of the district or borough and the nature or cause of the depression, *App.* (*3rd Rep.*) 807–812. 817–819.

See also *Glasgow. Imports. Liverpool. Metropolis. Number of Unemployed. Pontypool. St. Olave's Union. Tin-plate Trade. West Ham. Whitechapel.*

TRADES UNIONS:

Very rare application for relief by members of trades unions and friendly societies, *Keir-Hardie* 959–966——Approval of some distinction as regards relief between those who are quite destitute and those who receive an allowance from their trade union, *Hilleary* 1626–1635.

Chart (submitted by Mr. Llewellyn Smith) showing the percentage of unemployed members of trades unions making returns to the Board of Trade at the end of each month from December 1886 to February 1895, *3rd Rep.*, p. 52.

Charts showing the seasonal and cyclical fluctuations in employment in the case of members of trade unions making returns to the Board of Trade; also the fluctuations in special trades, *3rd Rep.* p. 52.

Summary of the several agencies which have been in operation for dealing with distress and unemployment, by far the most extensive agency being the insuring against want of employment through trade societies, *Smith* 4680–4682.

Statement as to the practice in some unions as regards out-of-work benefit being sometimes followed by superannuation, *Smith* 4741–4747——Impression that non-union men are a larger proportion than union men, *ib.* 4796.

Better position of organised than of unorganised labour in time of distress, in so far as the number of organised trades are mutually helpful to each other, *Smith* 4826–4828——Consideration of the effect of trades unions as regards the unemployment of the less efficient men, witness fully recognising the great value of trade organisations in times of depression, *ib,* 4875–4884. 4887——Probability that the standard of efficiency is higher among unionists than non-unionists, *ib.* 4927–4930.

Exceedingly large expenditure of the Amalgamated Society of Engineers for unemployed benefit, witness fully recognising in this connection the valuable operation of trades unions, *Smith* 4958–4966 —— Respect in which unemployed benefit promotes the policy of trade unions as regards maintenance of the rate of wages, *ib.* 5018.

Argument that trade unions, by trying to set up a monopoly of employment for people belonging to the unions, do not always promote their own interests; opinion that they should allow labour to flow more easily, *Mackay* 5549–5559.

View of witness that, while trade unions are entitled to demand a fair share of the profits of industry for their members, it is desirable that they should adopt more elastic ways of dealing with capitalists; tendency of their action at present to swell the ranks of the unemployed, *Cox* 6196 *et seq.*; 6261 *et seq.*

Suggestion

Reports, 1895—*continued.*

TRADES UNIONS—continued.

Suggestion that trade unions should enter into contracts with capitalists, selling the labour of their members at so much per week, or allow their individual members to so contract, the agreement to be subject to compulsory arbitration, *Cox* 6197–6199. 6391–6398. 6518.

Desirability of a modification of the trade unions' rules so as to permit the elderly or more weakly members to earn what they could at a lower rate than that for those in full vigour; belief that such a modification would largely mitigate the suffering entailed by want of employment, *Cox* 6208, 6209. 6307–6315. 6465. 6466. 6526–6532.

Powerlessness of the unions to solve the difficulty of the unemployed; question hereon whether it is not expedient for the State to facilitate a general system of weekly contributions to an unemployed benefit fund, *Hunter* 8377–8384.

Table (submitted by Mr. H. Llewellyn Smith) showing the percentage number of members of the Trade Societies in the United Kingdom rendering Returns to the Board of Trade, who were returned as unemployed at the close of each month in the several years 1888-94; *App.* (*3rd Rep.*) 547.

See also *Glasgow*, 4.

Tramps and Vagrants. Instances of the great abuse through able-bodied men cadging and begging about the streets instead of working for a living, even at a reduced rate of wages, *Hills* 2580, 2581——Undue facilities given by the public authorities, as by means of shelters, for people to go upon tramp; demoralising effect of encouraging the poor to be dependent on the rates and upon other people, *Mackay* 5718-5724.

Recommendation that the idle, dissolute, and criminal classes should be left to the sharp remedies of the Poor Law and the Criminal Law; statement hereon that the Statutes against vagabondage do not appear to be regularly enforced, *Cox* 6212–6214. 6007-6610. 6616.

Discussion upon the question whether penal colonies in this country for tramps and vagrants would not be an improvement upon the present system; difficulty in ascertaining whether these classes are idle from choice and will not work, *Willink* 8901–8912. 8935–8947——Several difficulties and expenses in working the colonies in Holland and Belgium which would militate against their success in this country, *ib.* 8948–8962.

Recommendation that incorrigible idlers and loafers should be legislated for immediately, and that they should be transferred to a settlement where they would either have to work or starve; no serious difficulty in deciding whether a man is a worthless loafer or not, *B. Booth* 9862. 9927, 9928. 10044-10060.

Desirability of enforcing more stringent laws against begging; instance showing the evils of indiscriminate charity, *Hunt* 10153, 10154. 10335–10349.

Expediency of leaving loafers to be strictly dealt with under the Poor Law; witness has no means of telling the number of people of that class, *C. Booth* 10621-10623. 10742-10769.

See also *Casual Paupers. Labour Test. Out-door Relief.*

Treasury Grants. See *State-aid.*

Tredegar Urban District (*Monmouth*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 108.

Truro (*Cornwall*). Extent and character of the distress in this rural district in February; remedial steps taken for its relief; *App.* (*2nd Rep.*) 301——Sufficiency of voluntary modes of relief in the municipal borough, *ib.* 376.

Tuckwell, Rev. William, M.A. (Analysis of his Evidence.)—Witness is Rector of Waltham (Lincolnshire), and has had considerable experience as to the condition of agricultural labourers, 6947, 6948. 7437–7441.

Experience of witness that one of the chief causes of want of employment in the towns is the rural exodus from the villages; statistics showing that the decrease in the village population began in 1873 and is getting worse every year, 6948-6951. 6989 *et seq*; 7217–7229——Certainty that the able-bodied members of the village community have invariably been the first to go to the towns, 6951.

Opinion that the exodus from the villages is due to the farmers throughout England continuing obsolete methods of farming with a diminished number of hands, and to the increasing discontent of the labourer with his condition, 6952 *et seq.*; 7010–7022. 7141 *et seq.*; 7420–7423. 7442-7449——Necessity of a labouring man with a wife and four growing children having at least 21*s.* a week, in order to live with any decency or comfort; estimate that the average wage of agricultural labourers in England, after making every allowance, is not more than 15*s.* per week, 6954, 6955, 7112 *et seq.*

Liability of the agricultural labourer to be turned out of his cottage if he complains of his surroundings or votes against the will of his employer, 6955. 7153–7156. 7248–7272

Tuckwell, Rev. William, M.A. (Analysis of his Evidence)—*continued.*

7272——Utter hopelessness of the position of the agricultural labourer in England, there being no chance of an increase in his 10*s.*, 12*s.*, or 14*s.* wages per week, and the end being the workhouse, 6955. 7415–7419.

Particulars of an attempt made by witness in a very poor village in Warwickshire to improve the condition of the labourer by means of allotments; success of the experiment, the yield of the land in 1888 being about forty-two bushels of wheat per acre, the average throughout the country being twenty-eight, 6959 *et seq.*; 7023 *et seq.*; 7229–7244.

Explanation that there are two reasons why allotment land bears so much more than farmers' land; namely, that the former is much better cultivated than the latter, the labourer having no labour bill to pay, and that the labourer grows for consumption, while the farmer grows for sale, 6962–6965.

Statement that when witness left Warwickshire his successor repudiated the allotment scheme; inability of witness to lease any of the land, for the purpose of building cottages, without the bishop's consent, which was refused, 6966–6970. 7138–7140. 7401–7407. 7424–7429.

Conviction that the salvation of England in the future lies in small holdings, which may be made very profitable, while large holdings can never be made to pay; advantage of the allotment that it can be extended into the small holding, 6970 *et seq.*; 7043–7057. 7074 *et seq.*; 7442–7455. 7470–7476.

Attention drawn to the fact that there are numerous crops for which there is a large demand, and which are being imported from France and Belgium, whilst they can be grown on small holdings in this country, 6971–6973. 7058–7060.

Great success of Lord Tollemache's pasture allotments at Pockforton, the labourers all having money in the savings banks, while the result to Lord Tollemache is that he gets 2½ per cent. on his outlay and the pick of the finest labourers in the country, 6974–6977——Dissatisfaction with recent legislation in regard to allotments, as the labourer cannot get as much land as he wants at a fair rent, nor have perpetual tenure of it as long as his rent is paid, 6978. 7470 *et seq.*

Comparison of the agricultural systems of France and England, the French peasant being comfortable, independent, and full of hope and happiness, while the English peasant is degraded, underpaid, servile, and despairing, 6979, 6980. 7037–7042. 7065–7073. 7086–7088. 7171 *et seq.*

Opinion that nothing less than a gradual and merciful extinction of landlordism, and the nationalisation of the land, will arrest the depopulation of the rural districts; necessity of making the village attractive as well as lucrative, 6981–6988. 7097 *et seq.*; 7273–7276. 7546–7462——Doubt as to there being any individual repugnance on the part of labourers to village and agricultural life; belief that they would stay in the country if life were possible there, 6999–7009.

Admission that witness' ideal allottee would have to work, on an average, eighty-one hours per week, including the work done for the farmer and on the allotment; contention, however, that he would be a gainer morally and physically by so doing, 7028 *et seq.*; 7134–7137——Statement that the only instance of co-operative farming that witness is aware of was undertaken under very favourable circumstances and was an absolute failure, 7049–7057. 7160.

Suggestion that the municipal authority should be the proprietor of the land and let it to the men on conditions of perpetual tenure, fair rent, free sale, and as much land as the men want, 7061. 7064 *et seq.*——Opinion that the Small Holdings Act is even less likely to lead to the acquisition of small holdings by the agricultural community than the clauses in the recent Act, because of the extraordinary difficulty in getting land under the Act, 7079 *et seq.*; 7246, 7247.

Considerable doubt as to its being an easy matter to purchase small quantities of land at a reasonable price in or near our villages, 7081–7085——View of witness that if the allotment holders, by growing larger quantities of stuff than they consumed, displaced the produce grown by the farmers, there would be no serious difficulty, but rather a national gain; probability of the allottee being able to prevent any reduction of his wages, 7089–7096. 7163, 7164.

Decided opinion that the present system of land tenure, apart from its effects on agriculture, is detrimental to the interests of the community; no doubt that the system increases the land values for the proprietors at the expense of those who create the increased value, 7097-7104.

Conviction that land nationalisation would be absolutely just, ethically, as the community has the right to redistribute the land; contention that the landowners ought to think themselves overpaid with forty years' fair rent, 7110, 7111. 7356 *et seq.*; 7396–7400. 7477–7483.

General statement that agricultural wages have not risen during the last ten years, 7115–7119——Object of witness' proposals in regard to allotments and small holdings

to

Tuckwell, Rev. William, M.A. (Analysis of his Evidence)—*continued.*

to bring the people back from the towns to the country; necessity of some lapse of time for the operation of the legislative changes, 7120–7130. 7161, 7162. 7277–7280. 7339 *et seq.*

Approval of farm colonies as a medium for bringing the people back to the land, if worked concurrently with witness' scheme, 7131–7133——Concurrence in the view that it would be better for the agricultural labourers' cottages to be separate, with the gardens or allotments adjacent to them, than for the cottages to be crowded together on the allotments, 7138–7140.

Desirability of establishing agricultural technical schools, or training colleges, to teach improved methods of cultivating land, and of the educational endowments being re-converted to the use of *pauperes scholares*, for whom they were bequeathed, 7157–7159. 7165-7170——Admission that there are very high protective duties in France on certain produce, and that these duties are an important factor in the comparison of the French and English agricultural systems, 7173–7179.

No doubt that the French peasant and his family can live on very much less than the amount required for an English peasant and his family, 7180–7189——Table handed in by witness showing how the estimate of 21*s.*, the minimum sum per week on which a labourer with a wife and four children can live, is made up; witness has no experience of such a family living decently and comfortably on 14*s.* per week, 7190–7216.

Advisability of providing allotments by private effort wherever possible, as that course is much better and cheaper than resorting to legislative machinery, 7244——Desirability of anything like a competitive rent being avoided; idea of witness that the land to be alloted should be valued and then let by the municipality at an economic rent, 7281 *et seq.*

Contention that a tenant, under witness' system, would be much better off than a tenant under an ordinary landlord, the rent payable by the former being somewhat less than that payable by the latter during the first forty years, and considerably less after the landowner is paid out, 7332 *et seq*; 7430–7436——Opinion that if witness' proposals were taken *en bloc* they would begin at once to reverse the migration from the country to the towns, 7395.

Proposal that all land that is at present individual property shall become State property, and be re-valued, 7408–7414——Explanation that under witness' scheme the labourer who had become a farmer by his own exertions would be allowed to have as many allotments as he could work, sub-letting being most rigidly prevented, 7449–7456.

Explanation that the very severe distress in witness' district during last winter was met by special voluntary subscriptions spent in coal and food, 7463–7466.

Tuckwell, Rev. W. Letter from Mr. Tuckwell, dated 24th June 1895, in reply to certain exceptions taken to his evidence respecting the Stockton covenants by the Rev C. L. E. Parker, *App.* (3*rd Rep.*) 546.

Tunbridge Urban District (*Kent*). Information respecting the extent of the distress in this urban district and the remedial measures adopted in the form of employment and relief, *App.* (2*nd Rep.*) 108.

Tunbridge Wells. Letter from the mayor of Tunbridge Wells, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (2*nd Rep.*) 78.

Uxbridge. Considerable distress through the severe weather; relief through voluntary agencies, *App.* (2*nd Rep.*) 198.

V.

Vagrants. See *Tramps and Vagrants.*

Vallance, William. (Analysis of his Evidence.)—Witness is clerk to the Whitechapel board of guardians, 11532.

Evidence as to the powers at present possessed by Poor-Law authorities in dealing with cases of distress resulting from want of employment, such powers being derived from the Poor Law Amendment Act of 1834, London and other urban unions being regulated by the Out-door Relief Regulation Order of the 14th December 1852; 11533, 11534——Relief to able-bodied male persons on the ground of want of employment, conditional, under the order, on either the acceptance of an order of admission to the workhouse or the performance of an adequate task of work as a labour test; exceptions to this rule, 11534.

Statistics showing that the total average number of paupers relieved in Whitechapel in 1870 was 4,865, and, in 1895, 1,868, the greatest pauperism having been reached early in February 1870, when the total was 6,758; 11535, 11536——Statement that previous to 1870 the administration of poor relief in Whitechapel was similar to that in other unions, but that the experience of the winter of 1869–70 led the guardians to reconsider their position, and to aim at reforming a system that was felt to be fostering pauperism, demoralising the poor, and wronging the ratepayers, 11537, 11538.

Absence of necessity for opening the labour-yard or of adopting exceptional measures of relief in Whitechapel during the last twenty-five years, notwithstanding the virtual suspension of the Order of 1852; there has been no complaint that the administration entailed suffering on the poor, the general opinion being that the guardians are bringing about a better state of things, 11538, 11539. 11550. 11592–11594——Substitution by the guardians of useful and profitable employment for the paupers in the workhouse in lieu of oakum picking, stone-breaking, &c., every one being employed to the extent of his ability, and, as far as possible, at his own trade; entire success of the attempt to exercise a salutary restraint upon the conduct and conversation of the paupers during the evening hours, 11540, 11541. 11557–11560.

Particulars of a modified workhouse test order obtained by the Whitechapel guardians from the Local Government Board in 1887, under which they were able to ensure the preservation of the home of the applicant for relief, and at the same time have adequate security against a too ready dependence on the rates, 11541.

Consideration by the Whitechapel guardians, at intervals, of the practicability of, either directly or indirectly, employing the unemployed on the land, resulting in several conferences of the guardians of all the metropolitan unions; conclusion that any scheme of an agricultural training home must necessarily be carried out by a body outside the Poor Law, 11542-11546.

Information respecting the six men sent by the Whitechapel guardians to a small farm at Langley, started by Mr. Hazell for the relief of the unemployed, five of whom reached the farm and obtained satisfactory reports, two of them emigrating to New Zealand; explanation that no more men were sent to the farm because there were only

Reports, 1895—*continued.*

Vallance, William. (Analysis of his Evidence)—*continued.*

only eight men who were suitable and willing to go, and of these seven took their discharge, 11546–11548. 11561–11567.

Statement that the relieving officers in Whitechapel are in constant communication with the Charity Organisation Society, with a view to saving from the Poor Law those who are under the necessity of seeking assistance; endeavour of the guardians also to secure the co-operation of the District Board of Works with the same object, 11549. 11568–11575.

Sufficiency of the existing Poor Law, wisely administered, in co-operation with organised charity, to meet ordinary recurrent or seasonal periods of distress, while exceptional cases can be dealt with by the modified workhouse test order, 11551.

Decided opinion that the present time is opportune for the Legislature to deal sternly with the habitual pauper, who uses the workhouse as a legal means of avoiding the necessity for self-maintenance by work; recommendation that justices should have the power of sending such men to some place where they could be kept to useful labour for three months, 11551. 11576–11591——Conclusion that the last word cannot have been spoken upon the question of the unemployed so long as any large quantity of land remains out of cultivation, 11551.

Increasing number of Jews now resorting to the Poor Law, the Jewish board of guardians experiencing more and more difficulty in dealing with the poor in the absence of a workhouse test; fear of the board that if they established a workhouse for Jews a larger number than ever would be attracted from Russia and Poland, 11552–11556—— Strong feeling on the part of witness that persons who receive Poor Law relief should not be allowed to vote for Poor Law guardians, 11595, 11596.

Valley Rural District (*Anglesey*). Scarcity of labour in this district, there having been no distress, *App.* (*2nd Rep*) 470.

Vestries (*Metropolis*). Denial that pressure on the part of the Local Government Board was needed in order to stimulate vestries and district boards, as in Islington, to do what was feasible in the matter of the unemployed, *Dewey* 3762–3771.

Disapproval, on principle, of any question of employing unemployed labour being allowed to influence the vestries in carrying out their duties as to repaving streets and remedying sanitary defects, *Mackay* 5647–5661.

View of witness that there should be only one Poor Law authority, and that it would be a mistake to have the vestries giving relief as well as the Poor Law guardians, *Mackay* 5799–5802. 5819 *et seq.*

Impossibility of any voluntary committee dealing satisfactorily with the amelioration of relief in London; suggestion that in cases of necessity relief should be granted from the Common Poor Fund and administered by the vestries under the control of an elected body, *Smart*, 11305–11327. 11332–11354. 11382–11399.

W.

Wages. Explanation that witness is not prepared with any wages statistics in the engineering or other skilled trades; deductions to be allowed in years of depression, whilst on the other hand allowance should be made for overtime, *Smith*, 4798–4804.

Tendency of the rigid administration of the Poor Law as regards out-relief to make the men disposed to demand higher wages in depressed times, *Mackay* 5713–5715.——Impracticability of labourers saving much, if anything, out of their precarious earnings, *Hunter*, 8272. 8332–8336.

Adoption by witness of a minimum wage (as well as an eight hours day); statement hereon as to men not being often thrown out of work because of age and the competition of

Reports, 1895—*continued.*

Wages—continued.

younger men, *Mather* 9061–9069.——Information as to the average age at which a good worker fails to get his highest value, *C. Booth*, 10574-10581.

Wallsend Urban District (*Northumberland*). Amount and cause of the distress in this district; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 389.

Walmer and Deal (*Kent*). Statement showing the action taken, or proposed to be taken, as regards the provision of work, or of relief for the unemployed, *Sir H. Owen* 181.

Walsall (*Stafford*). Particulars supplied by the mayor, in letter dated 20th February 1895, respecting the amount of distress in the county borough from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 63—— Extent and character of the distress in the rural district in February; remedial steps taken for its relief, *ib.* 301.

Waltham (*Lincolnshire*). Statement that the very severe distress in witness' district during last winter was met by special voluntary subscriptions, spent in coal and food, *Tuckwell* 7463–7466.

Waltham Holy Cross (*Essex*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 178.

Walthamstow (*Essex*). Amount and cause of the local distress; steps taken for its relief by the local authorities and by voluntary agencies, *App.* (*2nd Rep.*) 389, 390.

Walton le Dale (*Lancaster*). Satisfactory absence of distress in this district, *App.* (*2nd Rep.*) 352.

Walton-on-the-Hill (*Lancaster*). Exceptional distress in this urban district in February, due to the severity of the weather; measure of relief provided, *App.* (*2nd Rep.*) 286.

Walton-on-Thames (*Surrey*). Amount of distress in this district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 178.

Wandsworth and Clapham Union:

1. *Large Extent and Large Rateable Value of the Union.*
2. *Amount of Distress and Cost of Poor Relief.*
3. *Stone-yard and Out-Door Relief; Objections to the Operation of the former.*

1. *Large Extent and Large Rateable Value of the Union:*

Evidence to the effect that the Wandsworth and Clapham Union comprises 11,454 acres, with a population of 332,542, and is the largest in the metropolis; division of the union into six parishes, of which Battersea and Wandsworth contain a large number of the working class, the remainder being more residential, *Henderson* 5156–5160.

Details as to the rateable value of the union, which has been just about doubled in the last twenty years, and is now 1,962,355*l.*; variation of the rates in the various parishes, *Henderson* 5161–5165.

Considerable

Reports, 1895—*continued.*

WANDSWORTH AND CLAPHAM UNION—continued.

2. *Amount of Distress and Cost of Poor Relief:*

Considerable distress reported from Wandsworth, largely through stoppage of employment in the building trade, *Sir H. Owen* 139, 140.

Inclusion of various rates under the heading of poor rate, the actual amount spent in connection with the poor not being more than one-third of the whole rate; great difference in the constitution of the poor rate inside and outside the metropolis, *Henderson* 5166 *et seq.*

Statistics showing that the actual money required for the maintenance of the poor in the Wandsworth and Clapham Union has increased in a greater ratio than the valuation, *Henderson* 5169 *et. seq.*; 5235–5240.

Evidence to the effect that the relief operations of the board of guardians are not restricted to the poor people who apply for relief, but that all known deserving cases are relieved either by the board or by charity societies with which the guardians are in touch, *Milligan* 5883-5886. 5895–5900.

View of witness (as chairman of the board) that it is not his duty to go outside his board and seek out cases of poverty; statement that the work involved in doing so would be too great as he already deals with something like 6,000 cases of distress per year, *Milligan* 5884–5887.

Particulars supplied by Mr. B. Weir in letter dated 23th February 1895, respecting the amount of local distress from want of employment; the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (*2nd Rep.*) 58.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 and 1893–94 the number of in-door and out-door paupers respectively, and the cost of in-maintenance and out-door relief, *App.* (*3rd Rep.*) 524–533.

3. *Stone-yard and Out-door Relief; Objections to the Operation of the former:*

Result of a committee of inquiry into out-relief in 1894, that some of the relieving officers were dismissed for malversation, that new rules were made, and the whole district reconstituted, *Henderson* 5180–5190. 5237–5240.

Decrease in the out-door relief this year until the very severe weather set in, when the number in the stone-yard increased very much; permission given for the men to work six instead of four days per week in the stone-yard, because of the acute distress during the frost, *Henderson* 5187–5200. 5241 *et seq.*; 5273–5275. 5311–5324.

Particulars of the relief given to the men working in the stone-yard, the weekly value going up to a maximum of 15*s.* 2*d.*, with a double allowance of bread on Saturday, for a man with a wife and more than six children, *Henderson* 5200–5215. 5293–5310.

Statement that the inquiry into the genuineness of the circumstances alleged by the applicants for relief was as thorough as possible, considering the large number of applications, *Henderson* 5206–5215. 5272.

Explanation that the average quantity of stones broken in the stone-yard this year has been 2 to 3 cwt. per man per day, while the allotted task is 8 cwt.; understanding, however, that the men work according to the best of their physical ability, *Henderson* 5216-5220.—Analysis of the trades of the men working in the stone-yard in 1894, the majority of the men being labourers, *ib.* 5221–5226. 5276–5278.

Statement that in no single case was an applicant who came within the rules refused work by the guardians; belief, however, that the greater number of people in distress did not apply for relief, *Henderson* 5227–5234. 5268–5271. 5281–5292.

Resolution passed by the guardians of the Wandsworth and Clapham Union expressing the opinion that the Government should at once consider the question of starting some scheme to meet the difficulty of want of employment otherwise than by opening stone-yards, which are calculated to pauperise and demoralise the poor, *Henderson* 5243–5267. 5303–5310. 5325.

Explanation that the resolution of the board calling upon the Government to find means of employment for the unemployed and condemning the stone-yard system, was passed by twelve to ten; belief that the whole of the guardians agreed to the latter part of the resolution, *Milligan* 5888-5891.

Paper containing a comparison of numbers in the stone-yard in 1893–94 and 1894–95; *App.* (*3rd Rep.*) 502.

Reports, 1895—*continued.*

WANSTEAD FLATS (WEST HAM RELIEF WORKS):

1. *Explanations generally as to the Extent and Character of the Experiment at Wanstead Flats, the Labour on which the Men were Employed, and the Results as regards subsequent Employment.*
2. *Rate of Payment of the Men and Financial Results.*
3. *Exceptions taken to the Experiment.*

1. *Explanations generally as to the Extent and Character of the Experiment at Wanstead Flats, the Labour on which the Men were Employed, and the Results as regards subsequent Employment:*

Institution by the West Ham Relief Committee last year of works upon about 180 acres of land at Wanstead Flats, men in want of work having been employed six hours daily, *Hills* 2533, 2534——Eventual carrying out of the works on Wanstead Flats by the Relief Committee (without aid from the Town Council), employment having been given to from 120 to 180 men, *ib.* 2536.

Explanations in detail respecting the conditions and system of payment under which the men have been employed, the character of the work, the supervision exercised, and the financial results; success claimed notwithstanding that there was an organised trades union obstruction to the payment of 4*d.* instead of 6*d.* an hour, *Hills* 2536–2566——Arrangements as regards food for the men, so that they show much physical improvement, *ib.* 2557.

Invitation to the present Committee to visit the relief works on Wanstead Flats, so that they may see for themselves the practical working of the system of employment, *Hills* 2568.

Very satisfactory results of the experiments in West Ham not only as regards the improved condition of those employed by the Relief Committee, but as regards their future employment elsewhere, *Hills* 2574. 2580. 2778–2790. 2798–2800.

Arrangements for supervision at Wanstead Flats; maximum of 186 employed at any time, *Hills* 2770–2773——Facility in applying the test of residence in connection with employment, *ib.* 2774–2777.

Information respecting the men employed in the levelling and digging operations on Wanstead Flats, most of whom were country born, the number which averaged about 100 having risen to 180 at the busiest time; statement that the work paid better after the gangs were reduced from twenty-five men to ten men as the superintendence was better, *Mansell* 11433–11450. 11478 *et seq.*

Evidence to the effect that on the conclusion of the work on the Flats, most of the intelligent and willing workmen were provided with situations in the Thames Iron-works and other works; belief, however, that a few of the men who had served their time at a trade are still out of work, *Mansell* 11451–11461——Willingness of the majority of the men employed to do the work alloted them, those who were not quite fit for the work, physically, doing their best; care taken to make the gangs as equal as possible, *ib.* 11462–11466

Opinion that, in addition to the absolute relief given at the moment, the Wanstead operations cured some of the men, and made them more permanent workers, *Mansell* 11491–11501——Suggestion that continuous land cultivation should be found for the unemployed, the men being mostly able and willing to work; desire of some of them to go back into the country if they could find work there, *ib.* 11502–11531.

2. *Rate of Payment of the Men and Financial Results:*

Employment of the men for six hours daily, four days a week at 4 *d.* an hour, *Hills* 2533, 2534——Shelter and food provided for the men at a very small charge, *ib.* 2574. 2582–2584.

Grounds for the contention that the experiment at Wanstead Flats proves that the men earned in kind an equivalent of 1*s.* 6*d.* or 2*s.* a day, and that their labour did not entail any loss whatever, *Mather* 9024–9032.

Statement that the rate of pay was 4*d.* per hour with 1*s.* per rod for double digging, the amount earned by each gang beyond the 4*d.* per hour being given at the end of the week as a bonus, *Mansell* 11467–11470. 11490.

Uncertainty as to whether the Wanstead experiment can be considered a paying transaction from a business point of view; no doubt that if witness had not had to take all comers, but could have picked his men, he could have made it pay, *Mansell* 11471 *et seq.*

3. *Exceptions taken to the Experiment:*

Condemnation of the work done on Wanstead Flats under Mr. Hills' scheme as useless and in no way remunerative, elevating, or productive; no doubt that it was done at a lower price than if it had been put out under contract, but not so long as the rate at which the borough council could have done it, *Morton* 11064–11069. 11144–11149.

Reports, 1895—*continued.*

Wanstead Urban District (*Essex*). Absence of exceptional distress in this district in February, *App.* (*2nd Rep.*) 179.

Ware (*Hertford*). Non-existence of any unusual distress in this rural district in February, *App.* (*2nd Rep.*) 324.

Wareham (*Dorset*). Letter from the mayor of Wareham, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 79——Statement to the effect that there is no exceptional distress from want of employment in the rural district of Wareham and Purbeck, *ib.* 435

Warrington. Exceptional distress in the district, mainly through the severe weather; relief measures provided, *App.* (*2nd Rep.*) 360.

Warwick. Letter from the town clerk of Warwick, dated 25th February 1895, respecting the amount of local distress and the relief provided, *App.* (*2nd Rep.*) 311.

Warwickshire. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 30, 31.

Watford (*Herts*). Amount of distress in the urban district; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 179——Character of the distress in the rural district, and of the employment and relief provided, *ib.* 198.

Wavertree (*Lancaster*). Information respecting the distress in this district, and the relief and employment provided, *App.* (*2nd Rep.*) 180.

Wayland (*Norfolk*). Sufficiency of voluntary effort for dealing with the distress in this rural district, *App.* (*2nd Rep.*) 324.

Weather (*Stoppage of Employment*):

Large mitigation of distress anticipated when the frost goes, though this does not equally apply to all districts, *Sir H. Owen* 248.

Apprehended continuance of a great amount of distress, irrespectively of severe weather, *Keir-Hardie* 738——Data for the estimate of 1,750,000 as the number out of employment through the frost, *ib.* 895–897.

Further information as to the basis of witness' estimate (a very rough one) of 1,750,000 of unemployed persons in the United Kingdom, through the frost; estimate of about 1,000,000 permanently out of work throughout the summer, *Keir-Hardie* 1186–1204. 1234.

Difficulties in drawing any comparison between the state of distress in connection with the want of employment in the present and previous winters; explanations hereon respecting the condition of employment in the two periods as affected by the state of the weather, *Smith* 4677, 4678.

Communications from local authorities and others throughout England and Wales and Scotland, respecting the extent of distress in each district, parish, &c., through the severity of the weather, *App.* (*2nd Rep.*) 57 *et seq.*; *App.* (*3rd Rep.*) 565 *et seq.*

Summary of returns (England and Wales), showing the amount of distress reported as due to the severe weather, in February 1895; conclusions drawn from the returns as to this cause of distress, *App.* (*3rd Rep.*) 803, 804.

Conclusion from the returns for England and Wales, that 44 per cent. of the population making returns complain of the severe weather as the chief cause of the exceptional distress, *App.* (*3rd Rep.*) 804.

Reference to the distress due to the weather as far more apparent in the metropolis and county and non-county boroughs than in urban or rural districts, *App.* (*3rd Rep.*) 804.

See also *the Headings generally throughout the Index.*

Wednesbury (*Stafford*). Information respecting the extent of the local distress and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 79.

Wellingborough (*Northampton*). Amount of distress in this district; character of the employment provided and of the relief given, *App.* (*2nd Rep.*) 180——Absence of exceptional distress in this rural district in February, *ib.* 339.

Wellington (*Salop*). No exceptional distress in this district from want of employment, *App.* (*2nd Rep.*) 445.

Wellington (*Somerset*). Information respecting the extent of the distress in the urban district, and the remedial measures adopted in the form of employment and relief, *App.* (*2nd Rep.*) 110——Absence of exceptional distress in the rural district in February, *ib.* 301.

Wells (*Somerset*). Extent of the distress in the urban district; remedial measures adopted *App.* (*2nd Rep.*) 79——Absence of any unusual or exceptional want of employment in the rural district, *ib.* 435.

Reports, 1895—*continued.*

Wem (*Salop*). Sufficiency of voluntary effort for dealing with the distress in this rural district, *App.* (*2nd Rep.*) 324.

West Bromwich. Particulars supplied by the mayor, in letter dated 21st February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies respectively, &c. *App.* (*2nd Rep.*) 132.

West Cowes. Amount of distress in this district in February; remedial measures adopted, *App.* (*2nd Rep.*) 352.

West Derby (*Lancaster*). Extent and character of the distress in this rural district in February; remedial steps taken for its relief, *App.* (*2nd Rep.*) 301, 302——Amount and cause of the distress in the urban district; steps taken for its relief by the local authorities and by voluntary agencies, *ib.* 389.

West Ham:

1. *Number of Unemployed in West Ham Union; Local Census taken.*
2. *Extent and Causes of the Distress in the Union.*
3. *Out-door and In-door Relief, respectively; amount of Poor Rate and other Rates.*
4. *Stone-yard and Labour Test.*
5. *Local action in the provision of Relief Works and of Employment; particulars as to the Cost, Administration, and Result of the Works.*
6. *Question of Government Aid towards Relief of the Distress; alleged inability of the Guardians or Local Authorities to cope with the evil.*
7. *Migration and Immigration of Labour.*
8. *Exception taken to Circular of Local Government Board.*
9. *Papers submitted by Dr. Hilleary in Elucidation and Amplification of his Evidence on certain Points.*
10. *Full Inquiry by the Committee into the case of West Ham.*

1. *Number of Unemployed in West Ham Union; Local Census taken:*

Reference to a recent census of the unemployed in West Ham, as showing that 6,176 persons were casually employed, and 10,131 out of work, *Keir-Hardie* 736——Large increase in the estimate of 10,000 out of employment if those affected by the frost and their families be added, *ib.* 898–910.

Consideration of the extent to which the number of the unemployed, as in the building trade and in work at the docks and on the river, was influenced by the frost, at the time the census was taken; form of census paper handed in, *Keir Hardie* 946–962. 1031–1034.

Number of men in the West Ham district out of work in winter, irrespectively of severe weather, and also in the summer, relatively to the total population, *Hilleary* 1240, 1241; *Alden* 2200–2217.

Several capacities in which witness has become conversant with the West Ham district; reference more especially to the prominent part taken by him in the recent census of the borough with reference to the number of the unemployed, *Alden* 1976–1980——Constitution of the local committee by whom the census was carried out, it having been completed about the 20th January, after a house to house visitation over nearly the whole of the borough, *ib.* 1980–1983. 1992. 1997–1999.

Result of the census that it showed about 10,140 workers out of employment in the borough, including about 1,000 women; very large proportion in the southern part of the borough, *Alden* 1982–1999——Difficulty of arriving at any fairly accurate estimate of the number of casual labourers, *ib.* 1993-1996——Enormous increase during the frost in the foregoing numbers, *ib.* 2000.

Explanation that the whole of the 10,000 persons reported as unemployed were not absolutely destitute; inclusion in this total of many young persons down to 16 years, *Alden* 2113–2131.

Examination with further reference to the total number out of employment in West Ham, in winter and in summer, and the several classes of which composed, *Alden* 2344–2371.

Information respecting the census taken in the early part of the year in the borough of West Ham, with a view to find the number of unemployed; the actual number of unemployed male workers was 9,431; *Thorne* 10790–10794——Upwards of 10,000 unemployed altogether, according to the census taken by the trades council of the borough, *Morton* 11024. 11028.

Particulars required in connection with the unemployed registers, together with the number of names registered during each week, *App.* (*2nd Rep.*) 495.

Exceptional

Reports, 1895—*continued.*

WEST HAM—continued.

2. *Extent and Causes of the Distress in the Union:*

Exceptional distress in West Ham, not only through some decaying industries, but through the agricultural depression in Essex, *Keir-Hardie* 1031-1033.

Extent to which the several parishes are rural or urban, the want of employment and the distress existing chiefly in West Ham and Leyton parishes, *Hilleary* 1242, 1243——Information respecting the various callings of the unemployed, the main proportion being returned as labourers, *ib.* 1316-1326——Enormous and rapid increase of the working-class population of the union; chief occupations and industries in which employed, *ib.* 1376-1378. 1392-1400. 1494-1500. 1596-1603.

Belief that not many persons in West Ham are summonod for non-payment of rates, *Hilleary* 1552–1555——Recurring character of the want of employment in the winter months whenever the weather is severe, *ib.* 1649–1652. 1731–1735——Small number of skilled workmen permanently unemployed, those out of work being chiefly labourers, *ib.* 1713-1722.

Examination as to the increase or decrease of employment of various kinds, as in the sugar industry, gasworks, docks, &c., *Hilleary* 1747–1778. 1812——Comparatively few casuals and tramps, *ib.* 1802–1808——View of the guardians that the severe weather mainly accounts for the excessive applications for relief in West Ham, as elsewhere, *ib.* 1809-1811.

Particulars as to the several trades and the different classes of workmen chiefly affected by the severe weather and by depression of business; reference especially to the Thames Shipbuilding Company, the docks, agriculture, &c., *Alden* 2001-2022——Large increase of employment in different trades in West Ham when the severe weather comes to an end, this not equally applying to the class of agricultural labourers, *ib.* 2098-2105——Fairly thrifty character of the working classes in the district, so that many have savings to fall back upon in times of distress, *ib.* 2132–2135.

Statement to the effect that the distress is more amongst the general labouring class than amongst skilled men, *Alden* 2477–2488. 2501–2512——Extent to which the unemployed are members of trades unions and receive out-of-work money, *ib.* 2482–2484. 2501–2509——Employment of women chiefly in the jam works and india-rubber works, *ib.* 2510-2512——Decreased employment in the ship-building trade and causes thereof, *ib.* 2513-2523.

Explanation that the road scarifier in West Ham was dispensed with last winter, because it would have been the means of throwing a large number of men out of work, *Thorne* 10824, 10825.

3. *Out-door and In-door Relief, respectively; Amount of Poor Rate and other Rates:*

Crowded state of the workhouse in West Ham, the guardians being unable to deal with the distress, *Keir-Hardie* 736, 737——Very high rates in the union, all that is possible being already done, *ib.* 987, 988.

Total of about 55,000 *l.* as the amount of relief in the union last year, the rateable value being 1,627,485*l.*, and the poor rate being about 1*s.* 1*d.*, *Hilleary* 1244–1248. 1655, 1656——Particulars respecting the amount of out-door relief in the winter months in recent years and in February 1895; also the total number of persons relieved at different periods, *ib.* 1249–1264.

Information with reference to the poor rate (1*s.* 1*d.*), the School Board rate, and other rates in West Ham, the total being about 8*s.* in the £., witness explaining that each additional penny of poor rate in the union would bring in nearly 7,000*l.*, which would be a much larger sum than a share of a Government grant, *Hilleary* 1366–1372. 1411–1415. 1431–1443. 1481-1493. 1606–1611. 1787–1790.

Sufficient poor rate available for the relief of distress in the district if pauperism with its disqualifications did not deter applications, *Hilleary* 1366–1372. 1431–1443. 1492, 1493——Benefit to the union from the Equalisation of Rates Bill if the union were within the area, *ib.* 1373–1375. 1617–1620——Facility with which the union can raise money at 3 per cent. or less, *ib.* 1664.

Information as to the numbers relieved in October and November last, and in March and April, before and since the severe weather, *Hilleary* 1711, 1712——Out-door relief freely given in the union, the guardians, however, having no difficulty in dealing with all the cases that come before them, *ib.* 1796-1801. 1818-1820.

Explanation that the poor rate throughout the West Ham union may be taken at from 1*s.* 2*d.* to 1*s.* 3*d.* in the £., whilst in some metropolitan parishes it is half as much again, *Hilleary* 1821–1830——Belief that an inspector from the central board has not suggested that, under certain circumstances, relief should be taken by the relieving officers to the men's houses, *ib.* 1852-1860.

Large and increasing proportion of out-door relief, steps being taken to increase the

WEST HAM—continued.

3. *Out-door and In-door Relief, respectively, &c.*—continued.

workhouse accommodation, the house being over-full, *Hilleary* 1878–1882. 1958–1966 ——Decrease rather than increase of relief in West Ham in December and January 1894–95, until the severe weather set in, as compared with the same period in 1893–94, *ib.* 1955–1957——Explanation that the school-rate for last year was 1*s.* 11*d.* in the £., *ib.* 1974, 1975.

Explanation respecting the rate of payment in money and in kind for out-relief in the union, *Alden* 2218–2220. 2526, 2527.

4. *Stone-yard and Labour Test:*

Considerable increase, through the frost, in the number employed in the labour yard as compared with previous years, the number, however, being now (26th February) on the decline; limited influx of unemployed from other districts, *Hilleary* 1354–1364. 1381–1391. 1802–1808.

Conclusion as to the necessity of retaining the stone-yard test, *Hilleary* 1881–1884. 1921. 1950, 1951——Varying practice, according to the stress of destitution, as to the application of the labour test, efficient inquiry being made by the relieving officers as to the circumstances of the applicants for relief, *ib.* 1968–1973.

Unsatisfactory operation of the Poor Law system in West Ham, the labour test in the stone-yard being objectionable and demoralising, whilst it could not be efficiently used on account of the great number of applicants, *Alden* 2136–2143. 2314–2316—— Relief at the stone-yard, partly in money and partly in kind, *ib.* 2218–2220.

5. *Local Action in the Provision of Relief Works and of Employment; Particulars as to the Cost, Administration, and Result of the Works:*

Extent of employment provided in West Ham on relief works other than the stone-yard; employment also by means of a sum of 1,000*l.* given by Mr. Hills, which the town council eventually declined to accept, *Keir-Hardie* 983–986. 991–1006. 1087–1092.

Condtions of the Local Government Board, subject to which the West Ham guardians sent twenty-seven men last year to do farm-work under the English Colonisation Society, the society being paid 5*s.* a week for each man; advantage if similar arrangements could be carried out on a large scale without entailing disqualification, *Hilleary* 1268–1283. 1333-1339. 1365. 1706–1709.

Explanation respecting the action taken in the union with a view to the provision of employment, there having been several deputations from the unemployed, followed by an interview with the Local Government Board; legal difficulties in the matter, *Hilleary* 1284–1289. 1327-1332. 1694–1696.

Eventual withdrawal of the council from Mr. Hills' scheme, to which that gentleman contributed 1,000*l.*, *Hilleary* 1285. 1510–1522——Steps taken last year by the council, jointly with a voluntary committee, for giving employment on certain works, *ib.* 1307.

Further reference to the scheme of employment promoted by Mr. Hills, at a low rate of wage, and objected to on that ground, though it was eventually carried out by a local committee, *Hilleary* 1307, 1308. 1469–1480. 1510–1522. 1636-1640——Summary of the employment given in January and February on relief works, showing the numbers employed and the cost incurred, *ib.* 1308, 1309.

Report of the borough engineer for 1893-94, containing particulars as to the relief works during the year, the wages paid for works on Wanstead Flats, for the laying out of recreation grounds, &c.; conclusion expressed that national rather than local treatment is required, *Hilleary* 1310–1315.

Payment of 6*d.* an hour to the men employed in the union; tendency of this rate to prevent men seeking regular employment, *Hilleary* 1456–1468——Demand of the unemployed for work at a fair rate of pay, their objection being to the stone-yard as a test of relief, *ib.* 1668–1671.

Difficulties in the way of certain joint arrangements between the guardians and the corporation, whereby the latter might aid as regards work for the unemployed, so as to obviate the application of the labour test by the former, *Hilleary* 1694–1705. 1725–1727——Belief that no steps are taken to prevent men going on relief works who are earning money in the docks for two or three days in the week, *ib.* 1739–1746.

Doubt as to any benefit resulting from conferences and concerted action between the various agencies in the locality, such as the guardians, town council, school board trades unions, friendly societies, &c., *Hilleary* 1812–1817.

Loan obtained last year by the town council for relief works at Wanstead Flats, and for other works; lapse of time before sanction was obtained from the Local Government Board, *Hilleary* 1831–1841——Aggregate of about 45,000*l.* as the indebted-

ness

Reports, 1895—*continued.*

WEST HAM—continued.

5 *Local Action in the Provision of Relief Works and of Employment, &c.*—contd.

ness of the council for public works, the rateable value on which raised being about 1,000,000*l.*; *Hilleary* 1842–1851.

Statement as to no action having been taken respecting any scheme of annual relief works, employment upon the land or roads not being feasible during hard frost; views of Mr. Will Thorne on this point, *Hilleary* 1887–1905. 1944–1947——Employment of the able-bodied men on wood-chopping and oakum-picking; degree of competition in the former case with outside employment, *ib.* 1922. 1927-1942.

Grounds upon which witness differed from the proposal of Mr. Hills to employ men upon relief works at a much lower wage than the trades union rate of wages, *Alden* 2081–2097.

Considerable experience of witness in connection with the relief works; he represents the local relief committee, *Hills* 2531-2533——Constitution of the relief committee two years ago, partly of the town council and partly of the subscribers to a public charitable fund, the latter having provided about 1,000*l.*, and the council having agreed to find a similar sum, *ib.* 2533, 2534.

Explanations in detail in connection with the relief works at Wanstead Flats, *Hills* 2533 *et seq.*; *Mansell* 11433 *et seq.*——Result of the foregoing experiment that in West Ham, and still more in Poplar, the work costs a great deal more than it would have done under ordinary conditions, *Hills* 2534.

Amended system proposed to the council, based upon piece-work, with a minimum wage; approval thereof by the council in the first instance, whilst on the interference of Mr. Will Thorne (secretary of a local trade union), this approval was rescinded, *Hills* 2535, 2536.

Conflicting evidence as to the success or value of the Wanstead Flats experiment, *Mather* 9024–9032; *Morton* 11064–11069. 11144–11149; *Mansell* 11471 *et seq.*

Detailed evidence respecting the relief works carried on in West Ham during the last three winters, *Thorne* 10802–10809——Statement respecting the 1,000*l.* contributed by Mr. Hills during the winter of 1893-94, and the restrictions attached thereto; reasons which led the town council to refuse the second contribution offered by the same gentleman in December 1894; *ib.* 10803–10806.

Evidence to the effect that the poor law guardians did all they could for the unemployed in West Ham during the winter, and were prevented from doing more by the Local Government Board; opinion, however, that the work carried out did not touch the fringe of the unemployed question, *Morton* 11008-11018.

6. *Question of Government Aid towards Relief of the Distress; alleged inability of the Guardians or Local Authorities to cope with the Evil:*

Reference to an application from West Ham for some aid from the Local Government Board, to be handed over to the Corporation with the view of diminishing the loss which the latter might have to bear in consequence of giving work during the hard frost, *Sir H. Owen* 285.

Inability of the guardians and Corporation of West Ham, aided by trades unions and friendly societies, to meet the present severe distress, witness advocating temporary State help for this and other localities who can prove their need of it, *Keir-Hardie* 736, 737. 777 *et seq.*; 967 *et seq.*

Questions considered as to the very large number of unemployed in West Ham (and in populous districts generally), in connection with the degree of relief to be afforded under witness' scheme of Government grants and the number of meals which could be provided, *Keir-Hardie* 777 *et seq.*

Denial that the guardians and local authorities of West Ham are able to successfully cope with the severe distress, and to relieve all the unemployed from year to year, though some districts may be in a position to do so, *Keir-Hardie* 1053-1058. 1134–1136——Dissent from the view that dissatisfaction to other districts and demoralisation in West Ham would result from the proposed State aid in the latter case, *ib.* 1059–1065.

Extent to which West Ham may be regarded as a typical case as regards local claim to a share of a Treasury grant; reference hereon to the case of Glasgow and other towns in Scotland, *Keir-Hardie* 1205–1222.

Petition presented to Parliament on the part of the Corporation of West Ham; submission therein that the duty of finding employment for able-bodied persons out of work should be undertaken by the State, neither the council nor the guardians having any machinery for dealing with the evil, *Hilleary* 1294–1306. 1379, 1380.

View of the West Ham Council (and of witness) that the State should either undertake the duty of finding work for the unemployed or should throw the duty upon the council or the guardians, and prescribe how it is to be done, *Hilleary* 1340-1347.

Reports, 1895—*continued.*

West Ham—continued.

6. *Question of Government Aid towards Relief of the Distress, &c.*—continued.

1403. 1416, 1417. 1451–1455. 1542–1551. 1570–1572. 1672, 1673. 1725–1729.——Circumstance of the Petition to Parliament not having been read over to the council; general approval, however, by the members, *Hilleary* 1530–1541. 1582–1595.

Further statement as to the extent of work available for the able-bodied when the weather improves, witness submitting that meanwhile those still unemployed and destitute through stress of weather might have their rents and rates paid for them and be provided with food, if a State grant be obtained, *Hilleary* 1861–1877. 1885, 1886.

Difficulties of adequate poor relief in West Ham on exceptional occasions, so that witness submits there should be a State grant available for the district and for other places labouring under similar difficulties, *Alden* 2107–2112——Entire inability of the corporation or of voluntary agencies to provide work for the unemployed, save for a very small proportion of them, *ib.* 2280. 2296–2299.

Unanimous opinion of a meeting of the unemployed that, in view of the large number of people starving, the Government ought to insist upon all the land now lying idle being brought into cultivation, or else depute various bodies to take possession of it and cultivate it, *Morton* 11018 *et seq.*

7. *Migration and Immigration of Labour:*

Limited extent to which there has been any official action as regards migration of labour or employment on useful works in time of depression, *Hilleary* 1779–1786.

Reference to statistics as showing that an enormous proportion of the working population of West Ham have migrated from other districts; large immigration of agricultural labourers, *Alden* 2045–2056. 2099.

Willingness of some 20 to 30 per cent of the unemployed to go back to the land, even under present conditions, if it were possible to get work in the country, *Morton* 1021 *et seq.*

8. *Exception taken to Circular of Local Government Board:*

Grounds for complaint as to the Circular of the Central Board having implied that the corporation could start relief works, *Hilleary* 1296. 1300–1302. 1549. 1570–1572.

Further evidence as to the misapprehension created by the Circular of the Local Government Board respecting the duties of town councils and other local authorities with reference to distress, witness repeating that Parliament should clearly lay down what is to be done, but objecting to the town council, in the case of West Ham, as the body to provide work for the unemployed, *Hilleary* 1909-1917.

Conclusion as to the importance of some steps being taken to prevent the influx of men in search of casual employment, this class being very largely in excess as compared with the work to be had at the docks, &c., *Alden* 2317–2327.

9. *Papers submitted by Dr. Hilleary in Elucidation and Amplification of his Evidence on certain Points:*

Paper handed in by Dr. Hilleary containing sundry details in reply to questions by the Chairman, Mr. Burns, and other members of the Committee, *App.* (3*rd Rep.*) 491, 492.

Particulars of work done and wages paid from 1st January 1895 to 25th January 1895; result as regards profit or loss, *App.* (3*rd Rep.*) 493, 494.

Constitution of the Relief Fund Central Committee; also of the Charitable Relief Committee for the north and south districts respectively, *App.* (3*rd Rep.*) 495, 496.

List of resolutions unanimously adopted at a meeting of the Central Committee on 17th December 1894; *App.* (3*rd Rep.*) 495.

Number of men who, after starting work, have left for other employment, *App.* (3*rd Rep.*) 496.

Conditions required in connection with charitable relief; number of cases relieved in each district, together with the cost, *App.* (3*rd Rep.*) 496.

10. *Full Inquiry by the Committee into the case of West Ham:*

Inquiry by the Committee into the case of West Ham, it having been suggested that this was a fair type of the parishes which suffered most, 1*st Rep.* iv.

See also *Canning Town. Farm and Labour Colonies. Relief Works*, 2. *Wanstead Flats.*

West Hartlepool. Explanation in February 1895 respecting the extent and character of the local distress, and the employment and relief provided, *App.* (3*rd Rep.*) 145.

Reports, 1895—*continued.*

Westbury (*Wilts*). Absence of necessity for any special measures of relief in this district, *App.* (*2nd Rep.*) 435.

Westhampnett Rural District (*Sussex*). Absence of exceptional distress from want of employment, *App.* (*2nd Rep.*) 460.

Westminster. Non-increase of relief and distress in Westminster, *Sir H. Owen* 141.

Westmorland. Information supplied in report by inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 54, 55.

Weston-super-Mare (*Somerset*). Absence of exceptional distress in March, *App.* (*2nd Rep.*) 442.

Weymouth. Letter from the town clerk, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App* (*2nd Rep.*) 80.

Wheatenhurst (*Gloucester*). Absence of exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 301.

Whickham (*Durham*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Absence of exceptional distress in Whickham urban district in February, *App.* (*2nd Rep.*) 286.

Whitby (*York*). No exceptional distress at the end of February, *App.* (*2nd Rep.*) 372.

WHITECHAPEL:

1. *Generally as to the Amount of Poor Relief and the Number of Paupers.*
2. *System of Out-door Relief and of Employment on Relief Works.*
3. *Question of Employment on the Land; Active Part taken by the Board of Guardians in this direction.*

1. *Generally as to the Amount of Poor Relief and the Number of Paupers:*

Statistics supplied from Whitechapel as to the increase of relief and the extent to which due to want of employment through the severity of the weather; reference especially to the number of able-bodied in the workhouse, *Sir H. Owen* 141.

Opinion that a certain comparison made by witness between Whitechapel and other districts in regard to the effect of out relief on pauperism still stands good, notwithstanding the enormous increase in the relief given by the Jewish board of guardians in Whitechapel, *Mackay* 5669–5674.

Statistics showing that the total average number of paupers relieved in Whitechapel in 1870 was 4,865, and in 1895, 1,868, the greatest pauperism having been reached early in February 1870, when the total was 6,758, *Vallance* 11535, 11536.

Letter from Mr. A. Turner, dated 5th March, to the effect that there has been no exceptional demand for labour at the works of the district board, *App.* (*2nd Rep.*) 385.

Return handed in by Sir Hugh Owen showing for each of the years 1884–85 to 1893-94 the number of in-door and out-door paupers, respectively, and the cost of inmaintenance and of out-door relief, *App.* (*3rd Rep.*) 524–533.

2. *System of Out-door Relief and of Employment on Relief Works:*

Explanation that previous to 1870 the administration of poor relief in Whitechapel was similar to that in other unions, but that the experience of the winter of 1869-70 led the guardians to reconsider their position, and to aim at reforming a system that was felt to be fostering pauperism, demoralising the poor, and wronging the ratepayers, *Vallance* 11537, 11538.

Absence of necessity of opening the labour-yard or of adopting exceptional measures of relief during the last twenty-five years, notwithstanding the virtual suspension of the order of 1852; absence of any complaint that the administration entailed suffering on the poor, the general opinion being that the guardians are bringing about a better state of things, *Vallance* 11538, 11539. 11550. 11592-11594.

Substitution by the guardians of useful and profitable employment for the paupers in the workhouse in lieu of oakum-picking, stone-breaking, &c., every one being employed to the extent of his ability, and, as far as possible, at his own trade; entire success of the attempt to exercise a salutary restraint upon the conduct and conversation of the paupers during the evening hours, *Vallance* 11540, 11541. 11557–11560.

Particulars of a modified workhouse test order obtained by the guardians from the Local Government Board in 1887, under which they were able to ensure the preservation of the home of the applicant for relief and at the same time have adequate security against a too ready dependence on the rates, *Vallance* 11541.

Reports, 1895—*continued.*

Whitechapel—continued.

2. *System of Out-door Relief and of Employment on Relief Works*—continued.

Statement that the relieving officers in Whitechapel are in constant communication with the Charity Organisation Society, with a view to saving from the Poor Law those who are under the necessity of seeking assistance ; endeavour of the guardians also to secure the co-operation of the district board of works with the same object, *Vallance* 11549. 11568–11575.

3. *Question of Employment on the Land; Active Part taken by the Board of Guardians in this direction:*

Consideration by the Whitechapel guardians, at intervals, of the practicability of either directly or indirectly employing the unemployed on the land, resulting in several conferences of the guardians of all the metropolitan unions; conclusion that any scheme of an agricultural training homes must necessarily be carried out by a body outside the Poor Law, *Vallance* 11542–11546.

Particulars relative to the experiment upon a small farm at Langley, where six men were sent from Whitechapel, *Vallance* 11546–11548. 11561-11567.

Report of the committee of guardians of the Whitechapel Union appointed on the 24th January 1888 to consider certain proposals of the Rev. S. A. Barrett for training able-bodied men in country pursuits by means of the Poor Law, *App.* (3*rd Rep.*) 548, 549.

Draft report submitted at a meeting of the agricultural training homes committee of the guardians held on the 13th June 1893, with reference to the question of agricultural training homes for the unemployed, *App.* (3*rd Rep.*) 552–554.

Report of committee of guardians adopted by the board at meeting on 3rd October 1893, respecting the proposed English land colonisation scheme, *App.* (3*rd Rep.*) 554, 555.

Report of the general purposes committee, submitted to the guardians, 9th April 1895 ; conclusions and suggestions therein on the subject of training farms and of employment on the land, *App.* (3*rd Rep.*) 555, 556.

Willenhall (*Stafford*). Considerable distress through the severe weather ; relief through voluntary agencies, *App.* (2*nd Rep.*) 378.

Willesden (*Middlesex*). Information respecting the extent of the distress, and the relief measures provided, *App.* (2*nd Rep.*) 111.

Willington Quay (*Northumberland*). Amount of distress in this district in February; remedial measures adopted, *App.* (2*nd Rep.*) 353.

Willink, Henry George. (Analysis of his Evidence.)—Witness is chairman of the Bradfield Board of Guardians (Berks), and of the Rural District Council, 8584, 8585.

Total of thirty parishes in Bradfield Union, the population, about 18,000, being chiefly engaged in agriculture, and scattered throughout the union in small villages, 8586–8593——Several resident landowners, some of them being large proprietors, 8594.

Information respecting the rate of wages, these varying from 10*s.* to 15*s.* a week; advantage in labourers (as on Mr. Benyon's property) being provided with cottages at 1*s.* or 1*s.* 6*d.* a week, 8595-8601. 8605, 8606——Wages of stonemasons and plasterers at the rate of about 36*s.* 8*d.* a week, bricklayers' labourers getting about 18*s.* 6*d.*; 8602–8604.

Reports, 1895—*continued.*

Willink, Henry George. (Analysis of his Evidence)—*continued.*

Statistics as to the great decrease of both out-door and in-door relief in Bradfield Union and of the expenditure thereon since 1871, though the population has increased; explanation more especially as to the very limited extent to which, and the conditions under which, out-door relief is now given, 8607–8664——Particulars respecting the system of giving relief on loan, whether out-door or in-door, this being done with the cognisance of the Local Government Board, and there being legal power to recover the amount from the parties liable if they come into possession of funds, 8626–8664.

Information respecting the workhouse, infirmary, staff employed, employment on the land, treatment of children, &c., 8665–8673——Explanation as to the treatment of tramps and their employment in pounding stones; large diminution in their number since 1890; 8674–8691.

Absence of exceptional distress in the union during the past winter, whilst the landlords gave as much extra employment as possible, 8692–8699——Opinion that in country districts generally the workhouse test, or in-door relief, is sufficient in times of ordinary distress, 8701–8705.

Necessary resort to a labour test if the workhouse accommodation be insufficient, 8706, 8707——Grounds for objecting to relief works either in rural districts or in towns, 8708–8713. 8727——Approval also of the workhouse test in towns with a labour test and out-door relief under certain conditions, 8714–8726.

Very salutary repugnance of the lower classes to in-door relief, witness strongly objecting to any relaxation as regards out-door relief, 8715–8726——Conclusions as to the unfitness of the unemployed in towns for labour on farm colonies, 8728–8734.

[Second Examination.]—Visit paid by witness to the Dutch labour colonies in 1883 and to the Belgian colonies in 1890, the results of his inquiries having been published in separate Reports which were subsequently submitted to, and generally confirmed by, the local authorities in Holland and Belgium, 8735–8740.

Information respecting the origination of the Dutch free colonies, which were founded in 1818, the area under cultivation since 1821 consisting of about 4,000 acres; three different classes received, there being about 1,800 persons altogether, 8741–8749——Explanation of the financial arrangements in the free colonies; reference especially to the practice as to the reception of families on payment by each district of 140*l.* per family, 8742–8749.

Foundation of the first beggar colony in Holland in 1820, these colonies comprising in 1888 about 3,500 persons; several classes received, one class being able-bodied persons convicted of begging, there being also a class of old soldiers and of orphans, 8750–8754——Financial difficulties of the two sets of colonies for many years past, owing largely to the inefficient labour on the beggar colonies and the heavy cost, 8750. 8755, 8756. 8851–8859.

Extracts from report by Count Arrivabene, who inspected the Dutch colonies in 1829, and from report by Sir John MacNeill, who visited them about thirty years later; unsatisfactory conclusions arrived at as to the working of the colonies and the bad financial results, 8755–8760.

Original intention to make both the free and the beggar colonies agricultural, whereas the labour coming mainly from towns was found to be unsuitable, so that manufactures, schools, and model farms were established, entailing great expense, 8759–8761. 8820. 8830–8843.

Summary of the leading changes and improvements which have been made as regards the Dutch free colonies since 1859; conclusion as to the very limited extent to which the system deals with the question of poverty in Holland, though the administration is now very efficient, 8760–8772. 8844–8862. 8867–8870.

Limited opportunities of witness for observing the working of the beggar colonies; several respects in which they have not been a success, whilst they have been very costly and are now a considerable burden upon the State, 8773–8780. 8784, 8785. 8792. 8856–8861. 8874–8881.

Opinion that neither the system of the free colonies or of the beggar colonies is applicable to this country; similar view of the director of the free colonies, 8779. 8817–8820. 8844–8866——Belief that as regards competition with outside producers the free colonies are not looked upon as any grievance; competition of the beggar colonies as regards manufactured articles, 8781–8783.

Several causes which have led to the greater success of the free colonies than of the beggar colonies, though even in the former case the colonists seem unable to save anything, 8786–8791. 8856——Compulsory constitution of the beggar colonies, beggars being now rarely seen about the streets, 8793, 8794. 8905–8907.

Visit of witness to the Belgian labour colonies in 1880, his report having been based upon a short inspection, and upon information supplied by the director, 8796, 8797——Total of three of these colonies, which are in the nature of penal institutions for able-bodied vagabonds above the age of fourteen, and for some other

Willink, Henry George. (Analysis of his Evidence)—*continued.*

vagrants or mendicants, the several communes paying so much per head per day, as fixed yearly by Government, 8798–8811.

Admission of some inmates to the Belgian colonies who come voluntarily, whilst the same vagrants are sent there again and again, 8806. 8812. 8816——Extremely good discipline enforced, the inmates working much better than in the Dutch beggar colonies, 8814–8816.

Contention that State labour farms in this country are not expedient, and would probably be failures, private enterprise in this direction being more likely to succeed, 8820–8823. 8865, 8866.

Statement to the effect that the free and beggar colonies in Holland would hardly have been started if a Poor Law or workhouse system were in force there as in this country, 8824–8829——Examination as to the poor land used for the Dutch colonies, and the small yield in comparison with the superior land and the larger yield in England, 8830–8883.

Admission that in some respects the Dutch free colonies, as philanthropic institutions, have worked usefully, though neither this system nor that of the beggar colonies would answer in this country, 8844–8882——Belief that the beggar colonies are conducted on total abstinence principles, 8883–8887.

Further information respecting the system of out-door relief in Bradfield Union, the class of persons relieved, and the varying amount given under different conditions, 8888–8895——Constitution of the Board adverted to in connection with the policy pursued as regards out-door relief; large majority in favour of the present practice, 8896–8899.

Examination with further reference to the operation of beggar colonies in Holland, and the extent to which they dispose of the whole class of tramps and beggars in the country, in the absence of a Poor Law system, 8900–8934——Discussion upon the question whether penal colonies in this country for tramps and vagrants would not be an improvement upon the present system; difficulty in ascertaining whether this class are idle from choice, and will not work, 8901–8912. 8935–8947.

Statement as to the amount of accommodation in the Dutch penal colonies, the number of beggars and vagrants sent to them, and the duration of their stay, 8915–8928——System of relief in Holland through the clergy, the funds coming from charitable and voluntary sources, 8929–8934.

Several difficulties and expenses in working the colonies in Holland and Belgium, which would militate against their success in this country, 8948–8962.

Further explanation that in Bradfield Union relief is granted by way of loan, the loans, however, being for the most part unrecovered, 8963–8971——Question considered whether the Bradfield guardians are acting in accordance with certain instructions issued by the central board to the effect that when relief is lent the loans should in due time be duly recovered, 8967–8973.

Wiltshire. Information supplied in report by Inspectors as to the amount of local distress, the remedial measures adopted, &c., *App.* (*2nd Rep.*) 26–28.

Wimbledon. Exceptional distress in the urban district in February, due to the severity of the weather; measures of relief provided, *App.* (*2nd Rep.*) 287, 288.

Winchester. Explanations, in February 1895, respecting the extent and character of the local distress in the urban district, and the employment and relief provided, *App.* (*2nd Rep.*) 145——Absence of exceptional distress in the rural district in February, *ib.* 322.

Windsor. Limited amount of distress in this urban district at the end of February, *App.* (*2nd Rep.*) 380——Absence of exceptional distress in March in New Windsor rural district, *ib.* 458——Relief during the distress by voluntary agencies, *ib.*

Winslow (*Bucks*). No exceptional distress in this rural district in February, *App.* (*2nd Rep.*) 302.

Wirksworth (*Derby*). Absence of exceptional distress in this district, *App.* (*2nd Rep.*) 111.

Wirral (*Chester*). Sufficiency of voluntary agencies during the severe weather, *App.* (*2nd Rep.*) 435.

Wisbech. Letter from the mayor of Wisbech, dated 20th February 1895, as to the extent and character of the local distress, the relief provided, &c., *App.* (*2nd Rep.*) 80.

Wishaw (*Lanark*). Letter from the town clerk respecting the amount of distress and the relief measures adopted, *App.* (*3rd Rep.*) 611.

Withington (*Lancaster*). Amount of distress in this district; character of the employment provided, and of the relief given, *App.* (*2nd Rep.*) 180, 181.

Reports, 1895—*continued.*

Wolstanton (*Stafford*). Absence of exceptional distress in this rural district in February, *App.* (2*nd Rep.*) 302.

Wolverhampton (*County Borough*). Particulars supplied by the mayor, in letter dated 20th February 1895, respecting the amount of local distress from want of employment, the relief afforded by public authorities and voluntary agencies, respectively, &c., *App.* (2*nd Rep.*) 63, 64.

Women and Children. Information to be supplied by witness as to the relative employment of female labour and male labour, and as to the displacement of women by boys and girls, *Smith* 4842–4846. 4935–4942.

Advisability not only of improving the status and pay of the working man as much as possible, but of bringing the children up to some skilled work, and of not allowing them to shirk their schools as they now do, *Martineau* 6849-6851. 6894–6919. 6933–6940.

Memorandum prepared by Miss Collet, one of the labour correspondents of the Labour Department of the Board of Trade, respecting the employment of women and children in occupations in which they compete with men and boys, *App.* (3*rd Rep.*) 505–507.

Table showing, for the whole of England and Wales, the number of males and females per 10,000 of each sex, respectively, above ten years of age, engaged in certain occupations, *App.* (3*rd Rep.*) 506.

Number of males and females occupied in 1891, per 10,000 of each sex, respectively, at each age period, with the decrease or increase on the previous census, *App.* (3*rd Rep.*) 507.

Table showing, for the whole of England and Wales, the number of females and males per 100,000 of each sex, respectively, above ten years of age, engaged in certain occupations, according to the census of 1891, with the increase upon the previous census, *App.* (3*rd Rep.*) 507.

Woodbridge (*Suffolk*). Statement showing the action taken, or proposed to be taken, as regards the provision of work or of relief for the unemployed, *Sir H. Owen* 181.

Woodford Urban District (*Essex*). Absence of necessity for any special measures of relief in this district, *App.* (2*nd Rep.*) 428.

Woolwich. Normal amount of relief and of distress in Woolwich Union, *Sir H. Owen* 141——Return showing for each of the years 1884–85 to 1893–94 the number of indoor and out-door paupers, respectively, and the cost of in-maintenance and out-door relief, *App.* (3*rd Rep.*) 524–533.

Worcester. Letter from the mayor, in February, explanatory of the extent and character of relief provided, *App.* (2*nd Rep.*) 344.

Worcestershire. Information supplied in report by Inspector as to the amount of local distress, the remedial measures adopted, &c., *App.* (2*nd Rep.*) 26, 27.

Workhouses. Necessity of a more efficient inspection of workhouses if the temporarily unemployed are to be treated by indoor relief, *Dodd* 7593, 7594——Opinion that in country districts generally the workhouse test (or indoor relief) is sufficient in times of ordinary distress, *Willink* 8701–8705.

Experience to the effect that the inmates of workhouses should be classified, and each class provided with a different home, *Hunt* 10179. 10270–10274——Disapproval of the system of keeping men in the workhouse who are able and willing to work, *ib.* 10179. 10275.
